EXECUTIVE COMMITTEE:

The preparation of this volume of the Encyclopaedia of Islam was made possible in part through grants from the Research Tools Program of the National Endowment for the Humanities, an independent Federal Agency of the United States Government; the British Academy; the Oriental Institute, Leiden; Académie des Inscriptions et Belles-Lettres; and the Royal Netherlands Academy of Sciences.

The articles in this volume were published in double fascicules of 128 pages, the dates of publication being:
1993: Fascs. 131-136, pp. 1-384
1994: Fascs. 137-142, pp. 385-768
1995: Fascs. 143-146, pp. 769-1056

ISBN 90 04 09834 8

PRINTED IN THE NETHERLANDS
AUTHORS OF ARTICLES IN THIS VOLUME

For the benefit of readers who may wish to follow up an individual contributor's articles, the Editors have decided to list after each contributor's name the pages on which his signature appears. Academic but not other addresses are given (for a retired scholar, the place of his last known academic appointment).

In this list, names in square brackets are those of authors of articles reprinted or revised from the first edition of this Encyclopaedia or from the Shorter Encyclopaedia of Islam. An asterisk after the name of the author in the text denotes an article reprinted from the first edition which has been brought up to date by the Editorial Committee; where an article has been revised by a second author his name appears within square brackets after the text.

ADDENDA AND CORRIGENDA

VOLUME II

VOLUME III

P. 231, KITÂBÂT. 9, Iran and Transoxania, add to Bibl.: Sheila S. Blair, *The monumental inscriptions from early Islamic Iran and Transoxania* (Studies in Islamic art and architecture, supplements to Muqarnas, v), Leiden 1992.

VOLUME VI

VOLUME VII

P. 793, MUT’AZILA. 1, 28, omit and is in the form of a simple outline of what the author expects to develop, and eventually correct, in his *Geschichte der frühen islamischen Theologie*. P. 816b, AL-MUZAFFAR, i, 20, for 292-4, 309-30, read 202-4, 209-30.

P. 913, NAHW. II, 3-4, for which has become the technical term used to denote ‘grammar’, read which has become the technical term used to denote ‘grammar’ in general (to be contrasted with lugha ‘inflectional’), and more specifically, ‘syntax’ (which is the counterpart of sarf or šarîf ‘morphology’ (so that for ‘grammar’ one also finds the phrase nāhâ wa-sarf).

P. 913, i, 16, for relativeness, read relativity (i.e. subordination of clauses).

P. 914, i, 31, for flexional, read inflectional.

P. 914, i, 22 from below, for in the ‘Abbâsid capital, read in the ‘Abbasîd capital, which remained the dominant
term there ever after.

P. 914b, i, 11, for philology, read lexicology.

NEDİM, Ahmed, an Ottoman poet, born in Edirne (Amasia not certain), the son of a slave, who was adopted by a well-to-do lady of Edirne, and is generally known, he was regarded as their equal in every way by the Turks in keeping with their democratic ideas. He came to Kastamuni early and there began his poetic career, soon gaining a great reputation. His poems are said here and there to bear superficial; here his grandfather is said to have been a certain Sadr Mustafa, who had come from Merzifun. His grandfather, a military judge named Mustafa, was a judge named Gibb, who mentions as his great-grandfather Kara-Celebi-zade [q.v.] Mahmud Efendi, who also was a military judge. The genealogy given by Ahmed Refik is, however, wrong because he confuses Karaman Mehmed Pasha [q.v.] with Rum Mehmed Pasha. The statement that Ahmed Nedim is descended from Djelal al-Din is therefore simply the result of confusion. Little is known of his life. He was a muderris, later on intimate terms with Ahmed III and his grand vizier Daud Ibrahim Pasha [see AL-DAMD]. He probably got his lakab Nedim from this friendship. Latterly he held the office of librarian in the library founded by his patron Daud Ibrahim Pasha. On hearing of the end of Ibrahim Pasha and the deposition of the sultan, Nadim lost his life at the beginning of Rabii II 1143/October 1730 in a horrible way; while escaping from the mob leaving the grand-vizier’s palace he fell from the roof and was killed. He was buried in Ayas Pasha in Pera beside the historian vizier’s palace he fell from the roof and was killed. He was generally known, he was regarded as their equal in every way by the Turks in keeping with their democratic ideas. He came to Kastamuni early and there began his poetic career, soon gaining a great reputation. His poems are said here and there to bear traces of the Kastamuni dialect. Coming to Istanbul, he at once gained the favour of Sultan Mehmed II by a kasida on winter; in 886/1481 he celebrated the accession of Bayezid II in a kasida and was rewarded by an appointment as secretary in the Divan. He gained such favour with the Sultan that he was appointed secretary to his eldest son ‘Abd Alllah and was given the title of bey when the prince went to Karaman as governor (müezzarrif). After the prince’s early death (888/1483), Nedjat returned to the capital with an elegy on the death of the prince which showed deep emotion. After a long interval in which he wrote a great deal but was in continual need, through the influence of Mu’ayyad-zade [q.v.] he became nishandji [q.v.] to Bayezid’s younger son Mahmod when the latter went to Sarukhan in 910/1504. Nedjatii wrote his finest verse while on the staff of this prince; this was the happiest period of his life. Mahmod also died prematurely in 913/1507 in Manisa, the capital of Sarukhan, and Nedjati again lost his patron. He returned with a beautiful elegy to Istanbul and finally retired from the service of the court on a modest pension. He took a house on the Wefâ Meydani, where many friends gathered round him, especially his pupils, the poet and tedvakkeri Edirneli Sehi and the poet Sun‘i. Nedjati died on 25 Dhu ‘l-Ka‘da 914/17
March 1509. He was buried near his own house, at the monastery of Seyyid Wefa and a tombstone was put up by Sehi for him.

He left a Divan which he had collected on the advice of Mu'ayyad-saleh and dedicated to prince Mahmud. There is also attributed to him a mathnewei, which is not otherwise known, entitled Munduzara-yi Guli u Khusrow, also quoted as Layla u Medemun and Miir u Makh. Even more uncertain seems to be the existence of the mathnewei mentioned by Sehi, Guli u Sahi. Nedjati is also mentioned as a translator of Persian works, but his pupil Sehi says nothing of this. He is said to have translated for prince Mahmud the Koming-ye s'edat of al-Ghazali (the Persian version of the Arabic Ihya), and the Da'miri al-hikaya (properly Da'swami al-hikaya usu-lauami) from the Persian of Djamal Din al-Awfi.

His Divan, of which there are 21 MSS. in Istanbul libraries has been edited by Ali Nihad Tarlan, Necati Bey divan, Istanbul 1965, and gives Nedjati a very prominent place in Ottoman literature, the Divan is regarded as one of the greatest for the 16th century, and others were still felt to be foreign, to adapt Turkish to Perso-Arabic metre, which he had collected on the origin of the pesef connect Hajijsji Bektash [see Bektashyya] with the early 8th/14th century popular mystical poet Yunus Emre [q.v.], recounting that the reluctant Yunus eventually received the pesef or inspiration of the saint, and poured forth hymns on the theme of divine love which themselves became known as pesefler "breaths". The pesef also expresses strongly love for the Prophet Muhammad, for Allah and for the Ahl al-Bayt [q.v.].

Legends on the origin of the pesef connect Hadjjji Bektash [see Bektashyya] with the early 8th/14th century popular mystical poet Yunus Emre [q.v.], recounting that the reluctant Yunus eventually received the pesef or inspiration of the saint, and poured forth hymns on the theme of divine love which themselves became known as pesefler "breaths". The pesef also expresses strongly love for the Prophet Muhammad, for Allah and for the Ahl al-Bayt [q.v.].

Most of the writers of the considerable corpus of pesefler which has come down to us are anonymous, probably reflecting the secrecy with which the Bektashis veiled their rituals; the words of a pesef might be written down but not generally made public, and almost none of the musical accompaniments was ever recorded in any kind of notation. We do, however, have some poems after Yunus Emre's time associated with such famous figures as Kavghusus Abâdil (d. 818/1415 [q.v.]), and the pesefler of Khâtâ'î (i.e. the Safawid Shah Ismâ'îl [q.v.]) are still sung by the Bektashis today; and by the 19th century, the names of several Bektashî sâz şairleri are known, such as Seyrânî (d. 1866), Turâbi (d. 1868), Derti (d. 1874). Miîrâtî (flor. in the 19th century) and Hilmi Dede Baba (d. 1907). The famous poet and philosopher Rûdâ Tewfîk (d. 1949) [see BOLUKBASIN RÜDA TEFIK, in Suppl.] also wrote several highly valued poems in the genre.

It was not till the reign of Murad IV that he came from the village of Hasan Kalı, gained the imperial favour, but his malicious, satirical and indecent poems soon brought him into controversy, cost him his life. The brother-in-law and vizier, who had succeeded in being enemies. A satire on Bayram Pasha, the sultan's, defierddr[1], wrongly says (cf. on the other hand his work for a time as a book-keeper. He failed in an attempt to make him one of the greatest, although his mastery of technique and natural poetical talent was resorted to as a body of the Ottoman band [see MEHTER]. The person to which parts of his Persian divan were attributed, see also Gibb, Ottoman poems, 208, and HOP, iii, 252 ff.; the history of Naşım, i, 586, and Bur-sali Mehmed Tahir, Osmanlı müziği, ii, 441 (according to which parts of his Persian Divan were published in the Khazine-yi Funun); A. Karahan, Nefir-i kads, İstanbul 1954; A. Bombaci, La letteratura turca, Florence 1969, 370-3; Karahan, Nefir-i divanında semder, Ankara 1983; İstanbul 1986; M. Çavuşoğlu, Osmanlı üçüçücinli yılda Nefir, Ankara 1987; IA, art. s.v. (Abdulkadir Karahan). Examples of Nefir's poems are given in Fahir iz, Eski türk edebiyatında nazım, İstanbul 1966-7, i, 17-19, 70-86, 120-4, 519, 528-9. (F. BABINGER)

NEFİR (a.), a term alluding in Ottoman usage to a musical instrument similar to a horn that comprised a part of the Ottoman band [see mÜREKKEP]. The person playing the instrument was referred to as nefir, and, according to the 1755 and 1776 Ottoman salary registers, there were twelve such players in the sultan's band of approximately sixty members. This band, and similar ones like it belonging to high-level Ottoman officials, travelled with their owners wherever they went, and normally played during the day before three prayers, sc. the afternoon one, the one after sunset, and, in the morn-
NEGEV [see Al-Nakr].

NEMCE (NEMSE; a. al-Nimsd), a term (meaning 'mute') borrowed from the Slavonic used by the Ottomans to indicate the Germans. In a broader sense, they also used it for the territory of the Holy Roman Empire, which lasted until 1806, and in a restricted sense for the territories under Habsburg rule within the boundaries of modern Austria.

In more recent Arabic sources, Germany is indicated by two terms which occur simultaneously: Almānjā and Dīrgāmnīya. In Ottoman sources Alʕalma(m), and occasionally Dīrgāmnīya, also occur next to Nente, without further differentiation. It was only after the foundation of the Ottoman Empire in 1804 that the Ottomans, in the course of the 19th century, adopted Almanja and Nushtūra (Agustūra being the older form) as different concepts. In Arabic, on the other hand, al-Nimiā was accepted as indicating Austria.

1. In Arabic sources.

Already in the 10th century, al-Masʿuddi (Murāqūd, iii, 63 = § 906) mentions the Nāmjān as a tribe of the Shī‘a. Amongst the travellers and merchants who travelled through their territory (Germany), al-Masʿuddi's contemporary Ibrāhīm b. Yaʿkūb [q. v.] deserves particular mention, although the name of the territory cannot be established from his account. The most comprehensive mediaeval source in Arabic concerning Austria is al-Idrīsī's Nuzhat al-mushtadk where information about Austrian toponyms is found in the various climes and sections. The name al-Nimsd, however, does not appear. The only Austrian region named specifically is Carinthia (Karantina), whose territory stretches out over wide parts of Austria, Hungary and other adjoining states. Cities in Styria, like Graz (Irkīza), and in Carinthia, like Villach (Blīqā), are described in greater detail, but Vienna (Wīynā) appears only in an itinerary. The rivers Danube (Nahr Danu) and Drava (Nahr D-uu-uu) are given as boundaries of Carinthia, while the Alps (Mount Di-uu-uu – Monk [Mont] Jovis) are also attributed to other territories. Al-Idrīsī's criterion for including Austrian cities in his Geography apparently was their significance as trading places. He may have been informed by merchants.

Endeavours to identify an Austrian (Styrian) city from Abu 'l-Fida's Taqsim al-baladān (Reinnaud, Geographie d'Aboulfeda, ii/1, 311, quoted after Ibn Sa'd al-Masʿūdī) and Abu 'l-Maysd ki Fitzūrā of 1870, 194) have been unsuccessful.

2. In Ottoman sources and in Ottoman-Habsburg relations.

The hereditary princes of the Habsburgs had their first contacts with the Ottomans when Carniola, Styria and Carinthia were repeatedly attacked by Ottoman incursions. Sultan Bayezid II [q. v.] and the Emperor Maximilian I had sounded out diplomatic relations in 1497, 1504 and 1510-11, Ottomans and Habsburgs were brought into continuous, immediate and hostile contact through the political situation in Hungary after the battle of Mohács [q. v.] in 1526. Sultan Süleyman I [q. v.] undertook two campaigns against Habsburg territory in 1529 against Styria and Carniola, in 1532 across southern Lower Austria, Styria and Carniola. After part of Hungary had been put under direct Ottoman rule in 1541, it was only in 1547 that Ferdinand I succeeded in concluding a trea-ty, which compelled him to pay to the sultan a yearly tribute of 30,000 golden ducats. This liability of the Habsburgs to paying tribute, interrupted only by war, lasted until the treaty of Zsitvatorok in 1606. At the beginning, the open state of war was interrupted by truce treaties, which were fixed for several subjects and repeatedly renewed and extended. Only in 1747 did Habsburg diplomacy succeed in concluding an unrestricted treaty (… muṣāq-i shariʿī oldūgāt eddhihā muddet-i nemdūde …). The wars of the 16th and 17th centuries found their origin in the conflict of interests about political power in Hungary. The unsuccessful attack against Vienna in 1683 of Kara Muṣṭafā Paşa [q. v.] was for the Ottomans the climax of a protracted war, marked by great losses, which led to losing Hungary to the Habsburgs. In the 18th century the latter, due to their alliances with Venice and Russia, and to their political ambitions on the Balkan Peninsula, became involved in three further wars with the Ottoman Empire.

After 1547 the Habsburgs continuously kept ambassadors at the Porte and, during the period of tribute—only in times of war—sent yearly to deliver the tribute. After 1606 important embassies used to be sent on specific occasions like the ratification of a treaty or the access to the throne of a new sultan. At first, the Ottomans sent to Vienna īzāq [q. v.], dragomans [see TARQUMAN] and the like in emergency cases only; in the 17th century they also began to send important missions but only for specific purposes. A permanent diplomatic representation of the Ottoman Empire in Vienna began only in 1797 (with a vacancy between 1823 and 1832).

The Treaties of Vienna of 1615 and of Karlowitz [see karloča] of 1699 already contained articles on reciprocal trade. In 1718 a separate commercial treaty was concluded at Passarowitz (Požarevac) [see Passarowca], in which it was permitted for Habsburg subjects freely to establish consulates in the ports and on the islands of the Mediterranean, and to organise free shipping on the Danube (the Black Sea excepted). In the twenties of the 18th century, commercial and navigation treaties were also concluded with local leaders of the Barbarian states which were part of the Ottoman Empire. An agreement of 1783 with the Ottoman Empire aimed at protecting Habsburg subjects from piracy and settling questions of compensation. In the commercial treaty of 1784 Habsburg subjects were granted the privilege of free commercial navigation on the Black Sea, a right given to Russia already a year earlier.

Next to the Habsburg Emperors, the Dutch Republic and the Kings of Prussia were the only powers within the Holy Roman Empire to maintain independent diplomatic relations with the Ottomans before the 19th century. During the last war between the Ottomans and the Habsburgs (1786-91), Prussia, in the Convention of Reichenbach of 1790, forced the Emperor Leopold II to renounce any conquest of Ottoman territory.

Apart from the detailed description of the campaigns of Sultan Süleymān I in 1529 and 1532, of the siege of Vienna by Kara Muṣṭafā Paşa in 1683, and of the warfare in Hungary and later on in the Balkan Peninsula, Ottoman historiography contains, from the middle of the 17th century onwards, references to the political events in Europe, including the Holy Roman Empire. The data, at first sparse and sporadic (for instance in Kātīb Čelebi, Münțedji-Bahī Aḥmed, Muṣṭafā Naʿīmā, Silāḥdār Findiklīlī Mehmēd [q. v.]), became increasingly extensive and ac-
curate in the course of the 18th century because diplomatic contacts intensified and interest in information grew. From the second half of the 17th century onwards, the official embassy reports (sefârî-nâmâ), the most important diplomatic, and individual treatises provided the Ottomans with a detailed and differentiated picture of the political situation in Europe. Among the travel accounts, a particular place is taken up by Ewliya Celebi’s description of his journey to Vienna while in the train of the Ottoman embassy of the campaign of 1683 against Vienna, and ʿOṯmān Ağa of Temesvár provides us with information about his stay in Styria and in Vienna during his captivity.

Samples of the German language are given by Ewliya Celebi, who put together a highly imaginative etymology of the term Nemèç (= nem Cen) Hungarian nem Cen “not Czech”).

Nepal, a Hindu kingdom with an area of 147,000 km² (80°-88° 15'E, 26° 20'-30° 10'N) rising up on the southern edge of the Himalayas between the Ganges plain (India) and Tibet (China). The southern plain and the central mountains, with a sub-tropical climate suitable for rice culture, nourish a dense population of Indian origin and who speak Indo-Aryan languages: the Hindus of the plain speak Hindi, and the Indo-Nepalese of the mountains speak the official language, Nepali, a branch of Pahâri; they dominate tribes speaking Mûndâ and Tibetoburmese languages [see hind. i.iii. Languages]. The high valleys shelter a thinly-scattered population of Tibetans. The total population was 19,360,000 according to the 1991 census. It is almost 90% Hindu, and Hinduism is the official religion. The main religious minorities, whose numbers fluctuate from one census to another, are the Buddhists (between 5 and 10%) and the Muslims (ca. 3%). The toponym Nepal, with no known etymology (written Naypâl or Nepâl, नेपाल), is attested from the 4th century AD in Sanskrit epigraphy, and was known to the Muslims of the 9th/11th century through al-Bûrûnî’s India (Eng. tr. Sachau, Alberuni’s India, London 1910, i, 98); it designated solely the valley of Katmandu (Kâthmândû). Hindu kings ruled there over an ethnically Tibeto-Burmese population, the Newâr (largely Hindu with a strong Buddhist minority) which prospered thanks to trade with India, Tibet and China. The valley recognized the suzerainty of the Dihli sultan (B. Mâr â l Sâhîd (695-715/1296-1316 [see kalâdhist]); it was raided by the Bengal sultan Shams al-Dîn Ilîyâs (746-59/1345-58) in 750/1349 (L. Petech, Medieval Nepal, Rome 1958, 103-4, 118-22, 177; Hommage à Sylvain Levi, Paris 1964, 23). According to the chronicles, the first Muslim merchants coming from Kâshmîr established themselves at Kâthmândû under Ratna Malla (1482-1513); then the palace is attested from the 17th century onwards by the Catholic missionaries then established in Tibet and Nepal, and, from 1738 onwards by official Nepali documents. The remainder of what is now modern Nepal was shared out amongst some fifty kingdoms; the land of the plain cultivated by the petty rulers of the mountains, came in the 14th century, under the control of the Dihli Sultans, those of Bengal and then the Mughal emperors; these petty rulers, like the kings of the Kâthmândû valley, paid tribute to them in the form of elephants. The population of the Nepal plain thus included some Muslims from that time; some of these, makers of glass bracelets above all, became established in the mountains during the 17th century.

With the decline of the Mughâls, whilst the English East India Co. secured a foothold in northern India, the present Indo-Nepalese dynasty of Gorkha created the modern state of Nepal. Prithwi Narâyândî (1742-74) conquered the Kâthmândû valley in 1768-9 (despite armed intervention by the Nawâwâb of Bengal and the British) and subdued the eastern districts, including Sikkim; his successors continued the policy of expansion towards the west until, in 1814, their lands became contiguous with those of the Sikhs. Prithwi Narâyândî secured British recognition and that of the puppet Mughâl emperors Shâh ‘Alâm II (1759-1806) in a formal treaty of 1771 (B. Lewis, Shâh ‘Alâm II: mahârâjadhirâj, Prithwi Narâyândî Shâh-ko sanâkîta dîñâvani, Katmandu 1967, iv, 713-18). Tribute was paid from that time onwards to the British until the Anglo-Nepalese War of 1814-16 and the treaty of 1818 which blocked Gorkha expansion and set up the frontier between Nepalese and British territories. The Râñâs, mayors of the palace who directed affairs in the country from 1846 to 1951, put relations with Britain on a normal footing; they helped them in 1857-8 to recover Lucknow, but gave refuge to some Shâhî nobles from that city. The independence of Nepal was recognised in a treaty of 1923.

The evidence of travellers like Francis Hamilton and the British Residents in Nepal like Brian H. Hodgson, confirmed by the archives and by legal texts, has brought out the religious policy of the new dynasty. It strengthened the Hindu character of the kingdom. Faithful to the tradition already set forth by al-Bûrûnî (op. cit., i, 19-20), it insisted on the impurity of Muslims; they were considered as “barbarians” (mîleṭha) and severely punished if they caused the pollution of Hindus of pure caste. It introduced new measures in forbidding them to proselytise (allowed
until then), as also were forbidden Christian missionaries, who were definitively expelled, together with their converts. The Muslims were nevertheless (as far as the most temporary expansion works of Kâdimî traders at the end of the 18th century) able to stay, to engage in commerce and to enjoy freedom to practise their religion. They did not have any personal law of their own; in regard to marriage (except for prohibited degrees), divorce, inheritance and the administration of pious foundations, they were always subject to Hindu law and answerable to Hindu judges. The discriminatory clauses regarding them were initially included in the Code of 1620, but they remained in force until the Code of 1963. This last abolished the penalties to which Muslims were liable for breakages of the caste rules; but despite the suppression of the principle of religious discrimination in the 1962 Constitution, it retained the prohibition of proselytism, and this last was even inserted in the Constitution of 1990.

Moreover, with the fall of the Rânâs in 1951, the land was opened up to modernisation. Censuses and ethnological fieldwork allow us to construct an ethnohistory of the Muslims of Nepal. Amounting to some 570,000 persons, they are almost all living on the plain, where they make up an average of 10% of the population there. They are petty traders, artisans and peasants; also, some 2,000 petty traders (Kâhîmîris and Hindûstânîs) live in the Kâdmîndû valley, whilst the 10-15,000 manufacturers of bracelets in the mountains to the west of Kâdmîndû live by agriculture and the peddling of ornaments. All of these originate from the Ganges plain and speak dialects of Hindi; stemming mainly from Hindus converted to Islam, they form a very hierarchical society, an Islamic version of the Hindu caste system. They are almost all Hanâfî Sunnîs, with a few Twelver Shi'as attested in the plain. The religious life has an Indian character and is heavily impregnated with Sûfism and the cult of saints [see HIND. ii. Ethnography]. This fidelity to the cult of saints, current in the highest classes, amongst the Kâhîmîris of Kâdmîndû in particular, is under fire in the more popular circles from the reform doctrines (called "Wâhîhabîsm" by their opponents) of the Deoband [q. v.] and of the Ahl-i Hadîdî [q. v.] schools introduced as a last resort by missionaries who come back from the towns of India bearing cheap, edifying literature in Urdu; mosques and village Kurân schools have multiplied, and a few scores of Nepalis make the kadîfî each year.

The firm and constant policy of the monarchy has been to forbid all violence against religious minorities, so that, despite the legal discrimination under which they live, the Muslims have always felt themselves more secure in Nepal than in India. Facing an internal opposition more and more active since 1979, the monarchy has since then cultivated its Muslim subjects, whose vote is a valuable support.

Bibliography: For a general survey of Nepal, see M. Gaborieau, Le Népal et ses populations, Brussels–Paris 1978. On the history and position of the Muslims there, there are two outstandingly important pieces of evidence: F. Hamilton, An account of the kingdom of Nepal, in JFRAS, i/2 (1834), 258-79. The general body of sources (to be completed by the references given in the text of the article) are gathered together, and often edited for the first time, in Gaborieau, Récit d'un voyageur musulman au Tibet, Paris 1973; idem, Minorités musulmanes dans le royaume hindou du Népal, Paris 1977. For the ethnology and political evolution of these minorities, see also Gaborieau, Muslim minorities in Nepal, in R. Israel (ed.), The crescent in the East Islam in Asia Major, London 1982, 79-101; idem, Ni Brahmanes, ni Ancêtres: colporteurs musulmans du Népal, Paris 1992. (M. GABORIEAU)

NERGISI, NERGISI-ZADE MEHMEF EDENDI (d. 1044/1635), pre- eminent Ottoman prose stylist.

He was born in Sarajevo, probably around 994/1586, son of the kâdî Nergisi Ahmed Efendi, and completed his education in Istanbul, becoming a pro- fessor of the Kâzîs (Allah Efendi (d. 1020/1611), from whom (and not, as in some accounts, from his son Kâzî-zade Abd al-Hâyy Fâ'dî Efendi) he received his müezzetem [q. v.]. He may have served briefly as a müddere; but his principal employment was as kâdî in various posts in Rûmeli, mainly in Bosnia. Following early appointments (during the period ca. 1022-27/1613-18) to Gabela and Çayni, he was invited by Kâzî-zade Fâ'dî, then kâdî of Bursa, to act as his nâbi (early 1028/1619). On Kâzî-zade's dismissal in early 1029/1620, Nergisi again sought a käditik, and was appointed, successively but with intervals, to Mostar (1030/1620-1) and shortly afterwards to Ya'ni Pazar, to Elbasan (1034/1624-5), Banjaluka (1038/1628-9), and Monastir (1042/1632). In 1044/1634-5 he was appointed by Murâd IV as vez'î- nüviât for the Revan campaign, but died at its outset, near Gebze on the Gulf of Izmit, as the result of a fall from his horse (9 Şewwâl 1044/28 March 1635). (On Nergisi's career, see O.F. Akün, Nergisi, in İA, ix, 194-6.)

Though a minor figure as a kâdî, Nergisi was recognised as one of the leading prose writers of his day, aided by his friendship with the Kâzîs and with fellow litterateurs such as Weysî and Şeyêh al- İslâm Yabay among others. His principal works fall into three groups:

1. Khamsî, printed Bulûk 1255/1839 (once in ta'sîk script, once in nesîh, and Istanbul 1285/1868-9. In chronological order of composition, these five works are: (i) Qazwînî-es-i Meslemè (1030/1620-1), a brief account (attributed to Ibn al-ʿArâbi, Muḥîyî l-Dîn [q. v.], but generally considered spurious) of the campaign of the Umayyad general Muslâm b. ʿAbd al-Malîk (1023/1613-18) to Gabela and Caynice, he was invited by the Celebi [q. v.]. (ii) Qâsun al-reshûd, written 1033/1623-4 as an accession gift for Murâd IV. Initially a translation of a 16th-century Persian "mirror for princes" written for Şâh Muhammad Khudâbanda [q. v.], the work was considerably expanded with Nergisi's own observations on Ottoman history. (iii) Memsâh (1034/1624-5), an original collection of ten love stories, of contemporary origin and significance, apart from two tales taken from the teşbihâr of Âşık Cebeli [q. v.]. Nergisi later re-used six of the stories in the Nihrâstân. (iv) İksir-i se'da (or İksir-i dewlet, 1041/1632), a translation of part of al-Ghazzîlî's [q. v.] Kimsa2 al-sa-râda on ethics. Nergisi's text became a popular Ottoman version and was separately printed several times. (v) Nihrastân, (1042/1632-3, his last work), Containing 23 stories (nihrâstân "offshoots"), this was compiled as a collection of ethical, exemplary and cautionary tales intended as an Ottoman literary and cultural nûfûzve to Sâ'dî's Gûlistân and the Bahâristân of Dîwâni [q. v.]. Like Megâhî-k-üs-hâşâkî, it is too significant for the use of contemporary allusions.

2. Münşef-i. Nergisi's autograph collection of his
own letters (finally totalling 38) was first made for presentation to Sheykh al-Islam Yahya during the latter's first meşhur-ı xadıd (1031/1622-3) and later expanded to include letters down to 1036/1626-7 (published in J.R. Walsh, The Esabili ‘l-mekârîb (Müne‘ât) of Mehmed Nergis Efendi, in Archivium Ottomanicum, i [1969], 213-302). Manuscripts of a later collection, probably made by Sheykh Mehmed b. Mehmed Sheykhî, contain over 50 letters.

3. a-Wasif al-kâmîl fi ahûl al-awzîr al-sâdîl (1038/1628), an account of the exemplary character and deeds of Murtâfa Pasha as governor of Buda

With his father, the poet Ahmed Rafî Efendi, then in exile; the latter is known as Ashafî-pasha-zade’s history, to have been principally named in the text, but for the Ottoman period appear outside the Top Kapu.

His Terdjeme-i sharh-i i Predictor was printed Qulâm. His Tarbîyat-i ‘arât-i ‘l-bay‘î-yî Molla Qulâm was printed at Istanbul in 1263. A biography of him by Pertev Efendi which was continued by Emîn Efendi is said to exist.

Bibliography: Bursaîl Mehmed Tahir, ʿOğmânîlî ma‘ašîlî, ii, 461; Mu‘allim Nâdî, in Mîqâm, no. 7, 84-6; idem, ʿOğmânîlî ʿshirîyati, 64-70; Khâzîn-yi funun, Istanbul 1312, ii, 230 (Eşefî); Thüreyya, Sîdîlî-ı sâdînî, vi, 552; Sâmi, Kâmîs al-sâlâm, vi, 4576; Mehmed, ʿOğmânîlî, ʿDârîlî, ʿOğmânîlî edebiyatî nâmâleri, Istanbul 1312, 263; Flügel, Die arabischen ... Hs. ... zu Wien, i, 686; I.A, art. Ne‘îr (Fevziye Abdullah Tansel). Two of his MSS. are given in Fahsr II, Eski türk edebiyatîna nazm, Istanbul 1966-7, i, 435-6. (Th. Menzel)

NESHRI (d. before 926/1520), Ottoman historian.

Nergisi’s one, partially-surviving, historical work, the Dijân-nûmâ, marks a pivotal point in both the development and the study of Ottoman historiography. However, very little is known with certainty about its author, how he lived or died, and that his account of the subsequent Janissary riots in Istanbul is based on personal observation. The date of his death is also uncertain, though it is possible that, as stated by Laflè, he lived into the reign of Selim I (for biographical discussion, see F. Taeschner, ʿOğhânînâmî. Die allosmanische Chronik des Mevlûdî Cevâhi, Istanbul 1912, 267-8; I.A., vi, 514-15; M.C. Şehabeddin Tekindag, ʿOğlînâmî, in IA, ix, 214-15; V.L. Ménage, Nergî’s History of the Ottomans: the sources and development of the text, London 1964, 1-5).

Nergisi’s Dijân-nûmâ was originally conceived as a universal history in six parts, but only the last section is known to be extant. This consists of an introduction, and three ʿabâkas covering respectively the Oghuz Turks, the Saljuqs of Rum and the Ottomans; it chronicles events down to 890/1485 (Bayezid II’s conquest of Akkerman), and concludes with a list of the principal viziers and holy men of the Ottoman period, followed by the dedication to Bayezid II. The style is a relatively straightforward Ottoman prose. The work was probably completed between 892/1487 and Rabî I 898/February 1493 (Mênage, Nergî’s History, 9). Nergî’s sources are not known. He claims to have been principally ʿAshârî, a Ẓâhirî ‘alîm, a chronological list, takâtûm, of the mid-15th century, and an anonymous chronicle of the late 15th century (P. Wittek, Zum Quellenproblem der ältesten osmanischen Chroniken (mit Auszügen aus Nesri), in MOG, i [1921-2], 77-150; Mênage, op. cit., 10-19). The Dijân-nûmâ
thus amalgamates the three principal Ottoman historiographical traditions then existing (H. Inalcık, *The rise of Ottoman historiography*, in B. Lewis and P.M. Holt (eds.), *Historians of the Middle East*, London 1962, 152-67; Ménage, *The beginnings of Ottoman historiography*, in Lewis and Holt (eds.), *op. cit.*, 168-79). The *Dîhan-nâme* became a principal source for many later Ottoman historians (e.g. Idris Bigilisi, Sa'd al-Din, ‘Ali, Solak-zâde and Münedijdam-bashi [q.v.]), and thus had a major influence upon subsequent interpretations of early Ottoman history. It was also one of the main sources used in Leunclavius’s *Historiae Musulmanae Turcicae*, Turin 1591, and so entered into European writing on the Ottomans (Ménage, *Nesrî’s History*, 31-40, on the ‘Codex Hanivaldus’).

The *Dîhan-nâme* has been published twice, once in facsimile (F. Taeschner, *Ghânâmê ..., i* [Codex Menzel], 1951, ii [Codex Manisa], 1955), and once as an edition with modern Turkish transcription (F.R. Unat and M.A. Koymen (eds.), *Mehmed Nesri: Kitâbd-i Djhîd-nâmê*, Frankfurt 1962). The poet’s life; part of it fell in the reign of Murad I (761-79), and about 150 quatrains, but the existing mss. should not be derived from *lakab* name. As a place of this name no longer exists, it is possible that *NesÎmê* came from NesÎmî near Baghdad, whence his father moved. **

Nesîmî was of Turkoman origin seems to be fairly certain, although the ‘*Seyyid*’ before his name also points to Arab blood. Turkish was as familiar to him as Persian, for he wrote in both languages. Arabic poems are also ascribed to him. Little is known of his life; part of it fell in the reign of Murâd I (761-91/1360-89), as his biographers tell us. He was at first a pupil of the school of Şaykh Shibli (247-334/861-945), but about 804/1401 he became an enthusiastic follower of Fâdîllâh Hurûfî [q.v.], with whom he was undoubtedly personally acquainted. He championed the views of his master with ardour and at the risk of his life. The poet Refîl, author of *Beshât-nâmê*, met a cruel death in 820/1417-18 at Aleppo, where he was flayed for his heretical poems, on charges, he retired completely from public life and his prayers were made popular in Bektâshiyya. Nesîmî’s poems were made popular in earlier times, especially by the wandering Kalendr dervishes [see *Kalandaryya*] and were known to everyone.

(CHRISTINE WOODHEAD)

**NEWî, YAHYA b. Pîr. ALS. b. NASÎH, an Ottoman theologian and poet, with the nom de plume (*maklîa*) of Newî, was born in Malghara [see *Malkara*] (Rumelia), the son of Shaykh Pîr ‘Alî, in 940/1533. Up to his tenth year he was taught by his learned father and then became a pupil of Karamânî-zâde Mehmed Elendi. His fellow pupils were the poet Bâkî [q.v.] and Sa’d al-Din, the famous historian [q.v.]. He was an intimate friend of the former. He joined the ‘*sâmâ*’, became mûdîrsî of Gallipoli in 973/1565 and after filling several other offices became a teacher in the Medrese of Mîhr u Mâh Sultân [q.v.]. In 998/1598 he was appointed Kâdî of Baghdad, but before he could take up office, Sultan Murâd III appointed him tutor to his son Muştafâ and to the princes Bâyezîd, ‘Ogîmân and ‘Abd Allah. When after Murâd III’s death (1003/1595) the usual slaughter of the princes deprived him of all his charges, he retired from public life and lived on a pension granted him by the new sultan. He died at Istanbul in Dhû ‘l-Ka’dâ 1007/June 1599 and was buried in the court of the Şeyhâl Wezfî mosque. His son was Newî-zâde ‘Atâî [q.v.].

Newî was a man of great learning, and his encyclopaedic knowledge was most clearly revealed in the best-known of his works, the *Nawâ’î al-funun wa-madhâbîn al-mâlûkîn wa-madhâbîn al-motun*, in which he surveyed the twelve most important branches of learning; on it see [J. von Hammer] *Encyklopädische Übersicht der Wissenschaften des Orients*, part i, Leipzig 1804, 22 ff., and the German translation of the story of Şhadân and Beshîr, *ibid.*, 24 ff., which forms the concluding section of this work. Bursâli Mehmed Tâhir gives a list of other prose works in his *Ogîmânî mu’dîlsfârî*, iii, 437-8, with references to the libraries in which they are. In poetry, Newî imitated the style of his contemporary Bâkî without however reaching his level. His poems which were collected in a scarce *Diwân* (ms. in Istanbul, Hamîdiyê library), lack ease and betray too readily the learned author who frequently makes his work difficult to understand with unusual words and obscure allusions. He tried his skill in different forms of verse, the *kâdîla*, *qâzelt* and *mehnawî*, without however
attaining popularity in any one of them. His fame as a poet was completely overshadowed by that of his contemporary and friend Bakl. New's high position as an author he owes to his learned work, particularly in the fields of kalâm, fikh, şâhid, mantık, tasawwuf, and males.

Othman Newres [see below], distinguished him from Tashkopruzade's full life of him (418-27 of the cod. reg. 44, Cat. no. 308 und F. Babinger, Nat., to Tashkopruzade's dhayl, Suleyman-ndme Bib. sala, Vienna). A copy entered upon a legal career. According to the Sidjill-i melâdî, it earned him banishment to Rethymno in 1456 and was buried in the cemetery opposite the entrance to the mosque of Plr staff of Hekim-Oghlu.

In 1302 there was published the names of two Ottoman poets. Newres composed a Divân in Persian and Turkish (printed in Istanbul 1290 and probably 1304), and also a history of the war with Nâdir Shâh in 1143/1730 in which he took part on the side of his stepson Othman Newres [see below], the author of the Order of the Djalwatiyya. Abd al-Razzaâk, known as Newres, or more accurately, Newres-i Kadim, “Newres the Elder”, to distinguish him from Othman Newres [see below], came from Kürkûk in northern İrâk and was probably of Kurdish origin. He seems, however, to have come to Istanbul at an early age to prosecute his studies. Here he became a mûderris but in the year 1159/1746 entered upon a legal career. According to the Sinâlî-i othmdînî, he held the office of kâfî in Sarajevo and Kütahya. His sharp tongue, which found particular expression in daring and malicious chronograms (tawdrikh), earned him banishment to Rethymno in 1456 and was buried in the cemetery opposite the entrance to the mosque of Plr staff of Hekim-Oghlu.

Great changes occurred in the interval 1454-1517, when Muslim civilians came to settle in the town, and Yürük Turks from Anatolia by way of the Aegean plains settled in the Bulgarian villages. The Tahrir T.D. 70, of which the actual census was taken in 1517, mentions Nevrokop as a town, containing 167 Muslim households and 319 Christian households, or roughly 1250 inhabitants. The settlement, which in 1454 was only 4% Muslim now had 34% Muslims. Further rapid expansion is shown by the register T.D. 167 from 1529. By then the Muslims had gone up to 281 households and the Christians to 385. This gives a town of almost 4000 households whilst the Christians had declined sharply, to 385 households. This suggests that besides conversion, immigration must have played an important role. The outcome of these movements was that the population of the town was now composed of 63% Muslims. The number of mahalles also show the reversal of the pattern: in 1529 5 Muslim mahalles and 13 Christian mahalles, in 1569 13 Muslim mahalles and 13 Christian mahalles, which gives the year 1172/1758 for its completion (cf., however, a similarly titled work in the Ottoman Tahrir of Istanbul under the title of the local population must have taken place. The Ne...
6 of Christians. The transformation of Nevrokop from a Christian village into a predominantly Muslim town was stimulated by the erection of a monumental mosque and a school, both of which are still extant. The mosque was constructed by the Beylerbey, Bajazet Bey, son of the Beylerbey of Rumeli, Dayi Karağa Paşa. The latter died in 1456 before Belgrade. His son Mehmed must have erected his buildings in Nevrokop in the 1480s or 1490s, to which the stylistic features point. Shortly before his death in 1512, the favourite of Sultan Bajazet II, Köçja Muşafar Paşa, founded another important mosque in Nevrokop, as well as a külliye. The 1529 Tahrir mentions both buildings, as well as the fact that their founders were both dead (merham), and adds a mesjid of Dâwûdîl. The register also mentions that Mehmed Bey had constructed a bridge over the Kara Su and had allotted the yearly rent of 10 watermills in Nevrokop and Drama, 50 shops and rooms in Selânik and some iron mines near the town. The official list of kâdis, janissaries, tekkes, khans, hamamâns, schools and coffee shops. In 1809-11 the Christian community of Nevrokop had constructed the small mosque of the Archangels Michael and Gabriel. In 1833-41 they built the large and monumental church of the Holy Virgin, expression of the changed conditions under the Tanzimât. In the 1820s, the last great domed mosque of the town was built, of which only old photographs remain. The Sâhname of the vilâyât of Selânik of 1324/1906-7 mentions that the town had 20 makâllâs with 5,882 persons, 5 Friday mosques, four mesjîds, two churches and no less than eight tekkes, pointing to a well-developed Islamic life. Besides this, there were seven schools for Muslims and two for Christians. A Greek source from 1908 mentions that the town had 5,900 inhabitants: 3,865 Turks, 490 Muslim Gipsies, 595 Christians belonging to the Greek Orthodox church and 900 Christians belonging to the Bulgarian Exarchate. The same source mentions that the population of the kada of Nevrokop was in majority Muslim, sc. 51,000 of the 83,000 inhabitants (= 61%). The Sâhname of 1303/1885-6 gives slightly lower numbers but has the same percentage of Muslims. The statistics of Verković and Kânčev give 55% and 53% respectively, with slightly varying numbers.

The Christian community of the town numbered not a single Muslim. An isolated few are mentioned in 1453-4, but by 1529, 13% of the rural population was Muslim and some 28% in 1569-70. This process had the same two aspects as in the town: settlement of Turks, 490 Muslim Gipsies, 595 Christians belonging to the Greek Orthodox church and 900 Christians belonging to the Bulgarian Exarchate. The same source mentions that the population of the kada of Nevrokop was in majority Muslim, sc. 51,000 of the 83,000 inhabitants (= 61%). The Sâhname of 1303/1885-6 gives slightly lower numbers but has the same percentage of Muslims. The statistics of Verković and Kânčev give 55% and 53% respectively, with slightly varying numbers.

The Bulgarian conquest of 1912, during the Balkan Wars, led to a mass exodus of the Muslim population of the town and, to a lesser extent, of the villages. Their place was immediately taken by Bulgarian refugees from the kada’s of Drama and Serres, which had been conquered by the Greek army and were to remain part of the enlarged Greek state. The Bulgarian census of 1926 shows these changes clearly. By then the town numbered 1,057 Muslim inhabitants, but the number of Bulgarians stood as high as 5,882. The 1934 census show that the new trend continued: 824 Muslim and 7,726 Christian inhabitants. After 1912 the mosques, tekkes and hamamâns disappeared one after the other. The oldest mosque of the town, that of Mehmed Bey ben Karağa Paşa, was the last to be given up. It still stands as a ruin (1990). Apart from a few Muslim Gypsy families, Islam has disappeared from Nevrokop, which after 1912 was rebuilt in a new fashion. In the late 1960s, many of the Pomaks were deported to the Rhodope to which the 12th-13th century
Byzantine sources refer. This process is now in full swing. The restoration of Islamic life to the Nevrokop villages has been seen in the large-scale rebuilding during 1991-2 of the mosques of the district destroyed in the assimilation campaign of 1985.

Nevrokop, which in 1978 rose to 17,805 inhabitants, saw its name changed to Göce Deliçev (in 1950). Ottoman Nevrokop was the native town of some Ottoman men of letters. Among them is the very learned poet Ra'na Mustafa Efendi, a Nakshbendi dervish and for long in the service of Muhammad 'Ali of Egypt. He died in 1248/1832-3 in his native Nevrokop. The latter had constructed the last domed mosque in the town, showing close similarity with the buildings of Muhammad 'Ali in Kavalla (erected 1818-21). Of more importance is Zühri Ahmed Efendi, the founder of the Zuhriyye Tekke in Kavalla (erected 1818-21). It was very probably this man who constructed the Saldı̇k fortress on the hilltop overlooking the settlement restored. The foundation inscriptions were composed by the major Istanbul poets of the time, among whom İbrahim Paşa also had the small Saldı̇k fortress on the hilltop overlooking the settlement restored. The foundation inscriptions were composed by the major Istanbul poets of the time, among whom İbrahim Paşa also had the small Saldı̇k fortress on the hilltop overlooking the settlement restored. The foundation inscriptions were composed by the major Istanbul poets of the time, among whom İbrahim Paşa also had the small Saldı̇k fortress on the hilltop overlooking the settlement restored. The foundation inscriptions were composed by the major Istanbul poets of the time, among whom İbrahim Paşa also had the small Saldı̇k fortress on the hilltop overlooking the settlement restored. The foundation inscriptions were composed by the major Istanbul poets of the time, among whom İbrahim Paşa also had the small Saldı̇k fortress on the hilltop overlooking the settlement restored.

Among the architects of the kültülye, we know a Sargis Khalfa, who supervised the construction process. İbrahim Paşa also involved the Chief Architect Mehmed Ağa, ordering him to send some of his junior colleagues to visit the Mustafa Pasha mosque in Gebze and other important vizierial mosques of western Anatolia. The architects were enjoined to study the aesthetic appearance of the buildings and also construction details, bringing back drawings for the Grand Vizier's inspection.

As 12th/18th century Anatolia was only sparsely inhabited, many of the measures designed to further Newșehir were to the detriment of nearby Ürgüb. The seat of the district küddi was moved from Ürgüb to Newșehir, and so was the market; in spite of the distances involved, Ürgüb residents were ordered to henceforth conduct their business in Newșehir. Wealthy people recently settled in Kayseri were ordered to move to Newșehir, and to ensure a stable urban population, well-to-do residents of the new town were forbidden to move their families to Istanbul; 800 families of central Anatolian nomads were also to settle in Newșehir. Scrub land was assigned to the townspeople which they could convert into gardens and vineyards, and they were also granted the land of certain abandoned villages for farming and pasture. In the early 12th/18th century, the urban population of Ürgüb was not a large one. In the 15th/19th century, Newșehir was a small town in the sangak of Niğde, in majority inhabited by Muslims, but with an active community of Turkophone Orthodox Christians. Out of 17,660 townsmen in 1316-17/1899, 10,972 were Muslims and 6,080 Orthodox. Grape cultivation and wine-making constituted one of the region's principal economic activities. The economic productivity of the town which followed the war between Greece and Turkey (1923) resulted in a decline of the vineyards, as the new settlers from Thrace were not familiar with viticulture. However as natural conditions (low rainfall, frosts in spring and fall) limited agricultural options, raisin and wine production soon resumed.

Down to the present day, the Newșehir district has remained an agricultural region. In 1978, 78.6% of the economically-active population was employed in agriculture (1965: 86.2%, 1955: 87.6%). The productivity of many agricultural enterprises is low, due to limited investment in erosion control, irrigation and seed selection. The employment of tractors and the cultivation of sugar beet and potatoes on irrigated land have, however, become sufficiently widespread to push down the demand for family labour. This
Mosque of Mehemed Bey ibn Karadja Pasha, ca. 1490. Only surviving Ottoman building in Nevrokop.

largely through community efforts, the building was deteriorate; but once a museum had been established, was donated by an 11th/17th century governor of Nevşehir. A silver door which an inscription identifies as a Janissary gift. A silver door was donated by an 11th/17th century governor of Kırşehir [q.v.]. After the abolition of all dervish orders in 1925, the complex (located in the town of Hacibektas) has again has a role to play. The complex (located in the town of Hacibektas, i.e. the Andaman Islands, to the north, whose i is not certain. The Andaman Islands appear in Arabic travel and geographical literature as early as the 13th century, when Ibn Juzayy al-Zaman Tahir Marvazi mentioned them. After an occupation by the Japanese in 1945, the Nicobars passed in 1947 to India and are now part of the Union Territory of the Andaman and Nicobar Islands, with the seat of the Lieutenant-Governor at Port Blair in the Andamans. The population of the Nicobars (1961 census) is 14,563.

(C.E. BOSWORTH)
plain, it has proved to be one of the earliest cities to have developed in the region. Even before neighbouring Uruk and Akkad became political centres in the last centuries of the third millennium Nippur seems to have been a religious centre for the independent communities, no doubt because, according to the Sumerian version of the Flood Story, man was first created at Nippur. So it was here that Ur-Nammu, king of Ur built the temple for Enlil, the god of storms, with its great ziggurat. The associated library is one of the richest sources for Sumerian literature ever found, and many of the original documents have been lost; much of what remains was preserved accidentally since the clay documents were used as fill for the walls of later houses. A beautifully decorated chocolate vessel with a cat-like figure in conflict with a snake has been described as a representation of Inanna (Ishtar). When Layard visited the site in 1854 he was overcome by its appearance, and from 1889-1900 an American excavation under the supervision of J.P. Peters (University of Pennsylvania) carried out the first thorough study of the site. More recent excavations have been conducted by McGown (University of Chicago). It was being built on up to the Parthian period. But what Peters described as ‘Parthian columns’ still standing when he was at the site had disappeared by 1948 when the Chicago team were there. The site is particularly suited to new historical assessments, as evidenced by the work of Stone, who integrates linguistic, archaeological and anthropological material in her study. In an unusual Akkadian satirical poem a poor man from Nippur, who has been oppressed by the mayor of his town, is able by his guile to humiliate his oppressor; this may well reflect the attitude of contemporary society to the place, for Nippur is often mentioned in lists of places that are excused the taxation burdens imposed on other towns.

Nippur was also an inhabited place in Muslim times; for example, we find it mentioned in 38/659 on the occasion of a rising against the caliph 'Ali (al-Ṭabarî, i, 3423, 3424) as well as during the Khâridjî troubles (op. cit., ii, 929, 930); cf. also Yâkût, iv, 275, 798, and Ibn al-Fâkhi, 210. In the later Middle Ages we find Nîffar mentioned as a Nestorian bishopric in the chronicles of the Patriarchs (Al-Nâfîr Patrâkûs dus-ṣulmâ al-Maŭâlî, ed. Gismondi, Rome 1897-9), of 'Amr b. Mâṭa (83, 95), and of Maḥî b. Sulaymân, in the period 900-1058 A.D. (cf. also Sachau, in Archäolog. Zeitschrift, 1889, 256, 260-1, and idem, The lands of the eastern caliphate, Cambridge 1905, 72-4; Streek, Babylonien nach den arab. Geographen, i, Leiden 1900, 134-5; Hâshim al-Sa’dî, Dughrayfûsîyat al-mârût al-hadîthâ, Baghdad 1927, 34, 35.

(M. STRECK-[M.E.J. RICHARDSON])

AL-NIFFARI, MUHAMMAD B. 'ABD AL-DJABBAR, Sûfî mystic, whom the principal Sûfî biographers fail to mention, and who flourished in the 4th/10th century, and, according to Hadîj b. Mukhdâtab (ed. A.J. Arberry, London 1935), together with a number of fragments. It is improbable that Nîffar himself was responsible for the writing of his works and a passage to his principal commentator, 'Alî b. al-Dîn al-Tîlîmûnî (d. 690/1291), either his son or his grandson collected his scattered writings and published them according to his own ordering. The Mawâkihit consists of 77 sections of varying length, made up for the most part of brief apothegms touching on the main aspects of Sûfî teaching, and purporting to be inspired and dictated by God; the Mawâkihit is similar in content, and is divided into 56 sections of the same name. The most characteristic contribution to mysticism is his doctrine of wukfâ. This term, which would appear to be used by him in a peculiarly technical sense, implies a condition in the mystic which is accompanied by direct divine audition, and perhaps even automatic script. Mawâkihit is the name given to the state of the mystic in which wukfâ is classed higher than ma‘rîfâ, and ma‘rîfâ in its entirety; as in the Middle Ages, it starts from Babylon and flows a little above lat. 32°30’ N. in an almost straight line eastwards. The geographer Subhârî or Ibn Sarâbîyûn [q.v.], writing in the 4th/10th century, observes that this canal bears the name Nahr al-Nîl only after passing the town of al-Nîl (the modern ruins Nîllîyey). At the present day, it is called only Shâţî al-Nîl throughout its course. Some what east of Nîllîyey a side-canal, now dry, branches off to the south for which, not only in its lower part where it flows by the ruins of Nîffar but along its whole extent, the name Shâţî al-Nîl, the same as that of the main canal, is and was usual. Yâkût, however, says (iv, 77, 798) that Nîffar lay not on the Nahr al-Nîl but on the bank of the Nahr al-Nars, a canal dug, it is said, by the Sasanid king Narsîs b. Bahrain (293-303 A.D.) which leaves the Euphrates at al-Hilla a little below the Nahr al-Nîl and turns southeastward. It was presumably connected by a branch with the southern small canal of the same name which branches off from the Nahr al-Nîl, so that the occurences above referred to the names Nahr al-Nîl and Nahr al-Nars for the river in Nîffar is explained. It should be noted also that the nomenclature of the Babylonian canals changed several times already in the Middle Ages. On the Nahr al-Nîl or Shâţî al-Nîl and Nahr al-Nars, see W.K. Loftus, Travels and researches in Chaldæa and Susiana, London 1857, 238; G. Le Strage, in JRAIS (1895), 256, 260-1, and idem, The lands of the eastern caliphate, Cambridge 1905, 72-4; Streek, Babylonien nach den arab. Geographen, i, Leiden 1900, 134-5; Hâshim al-Sa’dî, Dughrayfûsîyat al-mârût al-hadîthâ, Baghdad 1927, 34, 35.

AL-NIFFAR — AL-NIFFARI 13

is above 'ilm. The wādīf is nearer to God than any other thing, and almost transcends the condition of bayāriyya, being alone separated from all limitation. Al-Niffari maintains the possibility of seeing God in this world; for he says that vision (na'īa) in this world is a preparation for vision in the world to come.

In several places, al-Niffari distinctly touches on the theory of the Mahdī [q.v.], and indeed appears to identify himself with the Mahdī, if these passages are genuine; and this claim is seemingly in the mind of al-Zabīdī, when he describes al-Niffari as sāhib al-da'wā wa-l-maṣmūd (a very large book, according to al-Askari) not a conventional kifīyya, but rather an eclectic who blended the two schools (kifāyā = istilhāfīyya)

is above Cz7m. The wādīf is nearer to God than any other thing, and almost transcends the condition of bayāriyya, being alone separated from all limitation. Al-Niffari maintains the possibility of seeing God in this world; for he says that vision (na'īa) in this world is a preparation for vision in the world to come.

In several places, al-Niffari distinctly touches on the theory of the Mahdī [q.v.], and indeed appears to identify himself with the Mahdī, if these passages are genuine; and this claim is seemingly in the mind of al-Zabīdī, when he describes al-Niffari as sāhib al-da'wā wa-l-maṣmūd (a very large book, according to al-Askari) not a conventional kifīyya, but rather an eclectic who blended the two schools (kifāyā = istilhāfīyya)
With the exception of the brief survey (8 folios) Mas'alat subhdn, and a work entitled al-Maksur wa 'l-mamadiw which is attributed to him but is mentioned in none of the biographies, all the other works have been lost. The Mas'alat has been edited by Y. Muh. al-Sawwas, in RAAD, lviv/3 (1989), 361-91, on the basis of the Zahiriyia ms., madm'za 79. In it Niftawayh examines 32 Kur'anic verses containing the words subhdn or tasbih and comments on them from a linguistic viewpoint, with the support of numerous examples drawn from ancient poetry, hadithi and other literary forms for al-Maksur wa 'l-mamadiw, H. Sh. Farhbd believes it to be the work of Niftawayh and as such has published it in Madgallat Kulliyyat al-Adhâb, Djami'at al-Riyad, iv (1973) (cf. U. Harman, in Studies Arabica et Islamica, Festchrift. for I. 'Abkhs, Beirut 1981, 169 n. 31).

The majority of the lost works were known, however, either by the title or by the quotations drawn from them. A.D. al-'Umari (Niftawayh wa-dawruh fi 'l-kitâba wa 'l-ta'arikh, in Madgailat Kulliyyat al-Adhâb, Baghdâd, xv (1972), 71-102) gives a list of the quotations which are to be found in literature, without any indication of title (cf. F. Sezgin, GAS, viii, 149). Certain of these works feature among the sources for the Lâzâr of al-Kâlî, for the Prâb al-Kurân of al-Nâhhas (ed. 'Âshârî, 15, 48), for the K. al-Murâwûd of al-Masûdî (§1, 3991), for the Siyar al-lâm-nuhâdî of al-Dhahabi (vi, 69, viii, 55, x, 281, 302 ff.) and for al-Khâzûn of 'Abd al-Kâdir al-Baghdâdi (ed. 'A. Muh. Hârûn, iv, 458, ix, 146, xiii, 26). Of his numerous recensions, it seems that only two have survived. In one, he edits the diwan of Suhaym 'Abd Bâni 'l-Hâshâd (ed. Maymânî, introd., 7) and in the other, that of al-Samawâl (ed. L. Cheikho, Beirut 1910).

The disappearance of almost all of his literary works cannot fail to raise questions. For, while it is generally accepted that the loss of a great many Arabic books is most often due to the natural or human scourges which have ravaged the Islamic metropolises, it is remarkable that all the works of a writer of Niftawayh's versatility should have suffered the same fate. It may be suspected that the loss of his work is to be accounted for, to a certain extent, by the eclecticism of this author, in questions of fiqh, his intransigence in the nature of language, his polemics against the murîdî or the absence of one or more disciples dedicated to passing on his teaching.

Furthermore, a point made by Ibn Khayr (Fahrasa, 395-6) may provide a partial explanation of the cause of this loss. In effect, he states that al-Kâlî brought with him from Baghdad to Spain (in 220/942) a large quantity of the recensions and works of al-Niftawayh, in addition to those which he had left behind and which have been taken from him in Kayrawân.

OMAR BENCHEIKH

NIGDE, modern Turkish name Nigde, a town of south-central Anatolia in a fertile plain in the Black Sea. It lies in lat. 37° 58' N. and long. 34° 42' E at an altitude of 1,250 m, 100 feet.

The town is first mentioned in the Turkish period; previously, the chief town of the district was Tyana (Ar. Tuwana), but it is probable that the striking hill which commands the important road from Cilicia across the Taurus to Kayseriye at its entrance to a pass over the mountains had a fortified settlement upon it in the pre-Turkish period. The old place-name may be the origin of the modern one, an older form of which was Nekte (Yâkût, iv, 811, Nakkâdî; Ibn Bîbî and others, also in inscriptions down to the 19th/18th century, Nakkâda; the modern form Nigde is already found in Hadm Allâh Mu'tamîfî, Nuzhat al-ja'âlîb, 99). In this particular district, some villages have retained their ancient names (Andaval-Andabalis, Melegopol-Malakopaias), and considerable numbers of descendants of the original Christian inhabitants survived until the early 20th century (R.M. Dawkins, Modern Greek in Asia Minor, Cambridge 1916, 16 ff).

Nigde is first mentioned in connection with the partition of Seldijik territory among the sons of Khâdîr Arslân II (685/1289), when it was allotted as an independent lordship to Arslân Şahî (Ibn Bîbî, ed. Housma, in Rec., i, 11). Nigde had perhaps previously belonged to the Danişmendids (q.v.), but Ewliya Celebi, i, 189, cannot be taken as evidence of this. Kay Kâwîs I granted Nigde to the Amîr-i 'Akhûr Zayn al-Dîn Baghîr (Ibn Bîbî, 44), who shortly before his death occupied the important mosque of 'Allâ al-Dîn here (620/1223). In the 7th/13th century Nigde was the headquarters (sar-i 'ashkar) of one of the great military districts of the Seldijiks. Under Khâdîr Arslân IV, Ibn al-Khaṭîr Masûdî held this office. At first an ally of the all-powerful Mu'in al-Dîn Parwâne (q.v.), with whom he killed the sultan in 662/1264, he endeavoured to remove the young Kay Khusrâw III out of the Parwâne's influence and brought him to Nigde (674/1276). But the help for which he had appealed to Egypt came too late, and he succumbed to the Parwâne, who was supported by the Mongols (Ibn Bîbî; Weil, Gesch. d. Chaliften, iv, 80-1). He built a wall in Nigde opposite the 'Allâ al-Dîn mosque (666/1268). Under the Ilkâns, there ruled in their name, or in the name of their Anatolian governor Eretma, Sunkdur Agha, who is known only from inscriptions and is, it is remarkable to note, not mentioned by any of the Christian historians of Nigde about 1353 (ii, 286-7, tr. Gibb, ii, 433); he may have been independent after the death of sultan Abî Sâ'îdî. He gave the town a large mosque, on the wall of which facing the Bezistân is a Persian inscription, in which he grants Christian foreigners exemption from dîrham and kharâdî (736/1335).

The Seldijik princess Khudâwûd Khâdîn, buried in 732/1332 in her splendid turbe built in 712/1312, on the other hand, probably did not rule
in Nigde although she resided there. She was, if the lady buried beside her in 745/1344 was her daughter, according to al-'Umarî (ed. Taeschner, 31), in the Bulghardagh, where a wilayet called Shudâ'î al-Dîn is still mentioned in Sa'd al-Dîn (i, 517, following Idrîsî) and where lies Ulûkîhîa, which, according to Hâджji Khâlîfî (Dîshân-numâ, 617), was also called Shudâ'î al-Dîn. After the period of Sunkur's rule, Nigde probably passed directly to the Karamañoğlu, who held it against the attacks of the Ertuğrul's Abâlîgûl (Abâ' al-samîr) (Bezm u rezm, 424, 523). After Timûr's invasion, the Karamanids, who defended it successfully against towns to the Ottomans, but was restored to the power of the Karamanids extended northwards as far Kacli Burhan al-Dîn, lord of Kaysariyye and Siwas lîd al-Dîn mosque, one of the oldest mosques in Kaysariyye itself. Nigde then ceased to be a frontier town. Apart from a temporary occupation by Mamlûk Egyptian troops in 822/1419 (We1, v, 146 ff.), it enjoyed peace and prosperity and the special care of the Karamanids, who had one of the bulwarks of their power there till the end of the dynasty. A series of buildings, the first of which not only in time but also in size and quality is the Âk Medrese of the general Isâh Pasha, who had the defences of the town restored. In 878/1473 the Ottoman sânâgk-bey of Nigde, Koçî Bey, forced Deweli Karâhîsârî, which still belonged to the Karamañoğlu, to surrender to prince Muştafa. The latter died on the way back at Nigde (Sa'd al-Dîn, i, 517, 550).

The sângîk of Nigde belonging to the beylerbeyîgî of Karamañoğlu, contained the kadad of Ürgûb, Bor, Dewelu, Deweli Karâhîsârî and Ulûkîhîa. In about 1132/1720 the grand vizier İbrahim Pasha transformed his birthplace of Mushkara in the kadad of Ürgûb into the imposing town of New-hîshîr (q.v.), of evidence of their interest in the town. Nigde surrendered in 875/1470 to the Ottoman general Isâh Pasha, who had the defences of the town restored. In 878/1473 the Ottoman sângîk-bey of Nigde, Koçî Bey, forced Deweli Karâhîsârî, which still belonged to the Karamañoğlu, to surrender to prince Muştafa. The latter died on the way back at Nigde (Sa'd al-Dîn, i, 517, 550).

The sângîk of Nigde belonging to the beylerbeyîgî of Karamañoğlu, contained the kadad of Ürgûb, Bor, Dewelu, Deweli Karâhîsârî and Ulûkîhîa. In about 1132/1720 the grand vizier İbrahim Pasha transformed his birthplace of Mushkara in the kadad of Ürgûb into the imposing town of New-hîshîr (q.v.), and the fiefs for the garrisons of the defended fortresses of Nigde and Deweli Karâhîsârî were transferred to the new foundation (von Hammer, Görî, iv, 250-1). At the end of the Ottoman period, the sângîk of Nigde, to which the last of the lady Sâhârî was married, contained 148,700 Muslims and 49,551 Christians, the latter mainly nates and mostly speaking Turkish. Nigde was the residence of the metropolitan of Konya. The town numbered at this time 11,526 inhabitants, but in 1927 (after the exchange of populations with Greece) only 9,463.

Nigde (now on the Kayseri-Ulûkîhîa railway) consists of an upper town running north and south, now largely uninhabited (Tepe Wirane), at the highest point of which in the north stands the imposing citadel, and the lower town (Şehir altî) which was once surrounded by a wall. In the upper town is the ʻAlâ'î al-Dîn mosque, one of the oldest mosques in Anatolia, with an architect's inscription in Persian. Before the gate of the upper town at its south end is the Gothic-influenced mosque of Sunkur (ca. 1330), showing influences from Little Armenia and Cyprus, and to which below it is the Karamañoğlu Âk Medrese of 812/1409. A little apart to the west of the town, separated by a broad road, running north and south is the modern quarter of Kayabağhi with a few remains of the old cemetery and a group of türbes, among which that of Khudâwând Khâtûn from the year 712/1312 is prominent.

Modern Nigde is also the chef-lieu of an il or province of the same name; in 1970 the town had a population of 84,427 and the il, which has good agricultural land where it can be irrigated, one of 408,684.

(P. Witterk*)

NIGER, the great river of West Africa, with its source in the southwestern Féta Djallon (q.v.) at an altitude of 800 m/2,624 ft. It runs northeastwards to the Sahara Desert, and then it turns southeastwards before descending southwards and ending in its delta on the Gulf of Guinea, in present-day Nigeria (q.v.).

Under the name of al-Nîl, the Niger river appears early in Muslim geographical writing, perhaps first in Ibn al-Fakhî (q.v.), whose Kitâb al-Bulâtân was completed after 290/903. For many centuries, however, Muslim geographical analysis of the river was strait-jacketed by widespread deference to the Ptolemaic model linking the Niger to the Nile. The early geographers seem frequently also to have regarded the Niger and Senegal rivers as one and the same. This was the northernmost part of the Niger, the so-called Niger bend (boucle in French), flowing eastwards through the desert, which first became known to the outside world in some detail.

Two major centres of trade, political centralisation, and religious change here first attracted Muslim attention, Ghâna (q.v.) some distance west of the bend but with its sphere of influence extending to the river, and Gao (q.v.) (variously Kûkû, Kawakkaw, KîRîK, Kâhû, etc.) lying on the river after it has turned south at the eastern tip of the bend. Ghâna and Gao were known in the first half of the 3rd/9th century, even before the Niger. Al-Muhallabî (q.v.), who died in 380/990, was perhaps the first to associate Gao with the river; his own work is lost, but Yâkût quotes the following passage:

Kûkû, the name of a people and a country of the Südän ... Their king pretends before his subjects to be a Muslim (yuzâhî bi 'l-îslâm) and most of them pretend to be Muslim too. He has a town on the Nile, on the eastern bank, which is called Sarnâh, where there are markets and trading houses (maładî) and to which there is continuous traffic from all parts. He has another town to the west of the Nile where he and his men and those who have his confidence live. There is a mosque there where he prays but the communal prayer-ground (musâlâh [q.v.]) is between the two towns. In his own town he has a palace which nobody inhabits with him or has resort to except a eunuch slave (khâdîm makstu'). They are all Muslims ...

It seems unclear exactly how much of this is from al-Muhallabî; there is an internal inconsistency concerning the extent of local Islam. The passage, nonetheless, is interesting. The river here is a meeting-point, with markets and trading houses nearby, implying considerable trans-shipment between land and water transport. A religious meeting-point too: the reference to a pretended Islam may indicate "mixed" religion, with Muslim and traditional elements commingled; isolation within the royal palace may echo an earlier (and still surviving?)
To the staff of (divine) assistance, all its creatures obedient, its water creatures were turned on their backs, their teeth and their fangs broken. They became for us as food offered to a guest; like game animals they became tractable, and its water became like quails and manna—a limpid cup. Until we returned...

(H.J. Fisher)

The Niger Republic is, to quote Djibo Mallam Hamani (though specifically of the Abar Massif, which fills the north of it), a "carrefour du Soudan et de la Berbérie". Its geographical position on the map, and the multi-ethnic character of its societies, has had a profound effect on the Islamic life of the Nigeriens throughout their history.

1. Geography and peoples

The Niger Republic covers an area of some 1,267,000 km². However, 800,000 of these are within the Sahara, much of which is uninhabited or is uninhabitable. The bulk of the remainder of the country is Sahel. It is only along the banks of the Niger river (q.v.) where Niamey, the capital, is located that there is any intensive cultivation and continuous settlement. Within the Sahara area are found the mountains of Abar (Air [q.v.] or Azbin). This massif extends approximately 480 km north from the Abar river—sound advice turned down because men of religion were judged unfit for counsels of war. An estimated 2,000 boats were available to evacuate Gao, but again no full-scale withdrawal occurred. The Moroccans, having occupied Timbuktu, and desperate for boats, cut down every tree, even stripping houses of their doors. A branch of the legitimate *tana* dynasty retreated downstream from Gao, to the Dendi region, where, protected by rapids, forest, and the river barrier, an independent Songhay presence successfully survived. Comparable patterns of raiding and sanctuary-seeking, depopulation and repopulation, communication and conflict, recur at divers times and places: Samuel Crowther’s 1854 journal, for example, of travel on the lower Niger and the Benue, gives many instances in the aftermath of the Sokoto expedition in 1857.

The liminal experience of river crossing figures in many accounts of pilgrimage, *gihad*, etc. Abdullahi dan Fodio’s *Tazyn al-warad* mentions several cases, one of special interest. Describing a raid across the Niger early in the Sokoto *gihad*, the prose version recounts the plucky, and lucky, finding of a practicable ford. The verse rendition, coloured by the Qur’ān (VII, 160, XX, 77-80, XXVI, 63), elaborates:

When we came to the river it obeyed, parting

**divine kingship. The river is at the same time a barrier:** Sarnah, the trading town, is east of the Niger, outside the bend; in another town, on the western, inner bank, the king lives with his own people, with those in whom he has confidence—suggesting that there were some traders and other visitors whom the king mistrusted.

As well as a meeting-point, and a dividing line, the Niger was also a channel of communication. Abū ‘Ubayd al-Bakrī [q.v.], writing in or before 460/1068, well described the route from Ghānā to Kawkaw, mentioned here, down the Nile through the desert, and locating pagan Sūdān south of the river, Muslim Berbers to its north. Al-Bakrī places the town of Kawkaw inside the bend, curiously not mentioning any settlement on the opposite bank here. Journeying north and west along the Niger, from Gao back towards Ghānā, al-Bakrī has the traveller encounter the cannibalistic Damdám, whose local religion is described; whether these details are correct or not, they do suggest that the traveller is inside the bend, while the described route from Ghānā to Gao follows the northern, desert bank. Al-Bakrī vividly pictures Gao, comprising two towns, one Muslim, the other the royal residence. During the royal meals, a drum is beaten, women dance, and all business in the town ceases; leftovers are then thrown into the Niger with the river. The king is Muslim, “for they entrust their lives to the king of Muslims”.

The celebrated geographer, al-Idrīsī [q.v.], in the mid-6th/12th century, refers often to the Niger, but with the river. The king is Muslim, “for they entrust their lives to the king of Muslims”.

French West Africa. Even so, pockets of paganism survive. For example, the Wodaabe Fulani are still pagan in many of their beliefs and in their practices (see Carol Beckwith and Angela Fisher, Nomads of Niger, London 1984, and A. Malik Bonfigliori, Dudaal, Cambridge-Paris 1988), though belief in magic, in charms, in djinn and demonic forces is to be found amongst all the nigerien communities (see, for example, the keli telf among the Ayar Tuareg, in D. Casajus, La tente dans la solitude, Cambridge-Paris 1987). Throughout its Islamic history, Niger has witnessed the growth of Šufi [see ātābiy] movements and of various branches of Islamic thought and religious studies. They embody a position which has been sensitive to puritan reformist movements inspired by the works of 'Abd al-Karlm al-Maghlli [q.v.], by the teaching of Shaykh 'Umar Djiibril, by the Sokoto djihiyd of Shehu 'Uthmân dan (b. Fodi) (Füedi) [q.v.] and by reformers inspired by the Wahhabiyya [q.v.]. The Tuareg scholar community (inselaman) has played a major role in composing literary works in Arabic, or in religious verse in Arabic and Tamashegh, out of all proportion to their meagre numbers (see below).

When Niger became independent in 1960, it was established as a secular republic. In the 1970s it sought closer ties with the Arab World. On August 15, 1974, steps were taken to constitute a Niger Islamic association and plans were pursued to found an Islamic university. This has now been established at Say, south of Niamey. Students from all over Muslim West Africa are taught there. Nigersien students have been sent to study in the Arab East, and there is considerable encouragement to teach classical Arabic at all levels. According to J.-L. Triaud, Islam and state in the Republic of Niger (1974-81), in Islam and the state in the world today, ed. O. Carré, New Delhi 1987, 253, “The new regime has drawn from this Arabized group to fill certain fundamentalist tendencies”. O. Carre, New Delhi 1987, 253, “The Republic of Niger (1974-81), in Islam and the state in the world today, ed. O. Carré, New Delhi 1987, 253, “The new regime has drawn from this Arabized group to fill certain fundamentalist tendencies”.

Niger has become integrated into the life of the nigeriens over the centuries through a gradual process of Islamisation. It has produced a number of Arabic scholars and poets worthy of a place beside those from Timbuctoo in Mali, or from several towns in Mauritania and of the diversity of religious leaders, regions, cities and events, have played a key part in determining that Islamisation:

(a) The earliest encounters between the Arabs, led by the Companion, and commander 'Ukba b. Nafi' [q.v.] and the inhabitants of the oases of Kawar, on the Fazzân border. This was followed by commercial contacts between the communities of the Ibi'diyiya [q.v.] in the Fazzân and towards the region of Ayar (see, in particular, K. Viskar, The Oasis of Salt, the history of Al-Fazar, a story of economic development, Bergen 1979, 97-111). Viker furnishes a useful selection of passages from important Arab geographers (159-76 together with English translation) including Ibn 'Abd al-Hakam (d. 258/871-2), al-Ya'kubi (wrote 278/891), al-Bakri (wrote 460/1067-8), al-Idrisî (wrote 548-1154), Ya'qût (wrote 621/1224), Ibn al-

Athîr (d. 630/1233), Ibn Sa'id (wrote 638/1240) and al-Harrânî (wrote ca. 1330). (See also T. Lewicki, Eldjes habirines et soudanaises, i, Warsaw 1976, 59-60.)

(b) The establishment of Berber Massûfa Sanhadja (who originated in Mauritania and Mali) centres in the vicinity of Takaddâ (Tegdidan Tesem/Zelik), and later within the Ayar massif itself. The area was visited by Ibn But_liy [q.v.], in 754/1353, who mentions the names of two kāds. Two noted scholars from Takaddâ and its satellite Anû Şamman were al-'Abîb b. 'Abd Allâh, d. after 955/1548-9, and al-Nadîjî b. Muhammad d. after 1004/1695-6. Both of them wrote substantial works on the Muktasas as al-Khalîl and left other religious compositions (see J.O. Hunwick, The Central Sudan before 1800, biographies and bibliographies, in Arabic literature in Africa, no. 1, North-western University, Evanston 1985, 23-41). The Great Algerian reformer 'Abd al-Karlm al-Maghlli [q.v.] allegedly visited this area for a while on his way to GaO.

(c) The religious significance of the foundation of the Agâdes sultanate, recognised by the caliphate, in the 15th century, its supplanting of Takaddâ, its temporal subordination to the Askias and to Borno, its rôle as a clearing house for trans-Saharan commerce and its growth as a focus and haven for scholars who were in touch with Djâlâl al-Dîn al-Suyûtî [q.v.] by correspondence, and who visited the Arab East. Each and all made an impact on more southerly areas of Niger.

(d) The establishment of Kâdiriyiya lodges in Ayar, for example, at Agalal and in Agâdes city. Other Šufi orders followed. Prominent amongst them was the Shâdîliya. Evidence of a Shâdîli presence in the city of Agâdes in the mid-17th century may be found in the biography of Shaykh 'Uthmân b. al-Shâykh 'Ali al-Huḍâry whose compositions are cited in a manuscript (now being edited in Libya), of a work attributed to Ahmad al-Dârîdî al-Huḍâryî. It contains the biographies of leading Fazzânî scholars. A specifically Tuareg and Fulani order that was founded by a little-known Oriental darwîsh, Šîh Ṣâmîr al- Baghîdâdî, martyred in the early 16th century, has become the focal point of Ayar Šufism in general. He appears to have been an eclectic divine (the only Mahmuđîyya founded elsewhere is a sub-order of the Nukṭawîyya, dating from about the same period, though it is to be doubted whether there can be any connection). Later, both the local Suhrwâdiyya and the Khâlwaitiya adopted, adapted and possibly “sanitised” many of the teachings and practices (ddâb) that were handed down in the Mahmuđîyya.

Šufism spread from Ayar into adjacent Azawagh, and at a later date into the Imanan canton, in Zerma country, and to a Šûtî awzîya established, under Borno’s aegis, at Kalumbardo, near Lake Chad, though within Niger’s existing borders. In Agâdes city, the sultanate attracted scholars and sustained a number of ulamâ and fûkhâhs who were revered amongst the city’s mixed population.

(e) The reform movement of the Agadès-born Djiibril b. 'Umar (died after 1198/1784). He visited Egypt and Mecca and his pupils included Shaykh 'Uthmân b. Fudi. The latter at a later date criticized his master’s view that one who commits a grave sin (kabîra) becomes an unbeliever, a view that was akin to that used by earlier petty Tuareg mudžâhâdin from the Ibkorkaryan and Ait Awari in the region, in order to justify their razing of Šufi centres in villages of Azawagh and Ayar.

(f) The Sokoto djihiyd itself, during which the
Islamic movement embraced large Hausa areas of Southern Niger, especially Gobir, the Agadès sultanate, the Aïr Awari (where Muhammad al-Dawâlînî their leader tried to settle his followers) and other Tuareg groups such as the Kel Geres. The Hausa and Zarma river areas were subject to inroads from the IWWillemmeden Tuareg whose “chaplain”, the Keessu, were often adept of the Kunta Kâdiriya and who habitually fabricated charms and potions and who issued fatwas and composed sermons.

(g) Sanûsí [q.v.] penetration into northern Niger from 1870 onwards. The rebellion of Kaoussen against the French in Agades and Ayar, were backed by German-Turkish military sponsors based in the Fazzàn. The consequences of the French expedition, mounted from Zinder in 1906, and which achieved the defeat of Kaoussen’s mudjahîdîn in 1916, was to lead to a mass emigration of population from Ayar and major destruction of its Muslim centres (see Va., 1850-1960, Kaoussan ou la révolte sennoussiste, in Etudes Nigréennes, no. 33, Niamey 1973, and F. Fuglestad, A History of Niger, 1850-1980, Cambridge 1983).

(h) The current Islamic revival; this has included a Khalwatiyya headquarters in Ayar at Egandawel (accompanied by an agricultural settlement at Tabbelot-Akririb) inspired by a revivalist, Mûsâ Abâtûtî, a resurgence of Islamic practice in Agades (see Aboubacar Adamou, Agades et sa région, in Etudes Nigréennes, no. 44, 318-21), and growth of the Niassist Tidjânîyya amongst Hausa and Zerma, led by Shaykh al-Hâjîdî Abû Bakar, from Kouta, near Dosso, who married a daughter of the master, from Kaolack in Senegal. The Niassists, the madrasa at Say, neo-Wahhâbîm, fundamentalism, and the Niger Islamic Association, and the reformist movement, strong around Maradi, aiming at an increase of wealth, and the building of madrasas, known as tâlîîs (dîqamat tâlîîat al-bîdîa wa-iskâm al-suûna) to name the most important centres of power, all make a significant contribution or compete for the souls of the Muslims in Niger today.

NIGERIA, the largest of the West African coastal states.

i. Modern Nigeria

Nigeria was put together in 1914 from the former British protectorates of Northern and Southern Nigeria, to become the Colony and Protectorate of Nigeria. It is bounded in the south by the Gulf of Guinea, in the west by Benin, in the north by Niger, in the north-east by Chad [q.v. in Sudan and Chad] and to the east by Cameroon. The administrative capital is Abuja. The chief towns include Lagos, Ibadan, Ilorin, Kano and Sokoto. The population as at 1984 was 88,148,000 in an area of 923,768 km²/356,574 sq. mls. This comprises more than 250 tribal groups, of which the largest are the Hausas [see Hausa], the Fulani [see Fulani] and the Kanuri of Bornu [q.e.], in the north; the Yorubas in the south-west; and the Iboes in the east.

The terrain encompasses the sandy shoreline and mango swamps of the coast, behind which lies a belt of tropical rain forest. This gradually gives way to orchard savannah as one moves north, to the area of Zaria. From there on the country becomes progressively drier and more barren until one reaches the thin scrub savannah and the near-desert conditions of the immeasurably sub-Saharan north.

Nigeria has numerous rivers, of which the Niger [q.v.], the Benue and the Gongola have been historically important. The coastal area has two rainy seasons. The highest annual rainfall exceeds 2,500 mm/100 ins. This decreases the farther north one travels. The northern dry season extends from October to April and is the time of the harmattan, the hot, dust-laden wind from the Sahara.

The main religions of Nigeria are Islam (ca. 50%);
Christianity (ca. 34%) and a receding African animism.

A.H.M. Kirk-Greene, in his *The linguistic statistics of northern Nigeria: a tentative presentation*, in *African language review*, vi (1967), 75-101, lists some fifty-three "‘Other northern languages’" in addition to Hausa, Fulani, Kanuri (of Bornū), Tiv, Nupe and Yoruba that were still spoken in northern Nigeria ca. 1952. The total number of languages spoken in the whole of Nigeria has been put at 250. Hausa, Yoruba, Edo and Ibo are now the most widely used indigenous tongues. British English is the official language of the present Federal Republic of Nigeria, although there is strong pressure in the north for Hausa to be adopted as the national language. The minor northern vernaculars, some of which are confined to individual villages, are becoming extinct, replaced mainly by Hausa.

On 1 October 1954, the Federation of Nigeria was established under British tutelage. It consisted of an Eastern Region, a Western Region and a Northern Region, together with the Southern Cameroons and the Federal Territory of Lagos. The Federation was granted independence on 1 October 1960, within the British Commonwealth. It consisted of Northern Nigeria, Western Nigeria, Eastern Nigeria and the Federal Territory of Lagos. In 1963 it became the Federal Republic of Nigeria.

Nigeria experienced widespread disturbances, a military coup and then a civil war during the period from 1966 to 1970. During this time the Republic of Biafra was declared in the former Eastern Region. It surrendered to the Federal Republic in 1970, at the end of the civil war. After a further period of military rule, a return to parliamentary government based on military coup and then a civil war during the period that followed is tenuous. It seems that Muslim-Hausa traders were settled in the kingdom. Under their influence the Yaurawa were won over to Islam by the end of the 11th/14th century. This is reflected in the Yoruba word for a Muslim—*imale*. Subsequent Yoruba history has included a tussle between the ancient cult of Ooduwa, centred on Ile-Ife, and an intrusive Islam from the north. A substantial Muslim community had developed among the Yorubas by ca. 1078/1667. As a result of political rivalries within the Yoruba empire of Oyo [q.v.], an Islamic party revolted against the traditional authority early in the 13th/19th century. Consequently, most Yorubas were drawn into the aftermath of the Islamic *ghādā* [q.v. and also *muqāহid*] in the north and were formally incorporated into the empire of Sokoto, as the emirate of Ilorin, in 1246/1831. But other Yorubas remained outside the emirate, in Lagos and elsewhere. They have continued to be subject to Islamic influences, none the less.

Islam is less complete among the Yorubas than it is among the northern Hausas and Fulani. Many are Christians, or adhere to the ancestral belief system. It is not uncommon to find Muslims and Christians in the same Yoruba extended family.

The Nupes, located within the northern angle of the Niger-Benue piedmont, resemble the Yorubas in their continuing attachment to an ancestral cult and language. They were in trading contact with the Muslim Hausas as early as the 9th/15th century, and have experienced Islam from that point on. Yet there is no firm evidence of the official adoption of Islam among them until early in the second half of the 12th/18th century. Thereafter, there is evidence of a swing back to the traditional belief system among some Nupes, later in the century. In modern times, Islam has become stronger among them; but not all Nupes are Muslims, even today.

The Kwararafas are a warlike people inhabiting the Gongola and Benue valleys. They have been traditional enemies of the Hausas to their north. A Muslim tradition among them cherishes a fantastic legend of origin in Yemen, which echoes the *Sūra* [q.v.] story of the Prophet's letters to erstwhile hostile neighbours, calling them to Islam. It is surely an importation of the Kwararafa early in the 13th/19th century. Its trading pre-eminence thereupon declined. It became absorbed into the Islamic empire of Sokoto [q.v.].

The ancient kingdom of Kebbi, located north-west of Zamfara, may have come under Islamic influences during the hegemony of the Songhay empire. Its ruling family had accepted Islam by 921/1515. Its inclusion among the *Banza Bakwai* is tenuous. For the Kebbaa appear to have used Hausa only as a trade language; while their claim to Islam is as ancient as that of the Hausas.

Yauri is the chief market of Kebbi, astride the route to the “Fulani” kingdom of Sokoto (q.v.). The “Bastard Seven” are a neglected note of Hausa history. They overtook Zamfara's territory at the gold-bearing regions of the Volta. By 1025/1616 it seems that Muslim-Hausa traders were settled in the kingdom. Under their influence the Yaurawa were won over to Islam by the end of the 11th/17th century.
committed to polytheism. However, more recent pressures for a uniform, Sunni, Maliki Islam throughout northern and riverain Nigeria now impinge upon them.

The Gwaris are scattered in the country of southern Zaria. Their Islam is of uncertain date and tenacious substance. Some venerate an Allah Bango, "Allah-of-the-book-boards", surely a reference to the presence of literate Hausa malams (Hausa = "ulamah") among them. Another of their deities is "Shehu" or "Shekohi", probably reflecting Hausa "Shehu" (shehka) "Ugmann" b. Fodi [q.e.]. Not another in "Mama", "Mabu", "Mewa", "Mubammad." While the origin of these Islamic fragments is uncertain, their most likely provenance is the Muslim drive south that followed the 13th/19th-century jihad in northern Nigeria. As is frequent among the Muslim Hausas' smaller neighbours, a reformist, SunnI Islam has won northern Nigeria. As is frequent among the Muslim Hausas' smaller neighbours, a reformist, SunnI Islam has won.

The development of Islam in Nigeria remains the Fulani [see FULBE], Borne and certain smaller, animist groups such as the Dakarkaris and the Plateau people.

iii. Recent trends in Islam in Nigeria

Lugard's amalgamation of Southern and Northern Nigeria resulted in bundling the Ibo, Ibibios and other non-Muslim peoples of what, during the colonial period, was known as the Eastern Region, together with the Muslim northerners, in one federation. These people had remained untouched by Islam—except as potential slaves—up to the colonial occupations. Many had by this time become protégés of Christian missionaries from the Coast. They were mainly Roman Catholics. They continued under missionary tutelage until Nigerian independence, the civil war, the oil boom and a series of military coups, brought about sweeping changes.

During the colonial period these invertebrate petty traders from the east flocked north in the train of the British. Because of their missionary education many became minor civil servants. They set up Sabon Garis "New Towns", outside the northern Muslim cities. With Nigerian independence approaching, they became the victims of ethnic and religious hostility on the part of the Muslim northerners, which their own posturing prior to the declaration of Biafra did nothing to diminish. Immediately before the outbreak of the civil war, a mass exodus of Ibo from the north, back to the east, took place, against the background of an ugly blood bath.

After the civil war, and in the more congenial atmosphere of the Nigerian oil boom, Ibo and other easterners returned to the north, as traders and in certain professional capacities that ranged from bank clerk to lecturer in the new northern Nigerian universities. However, they faced different conditions from those that had obtained under the British colonial administration. For there was among radical northern Muslims a wide consensus that such returning easterners should subscribe to Islam, as a condition of their new acceptability in the Muslim north. This was not official, and was seldom openly expressed. It was, however, the unspoken extension of the policy of "Northernisation" that the old Northern Region had officially adopted during the terminal days of the colonial administration, and continued ever since. While Christian enclaves of eastern and Coastal Nigerians remain in northern townships, there are, nonetheless, an increasing number of "Musas", "Aliyus", "alii in northern Nigeria who, apart from such names and the Hausa-Muslim riga, display all the characteristics of a southern, Coastal Christian mission upbringing. How significant such conversions of convenience may be, is questionable. Nonetheless, they represent a widening of Islamic influence.

Such pressures have a precedent. From ca. 1380/1960 to his assassination in 1385/1966, the Sardauna of Sokoto, then Premier of the Northern Region, pursued a policy of "Islamisation", the purpose of which was to persuade—or coerce—all indigenous northern Nigerian peoples to accept Islam. It had the fervour of "Djihad of the Heart" behind it. It also involved some harassment, as well as bribery, of residual animist groups such as the Dakarkaris and the Plateau people. And it convinced, or allowed certain Ibo army officers to claim, that the Sardauna was preparing Holy War against all non-Muslims. This then became part of their justification for declaring an independent Biafra. In the event, the Sardauna's campaign resulted in widespread nominal conversions, in which chiefs, village heads, etc., adopted Islamic names in addition to their traditional ones. This was taken as sufficient to establish the Islam of their people as a whole. Once again, it is questionable how deep such mass "conversions" go. But certainly the Sardauna's essay after the hearts and minds of his non-Muslim countrymen has been a precedent after the renewal of which in a more thoroughgoing fashion, northern Muslim radicals now hanker. They enjoy some support in this among certain Yoruba Muslims.

The period from the end of the Second World War to the granting of northern independence in 1960, is known to the Hausas as Zamanin siyasa, "The Time of Politics". It saw the rise of Nigerian political parties, superficially resembling those of the British parliamentary system. In fact, the Northern Peoples' Congress (NPC) was identified with the interests of the aristocratic Fulani emirates and the "Native Authority" (NA) system that sustained them. It advocated a modified Islamic theocracy for independent northern Nigeria. This party was challenged in the north by the Northern Elements Progressive Union (NEPU), ostensibly mimicking the European left but also representing the ancient antagonism of Hausa commoners towards their Fulani overlords; and pursuing a tradition of Islamic dissidence. It was closely associated with the Tijaniyya [q.e.] tarika, that had, hitherto, reflected this dissidence. Both parties vied with one another in their claims to represent the true Islam, and excoriated the other for betraying that Islam. By and large, the establishmentarian NPC had the better of the radical NEPU, a consequence, no doubt, of the prevailing ethos of Sunni, Maliki conservatism at that time. Their tussle produced a plethora of different Hausa political verse, admirably recorded by Haruna Abdullahi Birniwa and dissent; a comparative study of NPC/NPN and NEPU/PRP Hausa political verse from circa 1946 to 1983, PhD thesis, University of Sokoto, Nigeria 1987, unpubl.)

The Nigerian civil war, the oil boom and the military administrations shattered the old Islamic party lineaments and created new interests and alliances. While the People's Redemption Party
and contrast what they regard as the admirable stability of the Muslim extended family. But this greater freedom has led to Islamic theocracy. As the banners of radical-Ikhwan al-muslimin \[q.v.\] widely mimics the broad philosophy of the Saudi Wahhabiyya. For, while the conservative Sunn\'i malams still fight shy of such immoderation, a younger generation of Muslim academics to whom the growth of universities in the north has given considerable influence, many are among the most ardent advocates of polygyny, though once again with due regard for the law. They regard it as essential to defend an Islamic way of life, increasingly threatened by secularism. Whatever may be happening elsewhere in the Islamic umma, the decline of polygyny in northern Nigeria is not evident.

Much of the most valuable work on recent developments in Islam in Nigeria will be found in unpublished MA and PhD dissertations. Birnini's work on the Hausa drug trade, not only provides primary source material in the form of Hausa verse; it also includes an acute analysis of the history of the northern Nigerian political parties. Muhammad Sani Aliyu's *Shortcomings in Hausa society as seen by representative Hausa Islamic poets*, MA thesis, Bayero University, Kano 1983 unpubl., throws light on the malam's reactions to secularism; Samaila Mohammad's *Some aspects of the culture and institutions of the Dakarkarki people examined in the light of their consiguiety with the Hausa people*, MA thesis, Bayero University, Kano 1982 unpubl., is an admirable study of contacts between the Muslim Hausas and an animist society; Abdullahi Bayero Yahya's *A critical anthology of the verse of Aljaji Bella Gidausa*, MA thesis, Bayero University, Kano 1983 unpubl., enshrines valuable source material for studying the genesis of NPC. **NIGHT WATCHMAN** [*see *Asasu*] .

**NIHAL CAND LAHAWRI**, Indian man of letters, Hindī by religion, was born in Dihll, but left it for Calcutta. Here he was introduced to Dr. J.B. Gilchrist, who asked him to translate into Hindi by religion, was born in Dihll, but left it for Calcutta. Here he was introduced to Dr. J.B. Gilchrist, who asked him to translate into Hindi a Persian work, *Nuzhat al-kulub*. He consented, and thus became one of the famous band of Fort William translators. He made the translation from Gūl-i Bakāwālī, a Persian rendering by Shāykḩ ʿIzzāt Allāh, 1772, of an old Hindī story, which has been reproduced in Urdu verse by Dayā Shankar i Nasim. It is in Nihal Cand called his work Madhab-ī ṣīḥ. It is a very good prose work with verse. The title gives the date 1217/1802. Apart from the above-mentioned facts, nothing is known about the writer.

**NIHAWAND**, a town in the Zagros Mountains of western Persia, in the mediaeval Islamic province of Bahrādān (cf. al-Baladhurī, 303 n. e, Marquart, *Éranšahr*, i, 117) identifies him with the town of *Našīm*. It is in the same legend is reflected in the name of the river Gāmāsāb (*Gāw-māsāb* = "water of the bull and fish"); *mārī* is the Kurdish form of the Persian *mārī*.

In modern Persia, Nihawand is the chef-lieu of the district of Nihawand (formerly called Mah-Bahrādān or Māh-Dīnār) which was under Nihawand (cf. de Morgan, *Mission*, ii, 136: *Rūḍīdawīr*) and was famous for its abundance of water (cf. al-Īṣākhī, 199). For a list of the places more or less dependent on Nihawand, cf. Schwartz, *Iran*, 505-9. In the Mongol period, Hâmid Allâh Mustawfī's *Nauhat al-balûb* mentions three districts of Nihawand: Malâviẓ (now Dawlatabâd), Isbīdhān (*Isbīdhān*), see below) and Djiḥūk.

Near Nihawand was fought the famous battle which decide the fate of the Iranian plateau and in which the Kūfī commander al-Nu'mān b. Mukarrin defeated the Sāsānids generals. The commander-in-chief is given different names: Dhu l-Ḥādhibayn Marīndāshāh (cf. al-Baladhurī, 303 n. e, Marquart, *Éranšahr*, i, 117) identifies him with the Kufi commander al-Nu'mān b. Mukarrin Kāwī Nāṣīm (q. v.). The Kūfī commander al-Nu'mān b. Mukarrin was under Nihawand (cf. de Morgan, *Mission*, ii, 136; *Rūḍīdawīr*), and was famous for its abundance of water (cf. al-Īṣākhī, 199). For a list of the places more or less dependent on Nihawand, cf. Schwartz, *Iran*, 505-9. In the Mongol period, Hâmid Allâh Mustawfī's *Nauhat al-balûb* mentions three districts of Nihawand: Malâviẓ (now Dawlatabâd), Isbīdhān (*Isbīdhān*), see below) and Djiḥūk.

The decision of the battle, which decided the fate of the Iranian plateau and in which the Kūfī commander al-Nu'mān b. Mukarrin defeated the Sāsānids generals. The commander-in-chief is given different names: Dhu l-Ḥādhibayn Marīndāshāh (cf. al-Baladhurī, 303 n. e, Marquart, *Éranšahr*, i, 117) identifies him with the Kufi commander al-Nu'mān b. The district of Nihawand (formerly called Māh-Bahrādān or Māh-Dīnār) was finally incorporated in the possessions of the Baṣraans and called Māh Baṣra ("the Media of Baṣra"); al-Baladhurī, *306*).

Nihawand is often mentioned in the period of the wars between the Saflawids and the Ottomans. In 998/1589 at the beginning of the reign of Abbās I, the Ottoman vizier Cīhāte-zāde (q.v.) built a fortress at Nihawand ("Sīmārā, 372"). After the death of Murād IV, a rebellion took place among the garrison of Nihawand; the Ottomans were driven out by the Shīfī inhabitants. As a result, in 1012/1603 war again broke out with Turkey (ibid., 440). In the spring of 1142/1730 Nādir Shāh (q. v.) took Nihawand again from the Turks.

In modern Persia, Nihawand is the chef-lieu (population in 1960, 26,452) of a district of the same name (population 70,000) in the fifth ustan of the province of Kūrdistān.

C.E. Bosworth

NIHAYA (A.), a term of Islamic philosophy which (together with its negation mà la nihâya lâhu) is entirely governed by its lexical meaning. Ibn Manzûr, in L.A., defines it thus: "the extremity (nâhiya) and final limit (kabîr) of a thing; and this is because its final limit prevents it from being prolonged (qamâ-hu an al-amâdî), so that it is stopped (fa-yarattîd)." This definition of nihâya is based on its etymology, since the verb nahi means "to forbid". The nihâya is thus that which forbids access to something beyond a certain limit. Ibn Manzûr explains the Kûrânic phrase sidrat al-muntahâ (L.II, 14) by saying that it is the lotus "which one reaches by arriving at it and which one does not go beyond (wa-lâ yuâlîhâwâz)”.

This concept of not going beyond can apply to such realities as time, space and the division of bodies. Does time have a limit in the past (an original time) or in the future (a final time), limits before or beyond which there is no more time, or is there an extension of time into infinity, an eternity of time a parte ante (al-lam-yazål) which has never ceased to exist in the past, and a parte post (al-lâ-yazål) which will never end in the future? The same question can be put regarding space: does there exist an infinite space, or is it all existing space limited? Likewise, is there or is there not a limit to the division of bodies; is a body composed of an infinite number of parts, or is it built up from a finite assemblage of indivisible atoms? But the concept of not going beyond is also applicable to the operations of thought: does it reach as far as definitive conclusions, i.e. can it define final and "completed" truths, without being obliged to go back incessantly and infinitely in its reasonings, "until there is no nihâya", which is, in the eyes of logicians, the sign of a defect in a proof? One can thus discern that the concept of nihâya is involved in everything touching such problems as what is finite, the infinite and the undefined.

The question in regard to space and time was treated in the discussions of the opposing views of al-Ghazâlî and Ibn Rushd in the two Tahâfûs. Is there a parallelism between space and time in regard to their limits? Al-Ghazâlî, in an eristic form of augmentation against the philosophers, supports it. He remarks that the future and the past are relative to each other, since all future becomes a past, and all past is merely such in as far as it precedes the future.

But these are equally relative to the human soul which, in its present form, represents these two dimensions of time thanks to its faculty of imagination (wa'am, tasawabhum) which, itself, cannot come to a halt, neither to an initial term nor to a final one. Hence it has no nihâya. But the same is true in regard to space; so our imagination cannot be cut off, so that one can conceive of an undefined growth of the world in space (or, contrariwise, an undefined contraction), which raises the question of our knowing whether the world could have been created greater or smaller than it in fact is. Further, one can ask oneself if it could have been created earlier or later. In effect, if spatial dimension accompanies a body, then temporal dimension accompanies movement. If one thus admits, in turn, that the world is limited and that it does not exist beyond the created world as it actually is, neither open space nor empty space, as the philosophers, following Aristotle and his theory of place (tòmos, cf. Physics, book IV), then they must be compelled to recognise that, beyond the movement of the world, there exists no empty time nor filled time, and, as a result, that the world has a temporal nihâya just as it has a spatial one. If the philosophers refuse to grant that the world has a first beginning at which one must stop when one traces back the succession of movements which are characteristic of it, despite being carried away by the imagination, then they are not in conformity with their own beliefs, since they admit a nihâya for space but refuse it for time whilst the case of time is identical with that of space.

Ibn Rushd replies that, if the future and past are relative to our own imagination, they are not then "things which exist in themselves; they have no existence outside the soul and are only a creation of the soul (ghayr tafâlû l-nafs)". The fact that the imagination goes beyond all spatial limit as much as beyond all temporal limit does not imply that, in reality, the case of time is the same as that of space. Or, to be precise, there exists a parallelism between space and time in regard to their non-existence, a great difference: this is that every body, as such, forms a whole, an ensemble which can be added up into a totality, which is not the case with movement which, on the contrary, by its very nature flows along and cannot be halted in a total stop. This is why, according to reason, and not this time according to the imagination, one can conceive of a spatial limit to the world, whilst one cannot conceive of a limit to movement and, consequently, to time, since time is made up of a enumerated number of movements, on which it depends. This is the explanation why, when there is a question of a reality which comes into existence (al-muhâdâ) after its non-existence, one must not trace back the anteriority (kahânîya) of its non-existence to an act of the imagination, since if one does that, one suppresses the reality of what comes into existence and establishes a higher limit of real existence, a fact that every body, as such, forms a whole, an ensemble which can be added up into a totality, which is not the case with movement which, on the contrary, by its very nature flows along and cannot be halted in a total stop. This is why, according to reason, and not this time according to the imagination, one can conceive of a spatial limit to the world, whilst one cannot conceive of a limit to movement and, consequently, to time, since time is made up of a enumerated number of movements, on which it depends. This is the explanation why, when there is a question of a reality which comes into existence (al-muhâdâ) after its non-existence, one must not trace back the anteriority (kahânîya) of its non-existence to an act of the imagination, since if one does that, one suppresses the reality of what comes into existence and establishes a higher limit of real existence, a fact that every body, as such, forms a whole, an ensemble which can be added up into a totality, which is not the case with movement which, on the contrary, by its very nature flows along and cannot be halted in a total stop. This is why, according to reason, and not this time according to the imagination, one can conceive of a spatial limit to the world, whilst one cannot conceive of a limit to movement and, consequently, to time, since time is made up of a enumerated number of movements, on which it depends. This is the explanation why, when there is a question of a reality which comes into existence (al-muhâdâ) after its non-existence, one must not trace back the anteriority (kahânîya) of its non-existence to an act of the imagination, since if one does that, one suppresses the reality of what comes into existence and establishes a higher limit of real existence, a fact that every body, as such, forms a whole, an ensemble which can be added up into a totality, which is not the case with movement which, on the contrary, by its very nature flows along and cannot be halted in a total stop. This is why, according to reason, and not this time according to the imagination, one can conceive of a spatial limit to the world, whilst one cannot conceive of a limit to movement and, consequently, to time, since time is made up of a enumerated number of movements, on which it depends. This is the explanation why, when there is a question of a reality which comes into existence (al-muhâdâ) after its non-existence, one must not trace back the anteriority (kahânîya) of its non-existence to an act of the imagination, since if one does that, one suppresses the reality of what comes into existence and establishes a higher limit of real existence, a fact that every body, as such, forms a whole, an ensemble which can be added up into a totality, which is not the case with movement which, on the contrary, by its very nature flows along and cannot be halted in a total stop.

Another question regarding creation ab aeterno also brings in the concept of nihâya. The two Tahâfûts are clearly opposed on this point. How can one conceive of an eternal creation? asks al-Ghazâlî, when the eternity of the world is impossible. In effect, the revolution of the Sun takes place over a year and that of Saturn over 30 years. The Sun's revolution is thus
To one-thirtieth of the revolution of Saturn, or, putting it another way, for one revolution of Saturn, there are 30 revolutions of the Sun; for two revolutions of Saturn, there will be two times 30 revolutions of the Sun. When one takes a finite number of revolutions of Saturn, one will have a finite number 30n revolutions of the Sun. The relationship between the totality of the revolutions of Saturn and the totality of the revolutions of the Sun remains the same in relationship to the parts of these totalities, i.e. 1:30. Ibn Rushd replies, however, that if there are an infinite number of revolutions of Saturn and the Sun, this relationship disappears, since there is no conceivable relationship between an infinity “once” and “30 times” infinity. Hence infinites of revolutions are impossible, and the world cannot have been created ab aeterno. These considerations are already to be found in the Fisal of Ibn Hazm. Furthermore, is the infinite number of these revolutions an even or an odd number, or both at the same time, or is it neither? One must say that it is either one or the other. But if one says that it is an even number, it will become an odd number by the addition of a unity, and if one says that it is an odd number, it will become an even number by the subtraction of a unity. But how can one conceive adding a unity to or taking a unity away from what is infinite? One can only reply that the infinite number is neither odd nor even, which is contrary to the nature of the concept of number. Finally, Ibn Rushd’s reply rests on a completely Aristotelian principle: sc. that an infinite number of revolutions is only infinite in potentiality, and that there does not exist any act of any kind such that one can take it as a whole which is defined and genuinely capable of being totalised (cf. Tahafut al-Tahafut, 12-18).

Another question involving nihāya arises in regard to the division of bodies. Ibn Sinā discusses it, in particular in his Īkhārūt (ed. Sulaymān Dūnyā, Cairo 1957, ii, 130 ff.). Should one come to a stop at indivisible atoms, in finite number, or not? If division proceeds to the infinite, are the final parts of which bodies are made up bodies themselves or something else? This question raises numerous difficulties. It is a fact that, if one defines a body geometrically as that which has three dimensions in space, sc. length, breadth and depth, it is always possible for the imagination to divide up a line, surface or volume infinitely. But how can one put together again a body which is not divisible, unlike geometrical dimensionality but “corporeity” (djismiyya), a principle which is not divisible, unlike geometrical dimension. It should be observed that Ibn Sinā is raising here the important question of the continuous and the discontinuous.

The theologians also tackled this question of the constituting of bodies. Let us merely cite al-Nazzām [q.v.], a Mu'tazilī of the Baṣrān school, who denied the existence of the indivisible part or atom. The division of bodies can go on infinitely, which brings into consideration their continuity and, at the same time, the question of the nature of space and the possibility of movement. He resolved it by his doctrine of the “leap” (tafra), a moving body which cannot pass by means of an infinite number of positions from A to B “leaps” from one point to another. ʿAbd al-Kāhir al-Baghdādī, in his Fīrāq bayān al-firāq, remarks that this idea of the possibility of divisibility as far as the infinite brings in the thesis of the simultaneous occupation of bodies of a single space (taddkhul al-adjamū fi hayyiz waḥid). In practice, as Ibn Sinā discerned clearly, one cannot explain the contact of parts thus infinitely divided up in order to take into account the composition of the body, except by considering that they have two distinct extremities (ṣarafān), so that contact with one is different from contact with the other; which is contrary to the hypothesis of division to infinity. Furthermore, one must freely admit that the elements which are supposed to be in contact become completely penetrated within each other, which cannot explain the constituting of the volume of bodies.

These are the main problems which the concept of nihāya raises.

(R. Arnauld)

NIKĀBA (.), a term whose sense has been fixed in the 20th century for “trade union”, i.e. association for defending the interests of and promoting the rights of wage and salary earners, can also however denote the liberal professions and even those of employers. The term derives from the corporative function of the sukīb, with the adjective nikābi (in practice applied as a substantive only to wage and salary earners) and the abstract nikābiyya “syndicalism”; there is no verbal form in this sense.

The term’s usage became general after the First World War. Trade unionism, free from the theoretical non-differentiation between employers and employees of the guilds, is already attested in those countries in which capitalist enterprise was most advanced. In Algeria (1880 onwards) it referred primarily to the dominant Europeans, with some slight reference to the autochthonous peoples, and utilised the French term syndicalisme. In Egypt, where the corporative system was abolished in 1890, the first trade unions (1899 onwards), at first dominated by foreign or Ottoman-minority elements, but later mixed, became known as associations (djam’yya).

This term prevailed when Egyptian trade unionism was put on a nationalist basis (1908-11). Nikāba came into usage at the same time in the terminology of the Nationalist (Waṭanī) Party of Muhammad Farīd [q.v.], from 1908 onwards. It referred to an agricultural co-operative, in the Italian co-operative sense (nikāba zirā’yya) and at the same time to the Nikābāt al-Ṣanārat al-Yadayiyya (Union of Manual Workers), an educational and co-operative association under the patronage of Nationalist lawyers, with individual and collective membership, for a body of workers. Henceforth, the Egyptian press used the term to translate the titles of trade unions formed by foreign workers.

In the Ottoman empire, the corporative system, although in decay, remained longer in usage, with mutual insurance societies only permitted to foreigners and to members of the minorities employed in the foreign concessionary companies. The first trade unions arose at the time of the strikes during the 1908 Revolution, which however hardly touched the Arab provinces. Laws were passed (1908-12) to counter and to regulate the movement. Trade unions were forbidden and the old corporations dissolved. They were replaced by professional associations, comprising employers and employed, with representativeness reserved for the former. In the Arab version, for a long time after the War, nikāba denoted corporate groups (nikābāt al-aṣnāf, n. al-firāq wa’l-ṣanārat al-Yadayiyya), whilst djam’yya, pace the case in Egypt, referred to legal “associations”, not trade unions.
After the War, whilst modern Turkey adopted, in order to remove ambiguity, the loan form *sendika,* nikāba became the predominant term in the Arab-speaking lands.

The history of Arab trade unionism went, briefly speaking, through three phases. Until the 1940s, under colonial domination, it became firmly established in Egypt, spread through the British and French mandates of the Near East and became general in the three countries of French North Africa. In this context, it acquired a strong political tinge, within the framework of the combined stakes of class and nationalism. The first vehicle of diffusion of the form and the term was the current which claimed to belong to the Communist International and the International Red Trade Union Movement, i.e. within the organic link between the Communist Party and trade unionism till the middle of the 1930s. In the Near East, where these organisations were independent of those of the metropolises, the first Egyptian federation (*Ittihād Nikābat al-'Umādī*) was crushed by the Wafdist resistance, through the exertion of political patronage, by the nationalist-reformist currents, dominant since the 1930s, an International Confederation of Arab Trade Unions (al-'Ittihād al-Duwali li-Nikābat al-'Umādī al-'Arab = I.C.A.T.U.), autonomous of the central world organisations but open to co-operation with them, was created in 1956. It assured inter-Arab trade union solidarity with repressed movements, at the same time getting involved politically in regional happenings (Arab-Israeli conflict, oil, etc.). It concerned itself with the harmonisation of Arab legislation on labour, in a first stage with the Arab Labour Organisation (Manazamat al-'Amal al-'Arabī) and the International Trade Union Federation, connected to the Second Socialist International. But the use of their capability of mobilising on the streets and in strikes served largely for these parties to embarrass their enemy in power. Once the power was taken over, repression began again. The presence of a colonial population in French North Africa allowed the securing of more rights. The lines of cleavage were those of the metropolis, opposing the reformist movement to the current class, until the reunification of the Confédération Générale du Travail (C.G.T.) in 1936. The second current, also anti-colonialist, was aimed, despite prohibitions and repression, at unionising the indigenous peoples and even supported, in Tunisia, a nationalist party failed (Tunisia, 1937-8). The creation of a five-worker union in Lebanon, opposition was strong and the trade union movement was slower in Syria, and more pluralist there. In ʿIrāk, it enjoyed periods of expansion and contraction. The tendency of the mandatory or tutelary authorities was to suppress this movement, considered as a prop of nationalism, or at most to oppose to it the Ottoman regulations regarding associations, for long maintained in force. The demands made were as much juridical as economic, and in view of the resistance encountered, nationalist. With its class current broken, Egyptian trade unionism was taken over, through the exertion of political patronage, by the nationalist parties, on reformist lines close to the International Trade Union Federation, connected with the Second Socialist International. But the use of their capability of mobilising on the streets and in strikes served largely for these parties to embarrass their enemy in power. Once the power was taken over, repression began again. The presence of a colonial population in French North Africa allowed the securing of more rights. The lines of cleavage were those of the metropolis, opposing the reformist movement to the current class, until the reunification of the Confédération Générale du Travail (C.G.T.) in 1936. The second current, also anti-colonialist, was aimed, despite prohibitions and repression, at unionising the indigenous peoples and even supported, in Tunisia, a first experience of trade union federation on national class bases (C.G.T.T., 1924: *Djamiṣʿat Umām al-'Umādī al-Tūnisīyya*). The sole attempt at a take-over by a nationalist party failed (Tunisia, 1937-8). The implanting of Zionist trade unionism in Palestine (from 1920 onwards) did not favour an ethnic mix of workers. The Communist Party envisaged it, but failed. Arab associations or trade unions formed but without avoiding the cleavages of the two main nationalist clans.

The second phase, beginning in 1942 during the Second World War, was one of an increase in struggles and the acquisition of legal rights. Class orientations prevailed, but in pluralist structures, either running parallel to or in alliance with a national movement which led up to the first manifestations of political independence. This was also true for Palestine before the partition in 1948. The creation of the World Trade Union Federation (W.F.T.U.) from 1945 onwards favoured the exchange of experiences. Extended coverage was made (Sudan, Libya, Somalia and Aden). The politics of economic development increased the numbers of salaried members. The new governments used, however, the split in the World Trade Union Movement (I.C.F.T.U. after 1949) to install here an official trade unionism, and to forbid there all syndicalist activity. The context favoured the swallowing up of Maghribi trade unionism by the dominant nationalist parties.

The last phase is thus characterised by the permanent introduction of democratic stakes, until then never permanently resolved: liberty to form trade unions, and their autonomy regarding the state and political parties. Under the influence of the nationalist-reformist currents, dominant since the 1950s, an International Confederation of Arab Trade Unions (al-'Ittihād al-Duwali li-Nikābat al-'Umādī al-'Arab = I.C.A.T.U.), autonomous of the central world organisations but open to co-operation with them, was created in 1956. It assured inter-Arab trade union solidarity with repressed movements, at the same time getting involved politically in regional happenings (Arab-Israeli conflict, oil, etc.). It concerned itself with the harmonisation of Arab legislation on labour, at the same time getting involved politically in regional happenings (Arab-Israeli conflict, oil, etc.). It concerned itself with the harmonisation of Arab legislation on labour, and with the Arab Labour Organisation (Manazamat al-'Amal al-'Arabī) and the International Trade Union Federation, connected to the Second Socialist International. But the use of their capability of mobilising on the streets and in strikes served largely for these parties to embarrass their enemy in power. Once the power was taken over, repression began again. The presence of a colonial population in French North Africa allowed the securing of more rights. The lines of cleavage were those of the metropolis, opposing the reformist movement to the current class, until the reunification of the Confédération Générale du Travail (C.G.T.) in 1936. The second current, also anti-colonialist, was aimed, despite prohibitions and repression, at unionising the indigenous peoples and even supported, in Tunisia, a first experience of trade union federation on national class bases (C.G.T.T., 1924: *Djamiṣʿat Umām al-'Umādī al-Tūnisīyya*). The sole attempt at a take-over by a nationalist party failed (Tunisia, 1937-8). The implanting of Zionist trade unionism in Palestine (from 1920 onwards) did not favour an ethnic mix of workers. The Communist Party envisaged it, but failed. Arab associations or trade unions formed but without avoiding the cleavages of the two main nationalist clans.

The second phase, beginning in 1942 during the Second World War, was one of an increase in struggles and the acquisition of legal rights. Class orientations prevailed, but in pluralist structures, either running parallel to or in alliance with a national movement which led up to the first manifestations of political independence. This was also true for Palestine before the partition in 1948. The creation of the World Trade Union Federation (W.F.T.U.) from 1945 onwards favoured the exchange of experiences. Extended coverage was made (Sudan, Libya, Somalia and Aden). The politics of economic development increased the numbers of salaried members. The new governments used, however, the split in the World Trade Union Movement (I.C.F.T.U. after 1949) to install here an official trade unionism, and to forbid there all syndicalist activity. The context favoured the swallowing up of Maghribi trade unionism by the dominant nationalist parties.

The last phase is thus characterised by the permanent introduction of democratic stakes, until then never permanently resolved: liberty to form trade unions, and their autonomy regarding the state and political parties. Under the influence of the nationalist-reformist currents, dominant since the 1950s, an International Confederation of Arab Trade Unions (al-'Ittihād al-Duwali li-Nikābat al-'Umādī al-'Arab = I.C.A.T.U.), autonomous of the central world organisations but open to co-operation with them, was created in 1956. It assured inter-Arab trade union solidarity with repressed movements, at the same time getting involved politically in regional happenings (Arab-Israeli conflict, oil, etc.). It concerned itself with the harmonisation of Arab legislation on labour, at the same time getting involved politically in regional happenings (Arab-Israeli conflict, oil, etc.). It concerned itself with the harmonisation of Arab legislation on labour, and with the Arab Labour Organisation (Manazamat al-'Amal al-'Arabī) and the International Trade Union Federation, connected to the Second Socialist International. But the use of their capability of mobilising on the streets and in strikes served largely for these parties to embarrass their enemy in power. Once the power was taken over, repression began again. The presence of a colonial population in French North Africa allowed the securing of more rights. The lines of cleavage were those of the metropolis, opposing the reformist movement to the current class, until the reunification of the Confédération Générale du Travail (C.G.T.) in 1936. The second current, also anti-colonialist, was aimed, despite prohibitions and repression, at unionising the indigenous peoples and even supported, in Tunisia, a first experience of trade union federation on national class bases (C.G.T.T., 1924: *Djamiṣʿat Umām al-'Umādī al-Tūnisīyya*). The sole attempt at a take-over by a nationalist party failed (Tunisia, 1937-8). The implanting of Zionist trade unionism in Palestine (from 1920 onwards) did not favour an ethnic mix of workers. The Communist Party envisaged it, but failed. Arab associations or trade unions formed but without avoiding the cleavages of the two main nationalist clans.

The second phase, beginning in 1942 during the Second World War, was one of an increase in struggles and the acquisition of legal rights. The context favoured the swallowing up of Maghribi trade unionism by the dominant nationalist parties.
bounds to which were consideration for her family. Dissolution of the marriage rested entirely on the man's opinion; and even after his death his relatives could enforce claims upon his widow.

2. Islam has abandoned some of these old marriage laws in far-reaching fashion, while retaining their essential features; here as in other fields of social legislation Muhammad's chief aim was the improvement of the woman's position. The regulations regarding marriage which are the most important in principle are laid down in the Kur'ân in sura IV (from the period shortly after the battle of Uhud): '13. If ye fear that ye cannot act justly to your wives, whether ye have or have not intercourse—these are revelations from Allah. Allah is all-knowing and wise.

29. If however any one of you has intercourse with her, let him give her her reward as their due, but it is no sin to make an agreement between you beyond the legal due. Allah is all-knowing and wise. 29. If however any one of you has intercourse with her, let him give her her reward as their due, but it is no sin to make an agreement between you beyond the legal due. Allah is all-knowing and wise.' Also sura II, 220 (uncertain date), the pro-
cliche of Shafi'i law: 'The part which they take is to pronounce the necessary formula to the parties or even to act as authorised agents (hakim) usually act under the supervision of the kadi. Everywhere find men whose profession this is and who forthwith purchase a licence which is valid in law, they can only be married at all by a wali mudjbir. According to the Hanafis, on the other hand, every blood relative acting as wali is entitled to give a maiden under age in marriage without her consent; but a woman married in this way by another than her ascendant is entitled on coming of age to demand that her marriage be declared void (jidd) by the kadi. A bridgroom who is a minor may also be married by his wali mudhib. As a kind of equivalent for the rights which the husband acquires over the wife, he is bound to give her a bridal gift (mahr, sadak) which is regarded as an essential part of the contract. The contracting parties are free to fix the mahr; it may consist of anything that has value in the eyes of the law, if it is not fixed at the conclusion of the contract and if the parties cannot agree upon it, we have a case for the mahr al-mithl, a bridgail gift fixed by the kadi according to the circumstances of the bridgroom. It is not necessary to pay the mahr at once; frequently a portion is paid before the consummation of the marriage and the remainder only at the dissolution of the marriage by divorce or death. The wife's claim to the full mahr or the full mahr al-mithl arises only when the marriage is terminated; if the marriage is previously dissolved by the man, the wife can only claim half the mahr or a present (mutil) fixed arbitrarily by the man; these regulations go back to sura II, 237-8 (cf. XXXIII, 48). In form, the marriage contract, which is usually prefaced by a solicitation (khutba), follows the usual scheme in Muslim contracts, with offer and acceptance; the wali of the bride is further recommended to deliver a pious address (khutba) on the occasion. The marriage must be concluded in the presence of at least two witnesses (gahid) who possess the legal qualifications for a witness; their presence is here not simply, as in other contracts, evidence of the marriage but an essential element in its validity. On the other hand, no collaboration by the authorities is prescribed. But since great importance is usually attached to fulfilling the formalities of the marriage contract, upon which the validity of the marriage depends, it is usual to carry through this important legal matter without the assistance of an experienced lawyer.

28. Further married women except (slaves) that were already past; Allah is gracious and merciful. 28. Further married women except (slaves) that
of one of them, usually the 

wife of the bride. The most

is the marriage contract.

The actual position of the 

woman in marriage is a 

settled question.

1. blood relationship, 

between the man and 

his female descendants. 

2. foster-relationship, 

which, by extension of the 

Kur'anic law, by tradition 

is regarded as an impediment to 

marriage in the same 

degree as blood relationship;

3. relationship by mar-

riage, namely, between a 

man and his mother-in-law, 

daughter-in-law, step-daughter, etc., 

in the direct 

line; marriage with two sisters 

or with an aunt and 
niece at the same time is also 

forbidden; 4. the 

existence of a threefold 
talaq [q.v.] 

talk [q.v.]

right to dispute his paternity by 
faskh [q.v.].

Parentage can 

also be established by the 
husband's 

ikrān [q.v.], 

while 

its dissolution; it is presumed that such children 

are impossible.

4. The laws regarding the 

rights and duties of 

husband and wife cannot be 

modified by the parties at 

the drawing-up of the contract. This can, however, be 

effected by the man pronouncing a conditional talaq

[see talaq, vii.] immediately after the conclusion 
of the marriage contract; this shift to secure the 

position of the woman is particularly common among 

Indian Muslims. For the rest, the couple is left to 

private agreement, which is not mentioned in the 

marriage contract. The actual position of the woman 
in marriage is in all Muslim countries entirely 
dependent on local conditions and on many special 
circumstances. It is not a contradiction of this to say 

that the legal prescriptions regarding marriage are most 
carefully observed as a rule. In spite of certain ascetic 
tendencies, Islam as a whole has been decidedly 
in favour of marriage.—In modern Islam, the problem 
of the woman's position in marriage and polygamy is 
especially discussed between conservatives and 

adherents of modern social ideas. For the different 

views resulting from these conditions, see the works in 
the Bibliography cited below.

5. Alongside of the usual form of the old Arabian 

marriage, which in spite of its laxity aimed at the 
foundation of a household and the procreation of 

children, there existed the temporary marriage in 

which the husband's rights and obligations were 
previously fixed. Such temporary marriages were 

entered upon mainly by men who found themselves 
staying for a time abroad. It is by no means certain 

that these are referred to in sura IV, 28, although the 

Muslim name of this arrangement (mu'ā [q.v.], 

"marriage of pleasure") is based on the literal 

meaning of the verse; it is, however, certain from 

tradition that Muhammad really permitted 

mu'ā to his followers especially on the longer campaigns. But 

the caliph 'Umar strictly prohibited mu'ā and regarded it 
as fornication (zina) (a group of traditions already 
ascribes this prohibition to the Prophet). As a result, 

mu'ā is permitted only among the Shāfiis but 

prohibited by the Sunnis. The latter have, however, 

practically the same arrangement; those who wish to live 

counter to the law as husband and wife for a certain 

period simply agree to do so without stipulating it in 

the marriage contract.

II. IN THE MODERN ISLAMIC WORLD

I. Impetus for reform

Increasing dissatisfaction in recent years with traditional marriage law, particularly the discord between legal norms adapted to the patrilineal, patriarchal structure and the demand for change, has spawned reforms motivated by a desire to adapt "modernistic" interpretation of shari'ah law to expedient changes in the social and economic environment. Impediments to marriage, such as the guardianship of minors (and below), below which no claim of sexual maturity may be made, have been raised: fifteen or sixteen for a boy, and seventeen for a girl. In Egypt (1923, 1931) no distinction is drawn between puberty and competence for marriage. Prescribed ages for marriage are eighteen for a boy and sixteen for a girl. Marriage below these ages is permissible, however, on proof of sexual maturity (see below). Simultaneously, traditional "shari'ah" (see MAHKAMA. 4. xiii, at VI, 40-1).

Relevant legislation:

ii. Impediments to marriage

"Shari'ah" impediments to marriage, excepting foster relationship, have been completely abandoned in Turkey. A reform unique to Kuwait to safeguard the family’s integrity prohibits a man’s marrying a woman he has deliberately and viciously turned against her former husband.

iii. Marriage guardian

The marriage guardian’s role has been virtually restricted to protecting the interests of wards physically mature but not of competence for marriage. Moreover, the court is empowered to permit marriage even against the guardian’s will. Under Ottoman family law concerning marriageable age, fifteen or sixteen for a boy, and seventeen for a girl, has directly affected the validity of marriage. Marriage in violation of the provisions pertaining to the age of competence to marry and the conditions concerning permission to marry is deemed irregular (fard) with no legal effects before consummation. In North Yemen, the marriage of a boy (not a girl) below fifteen is not valid. Laws in other Middle Eastern countries evade this issue. Courts, however, tend to validate such marriages retroactively once the parties reach puberty.

Other devices intended to enforce reformist restrictions on child-marriage are prohibition of registration of any union in which the parties have not reached the minimum age for marriage (see below, v). In the Sudan (1960), the traditional Mālikī rule that an adult woman must be given in marriage by her guardian still obtains, although the woman’s consent is now as a rule essential for its validity.

iv. Equality in marriage

Criteria for equality between spouses (kufla‘a), as well as the guardian’s right to demand annulment of the marriage on grounds of inequality, have been curtailed. Ottoman family law explicitly mentions as criteria on the guardianship and property (out of which the prompt dower can be paid and the wife’s maintenance provided). In Jordan the only remaining criterion is property. In Kuwait religious piety is the sole criterion. In Syria equality is a matter of local convention, not law. So far ‘Irāk alone totally ignores this institution, implying its complete abandonment. However, a new criterion has emerged: parity in age between the spouses (see below, vi).

v. Age of marriage

Restrictions on child-marriage are intended to prevent the harmful social implications of premature marriage. Distinction has been made to this end between an age of competence for marriage and a minimum age below which marriage is never possible, the parties being presumed to be under puberty. Most Middle Eastern countries have followed the precedent set by Ottoman family law in prescribing the age of competence for marriage: eighteen for a boy and seventeen for a girl. Marriage below these ages is permissible, however, on proof of sexual maturity (see below). Simultaneously, traditional "shari’ah" (and Ottoman family law) age limits (nine for girls, twelve for boys), below which no claim of sexual maturity will be heard (in effect, minimum ages for marriage), have been raised: fifteen or sixteen for a boy, and between thirteen and sixteen for a girl. In Egypt (1923, 1931) no distinction is drawn between puberty and competence for marriage. Prescribed ages for marriage are eighteen for a boy and sixteen for a girl. Marriage below these ages is not permissible (nor registered—see below, viii) even on proof of sexual maturity. In the Sudan (1960) a pre-pubescent girl at least ten years old may be given in marriage with the consent of the court where there are grounds for anxiety about her morals.

Adolescents having reached the prescribed ages of puberty but not of competence for marriage may marry in the interim period of two or three years (irrelevant under Hanafi law), subject usually to the marriage guardian’s consent and always to the court’s permission. In Israel the “good defences” (physical maturity and the guardian’s consent) against a charge of contravention of age-of-marriage legislation were abrogated (1950), but simultaneously a district judge was empowered to permit the marriage of a girl who was pregnant or had given birth or, since 1960, had reached the age of sixteen.

Ottoman family law concerning marriageable age has directly affected the validity of marriage. Marriage in violation of the provisions pertaining to the age of competence to marry and the conditions concerning permission to marry is deemed irregular (fard) with no legal effects before consummation. In North Yemen, the marriage of a boy (not a girl) below fifteen is not valid. Laws in other Middle Eastern countries evade this issue. Courts, however, tend to validate such marriages retroactively once the parties reach puberty.

Other devices intended to enforce reformist restrictions on child-marriage are prohibition of registration of any union in which the parties have not reached the
legal ages for marriage (Egypt, 1923; Kuwait; Israel, 1950), preclusion of courts from entertaining any matrimonial cause whatsoever in such marriages, i.e. the marriage is valid but not effective (nāfūdhiyya) (Egypt, 1923; Jordan, 1931) by rendering the parties liable to statutory penalties (Jordan, Iran, Lebanon, Israel).

vi. Disparity in age

Prohibition, by means of registration, of a marriage in which there is a gross disparity in age between the parties (unless there is some genuine benefit in the union) is intended to defend the wife’s interests. Jordan was the first to act on this issue: marriage of a woman under eighteen to a man under thirty-seven is prohibited if the husband-to-be is more than twenty years her senior, unless it is established in court that she consents of her own free will and that the marriage is in her interest. In Syria disparity in age may lead the court to withhold permission for marriage, taking into account the welfare of the parties. In South Yemen, marriage in which there is a twenty-year disparity in age is prohibited unless the wife has reached thirty-five.

vii. Stipulations in the marriage contract

Application of the mechanism of inserting stipulations benefiting the wife into the marriage contract (provided they do not conflict with marriage aims, affect the rights of others, or restrict the liberty of the husband), is intended mainly to improve the position of married women. Anchored in the Ḥanbali school, this mechanism rests on voluntary agreement between spouses. Non-observance of a stipulation is grounds for dissolving the marriage at the wife’s request without prejudice to her financial rights. Ottoman family law first introduced this mechanism. Jordan, Syria, Iraq, Iran and Kuwait followed suit. The stipulations pertaining to marriage are (1) that the wife should not be removed from a locality agreed upon between the parties; (2) that the husband should not marry a co-wife (see below, ix); (3) that the wife may work outside the matrimonial home; and (4) that the wife may complete her studies (Kuwait).

viii. Registration of marriage

Registration (performed by the ghara'a court or its authorised notary; in Syria, a district judge must review the marriage application), a wholly new departure from the traditional legal system, has become a necessary legal formality in most Muslim countries. Its purpose is to strengthen state control over marriage proceedings and to impose reforms relating to marriageable and co-marriageable marriage, (since 1976) to marriage of a Muslim woman to a non-Muslim. In Jordan this category applied also to the marriage of a Muslim man to an adherent of a non-revealed religion (ghayr kitābiyya). All other prohibited marriages are treated with equal justice (ṣahid).

x. Void and irregular marriages

Modern legislation in this respect aims to mitigate the harsh legal effects of prohibited marriages. Ottoman family law, and in its wake Jordan (1951) and Syria, reduced the category of void (bālīh) marriage, entailing no legal effects whatsoever, solely to marriage of a Muslim woman to a non-Muslim. In Jordan this category applied also to the marriage of a man to a woman related to him within the prohibited degrees (mahram) and (since 1976) to marriage of a Muslim man to an adherent of a non-revealed religion (ghayr kitābiyya). All other prohibited marriages are deemed irregular (fasīd) which, if consummated, entail some of the legal and financial effects of valid (ṣahīḥ) marriage.

Syria introduced an innovative reform (with no apparent basis in the ghara’a law) of divorcing the wife from her husband by court petition (see above, xii). Ottoman family law allows a woman to stipulate in her marriage contract that her husband shall not marry another wife and that should he do so, either she or the polygamous wife will be divorced. Jordan followed suit, though the first wife may dissolve only her own marriage, not that of the co-wife.

(2) Prohibition. Polygamy has been prohibited (in Iran this presumably applies to both permanent and temporary marriage) unless permitted by court (district court in South Yemen) on the basis of “good defences”, insane or (since 1963) that the husband is financially able to properly maintain multiple wives (Syria; Iran, 1967); that the co-wives will be treated with equal justice (‘Irāk, Iran, 1967); and that the first wife consents to the marriage, is unable or unwilling to co-habit, has been sentenced to imprisonment, is addicted to drink, drugs or gambling, has deserted the family or disappeared, or has become too poor or too barren, is afflicted with incurable disease (Iran, 1967, 1975).

In South Yemen a medical certificate to this effect is required. In ‘Irāk these defences are presumably implied by the phrase “some legal benefit in the polygamous marriage”. In Israel (1951) the defence available to Muslims qua Muslims against a charge of polygamy (prohibited by the Mandatory authorities) was abolished and replaced by two defences against such a charge: prolonged absence or mental ill-health of the male spouse.

Prohibition of polygamy, unlike abolition, does not in itself invalidate polygamous marriage, though those failing to obtain the court’s permission are liable to penal sanctions.

(3) Divorce. This obtains in circumstances where no stipulation barring co-marriage has been inserted in the marriage contract or where permission for polygamy has been granted by court. A woman finding the position of co-wife intolerable may dissolve her own marriage on grounds (anchored in the Matki school) of injury (extended to cover unequal treatment of co-wives), or disputes between the spouses (once again extended to cover cases of unequal treatment), in which case the marriage will be dissolved through the arbitration procedure. With slight variations this remedy obtains in the Sudan (1913), Lebanon and Israel (under Ottoman family law). Jordan, South Yemen, and ‘Irāk (1959). In Egypt (1979, 1985) the wife’s option to dissolve the marriage lapses one year after the conclusion of the polygamous marriage. The husband and the solemniser must inform the first wife when a co-wife is taken, failing which they are liable to penal sanction. In Iran (before 1979), a wife who had not consented to a polygamous marriage might petition the court on these grounds asking for a certificate of incapability of reconciliation and subsequent divorce.

x. Void and irregular marriages

Modern legislation in this respect aims to mitigate the harsh legal effects of prohibited marriages. Ottoman family law, and in its wake Jordan (1951) and Syria, reduced the category of void (bālīh) marriage, entailing no legal effects whatsoever, solely to marriage of a Muslim woman to a non-Muslim. In Jordan this category applied also to the marriage of a man to a woman related to him within the prohibited degrees (mahram) and (since 1976) to marriage of a Muslim man to an adherent of a non-revealed religion (ghayr kitābiyya). All other prohibited marriages are deemed irregular (fasīd) which, if consummated, entail some of the legal and financial effects of valid (ṣahīḥ) marriage.

Syria introduced an innovative reform (with no apparent basis in the ghara’a law) of divorcing the wife from her husband by court petition (see above, xii). Ottoman family law allows a woman to stipulate in her marriage contract that her husband shall not marry another wife and that should he do so, either she or the polygamous wife will be divorced. Jordan followed suit, though the first wife may dissolve only her own marriage, not that of the co-wife.
to temporary marriage (mut'a) is the curtailment of some of its legal effects to the point of complete abolishment of the institution. Temporary marriage is no longer valid in 'Irak (1959), although a child born of such a liaison is considered legitimate with all attendant consequences. In Iran (before 1979) temporary marriages were valid, though it seems that mutual rights of inheritance between partners might no longer be created. Traditional mut'a was reintroduced after the 1979 revolution. Under Ottoman family law, and in its wake Jordan, temporary marriage is deemed invalid.

With the abolition of slavery in Saudi Arabia (1962), concubinage, i.e. a man's ghari' right to have sexual relations with an unlimited number of his female slaves, ceased to exist.

x. Dowry

In Ottoman family law, and in its wake Jordan, Syria, and 'Irak (1959), no mention is made regarding minimum dower, implying abandonment of ghari' doctrine in this respect. In South Yemen, dower (prompt and deferred combined) must not exceed one hundred dinars, contrary to traditional doctrine which does not acknowledge a maximum dower.

Egypt (1929) and the Sudan (1933) introduced, via takhayyur with the Hanafi school, that where a married couple or their respective heirs dispute the amount of dower stipulated, the burden of proof falls on the wife. Syria, Kuwait, and Jordan (1976) followed suit.

Non-payment of the prompt dower before consummation has become (since 1951), contrary to the Hanafi view, grounds for dissolution [see talaq].

xii. Maintenance between the spouses

General trends in this respect favour either one spouse or the other, depending on the circumstances.

(1) Definition of maintenance. In Jordan, and in its wake Syria, 'Irak, Egypt (1979, 1985) and Kuwait, the definition of maintenance has been extended to cover winding-up (takhir) and additional traditional components. In Egypt (1979) maintenance also includes "everything that is requisite by custom," "custom" being replaced in 1985 by "ghari'a".

(2) Criteria for fixing maintenance. Egypt (1929) and the Sudan (1936) and, with some variation, Kuwait, innovated via takhayyur that a wife's maintenance shall be calculated by exclusive reference to her husband's means, regardless of her own condition. Jordan, Syria, and Egypt (1979, 1985) followed suit with the proviso that the rate of maintenance must not be below minimum sufficiency.

Though maintenance may be increased or decreased depending on the husband's condition and the cost of living (as in traditional law) no application shall be heard before the expiration of a certain time period (six months in Syria and Jordan, one year in Kuwait, but no time period in 'Irak) from the date of the court order, save in exceptional emergencies.

South Yemen introduced an unprecedented innovation—in glaring contradiction to the ghari'a—according to which spouses bear the expenses of their common life as well as the maintenance of their children according to their respective means and abilities. This reflects a radical concept, anchored in 1974 law, according to which a marriage is a contract between two parties equal in rights and duties.

(3) Arrears of maintenance. Egypt (1920), and 'Irak (1959) in its wake, acknowledged via takhayyur the principle of arrears of maintenance: maintenance of a wife who has submitted herself, even putatively, to her husband is deemed a debt owed by him from the time when he fails to support her, not (as in Hanafi law) from the time when she sues him in court. The Sudan (1927) adopted a less radical approach: arrears of maintenance still lapse on the death of either party unless the wife has been given judicial permission to raise maintenance on credit. In Jordan and Syria, as in Ottoman family law, arrears of maintenance are created solely by mutual agreement or by judicial judgment (in conformity with traditional law), however—contrary to the Hanafi school—they lapse only by payment or renouncement, not on the death of either party or on dissolution.

In Egypt (1931), and the Sudan (1936) in its wake, as a precaution against dubious claims for maintenance alleged to have been due many years, courts were forbidden by the procedural expedient of denial of judicial relief from entertaining claims of arrears of maintenance in regard to any period more than three years (one year in Egypt since 1979) prior to the suit. In Syria the court will not allow the wife more than four months' arrears of maintenance.

(4) Provisional maintenance. In Syria, 'Irak, Kuwait and Egypt (1979, 1985) the court may order payment of provisional maintenance before handing down its final decision.

(5) Collection of maintenance. The Sudan (1915), and Egypt (1920) in its wake, decreed that if a husband has property out of which his wife's legally entitled maintenance can be obtained, a decree to this effect will be executed. In Lebanon, Israel (both under Ottoman family law), Jordan, and 'Irak, such a judicial decree is possible only if the husband is absent.

In 'Irak, where maintenance cannot be collected from the husband and in the absence of any person willing to lend money to the wife who, in her turn, is incapable of earning a living, maintenance shall be provided by the state. Egypt (1976) and Israel (1972) transferred the burden of maintenance payment fixed by judicial decree to governmental authority, which in turn recoups itself from the judgment debtor.

(6) Non-provision of maintenance as grounds for divorce. In Egypt (1920), Jordan, Syria, 'Irak, Iran (before 1979), and South Yemen, failure to provide the wife with maintenance due to unwillingness or hardship on the part of the husband (provided, in some of the countries, that he has no property out of which maintenance may be obtained, and that a period of delay has been exhausted) is deemed, via takhayyur, legal grounds for judicial divorce [see talaq].

(7) Maintenance of a working wife. Syria, 'Irak and Jordan (1976) explicitly deny the right to maintenance to a wife who works away from home without her husband's consent. In Egypt (1979, 1985) and Kuwait, however, the husband's permission for that purpose is not required, provided the wife's exercise of her right to a lawful job is not abused or in conflict with the family's interest, and that she was not forbidden by the husband to attend her work. This, with some variation, applied also in Iran (before 1979).

xiii. Inheritance rights between the spouses (see mirath. 2. In modern Islamic countries, at VII, 111-13).

2. In Muslim India up to 1930 [see 'urs].

3. In Muslim India after 1930, marriage thus became a contract between husband and wife, but a marriage as a sacrament but a contract between husband and wife, is literally termed in Indian Islam 'akd-e-nikah ("marriage contract"). Among Indian Muslims, however, nikah is considered to be the establishment of relationship between the families of the bride and the groom, which is reflected in the formal procedure and series of ceremonies which precede the final nikah ceremony.

In spite of the impact of modern education among Indian Muslims, allowing some degree of freedom in expressing preference for selecting marriage partner by both boys and girls, the formal nikah proposal (nikah ka pooyeham) is sent—or conveyed—by the elders of the boy to the elder family members of the girl. The ceremonial modesty requires some delay in accepting the proposal (pooyeham). After the formal declaration of engagement (nikahat), an auspicious date is fixed for the nikah. Generally, the month of Muharram and the following thirteen days of Sawan are avoided for nika*ah ceremonies by both Sunni and Shī'a in commemoration of martyrdom of Imām Husayn.

On the appointed day, the marriage party (nikah ki bārā), comprising the male relatives and friends of the groom's family, proceeds to the house of the bride, where they are received by the male members of that household. Soon afterwards, the preparations for the main ceremony begin, which includes changing of the
groom's clothes into a completely new set prepared and provided by the bride's family. For the 'akd ceremony, besides the kadi (usually a Mawlawi or Muslim religious scholar) and a wakil (representing the bride), two witnesses are required. It is the privilege of the bride's family to choose a Mawlawi to act as kadi; whereas the wakil (to be a neutral person in any unforeseen future dispute) is usually the bride's maternal uncle or her paternal or maternal aunt's husband. The two witnesses are selected from among the relatives of the bride. In order to obtain advance consent of the bride, the wakil and the two witnesses proceed to the women's quarter, where the wakil in a loud voice asks the bride three times her consent for her 'akd-e-nikah (specifying the name of the groom and the amount of her mahr), to which she is expected to respond in her modest and subdued voice. Thereafter, the wakil's party returns to the male gathering and informs the kadi that the bride's consent has been obtained for her nikah. It is followed by a brief religious ceremony in which the kadi loudly recites in Arabic the marriage sermon (nikah ka khutba), which consists of some Qur'ānic verses and a history of successful marriages in an Islamic context, citing those of Adam and Eve, Abraham and Hagar, Muhammad and his four prominent wives, and 'Ali and Fāṭima. After this recital, the kadi sits in front of the groom, facing towards him; the wakil and both the witnesses, already sitting close to the groom, lean slightly towards him, so that the couple can hear his consent clearly. The kadi, in a low voice as if maintaining secrecy, asks the groom three times in the following words (in the native language): "I marry you to such-and-such girl, daughter of so-and-so person against so much amount of mahr. Do you accept?" Each time the groom is expected to reply in clear voice. "I accept." After the acceptance, the kadi recites in Arabic a long prayer, again in a loud voice; blessing the newly-married couple with a future happiness like those of all the early marriages cited in Islamic history. This brings the 'akd-e-nikah to its conclusion, which is followed by a feast prepared by the bride's household. Finally, the rukhsait (departure of the bride) with the groom's party back to the groom's house takes place.

4. In Indonesia

In Bahasa Indonesian, the country's national language, there are two words for marriage: nikah and perkawinan. Nikah generally refers to the conclusion of a marriage between Muslims. Perkawinan is a broader concept which prevails nowadays in national legislation, in popular use and even in Islamic writings. *Hukum perkawinan*, marriage law, includes the rules concerning polygamy, divorce and alimony (nafkah).

The sources of Indonesian marriage law include those of national law, Islamic law, custom and colonial law. Over the past forty years, the relevance of colonial law and adat law has significantly decreased. Since Independence, efforts have been made to enact a national marriage law for all citizens. This goal was reached with Law no. 1 of 1974 concerning marriage and its executive regulations, which will be referred to as the "national law".

Historically speaking, customary or adat law came
first. Within Indonesian society, the relationship between adat law and Islamic law has been debated for centuries. The debate carried over to the Dutch when L.W.C. van den Berg claimed in the 1870s that Islamic law should be applied in its integrity to Muslims in Indonesia. Van den Berg was opposed by Snouck Hurgronje, who held the view that Islamic law should only be applied insofar as accepted by society through its customary law. This so-called “reception theory” came to prevail in the colonial government, and it was eventually incorporated in the colonial constitution of 1925. After independence, this theory lost favour in Indonesia, and the political appeal of the adat law has considerably weakened. As a result, recent debates on marriage have mainly focussed on national law and Islamic law and the relationship between the two.

Law no. 1 of 1974 says that in order to be valid, a marriage has to be concluded according to religion and belief. For most Indonesians this means Islamic marriage law. Some provisions of the law seem to contravene codified Islamic law. For example, according to the law the marriage is not the same as the “bride price” of customary law. In many ways, Islam requires few changes for a convert. It has been estimated that 20% of the total population, or 10% is more realistic. That is still more than six million persons. The few hundred thousand live in Uganda, more than five million in Tanzania, and over a million in Kenya. They all follow the Shafi school, except the Indian Muslims, who are Hanafis, or Isma'lis, Bohoràs [q. v.], Twelver Shāis and a few others. Of the African Muslims, only the Somalis retain their own language, except when they settle in the towns. All other Muslims in East Africa are Swahili-speaking, or adopt Swahili when converting to Islam. Marriage is probably the commonest reason for conversion for either sex.

In many ways, Islam requires few changes for a convert. The proposal for a marriage is made by a senior member of the family, usually but not necessarily, the groom’s family. This is the mappa, has to make numerous journeys between the two family homes until all the details of presents have been settled. The “bride price” is called mahar in many East African languages; it is an ancient custom, although strictly speaking mahar [q. v.] is not the same as the “bride price” of customary law. Some Swahili scholars insist that mahar should be only a token sum, others that it is payment to the bride’s father for the trousseau, including furniture. On the Coast, some marriages are uxorio: the bridegroom moves in marriage, generally called talak, has been embedded in a court procedure as well. The judge first has to check whether there is a valid motive as specified by national law in a limitative list of divorce grounds. If this is the case, he functions as an official witness to the talak. The old custom of concluding taknik talak upon marriage has been continued through the uniform model contract that reiterates the same divorce grounds as those mentioned in national law. In colonial times, the government had found various types of Islamic courts deciding marriage disputes among Muslims, in what was regarded to often be an unfavourable position. In 1870s, L.W.C. van den Berg was commissioned to draft a law on Islamic courts. This became the Law on Priest Courts of 1882, which remained the basic law on Islamic jurisdiction until its replacement by Law no. 7 of 1989 concerning religious jurisdiction. This law has made the religious courts competent not only in marriage and divorce cases between Muslims but also in matters of inheritance. The decisions of the religious courts, however, can be subject to final appeal to the Supreme Court, the Mahkamah Agung. Religious courts, K.U.A.s and institutes of higher Islamic learning (I.A.I.N.) where the Islamic law is taught, are all under the jurisdiction of the Ministry of Religion. Interpretations of Sunni schools other than the Shāfī school have one gained currency, contributing to flexibility of reasoning. In this respect mention has even been made of a fifth mazhab, the mazhab Indonesia. Nevertheless, Juyntboel's Inleiding is still held in high esteem among Islamic scholars.

There are indications that the religious courts, the K.U.A.s and the local functionaries, do not always apply the law as it appears to have been intended by the national legislator. This happens notably when the national and the shari'as norms seem to be incongruent. Consequently, the protection of women as intended in the national law can be undermined. Also, marriages between partners of different religions, which have since long been allowed in national law, are becoming increasingly difficult in practice.

J.M. Otto and S. Pompe

In many ways, Islam requires few changes for a convert. The proposal for a marriage is made by a senior member of the family, usually but not necessarily, the groom’s family. This is the mpoaa, has to make numerous journeys between the two family homes until all the details of presents have been settled. The “bride price” is called mahari in many East African languages; it is an ancient custom, although strictly speaking mahr [q. v.] is not the same as the “bride price” of customary law. Some Swahili scholars insist that mahari should be only a token sum, others that it is payment to the bride’s father for the trousseau, including furniture. On the Coast, some marriages are uxorio: the bridegroom moves in
with his wife. Elsewhere, almost always the bride is taken ceremoniously to the bridegroom's home. Traditional songs accompany every stage of the proceedings.

The preferred marriage partners are parallel cousins, in the paternal lineage; since many houses are the family homes of brothers living together, the bride and groom will have known each other since childhood. Since everyone has to obey his father, the latter can and does decide on the choice of partner for both his sons and his daughters.

The Kurʾānic impediments are not always enforced. In the dry eastern part of Africa it is customary for a man in certain circumstances to marry two sisters; often it is obligatory for a man to marry his father's widows, his brother's widows (this is not forbidden in the Kurʾān), and even his father's brother's widows. The preferred marriage partners are parallel cousins; often it is obligatory for a man to marry his sisters; sometimes it is obligatory for a man to marry his own mother. A Muslim scholar's objections are shrugged off. As a result, two persons may marry who have sucked the same breast.

In Africa, many women cultivate their own plot of land within the area of land belonging to their husband's clan. They can sell their produce and cook for the family when it is their turn. As a result, they will not be so much affected by their husband's neglect as the family when it is their turn. As a result, they will have sucked the same breast.

Place marriage beyond the reach of every husband. Even those that wish to add another wife must certainly suffer financially as a result of this. Once you enter into the marriage contract it is with difficulties that you get out of it. (Muhammad Sani Aliyu, Shortcomings in Hausa society as seen by representative poets from ca. 1950 to ca. 1982, M.A. diss. Bayero University, Kano 1983, unpubl.)

The Sultan of Sokoto, Abubakar III, on realising the extent of the problem, set up a committee in 1967 to examine alcohol and drug abuse and extravagant wedding customs. The committee’s findings were largely ignored because it proved impossible to pass legislation to enforce compliance with the suggested regulations, including those relating to wedding gifts. The same fate met the recommendations of a second committee convened in 1969. Undeterred, and prompted by increased concern over drunkenness, prostitution and deviant marriage customs, the Sultan established a third committee, this time under the chairmanship of Alhaji Shehu Shagari, the first executive President of Nigeria from 1979 to 1983. This committee received 1,200 letters and conducted 600 interviews; its findings were summarised in a booklet Naiṣha ga Musulmi kanyaki da shashanci da almubazzanci da, tr. from Al-Hakir Mzee Bin Ali Muhammad, Naiṣha ga Musulmi kanyaki da shashanci da almubazzanci da, tr. from Al-Hakir Mzee Bin Ali Muhammad, M.A. diss. Bayero University, Kano 1983, unpubl.)

With the family's permission, a man can still obtain a girl by paying her father mahari, which in this case acquires a new meaning.

There is no minimum age for girls to marry, but the majority of the men will be in their twenties when marrying. Kurf, a husband of equal socio-economic class [see kafa], is essential for a girl born of the kafa, the established clans on the East Coast. If a virgin takes a lover of a lower class, this is considered a scandal that affects the whole family, to the extent that girls known to have been executed for it. The Sultan of Sokoto, Abubakar III, on realising the extent of the problem, set up a committee in 1967 to examine alcohol and drug abuse and extravagant wedding customs. The committee's findings were summarised in a booklet Naiṣha ga Musulmi kanyaki da shashanci da almubazzanci da, tr. from Al-Hakir Mzee Bin Ali Muhammad, Naiṣha ga Musulmi kanyaki da shashanci da almubazzanci da, tr. from Al-Hakir Mzee Bin Ali Muhammad, M.A. diss. Bayero University, Kano 1983, unpubl.)

The Sultan said he wished Naiṣha ga Musulmi to be a public record of the endeavours of the aluma to stem the tide; its tone was uncompromising. The following is an example:

Place marriage beyond the reach of every husband. Even those that wish to add another wife must certainly suffer financially as a result of this. Once you enter into the marriage contract it is with difficulties that you get out of it. (Muhammad Sani Aliyu, Shortcomings in Hausa society as seen by representative poets from ca. 1950 to ca. 1982, M.A. diss. Bayero University, Kano 1983, unpubl.)

ed to recognise religious and cultural sensibilities and was therefore dropped. However criticisms continued to surface and women's groups, notably FOMWAN (the Federation of Muslim Women's Associations in Nigeria) aroused awareness of the issues through its nationwide organisation which had attracted university-trained Muslim women. In 1991 a four-day seminar, Better Protection for Women and Children under the Law, was organised by the Federal Ministry of Justice. Aisha Lemu, a FOMWAN executive member and the wife of the Grand Kadi of Niger State, addressed the seminar on the subject "Muslim women and marriage under the Shari'a." Her remarks on the financial and marital rights of Muslim women echoed some of the earlier views expressed in Naiha ga Musulmi, but went further and blamed the courts for not implementing the law in respect of divorce and the custody of children. She said:

The main problems faced by Muslim women in Nigeria are caused by pre-Islamic customs. In the North women who are ready to take their cases to the Shari'a courts can sometimes still fail to get their rights in the lower courts because of either ignorance of the Shari'a or corruption. However, if they are patient and persistent enough to appeal to the higher Shari'a courts their rights will be upheld. In the multi-cultural context of Nigeria, which is a secular state, it is difficult to see how the Federal Law Reform Commission will be able to effect change without causing deep resentment in one section of the country or the other. Gradual shifts in attitude may, however, be engineered by women's pressure groups characterised by FOMWAN and others, notably The Women's Commission in Kano, which are backed by Muslim intellectuals predominantly based in Northern Nigerian universities.

This Nikopol, founded by Heraclius (ca. 575-642), has often been confused with the Byzantine town of NIKOPOLIS, modern Bulgarian Nikopol, a town on the southern bank of the Danube in lat. 43° 43' N. and long. 24° 54' E., famed as the scene of a battle between the Ottomans and the European Crusaders in 1396. This Nikopolis, founded by Heraclius (ca. 575-642), has often been confused with the Byzantine town of NIKOPOLIS, modern Bulgarian Nikopol, a town on the southern bank of the Danube in lat. 43° 43' N. and long. 24° 54' E., famed as the scene of a battle between the Ottomans and the European Crusaders in 1396.

The importance of Nikopol as a trade centre and military post is due chiefly to the command which it holds over the Osman and the Aluta, the two Danubian arteries reaching into the heart of Bulgaria and Rumelia respectively. Situated on a naturally fortified plateau, it dominates the plains to the south, the Danube to the north, and the eastern gorge connect-ting the interior of Bulgaria with the river. The medieval double walls and strong towers surrounding Nikopol were destroyed by the Russians during their occupation of the city in 1913 and 1918.

Nikopolis was first captured from the Bulgarians in 791/1389 by 'Ali Pasha Çandarlı [see 'Ali Pasha Çandarlı]. Seven years later, it was the scene of the famous battle in the Crusade which is called by its name. The acquisition of Bulgaria by the Turks and their continual interventions north of the Danube into territories claimed by Hungary, together with a state of comparative peace in Western Europe in the last decade of the 14th century, made it both necessary and possible for most Catholic countries to participate in the expedition. An army of about 100,000 Crusaders (according to the most reliable estimates) from France, Burgundy, England, Germany, Italy, Spain, Hungary, Poland, Wallachia and Transylvania marched along the Danube, seized Vidin and Rakova, and finally set siege to Nikopol while an allied Veneto-Genoese fleet blockaded the city from the river. The siege lasted about fifteen days, during which Bayezid I [q.v.] abandoned the siege of Constantinople, burnt the siege machinery, and summoned his Asiatic and European contingents to arms. A Turkish army of perhaps 110,000 men met at Adrianople and, marching through the Shkipa Pass, descended into the valley of the Osma and pitched their camp on the southern hill commanding the Nikopol plain.

The battle took place on Monday 21 Dhu 'l-Hijja 798/25 September 1396, and the Crusaders were completely routed owing to the superiority of Ottoman tactics and the dissensions amongst the leaders of the Christian host. Bayezid divided his army into two large sections. The first, consisting of two large bodies of irregular cavalry and of irregular infantry, occupied the slope of the hill. Between the cavalry vanguard and the infantry rearguard of this section, the Turks planted a field of pointed stakes. Beyond the skyline on the other slope of the hill, hidden from their unsuspecting enemy, the second and more important section, consisting of Bayezid with his Sipahis and Stephen Lazarević with his Serbs, watched for the new and unseen forces. Meanwhile, a stampede of riderless horses produced confusion in the Crusaders' rear which comprised the Eastern European armies. Mircea and Lacižković, who had no sympathy for Sigismund of Hungary, retired with their Wallachian and Transylvanian auxiliaries defeated, the Turkish army of perhaps 110,000 men met at Adrianople and, marching through the Shkipa Pass, descended into the valley of the Osma and pitched their camp on the southern hill commanding the Nikopol plain. vive the critical struggles of the next decades. In later history, Nikopolis plays only a minor part. During the wars of the 19th century it was thrice captured by Russian armies (September 1810; July 1829; July 1877), and by the Treaty of Berlin (13 July 1878) was included in the tributary principality of Bulgaria. The modern town of Nikopol (estimated population 1970, 3,715) lies in the province (ćeşme) of Pleven (Ottoman Turkish Plewne [q.v.]).

(A.S. Atiya)

NIKSAR, the classical Neo-Caesarea in Bithynia, a town lying on the southern rim of the Pontic mountain chain of Asia Minor (the modern Turkish Kuzey Anadolu Dağları) on the right bank of the Kelkit river. It is situated at an altitude of 350 m/1,150 feet in lat. 40°35' N. and long. 36°59' E. The nucleus of the town is picturesquely situated at the foot of a hill, crowned by the ruins of a mediaeval castle which was erected from the material provided by the numerous buildings of antiquity there. Here in remote antiquity was Cabira and after its decline Diospolis founded by Pompey, later called Sebaste. In Church history Niksar is famous as the scene of the Council (314 A.D.) and as the birthplace of Gregory the miracle-worker. In the Muslim period it became important under the Seljuk sultans, of whom numerous important buildings have survived to the present day. It became more important under the Dānishmandids, whose founder Malik Dānishmand took Niksar among other places. His grandson Muhammad successfully resisted a siege by the emperor Manuel in Niksar. His son Yaghıbasan (537-62/1142-66), of whom there survives an inscription of the year 552/1157, died in 562/1166, but Syriac and Arabic translations of his philosophical works have recently come to light.

1. The Book on Plants: K. Anstüdtli fi 'l-nabdt, ta'fsir Nikûlû'ûs is probably an adaptation of Aristotle's lost work Πεποιημένα. The Arabic translation was discovered in 1923, edited by Arberry (1933) and Badawi (1954). See now Drossartul Luloful and Poortman, Nicolaus De plantis, five translations, in Verh. Ak. Amt. (1969) (= DLP). Because in the Latin version by Alfred of Sareshel (1200 A.D.) the words ta'fsir are omitted in some passages, our edition of Aristotle himself. Some 160 ms. testify to its popularity in the Middle Ages, and yet it was eclipsed by the Greek retroversion from Alfred's text (13th cent.), which from 1539 onwards figured as an appendix to all Greek editions of Aristotle. However, it was generally considered spurious. In 1841 Alfred's Latin version was edited by J.H.F. Meyer, who knew the title in a later Arabic hand. His edition was published by E.H.F. Meyer, who knew the title in Arabic from Hadji Khalifa (ed. Flügel v., 162, no. 10564). In his commentary, Meyer marked off a long digression (§§ 66-70) on the parts of plants that was borrowed from the History of Plants by Theophrastus, whose name was not mentioned. Apparently, Nicolaus inserted this detailed account because Aristotle used to maintain that the parts of plants were few and simple. A comparison with Theophrastus' Greek text shows that Nicolaus, in compiling, sometimes left out important words, e.g. restrictive particles, and had the habit of omitting parallel passages. Consequently, the tenor of the original work was often distorted and obscured. Obviously, he did the same to the Aristotelian part. Glossators swamped the text with enigmatic glosses and digressions on alien matters. Hence the rambling character of the book.
In the Orient, many authors have used the K. al-Nabdt, and though some of them (e.g. Ibn al-Tayyib) had a poor opinion of it, Ibn Rushd appears to have written an epitome (DLP, 363 ff.). The fragment of a long commentary in Hebrew (Oxford Hunt. 576) is a clever imitation. Ullmann, Die Natur- und Geheim- wissenschaften im Islam, Leiden 1972, 73 ff., rightly asserts that the book has primarily been one of the few sources for the knowledge of Theophrastean botany among the Arabs. And indeed, Ibn Sinâ and Ibn al-Ṭayyib, for instance, had a strong preference for the relevant part which, of course, they attributed to Aristotle.

2. On the Philosophy of Aristotle in at least 13 books. This extensive compendium of Aristotle’s physical treatises, Nicolaus acted as a pioneer; at the time when commentators used to begin with Logic, he turned to the philosophy of nature. The remnants in Europe are very scarce, but a curtailed Syriac version in the mutilated Cambridge ms. Syr. Gg. 2.14 was discovered in 1901. Drossaart Lulofs edited the first five books in 1963 (= Nicol. Philos., ii, 27–34); and (d) abridged excerpts of Aristotle’s work had a lacuna, see Ibn Rushd, Tafsir iii) with Meteor., 17–49). On the reference of the Damascene (see Drossaart Lulofs, Nicolaus Damascenus on the Philoso-

...
Edessa and in the Arabic-Christian author Agapius (Patrologia Orientalis, v, 596), is not followed by the Muslims who know only the Oxus under this name. Al-Axandria, because there would be then another name al-Fayyum, 127) mentions as another name al-Kasr (al-MasudT, a locality on Nubian territory, where tribute was paid, and the canals or Bahr al-Ghazal. In the Delta, the different rivers which go back to local beliefs or to classical sources, is based partly on direct observation, but for the most part on legendary or pseudo-scientific traditions which go back to local beliefs or to classical knowledge. For a long time during the Middle Ages the limit of Islamic territory on the Nile was well fixed; it ended at the first cataract near the island of Bilaik (Philae) to the south of Usowan (Assouan); here began, since the treaty (bakt [q.v.]) concluded by 'Abd Allah b. Abi Sarh with the Nubians, the Nubian territory (see nuna), where for long centuries Christianity prevailed (al-Baladhuri, 236; Ibn 'Abd al-Hakam, Futu3 Misr, ed. Torrey, 188). The first locality on Nubian territory, where tribute was paid, was called al-Kasar (al-Masu'di, Muradi, iii, 40-1 = § 883).

Historical tradition has preserved parts of the alleged correspondence between 'Amr b. al-'As and the caliph 'Umar on the subject of Egypt, then newly-conquered; here the Nile is described as a river 'whose course is blessed', while the flood and the inundations are praised in poetical terms ('Umar b. Muhammad al-Kindi, Fada'il Misr, ed. Ostrup, 204; al-Dimaqj, ed. Mehren, 109). The same correspondence reveals the perhaps historical fact that 'Umar did not wish to see the Arab army established in Alexandria because there would be a great river between the army and the caliph (Ibn 'Abd al-Hakam, 91; cf. also what is said on p. 128 about those who went to live in al-Djiza).

The principal towns by which the Nile passed in mediaeval Egypt in Upper Egypt, between Usowan and al-Fustat, were Adfu (Edfu, on the left), Isna (Esna, l), Arman (l), Kus (r), 'Al-Aksar (Luxor, r), Kift (r), Al-Kindi, Ashmunin (r), Usyuy (Assuit, Sudan), Al-Ushmunin (l), Al-Fayyum (r), Dalas (l), Al-Ashmunin (l), and Ifakhir (Al-fih, r). This succession of towns is given for the first time by al-Yakutib (331-4), while Ibn Hawkal (ed. de Goeye, 95) is the first to give a table of the distance between these towns, expressed in barsid, the entire distance being 21 days' journey (al-ldrisi, ed. Dozy and de Goeye, 52, gives 25 days' journey for the same distance). Shortly before al-Ushmunin, there branches off on the left the canal that carried the water to Fayyum, which is known to Ibn al-Fakh (74) as Nahr al-Lahman and to al-Idrisi (50) as Khalid b. al-Manhi: this canal, which according to unanimous tradition was dug by Joseph, occurs already on the ms. map from the year 479/1086, of Ibn Hawkal in Istanbul, Top Kapu Saray ms. no. 3346 (reproduction on fol. 658 of Monumenta Africae et Aegypti by Youssouf Kamal). It is the Bahr Yusuf of our days; on it was situated al-Bahnaa. The banks of the Nile in Upper Egypt are not very well known to the geographers; one finds repeated everywhere the assertion that the borders were cultivated without interruption between Usowan and al-Fustat (cf. al-ldsakhi, 50), but that the width of the cultivated territory varied during the river's course, dependent on the greater or lesser distance of the two mountain ranges that border the stream. Ibn Hawkal (Istanbul ms., see above) describes two extremely narrow strips, one between Usowan and al-Fustat, the other between Isna and Arman (now called Gebel Silsile). The curves in the course of the Nile, especially in the upper part of the Sa'id, are not indicated on the maps of al-Iddakhi and Ibn Hawkal. The oldest extant Arab map of the Nile, however—which is at the same time the oldest Arab map that we know of—gives clear indications that its sinuous course was a known fact. This map, reproduced in the edition of that text by H. v. Mziik (BAHUG, iii, Leipzig 1926). The representation of the Nile here is connected with the classical tradition of astronomical geography; al-Khazari himself, and after him Suhraab (Ibn Serapion) and Ibn Yunus (ms. 143. Col. of the University Library at Leiden, where on p. 136 a special table is given of the towns lying on the banks of the Nile), give exact indications as to the longitudes and latitudes of the Nile towns, but these indications need many very uncertain corrections to allow of the reconstruction of a map, as von Mziik has tried to do for al-Khazari in Denkschr. Ak. Wiss. Wien, lix, Vienna 1916, and J. Lelewel for Ibn Yunus in pl. ii of the Atlas annexed to his Geographie du Mouyen-age, Paris 1830. But the fact that the course of the Nile runs from south to north was well known to all the Arabic sources, which often repeat the assertion that the Nile is the only river in the world for which this is the case. Only the text of Ibn Hawkal seems to imply that the Nile reached al-Fustat from the south-east (96).

The Delta of the Nile begins to the north of al-Fustat, where the distance between the two mountain ranges widens, while these hills themselves become lower and pass away delving into the desert. Immediately below al-Fustat began the canal that was dug by 'Amr b. al-'As to link up the Nile with the Red Sea; this canal (Khalid Misr or Khalid Amir al-Mu'minin) was made in 23/644 according to Muhammad b. Yusuf al-Kindi (cited by al-Makrizi, Khiaut, ii, 143; cf. Yakit, ii, 466) and served for the conveyance of provisions to the Hijaz until the reign of 'Umar b. 'Abd al-'Aziz; afterwards it was neglected and even obstructed by the order of the caliph al-Imar, so that, in the 4th/10th century, it ended at Dhanab al-Timsah in the lakes to the north of al-Kulzum (cf. al-Ma'di, Muradi, iv, 97 = § 1426).

The two principal arms of the Nile in the Delta began about 12 miles to the north of al-Fustat (a little further than nowadays, according to Guest) and had, as now, a great number of ramifications which communicated with one another and ended for the greater part in the big lakes or lagoons stretching behind the sea coast from west to east; these lakes were called in the Middle Ages: Buahrayr Maryuy (behind Alexandria), B. Idkii, B. al-Burullus or B. al-Bughitim and the very large B. Tinnis, which last contained a large number of islands with Tinnis as the most important. On the land tongue, where the two main arms
The Nile arms went as now to the town of Rashid (Rosetta), after which it reached the sea; near the direction of Alexandria, ending in the Buhayrat Maryût; this branch was only filled with water in the time of the flood (see a very complete survey of the different "canals" of Alexandria by P. Kahle, in *Isl.,* xii, 83 ff.). The eastern arm ran, as is still the case, past Dimyáit (Damietta) and reached the sea shortly afterwards; it had several branches that went to the Buhayrat Tinnís, one of which continued one of the Nile mouths of antiquity. Though many sources, based on a pseudo-historical tradition, repeat after each other that there are seven Nile arms (Ibn ʿAbd al-Hakam, 6; further, al-Khārazmī, Kudáma, Suhrāb, al-Masʿūdi, Ibn Zulāk), the more realistic authors (Ibn Khurradadhbih, al-Yâkubī, Ibn Rusta, al-Istakhri, Ibn Hawkal, al-Idrīsī) only know of the two main arms. These were linked up by a canal dug by Haman (Ibn Mīzik, *BAHUG,* vol. 36, p. 159); this branch was only filled with water in the time of al-Abd al-Hakam, 6; cf. Guest, *op. cit.,* 944, and Maspéro and Wiet, *Maîtres, in MIFAO,* xxxvi, 104). Al-Maḳrizī has preserved a detailed description of the canal system in the province of al-Buhayra, to the east of Alexandria, from the Kītāb al-Mınāḥîd of Abu ʿl-Ḥasan al-Makḳūzī, who wrote in the 6th/12th century (*MIFAO,* xlvi, 167 ff.). It seems possible that a study of the ancient maps (especially the Delta map of the Istanbul ms. of Ibn Hawkal and the maps of al-Idrīsī) may be useful for a more complete reconstruction of the mediaeval situation.

The Nile arms have always been decisive for the administrative division of the Delta, which the sources call by the name of Asfal al-ʿArd or Asfal Ard Miṣr. The region to the east of the eastern branch was called al-Ḥawf; the texts of al-Istakhri and Ibn Hawkal place al-Hawf to the north of the Nile, which may be understood in connection with the view from S.E. to N.W. The region between the two main arms was called al-Rif (a name, sometimes used for the entire Delta as well) or Ṣaḥn al-ʾRif, while the country to the west of the western arm was called al-Buhayra and later al-Ḥawf al-Ḡarbi, the original Hawf being called then al-Ḥawf al-Šarḳī. The three sections were divided into kénars, the limits of which were determined by the more important branches; the bigger administrative units of later times [see *Miṣr*] depended likewise on the river system. The original Hawf, which links up the Nile with the Suez canal.

As to the knowledge of the course of the Nile to the south of Egypt, the Islamic geographical literature begins rather late to give information based on direct observation. At first, these sources themselves contribute with saying that the Nile comes from the country of the Nūba; for the rest, there were ancient sources of a different kind that helped to complete the geographical conception of the course of the great river. This conception involved also the origin of the Nile, covered since antiquity by a veil of mystery. The real origin of the Nile always remained unknown to Muslim scholars and travellers. It is a curious fact, however, that the information on this subject which we find uniformly repeated in the Islamic sources from the treatise of al-Khārazmī (ca. 215/830) onwards gives an idea of the origin of the Nile which does not correspond entirely to the data furnished by the classical sources. This conception makes the Nile emerge from the Mountains of the Moon (Djabal al-Kamar) to the south of the equator; from this mountain come ten rivers, of which the first five and the second five reach respectively two lakes lying on the same latitude; from each lake one or more rivers flow to the north where they fall into a third lake and it is from this lake that the Nile of Egypt begins. This conception is largely schematised and corresponds only partly to Ptolemy's description of the Nile sources; Ptolemy knows only of two lakes, not lying on the same latitude and does not speak of a great number of rivers coming from the Mountains of the Moon. The third lake especially is an innovation (cf. von Mīzik, in *Denkschr. Ak. Wiss. Wien,* bxviii, 44); in later authors such as Ibn Sāʿīd and al-Dimāḥqī this third lake is called Kūrā and may be connected with some notion of Lake Chad (the same authors change the name of Djabal al-Kamar to Djabal al-Kumr, which pronunciation is commented on by al-Maḳrizī, ed. Wiet, i, 219), but this is not probable for the time of al-Khārazmī; the knowledge of more equatorial lakes, however, may perhaps be traced to the experiences of the two centuries despatched by Nero to explore the Nile and who reached, according to Seneca, a marshy impassable region, which has been identified with the Bahr al-Ghazal. The system described by al-Khārazmī of the origin of the Nile is represented on the map in the Strasbourg ms. and is repeated many times after him (Ibn Khurradadhbih, Ibn al-Fakīh, Kudáma, Suhrāb, al-Idrīsī and others). Al-Masʿūdi, in describing a map he has seen, does not speak of the third lake (*Munadi,* i, 205-6; § 215) and Ibn Rusta (90) says that the Nile comes from a mountain called B.b.n and also knows only two lakes. Al-Istakhri and Ibn Hawkal, on the contrary, frankly admit that the origin of the Nile is unknown, which is also illustrated by their maps. Still the system of al-Khārazmī continued to be a geographical dogma and is found as late as al-Suyufī. Al-Khārazmī also took over from Ptolemy a western tributary of the Nile, which comes from a lake on the equator; this river is called by Ptolemy Astapos and may perhaps be identified with the Astbara. A later development, which connects with the Nile system a river that flows to the east in the Indian Ocean, is found for the first time in al-Masʿūdi (*Munadi,* i, 205-6, ii, 383-4; §§ 215, 796); this view is later taken up again by Ibn Sāʿīd and al-Dimāḥqī.

Another category of notions about the origins of the Nile is connected with the Jewish and Christian traditions which make the Nile come from Paradise. Mediaeval cosmographical theory places Paradise in the extreme East, on the other side of the sea (cf. the maps of Beatus), so that the Nile, like the other rivers
of Paradise would have to cross the sea. This state of things is actually described in an old tradition, ... expeditions went up the White Nile, and during the reign of Isma'il Pasha b. Ibrahim [q.v.] the Egyptian government opened the way for further scientific exploration. The exploration of the upper Nile and its sources since the end of the 18th century was the work of European travellers. They discovered, or perhaps re-discovered, the really large Nile lakes and identified the Ruwenzori mountain range with the Moon Mountains, the name of which was found again by the explorer Speke in the name of the Unyamwezi country, the "country of the moon". A part of the exploration of the Nile was due, however, also to Egyptian initiative. The Nile valley was occupied as early as 1820-2 under Muhammad 'Ali's son Isma'il Paşa, during which the city of Khartum was founded, established Egyptian domination in the Egyptian Soudan and opened the way for further scientific exploration. In the years 1839-42 three Egyptian expeditions went up the White Nile, and during the reign of Isma'il Paşa b. Ibrahim [q.v.] the Egyptian government
repeatedly tried to cleanse the swamps of the White Nile above Sobat from the masses of vegetation (sudd) which hindered navigation.

The yearly flood of the Nile (ziyāda, fayd, foqadan) is the phenomenon to which Egypt has been at all times indebted for its fertility and prosperity, as it provides, in compensation for the almost completely lack of rain in the country, a natural and almost regular irrigation for the lands on its borders and in the delta. It is the foundation of all cultural life and justifies entirely the attribute mudārak so often given to the river. On the same account, the Egyptians, as well as the Greeks, looked upon it as a "believing" river (al-Makrīzī, ed. Wiet, MIFAO, xxx, 218). The flood deeply influences the private and public life of villagers and townsfolk alike, and already the oldest Islamic traditions about Egypt reflect the feelings of wonder and thankfulness that animated the people of Egypt before them (Ibn 'Abd al-Hakam, 109, 205). Having reached its lowest level towards the end of May at Aswan and in the middle of June at Cairo, the Nile begins to rise again, reaching its highest level in the beginning of September at Aswan and in the beginning of October at Cairo. This regularity brings about a similar regularity in the methods of irrigation in the several parts of Egypt, in the times of the sowing and reaping of the different crops and consequently in the modes of levying the land taxes (e.g. al-Makrīzī, ed. Bulāk, i, 270, which text comes from Ibn Hawkāl; all the dates referring to these occupations have always continued to be fixed according to the Coptic solar calendar.

There is much discussion in the literary sources about the causes of the flood. The most ancient belief, which at the same time corresponds best with reality, was that the flood is caused by heavy rainfalls in the countries where the Nile and its tributaries have their origin. This is expressed in a somewhat exaggerated way in a tradition that goes back to ʿAbd Allāh b. ʿAmr b. al-Šāhī, according to which all the rivers of the world contribute, by divine order, with their waters to the flood of the Nile (Ibn ʿAbd al-Hakam, loc. cit., and 149). This implies the belief that all other rivers fall while the Nile rises, but, on the other hand, it is sometimes observed that other rivers also show the same phenomenon of rising and falling, especially the Indus, and this again is considered as a proof of the common origin of the two rivers (al-Makrīzī, ed. Wiet, MIFAO, xxx, 227). There are, however, other views, which attribute the cause of the flood to the movement of the sea, or to the effect of the winds; these views have been inherited from sources of the pre-Islamic period, among others from the treatise on the flood of the Nile attributed to Aristotle, and they are discussed and refuted at length in a special chapter of al-Makrīzī's Khitaq (MIFAO, xxx, 236 ff.).

Up to the 19th century, the irrigation system of Egypt continued along the same lines. When the flood began, all the outlets on both sides of the main stream and its principal arms in the Delta were closed, to be opened again about the time of the highest flood, when the water level had reached the necessary height according to the different places. The most important of these yearly "openings" was that of the canal (Khalīṣ) of Cairo, which, until recent times, remained a public festival. In Cairo the flood is complete (waḥiū al-Nil) when it has reached 26 dhūr’s above the capital the average level had to be 16 dhūr’s above the lowest level of the Nile; if the flood surpassed 18 dhūr’s it became dangerous, while a flood not exceeding 12 dhūr’s meant famine (cf. e.g. al-Idrīsī, 145, 146). In the history of Egypt, the years after 1441/1059 and especially the year 1451/1059 were notorious for the famine and disaster caused by the failure or practical failure of the flood. A historical account of the flood from the years 152-1296/769-1879 is given in Omar Toussoun, Mémoire sur l’Histoire du Nil, ii, 434 ff.

The regulation of the main stream and its branches are ascribed to the ancient Egyptian kings (al-Makrīzī, on the authority of Ibn Wāṣīl Shāh), and no real irrigation work of a wider scope existed in the Middle Ages and later except the famous canal system of al-Fayyūm [q.v.], which all the sources ascribe to the prophet Yusuf. In the rest of Egypt the water was allowed to flow freely over the lands after the piercing of the dams, so that large areas were completely inundated for some time; the Arabic sources contain some vivid descriptions of the large stretches of water, above which rose the villages, communication between the villages being only possible by means of boats during that time of the year (al-Masūdī, Mūridī, i, 162-3 = § 778; Ibn ʿAbd al-Hakam, 205). From the reign of Muhammad ʿAli [q.v.] new irrigation works were planned with the aim of making the country more productive, a possibility at which already the mediaeval authors hinted more than once. The first efforts, however, failed. About 1840 was begun the construction of a great barrier across the two arms of the Nile at the apex of the Delta, according to the plans of the French engineer Mouget, but this enterprise began to bear fruit only fifty years later when this barrage project, including the Tawfikiyya, Manūfiyya and Buhayriyya canals, had been completed in 1890. The later great irrigation works were executed higher up the river, such as the great dam and locks built in the head of the cataracts near Aswan in 1902, which was raised again in 1912 and again in 1933. While allowing, on one side, a better regulation of the distribution of Nile water in Egypt, these barrages higher up enabled at the same time a better irrigation of the borders to the south of Egypt. Herewith is connected the enormous barrage of Makwar, near Sennâr on the Blue Nile above Khartum, which permits the irrigation of the region called al-Ṭājirāt, between the Blue and the White Nile. This work was finished in 1925 and was completed by a similar barrage on the White Nile (1937), on the Arthara (1964) and on the Blue Nile (1966). In this way, the control of the Nile waters passed to a certain extent out of Egypt itself; it recalls the days of the great famine in 431/1059, when the Egyptians thought that the Nubians were holding up...
the flood of the Nile. The same problem came up in the 1930s with regard to the new project of constructing a dam on the frontier of the Sudán and the Belgian Congo, and the question was raised whether this dam would prove a fāʾīda ʿadīla or a fāʾīda ʿadīla for Egypt (cf. the newspaper al-Balāgh of 17 March 1934). Since the establishment of the Egyptian Republic in 1953, the most notable change in the Egyptian part of the Nile's course has been the construction (1959-71) of the High Dam (al-Saddāl al-ʿĀdīl) at Aswān, ca. 965 km/600 miles upstream from Cairo, with the aim of providing controlled water for irrigation in the lower Nile valley, protection against unusually high floods and the generation of hydroelectric power. The reservoir formed behind the barrage, Lake Nasser, stretches 480 km/300 miles upstream well into the Sudan. Whilst there have been great benefits for land reclamation and increased power generation in Egypt, there have on the other hand been indications of some deleterious effects also for the ecology of the Nile valley with increased salinisation of the river valley in Lower Egypt and alterations to the water flow in the Sudd region of southern Sudan.

It has already been shown how the flood of the Nile was the occasion of popular festivals such as the opening of the canal of Cairo. But in other respects also, the Nile is connected with traditional customs of a religious character, which are to be traced back in the Greco-Christian period into very ancient times. When the Arabs conquered Egypt, the sacrifice of the "Nile Bride" was still in use; every year a richly apparelled young virgin was thrown into the Nile to obtain a plentiful inundation. According to a tradition first recorded by Ibn ʿAbd al-Hakam (150), this custom was abolished by ʿAmr b. al-ʿĀs and the Nile resumed its flood after a note of the caliph Amr b. al-ʿĀs of the canal of Cairo, which pillar was called (Manners and customs, ch. 16, 42).

The cataracts above Aswan for a long time continued to form a barrier to the spread of Islam towards the countries bordering the Nile to the south of Egypt, which forms a curious contrast with the part played by the Nile in the introduction of Christianity into Nubia (cf. J. Kraus, Die Anfänge des Christentums in Nubien, diss. Münster 1930). Islam penetrated only slowly into Nubia and became more generally disseminated in the Sudán only in the 19th century [see NUBA; SUDAN].

Something has been said already about the praises of the Nile and its descriptions in poetical terms, by which this river has contributed to Arabic literature. Al-Makrizī (loc. cit., 270 ff.) cites some fragments of poems in praise of the Nile and its flood; among the poets whom he names are Tamīm b. al-Muḥīz (q. v.) (d. 375/985) and Ibn Kalākī (d. 567/1172). Further, ʿYākūt (i, 592, iv, 865) cites some poems which he attributes to Umayyā b. ʿAbī ʿl-Ṣāḥib. This poet is probably Abu ʿl-Ṣāḥib Umayyā b. ʿAbd al-ʿAzīz (d. 528/1134) who wrote a treatise al-Risāla al-Maṣriyya, from which also al-Idrīsī (Mauritaniae, ii, 364-5 = §§ 779-80) describes this festival, which he calls Laylat al-Qhitā, for the year 330/942. Lane describes the same ceremony, but in his time the Muslims did not take part in it. But bathing in Nile water in general procures baraka (cf. W. Blackman, The Felldhin of Upper Egypt, 32, with regard to bathing in the Bahr Yūsīl).

The quality of the Nile water is a matter of discussion in medical treatises. Ibn Sīnā (al-Kānadī fi l-ītiḥād, ed. Būlāk 1294, i, 98; cited by al-Makrizī) holds that the circumstance that a river flows from south to north has a bad influence on the water, especially when a south wind blows, and on this account he thinks that the abundant praise given to the Nile is exaggerated. The Egyptian physician Ibn Rīḍwān (d. 1037/1626) says that the Nile water reaches Egypt in a pure state, which is said to be the result of a cross between a crocodile and a fish, but which seems to be in reality a kind of skunk.

The possibilities which the Nile afforded for navigation are best seen from the historical sources. Seagoing vessels do not seem ever to have entered its arms, while the traffic on the river was maintained by small craft; various names of Nile boats occur in literature; in the 19th century the vessel called dhābabīyya is especially known. In earlier times, the term zalālūd was used for a Nile boat (al-Kindī, Kitāb al-Umarāʾ, ed. Guest, 157; Dozy, Supplément, s.v.). The skill of the fishermen in their sailing boats on the lakes in the Delta is often recorded; in shallow places, however, as well as on the inundated lands, boats had to be moved by means of oars or poles. The rapids between Egypt and Nubia were, as nowadays, an insurmountable barrier to river traffic; the loads were conveyed along the shore to the other side of the falls (Ibn Hawkāl, ms. Ahmet III, no. 3346, fol. 86).

The cataracts above Aswan for a long time continued to form a barrier to the spread of Islam towards the countries bordering the Nile to the south of Egypt, which forms a curious contrast with the part played by the Nile in the introduction of Christianity into Nubia. The earliest Arabic poems on the Nile are probably those found in the Diwān of Ibn Kayb al-Ruṣayyīfī (q. v.), the court poet of ʿAbd al-ʿAzīz Ibn Marwān at the beginning of the 8th century. Several treatises have been especially devoted to the Nile. Ibn Zūlāk (d. 387/997) says in his Fāḍīl al-Mīrī ms. arabe no. 1818 of the Bibliothèque Nationale at Paris, fol. 31a) that he has written a book on the importance and the salutary qualities of the Nile, which now seems to be lost. Further, there are a treatise Ṭabīṣrāt al-ḥākīm fi Nīl Mīrāw wa-ḥabūsātī mīn al-ʾanbār (ms. in Algiers; cf. Brockelmann, II, 666), and two short opuscula by Djalāl al-Dīn al-Małhī (d. 863/1459) and al-Suyūṭī, which are found together in the ms. Or. 1535 of the British Museum (Rieu, Suppl., no. 1198; Brockelmann, II, 138).

Bibliography: As the aim of the present article is to give a survey as comprehensive as possible of the Nile from the point of view of Islam and its history, it seems superfluous to quote here even the most important modern works and articles belonging to the abundant bibliography of the Nile. The earlier Islamic authors have all been named in the text; the later ones, such as ʿYākūt, ʿAbd al-Lāṭīl, Abu ʿl-Īdmāfī, al-Kalkashandī, al-Makrizī, al-Suyūṭī (Husn al-
J. von Hammer, GOR, i, 59), was the daughter of the lord of Yarhisar (Anatolia, near Bursa; cf. Hadjdjii [1924], 263) and F. Taeschner (cf. ZS, xx, 135) of the rape, but the Byzantine sources make no wife of his son Orkhan [q.v.], then only 12 years old. [q.v.], Othman was betrothed to the lord of Belokoma (Biledjik). Name, as also does the bridge over it in front of the reference to it. Nllufer Khatun became the mother of Idrls Bitllsl, and following him Neshri, tell the story her off in 699/1299 and to have destined her to be the Khalifa, 659) and according to one story took for himself, and which has come to replace his native of Yush". The poet's father, Ibrahim Nun, "water lily" and Greek i.e. nilufar Battuta for a Byzantine princess (cf. ii, 393-4). This poem, which evokes a vague comparison with Alf LInline Les Nuits, Alfred de Musset's This poem, which evokes a vague comparison with Les Nuits, Alfred de Musset's "The value of feelings". After the suspension of Masāki, Nima Yushfij remained without work for some years. In 1326/1947-8 he found a job in the printing and publication department of the Ministry of Education. He continued to work in that capacity till the time of his death, which took place in early January 1960.

Nima Yushfij's writings began to appear in print from 1921. Among the first journals to publish his works were Nauv behar and Karn-i bittun. Some of his poems were included in the Muntekarbati dāngh, a literary anthology published in 1342/1923-4. Until the poet's association with the journal Masāki, his works appeared sporadically. After that, they began to be published on a more regular basis. During the forties and fifties, his poetical works came out in Payām-i nau, Nama-yi mardun, Kurusi-i qangi, Andiluhi-yi nau, Kauvī, and several other journals upholding new literary tendencies. His first volume of his selected poems appeared in 1955, and a complete edition of his verse was published in 1364/1985-6.

The earliest work of Nima Yushfij was his long poem Kissya-yi rang-pard in ("The pale story"), which was published in 1921. It was composed in the maghnawi form, employing the same metre as the one used in Djalal al-Dīn Rūmi's Maghnawī. Its theme was personal, and it showed the poet's involvement with love and its unhappiness, alienation from society, and disgust with city life and its people. In spite of its conventional form and style, the poem represented a departure from the ordinary trend, in that it depicted a new sensibility based upon the Western concept of literary romanticism.

The next important work of Nima Yushfij, and in fact his masterpiece, was another long poem entitled Afšāna ("Myth"). Composed in 1922, it was published partially, then afterwards, in Tehran. This poem, which evokes a vague comparison with Alfred de Musset's Les Nuits, may be said to have heralded the beginning of modernism in Persian poetry. It contained a dialogue between a lover, dismayed by his experience, and the Myth which consoles him in his sorrow. Besides setting a new example in amatory verse, Afšāna was unique for its impres-
sionistic approach to the subject as well as for using an imagery derived from personal observation.

Many of Nima Yushidj's poems had a strong social aspect, and his collection of lyrics reflecting his views included Mahbub (“Prison”), Khamsa-vida-yi sarbars (“The soldier’s family”), Ay adamsah (“O you people!”), Nakus (“The bell”), Kar-i shab pa (“The night watchman”), and Macht-umin (“The amen bird”). Works such as these show a predilection for popular causes, and pro-leftist sympathies could be discerned among them.

Nima Yushidj left an unmistakable mark on contemporary Persian poetry. The generation of poets that emerged after the forties recognized him as their leader. One of his most important contributions was his effort to provide Persian poetry with a new formal structure, and he was the first to popularise free verse, which became the major vehicle of expression for future poets.

**Biography:**

**NIMAT ALLAH b. AHMAD b. KADID MURRAB, known as Khali Sf, author of a Persian-Turkish dictionary entitled Lughat-i Nimat Allah. Born in Sofia, where as an examiner he made a reputation as an artist, he moved to Istanbul and there entered the nakshbandi order. Association with the nakshbandi dervishes made him familiarised with literature and especially with Persian poetry. Nimat Allah decided to make accessible to others the knowledge he had acquired by an ardent study of Persian literature, and thus arose his lexicographical work, which he probably compiled at the instigation and with the assistance of the famous Kemal Pasgha-zaade (d. 940/1533 [q.v.]). He died in 969/1561-2 and was buried in the court of the monastery at the Edirne gate in Istanbul. His work, which survives in a considerable number of manuscripts, is divided into three parts: verbs, particles and inflection, and nouns. His sources were: 1. Ukbuyi-vida 'Adgim (see Oxford, Bodleian, Uri, 291, no. 108); 2. Ksaima-vida Luif Allah Halimi (Haddidi Khalifa, iv, 503); 3. Wiistya-vida makabid (Flugel, Vienna catalogue, i, 197); 4. Lughati Kamar-Husawari (Riiz, 144a); 5. Sibak-vida 'Adgim (Haddidi Khalifa, vi, 91 and Leiden catalogue, i, 100). Besides making careful use of these sources, Nimat Allah added much independent material, of which his dialect notes and ethnographical observations are especially valuable. This work is of considerable scientific importance and deserves greater attention than it has so far received.

**Bibliography:** O. Blau, Uber Nimatullah's persisch-turkisches Wörterbuch, in ZDMG, xxx (1877), 484; Riiz, Catalogue, 54b; Haddidi Khalifa, vi, 362. The dictionary was partly used by Gollus for the Persian part of Caste1's Lexicon Hypoghion. The best modern edition is Dorn, St Petersburg catalogue, no. 431 (p. 426) and Fleischer, Dresden catalogue, no. 182. (E. Berthels)

**NI'MAT ALLAH b. HABIB ALLAH HARAWI, a Persian historian. His father was for 35 years in the service of the Great Mughal Akbar (963-1515/1565-1605) where he was a khilafa inspector. Nimat Allah himself was for 11 years historian to Djahangir (1604-1606), then entered the service of Khan-Djahang Lodi [q.v.] whom he accompanied in 1018/1609-10 on the campaign against the Deccan. Soon afterwards he became acquainted with Miyyan Hayat Khan b. Salim Khan Kaskar of Samana, who persuaded him to write a history of the reign of Khan-Djahang. Nimat Allah began his work in Malkapur in Dhu '1-Hijjda 1020/February 1612 and finished it on 10 Dhu '1-Hijjda 1021/February 1613. The work is dedicated to Khan-Djahang, and is entitled Tavaksh-i Khshshahani and consists of a mukaddimah, 7, 8, and a khutb. It deals with the history of the Afghans, beginning with their legendary descent from the Banu Isma'il and treating with special fullness of the history of Bahlul Lodi, Shir Shahr Sur and Nwabd Khan-Djahang Lodi. The last chapters are devoted to the genealogy of the Afghani tribes and the reign of Dajhangir. The khutbah contains biographies of famous Afghan khans. There is also an abbreviated version of the work entitled Makhan-i Afghani.

Dorn, History of the Afghans: translated from the Persian of Nuamat Ullah, in Orient. Transl. Fund, London 1829-30. See also Storey, i, 393-5, 1302; Storey-Bregel, ii, 1209-14. (E. Berthels)

**NI'MAT-ALLAHYYA, a Persian Sufi order that soon after its inception in the 8th/14th century transferred its loyalties to Shi'i Islam. The Ni'mat-Allahyya first took root in south-eastern Persia where it continued to prosper until the time of Shah Abbasi. For the next two centuries it survived only in the Decani branch that had been established in the 9th/15th century. Reministrac, the Order enjoyed considerable vigour in the early 13th/late 18th century, the Ni'mat-Allahyya became the most widespread Sufi order in the country, a position it has retained until recent times.

1. The founder and the development of his order.

The eponym of the order, Shah Nimat Allah Nur
al-Din b. 'Abd Allah Wali (sometimes designated additionally as Kirmani, especially in Indian sources) was born in Aleppo, in either 730/1330-31 or 731/1330-1. His father was a sayyid, claiming descent from Isma'il b. Dja'far (which may help to account for his loyalty given the Ni'mat Allah order by several Nizari imams of the Kasmî-Shâhî line), and his mother was descended from the Shâbânkâra rulers of Fars. The stylistic superiority of Ni'mat Allah's Persian to his Arabic writings suggests that he must have been brought to a Persian-speaking environment while still a child. In his later, Persian period, his style changed to have the same purity as the Bektashi saint Kayghusuz Abdal ad-Dawdad, and the dicta of earlier theologians such as Sayyid Djalâl al-Dîn Khârazmî and 'Abd Allah al-Yâfî'î (d. 756/1355), whose spiritual lineage went back through three generations to Abû Madyan (d. 590/1194).

Ni'mat Allah joined al-Yâfî'î's circle in Mecca when he was twenty-four years of age, and stayed with him until his death. Most probably it was al-Yâfî'î, who frequently described the Sufis as 'kings' in his writings, who bestowed the title of Shah on Ni'mat Allah.

After the death of his master, Ni'mat Allah embarked on a long series of travels. These brought him first to Egypt, where he spent a period of retreat in the cave on Mt. Mukaţam that had been used for the same purpose by the Bektashi saint Kayghusuz Abdal (q.v.). He then travelled through Syria and 'Irak to Adhâr-baydijân, meeting in Ardabil with the progenitor of the Safawids, Shaykh Sadr al-Dîn and possibly with Kâsim al-Anwâr (although the latter can have been little more than an adolescent).

It was in Transoxiana that Ni'mat Allah first presented himself as a murshid and the propagator of a new order. Conditions there must have appeared propitious, for the Turkic nomads of the area, awaiting Islamisation, offered a vast pool of potential recruits on which other Sufi shaykhs were already drawing. It was, however, precisely the extent of Ni'mat Allah's success in establishing khanâkahs in several locations and, more importantly, in recruiting a large number of nomads in the area of Shâhri-Sabz which aroused the suspicion of Tîmur.

After the death of his master, Ni'mat Allah also wrote profusely; many hundreds of treatises have been attributed to him. Even allowing for exaggeration and misattribution and taking into account the fact that many of the 'treatises' are brief notes or communications, the size of Ni'mat Allah's literary corpus remains impressive. His writings include exegetical essays on the Kur'an and the dicta of earlier shaykhs and, more importantly, treatises that expound leading themes in the Sufism of Ibn 'Arabi, especially waqaat al-awgâ'id. He also composed a commentary on Ibn 'Arabi's Fusus al-hikam, claiming that he had been vouchedsafe a perfect comprehension of the book by inspiration from the Prophet, just as the author had received the book itself from the same infallible source.

Better known and more widely read than Ni'mat Allah's treatises is, perhaps, his Diwân, which consists for the most part of verses expounding waqaat al-awgâ'id with a particular emphasis on the impossibility of ontological multiplicity. Despite the manifest influence on Ni'mat Allah's poetry of 'Arâf and Rûmî, his fondness for the technical terminology and conventional symbols of Sufism detracts heavily from the poetic effect of his verse. The most frequently cited poems in the Diwân are those of a propagandistic nature which have been interpreted as foretelling events as diverse as the rise of the Safawids, the separation of Bangladesh from Pakistan and the Islamic Revolution in Iran of 1978-9. These verses, the authenficity of at least some of which is open to question, have tended to make of Shah Ni'mat Allah the Persian equivalent of Nostradamus (Browne, LHP, iii, 463-73).

There can be little doubt that Ni'mat Allah remained a Sunnî throughout his life. His master al-Yâfî'î was a Shâfî, and he himself frequently cited the hadîths of Abû Hurayra in his works, something unthinkable in a Shi'i author. Nonetheless, elements that may have facilitated the later transition of the Ni'mat-Allâhiyya to Shi'ism are also to be encountered in his writings. These include a belief in Twelve Isma'ili Imams (also dasâdaâ-gâna) of the spiritual universe and an emphasis on wâdây as the inner dimension of prophethood.

Shah Ni'mat Allah Wali was succeeded by his son Shah Khalîl Allah, then fifty-nine years of age. Not long after his father's death, he was summoned to the court of the Tîmûrid Shâhrukh in Harât. According to the hagiographical sources, this invitation was a sign of the monarch's veneration for him, but it is more likely that Shâhrukh sensed a political danger in
the strength and number of the Ni'imat-Allahiyya. That relations between Khalll Allah and the ruler were not altogether harmonious is shown by Shahrukh's refusal to exempt his kingdom. For whatever reason, some time between 836/1432 and 840/1436, Khalll Allah decided to leave Persia. Entrust-ing the shrine at Mahan to one of his sons, Mir Shahs al-Din, he departed for the Deccan with his two other sons, Mubbib al-Din Habib Allah and Habib al-Din Mubbib Allah.

Ahmad Shah Baha' in, the ruler of the Deccan [see above], conferred a delegation to Shah Ni'imat Allah inviting him to settle at Bidar [q.v.] in his kingdom. Formerly a devotee of the Chist saint Gisu daraz, he was searching for a new preceptor, one who might enjoy prestige among the immigrant elite, the so-called Afakis, on which he was coming increasingly to rely. Shah Ni'imat Allah had refused the invitation, but he sent Ahmad Shah a letter of initiation that also granted him the title of waqil-i nafs-i humdyun ("Sufi killer"). Now that Khalll Allah had finally come, he and his party were greeted with similar enthusiasm. Although now to remain in the Deccan for several generations: Allah II; Mir Shah Shams al-Dln Muhammad II; Mir Dln Muhammad; Mir Shah Hablb al-Dln; Mir Shah Kamal al-Dln; Khalil Allah died in 860/1456, and was succeeded in order then passed out of the family to a certain Mir. Some years later, A11 Shah (nd^ib) was replaced by the Kutb Shahls, he departed for the Deccan with his two other sons, Muhibb al-Dln Hablb Allah and Shams al-Dln, trusting the shrine at Mahan to one of his sons, Mir. Whatever reason, some time between 836/1432 and 840/1436, while en route from Nadjaf to Mashhad, by Aka Muhammad 4Ali Bihbahani, a madhhb popularly known as the "Sufi killer" killer.

Ma'sum 4Ali Shah's principal companion and disciple was Nur 4Ali Shah of Isfahan, a prolific author in both poetry and prose. His works are replete with theophrastic utterances; themes of ghuldt Shjism that seem to echo the verse of Shah Ismâl; and criticisms of the Shâhis (walmsâ). (The combination of these elements suggests that the renascent Ni'mat-Allahiyya of the time had doctrinally little in common with the order.) His first request, too, was refused, but his grandson Nur Allah was sent by way of compensation. Ahmad Shah received him with great honour, giving him his daughter in marriage and elevating him over all the indigenous Sufis by naming him malik al-madhâbih.

Now that Khalll Allah had finally come, he and his party were greeted with similar enthusiasm. Although links with Persia were not entirely broken, the leadership of both the Ni'mat-Allahiyya family and order was now to remain in the Deccan for several generations: Khalll Allah died in 860/1456, and was succeeded in order then passed out of the family to a certain Mir. The Ni'mat-Allahiyya order was reintroduced into Persia with royal encouragement. The main line of Ni'mat-Allahiyya descent is that which passes through Mast 'Ali Shah. The first became the eponym of a sub-order known as the Kawthariyya, which has survived down to the present, although with a very small membership, its best-known leader in modern times was Nâsr 4Ali Shah Malik-niya (still living in the late 1970s). The first descended from Astarabadi, and also reached into the 20th century, producing one of the most celebrated Persian Sufis of recent times, Sayyid Husayn Shams al-Urâfâ (d. 1353/1935), after whom it is retrospectively known as the Shamsiyya. Its following, too, has generally been very restricted.

The main line of Ni'mat-Allahi descent is that which passes through Mast 'Ali Shah. He was the author of several important works refuting the legalistic criticisms that were still being directed against Ni'mat-Allahi Sufism (see in particular his Kashf al-ma'sarâf, Tehran 1350 Sh./1971) and three compendious travelogues, valuable for the detailed information they contain on the Sufis of diverse affilia-tions whom Mast 'Ali Shah met in the course of his travels.

After the death in 1278/1861 of Zayn al-5Abidin
It is the line of a third claimant to the succession of Rahmat ʿAli Shah, Ḥājjī Muhammad Akā Nunawwar ʿAli Shah (d. 1310/1894) that has the best claim to be regarded as the main line of Niʿmat-Allāh descent; its adherents continue to designate themselves exclusively as Niʿmat-Allāhī, although the clarificatory expression "line of Dhuʾl-Riḍāyatsayn" (an epithet borne by the third successor to Munawwar ʿAli Shah) is sometimes additionally used. Munawwar ʿAli Shah was succeeded in turn by Wafāʾ ʿAli Shah (d. 1336/1918), Sādik ʿAli Shah (d. 1540/1922) and Ḥājjī Mīrzā ʿAbd al-Raḥmān Dhuʾl-Riḍāyatsayn (d. 1372/1953), a man of wide erudition, Muʾnis ʿAli Shah enjoyed great respect during the thirty years he directed the order, but its unity could not be maintained on his death. The traditional pattern of discord reasserted itself as thirteen claimants to the succession came forward. The most visibly successful of them was Dr. Dżawād Nūrūbkāhī, a psychiatrist. He managed to recruit many members of Tehran high society at a time when the profession of a certain type of Ṣūfism was becoming fashionable; to build a whole series of new ḥānakāhs around the country; and to publish a large quantity of Niʿmat-Allāhī literature, including many of his own writings. As the Islamic Revolution of 1978-9 approached victory, Nūrūbkāhī left Iran, and he now administers a mixed following of Iranian émigrés and Western converts resident in many cities of Europe and North America.

The role of the Ulama in the Qajar period, Berkeley and Los Angeles 1969, 36-40; idem, Religious forces in eighteenth- and nineteenth-century Iran, in Camb. hist. Iran, vii, 720-4; idem, The revolt of A qa Khan Mahālātī and the transf erence of the IsmAʿīlī Imāmata to India, in SL, xxix (1969), 62-5; A. Anwār, Anjoman-e Qolūsū, in Efr, Said Amir Arjomand, Religious extremism (ghulwān), Sufism and Sunнизm in Safavid Iran 1501-1722, in Journal of Asian History, xv (1981), 17-20; J. Aubin, Matériaux pour la biographie de Shah Niʿmatullah Wali Kirmani, Tehran and Paris 1982; "Abd al-Husayn Dhuʾl-Kūrghān, but it was widely criticised, both because of its contents and because it was composed in verse. On ʿAbād ʿAli Shah's death in 1316/1899, the leadership of the order was assumed by Zāhir al-Dawla ʿṢafā ʿAli Shah, minister of the court and brother-in-law of the ruling monarch, Muḥaffaẓ al-Dīn ʿAlī Shah; not surprisingly, this gave a somewhat aristocratic complexion to the ʿṢafā-ʿAli-Shiʿiyā. Given the incipient westernizing tendencies among the Iranian political élite, it was perhaps natural that a further transformation should also have set in during ʿṢafā ʿAli Shah's lifetime. He established a twelve-man committee to supervise the operations of the order which under its new designation Anjoman-i ʿUqūwawat ("Society of Brotherhood") was effectively transformed into a pseudo-masonic lodge; many of its members were, in fact, also initiates of Bāb’s ʿIrāq, the first masonic lodge in Iran affiliated with the French Grand Orient. The society abandoned virtually all the traditional rites of Ṣūfism, but continued to flourish among certain classes until the advent of the Islamic Republic, when its activities were brought to an end, together with those of all other masonic organisations. Its last leader was ʿAbād Allāh Iṣṭiʿjam (d. 1982).

2. Ni'mat Allâh and his family at the Bahmani court of South India. When Khâfî Allah b. Ni'mat Allâh arrived in the Bahmani capital Bidar after his father's death in 834/1421, he established there a khânâh for his kinsfolk and followers, and his own tomb (tombâh) became a prominent landmark near the royal tombs, where many of his descendants still live. The Bahmani sultan Ahmad Shâh's own tomb is liberally embellished with extracts from the dâvûn and other writings of Ni'mat Allâh (the texts are given in extenso, with translations, in G. Yazdani, Bidar, its history and monuments, Oxford 1947, 115-28, with some illustrations, Oxford 1954, LXXIV-1). The tomb of Ni'mat Allâh at Mâhân, some 20 miles/36 km south-east of Kirmân in eastern Persia, was erected in 840/1437 by Ahmad Shâh Bahmani's son, a short Mathnawi without a title, which deals with the usûl and demonstrates the genius and wit of the author's life, Chandra Lall Gupta and Angra Lall Varma, Agra 1909; Rûkâ'ât wa mubâhâhât, Lucknow 1845. A ms. of the Kân-î Ni'mat in Persia, Berl. catalogue, no. 541. See also Storey, 583-92, 633-6; 317, 1172, 1318. (E. Bertheis)

Ni'mat Allâh, who wrote under the taḥhûlât of 'Alî, was exceedingly prolific and wrote a number of works in prose and verse, of which the following are the most important: 1. Wâdâ'i Haydarîdâb; a description of the siege of Haydarabad by Awrangzib in 1097/1685-6. This work is characterised by a biting wit and describes the siege in a satirical form, which procured the little book the greatest popularity; 2. Dîvân-nâmâ, a chronicle which covers the last years of Awrangzib's reign and the war which broke out after his death among his sons; 3. Bahâdûr-Shâh-nâmâ, a chronicle of the first two years of the reign of Shâh 'Abâm Bahâdûr-Shâh; 4. Humâyun, Zâdibâ build a crown jewels with the title of dârâgha-yi dastgâh kirânâ. He attained his highest honours under Awrangzib (1069-1118/1659-1707), who gave him the title of Ni'mat Khân (1104/1692-3), which was later changed to Mulkarrân Khân and then to Dânâghând Khân. He died at Dîhilî on 1 Rabî' II 1122/30 May 1710.

Ni'mat Allâh, son of Ni'mat Allâh b. Shîrâzî, a Persian author, was born in India and came of a family several of whom had been distinguished physicians in their ancestral home in Shîrâz. He entered the service of the state under Shâh Dîwân (1003-1014/1598-1597) and was appointed as the crown jewels with the title of dârâgha-yi dastgâh-khânâ. He attained his highest honours under Awrangzib (1069-1118/1659-1707), who gave him the title of Ni'mat Khân (1104/1692-3), which was later changed to Mulkarrân Khân and then to Dânâghând Khân. He died at Dîhilî on 1 Rabî' II 1122/30 May 1710.

Nîmâr, Fâ'ris, Syro-Lebanese journalist, scientist and politician, born in Hashbaya, South Lebanon, in 1855 to an Arab Orthodox family, died in 1951. He studied Arabic, English, German and mathematics in Jerusalem, Mount Lebanon and Beirut. In 1870 he entered the Syrian Protestant College (SPC, subsequently renamed the American University of Beirut), and graduated with a Bachelor degree in Arts and Science. In 1951. He studied Arabic, English, German and mathematics in Jerusalem, Mount Lebanon and Beirut. In 1870 he entered the Syrian Protestant College (SPC, subsequently renamed the American University of Beirut), and graduated with a Bachelor degree in Arts and Science. In 1874 he was appointed assistant to the American missionary Dr Cornelius Van Dyck (1818-95) in the Astronomical Observatory at SPC, and taught subjects such as Latin, chemistry and astronomy. During the same year, and after his conversion to Protestantism, he joined the Beirut Masonic Lodge, becoming eventually its Master. Together with four other Christians he formed in 1875 a secret society which agitated for Syrian independence within the Ottoman empire by means of posting anonymous placards in Beirut and other Syrian cities.

In 1876 Fâ'ris Nimr and his colleague at the SPC Ya'qûb Şarrûf (1852-1927) began to publish, under the patronage of Van Dyck, the famous scientific magazine al-Muktafa. His adoption of Darwinism...
under the influence of Dr Edwin R. Lewis (d. 1907),
a chemistry teacher at the SPC, seems to have
alienated various influential individuals and institu-
tions, including the Board of Trustees of his college.
Consequently, in 1885 the SPC terminated his con-
tract and that of his colleague Şarrûf. This decision
prompted both Nimr and Sarrûf to transfer their
magazine to Cairo.
Once in Egypt, Nimr was received with open arms
by British and Egyptian officials. In 1888 he married
the daughter of the British Consul in Alexandria, and
accepted the principle of the British
Almukattam. Consequently, in 1885 the SPG terminated his con-
tract and that of his colleague Sarrûf. This decision
prompted both Nimr and Sarrûf to transfer their
magazine to Cairo.

For the Greeks, Aristotle and Herodotus (History,

NIMRUD, a ruined site of ancient Assyria, now in
northern Iraq some 30 km/20 miles south of al-
Mawsil [q.v.] in lat. 36°5′N. and long. 43°20′E.
The ruins on the plateau of Nimrud are those of the ancient Assyrian city of Kalkhû, apparently
mentioned in Gen. x. 11-12 as Calah. It is mentioned in Syriac sources, but the mediaeval Islamic geographers
mention it only incidentally and under differing names; thus Yakut, i, 119, iii, 113, says that al-
Salâmiyya is in the vicinity of the ruins of the town of Aţţûr, which can only mean the ruins of Kalkhû. The
modern name Nimrûd for the site appears first in
Niebuhr, who was in al-Mawsil in 1776, and the
impressive landmarks in northern Iraq and the recent
archaeological work of Mallowan, who followed his footsteps in this century from 1949
to 1952.

(M. E. J. Richardson)

NIMS (A.), masculine noun (pl. numûs, numûa)
denoting the ichneumon or Egyptian mongoose
(Herpestes ichneumon), a small carnivore of the family Viverridae, native to Africa and common in Egypt,
Morocco and Palestine. In Egypt, with the
greatly improved knowledge of industrial chemistry using
tin-glaze) dating back to the 9th century have also been found. The site has provided the largest collection
of carved ivory which was worked by expatriate
Phoenician craftsmen resident (probably obligatorily)
in what must have been one of the major artistic cen-
tres of the time in the Fertile Crescent. The life-sized female mask exquisitely carved from one piece of ivory is especially famous.

The importance of the site was recognised by the
19th century British excavator Layard, who dug there in
1845-51, but the archaeological work of Mallowan,
who followed his footsteps in this century from 1949
to 1958, has been much more thoroughly recorded. Bronze saddlery fittings and Aramaic mason’s marks
which have been found confirm that there is still much more to be learned about the position of foreign
workers at the site.

(M. E. J. Richardson)
four-day fever of an invalid; on the other hand, in the same conditions, the left eye causes the recurrence of this fever. An ointment based on mashed brain mixed with horse-radish juice and oil of rose is a violent irritant of the skin, the equal of scabies; only a mixture of the animal's excrement with oil of jasmine can suppress its noxious effect. Finally, the same excrement diluted in water and swallowed plunges the drinker into agony and into terror of demons which he imagines are in pursuit of him.

In botany, the Arabic name of the ichneumon is given to two plants: (a) al-nims is, in the Maghrib, the Downy koelaria (Koelaria pubescens) a graminaceous plant related to Fescue grass (Festuca); (b) bititsīth 'ayn al-nims ‘ichneumon’s eye melon’ or bititsīth 'ayn al-nims ‘ichneumon’s eye melon’ is a nickname given to the watermelon (Citrullus vulgaris, of the variety enemus).

Bibliography (by alphabetical order of authors):

After al-Dījahib, the few Arab authors who have recorded the ichneumon confine themselves to repeating these accounts; this is true in the case of Ibn al-Fakhr al-Hamadānī (3rd/9th century) (Fr. tr., Abridger, 76, 252), of al-Maṣirá (4th/10th century) (Marūghī, ii, 57 = § 492) and of al-Damiri (Ḥayāt, ii, 365). However, there is no doubt that the ichneumon was useful in Egypt, and because of the ease with which it was tamed it successfully played the role of the domestic cat; tradesmen, watchmen and caretakers could not dispense with this valued ally which rid them of unwanted guests—rodents and reptiles being especially abundant in the humid regions of Lower Egypt. The only precaution to be taken with this mongoose was to deny it any access to chicken coops and dovecotes, for the safety of their occupants and of their eggs.

The extreme vigilance of this small carnivore passed into metaphor and it was said of someone who had sharp eyesight 'ṣaynuhu ka-ṣym al-nims 'he has the eye of an ichneumon'. To describe somebody as nims was to express admiration for his great perspicacity.

In some parts of the Islamic world such as the Maghrib and Lebanon, the term nims has been erroneously applied to the weasel (Mustela putorius [see tin 'ins]). According to fable, both these creatures enter the mouth of the crocodile, when it is sunbathing, to devour its entrails, not being content with stealing its eggs, like those of turtles, snakes and birds. As a result of similar confusion, some Arabic dialects employ nims to identify various other members of the sub-family Mustelidae such as the stone-marten (Martes foina), the polecat (Mustela putorius) and the ferret (Mustela putorius furo); the term is even found erroneously applied to other viverrine, the civet (Genetta genetta). As for the two expressions fir and lūtrāq which Dozy attributes to the ichneumon (Supplément, s.v.), one is found in a manuscript of the Escorial and the other in al-Iдрīṣī, where the context is the topic of the crocodile; they do not seem to have any connection with the mongoose.

As is the case with every animal studied, al-Damiri does not fail to list the specific qualities of various organs of the ichneumon. Thus if a dovecote is fumigated with the burning tail of an ichneumon, all the pigeons are driven irrecoverably. The spleen mixed with the white of an egg is an excellent eyewash, curing conjunctivitis. A kirāṭ of blood diluted in a woman’s milk and poured into the nose of a lunatic restores his reason. A broth made from the animal’s penis and taken as a drink cures retention of urine. The right eye wrapped in linen reduces the

ii, 67) had already mentioned the ichneumon (γυνακεῖον ‘which follows the trail of the crocodile’) as a major domestic destroyer of the rodents and reptiles infesting the households of Egypt as well as of the eggs of the crocodile. Aristotle gives details (History of animals, Fr. tr. J. Tricot, Paris 1957, ii, 453, 601) of the stratagem used by this mongoose when biting a snake to death; it rolls beforehand in slippery clay so that the reptile cannot take a grip on its body which it tries in vain to envelop.

On the other hand, al-Dījahib describes, quoting an anonymous source (Ḥayawān, iv, 120) another tactic of the ichneumon which belongs to fable. At the approach of the snake, the wily mongoose huddles itself up, emptying its lungs as far as possible, and plays dead; the reptile wraps itself around its body to choke it and, abruptly, the mongoose takes a deep breath to inflate its rib-cage, which has the effect of breaking the snake into several pieces like an over-tensed spring.

After al-Dījahib, the few Arab authors who have recorded the ichneumon confine themselves to repeating these accounts; this is true in the case of Ibn al-Fakhr al-Hamadānī (3rd/9th century) (Fr. tr., Abridger, 76, 252), of al-Maṣirá (4th/10th century) (Marūghī, ii, 57 = § 492) and of al-Damiri (Ḥayāt, ii, 365). However, there is no doubt that the ichneumon was useful in Egypt, and because of the ease with which it was tamed it successfully played the role of the domestic cat; tradesmen, watchmen and caretakers could not dispense with this valued ally which rid them of unwanted guests—rodents and reptiles being especially abundant in the humid regions of Lower Egypt. The only precaution to be taken with this mongoose was to deny it any access to chicken coops and dovecotes, for the safety of their occupants and of their eggs.

The extreme vigilance of this small carnivore passed into metaphor and it was said of someone who had sharp eyesight ‘ṣaynuhu ka-ṣym al-nims ‘he has the eye of an ichneumon’. To describe somebody as nims was to express admiration for his great perspicacity.

In some parts of the Islamic world such as the Maghrib and Lebanon, the term nims has been erroneously applied to the weasel (Mustela putorius [see tin ‘ins]). According to fable, both these creatures enter the mouth of the crocodile, when it is sunbathing, to devour its entrails, not being content with stealing its eggs, like those of turtles, snakes and birds. As a result of similar confusion, some Arabic dialects employ nims to identify various other members of the sub-family Mustelidae such as the stone-marten (Martes foina), the polecat (Mustela putorius) and the ferret (Mustela putorius furo); the term is even found erroneously applied to other viverrine, the civet (Genetta genetta). As for the two expressions fir and lūtrāq which Dozy attributes to the ichneumon (Supplément, s.v.), one is found in a manuscript of the Escorial and the other in al-Iдрīṣī, where the context is the topic of the crocodile; they do not seem to have any connection with the mongoose.

As is the case with every animal studied, al-Damiri does not fail to list the specific qualities of various organs of the ichneumon. Thus if a dovecote is fumigated with the burning tail of an ichneumon, all the pigeons are driven irrecoverably. The spleen mixed with the white of an egg is an excellent eyewash, curing conjunctivitis. A kirāṭ of blood diluted in a woman’s milk and poured into the nose of a lunatic restores his reason. A broth made from the animal’s penis and taken as a drink cures retention of urine. The right eye wrapped in linen reduces the
areas. The first, Koyundjik, was an old Yazidi village whose inhabitants were massacred in 1836; it has also areas. The first, Koyundjik, was an old Yazidi village began his excavations on behalf of the British Museum from 1845-51 and found the rich library of Ashurbanipal; it was shipped to London and still today it represents one of the richest archives we have of Sumerian and Akkadian literature. Because it contained many late copies of important historical, religious and scientific literature it provides special opportunities to study how texts were transmitted in the scribal circles of the ancient Near East. The other important area is Nabî Yûnus where Esarhaddon carried out building works. This place has a rich aetiological tradition with the prophet Yûnus (Jonah), whose mission to convert the terrible Assyrians was accomplished because God brought him there in the "belly of the great fish", and is mentioned in Jewish, Christian and Muslim sources (see Yûnûs). Hence both a monastery and then a mosque were in turn built on the ancient mound, known as Tall al-Tawâh "hill of repentance". The tomb of Nabî Yûnûs has long been the most esteemed shrine of northern Irakk, high visited by Sunnis, and the large modern cemetery on the east of the mound continues the old tradition of corpses being brought there for burial. Outside the eastern wall of the former city is the sulphurous thermal spring known as ʿAyn Yûnûs and visited by pilgrims for its curative powers; and some local inhabitants perpetuate the tradition that the "great fish" is buried at Koyundjik. 

2. A place in central Irakk, after which a district (nâhiya) was named, to which Karbalâ (q.v.) belonged (cf. Yâkût, iv, 470). Ninawâ is frequently mentioned in the history of the Muslim wars of the first three centuries of the Hidrâ: e.g. in connection with the tragedy of Karbalâ of 61/680 when al-Husayn met his death (al-Tabari, ii, 287, 307, 309), in 122/739 in connection with the fighting with the ʿAlî Zayd b. Abî (q.v.) and Tabârî, ii, 1710), in the account of the subjection of a later ʿAlî rebel in 287/900 (al-Tabarî, iii, 1620, 1623); Ibn al-Asgîr, vii, 110, and finally in the history of the Khârijân troubles in 287/900 (al-Tabarî, iii, 2190). Ninawà (Nînà, Ni-na-a) is mentioned in old Babylonian inscriptions as a place not very far from Babylon (cf. e.g. ZA, 283, 307), 1227/39 in connection with the fighting with the ʿAlî Zayd b. Abî (q.v.) and Tabârî, ii, 1710, in the account of the subjection of a later ʿAlî rebel in 251/865 (al-Tabarî, iii, 1620, 1623); Ibn al-Asgîr, vii, 110, and finally in the history of the Khârijân troubles in 287/900 (al-Tabarî, iii, 2190). Ninawà (Nînà, Ni-na-a) is mentioned in old Babylonian inscriptions as a place not very far from Babylon (cf. e.g. ZA, xv, 217). It is not to be confused with a place of the same name mentioned in old Babylonian cuneiform inscriptions as a suburb or quarter of the South Babylonian Lagâš (the modern ruins of Telloh). On the Nineveh in Babylonia of the cuneiform inscriptions, see Hommel, Grundriss der Gesch. u. Geogr. des alter Orient, Munich 1904-26, 392-3 and passim (consult the Index, 1083, s.v. Ninawà or Ninawâ). According to A. Musil, The Middle Euphrates, New York 1927, 43, 44, the site of Ninawà is marked by the mound of ruins called Išqar-Naiwâ, below the modern town of Musayib, 2 miles east of the Euphrates and about 20 north-east of Karbalâ, in 32°45' N. (see Musil's map).

Bibliography: Given in the article. (M. Streck)

NING-HSIA, a Muslim autonomous region in Northwest China under the People's Republic of China.

The province of Ning-hsia was created in 1929 separately from the province of Kansu (q.v.) under Republican China. After the PRC was established in 1949, the greater part of Ning-hsia province was incorporated into Inner Mongolia (Nei-Mengku) and the central part was newly-raised to the status of Ning-hsia Hui-tsu Autonomous Region in 1958, with its present boundaries redrawn in 1976. This Region is situated along the middle reaches of the Yellow River and its tributaries, and it borders on Inner Mongolia in the north, on Kansu in the west and southeast, and on Shen-hsi in the east. The capital is at Yin-ch'uan.

Ning-hsia is the most densely-populated region of Hui-tsu ("Islamic race") in the PRC. It is the largest province of the PRC, its population is 3,895,500, of which Hui-tsu number 1,235,207, forming about one-third of the total population (1982 statistics). The origin of the Ning-hsia Muslims goes back to 13th century Yuan times, when the Mongol dynasty ruled China and when many Muslims emigrated from West and Central Asia to the Ning-hsia region. They were soon naturalised, as was also the case in other provinces, and consequently, communities of Hui-min or Hui-tsu, that is Chinese-speaking Muslims, were formed. Historical materials show that there were many Muslims there since early Ming times down to Ch'ing times (15th-19th centuries), and they had regional relations with religious leaders of Kansu, Ch'ing-hai and Sinkiang. Ning-hsia Muslims are traditionally Sunnis of the Hanafi school, and among them there have always been a number of Süfi groups, such as the Djihriyya (a branch of the Nakhshbandiya [q.v.]), the Khâfiyya or Khūfiyya, Kâdirîyya, Kâhwân, etc., and they still prevail among present-day Ning-hsia Muslims. These last have more than 1,400 masjids (ch'ing-ch'ên siu), distributed over the region, and a class of religious leaders including aghas, qâhîfes, muallâs, murâdîs, etc. Ning-hsia was the headquarters of Ma Hua-lung's [q.v.] North-west Hui Rebellion (1862-77), and his successors have been leaders of the Djihriyya order of Ning-hsia until the present time, but Ning-hsia Muslims now coexist with the Han Chinese under the PRC régime.

NİRANDJ (A.), derived from Persian nayrang, nîrang, pl. nîrangoğû, nîrangoğû (In nînà, ni; Paris: Brocckelmann, S. 1, 828), nîrangoğû (al-Dînâni, i, Strasbourg 4212, fol. 102b), designates, in the two languages, the operations of white magic, comprising prestidigitation, fakey and counter-fakey, the creating of illusions and other feats of sleight-of-hand (hijel). A certain al-Ḥasan b. Muḥammad al-Takkandar al-Takkandar al-Takkandar al-Takkandar al-Takkandar al-Takkandar described the whole set of these operations in his work Fi 'l-hijel al-bâhilîya li 'l-khizdâna al-kâmîlîyya (ms. Bursa, Haracçîoğlu 1221, ff. 119, 18.5 × 14 cm, naskî, copied in 881/1476 by another ms. of the same title Kâtîzîna dated 623/1234). Both author and work are virtually unknown, and it seems useful to give here the titles of the chapters, as already given by the present author in Sources orientales, vii, Paris 1966, 184-5.
I. The principles of this art; how to get to know it; appreciation of its subtlety and finesse.

II. Tricks involving the air and atmospheric phenomena.

III. Lamps and wicks; description of them in seances.

IV. Tricks with fire and the illusions produced in the minds of the spectators.

V. The making of talismans and the trickery for use in the transforming of colours and dyes.

VI. Bottles; the devices and tricks that can be done with them.

VII. Eggs; devices and tricks in their usage.

VIII. Eggs; devices and tricks in their usage.

IX. The concealment of hidden objects and the art of discovering them.

X. Wax effigies; their putting together, taking apart and reconstitution.

XI. The taming of animals by means of traps on terra firma, and by fishing in the sea.

XII. The art of getting knowledge of the nature of the objects used in unmasking the secrets of the spectators.

XIII. Enthusiasm for the manual arts and the transformation of colours and dyes.

XIV. Writing, the preparation of the ink well (read kcal).
firmation in the etymology from ni-rez "flowing". Sulduz lies in the low plain, through which the Gadir flows to the Lake of Urmiya. At the present day the name Nirz is unknown, but a Kurdish tribe of the region of Sawdj-bulak [q.v.] bears the name of Nirz.

After the Arab conquest, a family of Tà'î Arabs settled in Nirz. The first of these semi-independent chiefs was Murr b. 'Alî al-Mawqil, who built a town at Nirz and enlarged the market of Dâhvarân (cf. al-Balâdî and al-Ya'kîbî, ii, 466). One of his sons, 'Alî, was among the rebel of 212/827 whom the governor of Adharbaydjan castigated. Hamid al-Tûsî departed to Baghdad, but 'Alî succeeded, it seems, in returning to his lands (cf. Ibn Khurradadbih, 119). Abû Rudayn 'Umar b. 'Alî, appointed in 260/873 governor of Adharbaydjan by the caliph, made war on his predecessor 'Alî b. Ahmad al-Azdî and killed him (al-Tabari, iii, 186). He was supported by the Khârijid. Cf. the account in Sayyid Ahmad Kasrawî, Fâlîhâsân-i gunûmân, Tehran 1929, ii, 27, 34.

In the 4th/10th century, al-Iṣṭaḥkâr, 186, and Ibn Hawkal, ed. Kramer, 337, tr. Kramer and Wiet, 329-30, mention the Banû Rudaynî as a dynasty already forgotten which had reigned over Dâhkarân (read Dâhvarân), Tabriz (read Nirz) and Ushnuh al-Adhâriyya [see ushima].

Nîrîz, in Fârs [see NAYRîz].

AL-NISÂBûRî, al-ḤASAN b. MUHAMMAD b. Habîb b. Ayyûb, Abu l-Ḳâsim, was a famous litârâtûr and Kur'ânic scholar who died in either Dhu 'l-Hijjâd or Dhu 'l-Ka'dâ, 406/1015-16.

One of the most learned men of Nishâpur, Abu l-Ḳâsim was considered the leader of his time in Kur'ânic sciences. He was not only a grammarian but was also knowledgeable in maghârû (the accounts of the expeditions and raids of the Prophet) [q.v.], stories, and biography-history. Al-Nîsâbûrî was a Karrânî, who later became a Shâfîi. He transmitted hadîthî [q.v.] on the authority of, among others, the famous Nishâpuri Shâfîi traditionist Abu l-Ḳâbâs al-Asâm (d. 346/957-8 [q.v.]). For personality, we have but one anecdote. He owned a well and an orchard and obliged guests to pay for his hospitality, the rich with money, the poor with labour. Works attributed to al-Nîsâbûrî on the Kur'ânic sciences, including exegesis (tafsîr), for which Hâdîjî Khâlîla cites one work. Sezgin notes the existence of a Kitâb al-Ṭanzîl wa-tartîbih, only a few folios in length. Al-Nîsâbûrî is most famous for his Ḫâlîlât al- ṭâdâjûnîn [see MAGHîNÎN], a collection on intelligent madmen, a work in the entertaining and informative sub-genre of adab [q.v.], sc. character literature. In the introduction to the work, al-Nîsâbûrî places himself in the adab tradition, citing names like the famous al-Dâhîsî (d. 255/868-9 [q.v.] and Ibn Abî l-Dunyâ al-Kurâzî [d. 281/894 [q.v.]). After a standard philosophical introduction, al-Nîsâbûrî enumerates centre characters on the bearers for the character type, like Buhûlî, as well as the famous Madjûnûn Laylî [q.v.], and a number of anonymous men and women. Most fascinating in these anecdotes is their range, which extends from the silly to the elusively mystical.

ending -a* is transformed into -aw: šabrā“desert”, šahrātī“belonging to the desert”. There is a tendency to amplify short words by reinstating (or adding) a third radical (or y): bi-taʔrāxī, bi-taʔrāyī, and bi-tuR’ayī. From abuh “brother”, akhwi “fraternal”, damawi “sanguine, etc.”, an h also appears sometimes: šuhfāt “lip”, shuhfās “labial”. A w is even substituted for y in karawī (instead of kārīy) “rustic”, from kārya “village”.

The internal vocalisation is modified in a number of nisbas from proper nouns of the pattern RūR’ī, RūR’īa, RūR’ayī, and RūR’ayīb: insdnīyya, from Balūs, Male’d, Huri, from al-Madīna (also Madīni), Kurashi, Muzani, from Muṣayna. The two forms with or without -i-*a also exist as means of avoiding confusion: Dīzārī, from al-Dīzārī “Mesopotamia”, but dīzārī “insular”, from dīzārī “island”.

Since the Middle Ages, but especially in modern times, the nisba in the feminine has served to create a host of abstract nouns, especially for the formation in -f appears to be optional: the cotton trader is derived from professional designations should be considered separately, in that their termination in -i appears to be optional: the cotton trader is called, apparently arbitrarily, al-katātīn or al-katātānī. Other professional designations appear only with the -i termination, such as al-saydānī, the chemist.

In theory, a relative adjective is never formed from a plural (lā yusuʃ al-dā’ igām) but even in the earliest times this rule enunciated by the grammarians was already being circumvented: A’tāb “Bedouins”, A’tābī “bedouin”, Bālฮ “marshes in the vicinity of Baṣra”, Bālฮī, etc. Since mediaval times, usages of the type have proliferated, especially for the formation of nouns of profession: kitāb “book”, pl. kutub, kutubī “bookseller”; alongside farādī “specialist in farādī” [q.v.], the form farādī is also encountered. In certain cases, the plural appears to be artificial: makħzan [q.v.]’ “government of Morocco”, has no plural in this sense, but makḥzānīn > mkḥzānī, mkḥzānīyya, denotes a horsemen paid by the state; similarly, kaʃa “skewers” (no pl.) gives kaʃaʔ “seller of skewers”, etc.

Finally, it should be noted that in names such as Shawkwī, the suffix is not that of the nisba, but the personal pronominal affix of the first person.

In nomenclature, the nisba or “noun of relation” is one of the components of the mediaeval Arabic proper name. Its function is to express the relation of the individual to a group, a person, a place, a concept or a thing. It is most often preceded by the definite article the. Numerous nisbas are employed in the contemporary period in the family names.

In general, the individual who is the subject of a reference in a mediaeval Arabic biographical register possesses among the various elements of his name—one along with the kunya, lakāb [q.v.], professional designations— one or more nisbas which testify to inherited or acquired characteristics, to his path through life, geographical as well as intellectual, to his religious opinions and to the links that he has with his contemporaries. Inherited, the nisba relates the individual to a group, such as tribe, tribal subdivision, dynasty, family, eponymous ancestor, etc.; to a place, such as a country, region, city, village, quarter, street, etc.; or even to a profession. A professional designation handed down by his ancestors. Acquired, the nisba takes account into the activity of the person: it originates with the names of places in which he has been resident, those of persons with whom he has established advantageous links, the ideas which he has defended and his beliefs. Alternatively, the nisba may refer to quoted remarks or to a physical peculiarity. The following are examples of nisbas which denote the connection to a person: al-Kidīrī “the tribe of Kidīr”; to an ancestor: al-Husaynī “the descendant of the Husayn”; to a place: al-Dīnākhirī “the Damascene”; to a school of thought: al-Mālikī “the disciple of the Mālik legal school”; to an event: al-Badrī “he who took part in the battle of Badr”. There are also examples of nisbas which are rare, if not unique, and are analogous to nicknames; nisbas which denote a connection with the names. As such he has created the Sirat Antar (F. Rosenbahl, A history of Muslim historiography, Leiden 1968, 47): connection with a poetical work: one who knew by heart the Makāmah al-Ḥarīrī is called al-Makāmahī (G. Gabrieli, Il nome proprio arabo musulmane, in Onomasticon arabicum, introduzione e fonti, Rome 1914, § 205). Nisbas derived from professional designations should be considered separately, in that their termination in -i appears to be optional: the cotton trader is called, apparently arbitrarily, al-katātīn or al-katātānī. Other professional designations appear only with the -i termination, such as al-saydānī, the chemist.

Role and limits of the nisba

In the earliest Arabic inscriptions, written in Sabaic script, the term dīh “he of ...” was used to signify the relationship of the member of a tribe to his group (see Ch. Robin, Les plus anciens monuments de la langue arabe, dans l'Arabie antique de Karṣûb à Mahomet. Nouvelles données sur l'histoire des Arabes grâce aux inscriptions, in REMM, ixi, 114-15). Subsequently, the nisba had the function of indicating to which tribe an individual belonged, either through his origins (ārithm) or through links of clientage, for example in the capacity of mašūl [q.v.]. This tribal nisba implicitly contains the genealogy of the tribe. Having a member such as al-Kindī signifies belonging to the tribe of the Banū Kinda, with its eponymous ancestor, its achievements, its history and its territory which forms a part of the dār al-Islām [q.v.].

It is also to the dār al-Islām that the nisbas refer which are acquired by individuals on the basis of geographical names. It may in fact be stated that the names listed by the biographers do not contain nisbas formed on the basis of the names of places which do not belong to the dār al-Islām. If an individual changes his abode, like the scholars who are identified by the sources as having travelled in search of knowledge, henceforward his nisbas, formed on the basis of the names of places in which he has resided, may be added to his name (a citizen of Damascus who goes to Baghdad will be called al-Baghḍādī “the Baghḍādī” on his return; while in Baghḍād he would be known by the name of al-Dīnākhirī, “the Damascene”). On his death, a biographer could preserve in the wording of the name of this person both these nisbas: al-Dīnākhirī (with the added detail: al-Dīnākhirī al-asl, originally from Damascus), al-Baghḍādī. But if he leaves the dār al-Islām, to travel for example to China (al-Ṣīn), India (Bilād al-Hind) or to Asia Minor (al-Rūm), countries which belong to the dār al-barb [q.v.],
he will not bear the nisbas al-Šinî, al-Hindi or al-Rûmî except in cases where these are employed as nicknames (see Ibn al-Âthîr, al-Lubâb, ii, 64: 'he is called al-Šinî because he has returned from China and he has become familiar with the Chinese characteristics'). The individuals recorded in the biographical sources with the nisbas al-Šinî, al-Hindi or al-Rûmî are natives of these countries; they are not, as a general rule, travellers who have become long-term residents in these countries, for in such cases the biographer would have described them as nazîl, followed by the name of the place in question.

In the context of the dâr al-Islâm, two further aspects of the process of formation of nisbas should be noted:

(a) Within the confines of the dâr al-Islâm, there are some quasi-mythical regions such as Khurâşân, the cradle of Sûfism. The nisba Khurâşânî is found in the names of scholars who are not natives of this region, who have not even visited it, but who seek to ally themselves with Sûfi masters, claiming a spiritual heritage emanating supposedly from Khurasan (see Sublet, Le voile, 169, with a further example: the nisba al-Kâyrâwâni, which could represent the Far West).

(b) In the spiritual centre of this dâr al-Islâm are the holy cities of Islam, Mecca and Medina, the names of which can only be used in the form of a nisba in specific circumstances. Performing the Pilgrimage does not confer the right to call oneself Makkî or Madâni. One who resides as a guest-scholar in a mosque or an educational establishment is entitled to the epithet nîdżîwâr [q.v.] or âdâr Allâh. Only those who are natives or established citizens of these places may use these nisbas which, furthermore, have become (without the article, such as Makkî and Madâni) what are known as proper nouns, ism âdam [q.v.], borne primarily, so it seems, by Sunnis living in a Shâfi'î milieu who are anxious to affirm their orthodoxy (see Sublet, Le voile, 99-102, 170-1). Also worthy of note are isms in the form of a nisba without the article, such as Bâlghî and Bîrî (cf. Ibn al-Âthîr, al-Lubâb, i, 140, 161).

In the Mamlûk period, nisbas have a specific role in the composition of the names of the Mamlûk slaves who, originally, have only an ism. They acquire a nisba formed on the basis of the name of the merchant who sold them to the Mamlûk court (for example, Abl-Mudjîrî, see Ibn al-Dawâdârî, Kanz al-duwar (Die Chronik des Ibn al-Dawâdârî), ed. Munajjid-Roemer-Haarmann, Cairo 1960 ff., ix, 71). When circumstances require it, the addition of one or more nisbas deriving from the name of the master who gives them their freedom is possible (the sultan Baybars I, for example, bore the nisbas al-Šâlîbî al-Nâjîmî, which derive from his master's name (al-Mâlik) al-Dîn Ayyûbî). The form nisbât and 'nisbas' of the Mamlûks, in IOS, v (1975), 189-231, there is a list of these nisbas which were reserved in the Circassian period, by the expression min followed by the name of the master (for example, Tûmânâbî min Kânâswâh).

The feminine nisba

The nisbas of women whose names are recorded in the mediaeval biographical sources are masculine or feminine, the two forms being capable of co-existing in the same name, according to whether the biographer considers them as forming part of the patrilineal genealogy or as elements of the woman's name. The order in which he writes the elements of the name, and in particular the kunya, seems to have a bearing on the gender of the nisba or nisbas. For example, where the kunya is placed at the beginning of the name, as in Umm al-Khayr wa-tusamîm Sa'îda bint Muhammad b. Hasan al-Tabâri al-Husâynî al-Makkî, the nisbas are in the masculine form, being a part of the patrilineal genealogical formula, the kunya is placed after the genealogy and before the nisbas, as in Sa'îda bint Muhammad b. Hasan Umm al-Khayr al-Tabâriyya al-Husâyniyya al-Makkîyâ; the nisbas placed after the kunya composed with Umm are in the feminine (see especially the volume devoted to female biographies by al-Sâkhâwî, al-Daw' al-lamãt li-ahl al-tânî, Cairo 1934, xii). These feminine nisbas are seldom likely to supply information regarding the places visited by the women; some women performed the Pilgrimage, but they travelled far less than men, and if they were scholars, men tended to travel to them to receive or convey hadîthâ and to study texts under their supervision.

Children generally inherit the nisbas of their father, very rarely those of their mother. If sons or daughters are mentioned in the text of an article devoted to their father, they are called after the master, the son or daughter, followed by the nisba most often used to designate their father or their father's family; for example: Aţîsah bint al-Hârîrî... wa-kânât Umm Ahmad al-Hijâzî (see Sublet, Le voile, 117).

Composite (murakkab) nisbas

Derived from composite names, of persons and of places in particular, these nisbas can have two forms:

(a) A contracted form, e.g. the nisba Âbâhâmi corresponds to the name Âbd Shâms. Âbdallî to Âbd Allâh, Markasî to Imru' al-Kays, Dârâkûnî to the place-name Dar al-Kûn, Bâbârî to Bâb al-Brâsa and Râsînî to Ra's al-'Ayn.

(b) A simple form derived from one of the two elements of the name, e.g. the nisba Muťulâbi correspons to Âbd el-Muťulâbî, Bakri to Abû Bakr, Zobiârî to Ibn al-Zobiârî and Fâhîkî to Fâhîk al-Dîn.

On the other hand, certain nisbas are formed on the basis of several names. In the Muḏâqâm al-bulûdân, Beirut 1979, i, 456, Yakût gives the place name Baghdâdkhârkand. This is a fictitious name derived from a composite nisba, al-Baghdâdkhârkandî, borne by a single individual whose origin it describes: his father was Baghdâdî, his mother Khâzarîyya and he was born in Samarkand. Two other examples given by G. Gabrieli, Il nome proprio, § 20: al-Tabârkâzî is a composite of two elements, and Khâzarâzîmi (of Khâzarâzîm) Shâfâ'ânî is a composite of Shâtî'î and Hanafi, denoting one who was a Shâtî'î and subsequently became a Hanafi.

A particular case: the fictitious nisba

Al-Suyûtî mentions among the ten types of ansâb (nasab or genealogy and nisbas) which he describes (al-Muqâmî, ii, 444-7): man nisbîa ilâ 'ismî wa 'ismî abîhi, giving the example of the name Numayr b. Abî Numayr al-Numayrî. The nisba is b. Abî Numayr, literally, "son of the father of al-Numayr" and the nisba al-Numayrî. This is one of the formulas used to give an identity to a person born of an unknown father (the supposed father is sometimes given the name of monetary units such as Dinar or Dirham) or to an individual without a genealogy, a slave, for example. The nisba al-Numayrî is likewise derived from the ism; it appears with the name of the father as a repetition of this ism.

The nisba in the sources

The average number of nisbas borne by an individual (scholar, man of science, soldier or prince) whose biography is recorded in the mediaeval Arab sources is five. But this does not apply to the naming of eminent persons, for whom the biographer supplies
only one or two nisbas, which often form part of the name by which the individual is best known (Sublet, Le soir, 104-7). The fragile distinction between nisba and nickname is apparent here, as in the works devoted to nisab. The latter in fact combine not only the nisab (pl. nisab) a part of which refers to genealogy (nasab, pl. nasab) and to the eponymous ancestor, but also lakabs (nicknames) and professional designations. A specific form of biographical literature is devoted to homographic nisab. The authors experiment with nisbas, which often form part of the genealogy, and to the eponymous ancestor, but also lakabs and these professional designations, with the object of avoiding confusion between individuals, and in certain instances the authors of these erudite works have other objectives in mind, as in the case of Ibn Mâkulâ (q.v.).

In Persian, the suffix -i (MP-ikö) is used to form relative adjectives, but with -îdî after the silent hâ or the as a suffix at the end of words: (a) from places, e.g. Isfâhânî, Dîhlâwî, Sâwajî; some apparently irregular ones go back to earlier forms of place names, e.g. Râzî (Râyî, Swagî (Sudjântî/Sîstân. (b) from concrete nouns forming adjectives indicating function or craft, e.g. khânâq 'domestic' < khâmâ, hâtîdî 'gar- rison soldier' < hâtâ, shikârî 'hunter, pertaining to hunting' < shikâr.

In Turkish, the suffix -î in its various realizations is used for relative adjectives of place, e.g. İzmirî, Konyalî, Merzifonîl, Uskûbûlî, and -îdî in its various realizations for adjectives denoting functions, professions, crafts, etc., e.g. ekîdî 'old clothes dealer', au'dî 'hunter', munçû 'candlemaker', bekîdî 'coppersmith', meûlî 'mill seller'. Several of these forms have in the colloquial Arabic speech of such lands as Egypt and the Levant, former parts of the Ottoman empire, e.g. postâdî 'postman', boydî 'shoe-cleaner', kahwâjî 'coffee-house proprietor, servant', sufrâdî 'waiter'.

Deny, Grammaire de la langue turque, dialecte ottoman, Paris 1921, §§ 531-2, 542; G.L. Lewis, Türkisch gramm., Oxford 1975, 60-1. **NIŞF AL-NAHâR (a.)** "half of the day", "mid-day", is used in astronomy in the expression which denotes the "meridian circle" (dâ'îrât nisf al-nâhâr) passing through the two poles of the horizon (kubtâ 'l-yyûd) of a place, which it cuts at two cardinal points (djîla, wâtîl) North and South and through the two poles of the celestial equator (mu'âldâl al-nâhâr, etc.). As the demarcation between the East and West of a place, the meridian serves as the determination of the longitude (âtîl [see KUBBAT AL-ARî]) and for fixing the hour of midday prayer (see MIKAT) by the passage of the Sun (zawârî).

**NIŞH** (in Serbian, Niš), the second town of Serbia, situated at a height of 214 m/650 feet in a fertile plain surrounded by mountains, on the two banks of the Niska not far from its junction with the Morava. It forms an important communications centre, for roads and railway lines, on the international routes to Sofia, Istanbul and Salonica-Athens. The most important part of the town lies on the right bank, with the remains of the fortress on the right one.

In antiquity, Niš (Naissus, Niz, Nissa, etc.) belonged at first to the Roman province of Moesia Superior and later became the capital of Dardania.

Niš's greatest claim to fame is that it was the birthplace of Constantine the Great (306-37) and attained great prosperity in ancient times. The Romans had a state munition works here.

In the time of the migrations of the Huns, Niš was taken after a vigorous resistance by Attila (434-3) and destroyed but rebuilt and refortified very soon afterwards by Justinian I (527-65). By the middle of the 6th century, the first forces of the Slavs who had entered the Balkan peninsula in their endeavour to found states at the expense of the Byzantine empire appeared before Niš. Niš was thus in the 9th century usually in the hands of the Bulgars and until 1018 it belonged to a Slav state founded in Macedonia in 976 by the emperor Samuel. The Byzantines held it from 1018 to the end of the 12th century, when we find it described as large and prosperous; al-Idrisi who calls it "Nis" (also on his map of 1154, ed. K. Miller) lays special emphasis on the contributions made by the Slavs to the cheapness of food and the importance of its trade. But even then it did not enjoy peace. In 1072 the Hungarians reached the town on a marauding campaign; in 1096 its inhabitants had to defend themselves in a strenuous battle "at the Bridge" against the Crusaders, in which the latter suffered very heavily, and in 1182 the town was taken by Bela III supported by the Serbian prince Nemanja. A little later Nemanja took Niš and the whole country as far as Serdica (Sophia). The town suffered considerably in these troubled times. The Third Crusade (1189) found it almost empty and practically destroyed. In spite of this, Nemanja was able to receive the emperor Barbarossa in Niš with great ceremony. From this time until the Turkish conquest Niš was generally in Serbian hands.

In the earlier Turkish chronicles (e.g. Şükûrallah, Uruđ b. Adîl, 13th/P, Ashkhpazhâzâde, Nâşrî (Nâîloke), Anonymous Giese), there is no mention of the taking of Niš: Sa'd al-Dîn (i, 92-3), Hâjjîdî Khâlîfa and Ewwîyâ Čelebî, then von Hammer (GOR, i, 157) and Lane-Poole (Turkey*, 4) on the other hand, assume that it took place in the reign of Murâd I in 1777/1375-
6. The Serbian chronicles, however, definitely give 1386, and this year, which Gibbons strongly urged as the correct date (The foundations of the Ottoman Empire, Oxford 1916, 161-2), is now generally accepted.

During the Turkish period (1386-1878) Nish had checkered fortunes. In 1445 it was taken by the Christian army under king Vladislav III and John Hunyadi and destroyed. After the fall of Smедерева in 1459 the Serbian despotate became a Turkish province and Nish was even more securely in Turkish hands. For several days after 20 June 1521 a great fire raged in Nish, which was destroyed in its entirety if the Beglerbeg Ahmed Pasha, who was leading an army against Hungary at the time, had not come at the last moment to its assistance (F. Tauer, Histoire de la campagne du Sultan Suleyman 1er contre Belgrade en 1521, Prague 1924, 26 (Persian text), 31 (tr.)).

Western travellers who visited Nish in this period (Dernschwam, Contarini, etc.) were not particularly attracted by it.

Turkish writers give us an idea of the appearance of Nish in the 17th century. Hâddîjî Khalîfà (ca. 1648) describes it as a great town and kâddîfîk in the sangîhk of Sofia. The description which Ewliya Çelebi (ca. 1660) gives is much fuller: it is a fortified town in the plain with 2,060 houses, 200 shops, three mosques (1. 8hâzî Khudâwendîgî; 2. Muşî Êndî; 3. Huşayn Kethûdî), 22 schools for children, several madrasa, several inns, fountains, baths, many vineyards and gardens, etc.

On 23 September 1689, Nish was taken by the Austrians under Lewis of Baden but abandoned the very next year to the Turks (1690). In 1737 Nish was again taken by the Austrians under Secendorf but left to the Turks again after two months' occupation. It is to this period that the city owes its fortifications.

When in 1804 the Serbians under Karadjerdje rebelled against the Turks, they soon won a number of successes and in 1809 were able to build redoubts against Nish, in which Stevan Sindjâci, one of Karadjerdje's voivods, on May 31 blew up himself and the attacking Turks. Nish was nevertheless not relieved and the Turks built the so-called Čele-Kula ("tower of skulls") with the heads of the Serbians killed there, of which A. de Lamartine gave a moving account in his Travels (1834-1835), see especially N. Godin, Muhtad Pasha'ın Niş valiliği hakkinda notlar ve belgeler, in IUEF Tarih Enstitüsü Dergisi, xii [1981-2], 279-316.

At the end of the Ottoman period (1878), Nish had 19 mosques, but because of the rapid disappearance of the city's Muslim population, their number speedily diminished; after 1886, there remained only "a few" (cf. De Paris à Constantinople, Collection des Guides Joanne, Paris 1886, 92). The next-to-the-last was destroyed in 1896 by a violent flood, and the last one, within the fortress, is still in place. As for the local Muslims, they were already no more than 3.7% of the 35,384 inhabitants of the town in 1931. According to the statistics of December 1933 (established on the basis of the marriage registers of the local imâmate), Nish had 33 Muslims who were engaged in the local economy, chiefly Gypsies (the others being Serbo-Croat, Turkish and Albanian speakers). These Gypsies called themselves Muslims, bore Muslim names and married according to Islamic law, etc., but also observed some of the Christian festivities and from time to time prayed in churches. There still existed at this time in Nish a regional şarâ'a court (set up in October 1929 after the abolition of the former jurisdiction of the local muftî, whose authority till then had extended over the whole of the former kingdom of Serbia, cf. Glasnik Islamske Vjeske Zajednice, v/11 [Belgrade 1934], 30-1). The new court extended over a part of that of the older jurisdiction (19 districts), whilst the rest were dependent on the kâdi of Belgrade. The Muslims of Nish also had a district wakf me'arîf council, a community council (demosati medzeli) and an office for registration (mâcmûl). All these institutions disappeared in the course of the Second World War, and one only finds in Nish now individual Muslims dependent on the muftî of Belgrade.

It was not till 11 January 1878 that Nish, hitherto the capital of a Turkish vilâyet, finally passed from the Turks. This induced many Muslims to migrate to Turkey.

Lying on the military road between Istanbul and Vienna and therefore exposed to every campaign, Nish was by no means favourably situated to become a centre for the development of even a modest intellectual life. It appears, at least according to Gibb, that Nish produced no Turkish poets or authors, except perhaps Sünbulzâde Webhi (end of the 18th century), who celebrated in song his meeting with the young Muslims, they were already no more than 3.7% of the 35,384 inhabitants of the town in 1931. According to the statistics of December 1933 (established on the basis of the marriage registers of the local imâmate), Nish had 33 Muslims who were engaged in the local economy, chiefly Gypsies (the others being Serbo-Croat, Turkish and Albanian speakers). It was not till 11 January 1878 that Nish, hitherto the capital of a Turkish vilâyet, finally passed from the Turks. This induced many Muslims to migrate to Turkey.

Lying on the military road between Istanbul and Vienna and therefore exposed to every campaign, Nish was by no means favourably situated to become a centre for the development of even a modest intellectual life. It appears, at least according to Gibb, that Nish produced no Turkish poets or authors, except perhaps Sünbulzâde Webhi (end of the 18th century), who celebrated in song his meeting with the young Sara in the Turkish camp at Nish (HOP, iv, 259). In Nish, however, two Turks worked for a time who later were to become celebrated: 1. Ahmed Lutfi (1815-1907), afterwards imperial historiographer, and, by extension, a docu-

NISHAN (p.), means a sign, banner, seal (and hence letter of a prince), or order/decoration. As a loanword in Ottoman Turkish, it basically denoted a sign or mark and also designated the sultan's signature, or tugra (q.v.), and, by extension, a document bearing it (its scribe was a nihâbî (q.v.); the standards of the Janissaries or Yeti Čeri (q.v.); the insignia on military, naval and other uniforms; and,
Later, decorations bestowed by the sultan. In 19th and 20th century literary Arabic, nishān (also nishdan), similarly a loanword, had essentially the same connotations. This former bears its basic orders/decorations alone. These are to be distinguished from medals (Persian madāl, Turkish madālía, Arabic madāliyya— all from Italian medaglia). The former, awarded by a sovereign ruler for extended service (frequently coinciding with promotion or retirement), were richly elaborate; medals, in contrast, designated a specific occasion and were rarely bejewelled. Among Muslims and others, the main intent of both was to mark a significant event in the career of the recipient.

**Abbasid caliphs** and others (e.g. khans, emirs, sultans, sovereigns), political (for foreign dignitaries and ambassadors), social (determining status in society) and cultural (encouraging educators and intellectuals).

While other marks of appreciation (e.g. coins or clothes) may have been bestowed by 'Abbāsīd caliphs and Saljuq rulers, the practice of granting nishāns was institutionalised in Kadjar Persia, the Ottoman Empire and Afghānistan, vividly patterned on Western European practice in the early 19th century.

1. In the Middle East
   **Persia.** The prevailing pattern was a star of bejewelled sunrays surrounding a central design; nishāns were worn on the breast, frequently with a coloured sash. Every new nishān was first issued on the basis of a farman [q. v.], setting down its classes (marābe), subdivided into degrees (darāda) and the type and colour of the sash (hamayil), as well as the services meriting reward and categories of recipients. The orders, manufactured at the government mint in Tehran, were accompanied by a document and, at times, a gift of money as well. Some orders had to be returned upon the recipient’s death. The most noteworthy nishāns were the following: the Nishān-i Khāshūd (Order of the Lion and Sun), instituted by Fath 'Ali Shah in 1807, who renamed it (in 1810) Nishān-i Shah-ā Khāshūd (Order of the Lion and Sun) to increase its prestige. For generations, this remained a distinguished honour for notable Persians and foreigners, such as military officers and ambassadors to Tehran. It was an eight-pointed star, richly bejewelled and enamelled (each degree less costly than the one above it), with a central circle exhibiting a crouching lion and sun rising behind its back. On the reverse of a farman, for officers. Several other nishāns and medals were awarded by Rādī Shāh and continued under Muhammad Rida Shāh, as reported annually in the *Iran Almanac and Book of Facts* (Tehran). The Islamic Republic of Iran abolished them all.
   **Ottoman Empire.** Nishāns were regarded as signs of sovereignty and the sultans zealously guarded their exclusive prerogative to grant them. In the second half of the 19th century, there were attempts by the Princes of Bulgaria, starting with Alexander von Battenberg, to strike and award their own nishāns. One, sent by Prince Alexander to Alfonso XII of Spain, had to be returned by the latter because of Ottoman pressure. Isma‘īl Pasha [q. v.], Khedive of Egypt, did not strike his own nishāns, but obtained permission from the sultan’s court to award Ottoman ones.

From 'Abd ul-Medjid I’s reign, each nishān was prepared and distributed according to regulations (nishām-namā) published in the official Diṣūr. Struck at the mint or darb khāna [q. v.], it usually had the form of a star, crescent or sunrays. In Persia, each was a work of art, made of precious metals and gems, frequently accompanied by a sash (shirāt) or ribbon. Presented by the Sultan or dispatched via a delegate, it was boxed and awarded with a specially-written berāt [q. v.], phrased in stylised language, mentioning the name of the recipient, the nishān and its class (if any), and the reason for the award. No one was permitted to wear a nishān without a suitable berāt, for which the recipient had to pay, the price varying with time and degree. Some orders had only one degree (rizā), others up to five. Above the first degree, even more prestigious nishāns were elaborately adorned with diamonds or brilliants and called murāşī. These and first-degree nishāns were usually worn with a sash across the breast, with a small medal attached to the hip, resembling (but not identical to) the larger and more numerous medals, usually worn with a sash or ribbon.
more valuable one worn on the breast. Lower degrees had only one decoration, tied around the neck with a silver (according to their degree), mostly enamelled in the centre and bejewelled. When presented to military personnel, many nishāns had interlocking swords added to the top. Persons awarded a higher degree were expected to return the lower one. Most nishāns could be inherited, but not worn by heirs, who were requested to pay a fee to keep them.

Medals predated nishāns in the Ottoman Empire; the Nishān-i Iftikhdar and the Nishān-i Hamidi were awarded in 1268/1851. While the number of pieces produced was strictly limited in advance (although foreigners were excluded from this quota), as well as the payment, by degree, for the accompanying berdî. The sultan’s tughrə was again the centre-piece, on red enamel and gold, surrounded by 35 sunrays.

During Abd-ul-Hamid II’s reign, the number of nishāns, old and new, increased so much that their intrinsic value declined. This was due not only to his long reign, but also to his large-scale distribution of nishāns among both Ottomans and foreigners as a means of gaining allies and saving the Empire. Even on such occasions as the sinking of the Ottoman frigate Ertogrul, in a storm off the coast of Japan, nishāns were sent to the local people who had tried to rescue and tend the shipwrecked. Only the more important orders will be mentioned. The Sheyx ul-Islam (Order of Compassion) was struck in 1878 for Ottoman women (and, in rare cases, for foreign ones) who had made efforts to help during wars, earthquakes, floods and similar disasters. This first Ottoman nishān for women was in gold and silver, in the form of a five-pointed star with a violet-coloured enamel at its centre, bearing ‘Abd-ul-Hamid’s tughrə and the words inşā′iyyet (humanity), muṣ‘ā’iyyet (assistance) and hamiyet (patriotism). Like ‘Abd-ul-‘Aziz, ‘Abd-ul-Hamid issued his own version of Nishān-i ‘Ali Imtiyāz. Struck in 1878, it was designed for military personnel, administrators and intellectuals—both Ottoman and foreign—who had performed exceptional services for the Empire. Of one degree only (plus the bejewelled, murâṣa† one), it looked like a rayed sun with golden laurel twigs at its edges on a red enamel frame, surrounded by the inscription hamiyet (patriotism), tughrə (zeal), sheyxul-Islam (courage) and sadakat (fidelity). The khānān-dī Al-i ‘Othmān Nishān (Order of the Ottoman Dynasty), struck in 1892, was intended for rulers of foreign states and their families, as well as members of the reigning Ottoman family and Turkish personalities who had excelled in service.

Golden, oval-shaped, with the tughrə at its centre, surrounded by a red enamel frame, it was usually worn on a grand formal uniform. The Ertogrul Nishān (Order of Ertogrul), named for one of the Sultan’s ancestors, was struck in 1901. Shaped like a star with gold enamel at its corners, it was intended for those whom ‘Abd-ul-Hamid particularly liked.

In the time of Mehemmed V Reshad and the Young Turks, more nishāns were struck. The Ma‘ārifi Nishān (Education Order), issued in 1910, was intended for religious circles for using a human portrait, the sultan’s tughra within a tughra, and a red enamel frame, surrounded by a white gold-plated silver, the tughra was again in the centre on a green enamel background, surrounded by a small five-pointed star joined to a green enamel laurel. An inscription set out the nishān’s intent: Ulum we-funun we-fanā‘i-ni nefis. Eligible recipients had to have been
employed for at least five years (3rd degree), ten (2nd) and another ten (1st). Teachers who had failed at their jobs could be requested to return their nişanhs. Formerly in use,Pravda declared. The "Meziyyet Nişanı (Order of Excellence), considered even more prestigious than the Medjdin Nişanı and the Nişan-i ʿOğlumâni, was planned in 1910 and intended for both Ottoman and foreign subjects in the highest offices. This nişan, however, was never issued. The same is true of the Ziraʾat Lişkat Nişanı (Order of Capability in Agriculture), planned in 1912 for men particularly successful in agriculture. It was designed with a three-rayed sunray, "justice" (justice) and "masâvât" (equality)—a common slogan in the Young Turk decade. The Medjjis-i Medjdin Mejdîn Nişanı (Order for the Members of Meziyyet Nişdn) (equality)—a common slogan in hurriyyet (liberty), the Young Turk decade. The Medjlis-i Medjdin Nişanı (Order of the Members of Parliament) was issued in 1916 to all members in the 1916-19 Parliament. Made up of heptagonal groups of sunrays, its centre was a crescent-and-star in gold on white enamel.

Parliament) was issued in 1916 to all members in the 1916-19 Parliament. Made up of heptagonal groups of sunrays, its centre was a crescent-and-star in gold on white enamel.

In the successor states of the Ottoman Empire, heads of state variously continued to bestow orders and medals. In Turkey, a law passed in Parliament on 26 November 1934 and published in the Resmi Gazete three days later, forbade wearing Ottoman nişanhs (unless won in war) or foreign decorations. Instead, the state provided the İstiklal madalyası (Independence Medal), approved by Parliament in 1920 and distributed in 1923 to Members of Parliament and later to all those who fought or assisted in the War of Independence. In Egypt, King Fuʾād instituted several orders: the Kalâdat Muḥammad ʿAlî (Muhammad ʿAlî Collar) for a limited number of kings; the Kalâdat Fuʾād (Fuʾād Collar), for heads of state and eminent Egyptians; the Nişan Muḥammad ʿAlî (Order of Muhammad ʿAlî), sometimes called al-Wiṣḥâq al-akbar (The Highest Decoration), for Prime Ministers, both Egyptian and foreign; the Nişan Ismâʿîl (Order of Ismâʿîl), for prominent Egyptians and others; the Wiṣḥâq al-Nil (Nile Decoration), for ministers and pashas; and the Wiṣām al-Kamāl (Decoration of Perfection), for women only. King Fârūk introduced new no orders, while the Republic did, e.g. the Wiṣām al-Nil (Nile Decoration), for heads of state. The Wiṣām al-ıstikhlâk (Order of Merit).

knot supported the plaque of a Commander (see below). The plaque of a Grand Officer was smaller and was worn on the right side of the breast. The plaque of a Commander, smaller still, differed only in detail; a green ribbon four cm wide had a double red bordering which allowed the insignia to be worn below the neck. The decoration of an Officer, smaller still, was supported by a green ribbon with a double edging, with a rosette, which was pinned on the left side of the breast. The decoration of a Knight (first and second classes) was simpler, but the ribbon was the same. The decoration of an Officer was awarded on the recommendation of the Prime Minister for Tunisian nationals, and of the Foreign Affairs Minister for other recipients.

In the same year as the Nishan al-Ittiḥār was instituted (1837), the Bey founded the Nishān al-Dam (“Order of the Blood”) for himself and members of his family, but this decoration was also granted to the Prime Minister and to foreign sovereigns and their families. Its insignia was a rounded plaque of gold, with rings set with diamonds, and it was worn cross-wise by means of a green ribbon with two thin red borders. After the promulgation of the Fundamental Pact (“Aḥd al-ʿAmān [see duṭūr, 1]), the Bey Muḥammad al-Ṣādir in 1860 created a special order, the Nīṣān “Aḥd al-ʿAmān, reserved for princes and for Tunisian ministers, but also granted to generals and civilian officials of high rank. The insignia was a plaque in gold, round in shape, with a red enameled surface and set with emeralds, and it was worn cross-wise by means of a green ribbon with two red borders on each side. In 1874 the same Bey inaugurated the Nīṣān “Aḥd al-ʿAmān al-Murassā, whose insignia was a golden plaque set (muraṣṣa) with diamonds, but this decoration was granted only to a limited number of Tunisian dignitaries and foreign personalities: Marshal Lyautey, General de Gaulle and King Alfonso XIII of Spain. These four orders were thus placed in the following order of importance: Dam, “Aḥd al-ʿAmān al-Murassā, “Aḥd al-ʿAmān and Ittiḥār. All were abolished in 1957.

Once Tunisia became independent, it acquired three new orders plus a certain number of medals. The Nīṣān al-Ittiḥāl (“Order of Independence”) was founded by a decree of 6 September 1956 and regulated the time of the war of national liberation and has five classes, a gold medal for the outstanding level, one of silver or bronze for the other two, and red ribbon with black vertical stripes. For the other classes, the medal is in silver or bronze respectively. It has three classes also: for the outstanding one, the gold medal forms a star with eight points hung from a red ribbon with black vertical stripes. For the other classes, the medal is in silver or bronze respectively. The Ministry of Social Affairs has the Medal of Social Merit, whose holders form an Order, and the Medal commemorating the Battle and the Evacuation of Bizerta set up by the law 63-45 of 12 December 1963.

(This information concerning Tunisia has been kindly communicated by the National Foundation Beit Al-Hikma [Bayt al-Hikma] which had been given the task of drawing up a report on the Tunisian decorations.)

In Morocco, a dahir (ażūr) of 1 Ramadān 1386/14 December 1966 regulated the kingdom’s orders; this document, which followed and summed up earlier ones, was itself modified or completed by the dahirs of 26 Ramadān 1388/17 December 1968, of 12 Rabī‘ II 1396/12 April 1976 and of 3 Rabī‘ II 1403/18 January 1983.

In descending hierarchical order, the nine orders designated by the term wisām, and not nīṣān, were as follows. (1) al-Wisām al-Muḥammadi, reserved for monarchs or heads of foreign states, the royal family, and foreign princes. It has three classes. For the outstanding class, a gold plaque whose base in green enamel is surrounded by jewels and which is worn suspended from a collar of gold or of precious stones; for the other two classes, there is only a plaque, without the jewels for the third one. (2) Wisām al-Ittiḥāl (“Order of Independence”) intended for those who contributed to the achievement of independence. It has three classes also: for the outstanding one, the gold medal forms a star with eight points hung from a red ribbon with black vertical stripes. For the other classes, the medal is in silver or bronze respectively. (3) Wisām al-Walā‘ (“Order of Fidelity”), meant for persons who have shown their devotion to the sovereign. It has only one class, and the plaque is a star in gold with five points. (4) Wisām al-ʿĀrgh (“Order of the Throne”) is meant to reward civil and military officials. It has five classes; the gold medal (silver for the fourth class) is worn hung from a red band, with a green stripe on each side. (5) al-Wisām al-ʿAskārī (“Military Medal”) is for private soldiers and NCOs in time of war, and also for general officers holding the Wisām al-ʿĀrgh. It has only one class; the medal is bronze, oval in shape, with a white and red ribbon. (6) Wisām al-Ittiḥāk al-ʿAskārī (“Medal for Military Merit”) is for career officers. It has five classes; the outstanding class comprises a gold plaque plus a gold medal with a green ribbon with a red border; the first class, a plaque and medal of silver; the others, only a medal in silver or bronze. (7) Wisām al-Ittiḥāk al-Waṣṭīnī (“National Order for Merit”), meant for civil and military officials. It has three classes, a gold medal for the outstanding level, one of silver or bronze for the other two, and red ribbon with
wide edges. (8) al-Wisām al-ʿAlaʿi, the celebrated Oussamam Alouaite, which has five classes. The highest (the Grand Sash), has for its insignia a plaque 84 mm in diameter, with five clusters of silver rays, surrounded by a golden star 40 mm in diameter with five white enameled branches, a red cord, held together by a cluster of palm leaves in green enamel with a 16 mm golden circle in its centre, on a red enameled ground. This plaque is worn on the left side of the breast. Also, a gold star 60 mm in diameter, identical on both sides to that of the plaque, with a circle 25 mm in diameter in its centre; the second side bears a representation of the royal parasol, red in colour, on a golden ground; this star is hung from a ring of golden foliage by a wide ribbon in bright orange, 10 cm wide with, on each side, a white stripe. The Grand Sash is worn over the shoulder from right to left. For the rank of Grand Officer, the plaque is the same as above; it is worn on the right side of the breast, the star of an Officer (see above) on the left side. The Commander wears a star identical with that of the Grand Sash, but without the representation of the royal parasol, red in colour, in a golden ground; this star is hung from a ring of golden foliage by a wide ribbon in bright orange, 10 cm wide with, on each side, a white stripe. The Grand Officer is the same as the above, except that it is hung from a silver (and not gold) ring and has no rosette. (9) Wisām al-Mukallaʾ al-Waṭanīyya, with no information about this order. (For Pellat, Nishāpūr, secretary of state for the Sultan’s tugra, chancellor, in Ottoman administration.

The Saldjiks and Mamûks already had special officials for drawing the tugra, the sultan’s signature. As their official organisation was inherited in almost all its details by the Ottomans, this post naturally was included. Its holder was called nişanlı or teşârut. The nişanlı held the same rank as the defterdar [q.v.] and indeed even preceded them, for we find the defterdar before the nişanlı. The nişanlı was included among the ‘pillars of the empire’ (erkin-i devel). The part which he played varied in course of time. Besides being secretary of state for the imperial tugra (nişan), he had originally considerable legislative powers and he was called the ‘counselor’ (muderris) of the grand vizier, i.e. the Sheykh al-Islâm. In his office, the texts of the laws were prepared under his supervision. Most of the Ottoman codes of law (kânûn) that have come down to us go back to nişanlıs. As they had moreover the right to approve the contents of documents put before them for the imperial tugra, they had no slight influence on the business of administration. Of their official career we know that, according to the Kânûn-nâme [q.v.] of Mehmed II, they had to be chosen from teachers acquainted with law (muđerris), apparently because they had to display legislative ability, or from the defterdar and raḳasâ al-küttâb. As their authority diminished more and more in course of time, so did their influence, and finally they were limited to preparing the tugra. According to Mouradaja d’Ohsson (Tableau de l’Empire Ottoman, iii, 373), the nişanlıs received from the state a salary of 6,620 piastres. On their official dress, see von Hammer, GOR, viii, 431, according to whom they wore red, in contrast to the other kudjaglar who wore violet.

Some nishāns of the late Ottoman Empire (above with a riband, below with a pin for the breast). From right to left: Nishān-i ʿOthmānī; Nishān-i ʿāli imtiyāz; Medjidi nishānī. From Mahmut Shevket’s manuscript, ʿOthmānī ğīydet-i ʿaskarīye, Istanbul University Library, Türkçe Yazma 9393; with the kind permission of Istanbul University Library.
Marw in political importance, and also became a centre of economic activity (above all for its famed textiles, including luxury *yudhiš* and *sakštunī* cloths, cf. al-*Tha‘alibī, Lālī‘al-*ma‘arif*, tr. Bosworth, *The book of curious and entertaining information*, 133) and of cultural life. It ceased to be a provincial capital after the Saffārid amīr Ya‘qūb b. al-Layṯ in 259/870 captured Khurāsān from the Tahirids and entered the city, and for some 30 years control of it oscillated between the Saffārids and various warlords and military adventurers like Rāfī b. Harṭḥama (q. v.) until ʿAmīr b. al-Layṯ was defeated and captured by the Afghān and eastern Iran 994:1040, until adventurers like Rafī (q.v.) between the Saffarids and various warlords and military commanders in turn, their rivals for popular support there, the members of the Hanafis and the Shafiʿi religious figures from the two main madhābahs of Khurāsān, the Hanafis and the Shafiʿis, and from their rivals for popular support there, the members of the ascetic and pietistic sect of the Karrāmiyya (q. v.).

From this social group, which R.W. Bulliet has called a patriciate, stemmed notable scholars like Abu Muhammad al-Djuwayni and his son the Imām al-Haraymayn Abu ʿI-Maṣ‘alī (q. v.) and the traditionist al-Ḥakim al-Naysābūrī, Ibn al-Bayyāf (q. v.) and also ambitious statesmen like Māhmūd of Ghazna, the minister Hasanak (q. v.) from the Mikālī (q. v.) family (see Bosworth, *The Ghaznavids*, their empire in Afghanistan and eastern Iran 994:1040, Edinburgh 1963, 145-202, Bulliet, *The patrons of Nishapur*, Cambridge, Mass. 1972). The large number of traditions and lawyers which the city produced was undoubtedly a stimulus to the production of several biographical dictionaries of Nīshāpur scholars, beginning with that of Ibn al-Bayyāf (d. 405/1014) in eight or twelve volumes, the starting-point for various continuations and epitomes (see R.N. Frye, *City chronicles of Central Asia and Khurasan*, The Turā‘īs Nīshāpur, in *Zehi Veledi Togan’s armān*, Istanbul 1950-5, 405-20, for another text see *Dār al-kutub al-hāfla* and *The history of Nishapur*, The Hague 1965; the *Mantarqeshīn min al-ṣajjā li-Ivādak Naysābūr* of al-Sarīfīnī, ed. Muḥ. Ahmad al-ʿArīsī, Beirut 1409/1989).

The Arabic geographers describe Nīshāpur at this time as a thickly populated town divided into 42 wards, 1 *farsakh* in length and breadth (al-ʾIsākhrī, 254) and consisting of the citadel, the city proper and an outer suburb in which was the chief mosque built by the Saffārid ʿAmīr. Beside it was the public market, the Gate of the Taklīn Bridge. The suburbs also had walls with many gates. The best known market places were al-Muṣakarās and al-Kabīra (near the Friday mosque) and al-Qasība (see R. Curzon, *The lands of the Eastern Caliphate*, 429-30). Numerous canals were led from the village of Buṣhānḵār and Buṣhānḵār and drove 70 mills, whence it passed near the city and provided the houses with an ample water supply. Gardens below the city were also watered in this way. The district of Nīshāpur was regarded as the most fertile in Khurasān.

The town suffered many vicissitudes after this period. A great famine broke out there in 401/1011. At the beginning of the 5th/11th century Nīshāpur was the centre of the pietist Karrāmiyya led by the archontor Abū Bakr Muḥammad b. Ṣāḥḥ. The Saldjuk Ṭaghrī Beg first occupied the town in 428/1037 and subsequently made it his capital. Alp Arslān also seems to have lived there (cf. Barhebraeus, *Chron. Sir.*, ed. Bedjan, 243). In Shawwl 536/May 1142 the Khūṭarzmshāh Atsāl took the town for a time from the Ṣafīdūn sultan Sandjar. When it was sacked by the Ghuzz in 548/1153 the inhabitants fled, mainly to the suburb of Shādāykh which was enlarged and fortified by the governor al-Muʿayyid. Ṭughān Shāh Abū Bakr ruled the city during 569-81/1174-85 and his son Sandjār Shāh during 581-9/1185-96.

In Rabiʾ I or II 581/May or June 1187 the Khūṭarzmshāh Tekāš took Nīshāpur and gave it to his eldest son Malik Shāh. At the end of 589/1193 the latter received Marw and his brother Kubt al-Dīn Muhammad became governor of Nīshāpur. Malik Shāh died in 593/1197 in the neighbourhood of Nīshāpur. ʿAlāʾ al-Dīn Muḥammad (as Kubt al-Dīn called himself after his father's death) took Marw and Nīshāpur in 598/1202 from the Ghurids Ḥiyāth al-Dīn and his brother Shihād al-Dīn.

In addition to the wars and rebellions (e.g. 404-5/1207-8) which afflicted the town, it suffered from repeated earthquakes (540/1145, 605/1208, 679/1280). Yāḵūt who visited it in 613/1216 but stayed in Shādāykh, could still see the damage done by the first earthquake and by the Ghuzz, but nevertheless thought the town the finest in Khurāsān. The second earthquake was particularly severe; the inhabitants on this occasion fled for several days into the plain below the city.

In 618/1221 the Mongols under Čingiz Khān sacked the city completely (see Djuwayni-Boyle, i, 169-78). Although Nīshāpur's palmiest days were ended by the Mongol devastations, it soon revived from the effects of these. The city's centre had been displaced by Shādāykh after the earthquakes of the early 7th/11th century, and the town of Nīshāpur continued its reconstitution on a third site towards the end of that same century. Hamd Allāh Mustawfī describes it in the 8th/14th century as highly flourishing, with extensive protective walls (*Nuzha*, 148-9, tr. 147-8), whilst Ibn Bastāṭa calls it "Little Damascus" for its fertility and productiveness, and praises the *madrasas* and thongs of students which he saw there (*Rihla*, iii, 80-2, tr. Gibb, iii, 583-5).

Thereafter, Nīshāpur slowly declined in importance until its modest revival in the later 19th century. In 1890 G.N. Curzon found the Nīshāpur region still fertile, and the famous turquoise mines in the district called Bār-i Maḍīn some 50 km/35 miles northwest of the town were still being profitably worked; but the walls of the town itself were ruined (*Persia and the Persian question*, London 1892, i, 260-7). The modern town of Nīshāpur is situated in lat. 36° 13' and long. 58° 49' E., and lies in an altitude of 1193 m./3,913 ft. and on the east side of a plain surrounded by hills. To the north and east of the town lies the ridge of Bīnālūd-Kūh, which separates it from the valley of Maḥhiād and Tūs. At its foot spring a number of streams, among them the Shūrā Rūd and the river of Dīzbd (Mustawfī) which irrigate the lands of
Nishapur and disappear in the salt desert to the west. North of the town in the mountains was the little lake of Qa'em Sabz out of which, according to Mustawfi, run two streams, one to the east and the other to the west. The tombs of her famous sons 'Umar Khayyam and Farid al-Din 'Attar [q.v.] are still shown in the town. According to the 1365/1865 census, Nishapur had a population of 109,258.

Ewing, tr. Minorsky, 102-3, comm. 6-6.)

The historiography of the Middle East, Preface, pp. XXVI, XXIX); hence it is essentially the main source for Rawanduz's information on the Muhammad Nishapur's material which was utilised for the Nishapur, some early Islamic buildings and their decoration, New York 1986. (E. Honigmann-C.E. Bosworth)

NISHAPÜR, Zahir al-Din, Persian author who wrote a valuable history of the Saljuqids during the reign of the last Great Saljuq of Persia, Togrul (III) b. Arslan [q.v.]; he must have died ca. 380/1184-5. Nothing is known of his life except that Rawandi [q.v.] states (Rabat al-judur, ed. M. Iqbal, 54) that he had been tutor to the previous sultans Ma'sud b. Muhammad [q.v.] and Arslan b. Togrul (II). His Saljuk-nama was long believed lost, but was known as the main source for Rawandi's information on the Saljuqids up to the latter's own time (see Rabat al-judur, Preface, pp. XXVI, XXIX); hence it is essentially Nishapuri's material which was utilised for the Saljuqids by later authors like Rashid al-Din, Hamd Allah Mustawfi and Hafiz-i Abrü [q.v.]. The Saljuk-nama is a concise, soberly written history in Persian, of especial value for the history of the later sultans up to the accession of Togrul (III) in 571/1176; see for an estimate of its worth, Cl. Cahen, The historiography of the Selyúcids period, in B. Lewis and P.M. Holt (eds.), Historians of the Middle East, London 1962, 73-6. After its rediscovery, it was indignantly published at Tehran in 1945 by M. Azar.

NIYAR (a.), verbal noun of niyar meaning 'to scatter, spread abroad', in the pre-modern Middle East, the showering of money, jewels, the ceremony, ceremonial visits to the accession of a ruler, the victorious return from a military campaign, the reception of a diplomat's envoy, recovery from illness, etc. It was thus in part one aspect of the general practice of largesse and dispensing by superiors to inferiors [see hiba, infâm, màjila'] but also an aspect of charity to the poor. On occasion, the whole of the state treasury might be disbursed in this way (see Sultan, Iran, 347). Niyâr is often mentioned in the inscriptions of court festivities under the early Ghaznavid [q.v.] sultans; see Giti Faâl Rangîr, Aâdâb us rûsun us tâshrîfât dar bâr-i Ghâzan as khâlîlî Ta'rîh-i Bayhawk, in Yâd-nàma-yi Abu 'l-Fâdi-i Bayhawk, Mashhad 1934 b/1970, 412 ff.

Bibliography: Given in the article. (Ed.)

In India. The occasions for the distribution of largesse to the court and to the multitudes attending processions have been detailed in MÂRÂSÌM, 5, and MAWÂRÎD, 9, above, and references to the smaller coins used in the niyâr are made in MUGHALS, 11. Numismatics.

There are few specific references to niyâr in Indian dynasties before the Mughal period, although it was an ancient Indian custom and so likely to have been perpetuated (cf. N.N. Law, Ancient Hindu coronations and allied ceremonies, in Ind. Ant. [June 1919], 84 ff.) in the Dihli sultanate and elsewhere; for example, the shower of gold and silver coins, a ceremonial munificence; or, the head of a recent conqueror is referred to in the account of the conquest of Mâwârî Dughdarî and by Sikandar b. Muhammad Manghû in the Mirâr-t-i Sikandari, and 'Alâ' al-Dîn Kholdjâi is said to have used manjânih [q.v.] to scatter coins and 'golden stars' among the Dihli populace.

There are many references in the early Mughal period to this practice under Bâbur and Mumâyûn (Tuzuk-i Bâbûr, tr. Beveridge, 2; Gûdjarbân Begam, Mumâyûn-nâma, 112 et passim), when not only small gold and silver coins but also small gold and silver fruits (almonds, walnuts and filberts) and flowers were so scattered. This would appear to have been a Câghâtaî custom inherited by the Mûghâls, and it persisted until at least the time of Fârûk Khubzây. Fanny Parks (Wanderings of a pilgrim in search of the picturesque, London 1850) speaks of the custom of scattering coins and jewels over the head of the new ruler in the Lakhnaû court. For the scattering of coins among the populace, besides the half- and quarter-ruppes, smaller coins, usually thinner than those of the standard currency and not standing in any regular fractional relation to it, of gold as well as silver, and many of dainty and excellent workmanship, were known especially from the reign of Dîjahânîr; niyâr was for a short time the name of his quarter-ruppe; though niyâr, nîr afshân and khây khâlû are all used for largesse-coins in his reign. Occasions for the scattering of niyâr were especially the Imperial festivals and processions on anniversaries of accession-date, the emperor's solar and lunar birthdays, the births and marriages of royal princes and princesses, the formal recognitions of the emperor against gold, silver and jewels, the Akbari ceremony, ceremonial visits to Akbar's tomb and to the tombs of certain points especially at Fâtâpur Sikrî and A'dâmâr, and so on. It seems certain that much largesse-money was struck at provincial mints, possibly in connection with imperial visits, as many of the dated niyârs correspond with dates in the chronicles.

Bibliography: In addition to references in the article, see especially S.H. Hodivala, Nîyâr, no. XIV in Historical studies in Mughal numismatics, Calcutta 1923; references passim in the coin catalogues mentioned in the Bibl. to MUGHALS, 11.

NIYÂHA (a.) 'lamentation', the noun of action from nåhâ 'to weep with great cries, lamentations, sighings and affliction'. The term is used to designate the activity of professional mourners who play a great role in funeral ceremonies all around the Mediterranean. It is mentioned here, it is believed, in relation to this practice, considered to be a legacy of paganism, was condemned by the Prophet. Indeed, he is made to say 'Three pre-Islamic customs (akhkâh, 'Uds al-alâhâ, fi'sî) are not to be retained by the Muslims. They are: invoking the planets in order to receive rain (istîrkâ bî 'l-kawâkîh), attacking genealogies (al-ta'a fi 'l-nisba) and lamenting the dead (al-nyaâhâ 'alâ 'l-mayyîs)' (al-
Weeping for the dead was something which could be done not only by women but also by men, some of whom become well-known for this; the Aghâni cites, e.g. Ibn Suraydî (i, 99-100).

The pagan character of this practice is displayed in a text of Ibn Sa’d, Tabakât, i/1, 88, where it is written: “At the death of his son ʿIrâbîh, the Prophet wept (bakd). Someone said to him, O Messenger of God, did you not forbid weeping?—He replied, I forbade (bakd).”

Excited the people by political utterances and mystical assuals so that the ʿAḥl al-mahbûbât came to be done, both equally stupid and impious: a voice raised in a state of happiness (which shows itself) in celebrations, and a voice in times of misfortune (which shows itself) in mutilating one’s face, tearing of clothes and a diabolical mourning cry (rannat shayṭân = the ninia of the Romans = a funeral lament). My personal tears express my compassion for (the beings) and (the beings) will have no compassion for him.”

Another account, given by the same author (91), confirms the previous one. There was an eclipse of the sun on the day of ʿIrâbîh’s death; people saw in it a relationship of cause and effect. The Prophet rebuked this relationship and then let his tears flow. People said to him, “You are weeping, you, the Messenger of God!”—He replied, “I am a man; the eyes shed tears, the heart breaks and we say nothing which will irritate the Lord.”

Finally, one should add that, amongst the ancient Arabs, the position of the woman weeping for her husband was seen as an indication of her future intentions. If she did this standing (kâ’ima), it was assumed that she would not marry again (Aghâni, ii, 138).

NIYÂZÎ, an Ottoman poet and mystic. Shams al-Dîn Mehmed known as Mîrsî Efendi, Şaykh Mîrsî, whose máqâlas was Niyażî, came from Aspüzî, the former summer capital of Malatya (cf. Ewliya Celebi, iv, 15; von Moltke, Akademii Nauk SSSR, ixxxv, 36, and JA, ser. 4, vol. viii, 261). On his numerous other works, only available in ms., cf. Bursâlî Mehmed Tâhir, ʿOṭlâmî mûliîleri, i, 173-4, with references to where they are preserved, and Abdulbâkî Gönlpînar, IA art. s.v.

(F. Bârîncêr)
Niyazi Young Turk officers, who, on the orders of the Committee of Union and Progress, began to spread ittihad we Terakki Djemâyiyyeti (q.v.) between 1898 and 1908. On Friday, the C.U.P. decided to act to force the restoration of the constitution in cables sent to the authorities. He hundred men and began to demand the restoration of the constitution in cables sent to the authorities. He hundred men and began to demand the restoration of the constitution in cables sent to the authorities. However, he was an Albanian by birth.

When the Othmânîli Hürriyet Dînîyyeti (Ottoman Freedom Committee), which later merged with the Paris-based Ittihat ve Terakki Dînîyyeti [q.v.] (Committee of Union and Progress), began to spread among the officers of the Third Army, Niyazi was an early member. In July 1908, the Society suspected him of being a member of the Committee of Union and Progress, and he made a name for himself during the battle of Beğ pieniądze in 1897 Greek-Ottoman war. He was promoted to first lieutenant, captain and eventually adjutant-major, while serving with the Third Light Rifle Battalion in Ohrid and constantly engaged in combating the guerrilla warfare of Bulgarian bands in the area.

After the restoration of the constitution on 24 July, Niyazi, together with Enver, was launched by the Committee of Union and Progress in politics 1908-1914, the official group of the Young Turks, who, on the orders of the Committee, started an insurrection in Macedonia. On Friday, 3 July 1908 he took to the hills with about two hundred men and began to demand the restoration of the constitution in cables sent to the authorities. He was soon followed by other officers, such as Enver [q.v.].

The term does not occur in the Kur'ân. It is found in canonical hadith, but the passages show that is has not yet acquired in this literature the technical meaning and limitation described above. The development of this technical use appears to have taken place gradually, probably aided by Jewish influence. In Jewish law, the kawâdîn has a function wholly analogous to the niyya. Al-Shâhî (d. 204/820) appears to have been acquainted with the niyya in its technical sense (Kîbîd al-Umm). In canonical hadith, the literature which, generally speaking, reflects the state of things up to the middle of the 2nd/8th century, neither the verb nàwâd nor the noun niyya appear to have any special technical connection with the 'ibâdât. On the contrary, niyya has here the common meaning of all intention.

In this sense, it is of great importance. Al-Bukhârî opens his collection with a tradition, which in this place is apparently meant as a motto. It runs: "All works are only rendered efficacious by their intention" (innamā 'l-ṣā‘āl bi-l-niyya or bi l-'niyyât). This tradition occurs frequently in the canonical collections. It constitutes a religious and moral criterion superior to that of the law. The value of an 'ibâdât, even if performed in complete accordance with the precepts of the law, depends upon the intention of the performer, and if this intention should be sinful, the work would be valueless. "For" adds the tradition just mentioned, "every man receives only what he has intended"; or "his wages shall be in accordance with his intention" (Mâlîk, Ḍā'îqah, tr. 36). In answer to the question how long the kifârā is open, tradition says: "There is no kifârā after the capture of Mecca, only holy war and intention" (al-Bukhârî, Manâkîb al-Ansâr, bâb 45; Dîhkâd, bâb 1, 27; Muslim, İmâra, tr. 85, 86, etc.). This higher criterion, once admitted, may suspend the law in several cases (cf. Snouck Hurgronje, Islam and Phonograph, in Tbgkw, xii, 393 ff. = Verz. Geschriften, ii, 419 ff.). So the intention, in this sense, becomes a work of its own, just as the intention in its juridical application. Good intention is taken into account by God, even if not carried out; it heightens the value of the work. On the other hand, refraining from an evil intention is reckoned as a good work (al-
Bukhārī, Rīkā, bāb 31). In this connection, the (post-canonical) tradition can be understood, according to the intention of the faithful is better than his (canonical) tradition can be understood, according to Ihyd (Lisdn al-cwork iv, 31). In this connection, the (post-Bukhari, niyya comes near to the meaning of 330 ff., where this tradition is discussed). In similar branch of the Hephtalite confederation which had in northern India, that people known to the Arab Hindu Kush, from what is now Soviet Central Asia to Afghanistan and was looked upon as one of the most learned men of his age. He was also the murid (disciple) of Shaykh Husayn of Khārazm. His attainments procured him access to the court of Sulaymān, prince of Badakhshān, who conferred upon him the title of Kādī Khān. Subsequently, he left his master and went to India. At Kānpūr, he was introduced to the Mughal Emperor Akbar (963-1014/1556-1605). He received several presents, and was appointed Parsānūdi writer. Akbar soon discovered in him a man of great insight, and made him a “Commander of One Thousand” (yak hazār). He also bestowed upon him the title of Ghāzī Khān after he had distinguished himself in several expeditions. He died in Oudh at the age of seventy in 992/1584. He is the author of the following works: 1. Ḥāagtay Shah ʿAbāʾīd, a commentary on al-Taftazānī’s commentary on the ‘Ākāʾid of Nasafi; 2. several treatises on Sūfism.

NIẒAM AL-DĪN AHMAD B. MUḤAMMAD MUḤKĪM AL-HARAWĪ (d. 1003/1594), a Persian historian, author of the celebrated Tabakāt-i Akbarshāhī. He was a descendant of the famous ṣuyūṭ of Harāt, ʿAbd Allāh Ansāri. His father Khāṇā Mulk Harawī was major-domo to Bābur (932-7/1526-30) and later vizier to the governor of Gudjarat Mūlza (97) to the 37th year of Akbar’s reign (1001/1593). The later held several high military offices under the Great Mughal Akbar and became in 993/1585 Bakhshī of Gudjarat and in 1001/1593 even Bakhshī of the whole empire. According to Bākdāni (ii, 397), he died on 23 Šaʿar 1003/18 October 1594, aged 45. At his father’s instigation he took up historical studies while quite a boy. His fondness for this subject increased as time went on and induced him to try writing himself. The lack of a complete history of India made him decide to fill the gap, and thus arose his celebrated work, called the Tabakāt-i Akbarshāhī or Tabakāt-i Akbarī or Taʾrīkh-i Niẓamī which was finished in 1001/1593. Niẓām al-Dīn used 27 different sources for this work, all of which he mentions by name, and in this way produced a very thorough piece of work on which all his successors have relied. He deals with the history of India from the Arab conquests of the 7th century (366-87/977-97) to the 37th year of Akbar’s reign (1001/1593). The work is divided into a mukaddima which deals with the Ghaznawids, and nine tabakāt: 1. the Sultans of Dihlī from Muʿīzz al-Dīn Ghausī to Akbar (574-1002/1178-1594); at the end of this part are biographies of famous men at Akbar’s court, amirs, ālumā, poets, writers and ṣuyūṭīs, 2. the rulers of the Deccan (748-1002/1347-1594); the Bahmani, Niẓamshāhī, ʿAdilshāhī and Kutbshāhī ones; 3. the rulers of
Gujarat (793-980/1390-1572); 4. the rulers of Gudjarat (784-881/1379-1476); 5. the rulers of Bengal (741-984/1340-1576); 6. the Sharqi dynasty of Daspur (784-881/1379-1476); 7. the rulers of a pan-Indian position, was by his title Nizam al-Din. His grandfather had [q.v. ca. (in U.P.) born at Badaun died in Dihl in 18 Rabi II '725/3 April 1325.

His chief successor and directed him to settle in Dihli [q.v.], Hiddya. pulled out during the stress of awliya*, appalling poverty. At the age of twenty he left for his memory. During this early period Nizam al-Din lived UsulT gave instruction on the works of al-Kudur and was a welfare centre where free food was khdnakdh. Ala° al-Dln taught him the Kurgan, and Mawlana c of tender age. His mother, Bibi Zulaykha, a lady of c of the country. Shaykh Nizam al-Dln Awliya, he sent 700 deputies to different parts of the country, Shaykh Farid al-Dln Gandj-i Shakar was a welfare centre where free food was served to all visitors, and money was distributed to the needy and the poor on a very large scale. Enormous futil (unasked-for gifts) came to him, but he distributed everything and kept nothing for himself. Barani (Ta'rif-i Firuz-Shah, 345-7) has given a graphic account of his popularity in Dihli.

The Shaykh's way of thinking was to regard mankind as a topographical description of India, but it was apparently never finished by the author. Bibliography: Rieu, B.M. catalogue, 220a-222a. Biography of the author: Elliot and Dowson, History of India, v, 178-80. Synopsis of contents, ibid., v, 177-476. In shops and on the market in 1841. Fourth Editions: lith. Lucknow 1870; B. De, The Tabakat-I Akbari (as A History of India from the early Muslim invasions to the thirty-sixth year of the reign of Akbar) (with Eng.tr.), Calcutta 1913 (Bihl. Indica, New Ser. 199). For ms., see Storey, i, 433-5.

NIZAM AL-DIN, MULLA MUHAMMAD

Shaykh, a widely venerated saint of the CishtT order [see CishtT], who raised his temple to a pan-Indian position, was born at Badaun [q.v. ] ca. 640-1/1243-4. He was given the name Muhammad but became known by his title Nizam al-Din. His grandfather had migrated to India from Bukhara under the stress of Mongol invasions. His father died when he was a boy of tender age. His mother, Bibi Zulaykha, a lady of c, a woman of fervent piety, brought him up and moulded his thought and character. In Badaun, Shadii Mukri taught him the KurTn, and Mawlana Ala° al-Dln Uthman gave instruction on the works of al-Kudur and Mawlana Fakhr al-Din Zarradi, eminent scholars of the period, were among his disciples. Firuz Shah Tughluk referred to him as Sultdn al-mashiyikh ("King of the saints"), and throughout the centuries people of all walks of life have paid respectful homage to his memory.

The site where Humayun's tomb now stands was once a village known as Ghiyathpur, and the Shaykh had his hospice there. Part of his khanaka, the Cilla-khana, still stands (Bhayazid Bayat, Ta'rif-i Humayun wa Akbar, Calcutta 1941, 234).

Bibliography: Two collections of his utterances —the Fawa'id al-fu'did, compiled by Hasan Siqdel (Nawal Kishore, Lucknow 1884), and Durar-i-Nizmi, compiled by Ali Dindar (ms. Sallar Djang Museum, Haydarabad 61/5-99), and two biographical accounts—Kis'am al-sak'did by Djamal Kiwm-al-Din (ms. Osmania University Library, Haydarabad) and Siyar al-auliya' of Mir Khudw (Mubibbi-Hind Press, Dihli 1885) supply all the basic details about his life, thought and activities. For other sources, Barani, Ta'rif-i Firuz Shahi; Calcutta 1860; Hamid Kalandar. Kayr al-madjalis, ed. K. Ghaziuddin, 1927. (K. A. NIZAMI)
Nizām al-Dīn, who was fourteen at the time of his father's death, studied under Mullās ʿAlī Kuli of Dā'īya, Amān Allāh of Benares and Naqshband of Lucknow. On finishing his education he established the teaching tradition in Farangī Mahall, including amongst his many pupils not only members of his own family and the forerunners of the Khayrābād school of maṣūlīt studies but also students from Bengal and much of Awadh. At the same time through his powerful relationship with the illustrious Kādīrī mystic, Sayyid ʿAbd al-Razzāk of Bansa (d. 5 Shawwal 1153/27 June 1742) he established his family's connection with the Dīna-i Nizāmiyya, the leading Indian scholar of his day.

NIZĀM AL-MULK, ʿAbū ʿAli al-HASAN b. ʿAli b. ISMĀK AL-Tūsī, the celebrated minister of the Saljūqīd sultans Alp Arslān [q.v.] and Malikshāh [q.v.]; According to most authorities, he was born on Friday 21 Dhu 'l-Qa'da 408/10 April 1018, though the 6th/12th century Tašqī-ī Bayhāqī of Ibn Fudūk al-Bayhaqī [q.v.], which alone supplies us with detailed information about his family, places his birth in 410/1019-20. His birth-place was Rādkān, a village in the neighbourhood of Tūs, of which his father was revenue agent on behalf of the Ghznavīd government. Little is recorded of his early life. The Wāṣīyāt-yi ʿAbū ʿAlī ʿAlī ʿAlī ʿAlī al-Mulk, however (for a discussion of the credibility of which see JRAI [1931], The Sar-ṣūrawshi-yi ʿAṣiyād, etc.), contains several anecdotes of his childhood, and is also responsible for the statement that he became a pupil in Niẓāmāpur of a well-known Shāfīʿī doctor Hibāt Allāh al-Muwaffāk. On the defeat of Masʿūd of Ghzna at Dandānkān [q.v. in Suppl.] in 431/1040, when most of Khurasān fell into the hands of the Saljūqīs, Niẓām al-Mulk's father ʿAlī fled from Tūs to Khusravīdīr in his native Bakhshās, and there was heard of him no more. Niẓām al-Mulk accompanied him, and whilst in Ghzna appears to have obtained a post in a government office. Within three or four years, however, he left the Ghznavīd for the Saljūq service, first attaching himself to Caghri-Beg's [q.v.] commandant in Balkh (which had fallen to a Saljūqīd force in 432/1040-1), and later, probably about 445/1053-4, moving to Caghri's own headquarters at Marw. It seems to have been now, or soon after, that he first entered the service of Alp Arslān (then acting as his father's lieutenant in eastern Khurāsān) under his wazīr, ʿAbū ʿAlī Ahmad b. Shāḥshān. And he so far won Alp Arslān's regard as on Ibn Shāhīd's death to be appointed wazīr in his stead (then, probably, receiving his best-known lakab). During the period between the death of Caghri-Beg in 451/1059 and that of Tughrīl-Beg in 455/1063, therefore, Niẓām al-Mulk had the administration of all Khurāsān in his hands.

The fame which he thereby acquired, and the fact that by now Alp Arslān was firmly attached to him, played a considerable part in prompting Tughrīl-Beg's wazīr al-Kundūrsī [q.v.], first, before his master's death, to scheme for the throne to pass to Caghri's youngest son Sulaymān, and then, after it,
insisting at the outset on the execution of Kawurd, and, later, on the blinding and imprisonment of Malikshāh’s brother Tekēgh. He also reversed during the earlier part of Malikshāh’s reign the conciliatory policy originally pursued under Alp Arslān towards the caliph. He had been rewarded for the friendly attitude he first evinced—which formed a welcome contrast to that of Al-Kundurī—by the receipt from Al-Kā‘im of two new lakāds, viz. Ku‘ām al-Dīn and Ṭaḥtār ‘Alī al-Mu‘āmin (the latter believed to be the earliest of this type in the case of a wa‘zir); and up to 460/1068, his relations with the caliph’s son Fakhr al-Dawla Ibn Djahir [see QAJIRI, BANU] became more and more cordial; so much so, indeed, that Al-Kā‘im in that year dismissed Ibn Djahir, chiefly on account of his too-subservient attitude to the Saldjuk court. To secure this attitude in the caliph’s wa‘zir was, however, the very aim of Nizām al-Mulk; and on Fakhr al-Dawla’s dismissal he sought to impose a nominee of his own in a certain al-Rūdhawari, and subsequently in the latter’s son Abū Shudja Al-Kā‘im, to avoid this he appointed Fakhr al-Dawla, though on condition that his relations with the Saldjukids should in future be more correct. In fact, they soon grew strained, till Nizām al-Mulk came to attribute any unwelcome event in Baghdad to Fakhr al-Dawla’s influence. For many years, matters were prevented from coming to a head by the tact of Fakhr al-Dawla’s son, ‘Amid al-Dawla [see QAJIRI, BANU], who won Nizām al-Mulk’s favour so far as to marry in turn two of his daughters, Nafsā and Zubayda; but in 471/1078 Nizām al-Mulk demanded Fakhr al-Dawla’s dismissal, which the caliph al-Muktaḍā [q.v.] (who had succeeded in 467/1075), was obliged to grant. Nizām al-Mulk now hoped to obtain the office for his own son Mu‘ayyid al-Mulk, but to this al-Muktaḍā would not agree. Henceforward, accordingly, his dislike was deflected to al-Muktaḍā himself, and to Abū Shudja, his former protégé, whom the caliph now created deputy wa‘zir in an effort to conciliate him, leaving the vizierate itself unoccupied till the next year, when he appointed ‘Amid al-Dawla. But in 474/1082 Nizām al-Mulk in turn demanded the dismissal and banishment of Abū Shudja, and at the same time composed his quarrel with Fakhr al-Dawla, when the latter was sent on a mission to Isfahan, concerting with him a plan by which Fakhr al-Dawla should watch his interests at Baghdad. As a result, al-Muktaḍā, who gave in with a bad grace, lost all confidence in the Banū Djahir, and two years later replaced ‘Amid al-Dawla with the offensive Abū Shudja; whereupon Fakhr al-Dawla and ‘Amid al-Dawla fled to the Saldjukid headquarters. Nizām al-Mulk, on this, vowed vengeance on al-Muktaḍā, and at first seems even to have contemplated the abolition of the caliphate (see Sibt Ibn al-Ḍawārizi, Mir‘āt al-samā‘), as a prelude to which he commissioned Fakhr al-Dawla to conquer Dīyar Bârak from the Marwānids [q.v.], the sole remaining Sunnī tributaries of any consequence. The Marwānids were duly ousted by 478/1085, whilst al-Muktaḍā, on his side, showed himself consistently hostile to Nizām al-Mulk. But the latter’s feelings towards the caliph were in the following year completely transformed as a consequence of his first visit in turn to Baghdad (for the wedding of al-Muktaḍā to Malikshāh’s daughter). The caliph received him very graciously; and thenceforward he became a champion of the caliphate in face of the enmity which developed between al-Muktaḍā and Malikshāh as a result of the marriage. The celebrity of Nizām al-Mulk is really due to the fact that he was in all but name a monarch, and ruled...
his empire with striking success. It was not his aim to innovate. On the contrary, it was to model the new state as closely as possible on that of the Ghaznavids, in which he had been born and brought up. His position was similar to that of the Buyid rulers, the Bar-

makids [see BAKIRA], and the notable Būyid waṣīrī, the Sāhib Isma‘īl b. ‘Abdāb [q.v.]. All three may be said to have represented the old Persian civilisation (progressively Islamised, of course) in the face of a rise to empire of barbarian conquerors, Arab, Daylamī and now Türkmen. The monarchs were in each case equalled, if not surpassed, by their waṣaris, and most of all in the case of Nizām al-Mulk, for with him the invaders aspired to an emperor’s position whilst still quite unacclimatised to their new habitat, so that his superiority in culture was the more marked (cf. Barthold, Turkestan, 308). But in revenge, the Saldjūks’ lack of acclimatisation stood in the way of a complete realisation by Nizām al-Mulk of the now traditional Perso-Muslim state. Hence the lamentations that recur in the Siyāsāt-ī-nāma.

The Siyāsāt-ī-nāma was written by Nizām al-Mulk in 484/1091 with the addition of eleven chapters in the following year, is in a sense a survey of what he had failed to accomplish. It scarcely touches upon the organisation of the diwān, for instance, partly, it is true, because the book was intended as a monarch’s primer, but also because Nizām al-Mulk, having absolute control of the diwān, as opposed to the dārgāh (cf. again Barthold, 227), had succeeded with the assistance of his two principal coadjutors, the muta‘aṣṣī Sharaf al-Mulk and the mānṣūḥ Kamāl al-Dawla, in exactly modelling this, his special department, on traditional lines. Of the dārgāh, on the other hand, Nizām al-Mulk complains that the sultans failed to maintain a sufficient majesty. They were neither magnificent (though he approves their daily free provision of food), formal, nor awe-inspiring enough. At their court, accordingly, the formerly important offices of bādīgūb, waṣāqīt and amīr-i hāras had declined in prestige. Nor, as had his model potestates, would they maintain a sound intelligence service, whereby corruption might be revealed and rebellion forestalled. The Siyāsāt-ī-nāma consists in all of fifty chapters of advice illustrated by historical anecdotes. The last eleven chapters, added shortly before the waṣāqīt’s assassination, deal with dangers that threatened the empire at the time of writing, in particular from the Ismā‘īlīs (on the work, see Bibl., 3).

Nizām al-Mulk’s situation resembled that of the Būyid administrators in another respect. He was faced, as they had been, with the problem of supporting a largely tribal army, and solved it likewise by a partial abandonment of the traditional tax-farming system of revenue collection for that of the ikta’ or fief [q.v.], whereby military commanders supported themselves and their troops on the yield of lands allotted to them. Since in the decay of the ‘Abbāsid power provincial amīrs had tended to assume the originally distinct and profitable office of sāmil, the way for this development had been paved. The Būyids had later attempted to restore the older system; but the establishment of numerous local minor dynasties had favoured the new. Nizām al-Mulk now systematised it in the larger field open to him. In the Siyāsāt-ī-nāma he raises, however, on the necessity of limiting the rights of fief-holders to the collection of fixed dues, and of setting a short time-limit to their tenures (see on this subject, Becker, Steuerpacht und Lehnsteuer, in Isl., v [1914], 81-92, and Ṭa‘ṣā‘).

In the absence of the intelligence service he desired, Nizām al-Mulk contrived to intimate potential rebels and suppress local tyranny by a judicious display of the might and mobility of the Saldjūk arms. He also insisted on the periodic appearance at court of learned figures, the Bar-

makids [see BAKIRA], and the notable Būyid waṣīrī, the Sāhib Isma‘īl b. ‘Abdāb [q.v.]. All three may be said to have represented the old Persian civilisation (progressively Islamised, of course) in the face of a rise to empire of barbarian conquerors, Arab, Daylamī and now Türkmen. The monarchs were in each case equalled, if not surpassed, by their waṣaris, and most of all in the case of Nizām al-Mulk, for with him the invaders aspired to an emperor’s position whilst still quite unacclimatised to their new habitat, so that his superiority in culture was the more marked (cf. Barthold, Turkestan, 308). But in revenge, the Saldjūks’ lack of acclimatisation stood in the way of a complete realisation by Nizām al-Mulk of the now traditional Perso-Muslim state. Hence the lamentations that recur in the Siyāsāt-ī-nāma.

The Būyids had later attempted to restore the older system; but the establishment of numerous local minor dynasties had favoured the new. Nizām al-Mulk now systematised it in the larger field open to him. In the Siyāsāt-ī-nāma he raises, however, on the necessity of limiting the rights of fief-holders to the collection of fixed dues, and of setting a short time-limit to their tenures (see on this subject, Becker, Steuerpacht und Lehnsteuer, in Isl., v [1914], 81-92, and Ṭa‘ṣā‘).

In the absence of the intelligence service he desired, Nizām al-Mulk contrived to intimate potential reb...
endowing madrasas and associated institutions like hostels for students, such as the Hanafi official of Alp Arslán's, to the mustafla of Tādj al-Mulk Abu 'l-Ghāna'īm (d. 485/1093), founder of the Tājdiyya college there (see G. Makedis, Mîstûm institûtûn of learning in eleventh-century Baghdad, in BSOAS, xxiv [1961], 1-56; C. E. Bosworth, in Camb. hist. of Iran, v-vi, 70-4). Nizām al-Mulk may have intended to give an impetus to the spread of the Şī'ite faith in this region. Thus, in addition to the greater vitality), but it seems reasonable to impute to him a wider vision of a Sunni political, cultural and intellectual revival in the central and eastern lands of Islam, in which his own colleges would play a contributory role.

For the first seven years of Malikşah's reign, Nizām al-Mulk's authority went altogether unchallenged. In 472/1079-80, however, two Turkish officers of the court instigated Malikşah into killing a protégé of the waṣīr, and in 473/1080-1, again, the sultan insisted on disbanding a contingent of Armenian mercenaries against Nizām al-Mulk's advice. Malikşah now began to hope, indeed, for the overthrown main wazir. Nizām al-Mulk was in 473/1080-1 and 480/1087. She was eager for Mahmūd to be formally declared heir. Nizām al-Mulk, however, was in 473/1080-1, and a new set of verses by al-Nahlās quoted in the Raḥlat al-sudur of Râwandi, and really composed after the waṣīr's death.)

Nizām al-Mulk was assassinated on 10 Ramaḍān 485/14 October 1092 near Sīhāna, between Kangwuar and Bāsusūn, as the court was on its way from Iṣfahān to Baghūd. His murderer, who was disguised as a court jester, named Djamāl al-Mulk, who had taken Dašfārak's execution into his own hands (475/1082). After the fall of Sayyid al-Ru'asā in 476/1083-4, however, the sultan left plotting till, some years later, a new favourite, Tādj al-Mulk, caught his fancy. All went well with Nizām al-Mulk till 483/1090-1. In the 6th/12th century, NIZAMIYYA.

See further, on the sons and descendants of Nizām al-Mulk in the 6th/12th century, NIZAMIYYA.

(H. Bowen—C.E. Bosworth)

NIZĀM AL-MULK CĪN KILK KĀHN, KĀMAR AL-NOBĀT, in order to seal the Indian Muslim state of Haydarābād in the early 12th/18th century and a dominant figure in the military affairs of the decaying Mughal empire from his appointment as governor of the Deccan by the Emperor Farrukh-siyar [q. v.] till his death in 1611/1748. In the early years of his governorship he was the deadly foe of his rivals for influence in the empire, the Bāṛa Sayyids [q. v. in Suppl.], and after his victory over them at Shakarkhelda in 1137/1724, virtually independent ruler in Haydarābād with the additional title of Asaf Djāh. For further details, see Haydarābād, b. Haydarābād state, and Muḥammad Shāh b. Dājma Shāh.

Bibliography: T.W. Haig (ed.), The Cambridge history of India, iv, The Mughul period, 331, 336, 341-3, 346-50, 377 ff., and see the bibls. to the articles mentioned above. (Eo.)

NIZĀM-SHAHI (i.e. Nizām-Shāhī “ambassador of the Nizām-Shāh” of the Dakhan), a Persian historian whose real name was Khūrshāh b. Kubād al-Husaynī. Born in Persian ʿIrāk, he entered the service of Sultan Burhan b. Shīrāz or see nizām-sāginis. The latter being converted to the Shīʿa, sent Khūrshāh as ambassador to Tāḥmāsp Shāh Safāwī. Reaching Rāy b. Rājāb 952/September 1545, he accompanied the Shāh to Georgia and Shīrāz during the campaigns of 954 and 956 against Aḥkām Mīrzā. He stayed in Persia till 971/1563, perhaps with occasional breaks. He died at Golkonda on 25 Dhu ‘l-Ka‘da 972/24 June 1565.

Khūrshāh’s chief work is the Taʾrīkh-i ʿIrā-zi Nizām-shāh, a general history from the time of Adam based on such sources as al-Tabari, al-Baydawi, Taʾrīkh-i guzida, Zafar-nāma, Ḥabib al-siyar, the ‘Memoirs of Shāh-Tāḥmāsp’ etc. The book is divided into a prologue and seven nakalā, each of which is again divided into several gulfār. It is the most important part of this work is that which refers to the reign of Tāḥmāsp Shāh (in the Brit. Mus. ms. Or. 153, written in 972/1565, the events come down to 969/1561-2) and to the local dynasties of the Caspian provinces: Māzandarān, Gilān, Shīrāz. The two manuscripts in the British Museum show differences in their contents: Add. 23,513 (written in 1095/1684) has a narrative of the campaign of 1101 and a story of the Doṭān-ārā of Ahmad b. Muḥammad Ghaf-ārī. The later additions of Or. 153 come down as late as 1200/1786.

According to Firuţta, “Shāh Khūrshāh”, during the reign of Ibrāhīm Kūt-Shāh of the Deccan (957-988/1550-80) also wrote a history of the Kūt-Shāhs [q. v.]. It is difficult to reconcile this with a continuous stay in Persia from 952 to 971.

Bibliography: Rieu, Catalogue, 107-11; Schefer, in his Christo-mathiae persane, Paris 1885, ii, 56-103 (notes 65-133), printed the sections relating to the Caspian provinces. See also Storey-Bregel, 406-8. (V. Minošsky)

NIZĀM SHĀHĪS, one of five Deccani dynasties, with their capital at Ahmadnagar [q. v.] which emerged in South India as the Bahmani [q. v.]. kingdom disintegrated. The chronicles of the Nizām Shāhīs emphasise territorial and power disputes and religious (and possibly racial) tensions. The history of the dynasty splits into four periods. Under the first four rulers, 989-994/1480-1586, there was the vigorous establishment of the kingdom. Under the five rulers from 994-1008/1586-1600, there was intensive internal dissension. The period from 1008-35/1600-26, although with Nizām Shāhī rulers on the throne, was dominated by a Habashī (of black African origins) prime minister who restored much of the kingdom’s economic and political viability. By 1041/1632 the kingdom, decisively destroyed, with formal dispersal of the territories of the Ahmadnagar kingdom occurring in 1046/1636.

The founder of the dynasty, later known as Ahmad Nizām Shāh Bahri, was the son of a high official in the Bahmani court. He held various posts under the Bahmanis and in 989/1480 he declared independence from them and consolidated the areas in northern and western Mahrārshartra under his rule as Ahmad Nizām Shāh. Under the first four rulers (Ahmad, 989-994/1480-1510; Burhān I, 915-91/1505-1513; Ḥusayn I, 961-72/1554-65; and Murad I, 972-97/1565-88) the kingdom prospered despite military skirmishing with neighbouring Islamic successor states, with the Hindu state of Vidjiyānagar, and with the first Mughal incursions in the 990s/1580s. Burhān I converted to Shīʿism, the choice reflecting to some extent the underlying tension between those considered natives (darşāris) and those considered outsiders (pardaşāris). Potentially, there were racial implications as well. Many of the foreigners were generally fairer than the Deccanis, but there were many Habashī officers in the court and the exact causes for the continuous realignment of loyalties are rarely clear.

Militarily, the high point of this period came in Du‘mādā II 972/January 1565. The six major Dec- cani states aligned and realigned themselves attempting to extend their influence. The armies of Vidjiyānagar became particularly rapacious and the Islamic kingdoms reached an accommodation. The major armies gathered in Talikota to organise an assault on the Vidjiyānagar forces and also, apparently, for a certain amount of pre-battle carousing. In Du‘mādā II 972/January 1565 the forces marched out of Talikota and moved against the enemy, decisively destroying, with formal putting an end to that kingdom.

The rapid turnover in Nizām Shāhī rulers from 996/1588 to 1008/1600 reflects the disension and turmoil in the higher ranks of the Ahmadnagar court. Ḥusayn II, a parricide, ruled between 997-8/1588-9. He was succeeded by a paternal cousin, Ismā‘īl, who ruled in 998-9/1589-91. Ismā‘īl was succeeded by his own father, Burhān II, 999-1003/1591-5, who had been a member of the Mughal court for some years but, having manoeuvred his way on to the Nizām Shāhī throne, had to deal with serious Mughal forays into the Deccan. Burhān II was succeeded by his son and Ismā‘īl’s brother, Ibrāhīm, for four months in 1003/1595. Rival leaders put forth different candidates for the throne, and Bahadur, son of Ibrāhīm and strongly backed by Čand Bābī, was finally declared ruler only to be captured and imprisoned by
the Mughals after the fall of Ahmadnagar in Safar 1009/August 1600. Cand Bibi was a daughter of Husayn I and, as part of unending Deccani negotiations and realignments, had been married to ‘All Ādil Shāh of Bijapur [q.v.]. After his assassination in 1580, she was regent to their young son, Ibrahim ‘Ādil Shāh II. Later in the 1580s and in the early 1590s, Cand Bibi went back and forth between Bijapur and Ahmadnagar as a sort of “emissary for safe keeping”, as various leaders struck different bargains. After Burhān II was shot in 1595 and in 1596, the latter of which who still supported his grandson Bahādur to succeed him. By December of that year, the Mughals (led by Akbar’s son Mürād [q.v.], who died in Shawwal 1007/May 1599 in the Deccan), who had been skirmishing, raiding, and attempting to seize territory in the Deccan, began the siege of Ahmadnagar. In Dhumādār II 1009/February 1596 they successfully mined one of the walls of the fort, and Cand Bibi valiantly led the retaking of that wall. She emerged with enough stature to unite some of the feuding Ahmadnagar leaders and became a local heroine. In March, the occupants of the fort sued for peace and the Mughals withdrew.

In 1007/1599 the Mughals took Burhānpūr in Berār [q.v.] which then served as their base of operations for attacking the Deccani states. The following year, accompanied by Akbar, the Mughals again set siege to Ahmadnagar, this time led by his son Dānīyāl (died in Dhu ‘l-Ka‘da 1012/April 1604 in the Deccan). In the town and fort of Ahmadnagar, the internal feuding had reached such a pitch that one faction accused Cand Bibi of planning to betray the Nizām Shāhi forces and incited a mob which killed her. In Safar 1009/August 1600 the Mughals took Ahmadnagar.

The third period of Nizām Shāhī history was dominated by Malik ‘Anbār [q.v.], an Abyssinian slave who was in the Nizām Shāhī armies, then went to Bijapur as a soldier, and finally returned to Ahmadnagar in the 1590s. He fought for the Nizām Shāhī against the Mughals and oversaw the installation of the first two of the last three rulers, Murtūdā II (1008-19/1600-10) and Burhān III (1019-41/1616-32), followed by Husayn III (1014-2/1613-32). The bickering and skirmishing continued in the Deccan, and Malik ‘Anbār, an able general and politician, carved out larger territories for the Nizām Shāhī. He formed new alliances, embracing Hindu leaders who were later to become leaders of the Marāthā [q.v.] forces. With these leaders, more effective ways of waging war were developed, and swift moving, mounted soldiers of the Nizām Shāhī armies would quickly attack the Mughal forces and then retreat into the hills and prepare for the next swift attack and retreat. Dissension among the sons of Dāhāngīr pervaded the Mughal court, which was also embroiled in power and territorial disputes, and helped to frustrate repeated Mughal attempts to occupy the Deccan. In the meantime, Malik ‘Anbār embarked on a major land reform, similar to that done by Rādāj Todār Māli [q.v.] for Akbar. In 1026/1616 the Mughals put Ahmadnagar under siege a fourth time against which they were still extant. The early rulers and nobility commissioned many canals as well as palaces/pleasure houses/gardens. Indeed, a tomb near the impressive tomb of Ahmad I is reputed to mark the burial site of the elephant which captured the ruler of Vijayanagar (until 972/1565) reputedly paid the full price assessed at embarkation for every horse delivered to them whether alive or dead.

The Nizām Shāhī and many of their high officials commissioned palaces, mosques, gardens, tanks, canals, bath houses, hospices, hospitals, tombs, etc., the remains of which are still extant. The early rulers and nobility commissioned many canals as well as palaces/pleasure houses/gardens. Indeed, a tomb near the impressive tomb of Ahmad I is reputed to mark the burial site of the elephant which captured the ruler of Vijayanagar in 1565. The most famous Nizām Shāhī architect and builder was Schāhāb Khān II, an official under Murtūdā I and Husayn II. He not only extended the system of canals and tanks, but
rebuilt the Farah Baksh Gardens. His own tomb is outside the city on a hill; unlike other tombs of the period, it is an extremely tall building with stairs to the top. It is said he wished to make it even higher so that he could see as far as Daulatabad [q.v.].

There was an interest in literature and painting as well; an illustrated Ta'rif-i Husayn Shahi (ca. 972-6/a. 1565-9) survives at the Bharata Ithasa Samshodhana Mandala in Poona and a portrait of Burhan II is in the Bibliothèque Nationale in Paris. Some other miniatures have been attributed to the Nizam Shahi court and all the Surgeon and the Surgeon in the Mughals, to the latter by the Nizam Shahi one. Unfortunately, the wars with Bibliotheque Nationale in Paris. Some other

no doubt illustrated, that must have been in Nizam Shahi mosques, schools, and homes.

NIZAM-I DJEDID (t.), literally, "new system, new re-organisation", the new military units created by the Ottoman sultan Selim III (1203-22/1793-1807 [q.v.]).

The Treaty of Sistova between the Ottoman Empire and Austria (August 1791) and that of Jassy (March 1792) comprised three regiments, with barracks well-removed from the valleys. Hence by the end of 1806 the Nizam-i Djedid comprised 1,590 officers and 22,685 men, roughly half of them stationed in Anatolia and half in Istanbul. A large contingent of the new troops helped in the successful defence of Acre in Palestine led by Ahmed Djezzar Pasha [see Abdul-Hamid I, GOR, vi, 552-3].

The Treaty of Jassy, which was more successful in the newer, more technical arms: the artillery, the mortar-throwers, the mine-throwers, the gunboats, was more successful, but reform attempted in 1808 by the Mustafa Pasha Bayrakdar secret to reconstitute the Nizam-i Djedid under the designation of Nizam-i Asker, with the Austrian renaissance Süleyman Ağña, who had previously commanded the corps stationed at Lewend Çiftlik, charged with this task, but without success. It was only after the murder of the imprisoned former sultan Selim and the overthrow of the feeble puppet Mustafa in favour of Mahmoud II [q.v.], son of Selim's predecessor 'Abd al-Hamid I [q.v.], that more successful and more lasting measures in the direction of modernising the Ottoman Empire, its administration and armed forces, could eventually be embarked upon. For by then it had become clear that the previous Nizam-i Djedid had represented merely a tinkering with an old system which was incapable of being transformed into a modern one; a totally new start was necessary.

Nizâm-i Ḍjedīd — Nizám-i Gandjawī

(F. Bârînger—C. E. Bosworth)

Nizâm-i 'Arûdî Samâkandî, Abû Muhammad Ilyâs b. 'Ubîd al-Dîn. 'Arûdî (or 'Arûdî) was the poet who composed the Mathnâwî, the titles of which have not survived. He was a court poet who served faithfully the Ghûrîd princes for 45 years (he would thus be at the end of the 5th/11th century), according to what he tells us at the beginning of the Čâhrâ makâlât, the only work by him that has come down to us. His verse has been lost, at least except for fragments; what he tells us at the beginning of the Čâhrâ makâlât, which does not seem to be by him.

The earliest notice of Firdawîs and the only contemporary reference to Khayâm is found in the lost 'Arûdî's work. He tells us that the Čâhrâ makâlât, which he thinks is different from the 'Arûdîs which Bjowne says is almost unequalled in Persian. The number of these anecdotes, which form the most interesting and valuable part of the work, is about forty; some give valuable information on the literary and scientific state of Persia. We may say that the "Four Discourses" (especially the second) and "Awîl's Lubâh are the two old works which deal systematically with Persian poetry. Dâwlatshâh made a great deal of use of it (cf. Browne, Sources of Dâwlatshâh, in JRAŠ [1899], 37-69). We may specially point out that it is to Nizâmî that we owe the earliest notice of Firdawîs and the only contemporary reference to Khayâm. On the other hand, we must point out the historical inaccuracy of certain passages, even in the case of events in which Nizâmî claims to have taken part. His book is mentioned or quoted by "Awîl (Lubâh), Ibrâhîm ibn Isâ'îyâr (Hist. of Tahâristân), Mustawfî Kazwînî (Târîkh-î gûzîd), Dâwlatshâh al-dâhabî, Ghâfârî (Nîqarîstân). Hâddîdî Khâlîfa speaks of a Mâdîmâ-âl-nawâ'îdî which he thinks is different from the Čâhrâ makâlât; but Mirzâ Muhammad Kazwînî has shown that this is another title of the same book.

(H. Mâssî)

Nizâmî Gandjawî, Dâmâl al-Dîn Abû Muhammad Ilyâs b. Yûsuf b. Zâki Mu'mayyad, one of the greatest Persian poets and thinkers. He was born and spent most, if not all, of his life in Gandjâ (called Elisavetpol and Kirovabad during the Imperial Russian and Soviet periods), Nizâmî being his pen-name. In recognition of his vast knowledge and brilliant mind, the honorific title of balkâm, "learned doctor," was bestowed upon him by scholars. From his poetry, it is evident that he was learned not only in mathematics, astronomy, medicine, jurisprudence, history, and philosophy but also in music and the arts. His work is a synthesis of Persian literary achievements up to his time.

The traditional biographers, and some modern researchers, think that six years about the exact date of his birth (535-40/1141-6), and as much as thirty-seven years about the date of his death (575-613/1180-1217). Now there is no doubt, however, that he died in the 7th/13th century, and the earlier dates must be discarded as erroneous. UNESCO recognised the 1141 date as his birth date and declared 1991 the year of Nizâmî. To honour the 850th anniversary of his birth, there were international Nizâmî congresses held in 1981 in Washington, Los Angeles, London and Tabriz.

Usually, there is more precise biographical information about the Persian court poets, but Nizâmî was not a court poet; he feared loss of integrity in this role and craved primarily for the freedom of artistic creation. His five masterpieces are known collectively as the Khamasa, Qâned, or the Pandj gandj, The Five Treasures. The five epic poems represent a total of close to 30,000 couplets and they constitute a breakthrough in Persian literature. Nizâmî was a master in the genre of the romantic epic. In erotic sensuous verse, he explains what makes human beings behave as they do, revealing their follies and their glories, all their struggles, unbridled passions and tragedies.

Though he did not write for the stage, he could be
called a master dramatist. The plot in his romantic stories is carefully constructed to enhance the stories’ psychological complexities. The characters work and grow under the stress of action to discover things about themselves and others and to make swift decisions. He delineated simple people with as much insight and compassion as the princely heroes in his Maḥzan al-asrār. Artisans were particularly dear to him. Painters, sculptors, architects and musicians are carefully portrayed and often play crucial roles. The romance of Khusrav and Shīrīn is a very important source of information about the role of artists in pre-Mongol Persia as well as the education and training methods of the artists. The Khamsa serves as a principal source of our knowledge of 6th/12th century Persian musical composition and instruments. There have been few poets other than Nizāmī in the long and rich history of Persian literature who have had such an influence and impact on poets, calligraphers, miniature painters, musicians and, in recent times, on people of the theatre, film and ballet, and his influence has extended beyond Persia proper to such adjacent regions as Central Asia, the Caucasus, Asia Minor and Muslim India.

Considered as one of the greatest poems of the Near and Middle East, the number of imitations of, and selections from, the Khamsa or the separate poems of it is without precedent. The most popular have always been the three romantic epics: Khusrav wa Shīrīn, Laylā wa Majnūn, and Ḥafṣ ṭaykar. Besides the Khamsa, an incomplete Divān of Nizāmī’s poetry exists.

Maḥzan al-asrār, The Treasury of Mysteries, is the first maḥnawi poem in Nizāmī’s Khamsa. It is a didactic-philosophical poem with mystical overtones. It is the shortest maḥnawi of the quintet and is comprised of some 2,260 couplets written in the arzī maṭnī ma’ānī metre. Most probably it was completed in the year 582/1184–5, though the majority of scholars have tended to consider the year 570 or 572 as the date of its completion, and was dedicated to a patron of art and culture, Fakhr al-Dīn Bahramshāh of the Turcoman Mengüjdeği [q.v.].

Khusraw was a pious Muslim, but he tolerated and respected the Jews and the Christians. He was a pious Muslim, but he tolerated and respected the Jews and the Christians. He was well educated, independent, fearless, resourceful, imaginative, erotic and humorous. His loyalty knows no bounds. The Muslim community is, perhaps, a reflection of his geographical proximity to Gandja, and he is, like the Byzantine Maryam, a Christian. Nizāmī made a powerful commentary on human behaviour.

Shīrīn’s sense of justice is so great that she forswears Khusrav’s love until he should regain his throne, thus fulfilling his responsibility to his people. Even after they are married, she continues to exert a formidable influence on him throughout the East; in Persia alone, there were about forty first-class imitations of Maḥzan al-asrār.

Although some scholars consider Maḥzan al-asrār a mystical poem, the mysticism with its symbolism is apparent only in the introduction, which is infused with the essence of Sufr thought. In the main body of the book one can detect scattered mystical overtones, but it is up to the reader to arrive at the final interpretation.

Structurally, the poem begins with a large body of introductory matter which contains about 825 couplets or a little more than one-third of the whole book. Here, Nizāmī established a pattern for the introductory chapters of his later epics but also for almost all epics written thereafter. They include verses in worship of God, followed by a chapter of praise and veneration of the Prophet and a description of Muhammad’s ascension to the heavens. The twenty mukalats or discourses that follow cover some 1,400 couplets.

Khusrav wa Shīrīn is the second poem of Nizāmī’s Khamsa and the first of his romantic epics. Its protagonists are Khusrav II (590–628), the last great Sasanid monarch, known as Parwiz [q.v.], the Victorious, and his mistress Shīrīn. Their love was recorded by many subsequent Islamic writers, and Firdawṣ devoted more than 4,000 couplets to Khusrav II’s reign in his Shāh-nāma. It was Nizāmī, however, who gave the story a real structural unity. Infusing it with his own profound experience of love and expanding it with his thoughts on religion, philosophy, and government, he created a romance of great dramatic intensity. The story has a constant forward drive with exposition, challenge, mystery, crisis, climax, resolution, and finally, catastrophe. The action increases in complexity as the protagonists face mounting complications. Khusrav and Shīrīn are not able to meet for a long time, despite their untiring efforts and the help of their confidant. Then, after they do meet, they are forced apart by the political marriage of Khusrav and Maryam. When Khusrav promises Shīrīn to Farhād as a prize for completing a feat of daring and endurance, the story nearly comes to a premature conclusion.

After the death of Maryam and the murder-suicide of Farhād, it seems that all obstacles are removed and the lovers will be united. But Nizāmī introduces an affair between Khusrav and a girl from Isfahān that further complicates and delays his union with Shīrīn. Finally, on the lovers’ wedding night, Nizāmī creates a bizarre episode, a humorous entr’acte that gives the reader or listener a chance to take a deep breath before the epic’s tragic climax. Khusrav gets drunk and Shīrīn replaces her presence in the nuptial chamber with that of a knotty, wizened old crone. Through these dramatic devices, Nizāmī makes a powerful commentary on human behaviour.

Nizāmī’s deep understanding of women is strongly expressed in Khusrav wa Shīrīn. Shīrīn is the central character and there is no question that she is a poetic tribute to Nizāmī’s wife Afāk. She is well educated, independent, fearless, resourceful, imaginative, erotic and humorous. Her loyalty knows no bounds. That she is a queen rather than a commoner, as is the case in Firdawṣ’s Shāh-nāma, gives the story a stately quality. Her association with Armenia is, perhaps, a reflection of its geographical proximity to Gandja, and she is, like the Byzantine Maryam, a Christian. Nizāmī was a pious Muslim, but he tolerated and respected other religions.

Shīrīn’s sense of justice is so great that she forswears Khusrav’s love until he should regain his throne, thus fulfilling his responsibility to his people. Even after they are married, she continues to exert a
strong influence on Khusraw, educating him as always through example and love; as a result, the country flourished, justice was observed and the personality, creating from the fragmentary versions a full-scale dramatic poem.

For centuries, the legend of Layla and Majnun had been a popular theme of the short love poems and songs of the Bedouins, and during the early days of the Muslim era, it had been absorbed and embellished by the Persians. Majnun is traditionally identified with a poet known as Kays b. al-Mulawwah, who probably lived in the second half of the 1st/7th century in the Najjd desert of Arabia. Although it is probable that there was more than one love-crazed poet called Majnun, possessed by a djinn or a genie, the Russian scholar Krajkovič in 1946 erased most doubts as to his historical identity.

Neither the arid desert setting nor the spare plot of Majnun and Layla's romance inspired Niẓāmī's poetic vision, but he could not refuse the royal commission. And so he expanded and deepened the plot and the personalities, creating from the fragmentary versions a full-scale dramatic poem.

For his romance, Niẓāmī chose an easy metre, the short hazird musaddas. Layla wa Majnun is comprised of at least 4,000 distichs. Niẓāmī wrote that it took him "less than four months" to compose it, which implies a trance-like state of writing. The exact number of distichs has long been a source of controversy, especially since those that are considered apocryphal alter the plot significantly. Wahid Dastgiri's critical edition, based on thirty manuscripts copied between the 8th/14th and 11th/17th centuries, totals 4,650 distichs, of which Dastgiri considers 600 to be spurious, added by later writers and scribes, who also transposed an additional 400 distichs to cover their handwork. Others, as was common in copied manuscripts, give both dates. The earlier year is supported in the text by an abbreviated dating. Whatever its length and its exact date of completion, there is no doubt that Niẓāmī used all the material, written and oral, available to him, adding, altering and transforming as his poetic genius prompted, in order to create this tragic masterpiece.

Niẓāmī's originality lies in his psychological portrayal of the richness and complexity of the human soul when confronted with intense and abiding love. Majnun's compulsions, anxieties, frustrations, and passions are not slighted as he moves inexorably toward an ideal love that involves renunciation and, ultimately, transcendence. Many critics have interpreted this as mystical love; but if there is a mystic strain in Niẓāmī, it is subtle and covert; it never destroys or blurs the sharp psychological and the physical identity of its protagonist. It is virtually impossible to draw a clear line in Niẓāmī's poetry between the mystical and the erotic, the sacred and the profane. The psychological profile of Layla is less deeply drawn, but her enduring love is no less extraordinary than an achievement.

Layla and Majnun are scourged by separation, social ostracism, self-denial, and spiritual and physical suffering from the very beginning until their tragic ends. It is quite possible that, to soften the tragedy, Niẓāmī wrote a second version, weaving into it the love story of Zayd for his cousin Zaynab, which parallels that of Majnun and Layla; the couples become messengers for one another and to some degree are able to mitigate the relentless curse of separation.

The expanded version of Layla wa Majnun closes with a vivid dream sequence of Paradise. Majnun and Layla, sitting on an magnificent carpet, embrace and greatly embrace, the cup in hand. Many scholars believe this to be an interpolation, but if its date can be drawn from the moving dedication to the Shirvān-Shāh's crown prince, in which Niẓāmī counsels his own son Muhammad, addressing him as a boy of fourteen, the entire Zayd-Zaynab addition may well be Niẓāmī's own work.
listed by the hundreds, and the romance is popular even today. According to Bertels and A.A. Ḥikmat, counting only the most famous volumes, there are twenty in Persian, forty in Turkish, three in Uzbek, one in Kurdish and two in Tajik [see further, MĀRĪNĪN-LAVĀ].

Haft paykar is the fourth and the most intricate poem of Nizāmī’s Khamsa. It is a bedazzling exploration of the pleasures of love. At the same time, it can be interpreted as mystical. The seven stories told by the seven princesses can be interpreted as the seven stations of the mystic way. In fact, the title of the story can be translated as the “Seven Portraits”, the “Seven Effigies”, as well as the “Seven Princesses”. The poem is also known as the Haft gun-bad or “Seven Domes”.

In Islamic cosmology, the earth was placed in the centre of the seven planets: the moon, Mercury, Venus, the sun, Mars, Jupiter and Saturn. These were regarded as “emanations of God, and in their motion influenced beings and events on earth. Nizāmī firmly believed as well that the unity of the world could be achieved. At the same time, it can be interpreted as mystical. The seven stories told by the seven princesses can be interpreted as the seven stations of the mystic way. In fact, the title of the story can be translated as the “Seven Portraits”, the “Seven Effigies”, as well as the “Seven Princesses”. The poem is also known as the Haft gun-bad or “Seven Domes”.

In Islamic cosmology, the earth was placed in the centre of the seven planets: the moon, Mercury, Venus, the sun, Mars, Jupiter and Saturn. These were regarded as “emanations of God, and in their motion influenced beings and events on earth. Nizāmī firmly believed as well that the unity of the world could be perceived through arithmetical, geometrical, and musical relations. Numbers were the key to the one interconnected universe; for through numbers multiplicity becomes unity and discordance, harmony. Hence Nizāmī used seven, the number that has always been pre-eminent among the people of the East, as the major motif of Haft paykar; for in Islam, seven is considered as the first perfect number.

In Haft paykar, the phantasmagoric movement of its hero, Bahram Gōr, as he visits each princess, covers a symbolic path between black, or the hidden majesty of the Divine, and white, or purity and unity. The princesses and their pavilions are manifestations of specific planets, specific climes, colours, and days. The pavilions are domed, representing the structure of the heavens. Nizāmī illustrates the harmony of the universe, the affinity of the sacred and the profane, and the concordance of ancient and Islamic Iran.

The number seven casts its magic spell throughout the Haft paykar. Completed in the year 593/1197, the Haft paykar was commissioned by and dedicated to the prince of Maragha, ‘Alā’ al-Dīn Kurp Arslan, who allowed the already famous Nizāmī a free hand in choosing his theme. The poet chose an historical and situational humour, philosophy is counteracted by romanticism, and nationalism is softened by cosmopolitan ideals of Islam. The virtuosity of Nizāmī’s storytelling and his unbridled fantasy are matched by the brilliance of his language which is full of dazzling imagery and extended metaphor.

Nizāmī’s account of the adventures of Alexander the Great is probably the first work in Persian literature that is divided into two parts. The first half is called Sharaf-nāma (The Book of Honour) and the second part Ishāl-nāma (The Book of Wisdom). The two parts are also known, especially in India, as the Iskandar-nāma-yi barri (The Adventures of Alexander by Land), and the Iskandar-nāma-yi bahri (The Adventures of Alexander by Sea). The two parts, although constituting a full span of Alexander’s life from birth to death under the general title of Iskandar-nāma, are treated by the poet as two separate entities, each covering a cycle in Alexander’s life. In the first cycle, Alexander appears as the conqueror of the world, in the second, as the philosopher and prophet.

The introduction to the first part of the Iskandar-nāma is a little more than twice as long as the introduction to the second part. The introductions reflect the length of both parts; the Sharaf-nāma contains about 6,800 couplets and the Ishāl-nāma about 3,680 couplets, bringing Iskandar-nāma with about 10,580 couplets, the longest poem of Nizāmī’s Khamsa.

Confusion has been created among scholars by various dates given for the completion of the poem, as well as by the various people to whom it or its parts are dedicated in the available manuscripts. Some of them have considered the Iskandar-nāma to be the fourth of Nizāmī’s epic quintet, written in 587/1191 and dedicated to ‘Īzz al-Dīn Masūd I, the Zangid ruler of Mosul (572-89/1176-93). But because this date is contrary to many references and events in the text which would indicate a later date, some scholars believe that the work was dedicated to ‘Īzz al-Dīn Masūd II, of the same dynasty (607-15/1211-18). If this is the case, then the span of Nizāmī’s life would have to be stretched and the date of his death moved from the traditional one of 599/1203 or 605/1209 to some time after 587/1191, the date of completion of Haft paykar.

In the preface to the Sharaf-nāma, Nizāmī declares that he has already completed four mathnawis. This would indicate that the Iskandar-nāma was the fifth and last of his epic poems and was, therefore, composed after 593/1197, the date of completion of Haft paykar.

Those whose names have come down to us in association with the manuscripts are: Nuṣrāt al-Dīn
Djahān Pahlawān from the rulers of Adharbāyjān, Izz al-Dīn Māsūd from the rulers of Mawṣūl, and Nusrat al-Dīn Abū Bakr Pishkīn (Bīghān) from the rulers in the Caucasus. No doubt, Firdawṣī’s account of the life of Alexander was known to Nizāmī [see ISKANDAR NAMA], but it was, however, Firdawṣī who was his source of inspiration in composing the ISKANDAR NAMA. He, therefore, chose for it the heroic epic mutaḵārīn metre which Firdawṣī had employed in his Šāh-nāma. The ŠARAF-nāma, the first portion of the ISKANDAR nāma, is devoted to Alexander’s conquest of the world. His conquest, however, was already shaped by the idea of his future prophetic mission. It was, therefore, not for conquest, however, was already shaped by the idea of his future prophetic mission. It was, therefore, not for

The second part of the ISKANDAR NAMA, the ISKANDAR NAMA, portrays Alexander as a great sage and prophet. With the advent of Islam, Alexander found his place as Dhu ‘l-Karnān in Kur ‘ān, XVIII, 83/82-98, which encouraged Muslims to glorify him. After the conquest of the world, Alexander devoted his time to the spiritual gains of his conquests. He transported scholarly tomes from all parts of the known world to translate for his library and surrounded himself with the greatest minds in the ancient world. Nizāmī is not specific in describing Alexander’s religion, but it is a kind of monotheism which prepares the way for Islam. Like Caesar who conquered the future lands of Christendom, Alexander conquered the future domain of Islam, so that he is the archetype of the ideal ruler and a wise prophet.

By comparison with his other maqānasī, the ISKANDAR NAMA is very uneven. In the stories not directly related to the main current are held together structurally, giving an impression of wholeness, whereas in the ISKANDAR NAMA they are loosely woven into the massive structure.

Muhammad Kufi to shaykh in Nishapur, he went on the advice of his Ghurid Sultans and began, in 602/1206, his great Tadj. al-mathir fi 'l-tarikh, historical work which forced him to leave Ghazni, and he went to Dihli were brought him great fame. It deals with the history of the first three sultans of Dihli—the Ghurid Muham-

Kutb al-Din Aybak (602-7/1206-10) and Shams al-Din Muhammad as governor of Lahore (614/1217). An Appendix contains a panegyric of Iltutmish and his campaigns of conquest. The work was very highly

587/1191 and ends with the appointment of Nasir al-

style. It is written in high-flown and difficult language can be extricated from the medley of rhetoric, but in it. It is only with Mirkhând that the historical facts can be extracted from the medley of rhetoric, but nevertheless the book is of undeniable value for the history of India and Afghanistan.

NIZAMIYYA, a term often used in the sources for Saldjük history to designate the partisans and pro-
tèges of the great vizier Nizam al-Mulk [q.v.], after his death attached to and operating with the sons and descendants of the vizier. The influence of these partisans was especially notable in the years just after Sultan Malik Shâh’s death in 485/1092, when they actively promoted the cause of and secured the sultanate for Berk-yaruk b. Malik Shâh [q.v.] against his infant half-brother Mahmûd, the candidate of Malik Shâh’s widow Terken Khâtûn and her ally the vizier Tadj al-Mulk Abu 1-Ghanâm. In this present study, it is the descendants of Nizam al-Mulk, who filled many important civil and military offices of the Great Saldjük sultans and also, at times, of the ‘Abbâsid caliphs, who will be considered.

At least nine of Nizam al-Mulk’s sons achieved some office, civil and/or military, in the decades after his assassination in 485/1092. There was a distinct feeling among contemporaries that, in accordance with the belief that the arcana and the expertise of certain professions or skills were handed down within the families of their original exponents, the supreme capability of Nizam al-Mulk would manifest itself in his progeny. On the whole, this faith was unjustified.

Shams al-Mulk Uthmân was ʿaṣir al-djaysh for Sultan Muhammad b. Malik Shâh [q.v.], and then mustawfi and an inefficient vizier for Sultan Mahmûd b. Muhammad [q.v.] in the years 516-17/1122-3. No fewer than three of Nizam al-Mulk’s sons served Berk-yaruk as vizier: Muʿayyid al-Mulk ʿUbayd Allah, Fakhr al-Mulk-Muzaffar and the drunken and incompetent ʿIzz al-Mulk Hasan. Fakhr al-Mulk also served Sandjar b. Malik Shâh [q.v.] as vizier until his assassination in Khurasân in 500/1106 by a Bâtîni. Muʿayyid al-Mulk was probably the most talented and competent of the sons of Nizam al-Mulk, but was dismissed by the sultan in 488/1095 through the intrigues of Berk-yaruk’s mother Zubayda Khâtûn and Muʿayyid’s rival Madjd al-Mulk al-Shirazi. The vizier of Nizam al-Mulk’s son Nasîr al-Dîn Tâhir (see above), his assassination in Khurasân in 502/1107, the governor of Balkh, in 504/1109. Another of Nizam al-Mulk’s sons, Shams al-Mulk b. Malik Shâh as vizier until Berk-yaruk defeated his brother in battle at Hamâdân in 494/1101 and executed his former vizier as a renegade. Fakhr al-Mulk had served Tutuš b. Alp Arslan [q.v.], Saldjük ruler in Syria, before entering the service of Berk-yaruk, and subsequently went to serve Sandjar until 500/1107 (his son Nasîr al-Dîn Tâhir was also later to serve as Sandjar’s vizier from 571/1173 till his own death in 548/1153). Djamal al-Mulk Muhammad b. Nizam al-Mulk (d. 475/1080-1) was governor of Balkh during his father’s lifetime; and ‘Imâd al-Mulk Abu ʿI-Kâsim was vizier for Malik Shâh’s brother Bûri Bars (d. 488/1095), the governor of Herat.

Of the next generations, in addition to Fakhr al-

Mulk’s son Nasîr al-Dîn Tâhir (see above), his brother Kiwâm al-Mulk Sadîr al-Dîn Muhammad served Sandjar 500-11/1107-17, whilst Nasîr al-Dîn Tâhir’s son Nizam al-Mulk Kiwâm al-Dîn Hasan served Sulaymân Shâh b. Muhammad, briefly sultan in Baghâdîd 555-6/1160-1. Another of Nizam al-

Mulk’s great-grandsons, Shams al-Dîn Yaḵûb b. Ishâk b. Fakhr al-Mulk, is mentioned as a patron of the local historian of Bayhaḵ, ʿAli b. Zayd Ibn Fun-
dük [q. v.] (Yükü, Işığd, v, 216); with this generation, the descendants of Nizâm al-Mulk fade from public life and from mention in the sources.

Finally, on the great vizier's own authority his brother Abu 1-Kâsim 'Abd Allâh's son Abu 'l-Mahâsin Shâhâb al-Dîn functioned as Sandjâr's vizier 511-15/1117-21; and Ibn Funduk mentions several other collateral relatives as living in the Bayhâk district in the later half of the 6th/12th century.

Bibliography: See M. F. Sanaullah, *The decline of the Sahîfîq empire*, Calcula 1938, 40 ff.; 'Abbas Ikbâl, Wizarât dar 'ashîd-i sahbân-i bazzar sadûkî, Tehran 1939/1959, 414-22; cf. Ibn Hîshâm, *Sâhîh*, ed. Wüstenfeld, P. 15) belonging to the Kuraysh. The line in Umayya b. Abî 'l-Sâlî, Schulthess, i, 105, in which the descent of the Thakîf from Nizâr is celebrated, is apocryphal and is connected with the well-known dispute regarding the origin of the Thakîf. The story of the verdict of al-Akârâ b. Hâbis al-Tamîmî in favour of Djarîr b. 'Abd Allâh al-Badjâlî against Khâlid b. Arrât al-Kalîbi (Nakâzîd, ed. Bevan, 141-2; cf. Ibn Hîshâm, Sînâ, ed. Wüstenfeld, 50), in which there is a reference to Nizâr and which is placed before Islam, is not less suspect; its object is to defend the northern origin of the Badjîla (descendants of Annâr), often disputed, as well as that of their brethren the Khâthâm [q. v.], and to refuse the same origin to the Kalb, descendants of the Kûdâ, to which it was attributed just at the time of the strife that raged around the succession to Yazîd I. The *raziq* verses quoted by Ibn Hîshâm, Sînâ, 49 (and often elsewhere; they are sometimes attributed to 'Amr b. Murra al-Djûhani, a contemporary of the Prophet, and sometimes to a certain al-Aflâb b. Ya'bûb, otherwise unknown), in which we find used, with reference to Kûdâ, the verb *tanazzara* "to announce oneself to be descended from Nizâr" may be regarded as apocryphal. No stress need be laid on the isolated reference in al-Baladhuri (*Fâtâh*, ed. de Goje, 276, 16) to the quarters (*khiyat*) of the Banû Nizâr in Kûfâ contrasted with those of the Yamanîs; his language simply reflects the position in the author's time or that of his sources, later than the great upheavals of the first century A.H.

It is only from this period, and, to be more exact, after the battle of Manad Râhî (65/684 [q. v.] won by the Kalb over the Kays, that we begin to find the name Nizâr recurring with increasing frequency. It occurs mainly in political poetry: Djarîr, al-Farazdak, al-Alî, al-Kutâmî and Zufar b. al-Harith use it to designate the common source of the tribes of the north, contrasting it with the terms "Yaman" or "Kahtân." The expression *Ibn Nizâr* "the two sons of Nizâr" becomes regular; it indicates the Mudâr (Kays *'Aylân*) and the Râbîa* as belonging to one ethnic group; they are often referred to by one another as "the sons of Nizâr" and "the two sons of Nizâr." In the latter, the reigning dynasty, claiming descent from Kuraysh (themselves, consequently, Nizâris) had as their henchmen the Kalb, one of the most powerful Yamanî tribes, while the Azd, another tribe of the south, was incorporated with that of their most illustrious representatives, the Muha$$ta$$lîdîs [q. v.], were sometimes on the side of the Umayyads and sometimes against them. It was this complicated position that gave rise to the attempt to separate the Kûdâ (i.e. the Kalb) from the southern stock in order to make them descendants of Nizâr. The story told in *Aghânî*, i, 160-1, al-Bakrî, Mu'âdam,
ed. Wüstenfeld, 14-15, is intended to explain the separation of the Kūfātā from the rest of the NizārīYYa as a result of the murder of the Nizārī Yadhkur b. ʿAnaza by the Nizārī b. Nahād. The lines in Ḍiartin (Naṭaʾid, 994) sum up very completely the way in which the Kūfātā-Kalb were connected with the NizārīYYa, while elsewhere (e.g. ibid., 261: al-Ḥarazdak) Kūfātā and NizārīYYa are opposed. Later, at the end of the Umayyad period and especially in the struggle in Khūraṣān which was the prelude to the fall of the dynasty, NizārīYYa (also in the form Nizāriyya) became the representative of a new designation with its offshoots in Syria, formed a new grouping together of a number of tribes of different origin. Nizār is simply a fictitious invention, a great ethnic groups of the Arabs was nourished, continued down to a quite a late date, especially among the ZaydīYYa of the Yaman.

From what has been said, it is evident that we cannot speak of NizārīYYa as a tribe which had a real historical existence nor, as is the case with the Maʿadd, as a comprehensive term indicating an effective grouping together of a number of tribes of different origin. Nizār is simply a fictitious invention, a label intended to serve political interests. One must, however, ask whence the name came and what were the precedents which suggested its use in the sense above outlined. It is possible that the history of the four sons of Nizār (cf. above), a popular story, the nature and diffusion of which seem to take it back to a very early period and which originally had nothing to do with genealogical tradition, supplied the names on which the nassdbun later gave their imagination free play. But this is a pure supposition, which would have to be confirmed by definite proofs.

NIZĀR b. AL-MUSTAṢİR, Fātimid claimant, born on 10 Rabīʿ 2 1437/26 September 1045. On the death of his father, having been displaced by his youngest brother al-Mustaʿilī [q. v.], Nizār fled to Alexandria, took the title of al-Mustaṣir al-Dīn Allāh, and rose in revolt early in 488/1096 with the assistance of the governor, Naṣr al-Dawla Aftakīn, who was jealous of al-ʾAdžl, and the population of the city. He was at first successful in driving back al-ʾAdžl and advanced as far as the outskirts of Cairo, supported by Arab auxiliaries. Al-ʾAdžl again took the field against him, and after a short siege in Alexandria he surrendered towards the end of the same year, was taken to Cairo, and there immured by order of al-Mustaṣirī. By the IsmaʿilīYYa, and the Maʿadd and the IsmaʿilīYYa] Nizār was recognised as the rightful successor of al-Mustaṣirī, and this, with its offshoots in Syria, formed a new group (al-daʾwa al-qadīda), opposed to the MustaṣiliYYan group (al-daʾwa al-khadima), now known as Khūdās [q. v.] and Bohorās [q. v.] respectively. A party of the Nizāriyya at first held to the belief that Nizār was not dead and would return as the Mahdī or in company with him, but the majority held that the line of Nizār was continued by the Grand Masters of Alamūt [q. v.].

NIZĀRĪ KUHISTĀNĪ, Ḥakkīm Saʿd al-Dīn b. Shams al-Dīn b. Muḥammad, Persian poet, born 645/1247-8 in Birdjand [q. v.], where he died in 720/1320-1. The name Nizārī was not only his nom-de-guerre as a poet, but also seems to indicate the loyalty of his family to Nizār [q. v.], the pretender to the Fatimid imamate in the late 9th/10th century whose claim was supported by most Persian IsmaʿilīYYa. Reliably born in 660/1262-3, NizārīYYa remained in his own works. According to Borodin, followed by Rykpa, he would have been attached to the court of the Kart [q. v.] Malik of Herat, but Bayburdi identified the patrons mentioned by NizārīYYa as local rulers and Mongol officials in the near vicinity of his native Kuhistan. The most important were Shams al-Dīn ʿAli Shāh (reigned 688-709/1290-1308), who belonged to a dynasty ruling over Sistan, and the usāzʿ ʿAlī al-Dīn Hindi, the representative of the Il-Khāns in Khurasan. He worked for them both as an official and as a court poet. In 679-8/1280-1 he made a journey to the Transcaucasian lands, in his days the centre of Mongol power. In the Magdilān al-ʿushshāk of Kamāl al-Dīn Gāzurgāhī mention is made of two encounters with Saʿdī [q. v.], which however belong to the realm of biographical fiction. The same applies probably to the statement in the same source that he ended his life as a humble farmer.

The literary output of NizārīYYa was considerable, but it has only been preserved in few copies. The most important are the manuscripts of his collected works extant in libraries of St. Petersburg (Public State Library, dated 837/1434) and Dushambé (Academy of Sciences, dated 972/1564-5). They are both divided into fifteen parts, comprising volumes of kusādas, ghazals, quatrains and other lyric forms, as well as several mathnawīs. His earliest work, the Safār-nāma, contains a lively and valuable description of his journey to Transcaucasia. Adab-nāma (695/1295-6), in the metre mutakārīb, is a didactical poem after the fashion of SaʿdīYYa Būṣām. The romance Azhar u Mustak [written about 700/1300-1], a poem in haẓāf of about 10,000 lines, is situated in the Arabian desert. The plot was inspired by the Rāsūl-nāma of Farīd al-Dīn Ṭartī [q. v.]. A romance between Night and Day, in the metre ḍzāf, was written by NizārīYYa to vindicate himself when he was accused of heretical convictions. Dastār-nāma (710/1310) is a short didactical work in mutakārīb (edited and translated by Ye.E. Bertel's in Vostocniy Sbornik, Leningrad 1926, i, 37-104).

NizārīYYa′s name remained relatively obscure in the history of Persian literature. His IsmaʿilīYYa background is noticeable in his works although this is often hidden behind IsmaʿilīYYa formulations more acceptable to his environment. There is also a strong Sūfī element, especially in the ghazals, which constitute the most important part of his lyrical poetry. Some of these poems were cited by the mediaeval anthropologists ʿĀdājmī [q. v.] and Dawlabshāh. A competent critic like Dāmī [q. v.] compared his poetic "taste" (salīka) to that of Hāfīz [q. v.]. Modern Russian and Tadjik

**NIZARIYYA**, a major branch of the Ismâ‘îlîyya [q.v.], whose beginnings can be traced to the succession dispute following the death of the Fâtimîd [q.v.] Imam and caliph al-Mustansîr bi-llâh (d. 487/1094). Those who gave their allegiance to Nizât, al-Mustansîr’s eldest son, as the designated successor and imâm, and subsequently to those claiming descent from him, were called Nizâriyya. One of the most important figures in consolidating Nizârî identity in its early phase, particularly in Persia, was the well-known figure and dâ‘î Hasân-i Șâbbâb [q.v.], under whose leadership the Nizâris were able to establish a confederation of principalities in Persia and other parts of the region to the north and east of the Oxus, which was held together by the velayât of Alamût [q.v.]. The period also marks a reinterpretation of Fâtimîd Ismâ‘îlî doctrine, with a greater emphasis on the role of the Imâm as the authoritative interpreter of Muslim doctrine and practice.

The Nizârî polity in Persia lasted over 150 years, before its brutal destruction by the Mongols, ending in 654/1256. The various communities in Syria and Persia, subjected to a succession of adverse conditions, and much of their history and development during this period is little known. However, the dâ‘î was successfully initiated missionary activity leading to the emergence of a community in the Indian Subcontinent, principally in Pânjâb, Sind and Gujrat, referred to as the Khôdjas [q.v.]. Over the next centuries, sporadic contact was maintained between the Imâm, living in different parts of Persia, and the Nizârî communities in Syria, the Subcontinent and Central Asia, each with their own distinctive literary heritage and tradition.

In its modern phase, Nizârî history has been distinguished by the transference of the imâm from Persia to British India in the 19th century and then to Europe, where the present headquarters of the current Imâm, Shâh Karâm, Aga Khân (Agha Khân [q.v.]) is located. Nizârî communities are found today in over 25 countries in Asia and Africa, as well as in Great Britain, Europe and the United States and Canada, where, based on a common constitution, they have organised strong community institutions. These are complemented by a development network headed by their Imâm, concerned primarily with the development of the countries and peoples in which they live. **Bibliography** (in addition to works and bibl. cited in Ismâ‘îlîyya): F. Daftary, *The Ismâ‘îlîs: their history and doctrines*, Cambridge 1990; Azim Nanji, *The Nizârî Ismâ‘îlî tradition in the Indo-Pakistani Subcontinent*, New York 1978; and for their literature, see I. Poonaivala, *Bibliography of Ismâ‘îlî literature*, Malibu 1977. (Azim Nanji)

**NIZIB**, Nizîb, the Ottoman Turkish forms for modern Turkish Nizip, a town and district of southeastern Turkey, lying in the plain to the southeast of the Kurt Dağlari mountain chain on the Nizîb river, a right-bank tributary of the Euphrates, 17 km/10 miles to the west of Birecik [see BIRECİK], in lat. 37° 02' N. and long. 37° 47' E. at an altitude of 534 m/1750 feet. Nizîb and its surrounding district, extending to Kilis and the Syrian frontier, have long been famed for their extensive olive groves and sesame fields.

Ewliîâ Celebi visited Nizib in the 11th/17th century and describes it as “an inhabited town in the middle of an unfortified district on the edge of a high hill, with inns, mosques, baths and a small market but without vineyards or gardens”. Nizib at this period was the residence of a judge on the salary scale of 150 akêtes.

During the war (1831-40) between the Turks and Egypt under Muhammad ‘Ali, Nizib became the scene of a celebrated battle. İbrahim Paşa, adopted stepson and general of Muhammad ‘Ali, had crossed the Syrian frontier by the end of 1831 and after several victories advanced as far as Konya, where he inflicted such a defeat on the Turks at the end of 1832 that they had to cede by the peace of Kütâhiya (1833) the whole of Syria to Muhammad ‘Ali and the government of Adana to İbrahim himself, both recognising the sovereignty of the sultan. But neither the sultan nor Muhammad ‘Ali were satisfied with this, and both made preparations for another war. For this purpose, Mahmud II combined the four wilâyets of Diyarbakr, Karshup, Rakkâ and Siwâs under one governor with the title of vizier, Çerkes Hâfez Mehemd Paşa (on his career, see Sûdîlî-i şômânî, i, 99-100), and commanded him to cross the Euphrates at the beginning of 1839. It was not till some time later, however, that fighting actually began. Molîke and the military experts in Çerkes Hâfez Mehemd’s army then advised him not to cross the river but only to display his strength and frighten the Egyptian army into retreating; but Mehemd Paşa would not take this advice, crossed the Euphrates and fought a battle at Nizib, where he was completely defeated by İbrahim Paşa on 24 June 1839.

Besides this great defeat on land, the Turks a few days later suffered an equally severe loss at sea. Thetraitorous Kapudân-i Deryâ Ahmîd Fevzi Paşa, known as Fârî (i.e. ‘fugitive’, ‘deserter’; details in Sûdîlî-i şômânî, i, 99-100), led the Turkish fleet, which was sent to Syrian waters at the time of the battle of Nizib, to Alexandria and handed it over to Muhammad ‘Ali. The Egyptians, however, were unable to take advantage of the victory at Nizib because the Great Powers intervened and Muham- mad ‘Ali’s aspirations were in 1841 limited to the hereditary governorship of Egypt. The defeat at Nizib
led in the domestic politics of Turkey to the speedy proclamation of the tanzimât reforms [q.v.].

The modern town of Nizip is in the îl or province of Gaziantep and is the chef-lieu of an îlahi or district of the same name comprising 115 villages. In 1960, the estimated population of the town was 19,300 and of the district 68,200. Nizip is the administrative centre of the Gaziantep district.

NIZWA, a town of inner Ümân. It lies in an oasis on the eastern side of the Djabal âlî Djebril in central Ümân, and is the chef-lieu of a kasaba or district of the district of Gaziantep and is the chef-lieu of an îlahi or district of Gaziantep and is the chef-lieu of an îlahi or district of the province of Gaziantep.

Steppes. In the administrative aspect, the majority lived within the boundaries of the Dagestan Autonomous S.S.R., whilst others fell under the jurisdiction of Ceceno-Ingushetia and the Stavropol’skiy kray. All these regions belonged to the Russian Federation of the Soviet Union, but their administrative future within Russia, after the dissolution of the Soviet Union in December 1991, is unknown.

1. Ethnogenesis and early habitations. The stabilisation of the Noghay ethnos went hand in hand with the formation of the Noghay state. The latter was formed by Edigii (in Russian sources, Edigei), the famous military commander of the Tatar state of the Golden Horde. The Noghay ulus (appanage) seceded from the Golden Horde in the 1390s, their original homeland being the vast pasture lands between the Emba and Yaiyk (now Ural) rivers. During the reign of Nür al-Din, son of Edigii (1426-40), the Noghay tribes began to extend towards the Volga, and up to the 1530s they occupied the large territory between the Yar-Aul and Lower Volga rivers. In the 15th-16th centuries the Noghay Horde was a significant Tatar state, one of the successor states of the Golden Horde, comprising various Turco-Mongolian tribes which later took on an active part in the formation of numerous modern Turkic peoples, including the Kazakhs, the Karakalpaks, the Bashkirs and the Kazan Tatars.

The leading political force of the Noghay Horde was undoubtedly the Mangit tribe, from which Edigii himself, the founder of the state originated. That is why even their self-appellation during the first century of their stately independence was Mangii [g.v.].

The Noghay ethnos was formed of various Turkic and Turkicised Mongol tribes coming together under the sovereignty of Edigii’s successors. Even the Mangit tribe was of Mongol origin, although the family genealogy of the Edigii clan, obviously due to pious Muslim influence, traced back their alleged descent to the Prophet Muhammad’s time. The widest extension of the Noghay Horde was in the first half of the 16th century, when its historical rôle was at its zenith, and they actively participated in the wars of Muscovy, the Kazan and the Crimean Khanates.

The application of the name Noghay to the Mangit Horde continued, as it was the Mangit tribe who first established the political structure under Edigii. The term Noghay was first used for the Muslim sayyids, religious dignitaries, especially the sayyids, also an important role in the formation of the new ethnonym Noghay.

3. Noghay-Russian contacts. From 1489 onwards, exchanges of envoys had become regular between Russia and the Noghay Horde. After Ismail’s death (1563), the heyday of the Noghay Horde was over and it soon dissolved. Part of them accepted Russian suzerainty, other tribes fell under Crimean Tatar and Ottoman rule, while the eastern part was assimilated by the Kazaks. In the 17th-18th centuries, a few Noghay groups were numerous (e.g. the Yedisan, the Djembolyuk, etc.), lingering between the Russian and Ottoman great powers. In the 1780s, subsequent to the annexation of the Crimean Khanate by the Russians, most Noghay groups fell under Russian jurisdiction. In 1858-66 a mass emigration of the Noghays to Turkey took place, but most of them were disappointed in their new homeland and returned to Russia. From the 1870s onwards, the Noghays have gradually been settled and forced to abandon their nomadism for agriculture. The vicissitudes of the Noghays continued in the Soviet era, their administrative borders being changed several times. During the past few years they have been struggling for more cultural and regional autonomy within the Russian Federation.

enough from the Senegal River to escape inundations like that of 1950. Several plans of urban design were put forward even before independence was conceded to Mauritania (1960), and construction work, begun in 1958, has not ceased since that date in order to respond to a rapidly-increasing demographic growth because of the tendency of the nomads to become sedentarised and fixed and because of the massive migration of the peoples of the interior, driven forth by the desiccation which became severe during the years 1968-73 and searching for work. With an estimated population in 1974 of 100,000, the number of inhabitants rose to 600,000 by 1992.

Situated in the midst of sand dunes, 7 km from the ocean, Nouakchott is the only real town of the country, and comprises three parts: a westernised official and business centre (ministries, embassies, banks, trading establishments), better-quality residential quarters and, further out, the area of more or less precarious habitations of the less favoured population (trading establishments), better-quality residential and business centre (ministries, embassies, banks, etc.). There remains an interesting question: the origin of the name Nouakchott, which even the Mauritanian government, which uses the French language, customarily spells thus. Its etymology has given rise to apparently endless controversies. For Mokhtar Ould Hamdoud, "that of a-n-wakshut, i.e. in Berber, "woods". In reality, the Arabic form Anwakshut normally unvoiced to pass into Arabic as /). It shouldakeshshua, a noun, and the improvised landing-strips which many places were the heredi-

NU'AYM b. HAMMAD al-Khuwā'ī al-Marwazī, Abu 'Abd Allāh, a traditionist, was originally from Marw al-Rūdī [q. v.] who lived for a while in Egypt but above all in Baghādād where, having been invited to recognise the created name of the Kurzān in the course of the minba [q. v.], he refused to give his opinion and was thrown into one of the prisons at Sāmarrā; he died there on 13 Jumādā I 228/18 February 843 (but other dates around this are also given). He received from Suyfān b. Mu'allāya, 'All b. al-Mu‘ārakkār and other muhaddīths [see haddith] traditions which he in turn transmitted, notably to Yahyā b. Ma‘īn or al-Bukhārī. He is nevertheless judged to have been suspect and is even freely accused by some scholars, such as al-NAṣṣārī and al-Dārakūntī, of fabricating hadiths in support of the most rigorous form of Sunnī doctrine, of which he was a fervent defender. He is said, moreover, to have been a member of the Qāhmiyya [q. v.] at one period, before changing his views and accusing Abu Hanīfa and ŠAmīr b. Ubayd of having favoured the dissemination of this group’s ideas. Whilst being thus discredited as a traditionist, he nevertheless acquired a reputation as a scholar regarding succession law (faranā‘ [q. v.]), to the point that he is sometimes dubbed Fārid or Farādī.

His biographers attribute to him “some” books, but it is only known that he left behind a Kitāb al-Fitan wa 'l-malāthfīm, of which there is a ms. in the B.L., London (9449) and which was abridged by Naṣr Allāh b. ʿAbd al-Munīn al-Tanūkī (604-73/1207-74; see F. al-Bustānī, Dīrāsh al-ma’nī, s.v. Ibn Shukār, iii, 263c, who does not however cite this abridgement).

NU'AYMA, MIKHÂ'IL (spelled Naimy in
English language publications), modern Arabic
author (b. 1889, Biskinta, Lebanon, d. 1989 in
Lebanon). He received his schooling at the “Rus-
sian” school founded by the “Russian Imperial
Orthodox Palestine Society” in Biskinta, the training
college instituted by the same society in Nazareth
and the Diocesan Seminary in Poltava. In 1941
he joined his emigrant brothers in the USA, who
financed his studies at the University of Washing-
ton in Seattle. There he became a member of the “Free
Syria” movement which stood for an independent
Syria and Lebanon under French protection. Later,
he would become secretary of this movement in which
most of Nu'ayma’s literary friends took part. It may
be regarded as a forerunner of al-Ra’biṭa al-talamiyā.

Mikhâ’īl Nu’ayma obtained bachelor degrees in
Law and in English Literature in 1916 and went to
New York where his old-time friend Nasib ʿĀrida
was publishing the Arabic literary magazine al-Funūn
(“The Arts”). In New York he established contacts with
Ḍubrân Khalîl Ḍubrân [see Ḍubrân Khalîl Ḍubrân], Rashîd Ayûbû and Ilyâ Abû Mâdi. For his living
he worked for the Russian delegation at the
Bethlehem Steel Factories to purchase arms until
Russia withdrew from the war in November 1917. He
was then conscripted into the USA army and sent to
France where he witnessed the last battles of the
war. Early in 1919 he returned to New York and in 1920
he founded with his literary friends al-Ra’biṭa al-
talamiyā (English, Arrabita = “The Pen League”).
He earned his living as a travelling salesman. In 1929
he returned to Lebanon to devote himself to his pen.
Nu'ayma’s literary career started in Poltava, where
he became acquainted with the works of the great
Russian authors of that time. He especially admired
Tolstoy and his Yasnaya Polyana. He composed
poetry during this period and he kept a diary. During
his stay in Seattle he began to contribute critical essays
to al-Funūn, calling for drastic changes in Arabic
poetry and in criticism. He also contributed a
serialised play al-Abâ wa ʾl-ḥamâni (Parents and akkaḍ)
Childhood) which appeared in book form in 1917
in New York. His critical essays were published in al-
Ghīrâl (The “Sieve”) in 1923 at Cairo with a
foreword by Mahmûd ʿAbbâs al-ʿAkkâd [q.v. in Suppl.]. In Seattle he became acquainted with the
theorists of toosophy which were to have a perma-
nent influence on his writings, culminating in the
English-language publication The book of Mirdât,
Beirut 1948, translated by the author as Kalb Mirdât,
Beirut 1952, and in books like al-Yāmâ al-akharî
(“The last day”), Beirut 1963. Ṭayyâ (Job), Beirut 1967
and Yaʾb ʿAdam (“O son of ʾAdam”), Beirut 1969.

Nu'ayma published one collection of poetry Hams al-
ghuyân (“Eyelids' whispering”) Beirut [1943],
which inspired Muhammad Mandîr [q.v.] to call this
new type of poetry shîr mahmûs (“whispered
poetry”). Nu'ayma further wrote some 80 stories which
he collected in the volumes Kan yâyi ʾl-ḥaqqî (“Once
upon a time”), Beirut 1937. Ṭakbir (“Notables”), Beirut 1956 and Abî Ṭâṭṣ (“The fat-calved man”),
Beirut 1959.

Nu'ayma’s biography of Ḍubrân (Arabic edition,
Beirut 1934, English edition, New York 1950),
showing the weaker sides of Ḍubrân, produced a fierce
shock to those who had already lifted Ḍubrân beyond
good and evil. Nu'ayma’s most impressive work is his
autobiography Sab'ūn (“Seventy”), Beirut 1959-60,
in which he describes his early years in Biskinta,
Nazareth and Poltava (vol. i), his life in the USA and
the formation of Arrabita (vol. ii), and his life in
Lebanon from 1932 until 1959 (vol. iii).

Other works by Nu'ayma include: al-Marâhî
(“Stages”), Beirut 1933, Zâd al-maṣād (“Food for
the road”), Cairo 1936; al-Aswâq (“The idols”), Beirut
1946; Kârâm ʿalā darb (“A vineyard by the road”),
Cairo 1946; Lîkâ, Beirut 1946, translated as Tell we
meet ..., Beirut 1957; Sâwâl al-ʾālam (“The voice of
the world”), Cairo 1949; Mudhakkârât al-ʾarâsâb, Beirut
1949, translated as Memoirs of a vagrant soul, Beirut 1952;
al-Nîr wa t-dajîn (“Light and darkness”), Beirut
1950; Fi maḥabb ʾr-rîh (“Windward”), Beirut 1953;
Dârûb (“Roads”), Beirut 1954; Aṭîd min Mûskî wa-ʾi-
Wâshîntun (“Very far from Moscow and
from Washington”), Beirut 1957; Ḥanâmîsh (“Marga-
inals”), Beirut 1965; Fi l-gîrîbâl al-djâjdî (“In
the new sieve”), Beirut 1972; Nadîqû al-ġâhrûb (“Confi-dential whispers at sunset”), Beirut 1975; al-
Maḍîmûs-as-ʾâlîmî (The complete works) 8 vols.,
including Makâlât nuṭâfârîka (= vol. vii, Uncollected
essays) and Rasâʿîl (= vol. viii, Letters), Beirut

M. N. NIBLAND

Nûbâ, the mediaeval Islamic form for the
land of Nubia, lying to the south of Egypt, and its
peoples.

1. Definition

The names Nubia, Nubian, Nûba are commonly
used without scientific precision and it is only in the
linguistic sense that they have an unambiguous
meaning. The frontier separating Nubia from Egypt
proper is well defined as the first cataract of the Nile in the
neighbourhood of Aswân, and the area where Nubian
is spoken nowadays ends in the vicinity of the 18th
cataract, but the southern limit of Nubia is sometimes
placed as far south as the junction of the Atbara and
the Nile or even the confluence of the two Niles.
Nubia is often sub-divided into Lower Nubia from
Aswân to Wâdi Halfa and Upper Nubia from Wâdi
Halfa southwards, but neither term has any political
or administrative significance.

The mediaeval Arabic writers are equally vague
about the extent of Nubia: the region immediately
bordering on Egypt, which bore the name of Maris [q.v.],
seems to have been regarded as Nubia par excellence
to the south of it lay Mukurra with
its capital at Dongola (Dunkula, Dumkula), and
immediately bordering on Egypt, which bore the
name of Maris [q.v.], seems to have been regarded as
Nubia par excellence
to the south of it lay Mukurra with
its capital at Dongola (Dunkula, Dumkula), and

Allāh b. Ahmad b. Sulīm (Sulaym?), quoted by al-Makrizī. Marīs and Mūkūrā had distinct languages, and the frontier between them was situated three post-stations (kārid) to the south of the Third Qatarāt; politically, however, Marīs formed part of Mūkūrā and this probably accounts for the fact that Ibīn Sulīm immediately afterwards places the commencement of Mūkūrā at a day's journey from Asswān. The frontier between Mūkūrā and ʿAlwā was the district of al-Abwāʾ, a name still in use for the country round Kabūghiyā in Berber province. ʿAlwā is generally placed outside Nubia, and the preamble to the treaty which governed the political relations between Nubians and Arabs makes its provisions incumbent on "the chief of the Nubians and all people of his dominions .... from the frontier of Asswān to the frontier of ʿAlwā"; yet al-Maṣʿūdī speaks of ʿAlwā as part of Nubia and states that it is under the political suzerainty of Mūkūrā. According to Yakū b. Balḍān, ed. Beirut, v, 308-9, Nubia extends along the Nile a distance of eighty days journey, Dongola being situated halfway at forty days' distance from Asswān; of ʿAlwā he speaks, with obvious exaggeration of the distance, as a people beyond Nubia three months' journey from the king of the Nūba, whose official title is "King of Mūkūrā and Nūba".

Bibliography: E. Quatremère, Mémoire sur la Nubie (= Mémoires géogr. et hist. sur l'Égypte, ii), Paris 1811, contains tr. of all the important passages from Arabic authors; J. Marquart, Die Benin-Sammlung des Reichsmuseums für Völkerkunde, Leiden 1913, pp. cxxviii ff. See also ʿAlwā, Dongola, AL-MU-KURĀ. (S. Hillelson)

2. History
(a) Up to the Fāṭimid period
Nubia was called in Pharaonic times the Land of Kūsth [q.v.], and is vaguely mentioned in Herodotus and other Greek authors as part of the land of the Aethiopes; the name Nūba has been used since mediaeval times (see W.Y. Adams, Princeton 1977, 13). In the Arabic sources it is "land of the blacks", although the term Sudan is "land of the blacks", although the term Sudan

... continues to be distinguished in the terminology of the European researchers and writers by the Pharaohs and the Potelimes as mercenaries. In Roman times, there were military campaigns in Dodekaschoinos, i.e. the northernmost part of Nubia, but the Roman military presence ended in 298 A.D. when Diocletian withdrew the last Roman guards from the region and established the Roman frontier at Syene (modern Asswān). Meanwhile, the rest of Nubia formed a separate kingdom, already in existence since 750 B.C., inhabited by an African people and with its capital first at Napata and then at Meroe. But the latter state collapsed in the mid-4th century with the invasion of king Eṣānā of Axum, after which various unknown peoples came in and merged with the existing population of Nubia, and amongst all these ethnic groups the names of the Blemmyes and Noubades are notable (see V. Christides, Ethnic movements in southern Egypt and northern Sudan: Blemmyes-Beja in Late Antique and early Arab Egypt until 707 A.D., in Litty Filologice, ciii [1980], 129-43; L. Török, Late Antique Nubia, Budapest 1986, 27 ff.). In spite of their rivalry, these two groups seem to have tried to unite against the Byzantines in the mid-3rd century, but the Byzantine emperors used Nubia in a grandiose plan to dominate the Red Sea region and extend their influence as far as Yemen (see Christides, in Annales d'Éthiopie, ix [1972], 115-46). Within Nubia south of Dodekaschoinos three independent kingdoms emerged, viz. Nobāṭ, Mukūrā or Mūkūrā [q.v.] and Alodia or ʿAlwā [q.v.].

The Arab conquest of Egypt inevitably affected Nubia, and according to the Fath al-Bahnaṣṣ, Bēja-Blemmyes [see Bēja] and Noubades participated in the Byzantine defence of Upper Egypt against the Arabs (see J. Jarry, in Annales Islamologiques, ix [1970], 19-20). The first Arab raids against Nubia took place before the final conquest of Egypt in 645 A.D., but these were probably defensive actions against the har-ryings of the Nubians rather than evidence of a definite plan to invade the distinctly inhospitable region of Nubia, just as the Arabs' use of the shipyard at Clyisma or Kulzum [q.v.] was aimed at safeguarding the flow of grain across the Red Sea against Bēja-Blemmyes pirates there. An Arab raid under Nāṣīr b. ʿAbd al-Kays al-Fihri took place in 21/641-2, and another by ʿAbd Allāh b. Abī Sarh in 31/651-2, when the Muslims penetrated as far as Dongola [q.v.], destroying its basilica. After this, a truce was made between the Arabs and the Nubians, sealed by the celebrated bakt [q.v.], and also P. Forand, Early Muslim relations with Nubia, in Islam., xlvii [1971], and M. Hinds and H. Sakkout, in Wadād al-Qādī (ed.), Studia Arabicia et Islamica (Diploma für das 75. Geburtstag von Dr. Marquardt, Beirut 1981, 210 ff.). This comprised a trade agreement but was also a bilateral treaty of non-aggression and non-intervention between the two powers, and in future times was to play a significant role in Arab-Nubian relations.

During the Umayyad period, trade relations were important: Egyptian exports to Nubia included cereals and wine, whilst Nubia exported mainly slaves but also iron and camels, furnished by the Bēja-Blemmyes. An Arabic papyrus of 141/758, just after the fall of the Umayyads, sent from the governor of Egypt to the king of Nubia, refers to the mistreatment of Arab merchants (see Hinds and Sakkout, op. cit.; J.M. Plumley, An eighth-century Arabic letter to the King of Nubia, in Hans al-Qadīl [ed.], Procs. of the Seventh International Conference for Nubian Studies, Geneva 1980). Towards the end of the Umayyad period, the king Kiyrtaks invaded Egypt in order to release the Patriarch Anba Mīẖāʾīl, who had been imprisoned by the Muslims; and it was to Nubia that two children of the last Umayyad caliph, Marwān II [q.v.], fled after the ʿAbīsād Revolution (see Y.F. Hasan, The Arabs in the Sudan, Edinburgh 1967, 28 ff.; G. Vantini, Christiannity in the Sudan, Verona 1981, 75 ff.).

During the ʿAbīsād period, Nobāṭa gradually became incorporated in Mūkūrā, whilst ʿAlwā followed a similar cultural pattern to the other states, so that a degree of homogeneity was achieved throughout Nubia; it was not however until the 9th century that the Bēja-Blemmyes seem to have formed an organised kingdom, when we hear of a punitive raid into their land of 218/831 under the Arab general ʿAbd Allāh b. Dījam (q.v.) by a peace agreement in which an annual tribute to the Arabs of camels was promised (see al-Yaʾqūbī, Taʾrīḵī, i, 218; al-Makrizī, Khīṭat, ed. Wiet, Cairo 1927, iii, 272-5; Hasan, The Arabs and the Sudan, 38-41). Later in this century, the presence of gold mines in their land seems to have become generally known to the Muslims, for al-Mutawakkil in 241/855-6 sent his general Muḥam-mad b. ʿAbd Allāh al-Kummi on a successful expedi-
tion against the Beja in order to secure access to the gold mines in their country on the western shores of the Red Sea (al-Tabari, iii, 1428-33, tr. J.L. Kramér, Albany 1989, 141-5).

Over the next centuries, relations between Nubia and the Muslims revolved round the twin facts of the bakt, with disputes over the number of black slaves to be delivered to the caliphs and with the penetration of Muslim traders into Nubia and the land of the Beja-Blemmyes (see in the number of Arabic inscriptions on tomb stones there from the mid-3rd/9th century onwards), and with the constant interference of the rulers of Nubia in the Christian church affairs of Egypt, since the Nubian kingdom was deeply theocratic, with the ruler as priest-king.

Under the Fātīmids of Egypt, the bakt continued to be sent, with the conqueror Dāwhar sending an immediate embassy to King George II of Nubia (969-1002) regarding it, although the emphasis now seems to have been on the sending of beasts and exotica (see Subh, iii, 468-9, 524). The Christian Church in Nubia continued to be dependent on the Patriarchate of Alexandria, with Monophysitism in the ascendant in Nubia after the Arab conquest of Egypt but with the emergence of a stronger Melkite element in the more tolerant Fātīmid times, reflected in Nubia also; see U. Monneret de Villard, Storia della Nubia cristiana, Rome 1938, 128 ff.

From the Ayyuvid period to the early 10th century

With the advent to power in Egypt of the Ayyūbid s [q.v.] in 567/1171, Nubian affairs came into some prominence when in 568/1172-3 a coalition of the dispossessed Fātīmid’s black troops (al-sūdân) and the Nubians attacked an island just south of Aswān, provoking intervention by the troops of Šalāḥ al-Dīn under the sultan’s brother Ǧāns al-Dawlâ Tūrān (d.712/1312), who devastated it (wi-Fih) and apparently reverted to Nubian control since the Ikhshidīd capture of it in 345/957 and carried off a large number of captives. Soon after this, in ca. 1208, Āḥū Sāliḥ al-Armanī (see on him, Graf, GICAL, ii, 338-40) composed his account of the churches and monasteries of Egypt (ed. and tr. B.T.A. Evetts and A.J. Butler, Oxford 1894-5), which contains some interesting details about Māris, al-Mukurra, and ’Alwa, but must be used with caution owing to the confusion in the writer’s mind between Nubia and Abyssinia and his uncritical use of older authorities.

The factors which brought about the disintegration of the Nubian kingdom and the islamisation of the country were the immigration of Arab tribes, the rise of the Banū ’l-Kanz [q.v.], and the intervention in Nubian affairs of the Mamlūk rulers of Egypt, especially during the reigns of al-Zāhir Baybars [q.v.] and al-Maṣrūq al-Kawāwī [q.v.].

The Banū ’l-Kanz are first heard of in 397/1007 when the Fātīmid caliph al-Hākim, as a reward for services rendered, conferred the hereditary title of Kanz al-Dawlâ on Abū Makārīm Hībat Allāh, a chief of the Rabī’i Arabs who had settled on the borderland between Egypt and the Sudān. Already in the 4th/10th century the Rabī’i had gained control of the mines of al-Ālākī and imposed their rule on the Beja [q.v.] with whom they allied themselves by intermarriage, but the short-lived union, settled near Aswān, fraternised with the local Nubian tribes, and the tribe, formed by this amalgamation and ruled by the Kanz al-Dawlâ dynasty, came to be known as the Banū ’l-Kanz; they are represented by the Kenuz of the present day. During the period of the Mamlūks, they were virtually in independent control of Upper Egypt, alternately in alliance with or in revolt against the Mamlūk government, and though repressed at times with a heavy hand, they remained a powerful tribe until the Ottoman conquest of Egypt. Before this event, however, they had played their part, together with nomad Arabs and Mamlūk troops, in the destruction of Nubian independence.

The Bahri Mamlūks, for reasons not apparent in our sources, departed from the traditional policy of Muslim Egypt, and actively intervened in Nubian affairs. The pretext for the expeditions undertaken by the generals of Baybars and Kalawun was the payment of the tribute and, more frequently, the championship of Nubian pretenders who had solicited Egyptian support in order to gain the throne. On several occasions, such protégés of the Mamlūk government were installed in Dongola [q.v.] only to lose the throne again as soon as the Egyptian troops withdrew.

A formal treaty concluded with one of these kings virtually established an Egyptian protectorate. Meanwhile, the disintegration of the kingdom went on under the pressure of Arab immigration, and Arab chiefs who married into the royal house took advantage of the matriarchal line of succession to grasp at the throne. The age-long Christianity of Nubia was gradually undermined and in the 8th/14th century Muslim kings begin to appear. The first king to bear a Muslim name, Siyāf al-Dīn ’Abd Allâh Bârgamîbû, a nephew of the Christian king David, who was installed by a Mamlūk force sent out by Sultan al-Nâṣir Muḥammad b. Kalâwûn under ’Īzā al-Dīn Ayyāk in 716/1316; the new king ’Abd Allâh was, however, speedily overthrown by Kanz al-Dawlâ. From the manual for secretaries, al-Tarīṣf bi ’l-musâlah al-sharīf of Ibn Naḍîr Allâh al-Šumârî [q.v.] (written in 741/1340), we learn that at this date Christian kings still alternated with Muslims, and Ibn Baṭṭûta in 753/1352 (iv, 396) speaks of the Nubians as Christians, but mentions a Muslim king (Ibn Kanz al-Din). Of the conversion of the common people we have no details: no doubt it was brought about by the absorption of the native inhabitants, or those who survived, in the Arab tribes.

The immigration itself has left little trace in the pages of the historians, though the outlines of the process can be reconstructed from occasional references and from oral tradition. The nomads who had entered Egypt in the wake of the first conquest can never have found that country congenial to their mode of life, and the rise of non-Arab dynasties tended to make conditions still less attractive, while the Sudân seemed to offer all the advantages, from the nomads’ point of view, that Egypt denied. For a long time, the
kingdom of Dongola formed an effective barrier to southward expansion, but a gradual infiltration of Arabs must have begun at a comparatively early date, even though the eastward end of the process was not accomplished for several centuries.

The early stages of the movement are seen in the conditions depicted in the story of Abū ʿAbd al-Rahmān al-ʿUmarī, the events of which are laid in the reign of Abū Alī Mūsā b. Tūlūn (i.e. the later 3rd/9th century) (al-Makrizī's Kitāb al-Mukaffā, quoted by Quatremère, Memoire sur la Nubie, ii, 59-80). Arabs of Raḥsā and Djuhayna, led into the Sudan by that adventurous prince, have fraternised with the Bedja and exploit the mines of the Eastern Desert, but the Nile is forbidden them and Nubia is too strong to be attempted by force of arms. A fratricidal struggle in the Nubian royal house provides an opportunity for an alliance between the Arabs and a princely pretender to the throne. Acts of unblushing treachery are committed on both sides and in the end the Arabs have the worst of the encounter. The end of the process is seen in the 8th/14th century, when the kingdom of Nubia ceased to exist except as a puppet state controlled by the Muslim Arab tribes who gradually overran the country, a process noted by Ibn Khaldūn (Ibn Khaldūn, ʿIbar, Beirut 1956-71, v, 922-3) as having led to something like anarchy in Nubia. The ascendancy of the nomads clearly affected Nubian Christianity adversely. The Churches of Alexandria and Nubia gradually became disassociated with each other, and churches and monasteries in Nubia must have been looted and dispersed at this time, although Nubian pilgrims were noted in Jerusalem (where in the 14th century the Nubians possessed a chapel in the Church of the Holy Sepulchre which soon, however, passed to the Armenians and then the Georgians) as late as ca. 1480.

Of ʿAlwa [q.v.] further to the south, little is heard at this time. It was a reservoir of slave manpower, frequented by Muslim slave traders and by merchants from al-Mukurra to the north who came to collect slaves to pay the baqt. Mamlik pressure on al-Mukurra (see above) was felt in ʿAlwa, and already in the time of Ibn Khaldūn (later 8th/14th century) we hear of branches of Djuhayna "close to the Abyssinian border". It is to be noted that on the upper reaches of the Blue Nile in the southern Dżazīra the kingdom of ʿAlwa nevertheless lingered on precariously and Nubian Christianity was still a living memory in the time of the Portuguese Alvarez (1520-7), but in ca. 1500 the capital Sōba fell to an alliance of Kawāsmā Arabs (a branch of Rufāʾa-Djuhayna) and the negroid Fundj [q.v.], who here for the first time appear in history.

The 9th/15th century is almost completely barren of records relating to Nubia, and the historical memory of the present inhabitants remembers little of pre-Fundj days. With the coming of the Fundj, who soon extended their influence to Dongola, the history of Nubia is merged in that of the Sudān, and the Nubians, now Muslims and deeply affected by racial mixture with their conquerors, survive only as a linguistic minority on the northern fringe of their ancient kingdom.

Lower Nubia, however, was politically separated from the Fundj kingdom by the Ottoman sultan Selim I, who annexed the country south of Aswān as far as the neighbourhood of the Third Cataract, and garnisoned it with Turkish and Bosnian mercenaries (called Quzz by the people of the Sudān).

For the subsequent history of the region, see Fundj; al-Mahdiyya; al-Sudān.

(S.Hillelson-[C.E. Bosworth])

3. Languages

The name Nub(J)a is first attested in Eratosthenes (ca. 200 B.C.). Its etymology is probably an autochthonous word for "slave". The term Nūba was originally applied by the Arabs to the Nilo Nubians and later extended to cover other enslaved groups. It has since come to represent an ambiguous linguistic designation based on geography. About 50 tribes living in the Nūba Mountains (Dīr Nūba) of Southern Kordofan province, Sudan (an area of about 30,000 square miles), can be denoted as Nūba. Many are from diverse racial and linguistic backgrounds, having fled to the region as a result of the Arab slave trade of the 17th-19th centuries. Almost all are Muslims, except for some Hill groups. Many Nūba tribes are named after the hills in which they reside.

The Nūba (Mountains) languages belong to two families: (1) (Niger-)Kordofanian, and (2) the East Sudanic branch of Nilo-Saharan, which contains Songhai, Fur, Maban, etc.

(Niger-)Kordofanian is subdivided into Niger-Congo, the Kadugu-Krongo group (thought by some to be Nilo-Saharan), and Kordofanian proper. The latter, whose linguistic development occurred in the Nūba Mountains, has the longest history. Among the better known Kordofanian languages are the Heiban group, Moro and Otoro. Some Kordofanian languages go by different designations: thus Koalib (30,000 speakers) is also called Ka/owment, Ngiirere, Reese, Nuba, etc., and has a 67% lexical similarity with Ratdna, originally an Arabic pejorative label (< A. ratdna "gibberish"), and has a 67% lexical similarity with Nobiin; cf. Nubi or Ki-Nubi (rutdan nubi), an East African Arabic creole emanating from the Sudan in the 19th century.

More is known about the Nubian past than that of...
any other East Sudanic people. Although the Nubians established their Empire of Cush in ca. 850 B.C., with its capital at Meroe, Meroitic (written in a script derived from Egyptian Demotic) is unrelated to any form of Nubian. Lexicostatistics has shown that in the first millennium B.C., Nubians migrated from Dârfur to the Nile. Old Nubian developed in the 6th century A.D. with the rise of the Christian Nubian kingdoms. It is a direct ancestor of Nile Nubian and is closest to Nobiin. All Old Nubian texts (the last in 1484 A.D.) appear to come from the Nobiin north. The geographical distribution of the two major Nubian dialects continues to remain puzzling. The Kenuz, who inhabit Upper Egypt north of Wadi Halfa and came from Dongola, speak a Nubian dialect hardly distinguishable from the Dongolawâ. However, these two groups are separated by the Nobiin, who are located along the Nile between them. Bibliography: For older bibl., see Hillelson’s El† art. Of modern studies, see R. Thelwall and T.C. Schadberg, The Nubian Moun-
tains, in: Kultur und Geschichte in Afrika, v (1983), 219-31 (fundamental); Marianne Bechaus-Gerst, Sprachliche und historische Rekonstruktionen im Bereich des Nubienschen unter besonderer Berücksichtigung des Nilnubi-
schen, in: ibid., vi-vii (1984), 7-134 (useful); Schadberg, Kordofanian, in The Niger-Congo languages, ed. J. Bendor-Samuel, Lanham, Maryland 1989, 67-80; J. Ross, A preliminary attempt at the reconstruction of Proto-Eastern Sudanic phonology and lexicon, Southern Illinois University, Carbon-
dale, M.A. thesis, 1991, unpubl.; Aleya Rouchdy, Nubians and the Nubian language in contemporary Egypt, Leiden 1991 (useful). (A.S. Kaye) 4. The modern peoples of Nubia The Barâbra, as a separate group from the Danâga, are collectively referred to by other Sudanese as Halfâwwiyin (literally: those who come from the town of Halfa). The term Nubiyin (Nubians), on the other hand, refers to both the Barâbra and the Danâga. The Barâbra live in Aswân Province in upper Egypt and the Northern State of Sudan. The Danâga live only in the Northern State. Both groups are small-scale cultivators, skilful boatmen and are renowned for their domestic service. Date-palms are grown as a cash crop and cultivators have taken an Egyptian Demotic) is irrigated to intro-
duced early this century, to cultivate more land with a variety of crops. The narrow strips of arable land on the banks of the Nile are insufficient to meet the demands of a rising population, hence the Barâbra and Danâga are forced to emigrate. They are adapt-
able and enterprising, the men seeking work oppor-
tunities in other parts of Egypt, Sudan and, more recently, in the oil-rich countries of the Arab world where they are engaged in various professions. Wherever they go they maintain a strong cultural identity and keep links with their homeland. Though the Barâbra and Danâga have been influenced by Arab culture and Islam, their cultural identity is manifest in their dialects, traditions and attitudes. Even in urban centres in Sudan and Egypt this identi-
ty is maintained in the social clubs which they have established. As a result of the agreement between Sudan and in Egypt in 1959 to resettle the Nubians affected by the creation of the High Dam reservoir lake (the Nubâ Lake in Sudan and Lake Nâsjîr in Egypt), it is estimated that about 50,000 Sudanese and 70,000 to 120,000 Egyptian Nubians lost their homes, land and their date-palms. The resettlement scheme, located in eastern Sudan along the upper Atbara River near the Sudan-Ethiopia border, known as Khashm al-Girba, absorbed 40,000 Sudanese Nubians in 1964-5. Here the relocated Nubians were granted landholdings and new homes; a new town was named Halfa al-Dâdida (New Halfa) as a replacement to old Halfa which was inundated by the reservoir lake. The new villages established by the scheme were named after those which had been inundated in their homeland. Many amenities were introduced and planners were anxious to recreate the traditional architecture and physical layout of the submerged villages. Despite their displacement, the Nubians have accepted the inevitable and established good relations with the neighbouring nomadic tribes. The Nubians in Egypt, who were affected by the inundation, were resettled in the region of Kom Ombo, about 60 km/35 miles north of Aswân, and the resettlement area was named New Nubia. Before and since Sudan’s independence in 1956, the Barâbra and Danâga have played a part in the country’s cultural development and politics. They are generally devoted to the arts and to the Mirgâniyya (Khatmiyya [q.v.] tarîka. They are keen to take advantage of education facilities and show an aptitude for the educational professions and business. Many have achieved prominent positions in government, politics, the arts and in the civil service. Three Nubian singers are popular and famous: the late Khalîl Farh, Muhammad Wardi and Hamza ‘Alâ al-Dîn. The most remarkable figure was Muhammad Abmad [q.v.], the Mahdi of the Sudan (d. 1885), who was a Dongolawâ, though his family claim to be sharîf. Another Dongolawâ who has gained political prominence is Da‘far Muhammad Numayrî, a military officer, who came to power through a military coup and ruled Sudan from 1969 until 1985. don 1947; D. Tothill (ed.), Agriculture in the Sudan, London 1948; R. Herzog, Die Nubi. Unter-
ment in the Sudan, Miami 1972; Marien Zenzel,

(AMMAL AL-SHAIR)

NÚBAR PASHA (1825-99), a high-ranking official, statesman, and reformer of Armenian origin who held positions under six viceroys of Egypt at a time when the country was falling under European influence and control. Born in Smyrna and educated in France and Switzerland, Núbar was translator for Ibrāhīm Paša [q.v.], Chief Translator for ʿAbbās Hilmi I [q.v.], Secretary and Director of Communications and Railways for Saīd Paša, and, under the Khedive Ismāʿīl Paša [q.v.], Chief Translator, Director of Public Works, Head of Foreign Affairs, and Director of Commerce. He also served as President of the Council of Ministers under Ismāʿīl and two subsequent viceroys, and was foreign minister in fact for over two decades. Núbar was personally involved in many of the major developments of the time, particularly the Alexandria-Cairo railway project (1851), the Suez Canal arbitration award (1864), the procuring of the 1873/xīrrān, the establishment of the Mixed Courts (1875), and the political crisis of 1875-9. He also served as an agent in negotiating some of the private and public loans taken out by Saīd and Ismāʿīl, and helped reorganise Egypt’s transportation system.

Crucial to Núbar’s rise and success were the well-placed connections of his family, which included in-laws in Istanbul and a powerful uncle in the Egyptian court, who secured him his first position; the support of European diplomatic representatives (something which occasionally brought him into the ruler’s disfavour); and his own extraordinary ability to make himself useful to viceroys in need of men who knew and understood Europe (Núbar was entirely Western in culture and spoke all the major languages of Europe).

In his memoirs, Núbar presents himself as a grand reformer and defender of Egypt. Declaring his aim to be that of limiting the power of both the European consuls and the viceroy, Núbar discusses his strategy for the independence and development of Egypt, which included an increase in its transit trade, the build-up of the ports of Alexandria and Suez, the introduction of European technicians and expertise, and the establishment of the rule of law by means of Mixed Courts, which, he claims, could have protected the country against exploitation.

Yet Núbar did more to advance the cause of Europe than any other official in the viceroy’s service. The Alexandria-Cairo railway project (which Núbar had suggested to ʿAbbās Hilmi I) increased British influence; the huge indemnity imposed upon Egypt by the Suez Canal arbitration enriched European money lenders and despoiled the Egyptian treasury; the loans Núbar helped negotiate led to Egypt’s bankruptcy and the establishment of European fiscal control (in his memoirs, Núbar denies all responsibility for Egypt’s debt); and the Mixed Courts became instruments of European political intervention. Between 1875 and 1879, Núbar allied himself with Europe in a successful effort to bring down the ruler, Ismāʿīl Paša, weakening the political structure and opening the way to a rebellion and the British occupation. Blinded by his own ambition to be maker of politicians, Núbar misjudged the amount of power that was left to local politicians and ended his days as an official in a British-controlled administration.

(F.R. HUNTER)

NÚBATA B. ʿABB DULLLH AL-HIMMĀNI AL-TAMIMĪ, Abu ‘1-Asad, minor poet of the early ʿAbbāsīd period whose verses are known only from citations in other works and whose dates of birth and death are unknown. A native of Dinawar in western Persia, he was in the circle of the caliph al-Mahdi’s vizier al-Fayd b. Abī Sāliḥ Shīrawy and was a companion of the famous singer ʿAllawāy [q.v. in Suppl.].

Bibl.: Djahbiyārī, Wazār, ed. al-Sakkā et alii, Cairo 1401/1980, 164; Aghānī, xvi, 62; Zirikli, Aʿlām, viii, 320. (Ed.)

NUBUWWA (A.), ‘prophecy’, Hebrew nāḥiʿa, substantive derived from nāḥiʿ (‘prophecy’, Hebrew nāḥiʿ), term denoting in the first instance the preconception given by the divinity (Yahweh, the Baʿl, Allāh) to the prophet and the prediction made by the latter of future contingencies. In the second instance, nubuwwa is identified with waḥyi, ‘revelation’, which simultaneously comprises dogmas, cultic regulations, moral education, precepts of social and political order. In fact, for the early Muslims, prophecy was regarded as being the source of all knowledge having any degree of superiority. ‘The Prophet is the way and the prophets are the guides,’ wrote al-Kisāʾī (quoted by Yākūt, s.v. nāḥiʿ, 316 ff.).

In early times, the later Muslim nāḥiʿ is almost identical to the Aramaic kāhāz and to the Hebrew nāʾēḥ (cf. T. Fahd, Divination, 112 ff.). I Samuel ix, 9, reads: ‘In former times, in Israel, when a man went to enquire of God, he said ‘Come, let us go to the seer (nāʾēḥ); for he that is now called prophet (nāḥiʿ) was in former times called seer.’ It is for this reason that Muhammad had considerable difficulty convincing his fellow-citizens that his inspiration was fundamentally different from that of seers of various specialities (kāhāz, hāṣî, ʿarrāf, etc.). He himself, at the outset of his vocation, dreaded being a kāhāz (Ibn Saʿd, Tabakāt, i/1, 129-30). ʿUmar b. al-Khaṭṭāb, before his conversion, considered him as such (Usd, iv, 74). The intervention of revelation was required to convince him otherwise. ‘It is the word of an illustrious prophet,’ the Kurʾān states, ‘and it is the word of a poet, O men of little faith; nor is it that of a diviner, O men of little memory. It is a revelation (tanzīf) from the Master of the Universe’ (LXIX, 40-3; cf. LII, 39-34; LXXXI, 19-25). The characteristic features of the Kurʾānic text sowed doubt in the minds of his fellow-tribesmen; the latter observed, especially in the first revelations, the distinguishing marks of the oracles of soothsayers, these being rhythm, the arrangement of components of a phrase, the concern

NUBA — NUBUWWA 93

(AMMAL AL-SHAIR)
for verbal equilibrium, the choice of a vocabulary full of images, the use of uncommon words, as well as the manner of "veiling the head" at the moment of inspiration and of "enwrapping himself" (cf. LXXIII, I; LXXIV, I; Ibn Highâm, Sîra, 184; al-Tabâri, I, 1890, I, 10).

The triumph of Islam at Medina, followed by the conquest of Mecca, put an end to such reservations; the apostasy (ridda) of the Yemeni tribes of Madhhidj in 11/632, under the leadership of al-Aswad, soothsayer and conjuror, who "'entranced the hearts of the people' (Tabâri, I, 1796), was the last manifestation of an entire Arab pagan tradition to which Islam put an end by the principle lâ kihâna ba'd al-nubuwwa "no more divination after prophecy" (or rather, after "prophethood").

Henceforward, the gift of penetrating the mysteries of God is reserved for the Prophet and the djinns, who used to listen at the gates of Heaven, and inspire the kuhhdn, are prevented from doing so by angels entrusted with the task of pelting them with shooting stars (XV, 15-18; XXXV, 6-9; XLV, 12; LXVII, 5; Ibn Highâm, 129-30; Ibn Sa'd, I, 1, 110).

However, kiahâna [q.e.] is not formally forbidden either in the Kur'ân or in the Sunna; what is forbidden is, first, to visit a kâhin and believe what he says; this is to deny the revelation made to Muhammad (Wensinck, Concordance, iv, 196); and second, to charge a fee in the capacity of kâhin (op. cit., 505).

Nowhere in the Kur'ân is there a prohibition analogous to that of Leviticus, xix, 31, where it is written "Do not turn to those that evoke spirits nor to soothsayers; do not consult them lest you be defiled by them." "This reluctance of the Prophet to deny any intrinsic worth to the content of divination is due to the conception, current in his time, of prophecy and of its intermediaries" (T. Fahd, Divination, 68).

Prophecy was, in fact, regarded as an extension of divination. For Ibn Khaldûn, for example, "a veil separates men from the unknown which nobody knows, except he to whom God reveals it in dreams or through the path of saintliness" (ii, 177/205). According to him, the difference between the prophet and the soothsayer resides, in the first place, in the absence of the ecstatic state in the case of the soothsayer, an absence which renders him incapable of a universal vision of the created being and of contingencies, and of its intermediaries" (T. Fahd, Divination, 74 f.);

The concept of inspiration and revelation in the formative years of Islam was influenced by that of angelology and of demonology, which was rudimentary and anthropomorphic (cf. in this context, T. Fahd, Anges, démons et dijons en Islam, in Sources Orientsales, vii, Paris 1971, 155-213). The demeanour of the Prophet, at the moment of the onset of revelation, illustrates this point. Questioned about the processes of the revelation which he received, Muhammad replied, "Revelation came to me in two manners: either Djibril brought it to me and communicated it to me as a man communicates with another man, but this eluded me; or it came to me like the ringing of a bell, such that it penetrated into my heart; this no longer eluded me." (Ibn Sa'd, i/1, 131 f.; cf. al-Bukhârî, ii, 309 = 59 khâlî, 6). "His physical condition was affected: he grew mournful, and his face darkened; he had the appearance of someone intoxicated and felt a great weight, to such an extent that his camel cried out and its legs buckled beneath him" (Ibn Sa'd, loc. cit.; Fahd, Divination, 76).

Finally, it should be noted that the initial identity of the source of inspiration of the prophet and of the demon is further attested by the use of the verb uâhaba "to reveal", and its derivatives, for one as for the other, as emerges from Kur'ân, VI, 111, where it is stated, "Thus we have appointed against every prophet an adversary (who is none other than) demons of human kind and of djinn who reveal to one another pleasing disclosure (intended) to lead astray."

Still more suggestive regarding the manner of conceiving the phenomenon of prophecy in Islam are its "distinctive signs" (author, dasâ'dî, 1mâdâ' al-nubuwwa). An entire literature exists on this subject (cf. references in Fahd, Divination, 79, nn. 2 and 3). Ibn Khaldûn supplies a summary of these signs. "The divine revelation is opposed by the Kur'ân to prophecy in wakening as well as in sleep," and he adds, "My eye sleeps, but my heart is awake, and my heart is the eye" (Ibn Khaldûn, 118, 1st ed., ii, 1/1, 113; other references in Fahd, Divination, 77, n. 1).

Muslim authors, faced with the ambivalence of the divine message and its bearers, have established a distinction between "the angels of mercy", created from light, and "the angels of punishment", created from fire (al-Mu'tâhhar al-Makdisi, Badî', i, 160, quoting Ibn I'sâ'b), a distinction inspired by Kur'ân, LXVI, 6, which gives the impression that angels exist which are spiritual (nâhihil), corporeal (dîjîmûn), capable of growth (nâmit) and inanimate (dîjâmûn) (op. cit., 170), a notion comparable with the Neo-Platonic distinction between igneous and aerial demons and demons formed from earth (cf. Porphry, De Abst., ii, 46; Proclus, In Tim., ii, 11, 10; St. Augustin, De civitate Dei, x, 9, 2).

Demoniacal inspiration is opposed by the Kur'ân on account of the fascination which it exerts upon the minds of men. The typical example is that of poetic inspiration. Kur'ân, XXVI, 220-6, reads: "Shall I tell you to whom the demons (âbyâdûn) reveal? They reveal to every great liar and great sinner; they tell what they are supposed to have heard (at the gates of Heaven); but they are mostly liars. As for poets, they are followed only by the misled." It is not to be forgotten that the poets, described as kiahâl al-djîmûn "the dogs of the djinn", were originally givers of oracles for their tribes (al-Dîjâjî, Hayawân, vi, 71; Goldizher, Abhandlungen, i, 17; Fahd, Divination, 74 f.).
prehension which transcends the human faculty in an absolute manner. Then, from this ecstasy the man returns gradually towards a state of human awareness, either by hearing a sound of human speech or by seeing represented before him the image of a person who speaks to him of that which the person has brought from the presence of God. Then this state is dissipated, once the man has absorbed that which has been communicated to him" (i, 165-6/185).

The second mark of the prophet is the moral infallibility ("ismā'a), by virtue of which the man is naturally drawn to goodness and purity (iḥdāḍ Khiḍāḍī). The third mark is expressed in his activity on behalf of religion, of worship, prayer, alms and chastity, virtues which he practises and which he induces others to practise (i, 167/187). The fourth assumes that the man has absorbed that which has been communicated to him (ibid.). The fifth consists in miracles and marvels in words and in actions, adds Ḥāḍīḍ Khiḍāḍī (i, 171/194), which prove the veracity of his statements. The greatest miracle in Islam is the Kurʿān (i, 171/194).

For more thorough information concerning these marks, see, in particular, al-Māwardī (d. 450/1058), K. Altām al-nabūwawwā, Cairo 1319/1901 ff.; Abū Hātim al-Rāzī, same title, extracts published by P. Kraus in Orientalia, n.s. v (1936), 35-56, 358-78; al-Dzhāhid (d. 255/869), K. Al-hudţā āl jī Ḥāstā al-nabūwawwā, ed. Sandūbi in Rasūl āl al-Dzhāhid, Cairo 1933; Abu 'l-Husayn al-Rawandi (d. 250/864), K al-Zamur, in which the author opposes the traditional doctrine of prophecy and introduces some foreign elements (cf. P. Kraus, in SSO, xiv [1933-4], 93-129, 335-79); Fakhr al-Dīn al-Rāzī (d. 606/1209), Quelques aspects de la pensee avicennienne, in Revue Thomiste, xlv (1939), 714; Decker, op. cit., 16 ff. A brief analysis of Ibn Sinā’s doctrine concerning prophecy and the perception of the unknown is to be found in al-Shahrastānī, Milal, ed. Cureton, 309 ff. (Metaphysics) and 425 (Physics), German translation by Haarbrücker, ii, Halle 1851, 317-18, 327-32.

Al-Ghazālī accepted the doctrine of Ibn Sinā and developed it further. In fact, in the last six chapters of the Latin version of Makkāḍîd al-falāṣīf (tr. Dom. Gundisalvi, Venice 1506, of which the portion entitled Metaphysics has been edited by J. T. Muckel, Al-gazel’s Metaphysics, a medieval translation, Toronto 1933; Arabic text ed. Cairo 1331/1912), which deal with vision, prophecy and marvels, al-Ghazālī revives Avicennan ideas (which he is to refute the same year, in 488/1095, in the Talāfūt, ed. M. Bouyges, Beirut 1927, 255-67; L. Gauvrit, ibid., 1951, 41 f. and 514) and reveals them in a clear and expressive style. For him, the vision of the unknown, in the state of waking, is subject to two conditions. On the one hand the soul must free itself from corporeal links and remove itself from the veil of the senses by a force which is peculiar to it; it is then elevated to the higher world where things appear to it in an instant brief as a lightning-flash. This is the first mode of prophecy. The other mode, decidedly imperfect in comparison to the first, comes about in the normal exercise of the senses. In fact, the temperament predisposed to melancholy and amazement and easily alienated from the senses enables the soul to withdraw from the body and to see and hear with eyes open that which normally it sees and hears only through the opaque veil of the senses (cf. Metaphysics, ii, 5, 7, quoted by Decker, op. cit., 23 f.). This agreement of the theologian with the philosopher on the subject of prophecy remains an isolated phenomenon; in fact, as M. Horten writes (Texte zu dem Streite zwischen Glauben und Wissen in Islam. Die Lehre vom Propheten und der Offenbarung bei den islamischen Philosophen Farabi, Aviceanna und Avroes, Bonn 1913, 12), “in der Theorie über die
Prophetic studies in memory of Israel Abrahams, unknowable. According to him, prophecy is an i-iii, Paris 1856-66, Maimonides reveals at some length his opinion of pro-
alcilm al-ghayr kadim, which the species may attain, and this state is the op. cit., 124-58). This represents a fairly deep fissure (Tahdfut al-Tahdfut, anterior to its object: it is the knowledge from which the prophets, (op. cit., 532-3; on Ibn Rushd’s doctrine of prophecy, see L. Gauthier, op. cit., 124-58). This represents a fairly deep fissure in the rationalist system which bears his name, on account of his role as an arbiter in the conflict, then current, between theology and philosophy.

With Maimonides (d. 601/1204, see IBN MAYMUN), the brilliant disciple of Ibn Rushd, the Avicennan trend is revived. In fact, in chapters 32 to 48 of the second part of his monumental study of Jewish religious philosophy, intitled Dalälāt al-hārin (= Moreh Nebukim), edited and translated into French by S. Munk under the title Le guide des égarés. Traité de théologie et de philosophie, i-iii, Paris 1856-66, Maimonides reveals at some length his opinion of prophecy and the various modes of perceiving the unknowable. According to him, prophecy is an emanation from God which, through the intermediary of an active intellect, influences first the rational faculty and subsequently the imaginative faculty: it is the highest degree of man and the ultimate perfection which the species may attain, and this state is the highest perfection of the imaginative faculty (ch. 35, tr. ii, 281). It assumes the existence in the man of a natural disposition which makes of him “a superior man, perfect in his rational and moral qualities” (ch. 32, tr. ii, 261 f.). Three perfections are required of the prophet: perfection of the rational faculty, perfection of the imaginative faculty and perfection of morals (ch. 36, tr. ii, 287). Dream and prophecy both belong to “the highest and most noble” activity of the imaginative faculty, which takes place only when the senses are in repose and cease to function; it is then that there occurs a certain emanation (fayd) which is the origin of true dreams and of prophecy and which “differs only in quantity and not in quality” (“Gen. Rabba, c. 17, 44). In visions and in dreams, all the degrees of prophecy are contained (ch. 36, tr. ii, 282 ff. On Maimonides’ conception of prophecy, see Z. Diesendruck, Maimonides’ Lehre von der Prophetie, in Jewish studies in memory of Israel Abrahams, New York 1927, 82 ff.; Decker, Entwikkelung, 37-8).

This close connection established by Maimonides between dream and prophecy corresponds precisely to the conception current in the early days of Islam. In fact, Tradition relates that before acceding to the full light of revelation as such, Muhammad initially had dreams described as “veracious” (ruʿya sādika, sup-
plying to him, in the words of L. Massignon (Annuaire du College de France, 41st year, 85), “in the form of isolated touches, light and sound, which he was unable to coordinate, that alphabet of ecstasy which he attempted later to represent, in the form of isolated consonants, at the heading of certain sūras (such as, at least, he adds, the reconciliation that we suggest).” This statement is based on the testimony of Aʿīgha, “The beginning of the prophecy of the Messenger of God, when God wished to make him His agent and the instrument of His mercy towards creatures, (was manifested) by veracious dreams; every dream which he saw in his sleep was as clear as the dawn. This made him love solitude; nothing was more pleasant to him than to be alone’” (Ibn Highām, 151; Ibn Saʿd, ii/1, 129). Aʿīgha confirms this remark of Aʿīgha.

The Prophet is quoted as saying, “There exist no signs announcing prophecy other than the good dream; the Muslim sees it or it is seen for him” (Ibn Saʿd, ii/2, 18; cf. Ibn Khaldūn, iii, 81/115). The term brūḥa in Kurʾān, X, 64, is interpreted as ruʿya harana (al-Tabari, Taṣfīr, xi, 84 ff.). These “signs” or “preambles” form an integral part of prophecy, since the dream is said to be ‘a part of prophecy’, an asser-
tion repeated by the prophet when he treated of the spiritual treatises. Ḥadīth goes further, specifying, following the Babylonian Talmud (Beraḥbāt, 57b, quoted by Maimonides, op. cit., ii, 36), the proportions whereby dream is related to prophecy. The Prophet is quoted as saying: “The dream of the Believer is one of the forty (sixty, in the Talmud) parts of prophecy,” a statement which al-Dinawari (al-kafrī fi l-ʻalbīr, ms. Paris, fol. 34b) explains as follows. “The Prophet means that the majority of prophetic messages were upon them!—did not see the angel, with the exception of a minority among them. It is during their sleep that they received the revelation.” This amounts to saying that the Prophet first came to prophecy at the lowest level, i.e. the dream. It was at Ḥira’ that he graduated, for the first time, from dream to prophecy. In the year of his vocation—his fortieth year—he withdrew for a month of annual retreat (taḥannuth), accompanied by his wife. As he slept, the angel Gabriel appeared to him with a piece of some kind of silken fabric on which there was writing (namat min dibdīd jīhī kitb). He said to him “Read!” “I cannot read” he replied. The angel stuffed the fabric into his mouth, almost suffocating him. “I believed,” he says, “that this was death!” Then he released him, repeated the same question and inflicted the same treatment on him a second time, then a third. The fourth time, to escape this torture, Muhammad asked him: “What must I read?”, and the angel made him recite the beginning of the sūra al-ʻAlaq (XCVI, 1-5).

Muhammad adds, “I recited that which he had said, then it was then that he finally left me. I woke up (khabuṭu min nawsī).” (This phrase) was then as if inscribed in my heart. I went forth (wandering) and when I reached the middle of the mountain I heard a voice from Heaven saying ‘O Muhammad, you are the Messenger of God and I am Gabriel’. I stopped, watching him, neither advancing nor retreating, then I looked away from him towards the horizon and the sky; whichever way I turned, I saw him just as he was. I remained in this position, neither advancing nor retreating, until Khadīja sent men to look for me. Her envoys arrived at the high places of Mecca and returned from them and I was still in the same posi-
tion. Then he parted from me and I parted from him, returning to my wife” (Ibn Highām, 152-3; cf. the vision of Ezekiel, i, 4 ff.).

This account, combining the triple appeal of the vocation of Samuel with the initiation, through absorption of the prophetic message, of Ezekiel (ii, 8 ff.; cf. Jeremiah, v, 10) comprises two parts: the
first took place in sleep, the second in a state of waking. Here there is a typical example of dreams of Muhammad, 255 ff. (1). The second took place in a state of consciousness, the first in a state of sleep, cf. Fahd, Die Vorsagen, 72-77, 96, 98, 108, 114, 125, 253 ff. (2).

**AL-NUDJAYR**, a fortress in Hadramawt [q.v.] where in 12/633 during the caliphate of Abu Bakr, the capital to Hadramawt via Marib. There al-Muhadjir marched on Hadramawt. The rebels, in particular of Banu Mu'awiya, a branch of Kinda (Mad'ad', 56, table 3), finally sought refuge in the fortress of al-NUDJayr. They could not, however, break out from the siege of the stronghold which was under the combined command of al-Muhajjir and Ziyád. The Banu Mu'awiya finally surrendered. Al-As'ath signed an agreement with the Muslim leaders, securing safe conduct for himself and his family. In return he opened the gates of al-NUDJayr. The Banu Mu'awiya blamed al-As'ath for his betrayal, as many of their number were killed. However, the agreement put an end to serious anti-Muslim rebellion in Hadramawt, which enjoyed much stronger hold over the area by the Muslim authorities.

al-NUDJayr is not mentioned further in the historical works and al-Hamdání (87), writing in the 4th/10th century, describes the place as a ruin.

A.T. AL-NUDJUM (A.), the stars. There are two words in Arabic carrying the notion of "star", *nadjum*, pl. *nadjum* (from the root *n-d-j*, "to rise", and *kaubak*, pl. *kaubak* (see *WKS*, i, 400 b 28; cf. already Baby. *kakabu*: a reduplication of a basic root *KB* "to burn, to shine"). For the etymologies of the two words, see Eilers [1], 96 ff., [2], 115; [3], 6 f. Both words occur frequently in the *Kur'an*. In LV, 6, it remains in dispute whether *nadjum* is to be understood as "the plants, or grasses" (as maintained by I.Y. Kračkovskij and A. Fischer) or as "the stars" (see the recent German translation by R. Paret, and his commentary, 465, also the English translation of R. Bell and his *A commentary on the Qur'án*, Manchester 1991, i, 330). *Al-nadjum* is also used, in Arabic, as an alternative name for the Pleiades (otherwise called *al-thurayyad*, see Kunztich [2], nos. 186, 306). The two words are used indiscriminately in the general sense of "star", but *kaubak* can mean "planet(s)" specifically, according to context.

The following article is subdivided into three sections, for the fixed stars, the planets and other celestial objects.

I. THE FIXED STARS

The Arabs—habitants of the Arabian Peninsula, mostly Bedouins—had a good knowledge of the stars since ancient times. They used the fixed stars for orientation in their nightly desert travails (*ihitad*), to determine seasons and to predict weather, especially rain. They had proper names for a good dozen prominent stars or other celestial objects, names of old standing, the meanings of most of which had been obscured or lost in the course of time so that they became the object of speculation of the Arabic philologists and lexicographers of later times. For these, no modern "translations" can be given, cf. al-*guyyúk* (al-Auriga, Capella), al-*gibhá* (al-Canis Majoris, Sirius) also mentioned in the *Kur'án*, LIII, 49), al-*simak* (al-s. al-rámí, "the lance-bearing Simak", a Bootis, Arcturus; and al-s. al-díaz, "the unmanned Simak", a Virginis, Spica), etc.; cf. Kunztich [2], 20 f. For some of these old names there exist parallels in Babylonian astronomy; cf. Kunztich [8].

In addition, several hundred names for smaller, less conspicuous stars and asterisms were invented, most probably by poets, at various times and in various tribes and regions; see the name lists in Kunztich [2] and [7]. All these names were later assembled by the Arabic philologists and lexicographers in the so-called *anwa* books (for these, see the bibliographies in *
ANWA₂ and AL-MANAZIL). In contrast to ancient Greek (and modern) astronomy, where large constellations are made up of numerous stars, in the indigenous Arabic traditions, one (the individual) represents two such individuals and a name in the plural represents a group of individuals. There are only a few Arabic constellations formed from a number of stars, such as e.g. the several al-Thrfî, “fireplace(s) formed by a triangle of three stones on the ground” (cf. Kunitzsch [2], nos. 17-19). A classified survey of the astronomies of the old Arabs was given by Ideler. 407-28.

Of Iranian star names, only a few are known, and their astronomical identification remains uncertain; cf. Scherer 113 f., 118 f.; Eliens [1], [3]. Genuine Turkish star names are discussed by Bazzin and Roux.

In Islamic times the astronomers and poets of the Islamic world generally used the Arabic star names (but see the planets). Much of the Arabic stellar lore lived on into modern times although the astronomical identifications and the calendrical usage may now differ; see the modern studies cited in AL-MANAZIL and, for the Tuareg, Bnurs-Sudiyene.

Tradition has it that certain prominent fixed stars were worshipped by Arabic tribes in pre-Islamic times (cf. the allusion to Sirius, in Kur’an). In pre-Islamic times and modern astronomy as Orion; for more details, see Henninger.

Apart from perhaps some star names (see above), the old Arabs had also inherited from Babylonia—at unknown times, through unknown ways—some of the zodiacal constellations. But with them, several of these constellations were transferred to celestial areas different from their places in Babylonian and Greek (and modern) astronomy. Suffice it here to mention as a famous example al-Gwaziît (a female name of uncertain signification) which, in the series of the zodiacal constellations, corresponds to Gemini, but which is located in the stellar figure known in Greek (and modern) astronomy as Orion; for more details, see MINTAKAT AL-BURUDJ.

The old Arabs themselves developed a popular stellar system of so-called anwa₃ (sing. nau), stars and asterisms mostly situated near the path of Sun and Moon which were used for calendrical purposes and were known as star lore (one star mostly represents one) and were merged into the system of the 28 lunar mansions which the Arabs received from outside, perhaps from India, and which divided the ecliptic according to the Moon’s monthly revolution into 28 portions, each mansion being marked by a star or asterism carrying the name of the corresponding nau located in that place (see AL-MANAZIL; also Varisco).

The old Arabic stellar lore was much used in poetry. The poets like to cite star names and to use them for comparisons or for poetic allusions to calendrical and meteorological events connected with them, and the like; cf. Kunitzsch [10], items xxvi and xxviii; Kunitzsch-Ullmann.

The period of indigenous, old Arabic folk astronomy ended with the expansion of Islam, when the Arabs came into contact with ancient Greek and Hellenistic science. Through, and after, the translations from Greek (and sometimes Persian and Indian) into Arabic, the period of Greek-based “scientific” astronomy in the Islamic civilisation begins which, in some areas, continued down to the 19th century.

The knowledge of the fixed stars (al-kawâkit al-thâbita, or simply al-thawâbit) in the “scientific” astronomy of the Islamic period was completely based on and influenced by ancient Greek theory and material. The physical qualities and behaviour of the stars were understood according to the cosmological theories of Aristotle and Ptolemy: the stars were invariably known in the eighth sphere (beyond the planets), thus being unable to change places relative to each other, and were invariable in substance, size and colour. The eighth sphere (hence the stars fixed to it) performed a constant movement from West to East about the poles of the ecliptic, the so-called “precession” (hârakat or sayr al-kawâkit al-thâbita), which Ptolemy—following Hipparchus—assumed at a rate of 1° every 100 years. The astronomers of the caliph Al-Ma’mûn arrived at an improved rate of 1° in 66 1/2 years (al-Zidîq, al-umnat, Tabulat fabra), 214/829-30, which afterwards—simplified as 1° in 66 years—was adopted by most of the succeeding authors of star catalogues (al-Battânî, al-Sûfî and smaller star tables; another prominent value was 1° in 70 years (cf. the survey in Nallino, al-Battânî, Opus astronomia, i, 292 f.; see also Mercier [1]).

The iconographical and topographical division of the stellar sky into constellations was also completely taken over from the Greeks. Here the main source was the star catalogue in Ptolemy’s Almagest (epoch: A.D. 138) comprising 1,025 stars arranged in 48 constellations and registered with ecliptical coordinates, longitude and latitude, and (apparent) magnitudes. Of the Almagest several translations into Arabic were made from the late 8th to the late 9th centuries (cf. Kunitzsch [5], 15-82). The versions of al-Hadjîjâqî and of Ishâk b. Hunayn (the latter emended by Thabît b. Kurra) have survived into our time (the star catalogue from these two versions was edited by Kunitzsch [11], vol. i); the “old” version made before al-Hadjîjâqî’s was used in the star catalogue of al-Battânî, and many coordinate values from it are also cited by Ibn al-Salah. These sources supplied the Arabic-Islamic astronomers with the terminology and nomenclature of the 48 constellations and the 1,025 individual stars and provided them with the basic coordinate values for these stars (for a complete survey of the names of the 48 constellations, followed by Greek, Arabic and Latin indexes, see Kunitzsch [5], 169-212; the complete terminology for the individual stars, again followed by Greek, Arabic and Latin indexes, is given in ibid., 212-370). The Arabs also fixed to the eight constellations the titles of the constellations and cited from his Phaenomena and the Scholia in Aratum (cf. Sezgin, vi, 75-7; further, al-Birûnî, Tafîhîm, 72; Ibn al-Salah, 54 f., 71).

The Arabic term for “constellation” was kawâkab, pl. kawâkabû (adapted from Ptolemy’s ṣawârîmûs), or suara, pl. suwar.

Apart from the textual tradition, iconographic documents from (Late) Antiquity seem also to have reached the Islamic period conveying to the Muslim astronomers the outlines of the pictorial representation of the 48 classical constellations. An early example for the continuation of classical iconographic material into Islamic times is the fresco in the cupola of the bath in the desert castle of Kusâyîr ‘Amra (ca. 711-15 [see ARCHITECTURE]) showing a celestial hemisphere with constellation figures (cf. Saxl; Beer [1], [2], Almagro). Also, instruments such as celestial globes and astrolabes made in Arab lands are known and tradition must have reached the Muslims. Ibn al-Salah (18, 72 f.) mentions the description of a Greek globe datable ca. A.D. 738, and Ibn al-Kîfî (Tarîkh al-Hukamâ, 440) reports the existence of a globe made of copper (nukhâ), attributed to Ptolemy himself, in Cairo in 135/1064-5.

Several Islamic astronomers established star
catalogues in the manner of Ptolemy's catalogue: al-Battānī (only 533 out of Ptolemy's 1,025 stars; epoch A.D. 880; precession value = Ptolemy +11°10'; edited in Nallino, al-Battānī, Opus astronomicum; cf. Kunitzsch [10], item v; Ibn al-Ṣālāḥ, Appendix ii, 97 ff.); Abu ʾl-Husayn al-Ṣūfī (complete, accompanied by drawings of the constellations; epoch 964; precession value = Ptolemy +12°42'; Kitāb Suwar al-kauwātik, ed. Haydarābdād, 1373/1954, French tr. H.C.F.C. Schjellerup, St. Petersburg 1874, repr. Frankfurt-am-Main 1986; cf. Kunitzsch [10], item xi); al-Bīrūnī (complete, epoch 1040; precession value = Ptolemy +13°0; in al-Kānūn al-masʿūdī, ed. Haydarābdād, iii, 1375/1956, Russian tr. S.A. Krasnovaya and M.M. Rozhanskaya, in Istoriko-astro nomiceskiye issledovaniya, viii, Moscow 1962, 92-150, with comm. by B.A. Rosenfeld, in ibid., 177-86); and Ulugh Beg (complete; epoch 1437; textually depending on Nasir al-Dīn al-Tūsī's Persian translation of al-Ṣūfī's Book on the Constellations; astronomically claiming his own observation for the majority of the stars and dependence on al-Ṣūfī for the rest; edited by Th. Hyde, Oxford 1665; a modern recension of the coordinate values was made by Knobel; cf. further, Evans, 162-5; Shevchenko).

Besides these great, complete catalogues, innumerably smaller star tables were drawn up by Muslim astronomers of all times, mostly listing fundamental stars for use on astronomical instruments such as the astrolabe (see Kunitzsch [10], item i; for some edited specimens, see ibid., items ii-iv, and Kunitzsch [3], I A and XII A).

The pictorial representation of the 48 classical constellations in Islamic astronomy, in books, on celestial globes and elsewhere, mainly follows the patterns set up by the drawings in al-Ṣūfī's Book on the Constellations; al-Ṣūfī, in turn, must have followed traditions from Late Antiquity (for the textual description of the stars he generally follows the Almagest version by Iṣḥāq-Thābit; in the star coordinates he chooses between the various translations of the Almagest and faithfully repeats the Almagest values in his star tables, notwithstanding his criticism of many of them). For each constellation al-Ṣūfī gives two drawings, one as seen in the sky, the other as seen on the celestial globe (where the figures are viewed from outside, on the constellation's face and front side). The observer under all conditions).

The question, to what extent the star tables and catalogues of Muslim astronomers represent the result of their own independent observation, is not always easy to answer. It appears convincingly that a star table or catalogue with ecliptical coordinates, whose latitudes are identical to Ptolemy's and whose longitudes show a constant increase over Ptolemy's, was obtained by calculation rather than by observation. When the latitudes differ and the longitudes show varying differences against Ptolemy's, one could raise the objection that the author took the latter figures from the tables of his catalogue he merely repeated any new or "better" values found by himself, except for the magnitudes. Since most of the zīgās (astronomical handbooks with tables; cf. below) of the Islamic period are still unedited, it would be premature now to present final statements. It may be that in them one or another star table will be found that is built upon an author's own observations.

Surveys of the 48 Ptolemaic constellations are also
found—apart from the great star catalogues mentioned above—in some other works: Muḥammad b. Ahmad al-Suhrāzī (ca. A.D. 980), Maṣḥaṭ al-Qalām, ed. G. van Vloten, Leiden 1895, 210-13; al-Bīrűnī, Taḥfīm 69-72 (on 77-81 follows a survey of indigenous old-Arabic star names, and on 81-5 the lunar mansions are listed); Zakariyyāʿ al-Kazwīnī, Šūfiʿ al-makhlūkūt, ed. Wüstenfeld, i, 29-41 (this section is extracted from al-Šūfiʿ's Book on the Constellations; the section was separately edited and translated by L. Ideler and served as the nucleus for his voluminous study on the history of star names; on 41-54 follow the names of the 48 classical constellations (without adding the lunar mansions which is extracted from Ibn Kūtāyba's Kitāb al-Anwār, cf. ed. Haydärābād 1375/1956, 17 ff.). Some of the interest for the continuity of the tradition is Le traité sur les constellations by Severus Sebokht, in Syriac, written in A.D. 660, i.e. in early Islamic times, which must have been written before the famous Greek-Arabic translations; ed. F. Nau, in Revue de l'Orient Chrétien, xxvii (1931-2), 307-410, xxviii (1931-2), 85-100. About 600 years later another Syriac description of the 48 constellations was given by Bar Hebraeus (Abu l-Faraḍj b. al-Iṣbīrī) in his Livre de l'ascension de l'esprit, ed. Nau, Paris 1899-1900, text i, 110 ff., tr. ii, 44 ff., which now, however, is a mixed text including both Syriac and Arabic elements (cf. Kunitzsch [1], 32 f.).

A rare use of the 48 constellations was made by the Persian poet Fakhṛ al-Dīn Gūrānī in his epic Vis u Rāmūn (written ca. A.D. 1050), where he presents a horoscope which is greatly expanded by including all the constellations of the fixed stars in the astrological configuration (cf. Kunitzsch [10], item xxviii; in a subsequent article in Ist., lx [1983], 297-301, O. Neugebauer has dated this horoscope to A.D. 968). The Arab seafarers in the Indian Ocean in the 15th and 16th centuries, Ahmad b. Māḏjid and Sulaymān al-Mahrī, still knew and used some of the classical constellations and star names, though often in distorted form and in modified astronomical application. Especially Ibn Māḏjid (g.v.) takes pride in naming the classical books he had studied, among them al-Šūfiʿ's Book on the Constellations (here called Kitāb al-Taḏawūr). On the other hand, the star nomenclature of these muʿallāms contains several names of unknown and sometimes certainly non-Arabic origin. For discussion of these names, see the Index given in Kunitzsch [10], cxviii (1968), 297-314.

In astrology it was mostly the planets whose influence was considered. But since oldest times, the fixed stars could also be included in the astrological procedures. Already Ptolemy in his astrological handbook, the Tetrabiblos (Kitāb al-Arbaʿa), assigned to all the constellations and the major stars individually the "temperament" (στρογγυλ, Lai. complexio, temperamentum) of one or two planets, cf. Tetr. i, 9. Subsequently, lists of stars with their temperaments were drawn up, or in purely astronomical star tables the temperaments were added in a separate column. Further, to certain fixed stars was ascribed a bad influence on health, especially of the eyes, and also these stars were assembled in special lists. All this material reached the Arab-Islamic civilisation, in the same way as the astronomical knowledge, and we find it reproduced directly, or in various adaptations, in Arabic texts.

Of the Tetrabiblos several Arabic translations were made (not all edited until now; cf. Szegen, vii, 41 ff.). The famous astrologer Abū Māṣḥār included in his comprehensive al-Muḵbāl al-kahīr, i, 1, a survey of the 48 classical constellations (without adding the astronomical temperaments; see the facsimile ed.—made from ms. Istanbul, Carullah 1508, dated 327/938—by F. Szegen, Frankfurt-am-Main 1985, 111 ff.). For lists of stars doing harm to the eyes (cf. Tetrab., iii, 12) see again Abū Māṣḥār, Mukābal, vi, 20 = F. Szegen, Frankfurt 1851 f. (cf. Kunitzsch, apud Hüner 358 f.). Another list of unlucky stars of Abū Māṣḥār is given in Kunitzsch [10], item xvii, 113-19. A very recent specimen for a horoscope introducing the fixed stars is the horoscope of Asad Allāh Mirzā, 1830; cf. Elwell-Sutton (esp. 16-27, 94 f.). One ancient tradition on the "Thirty Bright Stars" appeared in Arabic under the name of Al-Manāṣir, i.e. "illuminations", in modified (Middle) Persian-medieval form, coming through (New Persian) biyādānīya as "desert stars", from New Persian biyādān "desert", in Taḥfīm, 46 (§ 125), was mere guesswork and popular etymology). The Hellenistic astrological compilation in five parts ascribed to Zoroaster also reached the Arabs through a Persian intermediate stage; the star names in the chapter on the fixed stars of its fifth part, Kitāb al-Mawādīdūt, were transformed into Persian and were retained in this form in the Arabic version; cf. the ed. of the chapter in Kunitzsch [13]. Another tradition, on stars causing weather disturbances, tempest, etc., containing star names of unknown origin and meaning, has been found until now only in Byzantine and mediaeval Latin versions and it is uncertain whether an Arabic stage was also involved in its transmission; cf. Kunitzsch [10], items xv-xvi.

Yet another use of star names occurred in lot books (kitāb al-fāʿ) where they took the role of "judges" answering questions or guiding the interrogator to further questions. An example is the Liber Alfadhol, a lot book attributed to Harūn al-Rašīd's astrologer al-Fadl b. Sahl, of which also Latin and old German versions exist and which contains 144 "judges" carrying star names (including a few astronomical terms); cf. Kunitzsch, apud Lutz, 321-36, and, in ZDMG., cvii (1967), 297-317, etc., also in the other texts of this kind cf. Kunitzsch, apud Lutz, 321 n. 1; Kunitzsch [6], esp. 281 f.; Wetzstein.

In addition, it may be mentioned that Arabic texts of all the kinds described were translated into Western languages, into Byzantine Greek from the 11th century onwards and into Latin, in Spain, from the late 19th century onwards. In this way, Arabic star and constellation names became widely known in mediaeval and Renaissance Western science, and more than 200 "Arabic star names" can still be found in modern star atlases and astronomical textbooks today.

Since it is impossible to give here lists of the many Arabic star and constellation names, once more the literature is cited where all these names are completely listed and explained: for indigenous old Arabic star names, see Kunitzsch [2] and [7]; for the lunar mansions, see AL-MANĀṢIR; for the zodiac, see MINTARĀT AL-BURŪḡ; for the nomenclature of stars and constellations derived from Greek sources, mostly the Almagest, see Kunitzsch [5]; for specimens of Arabic star names in Byzantine texts, see Kunitzsch [10], item ii (types I and II); for Arabic star names in mediaeval Western and modern astronomical use, see
Kunitzsch [1] and [3] and Kunitzsch-Smart; and for the special usage of names with the navigators of the Indian Ocean, see the Index in Kunitzsch [10], item xxv.

Arabic star names and their use in Western science have been the object of philological and historical studies over centuries, starting with G. Postellus' treatise Signorum coelestium vera configuratio aut asterismus, Paris 1553; cf. a short survey in Kunitzsch [1], 23 f. The Arabian matter in the popular book of R.H. Allen, Star-names and their meanings, New York 1899 (repr. New York 1963), is often incorrect and misleading, cf. the warnings in Kunitzsch [10], item xxiv. Also, modern Arabic authors have paid their tribute to the Arabic star names and their use in Western science. For example, the Arabic names were adopted by Arabic-Islamic astronomers and astrologers, see al-Bīrūnī, Taḥfīm, 199 (§ 329); Ullmann, 345 f. The Arabic names shown above (including the Western Arabic alternative names) were also retained in many mediaeval Latin translations from the Arabic, in astronomical and astrological contexts. The complete set of the seven names even appears in Wolfram of Eschenbach's epic Parzival (ca. A.D. 1210), 782, 6 ff.; see Kunitzsch [4].

Planetary theory in Arabic-Islamic astronomy was mainly based on the teachings of Ptolemy in his Almagest. The planets rotate on seven successive spheres (falsā [q.v.] ) about the earth, the Moon being the nearest to the earth, in the first sphere, and Saturn being the farthest, in the seventh sphere; the eighth sphere was held by the fixed stars. The lower planets (below the Sun), Moon, Mercury and Venus, were called al-kawākiḥ al-saftīyya, and the upper planets (beyond the Sun), Mars, Jupiter and Saturn, were al-kawākiḥ al-ṭulawīyya. The lowest point in a planet's orbit was called labīd, the farthest point was waqīf (from Sanskr. wakt, cfr. D. Pingree, in Viator, 1976, 161; afterwards Latinised as augmented aegis). The two points of intersection of a planet's orbit with the ecliptic were each called by the Persian term al-ṣawwah [q.v.] or—translated from Greek συνεκτικός—ṣekdā, node. The ascending node (awāṣaf or—translated from Greek ἀφανής) especially was called ra's (al-tannīn) "(the Dragon's) head, caput ( draconis)", and the descending node (awāṣaf or—translated from Greek ἀφανής) shanān (al-tannīn), "(the Dragon's) tail, cauda ( draconis)"). The planets performed a forward movement (istikāma) along the ecliptic (ilā tawdlt al-burāq), at certain times they became stationary (usikāf, ikīma) and then performed a retrogade movement (rujūd); this ended in a second stationary position after which they resumed the normal forward movement.

The knowledge about the planets' physical behaviour, their size, distances and motion, was mainly laid down in the so-called zīdās, i.e. comprehensive handbooks containing both theoretical chapters and the relevant tables. The word zīdā (pl. zīdāt, azṣadā, ẓiyādā) is of Persian origin (already in Pahlavi, zīd) and originally meant the thread(s) in weaving; from the arrangement of the threads in a piece of woven cloth it was extended to the network of lines drawn for astronomical tables and finally transferred upon complete works of tables with their introductory theoretical text. Very few such works have been edited so far, e.g. al-Zīdā al-ṣābī* of al-Battānī (ed. and tr. C.A. Nallino, i-iii, Milan 1899-1907); the Latin translation (by Adelard of Bath) of Maslama al-Maqrīzī's reduction of the zīdā of Muhammad b. Mūsā al-Khārażmī (ed. A. Bjørnbo, R. Benthorn and H. Suter, Copenhagen 1914; Eng. tr. and comm. O. Neugebauer, Copenhagen 1962); al-Bīrūnī's al-ṭālīn al-tanīn (ed. Haydarākhād, i-ii, 1954-6; Russian tr. P.G. Bulganok et alii, i-i, Tashkent 1973-76); survey of the contents in English by E.S. Kennedy, in Al-Abhāth, xxiv [1971], 59-81. About 130 zīdāt were listed, and twelve of the most important abstracted, in Kennedy [1]. More abstracts are in Toomer [1]; Mercier [2]. Of great historical interest are also works such as The Book of the reasons behind astronomical tables (Kitāb fi 'ilāl al-zīdāt) of 'Alī b. Sulaymān al-Ḥāshimi (ed.

---

II. THE PLANETS

As in all civilisations, the five planets visible to the naked eye were also known to the old Arabs, because they had names for them which were obviously originally Arabic and were not obtained, through translation, from outside. There seems, however, not to have existed a special term for the planets (as distinct from the fixed stars) with the Arabs in their "pre-scientific" period. Some commentators assume that the terms al-khūnās and al-kūnās in Kurān, LXXXI, 15-16, may refer to the planets; cf. WKAS, i, 387 a 2 ff., 442 b 41 ff. (not to be confused with the term al-khūsān which, according to Ibn Durayd, Dīmāhara, 1, 67 a 1-3, s.r. kh-1-s, designates the stars around the (North) Pole that never set, i.e. the circumpolar stars). In the "scientific" period of Arabic-Islamic astronomy which was based on translations from Greek, the most common terms for the planets (οἱ πλανήμενοι, sc. ἀστέρες) were (al-kawākiḥ) al-mutabbāyiyya (referring to the five planets alone) and (al-kawākiḥ) al-sayyara (for the five planets plus Sun and Moon), cf. al-Khārażmī, Mafāṭīḥ, 210, 228; al-Bīrūnī, Kānsān, iii 987, WKAS, i, 442 b 28 ff., 35 ff. Other terms, in certain translated texts, were al-kawākiḥ al-muttaqiyya (WKAS, i, 442 b 39), al-k. al-sayyara, al-k. al-dījārīya and al-k. al-dālā (ibid., i, 580 b 27 ff.).

The following table shows the names of the planets in Arabic, adding some alternative names used in the Western Arabic and Spanish Arabic area, and in Persian:

Popular estimated values for the (sidereal) revolution of the planets are mentioned by Ibn Kutayba, Anwa? 2, 127. According to him, Saturn travels in each of the twelve zodiacal signs 32 years (i.e. a total revolution of 32 years); Jupiter 1 year (i.e. a total revolution of 12 years); Mars 45 days (i.e. a total of roughly 1 1/2 years); the Sun 1 month (i.e. a total of 1 year); Venus 27 days (i.e. a total of 324 days); Mercury 7 days (i.e. a total of 84 days); and the Moon 2 1/2 nights (i.e. a total of 28 nights). He also mentions that Venus and Jupiter are of bright white colour, Saturn is yellowish, Mars is red, and Mercury also red, but it is seen only rarely because of its vicinity to the Sun.

Scientific astronomy has received and continued to use the precise Greek data in the Almagest and has, in the course of time, improved upon many of them, based on new independent observation. For details, one has to consult the ziga? and their abstracts mentioned above.

While, on the whole, Ptolemaic astronomy remained valid in the Arabic-Islamic civilisation until the 13th century, modern astronomy began with modern Western astronomy, on the other hand serious criticism of Ptolemy’s planetary theory was brought forward by several Muslim astronomers. Among the names here to be mentioned are Ibn al-Haytham (in Egypt, d. shortly after 432/1041; cf. Sezgin, v, 251 ff.); Djâbir b. Alìfah (Gerber, Spain, 1st half 12th cent.; cf. R.P. Lorch, The Astronomy of Jâbir ibn Alîfah, in, xix [1955], 189-193); al-Majîd (Albucasis, Spain, 2nd half 13th cent.; i.e. the Smaller Magellanic Cloud); cf. I. Khoury, ed., Sulaymân al-Mahri’s works, iii, Damascus 1933/1972, 302. The assumption of L. Massingham that the asterism al-bakar “the Cows”, mentioned by al-Sufi (cf. Kunitzsch [2], nos. 59 and 23), was identical with the Magellanic Clouds was rightly refuted by W. Petri, in Die Sterne, xxxviii (1962), 74-7.

b. Comets. The common Arabic term for a comet is (kastab) al-dhanah or kausah al-dhanah “star with a tail”. Also, the Greek term zouraya was translated as al-kawsah al-dhanah “rua’, i.e. the Larger Magellanic Cloud) and the other appears weak (gama?, i.e. the Smaller Magellanic Cloud); cf. I. Khoury, ed., Sulaymân al-Mahri’s works, iii, Damascus 1933/1972, 302. The assumption of L. Massingham that the asterism al-bakar “the Cows”, mentioned by al-Sufi (cf. Kunitzsch [2], nos. 59 and 23), was identical with the Magellanic Clouds was rightly refuted by W. Petri, in Die Sterne, xxxviii (1962), 74-7.

comets. The common Arabic term for a comet is (kastab) al-dhanah or kausah al-dhanah “star with a tail”. Also, the Greek term zouraya was translated as al-kawsah al-dhanah “rua’, i.e. the Larger Magellanic Cloud) and the other appears weak (gama?, i.e. the Smaller Magellanic Cloud); cf. I. Khoury, ed., Sulaymân al-Mahri’s works, iii, Damascus 1933/1972, 302. The assumption of L. Massingham that the asterism al-bakar “the Cows”, mentioned by al-Sufi (cf. Kunitzsch [2], nos. 59 and 23), was identical with the Magellanic Clouds was rightly refuted by W. Petri, in Die Sterne, xxxviii (1962), 74-7.

Islamic astronomers also devised—like Western scientists of late mediaeval and Renaissance times—systems for the demonstration of the planets’ movements, the so-called equatoria, see Kennedy [2], section “Equatoria”. 

For the use of the planets in astrology and some of their astrological properties, see MINTAKAT AL-BURUDJ.

III. OTHER CELESTIAL OBJECTS

a. Nebulae. Ptolemy in the star catalogue of the Almagest had described five of his 1,025 stars as “nebulous”. However, all of these were star clusters or double stars appearing to the naked eye as well as nebulous according to modern astronomical understanding. It was Abu l-Husayn al-Ṣufi who, in his Book of Constellations, independently and for the first time mentioned the Andromeda Nebula (M 31 = NGC 224), calling it latkha sababiyah, a “nebulous spot”. In one of the drawings of the constellation of Andromeda he marked the position of the nebula by a number of small dots; see Kunitzsch [9]. As for the Magellanic Clouds, in the southern celestial hemisphere, near the South Pole, invisible from the Arabian Peninsula, a first reference to them seems to be in the Almagist, al-Sufi al-bakar (the Cows), mentioned by al-Sufi (cf. Kunitzsch [2], nos. 59 and 23), was identical with the Magellanic Clouds was rightly refuted by W. Petri, in Die Sterne, xxxviii (1962), 74-7.

b. Comets. The common Arabic term for a comet is (kastab) al-dhanah or kausah al-dhanah “star with a tail”. ...among the atmospherical phenomena of the sublunar sphere, see Aristote, Phys `l-sama, ed. Badawi, 18 ff.; Meteorologie, ed. Schoonheim, 74 ff.; Humayn b. Ishakh, Kompendium, loc. cit. above; Artius Arabus, loc. cit. above. The common Arabic terms for them were xshb, pl. xshub, and nayaq, pl. nayzak (of Persian origin); cf. C.A. Nallino, Raccolta di scritti, v, Rome 1944, 377-93 (first published in RSO, viii [1919-21]).

Their quick movement in the sky when falling towards the earth was well known and was described as inkdadh, inkdadh, etc. Shooting stars (shuhub) were several times mentioned in the Kura (XV, 18; XXXVII, 10; LXVII, 8-9); the implication here is that dinns or shaytdns who try to sat on the angels are driven away by throwing xshub at them. This myth or shaytdns etc. Shooting stars (shuhub) etc. Shooting stars (shuhub), insibdb, and shihdb, as towards the earth was well known and was described in astrology, shooting stars mostly ranged in the same rank with comets. Authors describing such phenomena such as comets. Authors describing such phenomena and of the sciences generally, Azophi [al-Sufi], etc.; for details, see Mohd. A.R. Khan, Names of thirteen Muslim personalities of outstanding fame in astronomy and through other channels, the paranatellonta and of the Moon (1651), Giovanni Baptista Riccioli introduced and vulgarised in the West through the translations of the 12th century in Spain; examples are Albatigenius [al-Battani], Alfarganus [al-Farghani], Aihazen [al-Hasan, Ibn al-Haytham], Almanon [the Abbásid caliph al-Ma'mun, famous as a patron of the translations from Greek into Arabic and of the sciences generally], Azophi [al-Sufi], etc.; for details, see Mohd. A.R. Khan, Names of thirteen Muslim

...some time afterwards al-Mu'tasim died. The report further says that al-Kindi had also maintained that the spot may have been caused by a passage of Venus in front of the Sun (kufid al-zuhara li-`l-dams wa-la`lakahu bih bhdhisi l-mudda).

f. Paranatellonta. The paranatellonta are constellations, or portions of constellations, co-ascending or reaching other fundamental points of the sphere together with the decans (i.e. sections of 10 degrees) of the zodiac. The observation of the paranatellonta has belonged to astrological practice since Antiquity. The constellations of the paranatellonta (tuwar) are similar to the classical Greek constellations, a number of exotic, Egyptian and other figures, the so-called sphaera barbara. Texts describing the paranatellonta are known, inter alia, from Teukros the Babylonian (perhaps 1st cent. A.D.), in Arabic Tankaluss, or Tankalgh al-Babili. An Arabic version of the paranatellonta for the 36 decans of the zodiac was inserted by Abû Ma`âghar in his astrological Kitâb al-Mukhalaf al-kabîr, Book vi, ch. 1. The text was edited by K. Dyroff as Appendix vi, apud F. Boll, Sphaera, Leipzig 1903, 482-539. Abû Ma`âghar gives as the epoch for the positions of the constellations in his text the year 1160 Seleucid era = Oct. 848-Sept. 849. For each decan (here called waghî) Abû Ma`âghar registers in a first section the paranatellonta (sawwar) according to the "Persians, Chaldaeans and Egyptians". The ascription to the Persians is correct insofar as Abû Ma`âghar used a Persian translation from a Greek reduction of Teukros' text probably dating from A.D. 542 and afterwards converted into new Persian (cf. Boll, op. cit., 416; see also Sezgin, Gâs, vii, 71 ff.). In a second section there follows the description of the paranatellonta according to the Indians. As Boll has shown, what there is described in this section are, however, not the paranatellonta, but rather the figures symbolising the decans themselves in Indian tradition (cf. Boll, 414 f.). The third section describes the paranatellonta formed from the 48 classical Ptolemaic constellations. Through Latin translations of Abû Ma`âghar's work and through other channels, the paranatellonta and their nomenclature became of considerable influence in mediaeval and Renaissance Western astrological speculation (see the survey in Boll, 419 ff.). The astrologer Ibn Hibinsâ also included a description of the paranatellonta in his genealogies of the stars of which, according to Sezgin, Gâs, vii, 71 f., offers—at least in parts—a better text than Abû Ma`âghar.

g. Modern nomenclature of objects on the Moon, the planets and their satellites. A last echo of the grandeur of the mediaeval Islamic astronomers is found in the modern nomenclature of features on the surfaces of the Moon, the planets and their satellites. In his map of the Moon (1651), Giovanni Baptista Riccioli produced as names for the craters on her visible side the names of famous astronomers and scientists from various nations and times, a nomenclature which became standard until now in international astronomy. Among them there are the names of thirteen personalities of outstanding fame in astronomy and the science from the Islamic Middle Ages (two of them were added in 1837 by J.H. Mädler). All these names are supplied in the Latinised form as tuwar which, according to Sezgin, Gâs, vii, 71 f., offers—at least in parts—a better text than Abû Ma`âghar.

...and their satellites. A last echo of the grandeur of the mediaeval Islamic astronomers is found in the modern nomenclature of objects on the Moon, the planets and their satellites. In his map of the Moon (1651), Giovanni Baptista Riccioli produced as names for the craters on her visible side the names of famous astronomers and scientists from various nations and times, a nomenclature which became standard until now in international astronomy. astronomers given to some natural features of the Moon, in IG, xxvi (1953), 78-85. In recent times, after the exploration of the far side of the Moon, this kind of historical nomenclature has been continued. Among the names set up here—and which are approved by of the International Astronomical Union—there are five more of the Islamic scientists: Abu'l-Wafa’i [Abu ‘l-Wafa’], al-Biruni [al-Bīrūnī], Avicenna [ Ibn Sīnā], Ibn Yunus [ Ibn Yūnus] and Omar Khayyam [‘Umar Khayyām]. With the exploration of the planets and their satellites by spacecraft, the naming of objects on their surfaces continues and will honour many more of the astronomers and scientists of Islamic civilisation.

At the end of this article, it should be mentioned that the textual tradition of the astronomical and astrological literature in the Islamic area was accompanied by a rich tradition of illustrations. In purely astrological literature in the Islamic area was accompanied by a rich tradition of illustrations. In purely astrological literature in the Islamic area was accompanied by a rich tradition of illustrations. In purely astrological literature in the Islamic area was accompanied by a rich tradition of illustrations. In purely astrological literature in the Islamic area was accompanied by a rich tradition of illustrations.

In East Africa.

The Swahili people living along the East Coast of Africa between Mogadishu and Mozambique have a long tradition of sailing the Indian Ocean, to fish and to trade. Thus, from the Middle Ages, they have been familiar with the major stars and constellations of the tropical region as well as with the planets and their movements. Some of this vast knowledge of the Swahili is still kept in traditional knowledge and in the Arabic script in Swahili. Some of these have survived and are now in the University Library, Dar es Salaam. In Swahili this science is called elimu ya ndujum or elimu ya nyota “knowledge of the stars”, to be distinguished from tanjimu “astrology”. So far, 105 Swahili names for planets, stars and constellations have been identified; the majority are adapted from Arabic. Native Swahili (i.e. Bantu) words are often used. For example, bahu “dragged”, referring to the tale of the ram which God made to “travel the path along which Ismail’s sheep was dragged”, Sumaili “the path along which Ismail’s sheep was dragged”, referring to the tale of the ram which God made to carry the message of the Holy Prophet. These names are all from Arabic: shahini because its appearance marks the moment when the Pleiades, lit. “What one cheers greet its appearance.” Loud cheers greet its appearance. swala “ascent”, though for the ascending node of a comet, is also used.

A few of the star names are of Persian origin, e.g. shakini “royal white falcon” (Alshain, Beta Aquilae); zana “knee” (Rukbat, Alpha Sagittarii); baha “shoulder” (Gamma Orionis).

Most curious is the fact that the Swahili people have a solar calendar based on the Persian model; it is not known how, or when, this calendar came to be adopted by the Swahili. The New Year is called nauruz, noruz or nauruzi (the latter form of this Persian word being the Indian alternant, though the English dictionary gives naury as the Parsi New Year). Each sign creates a particular character in the person whose appearance marks the moment when the rains should begin and so, the moment for the planting of millet.

Under the heading of natural astrology, numerous procedures exist. Two of these are well known: sim al-anas? denotes the knowledge of the periods defined by the heliacal rising and the acronymal setting of certain stars (see anwa?, also Sezgin, GAS, vii, 336 ff., and Fahd, Disination², 412-17). The art of inspecting the sky to detect any signs of rain was known in Oriental astrology. The Swahili names of the Planets are: Mercury, Uraniti; Venus, Zabura; Mars, Miriki; Jupiter, Mushitori; and Saturn, Zohali.

Al-Nudjûm (Ahrâm al-), “decrees of the stars”, expression denoting astrology [see also munâdjdjum].

Astrology comprises two branches: natural astrology, consisting in the observation of the influences of the stars on the natural elements, and judicial astrology, consisting in the observation of the influences of the stars on human destiny. The scientific term which describes them is Ptolemaism (derived from the astrological work of Ptolemy, entitled Kââhidhûmum â supported by the Sun and the Moon, or Kââhidhûmum, of the former form of this Per-
and Greco-Roman Antiquity (cf. ibid., 407-8). The pre-Islamic Arabs practised it; on account of its association with the astral cult, it was denounced by the Prophet (al-Bukhari, i, 136).

More important is the art of drawing indications (dal'at) from the totality of atmospheric phenomena; these indications are gathered together in books bearing the title malama. The best known is that attributed to the Prophet Daniel (see MALĀHIM, and Divination, 408-12).

This literary genre comprises a large number of astrological collections and agricultural almanacs, bringing together all the knowledge accumulated over the centuries in the region of the Near and Middle East, knowledge drawn from Arabic translation and adaptation of Sanskrit, Pahlavi, Greek and Syriac writings. One of these collections (Aya Sofya 2684, 139 fols., nakshī of 906/1499, 27.5 x 18 cm) has been described in Divination, 488-95. It is divided into three parts: (1) book of conjunctions, concerning relationships between the stars (fols. 1b-105a); (2) meteorological divination according to Daniel (fols. 106b-117a); and (3) the heliacal rising of Sirius according to Hermes (fols. 117-132). In an appendix, there is a compilation of indications drawn from the occasion of Nawruz [f. v.], of the Coptic month of meteorological divination according to Daniel (fols. 137a-139b).

For agricultural almanacs, see Fahl, Le calendrier des travaux agricoles d'après al-Filaha al-nabatiyya, in Tawba and the festival of Easter (fols. 137a-139b). In an appendix, two opuscules entitled al-Bukhari, i. 8, 106 (AHKAM AL-)NUDJUM and Greco-Roman Antiquity (cf. ibid., 407-8). The pre-Islamic Arabs practised it; on account of its association with the astral cult, it was denounced by the Prophet (al-Bukhari, i, 136). A third source is known and used by the Arab astrologers, this being the *'AvOoXoyiai* of Vettius Valens, an eminent astrologer of the period of Hadrian and Antoninus Pius; this work was translated into Pahlavi under the title of *Visı̄ghāk* (anthology), annotated by Buzurjmidj, a courtier of Kārīr Anūṣhirwān (531-78), to whom it is attributed, and translated into Arabic as the K. al-Mawdīlīd (see Nallino, Raccolta, v, 238 ff.; Sezgin, GAS, vii, 38 ff.). The same title is also attributed to a Babylonian astrologer, Teukros, known to the Arabs as Tanḵalkūša, who lived at the beginning of the 1st century A.D. and who is the author of an astrological work, called *Pērī tow paxarteklotov*, translated into Pahlavi and thence into Arabic in the 2nd or 3rd/8th or 9th century as K. al-Mawdīlīd *'alā l-'ukm wa l-'hudd*, used by Abū Ma'shar in his K. al-Mawdīlīd *al-kāhir*, according to an extract made by Rhetorios (6th century A.D.), which was translated and translated into German by K. Dyroff and F. Boll, *Sphaera*, Leipzig 1903 (repr. Hildesheim 1967), 482-539 (cf. Sezgin, GAS, vii, 11 ff., 71-3, 80-1; Nallino, Raccolta, v, 246 ff.; idem, Tracce di opere greche giunte agli arabi per trafiau pheleveia, in *'Ajāb-nāma*, E. BROWNE Festschrift, Cambridge 1922, 345-63; AL-NUDJUM. III. f.).

A fourth source in Pahlavi was used by the Arab astrologers: this is the K. Zarduštshī fī *l-'uṣūṣ wa l-nudjum wa tahrīrātahu wa l-juhkm wa l-maordin*. On the Arabic writings attributed to Zarathustra, D. Pingree (quoted by Sezgin, GAS, vii, 84) writes: “Thus, as the original Zaradustshī text, having a Hellenic origin, was revised in Sassanian Iran in about 550 and then expanded with material from the Pahlavi Dorotheos in about 650, so the latter was revised in about 400, when it was expanded with material both from the Pahlavi Valens and from a Pahlavi translation of a Sanscrīt text” (*Māshīhālākh*: some Sassanian and Syriac sources, in Essays on Islamic philosophy and science, New York 1975, 5-14, cf. 8; V. Stegemann, *Astrologische Zaratustra—Fragmente bei den arabischen Astrologen Abī 'l-Ḥasan Allī b. Abī 'r-Ḥidayl (11. Jh.), in Orientalia, N.S., i/v [1937], 317-36).

From the Sanskrit, al-Bīrūnī (Ṭabīb mā bī l-Ḥind, 122 ff.) translated the K. al-Mawdīlīd al-saghir (ibid., 122) of Varāhaimhara, identified by D. Pingree (Astronomy and astrology in India and Iran, in Isti, liv [1963], 234) with the Laghuṣūkata, and cited the K. al-Mawdīlīd al-kāhir by the same author, as well as a K. al-Mawdīlīd by Kālion Buram al-Malīk (= Kaljana-Varnan). A K. al-Mawdīlīd is also attributed to Kānaka, astrologer at the court of Hūrūn al-Raglīd (ms. Čorum 500/5, fols. 156-159a, 11th/17th century; for the Pahlavi and Sanskrit writings, see Sezgin, vii, 68-97).

The first Arab astrologer to take an interest in genethlialogy is the eminent Jewish scholar Māshīhālākh (d. ca. 200/815 [f. v.]). Two works bear his name: K. al-Mawdīlīd, where the topics addressed are as follows: (1) knowledge of the beginning of the formation of the foetus and the observation of its stages before birth, (2) knowledge of the position of the heliacal star at the moment of birth, (3) education, (4) knowledge of the age by means of al-hulād (the altheia of the Europeans), its positions and those of the stars which are responsible for it, and (5) the form of the body, its external appearance and temperament. This work is often quoted by Arab astrologers dealing with this question. It has been the subject of two Latin

Ibn al-Nadim mentions a *K. al-Mawdall al-kabir* by the same author, comprising 14 chapters, which is known only from its Latin translation, made by Hugo de Santalla, with the title *Libellus de navitatibus 14 distinctus capitulis* (Oxford, Bodl. Savile 15, 72 fols.). A *K. Tahuril sini l-mawdall, quoted by Ibn al-Nadim, is known only from a Latin manuscript (B.N. Paris, K. Tahwil sini 'l-mawdlid, quoted by Ibn al-Nadim, is distinctus capitulis (Oxford, Bodl. Savile 15, 72 fols.). A

A summary composed by 'Umar b. al-Farrukhān using writings of Hermes, Dorotheos, Ptolemy and others, bearing the title *K. al-Mawdall* is known in ms. (cf. Carmody, loc. cit., 112). It was translated into Latin, under the title *De nativitatibus*, by Johannes Hispalensis (Carmody, 38-9) and edited by N. Pruckner as an appendix to *Firmicus maternus*, Basel 1551, 118-41.

Other writings bearing the same title, where the same sources are extensively quoted, are attributed to various eminent astrologers, including the following:

Abū ʿAllī al-Khayyāt, a disciple of Māghātallah, known to Europeans as Alphobalus. His work was translated into Latin as *De judicis nativitatum*, by Plato

...
the days of the month with the comment "good" or "bad" for such-and-such a thing (ms. Esat Ef. 3554, *nakbb* of 1088/1677, 19.5 × 14 cm, attributed to Djalfar ad-Sciāke), enumeration of actions advisable or advisable during the lunar months and the choice of days in any month, with justification (ms. Saray, Revan 1741, fols. 98a-107a, *nakbb*, 20 × 15 cm). More complex is the procedure described in the Köprüli ms. Fazil Paşa 164, fols. 1-54b (*nakbb* of 871/1466-7, 18 × 14 cm) arranged in the following manner: (1) Explanation of the method of application (fols. 1b ff.); (2) double column of actions; (3) circle of months; (4) thirty columns relating to the month and to the rubrics; (5) thirty rubrics: names of prophets, questions, positions of the moon, judgment according to the lunar houses; and (6) the lunar houses (for details, see *Divination*, 487).

The majority of Arab astrologers have left behind treatises or chapters relating to hermology and menology. The following are the best known:

Abū ʿl-Ḥasan Ibn ʿAlī b. Abī ʿl-Ridjal, known to Europeans as Haly Aben Ragel or Abenragel or even Albohazan, author of popular astrological writings widely circulated in the East and the West. Attributed to him is *De electionibus* in 103 chapters (ms. Venice 1493, fols. 161-84; Thorndike, Cat., 734; on his work, see V. Stegemann, *Beiträge zur Geschichte der Astrologie I*, Heidelberg 1935).

As has been mentioned, the two main areas of judicial astrology considered in this article were widely known and practised in the mediaeval East and West. The principles which govern them derive from the observation and interpretation of the connections and interactions of stars. Knowledge of these connections constitutes the essence of astrological divination, of theurgy and of the talismanic art (cf. on this topic, Fahd’s contribution to vol. vii of Sources Orientales, entitled *Lettres et sorciers en Islam*, Paris 1916, 157-204; summarised in *Encyclopedia of Religion*, art. *Magic*, reprinted in L.E. Sullivan (ed.), *Hidden truths. Magic, alchemy and the occult*, New York-London 1989, 122-30).

Šāliḥ, Lūt, Šuʿayb and Mūsā. ʿIbrāhīm is one of his following (ṣādiq) (XXXVII, 81). He is the perspicuous admonisher (nasīr mubnān, XI, 27; LXXI, 2), the rasūl amīn “the true messenger of God” (XXVI, 107), the ʾabd Shaykh, “the grateful servant of God” (XVII, 3).

God enters into a covenant with Nūh just as with Muhammad, ʿIbrāhīm, Mūsā and ʿĪsā (XXXVII, 81). He is the perspicuous ʿIsmāʿīl, Lūt, Šuʿayb and Mūsā. ʿIbrāhīm is fond of seeing himself reflected in the mouth of Nūh things that he would himself like to say and into the mouths of his opponents what he himself has heard from Nūh’s opponents. Nūh is reproached with being only one of the people (X, 72-4). God should rather have sent an angel (XXIII, 24). Nūh is wrong (VII, 58), is lying, deceiving (VII, 62), is possessed by ʿqīn (LIV, 9), only the lowest join him (XI, 29; XXVI, 111). When Nūh replies: “It is grievous to me, that I should live among you. I seek no reward, my reward is with God (X, 72-4; XI, 31); I do not claim to possess God’s treasures, to know his secrets, to be an angel and I cannot say to those whom ye despise, God shall not give you any good” (XI, 31-3), we have here an echo of Muhammad’s defence and embarrassment about many of his followers. The Kurʾānic pictures as events follows: God sends Nūh to the sinful people. Sūra LXXI, which bears his name, gives one of these sermons threatening punishment for which other analogies can be found. The people scorn him. Allah commands him to build an ark by divine inspiration. Then the “chaldron boils” (XI, 42; XXIX, 13, 14) is probably based on Gen. ix. 39, which says Nūh lived 950 years in all. When Nūh bIDS the waters be still, the ark lands on mount Ḍūqī (q.v.), XI, 27-51.

Not only Noah’s son but also his wife (with Lūt’s wife) are sinners (LXVI, 10). From the union of Kabil’s and Shith’s descendants it becomes a romance. It greatly, and in al-Kisāʾ it becomes a romance. From the union of ʿIbāl’s and Shīth’s descendants arises a sinful people which rejects Nūh’s warnings. He therefore at God’s command builds the Ark from trees which he has himself planted. As he is hammering and building the people mock him: “Once a prophet, now a carpenter?” “A ship for the mainland?” The Ark had a head and tail like a cock, a body like a bird (al-Thālābi). How was the Ark built? At the wish of the apostles, Jesus assures Sām (or Hām) b. Nūh from the dead and he describes the Ark and its arrangements in such a way that the quadrupeds, in the next the human beings and in the top the birds. Nūh brought the ant into the Ark first and the ass last; it was slow because Iblīs was clinging to its tail. Nūh called out impatiently: “Come in even if Satan is with thee”; so Iblīs also had to be taken in. The pig arose out of the tail of the elephant and the cat from the lion. How could the ox exist beside the lion, the goat alongside the wolf, or the dove beside the birds of prey? God tamed their instincts. The number of human beings in the Ark varies in legend between seven and eighty. ʿUḏī b. ʿAnāk was also saved along with the believers. ʿIbāl’s race was drowned. Nūh also took Adam’s body with him, which was used to separate the women from the men, for in the Ark continence was ordered, for man and beast. Only Hām transgressed, and for this was punished with a black skin. The whole world was covered with water and only the Haram (in al-Kisāʾ), also the site of the sanctuary in Jerusalem) was spared; the Kaʿba was taken up into heaven and Diḥrīl concealed the Black Stone (according to al-Kisāʾ, the stone was snow-white until the Flood). Nūh sent out the raven, but finding some carrion it forgot Nūh; then he sent the dove, which brought back an olive leaf in its bill and mud on its feet; as a reward it was given its collar and became a domestic bird. On the day of ʿAshūrāʾ every one came out of the Ark, men and beasts fasted and gave thanks to God. There are many contacts with the Haggada: the (different, it is true) partitioning of the Ark, Nūh’s anxiety about the animals, Hām’s sin and punishment (Sanhedrin, 108a-b). The story that the giant ʿOg escaped the Flood is also taken from the Haggada [see ʿOṯī b. ʿAnāk, But Muslim legend goes farther than the Bible and Haggada in depicting Muhammad, who sees himself in Nūh.

Continuing the anti-Shi'i reaction which marked the end of the reign of Nuh's father Nasr [q.v.], the early years of the new reign were dominated by the wars of the Seljuqs and the Fatimids. The Qawm al-Haram, led by Sunnil fath Abu 'l-Fadl Muhammad Sulami, but very soon, ominous signs of decline began to appear in the state. There were revolts in the tributary kingdom of Khurāsān [q.v.] and in Khurāsān under its governor Abū ʿAlī Ǧahānī, whom Nūh attempted to replace by the Turkish command-er İbrahim b. Simджūr. In 335/947 Abū ʿAlī succeeded in temporarily placing on the throne at Aṣṭān Suqmandr İbrahim b. Slđur. In 335/947 the Amir al-Rady (“the Well-armed”) became the dominant role in the state and in external warfare during Nuh’s reign, with the army often going unpaid and the subjects complaining of increased taxation. When the army mutinied at the end of Nuh’s reign, with the army often going unpaid and the subjects complaining of increased taxation burdens. Hence Nūh left to his son and successor Abū al-Malik a divided and disaffected kingdom, whose fortunes since no subsequent amirs were able to restore.

**Bibliography:** The main primary sources are Gardizi and İbn al-Athir, both utilising material from the lost Tarżik Waṭi Khurāsān of Sallāmī; and Nārgahlī, Taʻṣīk-i Bukhāra, tr. Frye, 97-8. **NUH (II) b. MANSUR b. NŪH, Sāmānīd amīr initially in Transoxania and Khurāsān, latterly in the first province only (366-87/977-97), given after his death the honorific al-Amir al-Rady (“the Well-armed”).**

The last of his line to enjoy a reign of any significa-nt length, Nūh succeeded his father Mανşur (I) [q.v.] at the age of 13, real power being in the hands of his mother and the vizier Abu ʿl-Husayn Ǧubayrī and the great military commanders, such as Abu ʿl-Hasan Simджūrī and his son Abū ʿAlī, Fāʾıḥ Khāṣṣa and Tāḥ. Warfare against the Büyids went badly, and only the death in 372/983 of Abū ʿAlī’s vizier prevented a Büyid invasion of Khurāsān. In the confusion, Abū ʿAlī secretly connived with Bughra Khān Hārūn, chief of the Turkish Karakhānids in the steps to the north of Transoxania [see tēr-khānīs], the partition the Sāmānīd kingdom, with Abū ʿAlī’s warlord the land south of the Oxus. Bughra Khān entered Bukhāra in 372/982, but soon withdrew. With Khurāsān also out of his control, Nūh remained ruler of the Zarafshān valley only, and in 383/993 he called in Sebūktīgīn [q.v.] from Ghazna [see Ǧanzənawīdīs] against Abū ʿAlī and Fāʾıḥ. Sebūktīgīn and his son Mahmūd [q.v.] established themselves in the former Sāmānīd dominions, now threatened by a further Karakhānī invasion from the north, but in 386/996 Sebūktīgīn and the Ghurids managed to make an agreement whereby the latter took over the whole basin of the Syr Darya, whilst Sebūktīgīn became master over Khurāsān. Nūh himself died in Radğab 387/July 997, with the final end of Sāmānīd rule in Transoxania only two years away.

(Č. E. Bosworth)

**NUH b. MUŞTAFA, Ottoman theologian and translator,** was born in Anatolia but migrated while still quite young to Cairo where he studied all branches of theology and attained a high reputation. He died there in 1070/1659. He wrote a series of theological treatises, some of which are detailed by Brockelmann, II, 407-8, S II, 432. His most important work, however, is his free translation and edition of Şahrastānī’s celebrated work on the sects, his *Terjemane-i Milal we-nihal* which he prepared at the suggest-}
metathesis. Also found are the terms nuhâd, nihâd, sur-kâd, and it is sometimes nicknamed râhu ‘l-md*khdb, and it is sometimes nicknamed rahu, as in Dozy, Supplement, ii, 19), the paralysis disappears. Hot tdlikun dipped in water drives flies off and prevents

According to Islamic law, consumption of the flesh of the flamingo is permitted; it is said to be, apparently, quite agreeable, not tasting excessively of copper (Cu). Known metals. The word is evidently common to all Semitic languages: Hebrew n’hâa’d, Aramaic n’hâfa’t, Ethiopian n’hbes; the Greek word χαλλυς appears in transliteration as khalkus. Because the alchemists wanted the materials they used to be kept secret, there exist many pseudonyms for copper, which moreover were often changed and are for the greater part incomprehensible. The alchemists attach it to the planet al-Zuhara, i.e. Venus (see the survey in E. Wiedemann, Aufsätze zur arabischen Wissenschaftsgeschichte, ii, 603-4). Most of these pseudonyms cannot be defined unambiguously; they certainly do not only indicate pure copper but also copper minerals such as primary ore, secondary products of erosion or sedimentary formations. According to al-Bûnî, copper is called in Greek khalklos, in Syriac n’hâsad, in Arabic al-nuhâd, al-miz; in (‘Irak and Khurasan) and al-kür (i.e. brass) (K. al-Dimashkî fî ma‘rifat al-djianahîr, Haydarâbâd 1355/1936, 244-5). Shams al-Dîn al-Dimashkî distinguishes three kinds of copper: the red-white Greek one (rûmî), the red and dry Cypriot one (kubrus) and the blood-red one from Sus (in Khûzistân). He describes the extraction as follows: the quicksilver in the quarry having attracted and absorbed the sulphur, the heat in the quarry causes the sulphur to dominate the quicksilver; after that, the mass is transformed into a red rock which has a pungent taste. Fire or a long stay in the earth occasionally makes it slate-like, occasionally it oxidises into verdigris (zîndîj), or it acquires a surplus of sulphur in the quarry and then becomes antimony (rîndîjâdîg), which is pulversised to obtain the collyrium called râkûkhîq. Dipped several times in boiling mercury, it takes on a golden colour. A needle, sickle, knife or sword made from copper thus treated and dipped in the blood of a billy-goat (dam al-tays) causes incurable wounds, and the sickle prevents the herb from growing (al-Dimashkî, Nûkhbât al-dahr, ed. A.F. Mehren, Leiden 1874, repr. Amsterdam 1964, Ar. text 54, tr. 59-60).

Of primary importance for Arabic mineralogy became the so-called “Book of Stones of Aristotle”. Its influence can be perceived not only from the great number of manuscripts but also through the rich secondary tradition. In J. Ruska’s edition, Das Steinbuch des Aristoteles, the “stone” copper is described under no. 59, where the best among the numerous kinds of copper is said to be the red one, mixed with black. Verdigris (zindjir) is explained as a green substance hidden inside this kind of copper, which can be extracted by the use of vinegar. When brass (suf) is cast and vitrified (zâb) and rendered opaque, some others are added, something emerges which resembles gold and is solid as if it were gold. Food and drink taken from a brass vessel are harmful, occasionally lethal. If a victim of facial paralysis (laktûs) enters a darkened house and looks at himself in a mirror made of jâlûkân (a copper alloy = mêtallikûn, hardly xâthûlûn as in Dozy, Supplement, ii, 19), the paralysis disappears. Hot jâlûkân dipped in water drives flies off and prevents
eyelashes from growing again after they have been depilated with a pair of tweezers. For these qualities of the hair, which is also called "Chirning iron" (khānīn, hadīd sinī), see also J. Rusk (tr.), Das Steinbuch aus der Konsommgraphie des... al-Kazvinī, Kirchhain, N.L. 1896, 28, and M. Ullmann, Die Natur- und Geheimwissenschaften im Islam, Leiden-Cologne 1972, 409 f.

Special healing properties were of old attributed to "burnt copper" (as islam), see Dioscorides, De materia medica, ed. M. Wellmann, v, 76, xαvαυρός y ναυδαρυκτας Arav. tr. ed. Ducreux and Térel, v, 59, al-nukkār, tr. hur-mukhār: this copper preparation possesses astrigent, dehydrating, diluting and purifying power and scars sores. Taken with honey, it is an emetic. This copper is made from nails coming from destroyed or sunken ships. The nails, sprinkled with sulphur and salt, are made white-hot in a kiln inside a closed melting-pot made of clay. According to the description, the ḍāṭo of Dioscorides (Greek text v, 102, Arab. tr. sūr, v, 84) is also a product of the copper quarry and resembles burnt copper.

Al-Tamimī describes how copper ore, set aglow in a kiln, disintegrates into its components, among which is copper; in the Niğhpırl region a copper quarry is said to exist, from which turquoise (faṛūzād) was extracted at the same time and therefore said to be a "copper-like" substance; next, al-Tamimī develops a theory on the nature of verdigris (see J. Schöfend, Über die Steine. Das 14. Kapitel aus dem "Kitāb al-Murid" des Tamimī, Freiburg 1976, 57, 81, 119).

According to the hadīsd al-islām, tr. Minorsky, there were layers of copper in the mountains of Bārzūdān in the province of Kirmān (65), in Farghana (115-16), Georgia (68), Kirmān (124), Sardān (Fārs), (129), Spain (154) and Tūs (103). Elsewhere, too, Persia is mentioned as the most important land of copper export: from Sardān it was exported to Basra and other places the first appearance of the Nukkar sect at the end of the 5th/11th century by Abu Zakariyya al-Ṭabarī, 13, § 168, n. 2, A.H. 14, § 11, (a) (with n. 3), 20; L. Massignon, in MIFAO, xxvii (1953), 51, 53; A. Musil, The Middle Euphrates, New York 1928, 39, n. 31; n. 32, 247, 329. (E. HONGMANN)

AL-NUKKĀR (AL-NAKKĀRA, AL-NAKKĀRĪYYA) "deniers": one of the main branches of the Khāridjī sect of the Ibadīyya sect [q.v.]. The existence of this sect has already been proved by E. Masqueray, A. de C. Motylnski and R. Strohmmtt; cf., however, the opinion of G. Levi della Vida, according to whom al-Nukkār is simply "an insulting epithet applied to Khāridjīs in general" [see supers]. The name al-Nukkār comes from the fact that the members of this sect refused to recognise the second Ibadī imām of Tāhārī, Ṭabī al-Wahlāb b. Ṭabī al-Rahmān b. Rustām [see rustamīds]. The other names given to this sect are: 1. al-Yazidiyya, from the name of the later name, which was used in the name of this sect: 2. Abū Ablāb b. Yazīd al-Fazārī al-Ibadī (cf. below), to be distinguished from another Ibadī sect which bears the same name and was founded by a certain Yazīd b. Anīsā. 2. al-Shaḥīyya; we believe this name should be derived from that of Shuʿyabī b. al-MuʿArrif (see below), 3. al-Mulhida (to be distinguished from another Muslim sect of this name = al-Bānishīyya), 4. al-Nukkādī (al-Nakārdī), the nīsāb from this name is al-Nakākī. 5. al-Naskṭiyūsa (and not as Strohmmtt writes it, Berber und Idāfīden, 274, n. 4). 6. Mistāun; this last name, which seems to be Berber (perhaps to be connected with the Berber tribe of Mεστa, mentioned by Ibn Khaldūn, Historie des Berberes, i, 182) was with the Nukkār the most used.

The Ibadī historical tradition of North Africa, fixed towards the end of the 5th/11th century by Abū Zakariyyā b. Vāyabī b. Abū Bakr al-Wargānī [q.v.], places the first appearance of the Nukkārīyya in the 13th century. The time of the election of Abū al-Wahlāb (in 16/784-5, according to Ibn Abīdhī, al-Bayān al-mughrīb, tr. Fagann, Algers 1901, 283), and names as the founder of this sect Abū Kūdāma Yazīd b. Fendīn al-Franī, who was later joined by a learned dissenting Ibadī from Cairo, Shuʿyabī b. al-MuʿArrīf. According to this tradition, the origins of the Nakkārī sect are closely connected with the Maghrib. On the other hand, from information supplied by the Ibadī theological

AL-NUKHAYLA, a town in 'Irāk, near al-Kūfā. It is known mainly from the accounts of the battle of Kādissiya [q.v.]. From the statements collected by Yākūt regarding its position, it appears that two different places of this name had later to be distinguished, namely one near al-Kūfā on the road to Syria, which is several times mentioned in the time of the caliphs ʿAlī and Muʿāwīya, and another, a waterfront station between al-Mughūthah and al-ʿAkaba, 3 mīls from al-Ḥufayr, to the right of the road to Mecca. Several encounters took place there during the second battle of Kādissiya, uging to Abū Kāblī in al-Bakrī, this al-Nukhayla was in the Syrian seat at al-bābīya). Ibn al-Fakīh also seems to be thinking of this region. Gaetani assumes that the reference in both cases is to the same place on the edge of the desert. According to Musil, it perhaps corresponds to the modern Kān Ibn Nukhaybat about 22 km/14 miles S. S. E. of Karbalā and 64 km/40 miles N. N. W. of al-Kūfā.

works, one may judge that there were other founders of the Nakkar sect in addition to Ibn Fendln and Shu’ayb. They are mentioned in a risala of Abū ‘Amr al-‘Azm (d. ca. 171/784-5), a member of the Banu ‘Abbās al-Shurd, who lived earlier than the 5th/11th century and refuted the Nakkarl doctrines in his various works.

Among the fugitives was Shu’ayb, who settled in Tripolitania. It was at this period that the complete rupture occurred between the Nukkar and the Wahhī section of the Ibadīyya, followed immediately by a bara’ or excommunication of Shu’ayb and his followers by the Wahhī doctors.

Soon the Nakkārī propaganda became very active, but it was not till the end of the 3rd/9th century, after the fall of the imāmat of Tāhert (in 296/908-9) and the establishment of the dynasty of the Fātimids in the Maghrib, that the Nukkarī acquired a preponderance among the Ibadīs of North Africa. The whole of the south of Tunisia and Algeria, from the Dījal Nūfūsa [q.v.] to Tāhert, became Nakkārī. The historians speak of a vigorous propaganda by the Nukkarī, the centres of which were the principalities of Tripolitania, the Dījal Awrās and the island of Djarba. As a result of this propaganda several Wahhī Ibadī districts were converted to the new sect. The Nakkārīs organised an imāmate separate from that of Tāhert. We know the name of a Nakkārī imām who lived towards the end of the 3rd/9th century: Abū ‘Ammār Abū ‘l-Hamīd al-Qāmī. It was his disciple Abū Yazīd Maḥmūd b. Kavdād [q.v.] who in the first half of the 4th/10th century was the leader of a formidable Nakkārī rising in the Maghrib, which almost succeeded in its endeavour to destroy the Fātimid state. Abū Yazīd was elected by the Nukkarīs in the Dījal Awrās as ‘the shaykh of the true believers’, Abū ‘Ammār giving place to him (in keeping with the teaching on al-asfāl). He tried to put into practice the teachings of Ibn Fendln; he formed a council of twelve members called asfālīn who were to rule in conjunction with him, the Nakkārī imāmate. But later he associated himself with the Khāridjī extremists by authorising iṣṣīrād [q.v.] or religious murder on the model of the Azrākīs [see AZĀRĪKA].

After the defeat and death of Abū Yazīd, the influence of the Nukkar diminished and several tribes went back to Wahhīsm. Nevertheless, the Nakkārīs again took part in the general rising of the Wahhīs against the Fātimids in 358/968-9 and later in 431/1039-40 we find them mentioned in connection with a great rising of this sect on the island of Djarba. In the 6th-8th/12th-14th centuries they are again mentioned in the district of Yefren to the east of Dījal Nūfūsa, on the island of Djarba, among the Banū Warghamma in southern Tunisia, and in the oases of Bilād al-Dījarī, Rīgh and Wārdīljīn. Remnants of the Nakkārī sect have survived in modern times. In a document of the 19th century, and according to A. C. de M. Cytoliński, Nukkar could be found ca. 1900 on Djarba and in Zawāgha.

Thanks to the exposition given by Abū ‘Amr, we are acquainted with the main principles which separated the Nukkar from the Wahhī Ibadīs. They number seven. Besides the doctrine regarding dhāri, mentioned above, a fundamental tenet of the Nukkar was their thesis that the names of God are created. Another Nakkārī tenet concerns the relations of man and woman. For other details of their teaching, see al-Barrādī, Khāt al-Dījarāh al-muntakābī, Cairo 1302, ii, 171-2.

Several Wahhī Ibadī theologians refuted the Nakkārī teachings in their works, some of them quite early. For example, al-Barrādī mentions the refutations of the thesis of Abū ‘Amr in his ‘Azm and Shu’ayb books, and al-Barrādī’s ‘Azm is named Abū ‘Amr al-Rabābī [q.v.] (Khāt al-Dījarāh, 172) and al-Wisāyīnī mentions a scholar of Sāḥil in Tunisia named Muhammad b. Abī Khālid who lived earlier than the 5th/11th century and refuted the Nakkārī doctrines in his various works.

AL-NUKKAR — NUKTAWIYYA

AL-NUKRA, a plain west of the Djabal Hawrân on the border of Trachontis in Transjordan. The name al-Nukra ("the cavity") is quite Jordan. The name al-Nukra belongs to the whole northern half of modern Jordan. In the wider sense, al-Nukra includes all the country from al-Ladjâ, Djaydur and al-Bal'à to the foot of the Djabal Hawrân, in the narrower sense only the southern part of this; in any case it stretches from al-Sânâmâyân to the Djabal al-Durât (Hawrân). To al-Nukra it is said that the whole northern half of modern Jordan.

In 1910, E.G. Browne published a work entitled Kitâb-i Nuqtatu 'l-Kâtî, a Persian history of the early Bâbî movement, based on a "unique" manuscript (Suppl. persan 1701) in the Bibliothèque Nationale. This manuscript had been bought by the library in 1884, in a sale of books belonging to the late Comte de Gobineau. Authorship of the history was ascribed to the Bâbî leader Subh-î Azal [q.v.] to Hadjdjî Mirzá Dânjî, a Kashan merchant killer. Browne's text soon became the centre of a controversy that still continues. The Bâbâ'î leader, 'Abbâs Effendi 'Abd al-Bâhî, maintained that the work was a forgery produced by the Azâli Bâbî. This thesis was developed by the Bâbâ'î scholar Mirzá Abu 'l-Faḍl Gulpaygânî and his nephew Sayyid Mahdî in their Kašf al-ğidâ and, more recently, by H.M. Balyuzî. While this conspiracy theory is clearly unfounded, internal evidence suggests that the history was not written by the author, Mirzá Dânjî. Recent conjectures favour authorship by his son or nephew, possibly in collaboration with a brother, using notes prepared by him. Some version of the Nukât al-kâtî served as the basis for the later Bahânî Târîkh-i Dâjjîd and its recensions. In spite of the controversy, there can be no doubt that the Nukât al-kâtî remains one of the most important sources for the early history of Bâbism.

The designation Nuktawiyya is said to be taken from the doctrine that earth is the starting point (nukta) of all things, the remaining three elements being derived from it; the term may also refer, however, to the use of two, three, or four dots, variously arranged, as cryptic abbreviations in the writings of the sect. The designation Mahmûdiyya is also encountered, this being derived from the name of the founder, Mahmûd Pasîkhânî. Born at the village of Pasîkhân near Fûman in Ghân, Mahmûd followed Fâdî Allah Astarâbâdî (d. 796/1394), the founder of Hûrûfism, until he was expelled from the movement for alleged arrogance (hence the epithets Mahmûd-i marâdî "Mahmûd the rejected" and Mahmûd-i mâradî "Mahmûd the banished"). He is said to have proclaimed himself the Mahdî and the bringer of a new dispensation in 800/1397, i.e. at the beginning of the 9th Islamic century. Virtually nothing is known of his life other than that he was still residing in Astarâbâd in 818/1415 when he finished the writing of one of his books, Qâsâs al-îsh'îrân. He died in 831/1427-28, supposedly a suicide, having cast himself into the waters of the Aras, but this is dismissed as a calumny by the Nuktawîs themselves.

Mahmûd Pasîkhânî is said to have written sixteen books and 1,000 treatises (naskha) in exposition of his doctrines; none of these has ever been published in full (for extracts from his principal work, Mizân, see, however, Râsîh Râdâ-zâda Malik's notes to his edition of Kaykhursaw Islândîyâr, Dâbistân-i mardâghib, ii,
It was during the reign of Shâh Ismâ’îl I that the Nuktawi movement first surfaced, significantly enough in the village of Angjudân near Kâshân, a principal centre of post-Âlamûr Nizârî Ismâ’îlîsm. Shâh Tâhir, thirty-first Imâm of the Muhammad-Muhammad-Shâhî Nizârî line, is reported to have so angered Shâh Ismâ’îl by gathering around him in Angjudân Nuktawîs and other religious deviants that he had to flee precipitously to India (Mâ’sûm ’Alî Shâh Shârâzî, Tarâk’ al-bâka’î, ed. Muhammad Djâfar Mâhjudb, Tehran 1339 AH /1960, iii, 136). Another instance of Nuktawi- and Ismâ’îlî symbiosis is provided by Murûd Shah Shâhâbî, thirty-first Imâm of the Kâsim-Shâhî line, whose combined Nuktawi and Ismâ’îlî following in Angjudân was broken up by Shâh Tâhmâsp in 981-2/1573-4 and who was himself put to death (Ahmad Thattawi, Ta’rikh-i Afî, cited in Kiya, 36). Mention may also be made of two poets: Wûkî’i of Nîghâpûr whose beliefs are said to have been intermediate between Nuktawism and Ismâ’îlîsm (Kiya, 35), and Abu ’l-Kâsim Muhammad Khâpâyî’s Amrî Shirâzî, who praised two of the Kâsim-Shâhî Imâms in his Dîwân and may have been a crypto-Ismâ’îlî (W. Iwanow, A guide to Ismâ’îlî literature, London 1933, 108).

Amrî Shirâzî first came to the fore in the time of Shâh Tâhmâsp, who entrusted him with the administration of awkûf, belonging to the Haramayn but located in Persia, and who also employed his brother, Mawllânà Abu Turâb, famed as a master of the occult sciences, as court calligrapher. Denounced for heresy in 972/1565, the brothers were blinded and went into seclusion. In 984/1576, the last year of Tâhmâsp’s reign, still more Nuktawîs were apprehended in Kâshân; they included the poet Hayâtî, who was jailed for two years in Shirâz before making his way to India.

Other centres of Nuktawi activity were developing meanwhile in Sâwâ, Nâ’in, Isfahân and—most importantly—Kazân. Nuktawism was propagated in Kazân by Darwîsh Khûrsaw, the son of a well-digger, who had gone to Kâshân to learn the Nuktawi doctrines and established his headquarters in a mosque on his return. Denounced by the ‘alamàd, he was interrogated by Shâh Tâhmâsp but giving suitably evasive answers was released with instructions no longer to hold forth in the mosque. On the death of Tâhmâsp, he was treated with such success that he was able to build a takîya which came to house two hundred of his followers. Despite a further round of executions of Nuktawîs in Kâshân in 994/1586 which numbered among its victims two musicians, Âfîd Dâ-‘târî and Mir Bighâm, Darwîsh Khûrsaw remained unmolested throughout the reigns of Ismâ’îl II and Khudâbânda into the early years of rule by Shâh ‘Abbas I.

Shâh ‘Abbas began by establishing a friendly and even intimate relationship with Darwîsh Khûrsaw, and was even initiated into the Nuktawiyâ, with the grade of amîn, by Darwîsh Turâb and Darwîsh Kamâl Iklîdî. The Şafawî chroniclers (e.g. Iskandar Bûg Munghî, ’Alâm-ârî-yî Abbâsî, Tehran 1350 AH /1971, i, 444), followed by most later historians, maintained that Shâh ‘Abbas cultivated the Nuktawîs only as a means of service, but on the contrary it had a genuine interest in their teachings. They had already attempted to proclaim Shâh Tâhmâsp as the Mahdi, and when they made a similar connection between their chiliasm theories and the person of Shâh ‘Abbas, he may well have contemplated the possibility of using Nuktawism as a new ideological basis for the Şafawî state. It seems probable at the
very least that his lifelong disregard for religious pro-

Mass arrests and executions of Nuktawi then ensued in other cities, including once again Kâshân, where the discovery of a list of leading Nuktawi adherents, including the brother of the poet Mir Sayyid Ahmad Kâshî permitted the sect to be uprooted from the area once and for all. Shah ‘Abbâs personally beheaded Kâshî when he was in the midst of reminding concerning a previous existence, and then deftly bisected his headless trunk before it fell to the ground. He had a further confrontation with Nuktawi during his pilgrimage to Maqshad in 1010/1600-1; he discovered that his caravan had been infiltrated by his erstwhile initiators or rebels; the sect, and they were accordingly put to death in the caravanserai at Izârâsh. The last Nuktawi to be executed during the reign of Shah ‘Abbâs was the astrologer Mullâ ‘Alî, put to death in 1020/1611.

Although curiously enough the Nuktawi continued to regard Shah ‘Abbâs as one of their own, discounting his hostility to them as a sign of immaturity, many of them found it prudent to take refuge in India. These refugees were instead endowed a great deal of respect by the Mughal emperor, he who moved Akbar to write a letter to Shah ‘Abbâs, fruitlessly urging on him the merits of religious tolerance. The emperor Dâhângir did not entirely turn his back on the Nuktawls, but their visible presence in India did not last long.

A brief resurgence of the Nuktawi movement took place in Persia during the reign of Shah Safi I. In Kâzâvin, a certain Darwish Ridâ who claimed alternately to be the Mahdi and his deputy gathered a vast following that allowed him to seize control of the city. The movement was bloodily suppressed and Darwish Ridâ himself was beheaded in 1024/1615. His followers found favour with the Mughal emperor and assisted him in the formulation of his imperial cult, the Dîn-i Lâhî. One of their number, Mir Sharîf Âlmî, even sat on the nineteen-member committee that elaborated the cult. It is possible, too, that Akbar’s chief confidant, Abu ‘l-Fadl Âllâhî, had Nuktawi sympathies; a letter from him was found among the papers of Mir Sayyid Ahmad Kâshî, and it was he who moved Akbar to write a letter to Shah ‘Abbâs, fruitlessly urging on him the merits of religious tolerance. The emperor Dâhângir did not entirely turn his back on the Nuktawls, but their visible presence in India did not last long.

This marked the end of the Nuktiawiyya as a movement with insurrectionary capabilities. Some thirty years later, Raphael du Mans remarked on the presence in Iṣfâhân of a ragged group of dervishes known as Mahmûdis (Estat de la Perse en 1660, ed. Ch. Schefer, Paris 1890, 87-8), but they were evidently too insignificant to warrant suppression. Despite its impressive longevity in the face of repression, the Nuktawi movement never had a chance of long-term success, being composed almost entirely of artisans and literati in an age when the application of tribal power was decisive (the Ustâdji chieftain Budak Din-ghî was the sole member of the Safavid military aristocracy whom the Nuktawls were able to recruit).

A few vestiges of the Nuktiawiyya can nonetheless be traced in post-Safavid Persia. According to Muhammad ‘Ali Nâzîm al-Shârî‘a, Sayyid Muhammad ‘Ali the Bâb was taught the doctrines of Nuktawism during his confinement in Mâkû and incorporated them directly in his Bayân (Hadîdî muhammad, quoted in Kârâghûzî, Naghâ-î izzatî ‘in banândî’-î Nuktiawiyya, 38). This is unproven, but there
are undeniable similarities between Nuktawism and Bábism: a belief in metempsychosis, a fixation on the outward and the return journey. The reform of Fatimid doctrine undertaken by al-Mahdi immediately on proclamation of the caliphate in 297/310. This would, moreover, explain his rapid rise from being the modest judge-in-chief of al-Mansur b. Hayyān, as soon as he had arrived in al-Mansuriyya, to the chancery where a nomination patent was made out appointing him (khādji) kādālī in an office whose exact nature is unknown. The speed of his adhesion to the doctrine of the Shī‘a, as being undoubtedly the father of al-Nu‘mān and of consequently converting Muhammad b. Hayyān into Muhammad b. Hayyān.

Thus al-Mu‘izz’s famous judge seems to have been raised and educated in the doctrine of the Ahl al-Bayt by a father who had already long been won over to Shī‘ism, before the proclamation of the Fatimid caliphate in 297/310. This would, moreover, explain his rapid rise from being the modest kāfī of a province, Tripoli, to the highest office of supreme kāfī in 336/948. It was in fact from that town that the Fatimid caliph Ismā‘īl b. Manṣūr [q. v.] summoned him to his new capital, al-Mansūriyya, just after his triumph over the Kharidjī rebel Abu Yazīd [q. v.], the famous ‘man on the donkey’, in order to appoint him to this high office, in conditions which al-Nu‘mān himself describes in his Kiāb al-Madžlis wa l-musayrat: ‘Al-Nu‘mān, as soon as he had arrived in al-Mansūriyya, was solemnly invented one Friday by the caliph, who awarded him robes of honour woven in the royal workshops and ordered him to proceed immediately to Kayrawān, since al-Mansūriyya had not yet got a mosque which could allow him to lead the Friday worship in an agreed dāim’ and to give the kāfī a negative meaning.”

Al-Nu‘mān’s elevation to the most coveted position amongst the body of fākhs thus coincided with the consolidation of the state and of Fatimid power, after the crushing of Khāridjīsm, as also with the ensemble of the Sunnī party and the deterioration of relations between the central organisation of the Ismā‘īlī da‘wa at al-Mansūriyya with the Karmāšī of Bahrayn. The reform of Fatimid doctrine undertaken by al-Mahdi was only immediately on proclamation of the
caliphate, with the obvious aim of adapting Isma‘ilism to the realities of Kayrawān orthodoxy in order the better to create a state madhhab, became more pronounced during the last years of al-Mansur’s reign and became stronger all through the twenty years’ reign in Ifrīkiya of al-Mu‘izz. Al-Nu‘mān’s designation thus came at a specific moment when the supreme kādi was to have a prime role in the elaboration of the state doctrine. Whilst holding his office and giving to the position of kādi an exemplary image both by his own competence and by his high moral qualities, al-Nu‘mān was also to distinguish himself by his role as a fertile author who was to have the merit of constructing a juridical and doctrinal system accessible to the masses of Ifrīkiya. From now onwards, he was to owe his fame to the elaboration and the teaching of a simplified and moderate doctrine (samā‘ al-hikma), at the same time giving to the office of kādi ‘l-kuddūs amongst the Shi‘is the weightiness and effulgence which a Saḥḥān [q.v.] had given to the Mālik kādi2 a century earlier.

The exercise of his judicial function was to entail, for al-Nu‘mān, a didactic task. Since his high office meant that he was to fulfil, at the side of the Imam, the role of theoretician of Isma‘ilism with those of the texts which he elaborated, al-Nu‘mān wrote under his ultimate direction. For the construction of a juridical and legal system accessible and compatible to the universalist concept of the imāmate. Thus if the Isma‘ili supreme kādi offered the same image of simplicity and modesty, with the additional technical and moral qualities inherent in his office, as did the Sunni kādi ‘l-kuddūs, he nevertheless lived and worked within a total dependence of power. He ceased to be the mouthpiece of the ‘umma, the censor of the palace, listening to the sovereign and feared by the aristocracy. In this way, various texts contributed to the image of the figure of the supreme judge, who became in the Fātimid state an official personage, a man of law caught up in the service of a cause, that of the Ahl al-Bayt. Yet as a consummate theologian, a highly literate author and an official with recognised moral and technical qualities, al-Nu‘mān has the merit of being known as one of the most famous representatives of the Mālik and of preserving for the high office of kādi its dignity and lustre.

F. Dachraoui

AL-NU‘MĀN B. BASHĪR AL-ANSĀRĪ, Companion of the Prophet and governor of al-Kūfā and Hims. According to the K. al-Himma, the Fatimid jurist and author, al-Nu‘mān, the Fatimid jurist and author, was one of the most distinguished of the Companions, and his mother, ʿArʾamait Rawḥa, was the sister of the much-respected ʿAbd Allāh b. Rawḥa [q.v.]. After the assassination of ʿUthmān, al-Nu‘mān, who was devoted to him, refused to pay homage to Abī Ali. According to some stories which seem rather apocryphal, he brought the bloodstained shirt of the caliph, according to others, the fingers cut from the hand of his wife Naʿūla, to Damascus and these relics were exhibited by Muʿāwiya in the mosque. In the battle of Siffin [q.v.] he faithfully stood by Muʿāwiya and he was always a favourite with him while the other Anṣār were kept at a suitable distance from the Umayyad court. In the year 39/659-60 al-Nu‘mān, by order of Muʿāwiya, undertook an expedition against Mālik b. Kāb al-Arabī, who had occupied in ʿAtīs al-Tamr on the frontier between Syria and Mesopotamia and began to besiege it, but had to retire without accomplishing anything. Twenty years later he was given the governorship of al-Kūfā. He was not really fitted for this post, because his pronounced antipathy to Abī Ali and his followers did not suit the Shi‘ī population of the town. In addition, he did not conceal his sympathy with the Anṣār, who were attacked by
After Yazid had come to the throne in 60 Radjab/April 680, he nevertheless left al-Nu'man in office; but the latter did not long remain there. Al-Nu'man is described as an ascetic, and he knew the teachings of the Qur'an thoroughly. But his asceticism was not of the strictest type, and his interest in musical entertainments was regarded as evidence of lack of dignity. In policy he proved very tolerant so long as it did not come to an open rising. When Muslim b. 'Aqil [q.v.], al-Husayn's partisan, appeared in al-Kufa to ascertain the feelings of the people and he found a number who were ready to pay homage to al-Husayn, al-Nu'man adopted a neutral attitude and took no steps to check the vigorous propaganda. As a result, the followers of the Umayyads in al-Kufa wrote to the caliph and called his attention to the fact that the threatening situation demanded a man of vigour who would be able to carry out the government's orders, while al-Nu'man, out of real or feigned weakness, was letting things take their course and only urging people to keep calm. When Yazid was discussing this with his councillors, notably the influential Ibn Sardjun, the latter showed him a document signed by Mu'awiya shortly before his death, containing the appointment of his nominal successor, the Banu 'Abd al-Baqi' b. 'Ubayd Allah b. Ziyad [q.v.] to the same office in al-Kufa. In spite of his antipathy to the proposal, Yazid carried out his father's wish and made 'Ubayd Allah governor of al-Kufa without removing him from his post in al-Asra', whereupon al-Nu'man hastened back to Syria. When the people of Medina rebelled at the beginning of the year 63/682 and drove all the Umayyads out of the town, Yazid wished to see what tact would do before resorting to arms and sent a mission to Medina under al-Nu'man to show the people the futility of armed resistance and to bring them to their senses. The mission was also instructed to go on to Mecca to induce the stubborn 'Abd Allâh b. Zubayar to pay homage. Al-Nu'man's warnings and threats had no effect on his countrymen, however, and there was nothing left for the caliph but to subdue the rebels in the two holy cities by force of arms [see Mu'awiyah]. After the death of Yazid in Rabii' 64/Nov. 683, al-Nu'man, who had in the meanwhile become governor of Hims, declared openly for 'Abd Allâh b. Zubayar. In Dhul 'Hijja of the same year/July-Aug. 684 and Mu'harram 65/Aug.-Sept. 684, however, the latter's leading follower al-Dahhak b. Kayn al-Fihri [q.v.] was defeated at Marj Rahit [q.v.], and thus the fate of al-Nu'man was also decided. He attempted to save himself by flight but was overtaken and killed. According to the Arab historians, the town of Ma'arrat al-Nu'man [q.v.] takes its name from al-Nu'man b. Bashir.

Rot-
from Hira after sensing that Parwiz was in pursuit of him and took refuge with the tribe of Bakr. He nevertheless finally surrendered to Parwiz, who had him trampled to death by elephants.

Al-Nu'mân's death represented the virtual end of the Lakhmid dynasty which had lasted for some three hundred years, the shield of Persia against the Arabs of the Peninsula. A few years later, the tribe of Bakr won the historic encounter of Dhu Kar [q. v.] against the Persians and their Arab condederates. It was the precursor of al-Kâdisiya [q. v.] fought in 637, the battle that was to remove Sâsânid Persia from the stage of Near Eastern politics. Nun is also a name of the 68th sura [see QURDAN, SUAR].

### Bibliography

Iqwan Shaqado, NUMAYR b. AMIR b. Saâ'ââ, an Arab tribe (Wüstenfeld, Genael. Tabellen, F 1) inhabiting the western heights of al-Yamama and those between this country, the nature of which explains the rude and savage character of the Numayr. Their name like that of Namir and Anmâr borne by other ethnic groups (there are also in the list of Arab tribes a number of other clans with the name Numayr: among the Aq, the Tamim, the Dhu 'fi', the Harrân, etc.) is no doubt connected with nimr, namir [q. v.], the Arabian panther; we know the deductions made by Robertson Smith from this fact and from other similar cases, to prove the existence of a system of totemism among the early Arabs (Kinship and marriage in early Arabia, 234).

His theory is now abandoned.

The geographical dictionaries of al-Bakrî and Yâkût mention a large number of places in the land of the Numayr, especially their wells, and often even record a change of ownership from one tribe to another (e.g. Yâkût, Mu'âgan, iii, 802: the well of Qhisl, which formerly belonged to the Tamim clan of the Kulayb b. Yarbî, later passed to Numayr); this wealth of references does not, however, mean that the Numayr played an important part in the history of Arabia. It is only due to the fact that the country of the Numayr was the Bedouin in its scenery and lends itself to description by poets. The Numayr, besides, were much intermixed with the neighbouring tribes (especially the Tamim, Bâhîla and Kuxshayr) and the boundaries of their territory were rather vague.

The Numayr, a poor tribe without natural wealth, have always been brigands. The part they took in the pre-Islamic wars was a very modest one and they appear very rarely alongside of the other groups of the great tribe of 'Amir b. Saâ'ââ (they hardly played any part in the battle of Fayy-Rih against the Banu 'l-Hâri b. Ka'b and their allies, Nakàâ'd, ed. Bevan, 469-72). It is to this isolation that they owe the privilege of being known as one of the Dâmaata al-'Arab, i.e. a tribe which never allied itself with others (al-Mubarrad, Kamîl, ed. Wright, 372; Nakàâ'd, 946; Mašfaddalúsây, ed. Lyall, 841; on the different tribes to which the tribe of Numayr belongs see J. A. Green, 1972); the other designation of the Numayr "the Ahmâs of the Banu 'Amir", also gives them a special place within the great tribe from which they sprang; it indicates that they were thought not to have the same mother as the other clans of the Banu 'Amir (Mašfaddalúsây, 259, 12-15: 771, 2-4; the source is the Dâmaara of Ibn al-Kalbi, Brit. Mus. ms., fols. 120b-121a, now edited). Neither during the life of the Prophet, nor at the beginning of the caliphate, did the Numayr make any stir; they appear neither as partisans nor as enemies of Islam. It is only from the Umayyad period that the name begins to appear in histories, but only to record their insubordination to the central power or their exploits as brigands; in the caliphate of 'Abd al-Malik, their refusal to pay tribute brought a punitive expedition against them (al-Balâghâr, Futâh, 139; cf. Aghânî, xvi, 112-13, xix, 120-1). Another expedition of the same kind but on a larger scale was that sent against them under the famous general of the caliph al-Mutawakkil. It is also Al-kâlibî who, in 232/846, to put an end to their systematic plundering, it ended in the complete dispersal of the tribe (al-Tabârî, iii, 1357-63, a most interesting account of Bedouin customs including on p. 1361 a detailed list of the Numayr clans, only one of which, the Banû 'Amir b. Numayr, devoted itself to agriculture and grazing, while the others lived only by brigandage). It appears, however, that the Numayr soon resumed their old habits and another expedition was sent against them with the same object as the earlier ones in the 4th/10th century by the Hamdânî Sayf al-Dawla (Yâkût, iv, 378).

An event of little importance in itself has given the Numayr considerable fame in literary history, although little flattering to them: this is the satire directed against them by the poet Djarîr [q. v.] which is one of the most famous examples of the invective of the hidâjâ (especially the hemistich: "Cast down thine eyes: thou belongest to the Numayr"). The occasion of it was the unfortunate intervention of the Numayrî poet al-Râ'î in favour of al-Farazsdâk in the celebrated feud between him and Djarîr (Nakàâ'd, 427-51, no. 53: Aghânî, vii, 49-50, xx, 169-71, etc.). The memory of this quarrel survived for a very long time. It was probably no accident that the man who urged the arab Bughâ to the expedition against the Numayr was the great-grandson of Djarîr, the poet Umâr b. 'Akl b. Bîlâl b. Djarîr; the Numayrî moreover had slain four of his uncles (Ibn Kutayba, Shîrî, ed. de Goede, 284, where we must read Banû Ðînna [b. 'Abd Allâb b. Numayr] in place of Banû Dabba). The enmity between the family of Djarîr and the Numayr was probably revived by the proximity of the latter to the tribe of the poet, the Banû Kulayb b. Yarbî.

To the Numayr belonged notable poets—in addition to al-Râ'î and his son Djarîl—like Abu ûayya (in the early 'Abbâsid period) and Djirân al-Awâd whose Dhosn has been published (Cairo 1350/1931, publications of the Egyptian Library), cf. Sezgin, GAS, ii, 217.

Nûn, the 25th letter of the Arabic alphabet, transcribed /n/, with the numerical value 50, according to the oriental order [see abjad]. Nûn is also a name of the 68th sûra [see kûr'ân, sûra].

1. In Arabic
Definition: an occlusive, dental, voiced nasal (Cantineau, Études, 38-40; Fleisch, Traité, i, 58, 84-3).

Sibawayh distinguishes two kinds of nun: (a) the one whose point of articulation is the tip of the tongue and the region a little above the incisors; this is a clear (madjhur) and hard (qadhid) "letter", but it is accompanied by a resonance (ghanna) of the nose (anf). (b) the light (khafa) nun, whose point of articulation is situated in the nasal cavities (khayashim) (Kislî, ii, 452-4; Roman, Étude, i, 52, 56, 60).

For al-Khalîfî, nun is an apical (dhalî) letter, articulation at the tip of the tongue (dhalî) (K. al-'Ayn, ii, 65; Roman, Étude, i, 216-17).

As Ibn Sinâ, he considers that nun is realised by the tip of the tongue which touches the alveolar arch and holds in the air, then emits it through the nasal cavities (khayashim); the air becomes a resonance (ghanna) of the nose (minkhâr) and a humming sound (daww) (Roman, Étude, i, 253-4).

Phonologically, the phoneme /n/ is defined by the oppositions /n/-/m/, /n/-/r/ and /n/-/l/ (Cantineau, Études, 172).

Alterations: the realisation (izhâr) of nun can only take place before the four laryngeals /'i/, /h/, /h/ and /w/ and the two velars /kh/ and /g/; before the bilabial /b/, there is conversion (kalb) to /m/; before the three pre-palatalals /l/, /r/ and /y/ and the two bilabials /m/ and /w/, there is assimilation (izhâm); before the other consonants, there is concealment (isaq), i.e. reduction to the nasal resonance (Sibawayh, Kislî, ii, 464-5; Roman, Étude, i, 306-7). See also tawwîn.

2. In Turkish

The earliest form of Turkish known to us, that of the Orkhon inscriptions (8th century A.D.), distinguished in the so-called "Runic" script two separate forms for use in back- and front-vowelled syllables, for the dental nasal /n/, plus further forms for the velar nasal /n/ and the palatal nasal /n/ (Tâlat Tekin, A grammar of Orkhon Turkic, Bloomington-The Hague 1968, 230), and thus: after a long vowel, the Uyghur script distinguished /n/, and /n/, and the Brahmi script a further sign /n/ for the nasalisation of vowels arising out of /n/ (A. von Gabain, Alltûrkische Grammatik2, Leipzig 1950, §§ 9, 25, 30-1).

In the Arabic script used for Ottoman Turkish, the dental nasal /n/ was conveyed by the letter nun, whilst the gutturally pronounced /n/ appears in standard Ottoman pronunciation, was written with the so-called qâhid, the Persian gâd (d, j; in Central Asian Turkish, 7ç). It should be noted that /n/ is very rare in word-initial position in true Ottoman Turkish words and /n/ never occurs thus (J. Deny, Grammaire de la langue turque (dialecte osmantî), Paris 1921, 19, 71-2, 76).

Bibliography: Given in the article. (Ed.)

3. Indian sub-continent

Arabic Persian and Turkish words with nun occur frequently in Indian languages, and occasion no difficulties or differences in their orthography; the signs for nunation (tawwîn) remain unchanged, and the qadhid is used for the geminated -nn- whenever Arabic orthography requires it (although it may be neglected in early inscriptions). The sound-systems of the Indo-Aryan languages, however, have resulted in certain modifications to the Perso-Arabic script, as follows.

In most Indian phonologies there are nasalled vowels; these are normally indicated by the usual nun following the nasalled vowel, although when a nasalled long vowel stands finally in a word, or even morphein, the final form of nun is written without its nukta, and is then called nun ghanna. This is derived from the purely calligraphic forms of the Persian nasta'îh script, but the Indian significance is different. Also, geminated consonants can arise morphophonemically; e.g. in the Urdu verb bannî to make, root bnn + infinitive suffix -nî, the -nî must be written with two onom with no tashdid.

Most Indian sound-systems have a retroflex nasal (derived generally from a single intervocalic nasal in Middle Indo-Aryan) as well as the dental, but these have fallen together in standard Hindî and Urdu, and even where they are still differentiated in various rustic forms of speech they are never distinguished in the Urdu script. (They occur in Ougurâtî and Marâthî, but there is no question of the Perso-Arabic script being used.) A retroflex nasal is required, however, in Sindhi and in Pashto, where new writing devices have been invented. In Pashto the nun, medial or final, is written with its usual single nuka, with the addition of a small subscript circle (or "bean") to either form. The Sindhi retroflex nasal substitutes a small râ for the usual nuka. (Sindhi also distinguishes the velar and palatal nasals in speech, but the velar r is represented by a gâf with two additional superscript nukas, the palatal b by a hâ with two horizontal subscript nukas.) The retroflex nasal also occurs in Pandjâbi, but no standard writing system has yet been introduced.

Bibliography: Specimens of written (and printed) Pandjâbi, Pashto and Sindhi are given in the appropriate volumes of G.A. Grierson, Linguistic survey of India. (J. Burton-Page)

NUR (a.), light, synonym dau'; also dâ' and dûa' (the latter sometimes used in the plural).

1. Scientific aspects

According to some authors, dau' (dûa') has a more intensive meaning than nur (cf. Lane, Arabic-English dictionary, s.v. dau'); this idea has its foundation in Kûrân, X, 5, where the sun is called dûa' and the moon nur. The further deduction from this passage is that dûa' is used for the light of light-producing bodies (sun and moon) and the term dawâ' for the reflected light in bodies which do not emit light (moon), is not correct, if we remember the primitive knowledge of natural science possessed by the Arabs in the time of Muhammad, nor is there any proof of it in later literature. The works on natural science and cosmology of the Arabs in the best period of the Middle Ages (Îbn al-Haytâm, al-Kazwînî [q. v.] and later writers) in the major part of cases use the term dau' and it therefore seems justified to claim this word as a technical term in mathematics and physics.

Besides dealing with the subject in his Optics (Kislî al-Manâzîr), Îbn al-Haytâm devoted a special treatise to it entitled Kauwil al-Hasan b. al-Husayn b. al-Haytâm fi 'l-dauwâ' which has been published with a German translation by J. Baarmann in ZDMG, xxxvi (1882), 195-237, from which we take the following details:

As regards light, two kinds of bodies are distinguished, luminous (including the stars and fire) and non-luminous (dark); the non-luminous are again divided into opaque and transparent, the latter again into such as are transparent in all parts, like air, water, glass, crystal etc., and such as only admit the light partly but the material of which is really opaque, such as thin cloth.

The light of luminous bodies is an essential quality
of the body, the reflected light of a body in itself dark being, on the other hand, an accidental quality of the body.

As the opinion of the mathematicians, all the phenomena of light are of one and the same character; they consist of a heat from fire which is in the luminous bodies themselves. This is evident from the fact that one can concentrate rays of light from the brightest luminous body, the sun, by means of a burning-glass on one point and thus set all inflammable bodies alight and by the fact that the air and other bodies affected by the light of the sun become warm. Light and heat are thus identified with each other or regarded as equivalent. The intensity of light, like that of heat, diminishes as the distance from the source increases.

Every luminous body, whether its light is one of its essential qualities (direct) or accidental (reflected), illuminates any body placed opposite it, i.e. it sends its light out in all directions. All bodies, whether the mathematician Abū al-Abū al-Salīb or the natural philosopher Ibn al-Haytham, the former having further the power of transmitting it again; that a transparent body (air, water, etc.) also has the power of absorbing light is evident from the fact that the light becomes visible in it if it is cut with an opaque body: the light must therefore have already been in it.

The penetration of light into a transparent body takes place along straight lines (proof: the sun’s rays in the dust-filled air of a dark room). This transmission of light in straight lines is an essential feature of light itself, not of the transparent body, for otherwise there must be in the latter specially marked lines along which the light travels; such a hypothesis is however disproved by admitting two or more rays of light at the same time into a dark room and watching them.

The ray is defined as light travelling along a straight line. The early mathematicians were of the opinion that the process of seeing consisted in the transmission of a ray from the eye of the observer to the object seen and the reflection from it back to the eye. Opposed to this is Ibn al-Haytham’s view that the body seen—luminous or opaque—sends out rays in all directions from all points of which those going towards the eye of the observer collect in it and are perceived as the image of the body (cf. Optics, book i, 23. “Visio non fit radiis a visu emissis” and also book ii, 23).

There is no absolutely transparent body; on the contrary, every body, even the transparent one, reflects a part of the light which strikes it (explanation of the phenomena of twilight). According to Aristotle, the heavens possess the highest and most perfect degree of transparency. Ibn al-Haytham challenges this statement and shows from a use of the theory of transmission that a body of the same body is both the source and the target of a ray. This is based on the well-known rules of the reflection of light in passing through media of different densities, that the transparency has no limits and that for every transparent body an even more transparent one can be found.

An explanation of the origin of the halo around the moon, of the rainbow, its shape and its colours, and of the phenomena of light in the atmosphere of the bath, is given by al-Kazwînî in his Cosmography, i (‘Adînî, al-makhdûkî, ed. Wüstenfeld, Göttingen 1849, 100-1; tr. Ethê, Leipzig 1868, 205 ff.). Al-Kazwînî in his discussion replaces the rainbows by small looking-glasses; Ibn al-Haytham, on the other hand, deals with the problem in a much more conclusive fashion by assuming a single or dou-

ble reflection of light in spheres (cf. E. Wiedemann, in Wied. Ann., xxxix [1890], 575).

2. Philosophical aspects

The doctrine that light is not a thing in itself and reveals Himself as such in the world to and man is very old and widely disseminated in Oriental religions as well as in Hellenistic gnosia and philosophy. We cannot here go into the early history; it will be sufficient to refer to some parallels in the Old and New Testaments, e.g. Gen., i. 3; Isaiah, lx. 1, 19; Zech., iv.; John, i. 4-9; iii. 19; v. 33; viii. 12; xii. 35; and Rev., xxi. 23-4.

How Muhammad became acquainted with this teaching is not known. How it was elaborated, as was its ‘light’ verses, notably XXIV, 35, the ‘light verse’ proper; cf. XXXIII, 34 (Muhammad as lamp); LXI, 8-9 (God’s light); LXIV, 8 (the light sent down = revelation). The light verse runs (as rendered by Goldziher, in Die Richtungen der Koranaulegung, 183-5): ‘God is the light of the heavens and of the earth; His light is like a niche in which there is a lamp; the lamp is in a glass and the glass is like a shining star; it is lit from a blessed tree, an olive-tree, neither an eastern nor a western one; its oil almost shines alone even if no fire touches it; light upon light. God leads to his light whom He will, and God creates allegories for man, and God knows all things.’

From the context it is clear that we have to think of the light of religious knowledge, of the truth which God communicates through his Prophet to his creatures especially the believers (cf. also XXIII, 40). It is pure light, light upon light, which has nothing to do with fire (nûr), which is lit from an olive tree, perhaps not of this world (cf. however A. J. Wensinck, Tree and bird as cosmological symbols in Western Asia, in Verh. Ak. Amst. [1921], 27-8). Lastly, it is God as the All-Knowing who instructs men and leads them to the light of His revelation (cf. LXIV, 8). It is clear that we have here the comparison of gnostic imagery but those rationalist theologians, who—whether to avoid any comparison with the creature or God or to oppose the fantastic mystics—interpreted the light of God as a symbol of His good guidance, probably diverged less from the sense of the Kur‘ân than most of the metaphysicians of light. Passages in which God appears as the Knowing (‘alîm) and the Guiding (hâdî) are very frequent in the Kur‘ân. One did not need to look far for an exegesis on these lines. As al-Asfârî observes (Makâliêt, ed. Ritter, ii, 534), the Mu‘azzalî al-Husayn al-Nadîjdjî interpreted the light verse to mean that God guides the inhabitants of heaven and earth. The Zaydis also interpreted the light as God’s good guidance [see gîlîa and zaydyya].

From ca. 100 A.H., we find references to a prophetic doctrine of nûr, and gradually to a more general metaphysics of light, i.e. the doctrine that God is essentially light, the prime light and as such the source of all being, all life and all knowledge. Especially among the mystics in whose emotional thinking being, name and image coalesced, this speculation developed. Meditation on the Kur‘ân, Persian stimuli, gnostic-Hermetic writings, and lastly and most tenaciously, Hellenistic philosophy provided the material for new ideas. Al-Kumâyî (d. 126/743 [q. v.])
The doctrine of light was dialectically expounded by Sahil al-Tusi (d. 295/882) (see also Massigion, A., Testamenti idei, 39, and Sahil al-Tusi-Tari). The first representatives of a metaphysics of light in Islam readily fell under the suspicion of Manicheism, i.e. of the dualism of darkness as the eternal principles. The tradition of al-Tirmidhi that God created in darkness [see KHALK] must have aroused misgivings. The physician al-Razi (d. 599/1687), among other things, took the doctrine of light to pour forth is also light occasional synonyms: huwa, ba‘ha‘), the 'prime light' (51) or (44) the 'light of lights'. Light (51) is essentially in God, the goal of all mystics. Qopinion that nothing can be predicated regarding God, the father of this doctrine is al-Ghazali (in Ma^drid^ al-Kudsfimaddrid^ ment Collection, 16; 2. 150-1, wrongly) were accused of this dualism. But the speculations about nur found powerful support from the 3rd/9th century in the monistic doctrine of light of the Neo-Platonists (we do not know of any Persian monism of light) which was compatible with the monotheism of Islam. The Neoplatonist doctrine of Plato, who in his Politeia, 506 D ff., compares the idea of the good in the supersensual world with Helios as the light of the physical world. The contrast is not therefore between light and darkness but between the world of ideas and mind and its copy, the physical world of bodies, in the upper world pure light, in the lower world light more or less mixed with darkness. Among the Neo-Platonists, the idea of the good – the highest God – pure light. This identification was also facilitated by the fact that, according to Aristotle's conception, light is nothing corporeal (De anima, ii, 7, 418b: [foc]. . . ouv pór oth élal xovma oth dkh peroph nómato. From the context, which is however not clear, it appears that Aristotle regarded light as an effective force (ávprf). This is however of no importance here. Many Aristotelian forces and Platonic ideas are described by Neo-Pythagoreans and Neo-Platonists sometimes as forces and sometimes as substances (spiritual). With Aristotel, ákovos (darkness) was conceived not as something positive but as strefos (private, the absence of light). From this developed the doctrine which we find in the Arabic Theo!ogy of Aristotle. Not far from the beginning (ed. Dieterici, 3) it is said: the power of light (huwawa narsiyu) is communicated by the prime cause, the creator, to the world of light and beings, and then from the 'akl through the world soul to nature and from the world soul through nature to the things which originate and decay. The whole process of this creative development proceeds without movement and timelessly. But God who causes the force of light to pour forth is also light (nur; occasional synonyms: haun, ba‘ha‘), the 'prime light' (51) or (44) the 'light of lights'. Light (51) is essentially in God, not a quality (ist), for God has no qualities but is through His being (huwesiyu) alone. The light flows through the whole world, particularly the world of men. From the supersensual original (150), the first man (insan ‘akif), it flows over the second man (insan nafsant) and from him to the third (insan jismant). These are the originals of the so-called real men. Light is, of course, found in its purest form in the souls of the wise and the good (51). It should be noted also that nur is a synonym for faith, distinction (nur) is said to be only a force in man in matter with definite quality (85). Fire, of course, like everything else, has its supersensual original. But this is more connected with life than with light.

The elevation of the soul to the divine world of light corresponds to the creative descent of light (8). When the soul has passed on its return beyond the world of the ‘akf, it sees there the pure light and the beauty of God, the goal of all mystics. Although the author of the Liber de causis is of the opinion that nothing can be predicated regarding God, yet he has to call Him the prime cause and more exactly pure light (§ 5, ed. Barthenewer, 69) and as such the origin of all being and all knowledge (in God is wajuj = ma‘rifá; see § 23, p. 103). The light emanated by God may, if it is regarded as an independent entity, be placed at various parts of the system. Most philosophers and theologians connect it with the ruh or ‘akf or identify it with them, sometimes with the light of being (hayyá), but this must be more closely investigated. The great philosophers in Islam, al-Farabi and Ibn Siná, connected the doctrine of light with the ‘akf in metaphysics as well as in psychology. Al-Farabi is fond of using many synonyms for the light of God and the ‘akf (ba‘ha‘), etc.; see e.g. Der Musterstaat, ed. Dieterici, 13 ff.). In the biography of al-Farabi in Ibn Abi Uaybay’s Ustūr, the ‘akf (ba‘ha‘) prayer is attributed to him in which God is invoked as the 'prime cause of things and light of the earth and of heaven'. Like al-Farabi, Ibn Siná takes up the doctrine of light in theology and further develops it. In his psychological writings he regards the light as a link of the soul and body (cf. Sahil al-Tusi-Tari, who places nur between ruh and suf in the four elements of man). In the Kistá al-Isharati (ed. Forget, Leiden 1892, 126-7) he even reads the whole metaphysical doctrine of the ‘akf of the Aristotelians into the light verse of the Kur‘áan. Light is the ‘akf bi ‘l-fár, fire the ‘akf fa‘dál and so on. God’s light is therefore like the nous of Aristotle! This discovery of Ibn Siná’s was incorporated in the pious reflections of al-Ghazáli (in Ma‘danid al-Kusf fi madand nafs fi naclf, Cairo 1927, 58-9).

On the idea of light amongst the Sufis, see TAŠANWUR.

NUR — NUR ALLAH 123

Abd al-Kadir Bada‘uni, hi, 137, says that he was, “although a Shi‘i, a just, pious and learned man.” He was flogged to death in 1019/1610, regarded as al-Shahid al-Thalith, his tomb in Akbarabad is visited by numerous Shi‘Is from all parts of India. By the Shális and his presentation to Emperor Akbar (963-1014/1556-1605), he was appointed káid of Lahore, later Mu‘in al-Shá‘í al-Musín (d. 999/1586). “Abd al-Kádir Badá‘uni, iii, 137, says that he was, “although a Shi‘i, a just, pious and learned man.” He was hanged to death in 1019/1610, on account of his religious opinions, by the order of the Emperor Dhiá’går (1014-37/1605-28). He is regarded as al-Shahíd al-Thalith, “the third martyr,” by the Shi‘is and his tomb in Akbarabad is visited by numerous Shi‘Is from all parts of India.

He is the author of numerous spiritual works, of which the following may be quoted: 1. Håsháya ‘alá ’l-Baydawi‘i, a supplementary to al-Baydawi’s commentary on the Kur‘án entitled Anwár al-tanzilí: see Asiatic Society of Bengal ms., List of the Government Collection, 16; 2. Håsháya Sharh gaddid ‘alá ’l-Taqfírid, glosses to Kishájí’s commentary on Naṣír al-Din al-Tusi’s compendium of metaphysics and
theology, entitled Tadjrid al-kaldm: see Loth, Ind. Off., no. 471, xv; 3. Ihdk al-hakk wa-izhd al-bdtil, a polemical work against Sunnism written in reply to Fadl b. Farahdhan’s work entitled Thal al-bdtil, a treatise in refutation of the Kafi of the house of Na’im al-isdid by Hasan b. Yusuf b. ‘Ali al-Hilli; see Bankipore Library, Khuda Bakhsh cat., xiv, 172; Farangi Mahall Library, Lucknow, fol. 108; Rambur Library, 281; Asiatic Society of Bengal (List of Arabic mss., 23); 4. Madqils al-mum’inin, biographies of famous Shb’is from the beginning of Islam to the rise of the Ottoman dynasty in Persia; see Bankipore Library cat., 766; Asiatic Society of Bengal cat., 59; Ethé, Ind. Off., no. 704, and Rieu, Cat. of Persian mss. in the Brit. Mus., 337a. Printed at Tehran 1268.

(M. Hidayat Hosain)

NUR BANU WALIDE SULTAN (ca. 932-91/ca. 1525-83), Khâssêki (principal consort) of the Ottoman sultan Selim II [q. v.] and mother of the sultan Murad III [q. v.]. She was born on Paros [see Para] as Cecilia, illegitimate daughter of Nicolo Venier (d. 1520), the penultimate sovereign ruler of the island and of Violante Baffo. The identity of this “Venetian Sultana” is often confused with that of her successor, the Wâlide Sultan Şâfiye [q. v.]. Some Turkish historians persist in ascribing a Jewish origin to her. At the time of the conquest of the island in 1537, she was selected for deportation to the harem of the sultan on such an occasion. He carried her out of the palace gate and accompanied the coffin as far as the mosque of Fâtih, where the funeral salât was performed. Nûr Bûnû is buried in the mausoleum of Selim II at the Aya Sofya.

Bibliography: E. Rossi, La Sultana Nur Bûnû (Cecilia Venier Baffo)…, in OM, xxxii (1953) 433-41; Selânîki, Ta’ârîkh, ed. Ispîlî, 141: Yeînî Kapilî) on Wednesday, 22 2-du’ ‘Ka’dâ’ 991/1583. Her son put on mourning dress (the first time ever reported of an Ottoman sultan on such an occasion). He carried her out of the palace gate and accompanied the coffin as far as the mosque of Fâtih, where the funeral salât was performed. Nûr Bûnû is buried in the mausoleum of Selim II at the Aya Sofya.

During the reign of Selim II, her influence mainly affected official appointments by introducing the sale of offices. The imperial harem gradually extended its influence in this way to affairs outside the palace. During the reign of her son, Nûr Bûnû was able to establish what is called the “Wâlide Sultanate” (kadmlar saltanati). Apart from her daughters, the leading members of her clique were the princess Mihrî Mâh (d. 985/1578 [q. v.]), the kedâmah (“Mistress of the Female Household”) from 991 till 1003/1595, Djanfêdâ Khânîn and Râdiye Khânîn (Kafja) (d. 1003/26 June 1597), a lady companion since Magnhna days. (cf. Selânîki, Ta’ârîkh, ed. Ispîlî, 693). The Jewish Kira Esther Handali (d. ca. 1590) also played a role in external contacts, e.g. with the financier Joseph Nasi, duke of Naxos (1514-79) [see Nâzîs]. The bâbîhül-vâdîd eghbi Ghzânfer Agha (d. 1603) and the leading mîzdâbî Shemsî Ahmed Paqa (d. 988/1580-1) belonged to Nûr Bûnû’s faction.

During her son’s reign, one of her main preoccupations was the rivalry with Şâfiye, first khasâskî of Murad III whom Nûr Bûnû was able to relegate to the Old Saray at the time of his accession.

In her day already, Nûr Bûnû was compared to the queen (modis) of France, Catherine de Médicis (1519-89). The two exchanged letters in 1581 and 1582. The presents from the French “Wâlide Sultan” to her Ottoman opposite number arrived too late in April 1584 and were redirected to Şâfiye Sultan by Esther Kira instead! Some letters of Nûr Bûnû and her Kira to the Doge and Senate as well as to the bailo, Giovanni Correr (in Istanbul 1578-80), apart from the many presents and tokens of respect received, are evidence of Şâfiye Sultan’s last favourable interest in affairs of Venice.

Her regular income came from the so called baqqhatlîk (“slipper money”) and wa‘d endowments [see Wâlide Sultan].

Nûr Bûnû possessed her own palace near Edirne Kapî, where in 1580 her son retired during a serious attack of epilepsy (Charrière, iii, 922 and n. 1). The celebrated Atîk Wâlide (Eski Şâfiye) mosque complex at Usküdar-Topkapî was given her by her son, and was later taken from 978/1570 to 991/1583 (designed by Sinân [q. v.]). Two small mosques were built in her name elsewhere in Istanbul.

After an illness, she died in her garden palace near Edirne Kapî (according to Selânîki, Ta’ârîkh, ed. Ispîlî, 141: Yeînî Kapilî) on Wednesday, 22 2-du’ ‘Ka’dâ’ 991/1583. Her son put on mourning dress (the first time ever reported of an Ottoman sultan on such an occasion). He carried her out of the palace gate and accompanied the coffin as far as the mosque of Fâtih, where the funeral salât was performed. Nûr Bûnû is buried in the mausoleum of Selim II at the Aya Sofya.
trouvery, some regarding it as a repetition of the story of David and Uriah, others holding the view that he was pre-existent in body or in soul. The controversy brought about the adoption of a somewhat neutral name for the primordial entity of Muhammad: al-bakīha al-Muhammadīyya (see a survey of the various opinions in Muhammad b. Yusuf al-Shāmi, Subul al-huḍa wa l-rashād fi sīrat Khalīf al-Insāb, Cairo 1990, i, 91-99). The latter term, meaning the Muhammadan reality', is opposed in the discussions of Ibn al-Kāmil (q.v.), i.e. the Perfect Man, the archetype of the universe and humanity, which is identified with Muhammad. In these discussions allusion is most often made to the Kur'ānic verse of light (XXIV, 35). Specific elaborations on the concept are current in the Išmā‘iliyya (q.v.) and among other Shi‘i extremist sects (U. Rubin, Pre-existence and light: aspects of the concept of Nūr Muhammad, in IOS, v [1975], 107-9).

The idea of Muhammad's pre-existence is claimed in early hadith material, where it is stated that Muhammad was the first of all prophets to be created (e.g. Ibn Sa‘d, Tabakât, Beirut 1960, i, 148-9). The idea is also implied in the commentaries on Kur'ān XXXIII, 7 (al-Barâr, etc.) which mentions the covenants (milhâq (q.v.) of the prophets (Rubin, art. cit., 69). Relevant are also the interpretations of Kur'ān VII, 172, which deals with the无人机 offspring (offsprings) of the children of Adam (Rubin, art. cit., 67-8).

In the early hadith material, the Muhammadan light is referred to as Nūr Muhammad, and is given a special function. It is identified with the sparcatic substance of Muhammad's ancestors. The light is said to have reached the corporeal Muhammad from his progenitors through the process of procreation (see especially Abû Sa‘d al-Khārijī, Shāraf al-Muṣṭafâ, n. B., L., XXIII, 1, fol. 7 ff.). This concept (tradiçãoism) corresponds to the Arabic, pre-Islamic, belief that virtues, as well as voices, were passed on from the ancestors (Goldziher, Muh. St., i, 41-2). Bearing (in their loins) the divine Muhammadan substance, Muhammad's Arab ancestors are presented as true Muslims, and sometimes even as 'prophets' (Rubin, art. cit., 71-85). See also the commentaries of al-Kummi, al-Tusi, al-Tabarî, al-Râzî, al-Kurtubî, and others (see Rubin, art. cit., 112 ff.). Shī‘i traditions hold that not only Muhammad, but also ‘Ali (q.v.) and his family, including the Imāms, shared the same light. It is claimed that while being passed on through the ancestors, the light was split in two, so that both Muhammad and ‘Ali received equal shares of it (Rubin, art. cit., 83-98). There are also Sunni counter-versions in which the first four caliphs are given a share in the Muhammadan light (Rubin, art. cit., 112 ff.).

There is also another kind of divine pre-existent light which is referred to as Nūr Allâh. It is said to have reached Muhammad and the Shi‘i Imams through the previous prophets (not the ancestors). It is being passed on at the end of each person's life, as part of his hereditary authority (wasiyya) (see Rubin, Prophets and progenitors in the early Shi‘a tradition, in JSAI, i [1979], 41 ff.).

Bibliography: Given in the article.

Nūr (meaning ‘true teacher’), a per-
son whose name is generally associated with the beginnings of the Nizārī [see NIZARIYYA] or Satpanth (i.e. the true path) Ismāʿīlim in India but who remains more as an enigmatic and a symbolic figure around whom the Nizārī tradition has woven a colourful tapestry of legends representing the emergence of its daʿwa in the Indian subcontinent. As far as the historical sources are concerned, we are on very tenuous ground because of scanty material. Most of our information is therefore derived from the Nizārī sources which tend to be hagiographic. The major source of this biography is the community's indigenous religious literature known as ginās (derived from Sanskrit जिन्स, meaning 'contemplative or meditative knowledge'). The ginās are poetic compositions in Indian vernaculars, such as Sindhi, Pangābī, Mūlsānī, Gudjārātī and Hindī, are polyglot in nature, and are ascribed to various pīrs [q.v.].

The dissemination of ginās, as we have seen, was of a polyglot in nature, and are often anachronistic and legendary in nature. Moreover, as this literature was preserved orally in the Indian subcontinent. As a result of this, the emergence of its daʿwa and the geographical context of its locations are ascribed to Nur Satgur, he probably came from Persia to Pātān (in Gudjārāt), where he allegedly succeeded in converting the then reigning Rādji king Siddhārādha Dīyasīnī (1094-1143), the same king whom is also reported to have been converted by the Muṣṭālī-Tayyībī [q.v.] daʿwa. The second narrative in those ginās traces Nur Satgur’s activities in another region, Dhāranāgārī, after his exploits in Pātān, where he allegedly succeeded not only in converting the king but also in marrying the latter’s daughter. (For details, see Azim Nanji, The Nizārī Ismāʿīlī tradition in the Indo-Pakistan subcontinent, Delmar, N.Y. 1978, 50-3, where the Nizārī tradition about the commencement of the Nizārī daʿwa is analysed.)

The existence of a shrine located in Navsārī, near Sūrat, ascribed to him, and the chronogram which he strove to set forth the subject-matter in an easily comprehensible form. Having realised that certain ideas did not come easily to young minds, he tried to express them by concrete examples. Moreover, he thought that his pupils would more quickly grasp the syntactic relationships of words and would understand their functions better if he presented them schematically certain examples, so that the arrangement of the different elements of the phrase might become clearer and more eloquent. All his educational works show great pedagogical care.

On the other hand, Nur al-Dīn edited, translated into French and commented upon, in collaboration with Jahier, famous works of Ibn Rushd and Ibn Abī Usaybiʿa, wishing thereby to throw into relief that place which scientific texts, at the side of philosophical, religious and hagiographic ones, occupied in the Arabic literature of the Muslim West.

Of his historical works, one should mention his critical edition of Ghāzawāt ʿUrūǧ wa-Ḥayr al-Dīn, of a history of the town of Constantine by ʿAbd al-Kādir Ahmad Ibn al-Mubārak and, above all, his Sāḥibī fi ṣaḥīḥ al-madīnat al-dawla, which became a reference which is characterised by the solidity of its documentation, the clarity of its exposition and its easy style.

The essential quality of his publications shows that Nur al-Dīn was a significant example of an Algerian ʿilmīn, with an Arabic and French education, who took up modern pedagogical methods and research techniques based on bibliography, the study of sources and manuscripts. With an absence of dogmatism and in a spirit of liberal-minded curiosity, he led a studious life devoted to learning. However, his published work is less important than the real value of the effects produced by his teaching, and it was in effect by his practical example that his influence was deepest. As a good teacher, well-informed, devoted and with a rare modesty, he brought much and inspired much not merely to his numerous pupils but also to his colleagues.

The chronological list of his writings is as follows:

NUR AL-DIN — NUR AL-DIN MAHMUD B. ZANKI

Ibn Usaybā'ī, grammatical analysis with exercises. 1365/1946. 7. al-Mutḍla^a, grammatical analysis with exercises. 1365/1946. 7. al-Mutḍla^a, grammatical analysis with exercises.

Joscelin founded refuge at Sumaysāt on the right bank of the Euphrates. Edessa was then incorporated into the domain of Nur al-Dīn. Relations between the latter and Sa'yf al-Dīn Ṭāhāzī became strained until, on the occasion of his brother's investiture, Nur al-Dīn addressed
to him, from Aleppo, an official act of homage, recognising the primacy of his elder brother. He obtained guarantees for his eastern frontier, where Harun took the place of Edessa and was charged with the responsibility of conducting the dhikhād \(^1\) against the enemy from the West.

Reviving the policy of his father, Nūr al-Dīn decided to take possession of Damascus \(^2\) and to incorporate it into a Syrian federation, for political reasons in view of the presence of the Frankish kingdom of Jerusalem to the south, and for economic reasons, since he was assured of the neutrality of his elder brother. He also sought to make himself independent of Damascus with the aid of the Franks of Jerusalem, but the latter were forced to withdraw.

For the Latin states, the objective was to remove Nūr al-Dīn, but the absence of political direction among the Crusaders spared the latter a campaign which could have caused him serious problems. On 24 July 1148, following a series of debates in the Assizes of Jerusalem, the decision was taken to attack Damascus. In July, the Franks mustered at Tiberias and arrived before Damascus on the 24th. Muṁīn al-Dīn sent urgent appeals for help to Mawsil and Aleppo and explored the Zankid threat to repel the Franks, who raised the siege on 28 July.

The year 1149 was a time of considerable activity. Nūr al-Dīn was determined to counter the attacks of Raymond of Antioch. He decided, after receiving reinforcements from Damascus, to attack the region of Afāmiya \(^3\), then occupied by the Franks. He also laid siege to Inab which commanded the valley of the Ghāb \(^4\) on 20 Sāfarr 544/29 June 1149, having defeated the Latins at a place known as Ārād al-Hātim. Nūr al-Dīn occupied the land between the Rūjd and the Orontes \(^5\). He took Afāmiya and Kāfīs al-Mudjīk, and then Hārir \(^6\), where he installed a Muslim garrison and then resumed the siege of Antioch, where the antagonists concluded a truce.

On 23 Rabī‘ II 544/28 August 1149, on the death of Mu้ำn al-Dīn Unur, there was tension in Damascus, where Mudjīr al-Dīn Aybak took control of the government. Seeking to intervene, Nūr al-Dīn found a pretext in the campaign currently being conducted by the Franks in the Hawrān. He appealed for the participation of a Damascene contingent in his support but, on the basis of previous agreements the Damascenes called upon the Franks of Jerusalem for help in resisting Nūr al-Dīn. Advancing with diminished strength, the latter crossed the Biqā‘ traversed the Anti-Lebanon and deployed his army some ten km to the south-west of Damascus at a place known as Manāzil al-‘Asākār, on 26 Dhū ‘l-Hijjah 544/25 April 1150. From his encampment, Nūr al-Dīn sent a declaration to the Damascenes, informing them that he had come to protect them from their supposed allies, the Franks. Since his supporters were still too few in number to control the city, Nūr al-Dīn decided to return to Aleppo, where his presence was necessary following the siege of Jelfelin of Edessa by Turkish troops in Dhū ‘l-Hijjah 544/4 April 1150 and his incarceration in the citadel of Aleppo. This event gave rise to various repercussions: in the month of Muḥarram 545, the Saldjūk ruler of Rūm, Mas‘ūd b. Muḥammad, set out to blockade Tell Bābshīr and invited Nūr al-Dīn to join him. The latter accepted, not wishing to allow his rival to be the sole beneficiary of the situation. While Mas‘ūd succeeded in taking all the places situated in the valleys to the west of the Euphrates, Nūr al-Dīn took the region of upper Afrīn \(^7\) in order to take control of the communications routes linking Antioch with the north. In autumn 545/1150 he occupied the region downstream of al-Bīrā on the right bank of the Euphrates. The frontier of the Dār al-Īslām was thus transferred from the Euphrates to the Orontes.

At the end of 545/spring 1151 the problem arose of the transfer of the frontier. The trend concluded between Damascus and Jerusalem. It was on 26 April that Nūr al-Dīn established his base to the south of Damascus and issued an appeal to the population but, failing to prevent contacts between the Damascenes and the troops of Baldwin III, he withdrew to the valley of the Barādā \(^8\). The Franks entered the city and, before returning to Jerusalem, claimed a portion of the indemnity promised in July 1151. After their departure, Nūr al-Dīn decided to take the city.

For the Latin states, the objective was to remove Nūr al-Dīn, but the absence of political direction among the Crusaders spared the latter a campaign which could have caused him serious problems. On 24 July 1148, following a series of debates in the Assizes of Jerusalem, the decision was taken to attack Damascus. In July, the Franks mustered at Tiberias and arrived before Damascus on the 24th. Muţiin al-Dīn sent urgent appeals for help to Mawsil and Aleppo and explored the Zankid threat to repel the Franks, which could have caused him serious problems. At the end of 545/spring 1151 the problem arose of the transfer of the frontier. The trend concluded between Damascus and Jerusalem. It was on 26 April that Nūr al-Dīn established his base to the south of Damascus and issued an appeal to the population but, failing to prevent contacts between the Damascenes and the troops of Baldwin III, he withdrew to the valley of the Barādā \(^8\). The Franks entered the city and, before returning to Jerusalem, claimed a portion of the indemnity promised in July 1151. After their departure, Nūr al-Dīn decided to take the city.

For the Latin states, the objective was to remove Nūr al-Dīn, his agents engaged in subtle propaganda, while he himself resorted to more persuasive tactics: he intercepted the food supplies arriving from the south. Prices rose and famine threatened. While the city starved, Nūr al-Dīn had dealings with the heads of the ābdād \(^9\) and with the zu‘ār who were recruited among the porters and lower echelons of the souks. Mudjīr al-Dīn appealed to the Franks, but before they had time to intervene, Nūr al-Dīn launched his operation. When his troops entered the town, the middle classes barricaded their homes against them and the mob went on the rampage, but within a few hours Nūr al-Dīn restored order, distributed provisions and undertook to respect private property. The population was reassured.

Rampage, but within a few hours Nūr al-Dīn restored order, distributed provisions and undertook to respect private property. The population was reassured. Mudjīr al-Dīn, isolated in the citadel, accepted Hims \(^10\) in return for his capitulation. On the day of his departure, Nūr al-Dīn called a meeting, the participants including the ra‘īs Raḍī al-Dīn al-Tamīmī and Nadjm al-Dīn Ayyūb, the kādīs and the fukahā \(^11\), as well as leading citizens and merchants. He repeated his conciliatory assurances and announced the abolition of taxes levied on the markets. The arrival of Nūr al-Dīn in Damascus marked the beginning of a new era for all the victims of previous régimes; thus the amīr Usāmā b. Munkīd, who had left the city ten years earlier, returned at the start of Rabī‘ II 549/June 1154.

In eight years, Nūr al-Dīn was to achieve, by gradual stages, his objective of a united Syria. He began by consolidating his position at Aleppo; as a means of suppressing the Shi‘īs, he revived with increased vigour the measures which Zankī had inaugurated: the imposition of Sunni Islam was to be one of the major objectives of his policy. Having relocated his eastern frontier on the Balikh, he was assured of the neutrality of his elder brother. He also participated in the dismemberment of the County of Edessa, as a result of which he had, in the north, a common frontier with his father-in-law Mas‘ūd,
Nur al-Din Mahmūd b. Zānkī 129

Sālḏuj sultan of Rūm. Whereas the power of Zānḵī had extended, from east to west, from Mawsil to Alep-
po, that of Nur al-Din extended, in 549/1154, on a
north-south axis from YāsMUX [q. v.] to the Al-Ruḫū to
Boṣrā and Sālḏqdad, guaranteeing the food-supplies of
the Muslim towns.

The following year, Nur al-Din demanded the sub-
misison of the āmīr Daḫbāk b. Bāḵṭārī, since the region of
Bašlabak b. V. [q. v.] was dependent on the province of
Damascus. When his demand was refused, he did not hesitate to send a detachment to rid himself of the
rebel, who was killed on 7 Rabīʿ II 567/1 Marṣāl 1170.

This problem being settled, the treaty with Jerusalem
was renewed and another concluded with Antioch, Nur al-
Din was free to intervene in the struggle which had
broken out between Sālḏjdus and Dānḏiḡmendīdīs
[ q. v. ] regarding the inheritance of his father-in-law
who had recently died. He responded to the appeal of
his brother-in-law Yāḡḥī-Basān, amīr of Siwās, and
took possession of the Sālḏjūk localities on the right
bank of the Euphrates, including al-Bīrā.

In the spring of 551/1156, weary of the skirmishes
provoked by Renaud de Chátillon, the āmīr Madḍjī
al-Dīn, representative of Nur al-Din in northern Syria,
launched an attack in the direction of Hārīm. In-
formed of the developments committed by the Franks,
Nur al-Din left Damascus with a strong contingent to
support the army of the north. Learning of his arrival,
Renaud de Chatillon offered peace negotiations. An
agreement was reached by which the treaty with An-
tioch was restored: Hārīm remained in the hands of
the Franks but produce and revenues were shared be-
tween the two states. Nur al-Din returned to Damascus in
Ramāḍān 551/November 1156 and renewed the treaty with Jerusalem, but at the end of
Dhu ’l-Hijdādīa 551/early February 1157 the Franks
violated it. Baldwin III, preoccupied by heavy debts
and anticipating easy booty, launched an attack against
the fertile region of the Djiwālān [ q. v. ] where,
under the terms of the treaty, Turcomans pastured a
considerable number of horses and cattle; the Frankish
 cavalry seized these herds and took the herdsmen prisoner. This raid gave Nur al-Din, who was eager to take possession of Baniyās [ q. v. ], an ex-
cellent pretext for intervention. In Saḥār 552/early
April 1157 he succeeded in persuading Baniyās
Damascenes and the peasants of the Ghūṭa [ q. v. ] to
contribute towards the cost of equipping his army with
siegeworks. Having reinforced the garrison of
Bašlabak to guard against possible intervention from
the north, Nur al-Din sent an army commanded by
his brother Nūṣrat al-Dīn in the direction of Baniyās,
where Frankish reinforcements were reported to have
arrived. On 13 Rabīʿ I/26 April 1157 the troops of
Damascus inflicted a heavy defeat on the Franks and,
although he succeeded in breaching the walls of
Baniyās, Nur al-Din learned of the advance of
Baldwin, marching to the rescue of the besieged town,
and taken by surprise, he gave the order to withdraw.
Baldwin, believing that the troops of Damascus would
not return, entrusted the task of restoring the town’s
defences to his infantry, and set out with his cavalry
towards Galīlēe. Nur al-Din set up an ambush near
Dījūr Bānāt Yāḵkūb [ q. v. ] on the Jordan, and when
the Franks halted on the shore of Lake Tiberias he
surrounded them and took them prisoner. This suc-
cess had the effect of uniting all the Frankish factions
against him.

Learning that the Crusaders had established their
head-quarters in the Buḵaḵa [ q. v. ], not far from Hīṣn
al-Akrād [ q. v. ], with the intention of attacking in the
direction of the Middle Orontes, Nur al-Din left
Damascus in Raḏjāb 552/August 1157 in order to
repair the defences of fortresses damaged by the earth-
quakes of the previous month. Arriving at Sarmīn, he
spent some time there. Shortly after the beginning of
Ramāḍān 552/October 1157, he fell ill there and
summoned Nūṣrat al-Dīn, Shīrḵūḵ and his senior officers.

AWARE OF THE GRAVITY OF HIS CONDITION, HE GAVE INSTRUCTIONS TO BE FOLLOWED IN THE EVENT OF HIS DEATH: HE NOMINATED Nūṣrat AL-DĪN AS HIS SUCCESSOR, TO BE RESIDENT AT ALEPO; NAḏJĪM AL-DĪN AYYŪB WAS TO REMAIN MILITARY GOVERNOR OF DAMASCUS AND SHĪRḴŪḴ WAS TO BE HIS REPRESENTATIVE THERE. IN SPITE OF INTENSIVE TREATMENT, HIS CONDITION WORSENED. THE PRINCE WAS TRANSFERRED TO ALEPO WHERE HE WAS LODGED IN THE CITADEL. HIS HEALTH IMPROVING, HE RESUMED THE CONTROL OF AFFAIRS AND SENT TROOPS TO OCCUPY SHAYZAR. HENCEFORWARD THE ENTIRE COURSE OF THE ORONTES WAS UNDER THE CONTROL OF THE ZANKID POWER. FINALLY RESTORED TO HEALTH, NUR AL-DIN RETURNED TO DAMASCUS ON 6 Rabīʿ II 533/7 April 1158 and immediately set about mustering an army with the object of taking revenge for recent French raids against the HAWRĀN AND DĀRAYŠĀ IN THE GHŪṬA. THE ARMY LEFT DAMASCUS ON 9 Rabīʿ II 533/11 May 1158 with heavy equipment for laying siege to HABĪB DAḴḌAḵ, A CAVE FORTIRED BY THE CRUSADERS WHICH CONTROLLED DJAWLĀN TO THE EAST AND LAKE TIBERIAS TO THE NORTH-EAST. LEARNING THAT REINFORCEMENTS WERE ADVANCING, NUR AL-DIN RAISED THE SIEGE AND REPLICATED PROVINCIAL REBELLIONS. THE CRUSADERS WERE FORCED TO GIVE GROUND, NUR AL-DIN ORDERED A STRATEGIC WITHDRAWAL; THE FRANKS, FEARING A TRICK ON THE PART OF THE DAMASCENSES, DECLINED TO PURSUE THEM.

IN DUH ʿL-HIJDĀDĪA 553/DECEMBER 1158-JANUARY 1159, NUR AL-DIN ONCE AGAINFall ILL IN DAMASCUS. LEARNING THAT MANUEL WAS ADVANCING FROM GILF, HE URGED THE GOVERNORS OF THE SYRIAN BORDER REGIONS TO BE VIGILANT. AS HIS CONDITION DETERIORATED, THE PRINCE SUMMONED HIS SON AMĪR TO DAMASCUS AND WARNED HIS ENTourage AGAINST ANY SINISTER INTENTIONS TOWARDS HIM ON THE PART OF HIS BROTHER NūṢRĀT AL-DīN. TO AVOID ANY MISUNDERSTANDING, HE APPOINTED AS HIS SUCCESSOR HIS BROTHER KŪṢĪ AL-DīN MAWĀḏūD, RULE OF MAWSĪL.

the troubles of Kilidj Arslan II, he occupied the former dependencies of the County of Edessa of which the Saldjuk had taken possession, and set out from Aleppo towards the north, by way of Tell Bashir [q.v.]. He reached 'Aynatāb [q.v.] then took successively Raสถาban and Kayσyn, occupied Bahasna then Marσaθāṣ [q.v.].

In 1160, Kilidj Arslan II succeeded in obtaining from his brother-in-law Nur al-Dln a cessation of hostilities since, as the Byzantine menace grew more serious, he needed all his troops. Ultimately, the Saldjuk sultan signed a peace agreement with Manuel.

After two years of respite, Baldwin III, knowing Nur al-Dln to be occupied in campaigning in the north, attacked territory dependent on Damascus, sending his troops towards the Hawrān. Nadgīm al-Dln Ayyūb negotiated the withdrawal of the Franks and obtained a truce of three months. As Nur al-Dln had not returned by the expiry of this respite, the Franks, under a thrall the Saldjuk sultan, undertook to recognise his sovereignty. In Djumada I 558/August 1163, arriving in the Delta. Having regained his authority in the Saldjuk sultan in Hamadḥān [q.v.], a crisis which was keeping the troops of Kuθb al-Dln Mawdūḍ far from Syria.

The situation of Antioch having been settled in the interests of Manuel, the treaty with Baldwin being still valid and the army of Mawṣēṯ at his disposal, Nur al-Dln had no fear of imminent interference with his domains, and he seized the opportunity to perform the bāḍajā [q.v.] in 556/1161. He set out from Aleppo with Shīrkuḥ, passed through Damascus and took the darb al-bāḍajā in order to reach the Holy Cities of the Hijādāz where he showed considerable generosity to the local inhabitants, particularly in the improvement of wells. At Medina he restored the defences of the town and obtained a truce of three months. As Nur al-Dln had not returned by the expiry of this respite, the Franks, under a thrall the Saldjuk sultan, undertook to recognise his sovereignty. In Djumada I 558/August 1163, arriving in the Delta. Having regained his authority in the Saldjuk sultan in Hamadḥān [q.v.], a crisis which was keeping the troops of Kuθb al-Dln Mawdūḍ far from Syria.

The course of events in Egypt was to pose an awkward problem for Nur al-Dln. In Rabī' I 1161/January-February 1164, the vizier Shāwār, driven from Cairo by the revolt unleashed by the amīr Dirghām [q.v.] in Ramadan 558/August 1163, arrived at his court, imploiring his aid. He reminded him that the deployment of Syrian units in Egypt would allow the creation of two fronts and the encirclement of the Latin kingdom of Jerusalem. Shāwār offered Nur al-Dln the titles of viceroy of Egypt in exchange for his aid and the financing of the costs of the expedition. Furthermore, he promised to cede him part of the north-eastern province of the Delta and undertook to recognise his sovereignty. In Dju mátād I 1164/April 1164, impelled by public opinion, Nur al-Dln dispatched an army commanded by Shīrkuḥ with the objective of restoring Shāwār to power in Cairo. To protect the advance of this army, he conducted a diversionary manoeuvre in the direction of Baniyās, which enabled the troops accompanying Shāwār to reach the Delta of the Nile. Dirghām then issued a very urgent appeal to the Franks, offering Amaury a treaty of allegiance which, in the event of success on the part of the Franks, would have made Egypt a vassal of the Frankish kingdom of Jerusalem rather than a Syrian colony. Amaury accepted the offer but, harassed by the attacks of Nur al-Dln and not having sufficient troops to fight on two fronts, he was unable to send an army to Egypt in time to prevent Shīrkuḥ's arrival in the Delta. Having regained his authority in Cairo, Shāwār reneged on the promises made in Damascus, ultimately agreeing to accept the costs of the campaign but refusing to pay the promised tribute.

Nur al-Dln set out to invest Hārīm, and the Franks...
based in the northern Latin states reacted. The confrontation took place in the first ten days of Ramadan 562/20 October 1168. Nūr al-Dīn had deployed a significant quantity of heavy equipment but as the Franks advanced accompanied by Byzantine reinforcements, he raised the siege and, to avoid being encircled, he withdrew towards Arrāb, not far from the ford of Balanēus to the east-south-east of the Lake of Antioch. Exploiting the tactic of withdrawal and counter-attack, after four feasts, on 9 Ramadan 559/11 August 1164 he lured the Franks into a ferocious battle, in the course of which he inflicted heavy losses on them, a success which he immediately exploited, returning to Hārīm, which capitulated the following day. This problem being settled, Nūr al-Dīn turned against the kingdom of Jerusalem, a large proportion of whose troops were then deployed in Egypt. He invaded Ḥalib and set about besieging Baniyās, which capitulated in Dhu 'l-Hijja 559/October 1164. Nūr al-Dīn installed a garrison there, agreed to a treaty with the Franks and insisted on sharing the revenues of the district of Tiberias. His policy had secured its objective, sc. to prevent the defeat of Shīrkūh.

In the spring of 561/1165, fearing an intervention by Manuel and not wanting to see Amaury prolong his stay in Antioch, Nūr al-Dīn agreed to free Beḥ mundial III for a ransom of 100,000 gold pieces. In order to maintain the balance of forces in northern Syria to the advantage of Islam, he sought to avoid any action liable to provoke the anger of the Basileus. The same year, taking advantage of the capture of Raymund III of Tripoli, he crossed the Biqāʿ and regained from the Franks the fortress of Munaytira. While the second Egyptian campaign unfolded, Nūr al-Dīn, who had received reinforcements from Mawsil, occupied the fortress of Hūnūn, not far from Bānīyās, in the Ḥaǧaḥ al-ʿĀmilā. Although disappointed by his campaign in Egypt, Shīrkūh brought back a considerable sum of money from Cairo when he returned to Damascus on 18 Dhu 'l-Qa‘da 562/September 1165. To alleviate his disappointment, Nūr al-Dīn awarded him the fief of Hims, the wall and defences of which he had recently adopted in Cairo. Nadjm al-Dīn left Damascus on 27 Radjāb 565/16 April 1170. To create a diversion, Nūr al-Dīn laid siege to al-Karak. Following the great earthquake of 365/1170, Nūr al-Dīn left his headquarters at Tell ʿAṣḥāṭarā to attend to the repairs needed for the defences of Hims, Hamāt, Bārīn and Aleppo.

On 1 Muharram 566/14 September 1170, the head of the Zankī family crossed the Euphrates opposite Kaʿfāt Djaʿbar and took possession of al-Rakkā [q.v.], its governor ceding the place to him in exchange for substantial compensation. Having taken control of the region of the Khābūr [q.v.], hitherto a dependency of Mawsīl, Nūr al-Dīn laid siege to Sindrā. At the approach of the Syrian troops, Ṭakhrūr al-Dīn placed himself under the protection of Shams al-Dīn Ildefiz [q.v.]. The latter sent a deputation to Nur al-Dīn for help to the whole of Christendom. The Franks responded and decided on Damineta (Dimvāt [q.v.]) as an objective, but the lack of co-ordination between Byzantines and Franks led to the abandonment of the siege of this locality. After this retreat, al-ʿAṣḥāṭarā wrote to Nūr al-Dīn inviting him to recall to Syria the units sent as reinforcements to Egypt, keeping in Egypt only the original force commanded by Salāḥ al-Dīn. The Syrian prince seems to have been worried by the attitude and the ambitions of the latter. He instructed Nadjam al-Dīn Ayyūb to remind his son that the struggle against the Franks was the first duty of all believers and that the ʿAbbasīd khārūm must be adopted in Cairo. Nadjam al-Dīn left Damascus on 27 Radjāb 565/16 April 1170. To create a diversion, Nūr al-Dīn laid siege to al-Karak.

In the middle of the month of Muharram 564/20 October 1168, the Franks launched an attack in the direction of Cairo. While the population resolved to resist, Shāwār warned the caliph al-ʿAṣḥāṭarā [q.v.] that the only chance of salvation was to appeal to Nūr al-Dīn, since the presence of Sunnīs was preferable to a Christian protectorate. The Fāṭimid caliph and Shāwār promised him a third of the revenues of Egypt as well as fees for the maintenance of the troops. Nūr al-Dīn decided to send a third expedition against the Franks, ordaining Fakhruʾr-Dīn to Cairo and entrusted him with full powers. When the latter died on 22 Djamādā II/23 March 1169, his nephew, Salāḥ al-Dīn, was appointed vizier by al-ʿAṣḥāṭarā and commander of the Syrian forces in Egypt by Nūr al-Dīn. Amaury, concerned at the latter’s seizure of Egypt, issued appeals for help to the whole of Christendom. The Franks responded and decided on Damineta (Dimvāt [q.v.]) as an objective, but the lack of co-ordination between Byzantines and Franks led to the abandonment of the siege of this locality. After this retreat, al-ʿAṣḥāṭarā wrote to Nūr al-Dīn inviting him to recall to Syria the units sent as reinforcements to Egypt, keeping in Egypt only the original force commanded by Salāḥ al-Dīn. The Syrian prince seems to have been worried by the attitude and the ambitions of the latter. He instructed Nadjam al-Dīn Ayyūb to remind his son that the struggle against the Franks was the first duty of all believers and that the ʿAbbasīd khārūm must be adopted in Cairo. Nadjam al-Dīn left Damascus on 27 Radjāb 565/16 April 1170. To create a diversion, Nūr al-Dīn laid siege to al-Karak.
Setton and Baldwin, *A History of the Crusades*, i, 565) has underlined, operated within a political framework defined by the system of his times. For him, Syria was the principal field of battle against the Crusaders and Egypt represented nothing more than a source of additional revenue to cover the costs of the *djihad*. In that year, before attacking the County of Tripoli, he had ordered Salah al-Dīn to gather all available forces in Egypt and lead them towards Frankish Palestine, thus trapping the Franks in a pincer-movement. The first objective was the castle of al-Karak; after ten days of siege the garrison offered to surrender to Salah al-Dīn. For him, the elimination of all obstacles between Egypt and Syria was not desirable, since henceforward he would be at the mercy of Nur al-Dīn. He decided to return to Cairo and sent a letter to his sovereign, claiming the pretext of unrest in Cairo fomented by the Shī'īs. Nur al-Dīn did not accept this excuse, and announced his intention of going to Egypt in person in order to depose Salah al-Dīn. The latter, on the advice of his father, re-affirmed his loyalty to Nur al-Dīn, who, the prince of Damascus set out with his troops and encamped at Kiswa in the Margī al-Ṣuffar [*q.v.*]; the Franks withdrew towards Ṣaffālā, where the Damascene army confronted them. Nur al-Dīn established his camp at Tell al-ʿAshṭārā and dispatched cavalry units to raid the district of Tiberias.

Having repelled the Franks, Nur al-Dīn turned his attention to northern Syria, where he was able to assist the Armenian Melej to expel the garrisons of Maṣṣīṣa, Adana and Ṭarsūs [*q.v.*]. He would have been glad to obtain the support of the Sāljuq prince of Konya for operations against Antioch but, following a stern warning from Manuel, Kılığr Arslān II rejected the overtures of Nur al-Dīn and turned against his neighbour, the Dānishmendī Dhuʿl-Nūn. The latter sought refuge with Nur al-Dīn, who was also joined by the ruler of Maṣṣīṣa [*q.v.*] and the amīr of al-Maḏjdal. Nur al-Dīn promised him his support and insisted that Kılığr Arslān restore the property taken from his predecessors. But the latter, repeating that uniformity was refused, felt justified in declaring war with a sovereign, claiming, in a message to Nur al-Dīn, that his father, Nadjm al-Dīn Ayyūb, was gravely ill in Cairo and that he feared lest, in the event of his father's death during his own absence, Egypt would slip away from the authority of Nur al-Dīn and would be removed from the authority of the Suma. Nur al-Dīn, not deceived, pretended to understand the reasons for the departure of the Ayyūbid prince. Through this gesture on the part of Sahāl al-Dīn, the kingdom of Jerusalem gained a reprieve of forty years and Nur al-Dīn was not to see in the al-Āksā Mosque [*q.v.*] the wooden *minbar* [*q.v.*] which he had had made in advance in Aleppo as an *ex-voto* offering for the return of al-Kuds [*q.v.*] to Islam.

Returning from Aleppo in Muharram 569/September 1173 Nur al-Dīn heard at Salāmīyya, to the south-east of Hamāt, the news of a Frankish attack against the Hawrān; while preparing to counter this, he was informed of the adversary's withdrawal. Returning to Damascus, he engaged in preparations for an expedition towards Egypt, the aim of which was to induce al-Salāḥ al-Dīn to intervene against the Franks. According to his plan, he left in Syria, confronting the Franks, troops from Mawsīl, under the command of Sayf al-Dīn Ghāzī, and he himself was to set out for Egypt with his squadrions after Ramadān 569/early May 1174. A few days after the *Id al-Fitr* [*q.v.*], Nur al-Dīn fell ill with an inflammation of the throat. Confining to his bed in the palace which he had had constructed to the south-west of al-Rayyām, two doctors including Djamāl al-Dīn Yūsuf b. Haydar al-Rabībī al-Dimāshkī, his personal physician. Despite their efforts, al-Malik al-ʿAdīl Nur al-Dīn Mahmūd b. Zankī died on Wednesday 11 Shawwāl 569/15 May 1174. At first interred in the citadel, his remains were transferred, when it was ready, to the funeral minbar [*q.v.*] which he had had constructed to the south-west of the Great Mosque of the Umayyads. At the present time, his tomb is still the object of popular veneration.

**Bibliography:** For pre-1965 bibliography, see the very detailed one given by N. Elisseeff in *Nur al-Dīn*, *un grand prince musulman de Syrie au temps des Croisades 511-569 H./1118-1174*, 3 vols., Damascus 1967, i, Bibliography, pp. XXI-LXXVII, and also Survey of sources, i-85. The remainder of this bibliography deals with works published subse-

*Mar zubann, Kayben and Bahasnā, places held by the Sāljuq on the right bank of the Euphrates. On 20 Dhuʿl-Ḥaḍra 569/3 July 1173 he occupied Marʿaš. Shortly after this, Kılığr Arslān II appealed to him for a truce. Nur al-Dīn required him to free the prisoners taken in the region of Maṣṣīṣa and to participate in the Holy War, either sending a contingent to join the struggle with the Franks, or operating independently against Byzantium.*

To mark his independence vis-à-vis the major atabegs, Nur al-Dīn sent as an envoy to Baghāzd his trusted adviser Kamāl al-Dīn Abu ʿl-Faqṣ Muḥammad al-SAḥhārazūfī to ask the caliph for a document confirming the sovereignty of all the towns in which his authority was recognised. In granting this solemn deed of investiture to Nur al-Dīn, the caliph deprived the successors of the Great Sāljuq of any authority over the lands situated to the west of the Tigris.

Taking advantage of the absence of Amaury, who had returned to Antioch, Nur al-Dīn put into operation a plan of attack against the land of Trans
Little is known of internal affairs in Hisn Kayfā and Amīd under Nūr al-Dīn Muḥammad, but it may be assumed that he continued the courtly traditions of his father which had been sophisticated enough to attract Usāma b. Munkūdih (see MUNKUDIH, BANU) to spend some of his declining years at Hisn Kayfā. The extant copper coins minted there in Muhammad’s name follow the numismatic traditions of the Turkmen dynasties of Mesopotamia for this century. As well as conventional Arabic inscriptions on one side, they bear figures copied from classical models; one coin depicts Nūr al-Dīn Muḥammad in the guise of Seleucus II (Lane Poole, The coins of the Artuqids and Zangids, 125-7). The Aleppo Gate at Amīd has a celebratory inscription dated 579 AH announcing Muhammad’s occupation of the city. Van Berchem suggested that he may have taken the title of sultān, used by his successors, after his acquisition of Amīd; and he also quotes at length an anonymous, contemporary account describing in fulsome terms Muḥammad’s just administration of the city (Aminid, 71-2, 75-81).

Nūr al-Dīn Muḥammad II, Nīzārī Ismāʿīlim. Imaṃ and the fifth lord of Amalūt (561-607/1166-1210). Born in Shawwāl 542/March 1148, he succeeded to the courtly and state on the death of his father, Ḥasan II, on 6 Rabīʿ I 561/9 January 1166. He devoted his long and peaceful reign of some forty-four years to managing the affairs of the Nīzārī daʿwā and community, especially in Persia, from the central headquarters of the sect at Amalūt. A thinker and a prolific writer, he also contributed actively to the Nīzārī teachings of his time.

Nūr al-Dīn Muḥammad II affirmed the Nīzārī Fātimid genealogy of his father and, therefore, of himself; and, henceforth, the lords of Amalūt were acknowledged as imāms, descendants of Nīzār b. al-Mustansīr, by the Nīzārī Ismāʿīlī community. In the doctrinal field, he systematically expounded and elaborated the important doctrine of the iṣāṣma, announced by his father in 559/1164, and placed the current Nīzārī imām and his renowned teaching authority at the very centre of that doctrine (see Ĥaṭf bāb-i Bābā Sayyīdān, ed. W. Ivanov, in Two early Ismaili treatises, Bombay 1933, 4-42).

Aside from petty warfare, the history of the Nīzārī state in Persia was politically uneventful under Nūr al-Dīn Muḥammad. However, the Syrian Nīzārīs were more involved at this time in their own local alliances and conflicts. There are also indications that a widening rift had developed between this Nīzārī
NUR AL-DIN MUHAMMAD II — NURBAKHSHIYYA

imam and Rashid al-Dm Sinan [q.v.}, the contemporary leader of the Syrian Nizâris, although a complete break was avoided. Rashid al-Din and other Persian historians also report a detailed story about how the Nizâris of his time persuaded, initially through the intimidating dagger of one of their fa'dâ's, the famous Sunnî theologian Fâhkr al-Din al-Râzî (d. 606/1209 [q.v.]) to refrain from denouncing them in public. Having ruled longer than any other lord of Alamût, Nür al-Din Muhammad II died, possibly of the plague, on 8/17 October 609/1211–12. He was succeeded by his son, Sayyid Muhammad b. Nurmîshâh, who assumed the eponym, Sayyid Muhammad b. Muhammad b. 'Abbâd Allâh Nûrbâkhsh. Nûrbâkhsh was born at Kâ'fûn in Kuhistân in 795/1392. His father, supposedly a descendant of the İmâm Mûsâ al-Kâfûnî, had come from Katîf, a Shî'î region of eastern Arabia, on pilgrimage to Mashhad before settling in Kâ'fûn; he may therefore be presumed to have been a Shî'î. Nûrbâkhsh's grand-father was from al-Âshâ [q.v.], likewise an area of Shî'î settlement; this accounts for Nûrbâkhsh's occasional use of the takhallús Lahsawî. While studying in Harât in his early youth, Nûrbâkhsh was recruited into one branch of the Kubrawi order by a follower of Ishâk Khuttalânî, the principal successor to Sayyid ʿAli Hamadânî (d. 786/1384). Moving to the Khânâkhâ at Khuttalânî's court, Nûrbâkhsh became the most prominent disciple of Khuttalânî, who bestowed on him the title Nûrbâkhsh ("Bestower of Light") in accordance with an indication contained in a dream. The account given by Nûr Allâh Shusharti (d. 1019/1610) in his Madâjîli al-mu'minîn (ed. Tehran, 1373–75/1556–75, ii, 143–7) —followed almost unanimously by later writers—relates that on the basis of the same dream Khuttalânî also declared Nûrbâkhsh to be the Mahdî and incited him to style himself İmâm and caliph and to lay claim to rule. He swore allegiance to him himself and ordered his disciples to do the same; all obeyed, with the exception of Sayyid ʿAbbâd Allâh Barzîbâdî (d. ca. 856/1452). Nûrbâkhsh asked for a delay in starting his insurrection, but Khuttalânî refused, saying that the divinely-appointed time for rebellion (mawqûf) had arrived.

The beginnings of the episode are recounted somewhat differently by Hâfîz Husayn Karbâlā', a spiritual descendant of the dissent Barzîbâdî. He attributes a far more active role to Nûrbâkhsh, claiming that he originated the claim to the status of mahdî himself and then had it endorsed by Khuttalânî, who was too senile and decrepit to stand in his way. Barzîbâdî allegedly succeeded in having the endorse-ment temporarily withdrawn, but his influence over Khuttalânî was no match for that of Nûrbâkhsh and preparations for the uprising proceeded (Karbâlā', Raudat al-dînîn wa-dâdânî al-dînân, ed. Dja'far Sultân al-Kurra'tî, Tehran 1349 Š./1974, ii, 249–50). This version of the affair seems at least as credible as that offered by Shusharti. Nûrbâkhsh certainly had a high estimate of his own worth; he claimed to possess superiority to Plato and Avicenna and absolute mastery of the sciences. Moreover, he continued to advance claims to the status of mahdî, however sporadically, after the death of Khuttalânî and wrote a treatise, Risâlat al-Hudâ, attempting to vindicate these claims.

In 826/1423, Khuttalânî and Nûrbâkhsh left the Khânâkhâ in Khuttalânî and ensconced themselves with their followers in the nearby castle of Kuh-tîrî. Before they could complete their military preparations, they were attacked and taken prisoner by Bâyazid, the Timûrid governor of the area. Khuttalânî, together with his brother, was put to death almost immediately, despite his advanced age. Nûrbâkhsh himself was spared and sent in chains to the prison of Shâhrukh in Harât. The contrasting fates of the two men might be taken to confirm Shusharti's depiction of Khuttalânî as the instigator of the whole affair; it is also possible, however, that Khuttalânî was the instigator himself and that Nûrbâkhsh was used by him as a tool to gain temporary favor with local rulers in Badakshân who had sought to block the expansion of Timûrid power in the region (Devin DeWeese, The eclipse of the Kubrawiyyah in Central Asia, 60).

After interrogation, Nûrbâkhsh was sent on from Harât to Shiráz; İbrahim Sultân, Shâhrukh's governor of Fars, subjected him to a further spell of imprisonment in Bihbâhan before releasing him.
Nurbakhsh then made his way in turn to Shushtar, Baara, Hilla (where he is said to have met the celebrated Shi'i scholar Ibn Fahd al-Hilli) and Baghdad. Next he proceeded to Kurdistan and the Bakhhtyary country where he revived with some success his claim to worldly sovereignty; loyalty was sworn to him and coins were struck, and the khutba was read in his name. It happened that Shahrukh was campaigning in Ahdarbasian at the time, and he had Nurbakhsh seized and brought to his camp. Nurbakhsh was then sent to Harat with instructions to mount the minbar at the Masjid-i Djami and publicly disavow his claims. This he did, with obvious reluctance, in the following ambiguous words: "They relate certain things from this wretch. Whether I said them or not, 'O Lord, we have wronged ourselves; if You do not forgive us and have mercy upon us, we will certainly be among the losers' (Kur'an, VII, 23)." He was then released anew, on condition that he restrict himself to teaching the conventional religious sciences ("ulam-i rasmi"); a condition he appears to have broken, for in 848/1444 he was re-arrested with orders for him to be ejected from the Timurid realm into Anatolia. Instead he was confined in turn in Tabriz, Shirwan and Gilan, being definitively released on the death of Shihab al-Din. At the age of 60 he moved to the village of Sulfan near Rayy, remaining there until his death in Rabia 869/November 1464. These last years of Nurbakhsh's life appear to have been relatively tranquil. It is probable that he reduced his public claims to spiritual eminence to those customary for a Sufi shaykh, although he continued to designate himself by such suggestive terms as mas'har-i mas'ud ("the promised manifestation") and mas'har-i djami ("the comprehensive manifestation").

Nurbakhsh wrote a number of treatises, only one of which has ever been published (M. Molé, Professions de foi de deux Kubrawis: 'Ali-i Hamadani et Muhammad Nurbakhsh, in BEO, xxxii [1961-2], 182-204; Arabic text and French translation of al-Risdlat al-Fikha'diyya), as well as a considerable quantity of verse (for samples see Mawlawi Muhammad Shafi', Fitrak-yi Nurbakhshî, in Magalân-i Khurasân, 12, 10, 11 [1973], 42, 43, 44, 45, 49, 54). The most interesting of his writings is perhaps the Risdlat al-Hudâ in which he clarifies his concept of the status of mahdi, one that deviates considerably from that of his ancestral Twelver Shi'ism. Nurbakhsh utterly rejects the occultation (ghayba) of the Twelth Imam, asserting that his body has decomposed and that his functions and attributes are now manifest (bâri) in him. Nurbakhsh He defines "absolute imâmate" as meaning on four pillars: perfection of prophetic descent, perfection of knowledge, perfection of sanctity and the possession of temporal power. All the preceding Imams, with the exception of 'Ali b. Abi Talib, lack the fourth pillar; Nurbakhsh, destined as Mahdi to gain supreme political power, is therefore superior to them. The proofs cited by Nurbakhsh for the status of mahdi consist largely of celestial signs and should not be confused with the list cited as the Kubrawi saint Sa'd al-Din Hamiya (d. 650/1252) and the scholar Nasir al-Din Tusi (d. 672/1274). Some of the dreams related here reflect set-backs as well as ultimate triumph in the form of a universal rule lasting seven or eight years; this suggests that the treatise may have been written after Nurbakhsh's coerced renunciation of the status of mahdi in Harat (see Molé's synopsis of Risdlat al-Hudâ in Les Kubrawiyya mitre sunnisme et shi'isme, in REI, xxix [1961], 131-6).

The most accomplished disciple of Nurbakhsh was Shaykh Muhammad Lâhidji (d. 921/1515), author of Shaykh al-Mahdi, in which he clarifies his concept of the status of mahdi, destined as Mahdi to gain supreme political power, is therefore superior to them. The proofs cited by Nurbakhsh for the status of mahdi consist largely of celestial signs and should not be confused with the list cited as the Kubrawi saint Sa'd al-Din Hamiya (d. 650/1252) and the scholar Nasir al-Din Tusi (d. 672/1274). Some of the dreams related here reflect set-backs as well as ultimate triumph in the form of a universal rule lasting seven or eight years; this suggests that the treatise may have been written after Nurbakhsh's coerced renunciation of the status of mahdi in Harat (see Molé's synopsis of Risdlat al-Hudâ in Les Kubrawiyya mitre sunnisme et shi'isme, in REI, xxix [1961], 131-6).

One of Faydbakhsh's sons, Shah Bahâ al-Din, was likewise close to Bâykarâ, and under his protection established a Nurbakhshî khânâkah in Harât. In general, however, the Nurbakhshiyâ appears to have been unable to strike root in Khurasân, and first Faydbakhsh, then Bahâ al-Din left Harât for more westerly regions. Faydbakhsh took up residence on his father's holdings near Rayy, which were considerably enlarged by a grant of land from Shâh Isma'îl; this he appears to have done to enlarge the family lands still farther, and when the poet Umâdi refused to surrender to him a large and desirable orchard, he had him assassinated, in either 917/1511, Bahâ al-Din also initially enjoyed the favour of the Safavid ruler, but after a few years he fell under suspicion and, as Khândâmî delicately phrases it, "in accordance with the requirements of fate he was interrogated and passed away" (Hasib al-isyar, ed. D. Humâ'û, Tehran 1333/1954, iv, 611-12).

Relations between the descendants of Nurbakhsh and the Safawids were definitively ruptured in the time of Faydbakhsh's grandson, Shâh Kâwâm al-Din b. Shâh Shams al-Din. Already in his grandfather's lifetime, Kâwâm al-Din attempted to establish himself as the dominant force in Rayy and its environs, silencing opponents and rivals by force. He also attempted to enlarge the family lands still farther, and when the poet Umâdi refused to surrender to him a large and desirable orchard, he had him assassinated, in either 925/1519, after which the family lands of Rayy were definitively taken up by the Safawids. Instead he was confined in turn in Tabriz, Shîrwan and Gilân, being definitively released on the death of Shihab al-Din. At the age of 60 he moved to the village of Sulfan near Rayy, remaining there until his death in Rabia 869/November 1464. These last years of Nurbakhsh's life appear to have been relatively tranquil. It is probable that he reduced his public claims to spiritual eminence to those customary for a Sufi shaykh, although he continued to designate himself by such suggestive terms as mas'har-i mas'ud ("the promised manifestation") and mas'har-i djami ("the comprehensive manifestation").

Nurbakhsh wrote a number of treatises, only one of which has ever been published (M. Molé, Professions de foi de deux Kubrawis: 'Ali-i Hamadani et Muhammad Nurbakhsh, in BEO, xxv [1961-2], 182-204; Arabic text and French translation of al-Risdlat al-Fikha'diyya), as well as a considerable quantity of verse (for samples see Mawlawi Muhammad Shafi', Fitrak-yi Nurbakhshî, in Magalân-i Khurasân, 12, 10, 11 [1973], 42, 43, 44, 45, 49, 54). The most interesting of his writings is perhaps the Risdlat al-Hudâ in which he clarifies his concept of the status of mahdi, one that deviates considerably from that of his ancestral Twelver Shi'ism. Nurbakhsh utterly rejects the occultation (ghayba) of the Twelth Imam, asserting that his body has decomposed and that his functions and attributes are now manifest (bâri) in him. Nurbakhsh He defines "absolute imâmate" as meaning on four pillars: perfection of prophetic descent, perfection of knowledge, perfection of sanctity and the possession of temporal power. All the preceding Imams, with the exception of 'Ali b. Abi Talib, lack the fourth pillar; Nurbakhsh, destined as Mahdi to gain supreme political power, is therefore superior to them. The proofs cited by Nurbakhsh for the status of mahdi consist largely of celestial signs and should not be confused with the list cited as the Kubrawi saint Sa'd al-Din Hamiya (d. 650/1252) and the scholar Nasir al-Din Tusi (d. 672/1274). Some of the dreams related here reflect set-backs as well as ultimate triumph in the form of a universal rule lasting seven or eight years; this suggests that the treatise may have been written after Nurbakhsh's coerced renunciation of the status of mahdi in Harât (see Molé's synopsis of Risdlat al-Hudâ in Les Kubrawiyya mitre sunnisme et shi'isme, in REI, xxix [1961], 131-6).
It remains finally to be noticed that Amir Sultan (d. 833/1429), the Bukhara saint who migrated to Bursa and married a daughter of Baysid I, has also been described as a Nurbakhsh. Although he is said, as a sayyid, to have had certain Shi'i inclinations, it is chronologically impossible that he should have been a Nurbakhsh. The origin of the error lies, no doubt, in the fact that Amir Sultan's father, Ali al-Husayni al-Bukhâri, was a disciple of Isâkh Khutatânâl, together with Sayyid Muhammad Nurbâkhsh (Meqdi Efendi, Târikh-i Fârishtâ). The name Nurbakhtânâl means, in Istanbul 1269/1552, 77). That the Nurbakhtânâl sect was known in Turkey is indicated by its frequent misidentification as a branch of the Khâlariyya (see, for example, Şinasi Çoruh, Emir Sultan, Istanbul n.d., 29).

brotherhood (tarlık) not different from a variety of other Sufi orders; but this is a misnomer. Nursi consistently rejected the view that he was a şeykh or pâr, being himself, however, a direct descendant of his followers formed an organised body. He referred to his followers as Risâle-yi Nûr talebesi (or Talebe-yi Risâle-yi Nûr), that is, “students of the Book or Epistle of Light”, but the word “disciples” is probably the best translation of talebe. The negative image of the Nuris held in the West and by the secularists of Turkey was a direct consequence of politics; Nursi was repeatedly jailed for allegedly violating the secularist principles (article 163, now abolished) of the Penal Code. In the era of multi-party democracy, the Nurists have supported the Democratic Party and its successors, leading İsmet İnönü and his successors of the People’s Republican Party leadership to accuse them of reactionist collusion.

The central concept of Nursî’s philosophy is när conceived of as spiritual light (for the ordinary ray of light, he used the term şaa). For Nursi’s followers när is synonymous with imân “faith”, and their study is directed toward the achieving of divine illumination—the true faith through the study of the Kurân. The view that the Nurists are hierarchically organised into groups denominated as “student”, “brother”, dost “friend”, and “beloved” according to their mastery of the teachings, veneration for the teacher, and devotion to the cause, is not supported by any definitive proof. The term kâdes “brother”, commonly used by the Risâle students, is a general public form of address in Turkey and has no sectarian significance. Nonetheless, there is something of a natural selection among the Nurists; those who knew Sa‘îd Nursi personally and who worked and lived with him for a long time, are held in higher esteem and respect than the latecomers to his philosophy. There are, of course, discussion groups and even periodic meetings usually held every three years for the consideration of his teachings. Originally, these meetings were regarded as religious seminars rather than devotional gatherings.

Nursî began to write the Risâle, which consists of his commentaries on the Kurân, in 1926, after he was forced to settle in Barla, in the province of Isparta, and after 1934 he wrote the third last part of his commentary in Kastamonu, but added supplementary sections right up until 1950. The Risâle was written originally in Arabic script and copied by hand. It was distributed first in Central Anatolia from a cluster of villages (Bedre, İslâmköy, etc.) in Isparta province and then from Kastamonu. His first writings were called Sûal ("words"), but the name subsequently was changed to its present one due to what the author called a sort of divine inspiration. Sections of the Risâle have appeared in Latin script and been openly sold—despite occasional restrictions—mainly since 1958, under a variety of titles, e.g. Şuâlî (1960) and Len’alar (Istanbul 1976). Increasingly, such titles are preceded by the general title Risale-i Nur kâtibiyatından. Various portions of the Risâle have been translated into English and published by the Risale-i Nur Institute of America in California. After Nursî’s death, a number of periodicals and newspapers, such as Yeni Nesil ("New Generation") and printing houses have become dedicated to publishing them and also commentaries on them. Some formal efforts at Nurist indoctrination were made, e.g. the brochure İstikâmet ("Direction"), published in Istanbul in 1983. The periodical Nur is at present published in Turkish, Arabic, English and German and is widely distributed.

Contemporary Risâle students and discussion groups are concerned primarily with the meaning of Nursî’s writings. His writings are at times quite ambiguous, sometimes rather cumbersome in style, but interspersed with precise, clear and beautifully-written passages. The basic purpose of the Nurcular has been not to launch a religious movement or challenge the existing socio-political order. The Nurist publishing houses have been instrumental in popularising many scientific books, some being regarded as controversial, but Nursî opposed materialism and any other doctrine likely to undermine the spiritual essence of the human being. The Nurists, if they are a sufficiently well-defined group so as to be named, thus espouse an uncompromising religious orthodoxy, attaching the utmost importance to the faith reached through the study and understanding of the Kurân. However, on social, economic, and educational questions they adopt a middle-of-the-road ideology advocating humanitarianism, pluralism, fellowship, and national unity. (Nursî repeatedly stated that although he was a Kurd, he considered himself a member of the Turkish nation because of the Turks’ lack of a sense of race, and for their faithful service to Islam.) The Nurists condemn both communism and capitalism for their excessive materialism and seem to favour a mild form of state intervention in the economy, provided it does not inhibit private initiative. This is a view that largely coincides with the economic policy of the recent Turkish governments. In social and political matters, the Nurists favour a pluralist approach, despite the danger that the advocacy of state-imposed social justice could provide justification for authoritarianism.

If the Risâle is considered in its entirety with regard to its theological message and preoccupation with human society, and taking into account the aspiration of those who follow its teachings and who come from every walk of life, then the Nurculuk must be regarded as one of the most democratic and advanced Islamic yâd (rejuvenation) movements, and Nurists as among the foremost ranks of those Muslims who have attempted to reconcile the faith with human and social environment. It was probably the first to advocate, in a doctrine openly based on the Kurân and Sunna, a total dedication to the faith along with acceptance of the philosophical, intellectual, and technological aspects of the modern age, whence Nurist groups have sprung up in a number of Muslim (Pakistan, Malaysia) and European (Germany) countries, making it in effect one of the strongest international Islamic revivalist movements. However, there is a latent danger of obscurantism as the movement spreads to the countryside and among the lower urban classes that tend to stress exclusively the devotional aspects of Nursî’s teachings and ignore their modernist, change-oriented dimension. There has been lately a not unnatural tendency on the part of the dedicated Nurists to organise and regard themselves as forming a special group of illuminated, righteous leaders and to develop an esprit de corps that gives the movement the appearances of a tarîkh.

Nursî died without leaving a known disciple to continue his work and elaborate on his ideas. After his death, several newspapers and journals were published by the Nurists, one of them, Yeni Asya, taking a more activist stand. Differences and disagreements arose over the question of participation in the political process. The majority of Nurists seem to have supported Necmettin Erbakan’s Islamist parties, but felt betrayed when Erbakan in the late 1970s entered into
a political coalition with the Republican People's Party, former persecutors of Sa'di Nursi. After the restoration of political freedom in 1982-5, one group of Nuri, the Nuri, supported Süleyman Demirel's Straight Path Party, while others backed the Motherland Party of Turgut Özal, who had proclaimed himself an adherent of the Nâşıkendîyya. Thus in general, the Nuriyya have supported right and centre parties, but the shifting course of Turkish political life has caused a certain reticence regarding politics amongst many Nuriyya. At the present time (1992), there are five major Nuri groups in Turkey, as well as a sub-group known as the Halk Nuriyya.

**Nuri**

A common name in the Near East for a member of certain Gipsy tribes. A more correct vocalisation would perhaps be Nauri (so Hava, Steingass, etc.), with plural Naur. Minor sky [see L. L. I., at V, 817a] gives Nauru. By displacement of accent we also find the plural form as Navaur (e.g. in Jaussen, *HttpContext* des Arabes, 90, and British Admiralty, *Handbook, Syria*, London 1919, 196, *Arabia*, London 1916, 92, 94). In Persia, the current name for Gipsy is *Lori, Lârî or Lûî [g.e.].* It is not unlikely that by a natural phonetic transformation the form nûr derives from lû, which, it has been suggested, originally denoted an inhabitant of the town of al-Rûr (or Arrî) in Sînâ, Quemu'rem advenced the theory (*Hist des Sultans Mamlouks*, v/2, n. 5) that the name nûr arose from the Arabic nûr (fire); he gives the form n. wâr. t. because these variants were usually seen carrying a brazier or a lantern. Even today many of the Naur earn their living as itinerant smiths. But it is more probable that the correct etymology is to be found in some Sanskritic dialect of northwestern Indian Nuriyya originated to the Gipsy tribes as of **Gipsy blood**, but it is more likely that the name arose from a parallel with the sad state of the fallen line of viziers. See L. Bouvat, *Les Barnides d'après les historiens arabes et persans*, Paris 1912, 110, 125.

The German traveller Ulrich Sertzen and the American missionary Eli Smith gathered valuable material in the Near East regarding those nomadic peoples which proved useful to later scholars. They were followed by Capt. Newbold (1856) on the Gipsies of Egypt, Syria and Persia; von Kremer, Austrian Consul at Cairo, on the Egyptian Gypsies (1863); Sykes (1902) dealt with the Persian Gypsies, while an excellent treatise appeared in 1901 from R. F. Macalister on the language of the Naur or Zutt, the nomad smiths of Palestine. Macalister in this work had the rather difficult task of reducing to writing a language almost completely unknown, and interpreting and analysing the Nûri stories and folk elements recounted to him by members of the Nûri settlement north of the Damascus Gate in Jerusalem. He employed several of these Naur in the course of his excavations there. A small Syrian Gypsy vocabulary received by Miss G. G. Everest of Beirut from a friend at Damascus was also published in the *Journal of the Gypsy Lore Soc.* (Jan. 1890), in an article by F. H. Groome. The philological aspect of the question has received, in recent years, the attention of scholars such as E. Galtier and E. Littmann (see Bibli.).

In Egypt, the Halab (sing. Halabi) are to be found mostly in Lower Egypt carrying on their special occupations at the various markets and *mawâlid* [see mawlid], and as traders in camels, horses and cattle. Their womenfolk are noted seeresses and medicine-women, practising all the arts of sorcery (*sibyl*): sand-divination (*darb al-râml*), shell-divination (*darb al-salâdâb*), bibliomancy (*fâth al-Kiââb*), etc. Their tribal subdivisions are variously given by Galtier (7) and
Newbold (291). Their name suggests some connection with Aleppo (Halab), but they themselves proudly claim a South Arabian ancestry, their tribal chronicling being in the popular broadsheet production, Taβhīd Zīr Sā'īm.

The Ghashar Gipsy tribe, however, have a rather unsavoury reputation, a fact that is reflected in the modern Egyptian colloquial Arabic verb ḍalghar “to be abusive” (see M. Hinds and El-Said Badawi, A dictionary of Egyptian Arabic, Beirut 1986, 617). Their speech has five nominal ingredients, and Galisier is of the opinion that they are more recent arrivals in the Nile Valley, probably wanderers from Constantino-ple. The argot of the Egyptian Gipsies is called al-Sim, and in modern colloquial Arabic in Egypt “to speak a dialect” is yatakallim bi l-Sim (see Hinds and Badawi, op. cit., 446).

The word Nūrī in Egypt is almost synonymous with thief, and their chasing propensities are libellously associated in a popular proverb with the inhabitants of Damanhūr [q. v.] (alf Nun wa-l Damanhuri). Accord-
Al-Nuri — Nuri Al-Sa'id

Nuri, Shaykh Fadl Allal, the most notable of the anti-constitutionalist 'ulama' in the Persian Revolution of 1906.

He was active in the movement against the Tobacco Concession in 1908-9, 1901-2, but otherwise not particularly important politically until 1921-03, when 'Ayn al-Dawla was appointed Sadri-i Azam and passed on to Shaykh Fadl Allal the responsibility for government business in the shar'a courts, which had previously come under the mujahhid Sayyid 'Abd Allal Bihbihani (Mirza Muhammad Naim al-Islam Kirmani, Tarkhi-bidari-yi Irangyan, Tehran 1361 Sh 1982, i, 210). Shaykh Fadl Allal supported 'Ayn al-Dawla's reforms of the finances in an attempt to preserve the traditional system of government and authority, but when the Sadri-i Azam's régime collapsed in Dhu 'Al-.ct al-Dhulayr 1324/July 1906, Shaykh Fadl Allal was forced to join what became the constitutional move-

Shaykh Fadl Allal, fourteen times Prime Minister of 'Irak under the monarchy (1921-58) and one of the most robust Arab politicians of his generation, was born in Baghdad in 1888, the son of a minor administrative official, and was killed at the hands of a hostile crowd in Baghdad on the day after the 'Iraki Revolution of 14 July 1958. Nuri attended military schools in Baghdad and Istanbul, receiving his commission in 1906; after four years soldiering in 'Irak, he returned to the Staff College in Istanbul, participating in campaigns in Macedonia (1911) and in the Balkan Wars (1912-13). In common with many of his fellow Arab officers, he was attracted to the liberal aims of the Committee of Union and Progress [see ITTNAID WE TARKHI DEM-IVVET], only to be disappointed by the increasingly centralising and pro-Turkish policies which it pursued in power. Along with several other 'Irakiis, Nuri joined 'Al-Adh, the secret society of Arab officers in the Ottoman Army, founded by 'Aziz 'Ali al-Misri. At the outbreak of the First World War, Nuri was in Baghda where he surrendered to the British occupying forces. He was sent briefly to India and eventually made contact with 'Aziz 'Ali al-Misri, with whom he joined in Cairo at the end of 1915. Shortly afterwards he was asked to take part in the British-sponsored Arab
Revolt, which the Sharif Husayn of Mecca [q. v.] proclaimed against the Ottomans (or more specifically against the government of the Committee of Union and Progress), on 5 June 1916. Al-Misrī was the first commander of the Sharifian forces, but he soon fell out with the Sharif and returned to Egypt. His place was taken by Dja'far al-'Askari, captured by the British in the Western Desert a few months earlier, who was doubly Nūrī's brother-in-law—the two men were married to each other's sisters. Nūrī himself became "coordinator and adviser-in-chief to the Sharifian forces" (Leclerc in Birdwood, Nūrī as-Sa'id: a study in Arab leadership, London 1959, 45, 59). During his time in the Hidjaz and Syria, Nūrī developed close personal relationships with a number of British officers, and also with Husayn's second son, Faysal (1885-1933 [q. v.]), remaining at the latter's side from August 1917 until, and well beyond, the capture of Damascus in October 1918. In the course of the War Nūrī received two British decorations for gallantry, the C.M.G. and the D.S.O.

In common with those with whom he was most intimately concerned, Nūrī would have had no clear idea of Britain's plans for the Arab provinces of the Ottoman Empire in event of the defeat of the Central Powers in the First World War. However, since Britain had given its backing to Sharif Husayn and his sons, it was widely believed (see Hanna Batatu, 'The old social classes and the revolutionary movements of Iraq; a study of Iraq's old landed classes and its Communists, Ba'thists and Free Officers, Princeton 1978, 342). Indeed in April 1939. Nūrī was openly contemptuous of his British patrons. In any case, whether or not this attack in April 1939. Nūrī was openly contemptuous of his British patrons. In any case, whether or not this allegation had any foundation was less important than the fact that it was widely believed (see Hanna Batatu, The old social classes and the revolutionary movements of Iraq; a study of Iraq's old landed classes and its Communists, Ba'thists and Free Officers, Princeton 1978, 342).

Meanwhile, Nūrī had returned to Baghdad in January 1921, where he was made Chief of Staff of the 'Irākī Army under his brother-in-law Dja'far, Minister of Defence in the provisional government. For most of the 1920s Nūrī concentrated on building up the 'Irākī Army, in his capacity either as Chief of Staff (1921-2) or as Minister of Defence, an office he held in seven of the nine cabinets formed between November 1922 and March 1930. Between March 1930 and October 1932 he served as Prime Minister, and was intimately involved in the negotiations for the Anglo-'Irākī Treaty of 1930 (see 'Irākī Foreign Policy). When official withdrawal of British control over 'Irāk and for 'Irāk's entry into the League of Nations in 1932, King Faysal's premature death in August 1933 left a power vacuum at the centre of 'Irākīs politics. His son Ghāzi, then aged 21, was both inexperienced and lacking in political acumen, with the result that control of the country passed increasingly to former or serving military officers. In October 1936, General Bakr Sidkī led a coup against the government of (former Major-General) Yāsīn al-Hāshīmī, in which Nūrī was serving as Minister of Foreign Affairs and Dja'far as Minister of Defence. Dja'far was shot at Sidkī's instigation while trying to negotiate with the coup leaders; Yāsīn died in exile a few months later, and Nūrī was smuggled out of the country via the British Embassy. He returned to 'Irāk in the autumn of 1937, a few months after the overthrow of Bakr Sidkī, and proceeded to wage a relentless vendetta against the perpetrators of the coup of October 1936 in general, and in particular against those involved in his brother-in-law Dja'far's murder. Eventually, Nūrī formed his third cabinet, and, apart from a crucial few months out of office between January and October 1941, served as Prime Minister for much of the period between December 1938 and June 1944, often holding the Defence and/or Foreign Affairs portfolios at the same time.

Two incidents during these years were to have lasting effects upon Nūrī's subsequent career, and generally to alienate him from public esteem. The first of these was the persistent allegation that he was in some way involved in Ghāzi's death in a motor accident in April 1939. Nūrī was openly contemptuous of Ghāzi (who had been a close friend and brother-in-law, who they would be involved in whatever future settlement of the area might be reached. Early in November 1918, Faysal invited Nūrī to accompany him on his journey from Syria to London (via France) and then to the peace conference in Paris, where he was to represent the Hidjaz. The French made it clear to Faysal that they had no intention of recognising the "Arab kingdom" which he had established in Syria in October 1918. Encouraged, perhaps, by the fact that almost a year had passed before sufficient French troops arrived in Syria to enforce French policy, Faysal's supporters there were determined not to give up their state. The First Arab Congress, held in Damascus on 7-8 March 1920, proclaimed Faysal King of Syria and his brother 'Abbād Allāh King of 'Irāk. A few weeks later, under the terms of the Treaty of San Remo, France was given the mandate for Lebanon, Britain the mandate for Palestine and Transjordan. By this time there was a substantial French military presence in Syria; on 14 July 1920 the French delivered an ultimatum to Faysal to accept the terms of the mandate, and when this was not accepted, defeated his army at Khān Maysalūn [see MAYSALUN], a few miles outside Damascus, ten days later. Faysal, with Nūrī at his side, left for Egypt, and eventually for discussions in London in the late autumn of 1920. In the immediate aftermath of the First World War, British plans for the territory which was to become 'Irāk were by no means clear. Most of the British administrators there had served in India, where they were used to a system of direct rule by British officials, and had little understanding of any expression of "national" or "Arab nationalist" aspirations. In the late summer of 1920 the notion that 'Irāk should either re-
while the 'Irakī Army fought a somewhat quixotic one-month campaign against a British force. The defeat of the 'Irakī Army was followed by a 'second British occupation', and this was used as an opportunity for the Regent and Nurī, 'their return from abroad only after the country had been subdued by British power made them so odious among the people that, regardless of what they did afterwards, they were never able to command public confidence' (Batatu, op. cit., 345).

By this time certain guiding principles of Nurī's conduct may be discerned. As the First World War ended, he seems to have realised that some form of foreign control over the Arab provinces of the former Ottoman Empire was inevitable, and that his own career would be best served by a pragmatic acceptance of this situation. Nurī saw the future of the Arab world in terms of a loose confederation of regions (and eventually of individual states) under the general aegis of Britain, and, if more reluctantly, of France. His patron Faysāl's translation to 'Irak in 1921 gave Nurī the opportunity to assist in building up a state which was independent at least to the extent that it was no longer part of the Ottoman Empire, and which might eventually emerge as a leading regional force, largely through the agency of the Army, whose construction and organisation was one of his principal concerns throughout the 1920s and 1930s.

The major flaw in this design was that because Faysāl and the Hashimites were on the one hand, and Nurī and his circle on the other, were regarded by members of the 'Old Social Classes' first as foreigners and outsiders and secondly (because of their lower class origins) as upstarts, both were forced to rely on Britain in ways which became more and more intolerable to the politically conscious sections of the 'Irakī population. Faysāl died before these tensions had developed beyond the point of no return, although he had considerable ombudsman towards the end of his life because of his acceptance of the restrictions on 'Irak's independence in the Anglo-'Irakī Treaty of 1930.

Realising the extent of his own isolation within 'Irak, Nurī tried to secure his base by placing trusted friends and colleagues in key positions in the army, so that in 1936, all of the Army's 3 major-generals, 3 of its 4 generals, 24 of its 25LOUDSHIRIAR officers and 18 of its 25 Shāfirī officers. In addition, as he gradually gained greater control of the state machinery, he was able to win over the tribal shaikhs and urban notables by co-opting them both politically and economically (see Batatu, op. cit., passim), a process greatly facilitated during and after the Second World War by this group's hostility to and fear of a burgeoning spectrum of 'opposition' parties and groups.

On his return to power after the Anglo-'Irakī 'War' of 1941, Nurī began to root out the Pan-Arab supporters of the Golden Square from within the Army, while putting forward his own modest version of Arab nationalism, the 'Fertile Crescent' scheme, in 1943. This involved the creation of a "Greater Syria" out of Syria, Jordan, Lebanon and Palestine, with which 'Irak would be associated, possibly leading to a wider federation which might embrace Egypt and Saudi Arabia. In time, popular resentment against Nurī and his circle reached a crescendo, although, given the nature of the political system, it was impossible for the régime to be ousted other than by force. In the course of the 1950s, a conspiratorial movement of Free Officers emerged in the Army, which eventually took advantage of military manoeuvres in July 1958 to direct units commanded by his sympathisers to take control of key locations in Baghdād. On the morning of 14 July the Royal Palace was surrounded, and the King (Faysāl II had attained his majority in 1953) and his uncle (the former Regent, now Crown Prince), were killed. Nurī went into hiding, but was discovered on the afternoon of the next day; this body, and that of the Crown Prince, both of whom were the objects of particular hatred, were dragged through the streets and eventually torn to pieces by the mob.

Possibly as a result of their reluctance to face harsh realities, few British diplomats concerned with 'Irak in the 1950s thought that a major change in the status quo was imminent (see here W.R. Louis, The British and the origins of the Iraqi Revolution, 1914-1925, in A. Fernea and W.R. Louis, Iraq in a changing world 1914-1958: the Old Social Classes revisited, London and New York 1991, 31-61). It is clear now that the perpetuation of the immense social inequalities over which Nurī presided (which increased with the rapid rise in oil revenues and the inauguration of the Development Board in the early 1950s), together with his dictatorial style and his constant manipulation of the electoral and parliamentary systems, were major causes of the chaos and violence which erupted when the dam finally broke in July 1958. It is not clear either that this was "inevitable", or that Nurī had "no choice" in acting as he did. While Nurī was clearly Britain's most faithful servant in 'Irak, the nature of his contribution to the history of his own country remains rather more difficult to assess.

Nuri Al-Sa'id — Nürsi

Nürsî, Şevkî Bâdi' al-Zâma'n Sâ'dî (Modern Tkhsh. Bediuzzaman Saidi Riza Nürsî) (ca. 1876-1960), religious leader, of Kurdish origin, in late Ottoman and Republican Turkey.

Sa'id Nürsî, the author of the Rüşûl-şîrî Nur 'Epistle of Light' (or 'Wisdom') from which the intellectual-religious movement known as Nurrulculuk [q. v.] sprang, was born in the village of Nürsî in the province of Bitlis [see NPRL] in eastern Turkey. His father apparently belonged to a local family of notables, as indicated by his surname Mirzâ. Nürsî started his education in the medrese of Seyyid Nûr (the names of many places and people with whom he was associated, including that of his mother, Nürîyye, derived from nûr 'light'), but he soon changed to an intensive, three-month-long study under Şevkî Muhammed Dzîlî in Beyazit; he received the title of Mollâ [q. v.], and from then on he continued his education on his own. During his travels around the province he developed an interest in the life of the common people and a deep feeling for nature that stayed with him all his life. His growing erudition, communal involvement and occasional confrontation with Ottoman officials earned him first the title of Mezbûr ('famous') and later, around 1894, that of Bâdi' al-zâma'n or 'beauty of the age'. In 1909 he started to call himself gharîb ('stranger' or 'dissident') in order to show that his way of thinking and behaving differed from that of his contemporaries, a strangeness displayed outwardly by his native garb and the gun and knife in his belt, resembling more his fellow-Kurdish tribesmen than a refined city ćûlîm.

After spending two years in Bitlis as the guest of 'Omer Pasha, Nürsî moved to Van in 1894, where he lived in the house of the provincial wâli or governor Ishkodralî Tâhir Pasha. There he acquainted himself with the physical and natural sciences and began to apply their methodology both to the teaching of Islam and to demonstrate the truth of the faith. At about this same time he met Menamed Mîrzâ Abd iil-Hamîd or 'Abd iîl-Hamîd Pasha, the governor of Van, who was in search of a man who would have the necessary qualification and standing to head the new religious orthodoxy while evolving an Islamic-modernist-national philosophy of his own. His aims were not only to rejuvenate the faith but also to revitalise the society in which the faith found its expression. This preoccupation with the living society had the effect of elevating the local culture and the vernacular (Nürsî only learned Turkish around the age of 14) to respectability and gave love of country (şanâvîr) and the natural aspects of human existence the sanction of religion. Yet the same forces that conditioned modernist and nationalist views also created disunity in society and a penchant for materialism, and these ills became Nürsî's ultimate target.

From roughly 1895 to 1921, Nürsî lived the life of an up-and-coming Ottoman rural intellectual. He came to share the patriotic and nationalist-religious views of this group of people as well as their search for social status and position which socio-economic and political change offered the opportunity to achieve. Thus he began to accept the tenets of modernism or Sa'idism, delivering in Salonica in 1908 a fiery speech glorifying the virtues of political liberalism; but later, in reaction to the positivist secularism of the Young Turks, he helped found the İttihat-ı Muhammedi (Muslim Union), which staged the abortive counter-revolution of 1909. Arrested and tried, but acquitted, he went back to his native region where he taught for a while. Then he participated in the Turkish war effort and helped prepare the call to dhîhdîd against the Allies. In 1915, he went by submarine to Libya, in order to work with the Sultan and the Allies. Returning home, he took part in the defence of Bitlis, was captured by the Russians, but escaped in 1917 and returned home via Warsaw and Vienna. He held a teaching job in Istanbul for about three years, after which the ascetic, spiritual 'new' Sa'id replaced the activist, worldly 'old' Sa'id.

The change was caused as much by Nürsî's increasing age as by the establishment of the Republic, the abolition of the caliphate (which he apparently accepted), and the passing of the old Ottoman order. Probably the 'old' Sa'id would have long been forgotten if the 'new' one had not emerged. Nürsî described his life until the early 1920s as a time of preparation and training necessary for the creation of the man who subsequently made himself into the
voice of the community and the faith. He criticised not the new régime, or even its reforms, but the enemy of the new régime, although the truth of this view was never proved. In 1925 he was arrested for alleged involvement in the Kurdish revolt of Sheikh Sa'id, and although he was once more acquitted, he was forced to settle in the town of Barla in the Isparta province, where he wrote two-thirds of his Risdle-yi Nur, (originally called Risdle, or At-At, then renamed Risdle, and later, to seven years' enforced exile in Kastamonu. He was subsequently arrested again in 1943, 1948 and 1952 for allegedly violating laws mandating secularism, but was finally acquitted in 1956. This was the result, among other things, of the official opinion issued by the Dyangan (Religious) Affairs Directorate which finally stated that Nursi's teachings were spiritual and Islamic. He had returned meanwhile to Isparta, which he considered his home, and there openly cast his vote for the Democratic Party, which had restored some religious freedom. He died in Urfa on 23 March 1960 and was buried there, but the military government that came to power on 27 May 1960 exhumed the remains (supposedly in response to his brother's request) and buried him in secret in an unknown place in the mountains of Isparta.

The broad range of Sa'id Nursi's teachings rested on the fact that he considered himself not a sheikh but an imam, similar to al-Ghazali and Ahmad Sirhindi [q.v.], and followed the orthodoxy of 'Abd al-Kadir al-Djalani [q.v.]. Absolute faith (imam) in God was the foundation of his belief. In this respect he departed from the Sufi personalised search and unity for God as well as from the Naksibandi concept of the tariqa or brotherhood as the vehicle of the faith. He adopted the notion of millet (the nation) as the collective of the Muslims, with Islamiyyet (the faith), the whole of this superseding ethnic, linguistic and local differences. The millet was, in fact, a new type of political-social entity, in which nature and humanity existed in harmony and balance, both being viewed as God's creations and the proof of His existence.

Religion, according to Nursi, operated in a social and human environment and had to take into consideration those factors natural to the human being. He regarded modern society—notably that of the West—and that espoused under the positivist-materialist policy of the Turkish government in the name of "secularism" as the source of materialism and spiritual impoverishment. He considered that the level of development of the faith was conditioned by the intellectual, moral, and economic level of development in society, and upheld the virtue of labour (sray-rmek, ceflah "exertion" or "activity"), mutual help, self-awareness and property rights, moderate acquisitiveness being a natural, God-given instinct. He criticized the ulama for turning their back on the physical sciences; in fact, he advised them to study these sciences. For him, ignorance (cetellet), poverty (fakirlik), and dissension were the worst enemies of society. Nursi's teachings lacked the dogmatism and rigidity that infected many other fundamentalist movements and appeared at times to say many things at once. This vagueness appealed to a variety of groups, ranging from modernists to moderate conservatives and dedicated Islamists. Above all, however, it was the example of the man and his life that has won him a wide following: a simple Kurdish villager with limited formal education, who eventually opted for membership in the newly-formed Turkish nation (he dropped the name Sa'id Kurd as having the potential best to represent the brotherhood of Muslims.

KEMAL KARAT

NUŞAYB al-Asghar, Abu 'l-Haḍja (not to be confused with Nusayb b. Rabah [q.v.], who is sometimes given the kunya of Abu 'l-Haḍja), a negro poet of the Arabic language originally from Yamâma.

He is described as musulî 'l-Mahdî to distinguish him from his homonym, because the future 'Abbâsîd caliph had bought him and freed him during the reign of al-Mansûr (136-58/754-75). It was he who gave him his kunya and married him to a female slave named Dja'afa. Once established on the throne (158/773), al-Mahdi, whose companion he had become, offered him property in the Sawad and ordered him to his daughter 'Abâsîd al-Mahdi (170/937/938-940), whom he had appointed head of a province of Syria, where he exploited his authority for his own enrichment. Naturally enough, he composed, in a long kaṣida (li-rhym, metre tawil), the eulogy of this caliph, whose wife Zubayda [q.v.] was also the object of his praises, on the occasion of her pilgrimage to Mecca (mi-rhyme, metre tawil).

During this period, he also maintained amicable
relations with the Barmakids, in particular with al-Fadl b. Yahya (d. 193/808 [q.v.]), who had offered him at least some of his work is inspired by the exchanges of gifts with other, lesser-known individuals, by gratitude for the presents solicited or by anger when his expectations were disappointed. Although he is described by the Aghani as hadj jag mal'iran, there are barely any traces of hadj jag in what has survived of his work, other than a satirical poem addressed to the governor of San`a`, who had accepted his adulation but had not rewarded him (<r> rhyme, metric, content).

The Fihrist (163, Cairo edition, 231-2) estimates his corpus as comprising 70 compositions, but of this only a few verses have survived. The critics have been unceasing in their praises for his talent. They place him at the same level as his homonym, declare that al-Raghib preferred him to other poets and speak highly of his qualities in the domains of amorous poetry, panegyric, satire and description, but it is difficult to corroborate their judgment.

Bibliography: The principal biography is that of the Aghani, xx, 25-34 = ed. Beirut, xxiii, 400-37. See also Abu Tamam, Hamasa, i, 273; Dhahib, Bursan, 107, 108, 314; Ibn al-Mu'tazz, Tabakat, ed. NUSAYRIYYA, a Shî`i sect widely dispersed in western Syria and in the south-east of present day Turkey; the only branch of extreme (ghuluww) Kuftan Shî`ism which has survived into the contemporary period.

1. Etymology

Pliny (Hist. nat., v, 81) mentions a Nazarnorum tettrachira in Coele Syria, situated opposite Apameia,
beyond the river Marsyas (not identified; probably the right-hand tributary of the Orontes passing to the east of the town), but this name is evidently not related to that of the sect. The Nusayriyya themselves derive the name from that of their eponym Ibn Nusayr, which would appear to be correct. In Arab-Islamic texts, the name is not attested in Syria before the establishment of the sect at al-Lādhikīyya in the 5th/11th century.  

2. Current distribution  

In Syria, the heartland of the Nusayriyya is the Djebel Ansariyye (known today as Diqab al-Alawīyyin) between al-Halfa to the north and Tall Kalakh to the south. From this nucleus, the Nusayriyya have spread out to occupy parts of the surrounding plains: the coastal plain to the west, the Ghâb to the east and the plain of ‘Akkâr to the south-west. Nevertheless, the towns which surround the Djebel have always maintained a non-Nusayri majority (al-Lādhikīyya, Diqab al-Bâniyân, Tartús, Saftârî, Tall Kalakh, Hims, Maṣyâf, Hamât). Nusayrī minorities are distributed to the south of Hims, on the plateau between Maṣyâf and the Orontes, to the north-east of Hamât and in the regions of Ma‘ârrat al-Nu‘mân, Idlib and Aleppo, as well as in Damascus. In 1964, the number of Nusayriyya in Syria was estimated at 600,000, or 11% of the population (more recent assessments do not exist). In Lebanon there is a Nusayrī minority immediately to the south of the Syrian frontier. Within the current boundaries of Turkey, sizeable minorities are to be found on the surrounding plains: the coastal plain to the west, the surrounding of these two towns (approximately 80,000 in 1921; the current figures are not known. Cf. the maps in Weulersse, i, 58 f.).  

3. Origins  

The sect was formed in Irak in the mid-3rd/9th century. According to al-Nawbakhti, 78 (cf. al-Kummi, 100-1; al-Kashshî, 520-1; Hâlm, Gnosis, 282-3), Muhammad b. Nusayr al-Nâmîrî was a supporter of the ‘Abî Mûsâ b. al-Hašân (d. 255/868). He proclaimed the divine nature of the imâm (who cursed him for this reason; al-Kâshshî, 520, 999) and claimed for himself the status of a prophet; he professed metempsychosis (tawâṣûţ) and antimanimism (šibâ). At the court of Bagdad, he was supported by the kātib Muhammad b. Mûsâ b. al-Hâṣân b. al-‘Arûf al-Djûfîrî (al-Kâshshî, 302, 554). According to Nusayri tradition, Ibn Nusayr was the favourite disciple of the eleventh imâm al-Ḥâsân al-‘Askârî (d. 260/874), who entrusted to him a new revelation which was to constitute the nucleus of the Nusayri doctrine. In the most ancient sources (al-Nawbakhti, al-Kummi; even al-Baghdâdi, 255-6), the sect is called al-Nâmîrîyya (from the nisba of Ibn Nusayr); from the 5th/11th century onwards, the name Nusayriyya becomes current (Ibn al-Qâdibârî, d. 406/1016, quoted by al-Astârâbâdî, Manhâj al-makâlî, 314; Ibn Ḥazm, Mîsl, quoted by Friedländer in fAOS, xxix [1908], 126 f.f.; al-Sâmâ‘înî, fol. 562 b [ed. Hyderabad xiii, 121 ff.]; al-Shahrastânî, 143-5). The literature of the Nusayriyya has revealed to us the lineage of the disciples of the founder, who wield authority in the tradition of the secret doctrine. Of Ibn Nusayr’s successor, Muhammad b. Djundab, nothing is known other than his name. His disciple Abu Muhammad ‘Abd Allâh al-Djundubâlî al-Djânnân (“the gardener”), d. 287/900, seems to have been a Persian immigrant from the region of Fârs in ‘Irâq (Diqabulî is situated between Kûfah and Wâsit). It is probably he who was responsible for certain quasi-Iranian features of the Nusayri doctrine, for example the adoption of the Iranian festivals of the equinoxes, mauârâz and mîhrgân [q.v.], which are celebrated by the Nusayris as the days when the divinity of ‘Allî is manifested in the sun. Al-Djundubâlî is the hero of a book entitled Kitâb al-Akbûr wa ‘l-adwâr wa al-nûnâyya (“The aeons and the cycles of the light”), from which quotations have been preserved in the Calendar of festivals of the Nusayris and of which the author was possibly the disciple and successor of Ibn Djundab, al-Kâšîbî.  

Abû ‘Abd Allâh al-Ḥaṣān b. Hamdân al-Kâšîbî (d. 346/957) was the head of the Nusayri community of the suburb of al-Kârkh to the south of Bagdad, but he seems to have led a hermetic existence. He was a poet of considerable talent (his Diwân has been preserved) and seems to have earned his living as such at the courts of the Bûyids in ‘Irâq and in western Persia, later at the courts of the Hamdânid of Mawâsîl and Aleppo. It was evidently he who conveyed the doctrines of the sect to northern Syria; he dedicated his Kitâb al-Hîdâya al-kubrî to Sayf al-Dawla, the Hamdânî amîr of Aleppo (Ta‘rîkh al-Aławîyyin [- TA], 260, 310). Al-Kâšîbî died at Aleppo in 346/957 (TA, 257-9) or 358/969 (al-‘Astârâbâdî, Manhâj al-makâlî, 112-23, and left behind numerous works. His tomb to the north of Aleppo, known by the name of Shaykh Yâbrâkî, is still venerated by Nusayris today (TA, 259).  

The successor of al-Kâšîbî at Aleppo was Muham- mad b. ‘Ali al-Djîlîî from (al-Djîlîîyya on the estuary of the Orontes). He survived the reconquest of Cilicia and of Antioch by the Byzantine emperor Nicephoros Phocas (358/969) and of the Syrian coast by John Tzimisces (363/975) and was for a period of time a prisoner of the Christians. He died, probably in Aleppo, after 384/994 (TA, 260).  

Surûr b. al-Kâsim al-Tabarârî, successor of al-Djîlîî at Aleppo, left the town in 423/1032 on account of the incessant warfare in the region and settled at al-Lâdhikîyya (Laodicea), which at this time was still under Byzantine domination. He was the founder of the Syrian Nusayrî community; according to TA, 327, the local dynasty of al-Lâdhikîyya, the Tanâgh (‘Abd Allâh al-Djundubâlî, 358/969) and of the Syrian coast by John Tzimisces (363/975) and was for a period of time a prisoner of the Christians. He died, probably in Aleppo, after 384/994 (TA, 260).  

The history of the Nusayri community in mediaeval times is obscure; the accounts contained in the TA, compiled at the beginning of the 20th century, are of dubious value; a study of this period has yet to be undertaken. In the early years of the 12th century, the western part of the territory of the Nusayris was conquered by the Crusaders; in 496/1103 al-Lâdhikîyya was captured by the Norman Tancred after a long siege. From this time onward, the northern area of what is now the Diqab al-Ansârîyya formed a part of the Norman principality of Antioch, but Christian penetration of the mountain region seems to have been ineffectual; in the Djebel itself, fortresses and other relics of the Crusaders are quite...
In Latin sources, the Nusayriyya (Nossorite) are seldom mentioned (cf. Dussaud, 21-7, 30). In 527/1132-3 the fortress of al-Kadhums was sold by the amir of al-Kahf to the Nizari Isma'iliyya of Alamûm, who subsequently took possession of numerous fortresses in the southern Djabal: al-Kahf, al-Khariba (531/1136-7) and Masyûf (535/1140-1), then al-Khawabâ, al-Rusûfa, al-'Ullayka and Manîka. The establishment of Isma'iliyya (the assassini of the Latin sources) in the region provoked conflicts with the Nusayriyya, this is the positive result in which belongs the Nusayri tradition of a “council” at 5'Ana (on the middle Euphrates) where representatives of the Nusayri communities—two each from Baghdûd, from 5'Ana, from Aleppo, from al-Lâdhiqiyâ and from the Djabal—tried in vain to find a formula of conciliation (ta'âhid) with the Isma'iliyya (TA, 258, 365). The council (al-majlis al-dim') of 5'Ana is undated, a second record is having taken place in 690/1291 at Sâfîhî, with equal lack of success (TA, 756).

Following the capture of Djabal, al-Lâdhiqiyâ and the Frankish fortresses of Sahûyn and Balâtunus by Salâh al-Dîn in 584/1188, the Djabal became part of the Ayyûbid sultanate. It is at the end of the Ayyûbid period that Nusayri tradition places an event of extraordinary importance: the settlement in the country of extraordinary importance: the settlement in the country. After an uprising by the Nusayriyya, sultan Kalawûn re-imposed the ban on all proselytism and heretical even than idolaters and authorised djihâd against them (S. Guyard, 393). Such measures were to be responsible. But Ibn Battûta, which oppression seems to have eased. According to him, from 1920 onward, “Dja'fart” (i.e. Twelve) judges were appointed in the towns of the south of the country (EP, s.v. Nusayrî)

Following the disintegration of the Ottoman empire and the establishment of the French mandate in Syria, the territory of the Nusayriyya was divided into three parts: Cilicia was ceded to the Republic of Turkey, while the sandjak of Alexendretta (Iskenderun) was separated from the remainder of Syria and placed under special admistration. On 31 August 1920 the French established the “Autonomous Territory of the Alawîtes”, which consisted of the former sandjak of al-Lâdhiqiyâ, the northern sector of the sandjak of Tripoli and part of the kadâ of Masyûf (sandjak of Hamân). On 12 July 1922, the Territory was proclaimed a State which, with the States of Damascus and Aleppo, formed the “Federation of States of Syria”. At the beginning of 1924, the Federation was dissolved (close to Sâfîhî), but an end to the conspectus of the Nusayriyya as more Lûdîniyya, Mahâlîba, Darâwîs, Numaylatiyya and Banû 'Ali (TA, 358-64; for the expansion of the various tribes, cf. Weuleresse, i, 330-1, and fgs. 136 and 137).

In the Mamlûk period, Baybars, having taken the fortresses of the Isma'iliyya to the south of the Djabal, made numerous attempts to convert the Nusayriyya to Sunnism; he forbade initiations into the sect and ordered the construction of mosques throughout the country. In 706/1306 he imposed the ban on all proselytism and repeated the order to construct in every township a mosque, for the maintenance of which the local population was to be responsible. But Ibn Baṭûtâ, touring the region in the mid-8th/14th century, relates that these mosques had been abandoned or even transformed into cattle-sheds or stables (Ibn Baṭûtâ, i, 177). The well-known fatwa of Ibn Taymiyya (d. 728/1328 [q.v.]) condemned the Nusayriyya as more heretical even than idolators and authorised djihâd against them (S. Guyard, Fetwa; Dussaud, 28-31). Ibn Kâdî Shûhba, Ta'âhid, tells of an expedition in 745/1344 in the course of which “books containing the dogmas of the Nusayriyya” were confiscated.

But the sect survived these persecutions and remained active until the Ottoman period, during which it occupied several positions. According to C. Niebuhr, who crossed the Djabal in 1766, the Nusayriyya were governed by four muka'dîms (at Bahliyya near al-Lâdhiqiyâ, at Sumrin, at the Bilâd al-Shawâbi and at Sâfîhî), who were subsidiary to the Pasha of Tripoli (Reisebeschreibung, ii, 439). Such was the case in 1832 when the Egyptian general Ibrahim Paşa b. Muḥammad 'Ali [q.v.] crushed the resistance of the muka'dîm of Sâfîhî. After 1854, the Turkish government was content to control the Djabal indirectly through the appointment of a local chief-bailiff, the muṣîr al-djâbal Ismâ'il Beq, governor of the district of Sâfîhî; installing himself at Dreykîkh (Ta'rîkh al-'Alawiyyin), he permitted the constant wrangling of the different rival families and subjected them to his authority. In exchange for a fixed tribute, the government allowed him unlimited power in the Djabal. But in 1858 this potestate was reckoned to have become too powerful, and he was deposed by Tâhir Paşa. On numerous occasions, in particular in 1870 and 1877, Ottoman troops ravaged the territory of the Nusayriyya and destroyed the power of the tribes and establishing a direct administration there (levying of taxes; recruitment of soldiers); mosques were constructed but they remained empty (Dussaud, 32-8).

During the last years of the Ottoman empire, a Nusayri of Adana, Muḥammad Amin Qâlib al-'ālî, chief of police in several wilâyatâs, composed his “History of the Alawîtes” (Ta'rîkh al-'Alawiyyin), which was published in 1924 in Arabic. In this book, the term Nusayri, in usage since the Middle Ages, was replaced for the first time by Alawî, which was henceforward to be the norm. The Ta'rîkh had the object of ridding the Nusayriyya of their reputation for being heretics or even pagans and showing that in fact they were true Twelver Shi'îs. It is for this reason that, from 1920 onward, “Dja'fart” (i.e. Twelve) judges were appointed in the towns of the south of the country (EP, s.v. Nusayrî).
seven times, calling for their obedience, but they refuse. In each manifestation, God, who is called "the Essence" (māʾna), is accompanied by two subordinate hypostases, "the Name" (ism) which is also called "the Veil" (ḥidżāb) and the "Gate" (bāb). In earthly life, this trio is revealed in numerous instances: the māʾna is incarnated successively in Abel, Seth, Joseph, Joshua, 'Aṣaf, St. Peter and 'Ali b. Abī Tālib, then in the imāms as far as the eleventh one, al-Ḥasan al-ʿAskari; all of these are therefore manifestations of divinity. However, their true character is veiled by revelation. Asaf, St. Peter and Joshua, (bdb). The part played by sal-ammoniac in alchemy is much more important. It is accompanied by two subordinate hypostases, "the Name" (ism) which is also called "the Veil" (ḥidżāb) and the "Gate" (bāb). The tenth manifestation of the divine light. Women are excluded from this because they are born of the sin of Eve; for this reason, they are not entitled to participate in the rites of men (Sulaymān, Bākura, 61). The popular religion of the Nusayriyya, especially that of women, retains traces of paganism (veneration of high places, of springs, of green trees). For the cult of saints (ṣiyāra), cf. Weulersse, i, 255-62; for rites of initiation and festivals, cf. Dussaud, 104 ff., 136 ff., Weulersse, i, 259-61, H. R. Dussaud, i, 305 ff.

Cahen, Note sur les origines de la communauté syrienne des Nusairiyya, in REI, xxxviii (1970), 243-9; H. Halm, "Das Buch der Schatten". Die Mufaddal-Tradition der ġallūt und die Ursprünge des Nusairietums, in presence of the hajīdābād (Adam, Noah, Jacob, Moses, Solomon, Jesus and Muhammad), each of them is accompanied by a bāb. The central trio of the Islamic period is ʿAli (māʾna), Muhammad (ism, ḥidżāb) and Sulaymān al-Farsi (bāb). The abūb of the eleven imāms are the intermediaries between the concealed divinity and initiated believers; for example, the eponym of the Nusayriyya, Muhammad b. Nusayr, was the bāb of the eleventh imām al-Ḥasan al-ʿAskari, whose secret revelations he confided exclusively to the Nusayriyya. He who recognises the identity of the māʾna is saved and may escape from metempsychosis; his soul, released from the body and transformed into a star, resumes its journey back to its original identity. However, their true character is veiled by revelation. Asaf, St. Peter and Joshua, (bdb).

Chinese embassies of the 6th-7th centuries, which were the subject of very full investigation in connection with a geographical problem, the question of volcanoes in Central Asia, by H. J. von Klaproth, A. von Humboldt and C. Ritter. The reference was to mountains of fire, Pe-Shan, on the northern slopes of the Tien-Shan south of Kuldja [q.v.]. Ho-Chou on the south side of the Tien-Shan near Turfan and the sulphur pits of Urumchū and Ürümqi. The mountain Pe-Shan was said to pour forth fire and smoke continually; on one side of it all the stones burn, and are melted and driven after flowing some miles solidifying again. Rao-sha and sulphur were obtained there for medicinal purposes but the stones could only be collected in winter when the cold had cooled the ground. Humboldt and Ritter do not accept a reference to the burning of coal by which sal-ammoniac and sulphur are obtained. The statement that the volcanoes of Central Asia produce sal-ammoniac in immense quantities is found in G. Bischof, but even G. von Richthofen still held the volcano theory. The botanist and geographer Regel, who travelled in these regions about 1879, was the first to dispute the existence of volcanoes. After Nansen, Le Coq and others had been unable to confirm the existence of volcanoes but established the fact that there were large deposits of coal on the surface, the old sources in Central Asia are now generally attributed to the burning of coal. Almost all the Arab geographers who refer to Central Asia, from al-Maṣʿūdī, al-İṣtakhrī, Ibn Hawkal, to Yākūt and al-Kazwīnī, give fantastic stories about the method by which sal-ammoniac is procured in the Buttam hills east of Samarkand. Here again the details suggest the burning of the earth rather than volcanic exhalations. The Persian traveller Nāṣir-i Khusraw [q.v.], however, mentions deposits of sal-ammoniac and sulphur at Demāwend, and Ibn Hawkal is acquainted with the volcanic sal-ammoniac of Etna; the latter was still exported to Spain in the 12th century. At an earlier date, they had begun to procure sal-ammoniac from the seat of camel dung. This product remained into modern times an important import by the Venetian traders and was only driven from the market by the modern cheap methods of production of the same good by The use of sal-ammoniac as a remedy in cases of inflammation of the throat, etc., is already mentioned by 'ʿAll b. Ṭabbān al-Ṭabarānī. Ibn al-Bayṭār also quotes from other authors all kinds of remarkable uses of it, on which no stress need be laid. Dājībīr b. Ḥayyān reckons sal-ammoniac among the poisons, which is true of large doses.

The part played by sal-ammoniac in alchemy is much more important. Dājībīr adds it as a fourth to the three máqṣūtāt of the Greeks, quicksilver, sulphur and sulphide of arsenic (As₂S₃), and it is used by all Persian-Arab alchemists in countless recipes. The preparation of carbonate of ammonia through distillation of hair, blood and other materials is already fully described in the "Seventy Books" and other works of Dājībīr. These methods seem to have given the stimulus to the discovery of the Egyptian "alabaster" method of obtaining it. The Egyptians had found in the oasis of Ammon already mentioned by Herodotus that the alchemists came with alchemy to Spain and thence into western alchemy.

In the earliest Latin translations, sal-ammoniac is still called nescaudor, nescadur, etc., i.e. transliterations of the Arabic name. The general term al-ʿukāb is also found in the forms alowch, alochaph or translated by aqula. The identification of this salt with the salt of the oasis of Ammon already mentioned by Herodotus is first found in Syriac authors and lexicographers.

**AL-NÜSHADIR — NUSKHA** 149

**ANSDB**, ed. Haydarabad, xiii, 201-2, derives the *ani*, perhaps an Iranian from Khurasan, since al-Samāḥī, general (said to be Turkish, but of Balkh) from the guard of the Abbasid caliphs at (sic) al-Nushari (sic) al-ʿlsa b. al-Shaykh [q.v.], and subsequently defended his territories against rulers; but thereafter he fades from historical mention.

(C.E. Bosworth)

**NÜSHIRWĀN** [see ANŪSHIRVĀN].

**NUSKHA** (A.). 1. In the central Islamic lands.

Nūshak is the common Arabic word for "transcript", "copy", and in the manuscript era used in the meaning of "manuscript". Semantically directly related derived forms of the stem *nūš* are *nāšak* and *nāṣith*, "copyist", and forms I, VIII and X of the verb *nūshka*, all meaning "to transcribe, to copy". In the following, *nūshak* will be more specifically used in order to denote the medium of the transmission of Islamic texts with exclusive reference to manuscripts written by hand. For the Arabic, Persian and Turkish, which are the most commonly used are the Arabic *makhtūṭ*, the Persian *nūshka-hā-yi khāṭṭī*, and the Turkish *yazmalar*. Where in the following the examples are mostly taken from Arabic literature, one must realise that, especially for the earlier period, no significantly different circumstances are applicable to the transmission of Persian texts, or Turkish or other Islamic texts for that matter. It must in this connection be borne in mind that the process of transmitting handwritten texts in an Islamic cultural environment persisted till well into the 20th century, in contradiction to the transmission of European texts, which were almost exclusively distributed in printed form ever since the art of printing became practiced, from the second half of the 15th century A.D. onward. The following aspects of *nūshak* in this sense will be distinguished here.

(a) Role of the book in Islam. The importance of the written word in Islam can hardly be underestimated. Muslims have always insisted that the Kurʾān, the divine revelation to the Prophet Muhammad and God's own word, was Islam's own miracle, the *muḍjadija* [q.v.], that was on equal footing with the miracles by which the earlier prophets had proved the truth of their mission. Also, the non-Muslims were divided in the *Ahl al-Kītāb*, the People of the Book who did have a divine revelation, corrupted as it had become in the course of time, and those unbelievers who had no book at all. The concept of the Celestial Book was not alien to other, pre-Islamic, cultures in the Middle East, of course, and this culture of the written word did, of course, not originate in 7th-century Arabia. The Nabataean, Syriac, Hebrew, Aramaic, Coptic, Greek, Latin, Persian, Indian and Ethiopic literatures were there already, before Islam, with a considerable production of texts. According to a report by Ibn al-Kalbī [q.v.], Arabic books seem even to have been written in the 4th-5th century a.d. [sic] to. Islam's innovation seems to have been that the Book was given divine status, or rather that this divine status was so rigorously enforced. It is probably this new accent on the importance of the Holy Book that gave the book in Islam its central rôle. In the course of time, this pivotal importance of the book in Islamic culture has only increased and the result is, today, that there are many millions of Islamic manuscripts ranging in age from the earliest period till the beginning of the 20th century. When expressed in mere numbers of texts, the Islamic literature of the manuscript era can claim to be the largest literature on earth.

The Islamic book had become in less than two centuries after the death of the founder of Islam the repository of all knowledge of an increasingly international orientated culture, just as the Arabic language had developed into a main vehicle of that culture. Whereas in the earlier period the language of the manuscripts was Arabic, with the emergence of the local languages and the spread of Islam, manuscripts in the other Islamic languages, most notably Persian and Turkish, were made with use of Arabic script. The number of languages for which Arabic script is used is only surpassed by those for which the Latin script is employed. In later time, Islamic manuscripts were also written in other alphabets than the Arabic. This mostly happened on the periphery of the Middle East, in countries such as China, Thailand, Sri Lanka and Indonesia. Within the Near Middle East, Albanian Islamic manuscripts may be mentioned in this respect.

(b) Material aspects of the manuscript. The study of the material, physical, aspects of the handwritten book is called codicology. This technical term for the study of the codex [see DAFAR] is, by extension, also employed for the study of the non-codex forms of manuscripts. The earliest writing materials in the Islamic era were *papyrus*, *bardi* in Arabic, and parchment [see QILD, RAKK]. There are reports on a great variety of materials on which the earliest fragments of the Kurʾān were recorded (see the survey in Nöldeke and Schwally, *Geschichte des Qurān*, ii, Leipzig 1919, 13-14), but, with the possible exception of leather or parchment and palm leaves, none of those can have been in regular use for the recording of texts in the Hijāz during and shortly after the Prophet Muhammad's lifetime. It is probably because of Islam's main orientation to the Hellenistic and Mediterranean civilisations that it chose papyrus and parchment as its prime writing materials, rather than palm leaf and tree bark, which were the common writing materials of South Asia at the time. When the Chinese techniques of manufacturing of paper [see KAGHAD] were introduced from Central Asia into the Middle East in the course of the 8th century A.D., the production of manuscripts must have received an extra impulse. The advantages of paper over papyrus and parchment are obvious. Paper is a stronger material than papyrus and cheaper, though less durable, than parchment.
The bulk of Islamic manuscripts have been written on paper, although parchment has remained in use for special purposes, such as copies of the Kur’ān or special letters or documents, for a long time, and more in the Islamic West than elsewhere. Manuscripts made of a mixture of materials, paper and parchment, are known as well. The Leiden Latin-Arabic glossary (Or. 231), which recently was dated (by P.S. van Koningsveld, *The Latin-Arabic glossary of the Leiden University Library*, Leiden 1976, 38-9) to the earliest period of Islam onwards, that of the codex as the book in classical antiquity. It would appear that manuscripts are made. Locally used writing materials, dating from early, possibly even pre-Islamic times, have remained in use in many areas. An example of this is apparently the use of wooden chips for notarial documents in North Africa. Another example is the use in Indonesia (see 2. below) of a great variety of natural products for the production of manuscripts, both Islamic and non-Islamic ones. For comparative codicology, the results of Beit-Arié’s research in the field of Hebrew manuscripts are significant, since Hebrew copyists in the Middle East, and elsewhere, tended to use local materials and to adopt local bookmaking techniques.

The common shape of the book was, from the earliest period of Islam onwards, that of the codex as it had developed in Europe in the post-classical period (quires consisting of folded sheets, sewn through their hearts and then sewn together as to constitute a book). This shape had, well before the advent of Islam, superseded the scroll, which was the common shape of the book in classical antiquity. It would appear that Gregory’s law (see Beitr-Arié) concerning the positioning of parchment leaves was not observed in Islamic manuscripts. The most common composition of quires in the entire Middle East is that of five sheets, folded into ten leaves containing twenty pages.

In the entire manuscript period, however, scrolls have remained in use in the Islamic realm as vehicles for the transmission of legal, economic and other texts, amulets and prayers, and for special features such as micrography. The common proportions of the Islamic manuscript are vertically oriented, meaning that its height is larger than its width. Only during a relatively short period of time, *Kūfī* Kur’ānic manuscripts are known to have been made exclusively in an oblong format. A tendency in Western Islam seems to have ... leaf, very much as present-day noteblocks.

Forma is that of a oblong-shaped book, but it is used in a vertical position, the sewing of the leaves being in the top edge, very much as present-day noteblocks.

Whereas there developed an extensive indigenous paper production in the Islamic East and West, this cannot be claimed of all regions, notably the northwestern *Kūfī* and 9th/15th century. Islamic papers had no watermarks, but different types of chain lines in the paper can be distinguished. Sometimes the paper mould of Middle Eastern paper makers must have had such a fine sieve that no marks at all are visible in the structure of the indigenous paper. Natural, vegetable, components are often visible in this type of paper. Especially the older ‘medieval’ papers have a certain thickness, sometimes verging on cardboard quality (which is particu-
which was used in Mecca and Medina in the first half of the 7th century A.D. to note down the divine revelation. Its basic set of graphemes had probably come into use in the Hijāzh around the middle of the 6th century A.D. There are reports by early Islamic historians pointing to another, 'Irākī, origin of the Arabic script, but concrete evidence for this is entirely lacking. In the early Islamic period, the geometrically stylised and highly monumental calligraphic script of the Kurān manuscripts developed into several sub-styles. The original manuscript of the 'Uthmanic recension of the Kurān—the first book in Islam—and its direct copies have not been preserved, nor any other of the manuscripts of early texts, notebooks and registers, for that matter. Only Arabic papyri give contemporary evidence for this stage in the development of the Arabic script.

The best distinguished types of these so-called Kufic styles of writing are mā'āl (used in the Hijāzh in the 2nd/8th century, with its characteristically right-leaning shafts), naskh (used in the Hijāzh and Syria, with its typically horizontal extension, mainly for Kurān manuscripts and always in oblong format), western Kūfī (with round shapes) and eastern Kūfī (also called karmāštī, with its typically edgy forms). Later direct developments of these Kūfī script styles are maghribī (used in al-Andalus and till the present day in the Maghrib [q.v.]), and sūri (used in sub-Saharan West Africa). The Kūfī and Hijāzhī styles, in turn, developed in the central lands of Islam into several types of bookhands. These can be seen in the (not too numerous) dated manuscripts which have survived from the 3rd/9th and 4th/10th centuries. Comparative evidence for these, now obsolete and somewhat archaic-looking bookhands is adduced in the older Christian Arabic manuscripts of that period, although the dated ones in this group appear to be even more scarce than the Islamic ones. There is no survey of this corpus of manuscripts. Only quite recently, François Déroche has succeeded in producing a more detailed typology of the script in early Kurān manuscripts on the basis of the collection in the Bibliothèque Nationale in Paris. Application of this typology to other collections, most notably the Şan Evrak in Istanbul and the fragments found in the Great Mosque of Sa'āda, seems promising.

At the same time there developed from the earliest period of Islam onwards, for daily life purposes, mainly in Arabic papyri of administrative and occasionally also literary contents, cursive styles of scripts, in which the protoforms of the later classical styles of script can already be distinguished. The canonisation of these cursive into well-regulated and respectable calligraphic forms is in the Arabic tradition usually connected with the names of famous calligraphers such as the ʿAbbāsīd wasīb Ibn Mūlka (died 328/939 [q.v.]) and Ibn al-Bawwāb (died 423/1032 [q.v.]), who are said to have invented these styles of writing and to have laid down their rules of orientation and proportion. There is a problem of authenticity of evidence, however. The description of the different calligraphic styles is, in most cases, not based on authentic models originating from the great calligraphers themselves or even their immediate pupils, but reports by historians such as Ibn al-Nadīm or al-Kalḵashandī [q.v.]. The models that are available are often reconstructions and interpretations by later calligraphers.

The classical six styles of calligraphy, called al-akhlām al-sittā, which developed near the end of the 4th/10th century, are naskh (the most often used style of writing, the common indication for "bookhand", in which many styles can be distinguished, and—after a long development—the forebear of present-day printing type fonts of Arabic), ṭawqīf (a monumental and decorative script which is used for titles, inscriptions, calligraphic panels and the like, but hardly ever to copy entire texts), mubākka (till the 8th/15th century in use for calligraphic Kurān copies), ṭabāhī (a smaller and more slender version of mubākka), ṭawqī (used in the "Abbāsīd chanceries, a script with round and flowing shapes with many interconnections) and ṭawṣīl (a smaller version of ṭawqī, mostly used in titles, sūra headings, colophons and diplomas [igūza [q.v.]). About the rest of these six classical styles, naskh, the bookhand, it must be added that this is, in fact, an unworkable category. In the 4th-5th/10th-11th centuries naskh was a clearly distinguished style of writing, but in the course of time numerous styles of writing, which are very much different from one another, have been designated as naskh, thereby making the term itself useless.

The most important later, regionally distinguished styles are taHik (a development of ṭawqī, used in important documents and diplomas; there are two variants, Persian taHik and Ottoman taHik, nastaHik (originated in the 8th/14th-15th centuries as a mixture of naskh and taHik and is now very much in use in Iran and the Indian subcontinent), shikasts (a highly cursive style developed from taHik and nastaHik, and now mostly in use in Iran, where it has become a means of expression of the new Islamic Iranian identity), diwāni (developed in the Ottoman chancellaries, of uncertain origin and in the Arab world still in use for decorative epigraphy), diwāni ḏalīl (a decorative variant of Ottoman taHik), ruk' (an edgy cursive style with remarkable contrast between thick and thin which developed in the end of the 12th/18th century in the Ottoman Empire and which has reached calligraphic peaks. A more common variant of this script has now become the cursive for daily use throughout the Middle East) and sīrākā (a curious stenographic-like Arabic script in which diacritics are not used; it is of uncertain origin and was in use in the lower administrative echelons of the Ottoman Empire for cash registers [see daft ar] and the like). See for a more extensive description of the characteristics of these styles of writing, KHATT. ii, iii.

(d) The manuscript as the medium of transmission of texts. It should be borne in mind that, throughout the history of Islamic literatures, manuscripts have been abundantly available. They were never a rare commodity, though not all texts were available at all places at all times. The numbers given for the contents of royal libraries, exaggerated as they may seem and often are, are nevertheless a sign that numerous manuscripts were found there. Private collections of manuscripts, often with large and important holdings, were, and still are, a common feature in the Islamic world. Their existence was often guaranteed by converting them into a waṣf [q.v.]. The fact that a literary or theological education has always been an honorable pursuit and rewarding occupation for a Muslim has added to this. One can maintain that the combination of scholarly activities with texts and the respect for the book has resulted in this stupendous accumulation in Islam of handwritten books. It has been estimated that their number in millions cannot precisely be estimated. The first effort ever to make a complete bibliographical survey of all Islamic manuscripts in the world is being undertaken by the London-based Al-Furqan Islamic Heritage Foundation, which was founded by Sheikh Ahmad Zaki Yamani. The publication by this Foundation of a
World survey of Islamic manuscripts has been in progress since 1992. It is an inventorisation of all known and as yet unknown collections containing Islamic manuscript materials, not only in Arabic, Persian and Turkish, but in a great number of other languages as well, including numerous materials in scripts other than Arabic.

The progress of bibliography can be illustrated by an example taken from Arabic literature. The Ottoman Turkish bibliographer Hâджî Kâlibî Alâeddîn (died 1067/1657) mentioned around 15,000 titles in his great bibliography, Râdîf al-zunûn. Almost all these titles are manuscripts. Broekelmann mentions around 25,000 different titles in the index of his Geschichte der arabischen Litteratur. Broekelmann’s figures concern titled works that have been preserved. Now, almost fifty years after Broekelmann, these figures must probably be multiplied by several times, due to the enormous growth of cataloguing activities in the past decades.

The view by Pedersen, The Arabic book, 20, that scholarly activities were mainly centred on the mosque (see also Masjid) is too narrow, even if it is exclusively applied to the pursuit of the theological sciences. Writing, reading, discussing, commenting upon books (and buying and selling them as well!) were mostly private activities which were widespread in all periods of time and in many strata of Islamic civilisation, but not primarily in a purely religious connection. With a Book as its distinguishing miracle, Islam was, “from one may say—bound to devote special attention and a central position to the book as a source of learning, and, thereby, give learning itself a special emphasis. It may be surmised that literacy was relatively high among Muslims and producing texts must have been a common occupation in an Islamic environment. The ensuing interrelatedness of different texts on the same subject is a problem with which philologists must try to cope.

These scholarly activities involved the copying of manuscripts and the transmission of texts. This could happen in many ways. Many manuscripts carry on their title-pages, in their margins or near their colophons information on their readership (samâdî, kirdî), on the authorisation to use a certain text (âdîqaza), or on its chain of transmission (muâla). Manuscripts often reveal traces of their collation (mukdabîla) and sometimes with other copies as well. All these marks provide an insight in the use and manufacture of a handwritten book. They are hardly less important for our knowledge of the status of a text than the text of the manuscript itself.

The production of the handwritten book was, in most cases, a private affair between author or teacher and reader or student. Anyone who wished to own a manuscript either had to buy it, or to borrow and copy it if it was not for sale. If he wished to read it with the author or a respected authority in the field, he often had to travel around (talab al-Hilm). In Islamic higher education it was not uncommon that students noted down (sîstîmî) what their teacher dictated (inâmî) from his own work to them, with the usual remarks of the author often written in the margin (sometimes provided with the note min famâ kirtî, “from the mouth of the author”). From this it is clear that scriptoria of the mediaeval European type were not a common source of book production in the Islamic realm. It is known, however, that for a quick and multiple publication of a text in the manuscript era mass dictation was used. The exact circumstances of this type of mass production of manuscripts are unknown.

Royal or noble patronage made it possible that lavishly illustrated or illuminated manuscripts were produced, often in magnificent bindings, and from the Ottoman and Mughal sultans it is known that they instituted palace workshops for the production of royal copies of important texts.

(e) The end of the manuscript era. The art of printing became widespread in the Middle East only in the course of the 19th century, although it had been practiced by Muslims in Istanbul since 1729 (see Mastâba, B.2). In the end, printing superseded copying by hand. The age of transition is in this respect the 19th century. It can be observed that the manufacture and distribution of texts took place, for a while, in the shape of printed and handwritten books simultaneously. This could even mean that manuscripts were copied from printed exemplars. Those authors who had, for whatever reason, no access to the new medium of printing were more or less obliged to revert to the traditional, time-proven way of copying by hand, for the distribution of their texts. In course of time this decree waned. The outcome of the manuscript had its direct influence on the typographical design of the early printed book. This is particularly evident from the lithograph editions, of which many have been made in the Islamic world. Lithography involves a minimum of technical requirements and therefore became immensely popular, notably in India, Persia and Morocco, to name but the best-known areas. But also the Egyptian editions from Bûlûk, made with movables, betray in their lay-out their handwritten models.

the Library of the University of Leiden ... A General Introduction to the Catalogue, Leiden 1982, and idem, Establishing the stemma. Fact or fiction?, in MME, iii (1988), 86-100. The scholarly journals Islamic Art; Manuscripts of the Middle East and Maghrib contain articles on many aspects of the Islamic handwritten book. Electronic databases on codicological aspects of Middle Eastern manuscripts are maintained by M. Beit-Arié (Hebrew manuscripts) and François Déroche (early Islamic manuscripts).

(J.J. Witkam)

2. In Indonesia

Naskh designates here old manuscripts, Islamic or otherwise, alongside indigenous-language terms which designate the literary form and the basic text (hikayat, caria, kidung, babad, serat tarikh sejarah, waqawacan, puji(yaka, pastuba) and also the original text before being printed. Islam brought the Arabic script of the Kur’ān and the Arabic words necessary for its teaching. On the model of the extra characters added to the Arabic alphabet for Persian, Turkish and Urdu, Arabic characters were adapted for the vernaculars, and were called pegan, jaus or melau, for these, see INDONESIA. iii. Languages, and for the pegan script of West Java, see H. Sukanda, Agama Islam ngbudayukeman Basa jainta Sunda, in Kongres Bahasa Sunda, Bogor 1988. The ways of writing have not been codified, but one can distinguish two sorts of scribes: the graduates of a pesantren [q.v.] and those of a pugroen (Sukanda-Tessier, Centres d’enseignements traditionnels de l’Islam..., in Stminaire Kiyai Hajji Wasyid, Banyud, 1988). (The term “Nusantarian”, from Nusantara, is now used for all cultural matters relating to pre-Independen (17 August 1945) Indonesia, the term “Indonesian” being used only for post-1945 matters.)

The manuscripts in indigenous scripts correspond to the socio-cultural strata, distinguished as follows:

(1) The pre-Islamic mss. have as their bases olla, lontar, palm leaves, nipah, tree bark prepared for writing, daluwang, thin sheets of bamboo, gold leaf or sheets of red copper. The characters used, of Indian origin, are called aksara (Balinese, Bugi/Makasar/Bima, Javanese/Kawi, Sumatrane (Batak, Karo, Lampion, Mambang, Rejang, Toba), Sasak, Old Javanese, Old Malay and Old Sundanese, corresponding to three socio-cultural strata. The oldest written texts (20th century), in Old Javanese, come from the 12th-14th centuries, and in Old Sundanese from the middle of the 15th century (see J. Noordyun, Bajangga Manik, in BJK [1982]). There are numerous catalogues and critical editions of Malay and Javanese mss., but the Old Sundanese ones present difficulties of decipherment not yet completely resolved, neither for those in the Manuscript Collection of the National Library at Jakarta and in foreign collections nor for those in numerous special collections in Indonesia and the kabuyutan (Sukanda-Tessier, Le triumphant de Sri en pays soudanais, in PEPEO, ci [Paris 1971]).

(2) The Islamic mss. have the same materials, with the following chronology: olla, 15th-18th centuries; tree bark, 16th-19th centuries; filigrane European papers, 17th-20th centuries; Dutch registers, local folio papers and note books, 19th-20th centuries. The Kur’ān, hadīth, the combined precepts of the rukun (al-)Islam and rukun (al-)Iman (share’s), fikh (safiat ul-nadāja, faris’id’ and du’å) are written in Arabic characters. Works on Şifism, tarekat Saturiyah and Kodiyyah, du’å, sulik, timu (l)-ladiuni, adab, Arabic hagiography and epics of the Islamisation of Java/Malay, Javanese and Sundanese chronicles, not to mention an important corpus of works on the timu jalak, cosmogony, medicinal plants, customs, rites and ancestral prayers linked to the agricultural round, calendars and propagandistic formulae of Hindo-Buddhist origin, are all written in pegan. The Islamic mss. are numbered in thousands, with Malay from the various sultanates of Sumatra, Malaysia, Kalimantan, Maluku, Sulawesi and Sumbok/Sumba/Sumbawa, or Sundanese from the sultan courts of Banten and Groben or the princely ones of Banten, Galuh/Banyumasan and Sumedang regions, or Javanese from the sultanates of Pajang, Demak, Mataram, Surakarta and Yogyakarta, or Balinese. The oldest of them, mostly from Malay from the various sultanates outside Java, or else the second wave of Islamisation (17th to the beginning of the 20th century) and assimilated to a “fourth” wave of Islamisation. The Old Javanese mss. only stem from West Java from the middle of the 17th century onwards, legitimised by the sultanate of Mataram. Some of them, recopied in the course of Islamisation—a process which lasted for several centuries—contain a few Arabic words, such as maghārīr, sawāl, wafīr, Nabi Muhammad, and are written in aksara.

(3) The first epics about Islamisation stem from pre-Islamic epics, oral and manuscript, salvaged by Islam from the 15th century onwards. Written in aksara on lontar, such as Carita Nabi Yūsuf, they represent a type of da’wun through the didactic aspect of their message, which is no longer delivered in the form of a harangue or sermon. The heroes are of Arab origin, such as Amir Hamdjah, Ummarmaya, Lukmanul Hakim, Sama’un, Ahmad Muhammad, (’ab) Durrahman (’ab)Durrahman, Abu(n) Nawas, or Malay, such as Hang Tuah, Ken Tambuhan, Indraputra and Muhammad Hanãfiah, or Sundanese like Silihwangi, Kean Santang, Ogin Amarsakiti, Munding Sari Wiramantri, Hasanuddin and Walangsungsang, or Javanese like Damarwulan, Candrakirana, Rara Mandut, Sekartaji, Sunan Rahmat, Raden Patah and Senapati. The historical texts recount either the first contacts with Islam (?12th-15th centuries), which met with strong resistance in West Java, or else the second Islamisation wave, whilst the first and second waves of Islamisation the northern coastlands of Java and the merchant sultanates outside Java, or else the third wave of Islamisation (17th to the beginning of the 20th century).

These epics belong to a living tradition of the preservation of writings. For the scribes who copy them, the readers, reciters and listeners, they are a mal’ and a gonguran (barka) which will earn merit in the Next Life, just like good acts which are not obligatory, sunna, which can entail the pardoning of sins, or the equivalent of ‘ibāda. These much-revered epic texts are read and chanted in West Java from sunset to sunrise according to beluk, a vocal art which is in course of disappearing, marking religious, family and agrarian rites, and they are hedged by a narrow surveillance when, if they are very ancient ones, they were considered as sacred and preserved in the kabuyutan where they could only be seen at every twelfth Malad (12 Rab’i’), together with ancient Arabic mss.

The indigenous Indonesian mss., which are of an unusual richness and number, have contributed extensively to unifying an entire nation in respect of the vast spread of differing religions and cultures. They have, moreover, given to Indonesian Islam its exceptional image of tolerance and exemplariness.

NUSUB, (pl. ansâb, Hebrew masâheb). The plural more often used, denotes the blocks of stone on which the blood of the victims sacrificed for idols (au-tâh, ansâm) was poured, as well as sepulchral stones and those marking out the sacred enclosure (i-fâh) of the sanctuary (cf. J. Wellhausen, *Die Erforschung Persiens*, 375; Yakut, *Buldân, iv, 256-62*). Among sedentary populations, the ansâb has been regarded in a few rare instances as the symbol of the divinity (cf. Ibn Sa'd, *Tabûkî, iv/1, 159-60*; R. Dusza, *Essai sur l'islamisme*, translated from the Dutch by V. Chausin, Paris 1914, 79, quoting, after Ibn Kutayba, a contemporary of the Prophet, Abû Râdî' al-Ulî'udî. For the two examples, see T. Fahd, *Panthcin*, 26). Among sedentary populations, the ansâb, a rough stone, has become the sanâm, "a stone carved with the image of the idols of the Ka'bah" (Yâkût, *Buldân, iv, 622: fa-haštâ hâlâ tâhâm ansâm al-Bayt*). In every house", writes Ibn Hîshâm, "the occupants took an idol (sanâm) which they worshipped. Whenever one of them set out on a journey, the last thing which he did before leaving, and the first on his return, was to touch it" (Sînâ, 54 = al-Azrâki, *Akhbar, 78: taminsâm bhi;* cf. Gen. xxxii, 14), as a token of benediction for a successful enterprise and as an act of thanksgiving (on the mash and its magical and therapeutic power, see Ibn Sa'd, *Tabûkî, i/v, 47; Goldman, in *Or. Stud. Th.* Nûdâke gen. i/v, 527*, where numerous references to ansâb are to be found). To explain the proliferation of ansâb, Ibn Hîshâm (51-2) makes them symbols of the Ka'bah, brought with them by the sons of Ishmael when they finally left Mecca, while Yâkût (iv, 622) asserts that "the cult of stones among the Arabs in their encampments has its origin in their deep attachment to the idols (ansâm) of the haram." These texts reflect a state of affairs prior to the reform of Kušây.
Comparing them with certain Biblical texts, one should in fact, regard them as an echo of the elohim of the Hebrews and the šīlān of the Assyrians long outlasted monotheism in the shrines fashioned in stone, in sand mixed with milk (Pantheon, 91) and in wood (Ibn Ḥīḍām, 335) of pagan Arabia (on the equivalence between elohim, teraphim and šīlān, cf. C. Gordon, Parallèles Nouezis aux lois et coutumes de l’Ancient Testament, in RB, xliv [1955], 35-6; idem, in JBL, liv [1935], 150-4; C. Dupont, in Le panthéon de l’Arabie Centrale à la fin du 1er siècle apr. J.-C., p. 132-50). Among the commonest finds in archaeological excavations are figurines representing “new divinities” worshipped in Egypt, Palestine, Syria and Babylonia (cf. among others, Petrie, Memphis, i, pls. 8-13 and p. 7; E. Pltz, in ZDPV, xlvii, 165 ff.) ; J. B. Pritchard, Palestine figurines in relation to certain goddesses, 5-31; Parrot, Sumer, 236 and passim; idem, Assur, 250 and passim; J. B. Connelly, Votive offerings from helestic Palästina: evidence for Herakles cult, in L’Arabie préislamique et son environnement historique et culturel, Leiden 1989, 145-58).

The cult of stones, deeply rooted among the Arabs of the Hīḍām, was not transformed as quickly as elsewhere into a cult of statues. It was in the mid-3rd-century A.D. that Nabataean and Syro-Palestinian influences had the effect of promoting, in urban centres, the representational phase of the Arab pantheon; it was only then that the sacred stone became an idol. Wellhausen rightly asserts that “Die Bilder sind nicht echt arabischen; waṭhaṭ und šanam sind importierte Worte und importierte Dinge” (Reste, 102). Henceforward, the šanam, made of wood (Ibn Ḥīḍām, 303) gradually took the place of the musīb made of stone.

Ikrīma, the son of Ābu Ḍāḥil, Muhammad’s greatest enemy, was a maker of idols; merchants offered these to the Bedouin who purchased them and set them up in their tents. In Mecca, there was not a single house which did not have its own idol (al-Āzrākī, Aḥḥār Makka, 77-8).

After the triumph of Christianity in the Orient, the Hīḍām remained the sole bastion of paganism; carvers of idols could still make a living there. It comes as no surprise to find that at the time of Muhammad’s arrival in Mecca, there were three hundred and sixty idol-crafters and sixty idols in the Kaʿba (al-Āzrākī, 77; Ibn al-ʿAǧīr, ii, 192), a number which probably has a symbolic significance but which confirms an abundance well corroborated by other sources.

The process of expansion of the cult of idols is described by Ibn al-Kalbī in the following terms: “The Arabs devoted themselves to the cult of idols: some constructed a sanctuary (bayt; regarding this term see Duanisna, 132 ff.), others acquired an idol (šanam); anyone who could neither possess an idol nor have a sanctuary constructed would set up a stone of his choice, facing the havām or some other place, and then he would perform processions around it, as in the sanctuary (of Mecca). These stones were called anṣāb (as opposed to) aynām and aṭawān, which were statues (tamāḏifīl), and the procession made around them was called dawr [a. K. al-ʾAsām, ed. Ahmad Zaki Paḏa, Cairo 1914, 21; this in Pritchard, 50]. On the one hand the evolution and the various names given to the idols, the sum of a Kīṭāb al-Aynām by al-Ḏāḥīz, no longer available, in his K. al-Ḥaywānān, i, 5; this information is also presented in Duanisna, 249-50.

Thus the anṣāb are represented as replicas of the Black Stone of the Kaʿba. They take on the form of sacred stones in nomadic and semi-nomadic societies.

The contribution of sedentary civilizations reinforces and enriches the cults and the rites of the nomads, but at the same time introduces confusion and adds to the difficulties facing the historian of religions, who is inclined to seek out connections and influences and to establish comparisons and similarities (Pantheon, 182).

Nevertheless, whatever were the forms given to the divinities of the Arab pantheon, the Arab religions retained their quite primitive internal structure. The development of the “artistic” representation of gods had no effect on the conceptual evolution of the cult. The present writer’s study, in Le panthéon de l’Arabie Centrale à la fin du 1er siècle apr. J.-C., shows that many of the Arab religions, rooted in a desert environment.

AL-NUWAYRĪ, MUHAMMAD B. ʿABBĀS AL-ʾASKALĀNĪ, local historian of his home Axilan- dri, who lived in the 8th/14th century but whose precise dates are unknown.

Between 767/1365-6 and 775/1373-4 he wrote a three-volume history of the city, the K. al-ʾilmān fīnā ʿgarrat bihi ʿl-ḥammālīm fī ṣanāʾat al-ʾIskandarīyya purporting to describe the calamy of Muharram 767/October 1365 when the Frankish Crusaders, led by Pierre de Luzignan, king of Cyprus, descended on Alexandria, occupied it for a week and sacked it (see S. Runciman, A history of the Crusades, London 1952-4, iii, 444-9; A.S. Atiya, in H.W. Hazard (ed.), A history of the Crusades, iii, Madison, Wisc. 1975, 16-18). Ibn Ḥadjar al-ʾAsākīlānī [q.v.], however, cited by al-Sakhāwī [q.v.], states that al-NUWAYRĪ spent so much time on the earlier history of the city that he barely had space to deal with the events of 767/1365. The present writer has by Atiya, 6 vols. Hādārābād 1388-93/1968-73.

AL-NUWAYRI

Sîhib al-Dîn Ahmad b. 'Abd al-Wahhâb al-Bakrî al-Tamlml al-Kurâshî al-Shâfi'i, Egyptian encyclopaedist and historian.

Born at Akhmîm in 679/1280, died in Cairo on 21 Ramadan 735/June 1333, he is the author of one of the four best-known encyclopaedias of the Mamlûk period. His family may have originated from a small township of the Egyptian Shâfî school of law, al-Nuwayra, but he had no direct links with this locality. He claims only, and on numerous occasions in the course of his work, to be descended from the caliph Abû Bakr. His father, Tadj al-Dîn Abû Muhammad 'Abd al-Wahhâb (618/1221-99), who was possibly an official in the sultan's administration (Kratschowsky, 'Sdlihiyya al-Nadjmiyya, al-madrasa al-Mansuriyya.

The sultan subsequently instructed him to erect a turba for the amir and to establish a maintenance wakf with what thirty-four years, during crucial periods in the history of Egypt and of Syria in the Mamlûk period, and was thus a witness to the early stages of the country; he mentions for example a journey in the Ghawr, and he describes the Ghuta of Damascus with the same attention to detail which he demonstrated in his account of the events of the year 698/1298, his recruit-ment to the diwdn al-khdss, the sharif lzz al-Dîn al-Dimâshqî (d. 715/1315), the Nuwaytâ' of Mâlik and the Sâhib of Muslim. He also received an idjaza [q.v.] from the shaykh lzz al-Dîn al-Fârûthî al-Wâsitî al-Rîfâ'.

For the first time, following his recording of his birth (xxx, 386-7), al-Nuwayri mentions, in his account of the events of the year 698/1298, his recruitment to the diwdn al-khdss, the sharif lzz al-Dîn al-Dimâshqî (d. 715/1315), the Nuwaytâ' of Mâlik and the Sâhib of Muslim. He also received an idjaza [q.v.] from the shaykh lzz al-Dîn al-Fârûthî al-Wâsitî al-Rîfâ'.

For the first time, following his recording of his birth (xxx, 386-7), al-Nuwayri mentions, in his account of the events of the year 698/1298, his recruitment to the diwdn al-khdss, the sharif lzz al-Dîn al-Dimâshqî (d. 715/1315), the Nuwaytâ' of Mâlik and the Sâhib of Muslim. remained of his property. Muhammad b. Kalawún made his way in person to al-Karafa to draw the plan of this task on the ground.

Khalwín, wearying of the tutelage exercised by the senior amîrs, abdicated and went to establish himself in the governorate of al-Karak. It was in 708/1308. Baybars II took power in Cairo. Five months later, in Rabî' II 709/September 1309, al-Nuwayrî, a loyalist, joined Muhammad b. Kalawún at al-Karak and only returned to Cairo with the sultan, who regained his throne at the end of Ramadan/early March of the same year. After this triumphant return, one of al-Nuwayrî's patrons, the steward of the sovereign, wakîl al-khāṣṣ, Ibn 'Abbâda (d. 710/1310), allowed him to work quite closely with the sultan. This Ibn 'Abbâda was himself the appointee of the supreme kāḍî Ibn Mâkhîf, who had given him the task of administering the property left behind by Kalawún. This individual rose very quickly in the favour of the sultan. In his turn, he seems to have noticed the talents of al-Nuwayrî, entrusting to him the administration of the great complex constructed by Kalawûn and of al-madrasa al-Nâṣîriyya. Through his good offices, al-Nuwayrî had regular access to Muhammad b. Kalawún, and in numerous instances had occasion to work directly on his behalf. This excessively rapid promotion seems to have turned his head (al-Ṭâfî', 48; Sulâk, ii, 91; Dwar) and he spurned the generous salary that Ibn 'Abbâda paid to him; he had little regard for this conduct displeased the sultan, who denounced Ibn 'Abbâda and gave the latter permission to punish him as he saw fit. Ibn 'Abbâda did not hesitate to have him flogged and to confiscate his property; shortly afterwards he was sent away to Syria, but he does not even hint at this misfortune in his work and mentions only his transfer to Tripoli. In the course of the same year, Ibn 'Abbâda died; al-Nuwayrî devoted to him a dry and brief obituary in which he has considerably more to say about his successor than about the deceased.

He arrived at Tripoli in Safar 710/July 1310 as sâhib dîwān al-nâṣhâ, head of the office of correspondence. He replaced a senior functionary who had made a name for himself in this occupation, Tâdî al-Dîn al-Tâwîl (d. 711/1311), mawza'îf t-dawâla. A few months later, he replaced another sâhib dîwān, al-Nâṣîr al-Qâdhî, replacing another functionary of Tripoli who had recently died, a certain Nâṣîr al-Dîn al-Kâšîr, and he travelled extensively during his time in Tripoli, as he had done previously in Upper Egypt and in Damascus. He stayed in Tripoli until 712/1312 and witnessed the defection to the Mongols of the nâdh of Damascus Djamâl al-Dîn Akkaẖû al-Afram. This amîr-nâdh, before 708/1308, had been among the opponents of the restoration of Muhammad b. Kalawûn; following his return to the throne, the sultan, stung by his experience of two depositions, attempted to eliminate all the senior amîrs who could eventually pose a threat to his rule. Thus the governor of Aleppo, Shams al-Dîn Karâsünkûr, realising that his only hope of survival lay in flight, sought to win over to his side certain amîrs including the nâdh of Tripoli, possibly with the intention of provoking an insurrection in Syria. Al-Nuwayrî, claiming amicable relations with the governor, sought to dissuade him from following Karâsünkûr. He recounts his conversation with him and the arguments which he posed to convince him. In spite of everything, the amîr took flight and attempted to induce him to join him as well as the amîrs of Tripoli. He relates how he succeeded in persuading the latter not to follow him, with only one exception, and how he induced them to renew their oath of allegiance to the sultan. Al-Nuwayrî, who, with the exception of his father, never speaks of his immediate family—it is not known whether he was married or had children—mentions the kâḍî al-Dîn al-Nuwayrî (d. 717/1317), his father's cousin in the maternal line, who died in Tripoli where he was sâhib dîwān; he had previously been nâṣîr in numerous places in Syria. Al-Nuwayrî left Tripoli in Djamâdâ 1 712/September 1312 and arrived in Cairo on 20 Râjab/20 November of the same year, after a brief stay in Damascus during the return journey. The circumstances of this departure from Tripoli are obscure; the formula that he uses is ambiguous. His sojourn in Tripoli perhaps explains the place which it occupies in his chronicle. He describes the conquest of Tripoli by Kalawûn, then retracts its history from the Arab conquest to 688/1289 and finishes by providing a list of its nuwâb, governors, up to the year 725/1325. This passage is furthermore a synthesis of data compiled by his predecessors and contemporaries, and of information which he gathered himself. His interest in Tripoli persists throughout his work, and thus he does not omit to note, every year, the changes taking place, the appointments of amîrs and of functionaries, the cadastral revision, information concerning the Nuṣâûriyya and climatic phenomena.

According to his biographers, on returning to Cairo he was appointed nâṣîr dîwān of two provinces of the 'Nîl Delta, al-Dakhâliyya and al-Mûrâhîyya (Tāfî', 46). He speaks of them indirectly in a biographical article concerning a major figure in the administration, a sâhib dîwān al-qâdîyâh, the kâḍî Ibn Hashîsh (d. 729/1328; A'yân al-asr, iii, 312; Sulâk, ii, 315). It may be assumed that at least until 716/1316, al-Nuwayrî was engaged in administering the revenues of these provinces, while residing in Cairo, probably until the end of his life. It seems that he continued to reside in al-madrasa al-Nâṣîriyya, since he mentions a dream which he had at that time which took place in one of the iwâns of the madrasa, called al-Iwân al-Bâbîrî, on the eve of Friday 13 Dhu 'l-Ka'da 729/8 September 1329. It is not known at exactly what date al-Nuwayrî abandoned administration to devote himself exclusively to the composition of his monumental work, but before turning to the latter he seems to have compiled, to summarise the main points of his life and career.

The reconstructed biography of al-Nuwayrî shows a man often involved in the important events of his time such as the war against Ghâzân Khân and the victory of Shâkhâb, in which he was a participant. Even in al-madrasa al-Nâṣîriyya, which played such an important role in his life, he dared to challenge the administrator of the foundation, Tâdâbî Shûdî al-Dîn 'Anbar al-Lâlî, the sultan's tutor, insisting that he pay to the staff the salary owed to them; from the same vantage-point, he witnessed the controversies surrounding Ibn Taymîyya. During the reign of Baybars II, al-Nuwayrî sided with Muhammad b. Kalawûn, whom he regarded as the only legitimate sultan, joining him in exile at al-Karak. While resident in Tripoli, decidedly at the centre of important events, al-Nuwayrî tried to distance himself from Djamâl al-Dîn Akkaẖû al-Afram from defecting to the Mongols with Karâsünkûr; failing in this, he nevertheless succeeded in limiting the damage. Through his contacts, he was well informed concerning affairs of state, and he took advantage of his duties to travel widely in Egypt and Syria. His career was in itself quite distinguished; he played a major role in the administration of the three most important dîwâns, those of al-khâṣṣ, al-nâṣhâ and al-qâdîyâh.
During the course of his career, he forged numerous amicable relationships with highly-placed members of the Mamluk régime. In Damascus, his friends included three amirs, Sayf al-Din Balaban al-Djukanadir al-Manṣūrī (d. 706/1306), Zahir al-Din Muḥirr al-Manṣūrī (d. 716/1316) and ‘Alā’ al-Din Muḥajjlūṣ (d. 707/1307) whom he had previously known in Cairo, and among the ‘ulama’, members of the most distinguished Damascenes families, Ibn Ṣaṣrā (d. 717/1317), Ibn al-Kalāṣīn (d. 715/1315) and his son Muḥibb al-Din Muḥmmād (d. 730/1330). In Tripoli, he was acquainted with members of the Mamluk elite as well as among his colleagues in the diwān al-inšā and the diwān al-ḡayb. He was also acquainted with some of the senior kutubb of the Mamluk administration, letters from whom he reproduces in numerous instances in his encyclopaedia. Each time, the terms which underlie his privileged relations with one or the other are ṣāḥib or ṣāḥabtuw. As a man of his time, al-Nuwayrī was also acquainted with Sūfī shaykh.”

After a career of at least eighteen years, approximatelly from 698/1299 to 716/1316, he retired from public life and devoted himself to adab and to the writing of his encyclopaedia. From his administrative life, he would have learned kisābi, the establishment of roles, exercised hiska, land-surveying (al-mukhayṣaṣ), the management of accounts and revenues, al-muhāṣaba wa al-taḥṣil, nazar, inspection of crops and of presses (al-ghālāṭi wa al-taḥṣil), forage, sales (al-muḥāṣaṣ). He read and contemplated a great deal over the years and conceived the idea of writing a book, or rather a work large enough to provide a compendium of the fruits of his reading and of his administrative experience. He expresses it in his introduction in these terms: “I mounted the war-horse of reading and investigation and spurred him on. I then galloped in the region of consultation. When I succeeded in taming the horse and the source of knowledge became clear to me, I then undertook to compose a work which would keep me company and in which I would find my bearings, having recourse to my own administrative experience. I called upon God the Great and Merciful and I have produced five great Books (funūn) harmoniously composed and divided into three sections. Al-Nuwayrī died on 21 Ramadān 733/5 June 1333, at the age of fifty-six years, having composed a monumental work of 9,000 pages in thirty-one volumes which he intitled Nihayat al-arab fi funūn al-adab. He thus bequeathed to posterity a work which would keep me company and in which I would find my bearings, having recourse to my own administrative experience. I called upon God the Great and Merciful and I have produced five great Books (funūn) harmoniously composed and divided into three sections.

Al-Nuwayrī died on 21 Ramadān 733/5 June 1333, at the age of fifty-six years, having composed a monumental work of 9,000 pages in thirty-one volumes which he intitled Nihayat al-arab fi funūn al-adab. He thus bequeathed to posterity his experience and his culture in the form of a compendium. His capacity for work was extraordinary since, while working on his encyclopaedia, he made copies of it which he sold before composition of the whole was complete. The first volume (p. 16) bears the date 714/1314. A single autograph manuscript survives from the first version of his encyclopaedia, volume 19 (corresponding to xxii in the printed edition, p. 540); it is dated 9 Džumādā II 718/8 August 1318. Volumes 29 and 30 are dated 725/1325, but it is certain that he made additions to volume 30, after 728/1328. It seems that he began making a second copy of the whole work which was completed on 20 Dhu ’l-Ka‘da 721/11 December 1321, the fifth on 22 Džumādā I 722/8 June 1322, the seventeenth on 7 Ramadān 722/19 September 1322 and the eighteenth on 26 Ramadān/8 October, just 19 days later. He must thus have copied eighteen volumes in less than ten months. His biographers have noted his ability to fill three manuscript notebooks in a day, and this performance seems unequivocally confirmed, with the addition to what he copied and sold of eight copies of the Sekhīt of al-Buḫārī. He was deemed an excellent calligrapher and bookbinder. He must then have written the totality of his work between 714/1314 and 731/1330, over a period of seventeen years, since his chronicle finishes in 731/1331, two years before his death.

The work is divided into five funūn; each funūn comprises five parts which, in turn, consist of a certain number of chapters or adāb (from two to fourteen). The first is a description of the Universe. Al-Nuwayrī begins with a cosmographic vision and then proceeds to the Earth and its elements of which it is composed. Earth and Heaven were conceived by God for Man’s benefit. The funūn concludes with a description of Egypt, its inhabitants and archaeological remains. The three succeeding volumes are devoted to living beings: Man is the principal theme of the second, while the third and fourth are concerned with fauna and flora. History is the subject of the fifth and last, and this is by far the most important; it represents more than two-thirds of the work. This section is conceived as a universal history, covering the period from Creation to 731/1331. Crucial episodes in this history are the story of the Prophet and of Arab expansion, then the ‘Abbāsid period and finally, the history of Egypt since the Fātīmid. The major preoccupation of al-Nuwayrī seems to lie in providing the reader with succinct summaries of the principal historical events. The work is conceived primarily as a work of reference, and the manner of compilation displays a concern to inform the reader in a qualitative manner; only works bearing authority are summarised here. The final volume of this important historiographer differs somewhat from the remainder. These are annals, or rather notes taken from day to day; the text is condensed and even displays a certain dryness. It contrasts strongly with the rest of the work, in which the style is in general mannered, sometimes even lapsing into rhymed prose. This abridged account of events personally experienced may have been written with a view to later revision, but he died without making any amendments.

In all, with a work gigantic in terms of the variety of subjects studied, the breadth of the information contained, al-Nuwayrī not only achieved his avowed object but did so much more. He succeeded in providing the sum of practical knowledge necessary for a good secretary and for the administrative world in general but he also reached a much broader public. The literary form of the work and the spectrum of subjects exposed, summarised and classified in the most accessible manner possible, clearly show that al-Nuwayrī wanted, beyond his readership of administrators, to contribute to the formation of a kind of “well-informed man”. He states this himself occasionally.

Al-Nuwayrī was greatly inspired by the geographical encyclopaedia of his predecessor, al-Waqwāq (d. 718/1318 [q. v.] entitled Mabbāḥiḥ al-fikar wa-mandīlīh al-‘abar (partial edition, Kuwait 1981), for the subdivision into funūn and even for the content. The four funūn of al-Waqwāq recur in the work of al-Nuwayrī, who added history to form a fifth section. Furthermore, he mentions him by name, as he does with the majority of his sources. In the books devoted to natural history, fauna and flora, he makes a synthesis between three types of pre-occupation, naturalist, medical and literary. He thus describes the animal or the plant, mentions its medical and other attributes, the legends concerning its subject and the poems of which it has been the object. Science and adab are thus united. Amina Muhammad Dasmal al-
Din (see Bibl.) has listed seventy-five poets quoted in the book on fauna (148). The work reflects the author's education with his constant references to hadith; the influence of traditions is also evident in his very approach of khabar, since he always adds to a work compiled by an authoritative person details gleaned either from his direct observation or from the testimony of a trustworthy person. He sometimes exhibits scepticism when he relates a story which he regards as fantasy, "this saying derives, in my belief, from the fables of the Arabs (khurāfī al-`Arab)" (ix, 276, or x, 209), but he has no qualms about relating amusing marvels for the entertainment of the reader.

Out of his work he is guided by three principles: to adhere to the stated plan, not to go to excess over details and to avoid repetition. In the introduction to Book III, which concerns animals, he writes, "Were it not for the risk of saying too much, we could have composed an epitome for each animal, but we prefer to confine ourselves to the writing of others rather than to our own accounts" (ix, 225). He engages in a constant dialogue with the reader and explains his approach. To avoid repetitions, he often has recourse to postponements; he even has a system of double postponement which demonstrates simultaneously his attention to minute detail in his conception of the work as a whole and his unwillingness to weary the reader with repetitions (ix, 333, xii, 2). There remains a final important remark which is valid for the work as a whole; al-Nuwayrī's professional travels across parts of Syria and Egypt led him to take a constant interest in the countries and regions visited, and it is from this source that he draws all the concrete examples which are scattered throughout his work.

Such personal notes occur on numerous occasions and in all parts of his encyclopaedia, on Tripoli, on Damascus, Upper Egypt, the Delta and Cairo, and in the historical section he borrows constantly from Syrian authors such as al-Djazari or al-Birzalī, in a manner which enables him to sketch in, for each year, information concerning at least the places in which he has lived and worked at one time or another. Similarly, in the sections devoted to administration, his personal experience enables him to convey important information regarding the machinery of the financial administration of Mamluk Egypt, with precise and meticulous descriptions. Furthermore, under the heading of administrative and financial information, al-Nuwayrī reveals indirectly, and without departing from his primary intention, certain aspects of the rural economy in the 8th/14th century. Thus his surveys of fiscal policy convey information on types of soil, crops, certain problems inherent in climatic or hydrographic conditions. In the same Book II, taking advantage of his access to important state documents and under the pretext of supplying models for the benefit of the kābīb, he reproduces a series of letters emanating from, in particular, great sovereigns such as Baybars, Kalāwīn and his son Muhammad. Other documents reproduced include certificates of investiture and records of waqāf. The first four funun cover only ten volumes, while the sections reserved for history accounts in itself for twenty-one. The importance of Book V accounts for the fact that his biographers consider al-Nuwayrī a historian before all else. He reveals his methodology in the introduction to his historical section: "When I saw that all those who wrote the history of the Muslims had adopted the annalistic form rather than that of dynastic history, I realised that by this method the reader was being deprived of the pleasure of an event which held his preference and of an affair which he might discover. The chronicles of the year draw to a close in a way which denies awareness of all the phases of an event. The historian changes the year and passes from east to west, from peace to war, by the very fact of passing from one year to another... The account of events is displaced and becomes remote. The reader can only follow an episode which interests him with great difficulty... I have chosen to present history by dynasties and I shall not leave one of them until I have recounted its history from beginning to end, giving the sum of its battles and its achievements, the list of its kings, the course of its Mohammedan empires, and of its highways" (xiii, 2). Little (Introduction to Muslim historiography, 31; idem, The historical and historiographical significance of the detention of Ibn Taymiyya, in IJMES, iv [1973], 315) has already drawn attention to the originality of the method adopted by al-Nuwayrī in his willingness to break with chronology in order to give more coherence to his narrative. When he does this he alerts the reader and explains himself; then, when he has finished with his exposure of a topic, he writes as a general rule wa-l-

276, or x, 209), but he has no qualms about relating amusing marvels for the entertainment of the reader. Through-out his work he is guided by three principles: to adhere to the stated plan, not to go to excess over details and to avoid repetition. In the introduction to Book III, which concerns animals, he writes, "Were it not for the risk of saying too much, we could have composed an epitome for each animal, but we prefer to confine ourselves to the writing of others rather than to our own accounts" (ix, 225). He engages in a constant dialogue with the reader and explains his approach. To avoid repetitions, he often has recourse to postponements; he even has a system of double postponement which demonstrates simultaneously his attention to minute detail in his conception of the work as a whole and his unwillingness to weary the reader with repetitions (ix, 333, xii, 2). There remains a final important remark which is valid for the work as a whole; al-Nuwayrī's professional travels across parts of Syria and Egypt led him to take a constant interest in the countries and regions visited, and it is from this source that he draws all the concrete examples which are scattered throughout his work. Such personal notes occur on numerous occasions and in all parts of his encyclopaedia, on Tripoli, on Damascus, Upper Egypt, the Delta and Cairo, and in the historical section he borrows constantly from Syrian authors such as al-Djazari or al-Birzalī, in a manner which enables him to sketch in, for each year, information concerning at least the places in which he has lived and worked at one time or another. Similarly, in the sections devoted to administration, his personal experience enables him to convey important information regarding the machinery of the financial administration of Mamluk Egypt, with precise and meticulous descriptions. Furthermore, under the heading of administrative and financial information, al-Nuwayrī reveals indirectly, and without departing from his primary intention, certain aspects of the rural economy in the 8th/14th century. Thus his surveys of fiscal policy convey information on types of soil, crops, certain problems inherent in climatic or hydrographic conditions. In the same Book II, taking advantage of his access to important state documents and under the pretext of supplying models for the benefit of the kābīb, he reproduces a series of letters emanating from, in particular, great sovereigns such as Baybars, Kalāwīn and his son Muhammad. Other documents reproduced include certificates of investiture and records of waqāf. The first four funun cover only ten volumes, while the sections reserved for history accounts in itself for twenty-one. The importance of Book V accounts for the fact that his biographers consider al-Nuwayrī a historian before all else. He reveals his methodology in the introduction to his historical section: "When I saw that all those who wrote the history of the Muslims had adopted the annalistic form rather than that of dynastic history, I realised that by this method the reader was being deprived of the pleasure of an event which held his preference and of an affair which
reference should be made to the comparison of sources made by Little (Introduction...), with the aid of numerous passages, in order to attempt a clarification of the circulation of borrowings between the different authors of the Mamluk period, while the severity of Ashtor’s judgment of this work (Studies, i) needs some attenuation, since its dimensions and its characterstics render impossible such an unequivocal judgment of the merits of this encyclopedia.

The edition of the Nikhay, begun in Egypt by Ahmad Zakari Pagha in 1923, came to a halt with volume xviii in 1955, was then resumed in the 1970s and, after further interruptions, volume xxx appeared in 1991; however the two preceding ones, xxviii and xxix, are not yet available. The edition will comprise more volumes than the manuscript work, since the thirtieth which has just appeared deals with the beginnings of the Mamluk period, while the years 678-731 have yet to be edited. Manuscripts of the Nikhay are to be found almost everywhere in Europe, in particular in Paris, Rome and Leiden, but also in Egypt. The work has been known and exploited for a long time [see EF, s.v.], but much remains to be drawn from it.

NUZHA [see MI'ZAF].

OB, one of the major rivers of Siberia, which flows from sources in the Altai Mountains to the Gulf of Ob and the Kara Sea of the Arctic Ocean. Its course is 3,680 km/2,287 miles long and 5,410 km/3,362 miles long if its main left-bank affluent, the Yyurakh, is included. Its whole basin covers a huge area of western Siberia.

In early historic times, the lands along the lower and middle Ob were thinly peopled with such groups as the Samoyeds and the Ugric Voguls and Ostiaks (in fact, the indigenous population of these regions today, only the upper reaches of the river in the Altai region being ethnically Turkish territory; see M.G. Levin and L.P. Potapov (eds.), Narodi Sibiri, Eng. tr. The peoples of Siberia, Chicago and London 1964, 305-41, 511-70). These Ugrian peoples are the ones whom the early geographical explorers and travellers in Inner Asia knew as the Yura (mediaeval Russ. Yugra) who lived beyond the Bulghar [q.v.] towards the Bahr al-Zulumat "Sea of Darkness", i.e. the Arctic, and supplied fur to the more southerly peoples by dumb barter (see J. Marquart, Ein arabischer Bericht über die arktischen (uralischen) Länder aus dem 10. Jahrhundert, in Ungarische Jahrbücher, iv [1924], 289 ff., 303 ff., 321 ff.; V. Minorsky, Sharaf al-Zaman Tahir Maroqzi on China, the Turks and India, London 1942, tr. 34, comm. 112-15; K. Donner, La Siberie, Paris 1946, 124 ff.; P.B. Golden, in The Cambridge history of early Inner Asia, Cambridge 1990, 253-4).

It is probable that the Ob is to be identified with the river beyond the Ili, the Irysh and a nameless one, and which Mahmud Kâshgharî calls the Yamâr, locating along its shores the tribe of the Yabaku, who had their own language (?) or dialect) but also spoke Turkish (Dinîw luyxhat el-turk, tr. Atalay, i, 29, 30, 79, iii, 28, etc. - tr. R. Dankoff and J. Kelly, Compendium of the Turks dialects, Cambridge, Mass. 1982-4, i, 83, 117, ii, 161, etc.; Brockelmann, Mitteltürkischer Wortschatz, 244, identifies the Yamâr "probably" with the Iism, a left-bank tributary of the Irysh, hence further west than the Ob, but this seems too far west, in the light of the relative positions of the Turkish tribes in its vicinity, see below). The map accompanying Kâshgharî's text (reproduced by Dankoff and Kelly at i, 82; according to A. Herrmann, Die älteste turkische Weltkarte, in Imago Mundi, i [1935], 27, this is possibly by the author himself or was drawn according to his specifications) places the Yamâr river beyond the lands of the Kay and Cümül tribes on the nameless river, again described as being beyond the Yabaku, but the Kay and Cümül territories may well have extended from the Irysh to the
OB — OGADEN

Ob, as apparently did those of the Basmil also (see Minorsky, Hudud al-cdlam, comm. 285, 305; idem, Maroazi, comm. 96). There is also the precious information in Kâshârî about an expedition northwards led by one Arslan-tigin (presumably a Karakhanid [see İLEK KÎNÂS]) against infidels who were led by a certain Budraç and who were routed, and the Turkish verses which Kâshârî quotes mention the crossing of the Ili and the Yamâr; also hostile to the Muslims were the Basmil (Dâvud, tr. Atelay, i, 144, 452, iii, 556 – tr. Dankoff and Kelly, i, 163, 340, ii, 330-1). Kâshârî derived information directly from one of the participants in this ghazu, hence it must have taken place in the early or mid-5th/11th century, although the episode very soon became enshrined in legendary accretions (Barthold, Züfafl Vorlesungen über die Geschichte der Türk.en Mitteleuropas, Berlin 1935, 95-6; Fr. tr. Histoire des Turs d’Asie Centrale, Paris 1945, 76-7).

Islam never penetrated to the Uigrian peoples of the lower middle Ob, and the Turkic peoples of the upper reaches remained shamanists also. In the later 16th century, Kuçu Kân, ruler of the Turco-Mongol khanate of Sibir [q.v.] centred on Isker on the middle Irtys, was finally defeated by Russian forces in August 1598 on the Ob; the Russians had already penetrated to the Ob basin in their thrust eastwards through Sibiria. A Russian army had reached the shore of the Ob, 1884; a fort was founded at Tomsk in 1604, and this place was later to be the seat of the first university in Siberia, inaugurated in 1888; Surgut was founded in 1595 and Barnaul erected into a town in 1771 (see Donner, La Siberie, 144-6; J. Forsyth, A history of the peoples of Siberia, Russia’s north Asian colony 1581-1990, Cambridge 1992, 28 ff.). The river itself, navigable on its upper course for some 190 days a year, became an important means of communication. Novosibirsk, where the Trans-Siberian railway crosses the Ob, was founded in 1893 and soon eclipsed Tomsk, later becoming the largest city of Soviet Asia. At present, the Ob basin falls within the Russian Republic, with only the river’s headwaters in the Gorno-Altai Autonomous Oblast.

OCHIALY [see ULUDJ ÁLT].

OCRIDA [see orkî].

OCSNOBA [see UKHUNÚBA].

ODJAK (fr.), "fireplace, hearth, chimney", a word which survives with a rather wide range of meanings in all Turkish languages and dialects. Originally otjak < otjak with the elements å "fire" and -jak (perhaps to be connected with a rare suffix denoting a place, cf. S. Tzecan, Eski Uygurca Hsuan Tsang biyografsi X. bólam, Ankara 1975, n. 1074; idem, Das uigurische Insiad-Sutura, Berlin 1974, n. 275). The connotation "iron ring (for a prisoner or criminal)" appears only in Sangdák and in Sheykh Süleyman Buğhari (G. Doerfer, Türkische und Mongolische Elemente im Neuperisiachen, Wiesbaden 1965 ii, 10-2, no. 421; G. Clauson, An etymological dictionary of pre-thirteenth century Turkish, Oxford 1972, 22). The term passed into Arabic (wajak), Persian and most Balkan languages (A. Skaljiç, Turcizmi u srpskokroatkom-hrvatskorskom jeziku, Sarajevo 1973, s.v. odjak, etc.). There are names derived from it, like Odžaci (district of Sombor, Bačka) and Odžak (a town in Bosnia, district Doboj and a locality near Livno).

ODJAKLI [see odjak].

OFEN, the German name of Pest [see rsșgrt] (this meaning "cave or lime-kiln"), later and until recent times that of Buda [see budn], both today parts of the capital of Hungary.

OGADEN, a vast arid expanse in the south-eastern part of Ethiopia approximately delimited by the Wadi Shebille to the south-west, the frontier of the former Somaliland to the north-east, the line Ferfer-Werder (the administrative capital) - Dooomo to the south-west and the line Degeh Bur - Degeh Meda to the north-west. It is ranged over by Somaliland nomads belonging to the Dâröd group, the Ogaden (from whom the region gets its name), and formed part of the province of Harargé (Harar) until 1991, when a new administrative set of arrangements on ethnic and cultural bases placed it within the "Somali province". It is claimed by the Republic of Somalia, and the fact that it actually belongs at present to Ethiopia explains that it actually belongs at present to Ethiopia. In the civil sphere we find groups of workers formed into oðająks (e.g. L. Fekte, Die Syd-qât-Schrift in der türkischen Finanzverwaltung, i, Budapest 1955, 761; C. Orhonlu, Osmanî imamato-luganda şehrâlık ve ulamân, Istanbul 1984, 33: oğçu-ahenger).

The technical vocabulary of fraternities like the Bektâşîyya and the Mawaliyya [q.v.] assigns to the oðaj special place in their tekkes. Bektâşî tekkes used to have an oðaj in front of the kîba between the post of Seyyid 'Ali and the Khorâşân posta. In Mawlewî-khânes, oðaj was another word for the makâm of the cook (âşajî dede). Amongst the Alevî of Anatolia, aqîdâzâd are spiritual guides who belonged to one of the lineages stemming from the twelve imams (K. Kehl-Bodrogi, Die Kızılhâs-Alven, Berlin 1988, 167-79).

At the beginning of the 20th century, oðaj became an emotive word with nationalist overtones for the Turkist movement (seen in the Türk Oðajî founded in 1911-12). The youth organisations of the more recent Milliyete Haraket Partisi were called Ulkâ Oğlamlar Dernekleri (1968-78).

The traditional name for the month of January was replaced in 1945 by a literal translation (calque sémantique) from Kânî-i tânî to Öcak (law no. 4696).

Bibliography (in addition to references in the article): Gibb and Bowen, index; Pakalin, s.v.

(K. Kreiser)

46 ff.) or a semi-independent sánchez (N. Göyünç, Türkül-otjak daimyeri hakkında, in Prof. Dr. Bekir Kütükolu’nun aramağın, İstanbul 1991, 269-77).

The oðaj was equally a unit of recruitment in the Ottoman military administration [see 'ADÂMI OGâLÂN, BOSTANDI, ŞEYBED]. The Janissaries in their totality were the oðaj par excellence [see yeśnie čeri]. Their cognomen Odajî-i Bektâşîîyan was coined for their close relation to the fraternity [see BÊKTÅŞÎYYA]. The Turkish soldiery in the Maghrîb and Egypt was also referred to as the oðaj (M. Colombe, Contribution à l’étude du recrutement de l’O.Gen d’Algérie, in RAdS, Ixxvii [1943], 166-83; A. Raymond, Artisans et commerçants au Caire au XVIII siècle, Damascus 1975-4, passim).

It was after the conquest of the Muslim amirate of Harar [q.v.] in 1887 that the King of Shoa Menelik, the future Emperor of Ethiopia (b. 1844, regn. 1889-1913), ordered the conquest of Ogaden, which was
completed in 1890. Carried out in the context of colonial expansion within the Horn of Africa (Britons, Italians and French installed themselves there in the years 1889-1890), this annexation was confirmed internationally by agreements concluded with Britian, which renounced part of the Haud pastures in favour of Ethiopia (1897), and with the Italians (1908), without however the frontiers being clearly delimited. Despite a certain amount of tension with the two European powers (the frontier incident of Wal-Wal in December 1934 was the pretext for the Italian aggression against Ethiopia (1935-6), the situation remained tense until 1960.

During the rebellion of 1900-20 of the sayyid Muhammad 'Abdil Hassan', the so-called 'Mad Mullah' (who was of Ogaden ancestry [see Muhammad B. 'Abd Allah B. Hassan]) against the British, some of the military operations took place in the territory of the Ogaden, and these last made appeals to the Ethiopians for help on various occasions.

In 1960 the two former Italian and British colonies, Somalia and Somaliland, became independent and united to form the Republic of Somalia [q.v.]. Impelled by a militant pan-Somalia feeling, the new state united to form the Republic of the Ogaden, and these last made appeals to the Ethiopians for help on various occasions.

The first war between Somalia and Ethiopia was begun by the former in 1964, and only international pressure prevented the Ethiopian military advance. The Khartoum Agreements in the spring of that year confirmed the status quo. After the fall of Emperor Haile Selassie in 1974, the Somalis took advantage of the disorder within Ethiopia to make another attempt at invasion (1977). The Ethiopians only retrieved their position thanks to the Soviet Russian volte-face which renounced part of the Haud pastures in favour of Somalis and symbolised by the five points of the star in the national flag, to whose unity Somali nationalism aspires.

**OGADÈN — ÓGODEY**

**OGODEY** or Öçödey, the second Great Khân of the Mongol Empire. Born probably in 1186, he was the third son of Öçigis Khan (Çingiz Khân [q.v.]) by his principal wife Börte. He was the first of the Mongol rulers to adopt the title Ça'an: Düwayni always refers to him thus, almost as though it was regarded as a personal name. Öçigis had during his lifetime indicated that Öçödey should succeed him, in preference to his other surviving sons Çağhatay and Toluy. It is often suggested that Öçödey was a generally acceptable conciliatory figure, and the empire seems to have been administered by Öçödey on the basis of family consultation rather than imperial autocracy. Öçödey does appear to have been, by Mongol standards, an unusually benevolent ruler, if the numerous anecdotes illustrating his tolerance and generosity which are preserved by Düwayni and Shahid also deserve to be believed.

Çingis's death in 1227 was, however, followed by a two-year interregnum before Öçödey was confirmed as Great Khân at a kuriltay in 1229 convened by his younger brother Toluy. Thereafter, the Mongol Empire continued to expand in both east and west. The conquest of the Chin Empire in north China was completed in 1234, and Mongol armies under the generals Couragehun and Baidu campaigned in northern Persia from 1229. The most spectacular campaign undertaken during Öçödey's reign was that in Russia and eastern Europe. In 1235 a kuriltay decided to launch this expedition, which was to be headed by Batu [q.v.], son of Çingis's (deceased) eldest son Djoči, to whom the lands to the west had been allotted as his ulus. The campaigns, conducted triumphantly between 1237 and 1241, culminated in an invasion of eastern and central Europe, from Poland to Hungary and Austria, which was abruptly terminated in early 1242, probably at least in part because the news had reached Batu of the death of Öçödey on 7 December 1241 (possibly as a result of over-indulgence in drink: a not uncommon end among the Mongol nobles). The enduring result of the expedition was the establishment of Batu's and his descendants' rule over what Westerners called the Golden Horde (known in the Islamic world as the Khatan of Kipchak).

The achievements of Öçödey's reign were not solely warlike. It was at this time that the Mongol Empire acquired a capital: Karakorum, in the Orkhon [q.v.] valley of central Mongolia. Çingis seems previously to have used the site, but it was Öçödey who in 1235 had the city walled and who built the substantial though (according to the Franciscan friar William of Rubruquis) sumptuous palace. Its construction was largely financed by American aid by their own. Thus the quite local problem of Ogaden took on an international dimension.

The first war between Somalia and Ethiopia was begun by the former in 1964, and only international pressure prevented the Ethiopian military advance. The Khartoum Agreements in the spring of that year confirmed the status quo. After the fall of Emperor Haile Selassie in 1974, the Somalis took advantage of the disorder within Ethiopia to make another attempted invasion (1977). The Ethiopians only retrieved their position thanks to the Soviet Russian volte-face which renounced part of the Haud pastures in favour of Somalis and symbolised by the five points of the star in the national flag, to whose unity Somali nationalism aspires.

**Bibliography:** Material may be found in the general works dealing with Ethiopia, Somalia and the geopolitics of the Horn of Africa and the Red Sea regions. The following first two titles reflect the Ethiopian case in the Ogaden dispute: Wolde-Mariam Mesfin, The background of the Ethio-Somali boundary dispute, Addis Ababa 1964; S. P. Petrides, The boundary question between Ethiopia and Somalia, New Delhi 1983; I. M. Lewis, A modern history of Somalia, London and Boulder, Colo. 1988. It may also be recalled that A. Rimbaut put together a Rapport sur l'Ogadine from the notes of the Greek merchant Sottirio (Comptes-Rendus des Séances de la Société de Géographie, Paris 1884). (A. Rouaud)

(D.O. Morgan)

OGHUL (t.), a word common to all Turkic languages (cf. W. Radloff, Versuch eines Worterbuches der Türk-Dialekte, St. Petersburg 1888-1911, 1/2, cols. 1015-16), found as early as Ogrhon Türkic and meaning ‘offspring, child’, with a strong implication of ‘male child’, as opposed to kiz ‘girl’ ([q.v.]) (Sir Gerard Clauson, An etymological dictionary of pre-thirteenth century Turkish, Oxford 1972, 83-4), original plural oghlan, still thus in Kağhârî (Dâwân lughât al-târk, facs. ed. Atalay, iv, Dizini, 425-6; C. Brockelmann, Mittelluikischer Wortschatz, Budapest P. 1928).

In connection with the sense of ‘offspring, descendant’, attention may be called to certain formations, such as oğâb oğlu, ‘son of a good house’, kul oğlu, which was used to apply to the sons of the Janissaries.

Oghûl is very frequently found in family names where it takes the place of the Persian zade or the Arabic ibn, e.g. Hekim-oghlu or Hekim-zade for Ibn al-Hekim, or Ramâdan-oğlu for Ramdân-zade or Ibn Ramdân (where it should be remembered that the Arabic ibn does not mean exclusively ‘son’ but ‘descendant’). An incomplete survey of such formations in an early period is to be found in Sîdîq-i Oğhûmâni, iv, 778-812. Atatürk’s law on family names has led in Republican Turkey to many names incorporating the element oğlu after the name of famous persons, families or tribes (e.g. Osmanoğlu, Şahsêvencoğlu) or after the names of practitioners of trades and crafts (e.g. Saracoglu, Ekmekcioglu, Tarakcioglu, Firincicoglu, Dülgeroglu).

From being an original plural, oğlan evolved into an independent singular, meaning ‘youth, servânt, page, bodyguard’, also found in certain compounds, e.g. ile oğlan, ‘sultan’s page’, dil oğlan, ‘language-boy’, ‘interpreter’. From oğlan we also get German Uhlan, the name for light cavalry.

(F. Babinger [C.E. Bosworth])

OGHÜZ [see qâwûz].

OGHÜZ-NÀMA [see qâwûz].

OGHÜZ-NAMA, a term which designates the epic tradition of the Oghuz [see qâwûz], Turkish tribes mentioned for the first time in the Ogrhon [q.v.] inscriptions.

After the fall of the empire of the Kök or Celestial Turks (7th-9th centuries), the Oguz tribes migrated westwards. From the 8th and 9th centuries onwards, they are found installed in the basin of the middle and upper Syr Darya, between Lakes Aral and Balkh in the modern Uzbekistan Republic, where they formed tribal confederations. The Seldjûks, who invaded the Persian world and Asia Minor from the 11th century onwards, were part of these. The epic tradition of the Oguz rests on earlier legends and epic tales dating from before their adoption of Islam. The geographical setting reflects the regions of the Syr Darya. Like popular poetry and ethnic origin legends, this epic tradition was at first transmitted orally.

The title Oghuz-nâma denotes the legend going back to the eponymous hero Oghuz. The tales were transmitted by the ozans [q.v.] who recited and sang them to the accompaniment of the kopuz. Written Oghuz-nâmâs are signalled from the 13th century onwards, during the Saldjûk period, but none has come down to us. The first and best known of the Persian historian Rashld al-Dîn (646-718/1248-1318 [q.v.]) in his Diwâni al-tawdnh began in the time of the Il-Khânîd Qhaânaz (694-703/1294-1304 [q.v.]) and presented to his successor Oldjeytii (703-16/1304-16 [q.v.]). The author based himself on oral information in which legend and reality are mixed together, which is why his history of the Oghuz belongs more to the realm of folklore than history. Rashld al-Dîn’s Oghuz-nâma relates happenings from before the Oghuz’s conversion to Islam, but it also contains historical facts concerning the Saldjûk conquests. The author must have used in the first place a text written in Turkish and then translated into Persian, since his narrative contains vocabulary elements from Mongolian and Eastern Turkish. He has added to this Kûrânic verses and poetic quotations from the Qurân, as well as certain phrases aimed at making the subject more vivid, such as ‘in the names of Allâh and Sayrâm, Muslim Turks are living today’.

In the Bibliothèque Nationale de Paris there is preserved an Oghuz-nâma in Uyghur script (Suppl. turc 1001, fonds Schefer). According to P. Pelliot, it must have been written ca. 700/1300 in the region of Turfan, but the manuscript itself must have been copied in Kharakasar at the beginning of the 9th/15th century. The story contains no Islamic traces, but Ira-
tion, who recites and sings the noble deeds of the old heroes. The second work drawn from the origins of the ancient Oghuz-namas is that of Abu l'Qahhār Jāhār Kadārūder (1012-74/1603-63) [q.v.], a khan of Khāzarzam who led an adventurous life, who belonged to the family of the Uzbek or Özbek [q.v.] Shūbānī and who was a descendant of Čingiz Khān. He wrote two works, one on the ethnic origins of the Turkmen, the Shakārga-yi Tarākīm, and another, the Shakārga-yi Türk, written at Khiwā in the year of his death and forming a genealogical history of the Turks. The author used Rašīd al-Dīn's history, but he states that the historical sources have not been observed. The traditional history of the legendary Oghuz lived on in Central Asia, where numerous Oghuz-namas written between the 9th/15th and 13th/19th centuries are to be found. On some occasions, Oghuz appears in them as a Muslim hero summoning his people to adopt the Islamic faith.

ÖHRID [see OKHRI.]

ÖKÇÜ-ZADE, MEHMET ŞAH BEG (970-1053/1642-50), Ottoman nişanghi and proce stylist.

Ökçü-zade Mehmed Şah (or Şahhi) Beg was born in 970/1052, the son of a long-serving Ottoman chancery officer, later beglerbegi [q.v.] Ökçü-zade Mehmed Pasha (d. ca. 995/1587). His own chancery career spanned 44 years. Appointed kâhit of the divānd-i himāyān [q.v.] (988/1580), he held office as re'ī al-kāhitāb (1005/1596), defter emini (1006/1597), and nişanghi (1007-10/1599-1601). He then served as defterdar [q.v.] of Egypt with the rank of sâlpāye begi (1013-16/1605-8). After several years without official employment, he was reappointed defter emini (ca. 1029/1620), then nişanghi briefly at the start of 'Othmān II's Polish campaign (1030/1621), and again for a short final period (ca. 1031-3/1622-3) coinciding approximately with the second sultaneate of Mustafā I and the tenure of the office of şeyh-i al-Islām by his friend and patron Yahyā, defter emini and nişanghi (1030/1621) and defterdar (1031/1621), respectively. He died in 1038/1629 (New'-zade 'Aṭā'ī, Deygil-i Şahhi-zâde ve nişanghi, Istanbul 1268/1852, ii, 730-1).

Considered by 'Aṭā'ī as second only to Tâdir-zade Djafer Celebi for his skill as nişanghi, Ökçü-zade's inşâ style is comparable with that of Azmī-zade, Nergisi and Weysi [q.v.]. His principal works are: (i) Münâğhabet-i inşâ, a collection of about 80 letters, first compiled ca. 1038/1629, with a valuable autobiographical introduction; various manuscript versions exist. (ii) Abū l-badā'ī (published Istanbul 1313/1896-7), an elegant versification, with prose commentary, of Kitāb hadithîh (cf. A. Karahan, İslam-Türk edebiyatında Kırk Hadis toplarna, türkçeye ve terhîlî, Istanbul 1954, 218-22). (iii) A prose translation of Kāshific's [q.v.] Tahfiz-i al-jâlāt (completed 1021/1612). Samples of his verse are also found in tughikes under the mahkâh Şahî. Bibliography: 'Aṭā'ī, ii, 730-1, and Ökçü-zade's Münâğhabet-i inşâ, in Turkish University Library TY 2105, fols. 1b-8b; derived from 'Aṭā'ī's Kāshif Celebi, Fəlülke, Istanbul 1267/1851, 127-8; Ahmed Resmî, Hikayet er-rü'âd ([S]efinet er-rü'âd), Istanbul 1269/1853, 23-5; Şüğlî-i 'Oğlanî, iv, 153; 'Oğlanî'nî mü'difilerî, ii, 78-9. For other references, see C. Woodhead, Ottoman inşâ and the art of letter-writing: influences upon the career of theницан and proce stylist Ökçüzade (d. 1630), in Osmanlı orantıları, vii-viii (1988), 143-59.

ÖKHRI, OHRID, a former Ottoman sangak capital and centre of an extensive kadaî, today a town of ca. 20,000 inhabitants situated in the south-westernmost part of the former Yugoslav republic of Macedonia. The Ottoman name of Ökhrî derives from the Slav Ohrid, which in turn goes back to the antique name Likhnikos. Throughout recorded history it was a major centre of Slav Christianity, the seat of an autocephalous patriarchate (976-1567 A.D.) and from 971 to 1018 capital of the West Bulgarian or Slav-Macedonian empire of Tsar Samuel. During the greater part of the Ottoman period (1385 or 1395-1912), it was the centre of a sangak which comprised the south-western corner of modern Slav Macedonia and large stretches of central Albania. During the reorganisations of the T̄anzimâ [q.v.], it was degraded to a kadaî in the sangak of Manastir [q.v.], which was also the centre of the uleimâ of Manastir. Ökhrî was further an Islamic centre of regional importance, possessing a number of mosques, medreses and dervish lodges, of which that of the Hayātiyye was the central tekke of this Khawwāiyeh branch of supra-regional importance, having a large number of tāles, especially in southern Albania. Ökhrî is situated at an altitude of 806 m/2,643 feet above sea level, the shores of Lake Ohrid, and is picturesquely built on the slopes of a promontory, which is on three sides surrounded by the lake and still carries the well-preserved castle and city walls of Tsar Samuel's time, repaired in the Middle Ages and maintained by the Ottomans till the 19th century. Its easily defensible position, on a lake full of fish and at the head of a fertile plain, ensured that the town was inhabited throughout recorded history as well as in pre-historic times. Moreover, Ökhrî commands the Via Egnatia on the eastern approaches of Albania. The old Ottoman chronicles ('Ashih-paşa-zade, Oрудî, Neshrî, Anonymus Giese) do not mention the conquest of Ohrid and present an inaccurate picture of the conquest of the adjacent districts (Manastîr, Pirlepe/Pirple to the east and Karšılli = Central Albania to the west), which are supposed to have been conquered in 787/1385. This date in fact represents a raid into Albania, ending with the Battle of Vijdhe, after which a number of Albanian lords accepted Ottoman overlordship. It is possible that at that time the Albanian ruler of Ohrid, the Grand Zupan Andrew Gropa, who in 1378 is mentioned as such on the foundation inscription of the church of Old St. Clement, was removed and direct Ottoman rule installed. It is nevertheless difficult to imagine
direct rule over the Ohrid area as long as Constantin Dejanović and Marko Kraljević were still ruling over the Ohrid area as long as Constantin Dejanović and Marko Kraljević were still ruling. On one side, this is reflected in the fact that the Ohrid Christians continued to live inside the old walled town and kept almost all their old churches. Moreover, the flourishing Slav Christian arts of the 14th century, architecture, icon painting and wall painting, continued to flourish after the Ottoman ad-

ministration was installed. This is shown by a long list of newly-built or painted churches in the villages around Ohrid and in the town itself (Radožda, 1460, Viniš, 1400-5, Elšani, 1407-8; Njivica (Pšarades), 1409-10; Velestovo, 1444, Godivljce, ca. 1450; Lefčani Monastery 1451-2, Stefan Pancir-Gorica, 1450-60; Sts. Constantin and Helena in Ohrid, 1460; Leskoec, 1461-2; St. Nicolai Bolmica in Ohrid, 1467 and 1480-

1; Korić, 1490, mostly built by local Ohrid noblemen). Interesting is the gap between the 1410s and 1430s, an indication of the unsettled conditions during the civil war between the sons of Sultan Bajezit I and its aftermath under Murad II. The art-

ists of this 15th century "School of Ohrid" also left their works in present-day Greek territory (Banitsa, now Vevi, near Vodena-Edessa, 1460): in Bulgaria, Monastery of Dragalevtsi near Sofia, 1475-6; the Monastery of St. Demetrius of Bobselvo near Dupnica, 1487-8, and the Monastery of Matka near Skopje, painted in 1496-7 at the expense of Lady Milica, also a member of the old nobility. Some churches have a list of their property in land and orchards, others mention the bishop in whose time the building was erected or painted, or they mention the ruling Ot-

toman Sultan, styled as "Tsar". As a whole, these preserved monuments of Christian art mirror the situation in the Ohrid kadašt in a manner not recorded in any chronicle.

After the conquest, the Ottomans confiscated two of the major churches of Ohrid and turned them into mosques for the Muslim settlers who came to form the nucleus of the Muslim Turkish population of the town. The first church was the cathedral of St. Sofia, built in 1056 by the Byzantine archbishop Leo on the site of an older church, perhaps going back to the late 7th or 8th century. The second church, the "father of Sultan Murad Khaan, Sultan Mehmemed Khaan", which is Mehmemed I (1413-21). This sultanic mosque did not get a wakf of its own. The expenditure for its maintenance and for the large staff of its servants (according to an account of 1047/1636-7, sixteen persons) was paid by the income of the okhrı mukada's (BBA, Maliyeden Müdever no. 5625, p. 26). The second church, then episcopal church of St. Clement, built in the late 13th century by St. Clement himself, must have been seized by Sultan Mehemmed II when visiting the town during his Albanian campaign of 1466. In that year, there had been disturbances, of a further unspecified nature, in Ohrid, in which the Archbishop Dorožje and a part of the Ohrid clergy and nobility had been involved. This group was deported to Istanbul and to the town of Elbasan, newly-founded by Mehemmed in that same year. The confiscation of the church is seen as an act of punishment.

This action would explain why the mosque is locally known as the "Mosque of Sultan Mehemmed". In the last decade of the 15th century, the by then 600 year-old church was demolished, and on its founda-

tions the large, single-domed mosque which we see to-

today was erected in the pure Ottoman style of the time of Bajezid II. Before the confiscation, the Ohrid Christians were allowed to dig up the relics of St. Cle-

ment and to take all the icons and church books to the large monastery church of Panayia Perivleptos, built in 1295 by the house of Paleologue. In the early Ottoman law, this would indicate a population of about 4,000 inhabitants, which is a lot for its time and place. As, however, the western half of the enclosure was almost certainly empty (steep slopes, and no traces of mediaeval buildings whatsoever), we might suggest a pre-Ottoman population of 2,500-3,000. In the 15th cen-

tury the number of the original inhabitants of Ohrid must have diminished. Almost immediately after the conquest of Constantinople, the Jews of Ohrid were deported to the new Ottoman capital. In 947/1540 the Jews from Ohrid living in Istanbul numbered only 16 families (Tapu Deftor no. 210, pp. 45-72). In 1466 Sultan Mehemmed II deported an unknown number of Ohrid Christians to his newly-

founded town of Elbasan, an event only recorded in an marginal note in a Slavic church book. The Ot-

toman census register T.D. 367 from 1528-9, p. 432, describing Elbasan, gives an impression of the extent of this deportation. Out of the 174 households of Christians, 73 households are mentioned as deportees (gjemat-i surgunin-i gebrin-i nefisi-Elbasan), paying until then considerably lower taxes. The first preserved de-

tailed survey of the urban population of Ohrid is ap-

decently the census of 1583, contained in the muftis defter of the Ohrid sandjak preserved in the Cadaster Office in Ankara (Kuyuydu Kadime, no. 25). It gives the names of 25 Christian mahallas in Ohrid, mostly called after their churches, having altogether 263 households. The Muslims are mentioned as one group with a total of 270 households. The names of the heads of households show us that a considerable part of them were converts to Islam in the first generation (ibn-i 'Abd Allâh), 21% of the total. The numbers of the surviving population, from Vasil Kânević, shortly before 1900, show us the end of the development. Especially in the 16th and 17th centuries, this shows a totally atypical demographic trend.
towns of the kadaš (Ohrid and Ustruga/Struga) and 55 of its villages, constituting almost two-thirds of the whole, we have comparable numbers. In 1519 these settlements contained 203 households, of which 7% were Muslim, all living in the two towns. Instead of showing a massive population growth, as known from most of the Balkans and Anatolia (and all over Europe), the Ohrid area stagnated. In 1583 the Christians numbered 2,490 households, only 35 more than in 1519. The Muslims, on the other hand, had increased from 200 to 523, or to 17% of the total surveyed population. The 1634 register (Nat. Libr. Sofia, Oh. 6-7) shows that the Islamisation of a part of the population of the villages and the towns must have continued, but as a whole the total population suffered only a slight decline, and not the drastic losses known to have taken place elsewhere, in the Balkans, especially in the Greek lands and in Central Anatolia. The poll tax register of 1634 shows that the Christian population of the town of Ohrid had decreased to 210 households. A codex entry of the year 1664 mentions that the town had 142 Christian houses but no less than 37 churches. In 1670 Ewliya Çelebi visited the town, which he describes as counting 160 well-built Christian houses, all situated within the castle walls, and over 300 Muslim houses, also well constructed and palace-like. These numbers look quite reliable. The mid-17th century seems to reflect the lowest point for the Ohrid Christians. In the subsequent period, they recovered, when the town again was witnessing expansion. The same is true for the village population. Some villages, which in the late 16th century seemed to be on the road toward total Islamisation (Delogozda, Livada, Mlševo, Moroža, Novo Selo, Orovnik, Trebeništa, Vapila and Volino), had by 1900 no Muslims at all. Some other Christian population that time still had the metropolitans of Kastoria, the autocephalous archbishopric of Ohrid, which until the 17th century was still a small town, in spite of its being the capital of the northern districts (Kalkandelen/Tetevo, Uskup/Skopje, Struga/Debar/Kicevo, Veles, Prespa, Moglena, Gora-Mokra and Razlog), which came under jurisdiction of Serbian administration, as well as the bishoprics of Manastir/Bitola and Struga. Besides the above-mentioned buildings, the waqf section of the 1583 census (BBA, TD 717, a setar from 1613, pp. 741-53) gives names of a number of mostly small Islamic institutions and their buildings: the school of Mu'alla'm-khan of Süleyman Bey, the mesdiid of Iskender Bey, the mesdiid and school of Mahmud Çelebi, son of Hâdidji Turghut, the mosque of Sheykh Shudja A11 Celebi near Gorna Dzumaya, the school of Ali Celebi near Hamza, the school and mesdiid of Yûnus Vojvod in Ohrid, and that of Hamza the Bazargan. Okhrî-zade Mustafa Çelebi, who founded a school in Struga, was the builder of a hamam in Ohrid, most probably the one on the Struga road. The fact that Islam was slowly spreading in the Ohrid villages is illustrated by the fact that a Mehmed Bey b. Ishak had constructed a mesdiid and a school in the village of Delogozda, where in 1583 14 Muslim households were living, besides 73 Christian households (in 1900 Delogozda was entirely Muslim). The register also mentions the mosque of Hâdidji Kâsim in Ohrid but gives no details on its waqf. The Aya Sofya mosque/church is not mentioned because it had no waqf of its own, but was maintained from other sources.

In 1081/1670-1, Ewliya Çelebi visited Ohrid, and he mentions that the town had 17 mosques and mesdiids, of which the mosque of Hâdidji Kâsim, the Kuloglu mosque, the mosque of Haydar Paşa and that of Hâdidji Hamza were the most important, besides of course the Aya Sofya mosque/church and that of Sinân Çelebi, who in the 1583 lists and by Ewliya is styled Okhrî-zade or Okhrî-zade Sinân Çelebi. Of medreses, Ewliya mentions the "tekke-medrese" of Sultan Süleyman and the medrese of Siwyâwsh Paşa, both unknown from the extant sources, including the comprehensive work of Cahid Baltaci. The official Ottoman list of medreses of Rûmeli from ca. 1660 (Özergin 1974), however, mentions the only medrese then active in Ohrid as being that of Hamza Bey, a person certainly identical with the founder of the mosque of "Hâdidji Hamza" as mentioned by Ewliya and the "Hamza Bazargân" of the 1583 defter. Undoubtedly these buildings, there were three šârâs in Ohrid in 1583, are the "İmaret Bairns in Ohrid, most probably the centre of an important sanjak. In 1767 the Ottomans, advised by the Greek Patriarchate of Constantinople, dissolved the autocephalous archbishopric of Ohrid, which until that time still had the metropolitan of Kastoria, Prilep/Bitola, Strumica, Kërça/Elbasan, Berat, Dërë/Durazzo, Vodena/Edessa, Grevena and Siana under its jurisdiction, as well as the bishoprics of Debar/Kîcevo, Veles, Prespa, Moglena, Gora-Mokra and Drimkol. In 1535 Ohrid had already lost its northern districts of Manastir/Bitola and Struga. Besides of Suleyman Bey, the school and mosque of Mahmud Celebi near Ohrid, which had received from Sultan Bayezid II, when the latter on his Albanian campaign of 1492 visited Ohrid. To the waqf property belonged the villages of Mlševo, Kocarnik, Velesta or Zagracani, on the other hand, were in 1583 14 Muslim households, all situated within the castle walls, and over 300 Muslim houses, also well constructed and palace-like. These numbers look quite reliable. The mid-17th century seems to reflect the lowest point for the Ohrid Christians. In the subsequent period, they recovered, when the town again was witnessing expansion. The same is true for the village population. Some villages, which in the late 16th century seemed to be on the road toward total Islamisation (Delogozda, Livada, Mlševo, Moroža, Novo Selo, Orovnik, Trebeništa, Vapila and Volino), had by 1900 no Muslims at all. Some other Christian population that time still had the metropolitans of Kastoria, the autocephalous archbishopric of Ohrid, which until the 17th century was still a small town, in spite of its being the capital of the northern districts (Kalkandelen/Tetevo, Uskup/Skopje, Struga/Debar/Kicevo, Veles, Prespa, Moglena, Gora-Mokra and Razlog), which came under jurisdiction of Serbian Patriarchate of Ipek/Paža, then restored by the Ottoman administration. In the second half of the 18th century, the Khalewitiye Sheykh Mehmîd Hayâtî lived and worked in Ohrid and founded the Asîînî-ye Hayâtîyiye, the mother tekkê of a large number of others in the...
Macedonia and especially in Albania, as well as in the Greek Macedonian town of Kearsaye/Kastoria. Mehmed Hayati is said to have studied in Edirne under the famous Hasan Sezai (died in 1151/1738) and took his name from that of his new Khalweti suborder, which he and his followers propagated successfully.

From the end of the 18th century till 1830, Ohrid and its district was ruled by the Albanian dey Hayati Devetk Bey, son of the Wezir Ahmed Pagha, who is remembered locally for the restoration of the Ohrid town walls, done with harsh forced labour from the local Christian population. He also brought good drinking water to the town, a feat commemorated in a long Ottoman inscription on the Ihtisab Cemeh in the old town square "Cinar", a work of the poet Sulaiman Fehim (1203-62/1789-1846), dated 1237/1821-2. In 1830, the reformed Ottoman army, on its way to suppress the Bughetti Wezirs of Iskenderiye/Shkoder, drove him away and reinstalled a regular Ottoman administration. In 1262/1846 the Ottoman Kârim-makâm Sherif Bey constructed a large new medrese in Ohrid, of which a long inscription still remains. In the course of the 19th century, a number of mosques were repaired or rebuilt in the style of the period. The most important is the domed AII Pasha mosque in the market-place.

In the course of the 18th century, the population of the town of Ohrid and its kada began to grow. This growth gained momentum in the 19th century and is in accordance with the general trend in Europe and in the Ottoman dominions. One of the characteristic was that the Christians grew considerably faster than the Muslims, having bigger families. The result was that by 1900, when Kancev did his research, which is generally held to be the most reliable, the town's population, in 1583 fifty-fifty Muslim-Christian and in the mid-17th century two-thirds Muslim, became two-thirds Christian. Kancev gives for Ohrid 8,000 Bulgarian-Macedonian Christians, 300 Albanian and 460 Vlach Christians, 5,000 Turks and 500 Albanian Muslims. In the three nahiyes of the kada of Ohrid, great changes had occurred. The mountainous nahiye of the north-east had entirely kept its Muslim population, partly through conversion of the local Bulgarian-Macedonian Christians, 300 Albanian and 460 Vlach Christians, 5,000 Turks and 500 Albanian Muslims. In the three nahiyes of the kada of Ohrid, great changes had occurred. The mountainous nahiye of the north-east had entirely kept its Muslim population, partly through conversion of the local Bulgarian-Macedonian Christians, 300 Albanian and 460 Vlach Christians, 5,000 Turks and 500 Albanian Muslims.

The Christian population particularly flourished and in large and well-built houses, the fur industry being their principal occupation. J.G. von Hahn, travelling in the early 1860s, especially noted that there were very few poor people in Ohrid. In his time, the 'imaret of "Sinan Paşa" was still functioning, but it had lost most of its income. Like Ewliya Celebi 200 years before him, Hahn praised this institution, distributing food to the needy regardless of their religion.

During the Balkan Wars, on 29 November 1912, the Serbian-Montenegrin army took Ohrid, which was then incorporated in the Serbian state. Late Ottoman Ohrid counted, according to the Sihname of the Manastir wisel of 1308/1890-1, 15 hamams, nine mosques and two tekkes. In 1934 Fehim Bajraktarević noted 12 mosques in Ohrid. Most of his names are the same as those encountered by Ewliya Celebi. After 1912 the St. Sofia church/mosque was reconverted to a church. The Ottoman additions, except for the fine marble minbar, were removed. In the years after World War II, the many surviving mediaeval churches and their paintings were restored and studied. To a lesser extent the same was done with the Ottoman monuments. In 1955-6 an important part of the Turkish-speaking Muslims of Ohrid and Struga emigrated to Turkey. Their place was taken by Albanian Muslims, who in the 20th century witnessed an expansive growth, turning Ohrid from a Turkish-Muslim into an Albanian-Muslim town, especially as the Christians hardly grew any more. The Asiâme of the Hayati order under the leadership of Shykh Kadri (born 1932), a direct descendant of Mehmed Hayati, is functioning unbrokenly, its buildings in perfect shape (December 1992). This tekke, which is one of the most important of Macedonian Islam, shared in the general renaissance of Islam after the downfall of old Yugoslavia.

The various censuses of the 20th century, only available for the western half of the old kada of Ohrid, show that the Albanian Muslims and the Pomaks [g.v.] survived the turbulences of the Balkan Wars and the two World Wars. In 1900 the 39 settlements later constituting the Yugoslav district of Struga, basically the plain of Ohrid and the mountains facing Albania, contained 24,640 inhabitants, of which 38% was Muslim. In 1914 it stood at 25,970 inhabitants, 39% Muslim; in 1944 31,341 inhabitants, of which 42% Muslim; in 1953; 33,319, 46% Muslim; and 1961 40,172, 52% Muslim. In 1971 it has been completely reversed, the Muslims having the larger families, and the Slav Christian population, especially since the 1970s, being almost static. In the early 1990s, the Muslim population, Albanian, Slav Macedonian and Turkish-speaking, must have reached two-thirds of the total population of the same area.

Since World War II, the entire old town of Ohrid has been declared a Monument of National Culture, to be preserved for the coming generations. The town, with its many monuments and oriental flavour, and the lake side, has developed into a centre of international tourism, the most important of Slav Macedonia.

His friendship with Orhan Veli, whom he met at the War College, he formed a lifelong friendship with Mustafa Kemal [Atatiirk]. During service with the 3rd Army, he joined the Committee of Union and Progress [see iTTtHAD WE TtÈRK Trees iTtIYETV], which brought about the revolution of 1908. He was then posted as Military Attaché in Paris (1908-11) before returning to serve in what is now Libya (1911) and in the first Balkan war (1912). He was briefly elected to the Ottoman Chamber of Deputies in 1912, and in 1913 he resigned from the army to become Ambassador in Sofia (1913-17). After re-election to parliament in December 1917, he joined the cabinet formed by 1zzet Pasha at the very end of the Great War. In March 1919 he was imprisoned by the succeeding government of Dâmdâr Ferîd Pasha [q.v.], and then transferred by the British to internment in Malta until 1921. After his release, Fethî joined the nationalist government led by Muştafa Kemîl, becoming Minister of the Interior in October 1921, and twice Prime Minister (August to November 1923, and November 1924 to March 1923). He then left parliament, to become Turkish Ambassador in Paris. In August 1930 he returned to Turkey to establish the Free Republican Party (Serbest Cumhuriyet Fikûrû). This was set up with Atatürk’s encouragement as a Liberal opposition to the ruling Republican People’s Party. Unfortunately the experiment proved premature since, against Fethî’s intentions, the party attracted the support of those opposed to the secular institutions of the republic. Accordingly, it was wound up in November 1930, after which Fethî joined the Liberal opposition to the ruling Republican People’s Party. He served a term as Minister of Justice, but retired in 1942, and died after an illness in 1943. 

**OKTAY, Ali FETHî (1880-1943), Turkish statesman and diplomat, was born in 1914. He was married to the journalist and author and poet, born in Trabzon in 1914. He entered the War College and Staff College in Istanbul, graduating as a Staff Captain in 1921. He fought in World War I. After the war, he formed a lifelong friendship with Mustafa Kemal [Atatiirk]. During service with the 3rd Army, he joined the Committee of Union and Progress [see iTTtHAD WE TtÈRK Trees iTtIYETV], which brought about the revolution of 1908. He was then posted as Military Attaché in Paris (1908-11) before returning to serve in what is now Libya (1911) and in the first Balkan war (1912). He was briefly elected to the Ottoman Chamber of Deputies in 1912, and in 1913 he resigned from the army to become Ambassador in Sofia (1913-17). After re-election to parliament in December 1917, he joined the cabinet formed by 1zzet Pasha at the very end of the Great War. In March 1919 he was imprisoned by the succeeding government of Dâmdâr Ferîd Pasha [q.v.], and then transferred by the British to internment in Malta until 1921. After his release, Fethî joined the nationalist government led by Muştafa Kemîl, becoming Minister of the Interior in October 1921, and twice Prime Minister (August to November 1923, and November 1924 to March 1923). He then left parliament, to become Turkish Ambassador in Paris. In August 1930 he returned to Turkey to establish the Free Republican Party (Serbest Cumhuriyet Fikûrû). from the Çağhatay Khânate. The early years of the reign had in fact seen an attempt, successful for a time, to re-establish peace and harmony between the various Khânates of the Mongol Empire. Oljeiţu refers to this in a Mongolian letter of 1305 to King Philip the Fair of France (A. Mostaert and F.W. Cleaves, Les Lettres de 1289 et 1305 des ilkan Arun et Oljeiţu à Philippe le Bel, Cambridge, Mass. 1962).

Domestically there seems to have been considerable continuity with the previous reign; the reform programme associated with Ghazan continued in force, though it may perhaps have been pursued with reduced enthusiasm. The unsatisfactory state of the history compiled by Rashid al-Dîn continued to hold office throughout the reign, though his tenure was not untroubled. His colleague Sa’d al-Dîn Sâwadjî fell from power and was executed in 711/1312, to be succeeded by Tâdî al-Dîn Čâli-Shâh. Relations between Rashid al-Dîn and Tâdî al-Dîn eventually became so bad that the empire had to be divided into two administrative spheres so that the waqî’s responsibilities should as far as possible not overlap: Rashid al-Dîn took the centre and south of the empire while Tâdî al-Dîn was made responsible for the north-west, Mesopotamia and Anatolia. Early in the next reign, that of Oldjeiţu’s son Abû Sa’dî, Tâdî al-Dîn was able to engineer Rashid al-Dîn’s fall and execution (718/1318) before himself achieving the unparalleled feat, for an Ilkhanid waqî, of dying of natural causes.

Rashid al-Dîn presented to Oldjeiţu his history of the Mongols which Ghazan had commissioned, and which was to form the first part of the Dîmîsî al-tauârîkh. Oldjeiţu asked him to continue the work as a memorial to Ghazan. This continuation was to contain accounts of all the peoples with whom the Mongols had come into contact: the unique ‘world-history’ sections of Rashid al-Dîn’s great history.

Oldjeiţu’s personal religious pilgrimage was complex even by the standards of the day, encompassing at one time or another almost every currently available faith. No doubt a residual shamanist, he had in infancy been baptised a Christian, with the name of Nicholas in honour of Pope Nicholas IV, with whom his father had negotiated. Subsequently he became a Buddhist, but after Ghazan’s decisive conversion to Islam, he became a Sunni Muslim, dallying in turn with the Hanafî and Shâfi’î schools and Shâﬁ’î madhab. Thereafter he became a Shî’î.

For much of the reign work continued on a new capital, Sultaniyya [q.v.], on the plain to the south-east of modern Zandjan. The city had been founded by Arghun; it was completed in 713/1313-14. Since Oldjeiţu maintained the nomadic habits of his ancestors, migrating seasonally from summer to winter quarters, Sultaniyya should perhaps be called his ‘chief seasonal residence’ rather than his capital (C.P. Melville, The itineraries of Sultan Oldjeiţu, 1304-16, in Iran, xxviii [1990], 55-70). It is said that Oldjeiţu wished to transfer the mortal remains of the Shî’î imâms Āli and Husayn to a new shrine in Sultaniyya. This remarkable mausoleum eventually became, instead, Oldjeiţu’s own. It still stands, the only important building of the new capital to survive and the most striking positive memorial of the Mongol period in Persian history.

Bibliography: Primary sources: The most important is Abu ‘l-Kâsim Kâshânî, Tâhâkî-i Oljeiţu, ed. M. Hambly, Tehran 1969. The unique ms., Aya Sofya 3019, ff. 135a-240b, should if possible be consulted. See also Waṣâfî, Tâhâkî-i Waṣâfî, lith., ed. M.M. Işfâhânî, Bombay 1852-3. Sources from the Timûrid period are also of value, e.g. Hâfîz
population. In 1642 there were 85 Christian households liable to pay the djizye (BBA. Mai. Mud. 1000, p. 5), but in 1688-9 only 27 households (Sofia, Nat. Libr. F. 195/2), on top of which an unknown number of families must be counted who were too poor to pay, or otherwise exempted. An official Ottoman list of kadiîîks of the European provinces of the empire, dating from 1670, mentions Olendirek in the eleventh of the 12 ranks of kadiîîks, a pointer to the relative unimportance of the place (M. Kemal Özşergin, Rumeli kadihîîlansdndan 1078 dâzenlemesi, in Ord. Prof. Ismail Üzungru'yi armaqan, Ankara 1976, 276).

Ewlyiye Çelebi, who in 1081/1669-70, on his way from Salona to Karpensi (Krenbeâ), must have passed through Olendirek, does not mention it, as his travel notes of this section were apparently in disorder.

Throughout its history Lidori-ı-Olendirek describes Olendirek as a bourg of 180 families, Greeks and Turks all speaking the same language because the Muslim state, transferred the capital to Omdurman, where he died on 22 June 1885 and was buried. Under his successor, the Khalîfa 'Abd Allâh b. Muhammad al-Ta'âebîî (q.v.), the early settlement grew into a town. Like the Mahdi's earlier seats during the revolutionary war, it was officially styled Bukat al-Mahdi, and the Mahdi's tomb (bubbat al-Mahdi) was a place of pilgrimage in lieu of the hadj to Mecca. Beside the tomb (now restored) are the Khalîfa's house (now a museum) containing a labyrinth of rooms, and to the west the great walled space which formed the mosque. Other official buildings were the arsenal-storehouse (hayîl al-amâna, now a football stadium), the treasury (al-sîxîr), and the prison (al-sarîr), from the name of the gaoler). A great wall protected the inner city. From this central area ran three main roads: one southwards to the desert-fringe; and the Khalîfa's black troops (ajihadiyya); one westwards to the former Fort Omdurman (al-kdra), garrisoned by the Khalîfa's black troops (dibbhâdîya); one westwards to the parade-ground at the desert-fringe; and the ominously-named darb al-shuhado? (awldd al-balad).

The Mahdi, now the victorious head of a Sudanese Muslim state, transferred the capital to Omdurman, where he died on 22 June 1885 and was buried. Under his successor, the Khalîfa 'Abd Allâh b. Muhammad al-Ta'âebîî (q.v.), the early settlement grew into a town. Like the Mahdi's earlier seats during the revolutionary war, it was officially styled Bukat al-Mahdi, and the Mahdi's tomb (bubbat al-Mahdi) was a place of pilgrimage in lieu of the hadj to Mecca. Beside the tomb (now restored) are the Khalîfa's house (now a museum) containing a labyrinth of rooms, and to the west the great walled space which formed the mosque. Other official buildings were the arsenal-storehouse (hayîl al-amâna, now a football stadium), the treasury (al-sîxîr), and the prison (al-sarîr), from the name of the gaoler). A great wall protected the inner city. From this central area ran three main roads: one southwards to the desert-fringe; and the ominously-named darb al-shuhado? (awldd al-balad).

Like other migrations to the presence of the living or dead Mahdi, this movement was designated hiajra. Accounts of life in the town were the centre of an Ottoman military establishment, and the Mahdi's tomb (bubbat al-Mahdi) was a place of pilgrimage in lieu of the hadj to Mecca. Beside the tomb (now restored) are the Khalîfa's house (now a museum) containing a labyrinth of rooms, and to the west the great walled space which formed the mosque. Other official buildings were the arsenal-storehouse (hayîl al-amâna, now a football stadium), the treasury (al-sîxîr), and the prison (al-sarîr), from the name of the gaoler). A great wall protected the inner city. From this central area ran three main roads: one southwards to the desert-fringe; and the Khalîfa's black troops (dibbhâdîya); one westwards to the parade-ground at the desert-fringe; and the ominously-named darb al-shuhado? (awldd al-balad).
Omdurman by three former European prisoners, Slatin (as above), Father Joseph Ohrwalder (in London 1899, have found a wide readership. (Egyptian) Military Intelligence, while the third is an older grouping, with its headquarters in Omdurman, established with government assistance in 1912, and became the leading nationalist organisation and the settlement there of migrants from all parts of the country, the speech of Omdurman became the leading nationalistic organisation and the seedbed of future political developments.

Bibliography: In addition to works cited in the text, there are frequent references to Omdurman in standard works on the Mahdiyya and Condominium, e.g. P.M. Holt, The Mahdist state in the Sudan 1881-1898, Oxford 1970; M.W. Daly, Empire on the Nile, Cambridge 1986; idem, Imperial Sudan, Cambridge 1991. (P.M. HOLT)

OMER EŞHİK famous Ottoman Turkish saz poet of the 11th/17th century, d. 1119/1707. Apart from one or two sources, information on him stems mainly from what he says in his own diwan. Basing themselves on such statements, some scholars (Bursali Mehmed Tahir, Fuad Koprulu and Cahit Oztelli, for instance) have claimed that he was a mystic and a miniaturist. But it seems more likely that he was an Ottoman historian, active both in the capital, Khartoum, and in Omdurman.

From his poems, Omer is known to have had a certain level of education, including a knowledge of Persian and Arabic. He gives his personal name as Omer and his pen-name as 'Adli, although he most frequently signs his poems with the pen-name Asik Omer, changed to Hejdat at this time. Although post-Tanzimat poets like Divyat Pagda and Mu'allim Nadjid may have been a bit disparaged him, they themselves could not deny having been influenced by him in their formative years. Many of his poems have been set to music; the miniaturist Lewni made a miniature of him. Turgut Kut, Ayyanvari Hafiz Hussein b. Ismail and ersiteri, Istanbul 1989, third ed. (1936-1980), 342-3; Sükru Elcin, Asik Omer, Ankara 1987; Saim Sakaoglu, Turkish saz siirleri, in Turkish Dili Ozeli Savaşı III (Halil Siiri), no. 445-50 (Jan.-June 1989), 138-42; Abdulkadir Karahan, Asik Omer, in Türkiye Diyanet Vakfi İslami Anıtkapodisi, iv, 1991, 1; Hussein Awansarayi, Mevlâna'si tarihi, Ankara 1962, 69.

ÖMER EFENDI, an Ottoman historian, according to popular tradition originally called Elkasovic or Çaulevi, who belonged to Bosna-Novai (Bosanski-Novai). Of his career we only know that he was acting as kadi in his native town when fierce fighting broke out on Bosnian soil between the Imperial troops and those of Hekim Ogluu Ali Paşa (1150/1737). Ömer Efendi at this time wrote a vivid account of the happenings in Bosnia from the beginning of Muharram 1149/May 1736 to the end of the month (1150/1737); written in a smooth, easy style, this work is of considerable importance for social history. It seems to have been called Hczawati-i Hekim Ogluu Ali Paşa, but is usually quoted as Hczawati-i diyar-i Bosna, and sometimes as Hczawati-nâme-yi Bândâlûk (i.e. Banjaluka in Bosnia).
As a reward for this literary effort, Omer Efendi was promoted to be one of the six judges (rüle-i adil-i-i sitte). Of his further life and death, nothing more is known. It is certain that he ended his days in Bosna-Novi and was buried there. The site of his grave is still pointed out but the tombstone has disappeared.

Omer Efendi's little book is fairly common in mss. (usually copies of the first printed text); cf. F. Babinger, GW, 277, to which should now be added: Zagreb, South Slav Acad. of Sciences, coll. Babinger, no. 390, 391, as well as no. 631, iv (here called "Omer Efendi". The present Ibrâhim Müteferrika [q.w.] revised and corrected Omer Efendi's narrative (cf. Hanif-zade, in Hadjdjî Khalifa, no. 14533: Ghazaâdât-i diydr-i Bosna) and published it under the title Ahsâul-i ghazaâdât der Diyar-i Bosna (8 + 62 pp., Istanbul 1154; cf. Babinger, Stambuler Buchweisen im 18. Jahrh., Leipzig 1919, 17). On later editions cf. Babinger, GW, 277. The book is also accessible in a rather bad German translation and a not very successful English one, cf. GW, 277.

Omer Efendi (A. Cevat Eren). (F. Babinger)

Omer Seyf ül-Dîn (Omer Seyfeddin), late Ottoman and early modern Turkish writer (1884-1920).

A major figure of Turkish fiction, Omer Seyf ül-Dîn (modern rendering Seyfeddin or Seyfettin) was a pioneer of realism and of the common idiom. A 1903 graduate of the Istanbul War College, he served as an officer, saw action, fell captive, and retired upon his release in 1913. Having published poems, short stories and essays since 1900, he joined his nationalist colleagues Ali Djânib and Diyâ (Ziya) Gökalp in Salonica (1911) where they published the influential magazine Genç Kalemler (“Young Pens”). From 1914 until his death on 6 March 1920 he lived in Istanbul, where he served as a teacher of literature, editor-in-chief of the journal Türk Sûzû (“Turkish Speech”), and a member of the Istanbul University Linguistic Research Board.

His 16-volume complete works comprise poetry, essays, children’s stories, etc., in addition to fiction. He was not an accomplished poet. His articles and essays, which exerted considerable influence in launching the ideals of nationalism in literature for the benefit of a wider reading public, are concise, lucid and deft. Among his published translations are those of parts of the Iliad and Kalela...

His fame rests essentially on his 138 short stories, mostly derived from childhood recollections, military life including combat, and everyday events. Many of them make use of traditional folk tales and legends, often recounting heroic deeds. In some, Omer Seyf ül-Dîn criticised entrenched institutions and superstitions. With a progressive spirit, he articulated the prospects offered by the awakening of Turkish nationalism for a better future. He took a stand against Ottoman Turks’ deleterious imitation of European models. He expressed faith in traditional Turkish culture blended with modernisation. He was one of the earliest among literary pioneers who brought the Anatolian countryside into urban literature. Reacting against the ornate elite poetry and prose of his predecessors, who were influenced by the Arabs and Persians, he wrote for and often about the common man in an attempt to make literature accessible "to the people."

His major novel, Efrûz Bey (1919), is an acerbic satire of the life and times of an upper-class, quixotic pseudo-intellectual and is the author’s most mature and most compelling work of realistic fiction. With several dozen of his well-made short stories, two or three novellas, and Efrûz Bey, he brought new dimensions to, and earned an enduring place in, the history of Turkish fiction.

(Talat Salt Halman)

On IKI ADA, Turkish rendering of the Dodecanese (Dodekanesos, “Twelve Islands”), the greater part of the Southern Aegean archipelago; they are grouped in a north-west to south-east direction in the south-eastern segment of the Aegean along the Turkish coast. The concept and even the number is somewhat artificial and underwent different interpretations and political expressions in the course of history, hence the relativity of the definition as to how many and which islands constitute this archipelago. The earliest mention seems to occur under the Byzantine emperor Leo III the Isaurian (717-40), when the “Dodecanese or Aigion Pelagos” formed one of his three naval commands. In the later Middle Ages Italian maritime control asserted itself over much of the Aegean, and some of the Dodecanese became a Venetian possession, but others passed under the sway of the Knights of St. John of Jerusalem after their establishment in Rhodes (1310). It was from the latter two powers that Ottoman Turkey seized control of the Dodecanese: those pertaining to the Knights as a result of the conquest of Rhodes in 1522, and those belonging to Venice during the kapitan-paşa Khayr al-Dîn Pasha [q.v.] Barbarosa’s two campaigns in 1537 and 1538. It was then that twelve islands within this archipelago acquired a special status of “privileged islands” that gave the inhabitants a sense of cohesive identity and firmly established their group as a geopolitical unit; the islands were: Ikaria, Patmos, Leros, Kalimnos, Astipalea, Nisros, Tilos, Simi, Chalki, Karpathos, Kos, and Meis; this was recognized with their voluntary submission and consequent treaty sanctioned by Süleyman I, to be confirmed by a number of later firman; the mostly Greek and Orthodox islanders had self-rule, against payment of a fixed annual sum (maktû). An illustration of the administrative rather than geographical nature of this Ottoman Dodecanese is the fact that the group included Meis (also known as Kastelorizon, Italian Castelrosso), an islet by the southern Anatolian coast near Kas to the east of Rhodes, but not Rhodes itself; like Rhodes, Kos too was excluded, although geographically situated in the midst of the group. The islands of Simi, and later Patmos, appear to have constituted the centre of political gravity and representation of the islanders in their dealings with the Porte and eventually also with other powers.

The inhabitants extracted some livelihood from their deforested islands (fruit, vegetables, wheat, tobacco), but for the most part they depended on the sea: local shipping, fishing, and especially sponge-diving, were their traditional occupations. Their smooth relations with the Porte began to suffer with the appearance of Greek as well as Turkish nationalism in the 19th and early 20th century. Istanbul first tried to cancel the islands’ privileged status and, following the constitu-
tional movement of 1909 and against the islanders' expectations, attempted to impose measures that amounted to incipient Turkicisation. The upheavals caused by the Italo-Turkish War of 1911-12, the Balkan War of 1912-13, and World War I brought about the final separation of the Dodecanese from Turkey and its establishment, enlarged by Rhodes as the administrative centre, as an Italian possession (Possementi Italiani dell'Egeo). Only in 1948 did the entire archipelago pass to Greece. The Muslim Turkish population of the islands, numbering about 10,000, had to face any great changes during the period of Italian rule, and the community's newspaper, Selâm, continued to appear in Arabic characters. But during World War II, from 1941 to 1944, the islands were occupied by the Germans (and the Jewish minority largely deported for extermination at Auschwitz), and then the Treaty of Paris of 1947 awarded the Dodecanese to Greece. From then on, under the pressure of Hellenisation, emigration to the Turkish mainland, especially to İzmir, accelerated; most of those who remained became Greek subjects, though retaining their Turkish language, with only a few of them retaining the Turkish citizenship which they had been able to keep since the time of Italian rule. In 1974 there were ca. 4,000 Muslims in their two main centres, Rhodes and Kos, those of Rhodes mainly in the town of Rhodes but those on Kos are in the town of Kos and the hamlet of Toroni as Türk Köyü. The communities are at present ageing ones since, under Greek aegis, young people find career prospects on the islands very confined, and the communities seem destined for gradual disappearance.

Parnakmozglou, On iki ada, in Türk Anıköpfelesi, xxv, Ankara 1977, 443-4. See also works by E. B. Soane, La Turquie d'Asie, Paris 1892, ii, 757, that "the 40 Nestorian raysas domiciled in Oramâr are entrusted with the care of the two Nestorian churches in the Kurdish town (sic)"; one of these churches, that of Mār Danyâyl at Nāw Gund was turned into a mosque towards the end of the 19th century or in the early 20th century. A local tradition even suggests that the ancestor of the modern qnas came long ago into this Christian district and by stratagems and intrigues succeeded in driving out its inhabitants. The toponymy of Oramâr seems to confirm this. The name Oramâr is probably ancient, and the district was probably inhabited at a very early date. There are similar place-names elsewhere in the region: Ora Bishu, one of the slopes of Kiria Tawka; Orıshu, a village beyond Gelia Nu; Uri, a Nestorian clan; finally Urmia itself.

Road system: Although there are not much but tracks used for intertribal communications, these routes must have played a more prominent part in ancient times. Oramâr is connected with Gawar via Şamsîkî, the pass of Başţazîn, ʿAlî Kâni, Başîrzâ and Dizza. It is a road which shows traces of works undertaken at the more dangerous places. To the south, the road going through a very narrow defile leads first to Nerwa (cf. below) where it forks to the west and to the east. A third road goes from Nerwa to Nehri, the centre of Şamdiyân, via Razza, the heights of Peramizi (frontier of the three tribes—Rekâni, Harki, Duskânî), Derî, defile of Harki (Şiwâ Harki), Begor, Mazra, Nehri.

Ethnography. The following Kurdish tribes may be mentioned in Oramâr itself and in the vicinity, with ramifications inevitable as a result of the Kurd migrations. After the name of each tribe that of the district and the number of households in ca. 1930 is given: Duskânî Zîhûrî (Oramâr, 2,000); Nīrwe (Nerwa, kadâd of Amâdiyâ), 800; Dîrî (Gawar and Gelia Dîrî, 1,000): Penînîsh (between Gawar and Djuţâmêr, and the part of the Pirhulki, near Başğâldâ'î, 4,000); Duskânî Zherî (kadâd of Dukh, 2,000); Mizîrî Zherî (ibid., 5,000); Berwârî (ibid., 4,000); Guweî (settling at Dukh; summering at Gawar and Oramâr, 1,400); Čêlî (Djuţâmêr, 6,000); Arûtûsh (summering at Firaşhîn; wintering at Berîji Zengâr, 6,000); Arûtûsh (sedentary: Albâk, 1,000; Nurdîz, 1,000); parts of Arûtûsh: Gewdan, Mâm Khoran, Zhirki (around Djuţâmêr, 6,000).

History. Oramâr has a rich history full of associations with the Nestorian Christianity of south-eastern Turkey and its European Missionaries.

ORAMÂR, ORAMAR, modern Turkish Oramar, a district (nakîye) of the south-east of Turkey, just to the north of the frontier with İrak, and in the modern îçe of district of Gawar (Yûksekoşa) in the îl or province of Hakkâri, with its chef-lieu of the same name (lat. 37°23' N., long. 44°04' E., altitude 1,450 m/4,756 ft.). In 1953 the settlement of Oramâr itself had a population of 943, whilst the nine villages comprising the nakîye had a total population of 3,632.

The boundaries of Oramâr are on the north Îskâţîn and Gawar; on the south Rêkân; on the west Dîlû, Baz and Tkhûma and Arûtsh; in the east Sît [see Şîmîdîn]. Oramâr is a group of hamlets scattered on the two sides of a rocky mountain spur above the Rûdbârî-Sîn. On the spur itself, which is called Gaparanî Zherî, at the place named Gîre Bûtî, is the capital of this part of the district and the Nestorian church of St. Mâr Dînîyâl at Nâw Gund or "the middle of the town". A large cemetery occupies the promontory at the end of the spur. The name Gîre Bûtî, explicable as the "hill of the idol", seems to indicate the antiquity of the settlement. The fact that the slopes separated by the Gaparân are very carefully cultivated and present a complicated system of little terraces, each of which is a field or tiny kitchen garden, leads one to believe that man chose this site for habitation a long time ago, perhaps simply on account of its extreme isolation in the centre of a wild country.

Gorography. Oramâr is at the east end of the curve traced by the system of the Djîlû Dâhû. According to Dickson, the chains and valleys of Turkish Kurdistan run roughly along the parallels of latitude and take a south-eastern direction as they approach the Persian frontier and at the point where they change their axis form a complicated system of heights and valleys. The most complicated part near the centre of the change of axis in question may be called Harki-Oramâr.

In trout (1900) although there are not much but tracks used for intertribal communications, these routes must have played a more prominent part in ancient times. Oramâr is connected with Gawar via Şamsîkî, the pass of Başştazîn, ʿAlî Kâni, Başîrzâ and Dizza. It is a road which shows traces of works undertaken at the more dangerous places. To the south, the road going through a very narrow defile leads first to Nerwa (cf. below) where it forks to the west and to the east. A third road goes from Nerwa to Nehri, the centre of Şamdiyân, via Razza, the heights of Peramizi (frontier of the three tribes—Rekâni, Harki, Duskânî), Derî, defile of Harki (Şiwâ Harki), Begor, Mazra, Nehri.

Ethnography. The following Kurdish tribes may be mentioned in Oramâr itself and in the vicinity, with ramifications inevitable as a result of the Kurd migrations. After the name of each tribe that of the district and the number of households in ca. 1930 is given: Duskânî Zîhûrî (Oramâr, 2,000); Nîrwe (Nerwa, kadâd of Amâdiyâ), 800; Dîrî (Gawar and Gelia Dîrî, 1,000): Penînîsh (between Gawar and Djuţâmêr, and the part of the Pirhulki, near Başğâldâ'î, 4,000); Duskânî Zherî (kadâd of Dukh, 2,000); Mizîrî Zherî (ibid., 5,000); Berwârî (ibid., 4,000); Guweî (settling at Dukh; summering at Gawar and Oramâr, 1,400); Čêlî (Djuţâmêr, 6,000); Arûtûsh (summering at Firaşhîn; wintering at Berîji Zengâr, 6,000); Arûtûsh (sedentary: Albâk, 1,000; Nurdîz, 1,000); parts of Arûtûsh: Gewdan, Mâm Khoran, Zhirki (around Djuţâmêr, 6,000).

History. Oramâr has a rich history full of associations with the Nestorian Christianity of south-eastern Turkey and its European Missionaries.
The cross-continental movements of the Turco-Mongol peoples in the 13th and 14th centuries ensured for the word a wide diffusion into Eastern Europe, including the East Slavonic, Magyar, Balkan and New Greek linguistic areas, finally entering such Western European languages as English and French.

Under the Ottoman Turks, ordu-yü hâmiyyân was a general term for the imperial army, and appears also as an element in the names of various functionaries connected with the army, e.g. the orduülü başlangıçtılı, who was the chief of a staff of tax collectors (moder-

nicians (ehl-i hıref, arabbâ-i hıref) who accompanied the Janissaries [see VENI ÜÇLERI] on their campaigns away from the capital (see I.H. UZUNÇARŞI, OSMANLI DÖRLÜ İLETİŞİMLERINDEN KAPITALİ ÖZELLİKLERI, Ankara 1943-4, i, 368-73; M.Z. PAKALIN, TARİH DEYİMLER VE TErIMLERi SİZLÜĞÜ, İstanbul 1946-54, ii, 728-9).

In South Asia, through usage amongst the Mughals [q.v.] of India, with the royal residence at Dilli styled the ordu-yü mualla, "excited camp", the term zabâni-

rdu was used for the mixed Hindustani-Persian-Turkish language of the court and the army, now the Urdu language of a large proportion of the Muslims in the subcontinent (see Yule and Burnell, HOBBON-JOBSON, A GlosSARY OF ANGLO-INDIAN COLOquIAL WORDS AND PHRASES, 639-40; HIND. III. LANGUAGES; and urdu). The term was still used in the Soviet Persian (cf. the Tağıkhana al-malsik, tr. MINORSKY, LONDON 1943, TR. 51, 62), but must by the time the latter work was written (early 18th century) have been archaic and obsolete.

(C.E. BOSWORTH)

2. In Mongol historical usage

In sources dealing with the period of the Mongol Empire, ordu is normally used in the sense of the camp or household of a Mongol prince, which would be under the supervision of one of his wives. He might therefore have several ordus. During the Ilkhanate, "to go to the ordu" meant to travel to the ruler's presence, whether that was to be found at one of the fixed capitals such as Tabriz, or wherever the royal encampment happened to be. This kind of usage was perhaps due to the Western term "Golden Horde" for what in the Islamic world was usually known as the khanate of Kıpçak. Quatremère (RASCHID-ELDIN, Histoire des Mongols de la Perse, Paris 1836, 98, n. 25) suggested that the word urduk was sometimes used to indicate, to some extent by contrast, the military camp in a more general sense. During his journey to Mongolia in the 1250s, William of Rubruck, whose Latin word for ordu is generally curta, picked up a confusion between ordu and orta ("middle"): "The court is called in their language orda, meaning 'the middle', since it is always situated in the midst of the men" (THE MISSION OF FRAR WILLIAM OF RUBRUCK: HIS JOURNEY TO THE COURT OF THE GREAT KHAN MONGKE 1253-1255, TR. P. JACKSON and ED. J. MORGAN and D.O. MORGAN, LONDON 1990, 131 and n. 4). The transformation in English of the meaning of "horde" from the camp to the nomadic warrior people who (in large numbers) sometimes furnished the contemporary English use of the word "to travel to the ruler's camp" gives us the sense of ordu, and probably ordu, from the time of the OED's first cited reference (1555).

Bibliography: G. DOEGER, TÜRKISCHE UND MONGOLISCHE ELEMENTE IM NEUPERSISCHEN, ii. TÜRKISCHE ELEMENTE IM NEUPERSISCHEN, Wiesbaden 1965, 35. Already in the Sâmândî period (4th/10th century), the geographer al-Mukaddasî, 263, 275, mentions "Urdu aksas" as "the residence of the ruler of the Turkmens", and in the ensuing Karâkânî period Ordu is record-

ed as a mint in Transoxania, possibly to be equated with their capital at Balâsâghân (E. von ZAMBAU, DIE Münzprägungen des Islam, i, Wiesbaden 1968, 42).
invasions or of the ensuing Il-Khânid, especially as
the latter made Adharbaydžan the centre of their
activity and with the group of dervishes known as the
Khânid-zâde Hasan Sirrî, who was a government of-
official and translator. Nahit Sirrî attended Galatasaray
lycée, graduating in 1913. He lived in Europe until
1928, and after his return to Turkey, worked as a cor-
respondent for the newspaper Cumhuriyet and as a
translator for the Ministry of Education. He travelled
in Anatolia and wrote articles, mostly concerning the
archaeological and historical antiquities of the places
he visited. He continued to work as a journalist until
his death on 18 January 1960, never having married.
Nahit Sirrî admired and loved Istanbul deeply, and
this is reflected in his works. The style he adopts for
his historical novels is the objective, calm and good-
humoured reporting of events with life in the Istanbul
of the past a dominant subject for his works and his
language remaining faithful to refined Ottoman style.

Ottoman troops learned the topography of Thrace and Macedonia, while they became rich by pillaging the property of Cantacuzenus' opponents and by taking them into captivity together with the peasants, who had remained faithful to the legitimate heir, in order to sell them as slaves. Cantacuzenus himself confesses that he could not control his Turkish allies. During the same period, around 1346, the Ottomans annexed the adjacent amirate of Karasi [q.v.] thus gaining access to the Aegean Sea. Orkhân, who had a fleet of at least 36 vessels as early as the 1350s, acquired the important fleet of the Karasi Turks who, besides the sea trade, engaged in a naval warfare, began to collaborate successfully with the Ottomans by organising raids on the Greek littoral. The alliance between Cantacuzenus and Orkhân continued after the end of the civil war in 1347, because the former, insecure and suspecting that some of the Thracian towns were ready to revolt against him, frequently appealed to his son-in-law for military support. Orkhân's son, Süleyman Paşa, often resided in Thrace at the head of troops sent to assist Cantacuzenus.

The war between Genoa and Venice, which broke out in 1351 and in which the Byzantines were eventually involved, gave Orkhân the opportunity to emerge on the international scene. He supported the Genoese by supplying them first with victuals and later with soldiers, and he placed a little fleet consisting of 9 vessels at their disposal. In 1351-2 the first Genoese-Ottoman treaty was concluded. Around the same time, the powerful kral of Serbia Stefan Dusan, whose territories were harassed by the Ottoman raids, tried also to conclude an alliance with Orkhân and proposed to give his own daughter in matrimony to one of his sons. It is not certain that the marriage ever took place.

In 1352 Süleyman Paşa accomplished the first Ottoman conquest in Europe by occupying the fortress of Tzymbé. In 1354 an earthquake destroyed the walls of several towns in Thrace, including the strategically important fortress of Kallipolis/Gelibolu [q.v.]. The Turks who were encamped in the countryside proceeded immediately to occupy them, while their inhabitants fled before them to escape captivity. Süleyman Paşa immediately took care of Kallipolis by restoring its walls and by inviting some prominent Turks to come to settle there. In 1357, the Turks occupied two important towns in Asia Minor, Ankara and Kratsea Gereye.

The Ottoman expansion was temporarily halted in 1357, when Orkhân's son Khalil was captured by Genoese pirates and taken to Phocaea, a town nominally under Byzantine rule. Orkhân was obliged to ask for the help of the Byzantine emperor, who put forward as a condition the end of the Ottoman raids on Thrace, perhaps as a result of the activity of the papal legate Pierre Thomas, who visited Constantinople with his fleet and then proceeded to an attack on Lampsakos in the autumn of 1359. It was probably in 1361 that the Ottomans conquered Didymoteichon/Dimotoka [q.v.]. Orkhân died in March 1362 (P. Schreiner, Die Revolutionen des jüngeren Osman, iv, Vienna 1977, 290-1). He left a state extending over Asia Minor and Europe. He had consolidated his rule by organising the administration of his territory, which was divided into domains governed by his sons and by some military chiefs. According to the Ottoman chronicles, in his years, besides the irregular force of the akıngis [q.v.], a cavalry was created consisting of müsellemes [q.v.] and an infantry of yayus. The information given by İdris Bifidî [q.v.] that the corps of the Janissaries was founded in Orkhân's days seems to be inaccurate (see V.L. Tatic, Söke ten on the Dervishes, in BSOAS, xxix [1966], 64-78). Regulations regarding dress produced a clear distinction between the Ottoman army and that of the other amirates, and 'Ali'd al-Dîn induced his brother to adopt the white cap (bork) for his soldiers.

Orkhân founded several mosques, establishments for dervishes, charitable institutions and schools. Religious life was vigorous in his days and the fraternities of dervishes, who were, in this period, the orders of dervishes, who remained popular religious leaders often inspired by heterodox doctrines. However, orthodox Islamic traditions became gradually predominant through the growing influence of theologians indicated in the sources as dânmşmend. On the other hand, there existed close relations with the local Christian population, and the early Ottoman chronicles mention many a Byzantine lord, even groups of Christians, who collaborated with the Ottomans. In 1354 Gregory Palamas, Metropolitan of Thessalonica and distinguished theologian, was taken as a prisoner to the Ottoman territories, where he had the opportunity to meet the Christian communities and also to participate in a public theological debate organised by Orkhân in Nicaea.

The economic situation of the state which Orkhân left behind, was apparently prosperous. The currency was the silver akçe [q.v.] struck in his name. Apart from agriculture and cattle-raising, the revenues of his state derived from booty, which was important as it included war captives sold as slaves or liberated after paying ransom; from the annual tribute paid by the Byzantines and the other Christian states and from the money paid by Christian states in order to be allowed to recruit soldiers within their amirate; and finally, from customs duties since trade was carried out, as suggested by the commercial treaty concluded with the Genoese.

ORKHAN — ORKHON 177
ed. Th. Menzel, Leipzig 1932, 329-54; E.A.
Zachariadou, 'laropfa xat OpuXoi TWV ... of what is
now the Mongolian People's Republic; it joins the
Selenga to flow northwards eventually into Lake
Baikal.

was a lawyer who became a first-term MP (1920-3)

novelist, born in Adana, Ceyhan, on 15 September

came back to Adana, working as a labourer, weaver,

and Minister of Justice for a while and founded the

EhalT Djumhuriyyet party in Adana but was forced to

military service, he wrote poetry under the

secretary and stock-taker in the cotton mills (1932-8).

In Bursa prison he met Nazim

prisoned for 5 years (1938-43). He published his first

he had engaged in political propaganda and was im-

prisoned for 5 years (1938-43). He published his first

story Balık, in 1940, and between 1941-3, his stories

were published in Yeni edebiat, Yarışyüş, Ikdam, Yurt

dunya, and Adimlar. In Bursa prison he met Nâzım Hikmet [q. v.]

and wrote prose under his influence, and in 1945, the literary journal Varlık
declared him to be the most interesting writer of his time. In 1943 he had

come back to Adana, and when he could no longer

find employment, moved to Istanbul with his family

and tried to make a living as a writer. In 1949 Ekmek

kaşası and his first novel Baba evi were published, and

he then became famous; in 1958 Kardeş payı and in 1969

Once ekmek won literary prizes. He still had to

write for his living, and produced novels, short

stories, interviews, scripts for cinema and theatre. In

1972 he was invited to Bulgaria, where he died on 2

June.

In his works Orhan Kemal told of the small people

who struggled to earn their daily bread—labourers

who worked in the fields and factories of the

Çukurova, people who lived in the slums of the big

city. His characters therefore are workers, small
government officials, beggars, garbage collectors,
inmates, villagers, drivers, wives and the like.

He played a great role in introducing 'life in the prison'
as a theme to Turkish short story.

He was keen to reflect the social state of women and children in his

works. His women have the traditional positive at-
ttribute, and his child heroes begin to work before

they can enjoy their childhood. Some of his works

reflect the conditions after the war years: effects of in-
dustrialisation, capitalism, changing traditions of the

low classes, especially in the Adana region. He

reflected on his childhood, and the stories he heard from his inmates during his imprisonment.

His works after 1946 are about the class war, and the bitter indif-
ference of the big cities to poor people became a domi-
nant theme. He does not describe the psychological dispositions of his characters, but this is reflected in-
stead in the dialogues of the characters themselves.

His language and style are plain, without metaphors and

similes. Most of his works have been made into films,

with the scripts by the author himself.

Bibliography: 1. Selected works, (a) Poetry:

1. First editions, (a) Novels:

(Firfinawekdr, 1919; Peri kiži ile čoban hikayesi, a poetic tale with a Turcik theme written in

symmetrical metre, was published in 1919. He taught

literature at several schools in Istanbul, and then in 1922 he began to publish Ak babâ, the famous satirical

magazine, with Yusuf Ziya.

In 1914, the same year he became a secretary at the

Othmanlı Medjlisi-Mebûthânî until its suspension.

In 1913 he published a small book of poems Firfinawekdr ve

kâr in 'arîd metre. His second book, Peri kiži ile čoban

hikayesi, a poetic tale with a Turcik theme written in

symmetrical metre, was published in 1919. He taught

literature at several schools in Istanbul, and then in 1922 he began to publish Ak babâ, the famous satirical

magazine, with Yusuf Ziya.

In 1924 he launched Reşmi günü, a children’s magazine, followed by

Günneh, Papagahen ve Yeşil kalem magazines in 1927. In

1932 he published Edebiyat gazetesi, in 1935 Ayda bir,

and in 1942 Çinâraltı. In 1946 he became an MP for the

Halk partisi (Republican People’s Party) from

Zonguldak. In 1960 he returned to journalism. In

1965 he joined the Adalet partisi (Justice Party) as an

MP from Istanbul. From 1969 until his death on 22

August 1972, he worked as a journalist.

Throughout his whole life, he wrote for many newspapers

and magazines, including Taşvir-i efüôr, Cumhuriyet,

Ulus, Zafer and Son Havâdis. As a poet, his first poems are

in 'arîd ârzâ, but later he became one of the famous promoters of symmetrical metre of the National

literary movement between 1908-12. In fact, he is known as one of the group of young poets called the

"Five poets of the symmetrical metre" (Faruk Nafiz

Çamlıbel, Enis Behiç Koyrükê, Halit Fahri Ozansoy

and Yusuf Ziya Ortaç being the others). His popular

poems have been set to music.

ORKHON, a river of the northern part of what is

now the Mongolian People’s Republic; it joins the

Selenga to flow northwards eventually into Lake

Baikal.
For Turcologists, the banks of this river are of supreme importance as the locus for the Old Turkish inscriptions, carved in the middle decades of the 8th century, and the first popularly derived ultimately from the Aramaic one [see TURKS. Languages]. These inscriptions are the royal annals of the Kūkūtürk empire, covered on this region till its fall in 744 and supersession by a Uyghur [q.v.] grouping based on Kara Balghasun on the Orkhon; these Uyghurs were in turn dispossessed by the Kirghiz [q.v.] in 840 and forced to migrate southwards to Kan-su and Turfan [q.v.]. Some of the Araməcgeographers of the Orkhon, but we know nothing of Kara Balghasun (whose ruins are still visible) from the visit to it by a Muslim traveller Tamim b. Bahr al-Muṭṭawwi', which probably took place, in Minorsky's view, in 821 A.D.; this is the only first-hand Muslim account of the Uyghur kingdom in Mongolia. 

Bibliography: See V. Minorsky, Tamim ibn Bahr's journey to the Uyghurs, in BSOAS, xii (1948), 275-305. (C.E. Bosworth)

OROMO, a people of eastern Africa, partly Islamised, present in Ethiopia but also, although in small numbers only, in Kenya, Somalia and even in the Sudan. Among its constituent groups are the Arssi (Arusi), Boran, Guji, Karayu, Leqa, Macha, Raya (Azebo), Tulama, Wello, etc. The Amharas, amongst whose people they have become installed, have for a long time given them the name of "Galla", whose etymology is uncertain.

Numerically, the Oromo form one of the leading ethnic groups of Africa. In Ethiopia they represent 40% of the total population, i.e. between some ten and fourteen millions. Linguistically, they are the majority, ahead of the Amhara speakers. Their language is called by themselves afam oromo and by the Amharas oromoňa or gallehna, and belongs to the Cushitic group [see KUSIT] at the side of Afar, Agaw, Beja, Saho and Somali. The writing of Oromo in Latin characters seems now to be becoming generalised, even though the Ethiopian or Arabic alphabets have sometimes been used for it also.

Religious differences (they include Christians faithful to the national church, Catholics and Lutherans, also Muslims, and also followers of their traditional religions), as well as a sort of cultural diversity of their own, the denial of the existence as a people before 1975, have not prevented the gradual formation of a common identity among the Oromo. This is based on a substantial degree of linguistic intercommunication and on common values (such as the gada system). For some people it shows itself in a nationalism which the setting-up of a new, decentralised Ethiopian administrative system (1992), which endeavours to regroup the Oromo lands into an entity called "Oromia", would probably not satisfy completely.

The cradle of the Oromo, originally nomads, is believed to have been the region which stretches from Lake Abaya to the upper course of the Webi Shebele. The most important warrior raids and migrations which pushed them northwards began in the middle of the 16th century. They were favoured, if not provoked, by the disorder brought about by the wars which had set the Christian empire against the Muslims in the first half of that century, and especially against the sultanate of Harar [q.v.]. These migrations brought them to the Blue Nile, to Tigré and, in the northeast, to Harar, in the midst of peoples whose customs and beliefs, and even language, they often adopted. In this way, some of them early became Muslim.

From the 18th century onwards, Muslim political entities took shape, often engaged in trading. In the north, the Tajju and Wello were capable of having an influence on the political evolution of the Christian states until 1853. In the south, petty kingdoms (Ennary, Jimma, Gera, Gomma and Guma), originating from the middle of the 18th century, became Muslim under the influence of merchants, mainly Harari ones. Divided by internal rivalries, they were integrated into the empire by Menelik between 1881 and 1897, together with the Arssi region which had become Muslim in the second half of the 19th century and whose inhabitants made up the Bura frontier.

Oromo Islam is far from "orthodox", and its devotees are sometimes Muslim only in name. The famous pilgrimage to the kabba of Šaykh Nür Hušen takes place in the Arssi territory, and the rites practised there strongly resemble those of the traditional pilgrimages at Abbà Mudda. The influential tajrās have come from the Sudan (Tijāniyya, Samānīyya) or from Arabia (Aḥmadīyya, Kādirīyya). 

(A. Rouaud)

ORONTE(s) [see AL-ʿAŠĪ]

ORTA (t.), literally "centre", in Ottoman Turkish military terminology, the equivalent of a company of fighting men in the three divisions (the Segmen, the Dījmaʿat and the Būlūk) of which the Janissary corps was eventually composed [see OĞAK and VENİ ĖRİEL]

The number of ortas within the corps varied through the ages, but eventually approached 200; d'Ohsson reckoned the total to be 229. The strength of each orta likewise varied; in the time of Mehmed II Fāṭih [q.v.], they said to have been composed of 50 men, but in the low hundreds at subsequent periods. The commander of an orta was called the Çorbağlı (literally, "soup purveyor" [q.v.]), and amongst the officers below him were, inter alios, the Adağlı ("cook") and the Baglı ("guard"). These were the titles, the origin of much Janissary nomenclature in culinary terms. The several officers in an orta seem to have reflected a variety of military functions rather than a hierarchy of ranks, as in modern armies. Also, each orta had its own clerk, oda pazağlı, who kept the rolls of the soldiers on the company's strength.

ORTA OYUNU (t.), "entertainment staged in the middle place", a form of popular Turkish entertainent so-called because it takes place in the open air, palanka, around which the spectators form a circle. One side is reserved for the men, the other for the women. Behind the spectators is found the place where the actors get ready to enter the stage by means of a passage which is left free. The décor consists solely of a chair—or a table—called dükkan "shop, booth" and a folding screen, yetı günüş "new world". An orchestra made up of a zurna, oboe, a çiftê nekârê "double drum" and a dasıîul "big drum" plays a tune for dancing, and the dancers (kötek) enter the stage, followed by the dJonathan "comic dancers". After this
preliminary demonstration, the actors proper appear. The two main characters, Kawuklu and Pishekar, have, respectively, the same characteristics of those of Karagoz and Hacivad in the shadow theatre [see karagoz], likewise the character of Zenne ‘lady’ (here a male actor in woman’s dress) and the various other types representing the minority groups of the Ottoman empire: Jew, Armenian, Frank (here the Frenchman, or European, resident in Turkey) and the Anatolian peasant, here called Türk. The role of Bebe Ruhi of the shadow plays is here played by an actor of an ethnic group other than Turk. As in the Karagoz plays, these are stripped of their serious nature, enriched by comic elements and provided with a happy ending. What distinguishes the Orta Oyunu from Karagoz is, so it would appear, its mode of presentation: the coming together of living persons who are entirely free to draw comic effects from the motifs. A burlesque dialogue between Kawuklu and Pishekær is called čene yarış’ ‘chink competition’, a term signifying in Turkish ‘contest in gossiping, talking at length’; the two actors, drawing upon the term’s ambiguity, reinforce their repartee with a miming contest which consists of twisting and deforming the chin to produce the most comic effects possible.

Certain types of taklid ‘comic imitation’ of the Turkish tradition attested from the 12th century onwards have some common features with the Orta Oyunu, but only the imitative element can be traced back to there. The same applies to the spectacle known as koli oyunu ‘entertainment with troupes’ about which Ewliya Çelebi speaks. One could also compare the Orta Oyunu with the improvised street displays of rural areas. Nevertheless, with the full array of its characteristics, the Orta Oyunu is only attested in written sources after the beginning of the 18th century.

Some Orta Oyunu texts, transcribed rather late, have been published in the works of Martinovitch (one text in translation) and of Cevdet Kudret (nine texts). In the work of Selim Nüzhet Görçek appears a list of thirty-nine authors. The Orta Oyunu was popular in the 18th century and until 1967 he worked for the magazine Akba. He died on 11 March 1968. For Orta Oyunu texts, see Oscar, 1943; San çiçimleri Mehmed Ağa, 1956; Güm deşmanları, 1960. (f) Memoirs: Bir varmış bir yokmuş: portreler, 1960; Bizim yokmuş, 1966.

OSMAN DIGNA [see usman dan fodio]
OSMAN NÜRI [see ergin, osman nuri]
OSRUSHANA [see usrushana]
OSSETIANS, an Iranian-speaking people who live in the central part of the North Caucasus, primarily in the North Ossetian ASSR and neighbouring areas on the southern slopes of these mountains in Georgia. According to the 1989 census, the number of the population was 538,000. The people are Muslim (Sunni Islam), and until 1967 they were part of the Soviet Union, 355,000 live in North Ossetia and 164,000 in Georgia. Sixty-five thousand of the Ossetians living in Georgia live in what was the South Ossetian AO.

The Ossetians are divided into two major religious groups, the Orthodox Christian Ossetians (Iron and Tuallag) and those professing Sunni Islam, the Diger Ossetians. The Diger, or Eastern Ossetians, live primarily in eastern North Ossetia, and the Tuallag in Georgia. The Digers live primarily in the mountains and valleys of the northwestern part of Northern Ossetia, in a small portion of eastern Kabarda, and in the major Ossetian urban centre of Vladikavkaz.

The Muslim Ossetians are a relatively small minority, constituting between 20 to 30% of the Ossetian population. The ancestry of the Digers accepted Sunni Islam under the influence of Muslim Turks and KurdishOssetians of the 16th to 19th centuries. Although both Christianity and Sunni Islam are represented in Ossetia, both of these faiths form only a thin veneer over a strong residual influence of the ancient polytheistic and animist beliefs of the north Caucasian tribes. Pagan rituals, deities and folkways of Caucasian culture have survived throughout Ossetia, mixing with traditional Christian and Islamic beliefs and published in 1916, followed by Cebdet aktina in 1917, a work which aimed to give moral support to the army and the nation during the war. In 1918 he began to write satirical poems. He launched a journal called Şıkard and wrote in the journal Diksen using the pseudonym of Çimdiş. In 1919 he published his satirical poems in Şıkard, comprising twenty poems which criticise the social and administrative life of Istanbul. In 1922, he published Ak baba, a satirical magazine, with Orhan Seyfi [q.v.], which became the forerunner of the journals of satire during the first years of the Turkish republic. Yusuf Ziya Ortaç wrote for the newspapers ıdam and Cumhuriyet between the years 1927 and 1933. In 1935, he published Ayda bir with Orhan Seyfi Orhon as well as Her ay, a journal devoted to arts, economy and politics, and also the journal Çirnavat. He left journalism to work as a literature teacher and later became an MP between the years 1946-54. In 1962 he published his last book Bir rüzgar esti and until 1967 he worked for the magazine Akba. He died on 11 March 1968.
practices. For example, polygamy was practiced well into the Soviet period among both Christian and Muslim Ossetians, and both groups appear to have been relatively relaxed about practicing their respective faiths. This syncretic blend has resulted in a curiously unique and distinct Ossetian culture. In addition to adopting many beliefs of the local Caucasian peoples among whom they lived, including the Balkars, Ingush, Kabardinians, and Georgians, the Digors and other Ossetians also maintain fragments of the ancient cultural practices of their nomadic ancestors, the Alans.

The Ossetians are considered to be descendants of the ancient Scythian and Sarmatian tribes who inhabited the steppe region north of the Black Sea. In the fourth century A.D., the Alans, descendants of these tribes, were forced southward from their steppe homelands by more powerful nomadic tribes, including the Huns and the Mongols. Although they generally maintained their nomadic way of life, the Alans formed a loosely structured state called Alania in the foothills and mountain valleys between the upper Kuban River and the Darial Gorge of the Caucasus. Strong ties were established between Alania and the Byzantine Empire, and, in the 10th century, Christianity became the official religion of Alania [see further, ALAN].

Following the Mongol invasions of the 13th century, the Alans scattered. One group migrated to what is now Hungary and parts of western Europe; culturally mixing with the local Caucasian peoples, the Alans re-emerged three centuries later as a distinct ethnic group now known as the Ossetians.

The Ossetic language is the only survivor of the northeastern branch of Iranian languages, also known as Scythian. Ossetic is divided into two main dialects: "eastern" or Iron and "western" or Digor. Among the Digor Ossetians, a form of Ossetic developed incorporating linguistic elements from Kabardinian (Circassian), a Caucasian language. Many archaic loan words and structures remain more closely related to small Turkic and Aramaic-influenced isolating Ossetian than to Tuallag Ossetic preserved in Digor. Iron and Tuallag are more heavily influenced by the Russian and Georgian languages, respectively. In the late 19th century a distinct Digor literary language was created, which used Arabic characters. At the same time, the Iron dialect was written in the Cyrillic alphabet and Tuallag in the Georgian alphabet. In 1923, all dialects of Ossetic were changed to the Latin alphabet, and in 1939, the Digor literary language was abolished and replaced by standard literary Iron, adopting many beliefs of the local Caucasian peoples.

In 1944 the Digors were deported to Central Asia along with other Muslim peoples of the North Caucasus. In the late 1950s, the survivors of the deportations were permitted to return to homelands in the North Caucasus, and the Digors were resettled more or less in their traditional territories in the Digor Valley along the border of Kabarda. In the Digor region of North Ossetia, there are no major cities. The Ossetian language is the only survivor of the northeastern branch of Iranian languages, also known as Scythian. Ossetic is divided into two main dialects: "eastern" or Iron and "western" or Digor. Among the Digor Ossetians, a form of Ossetic developed incorporating linguistic elements from Kabardinian (Circassian), a Caucasian language. Many archaic loan words and structures remain more closely related to small Turkic and Aramaic-influenced isolating Ossetian than to Tuallag Ossetic preserved in Digor. Iron and Tuallag are more heavily influenced by the Russian and Georgian languages, respectively. In the late 19th century a distinct Digor literary language was created, which used Arabic characters. At the same time, the Iron dialect was written in the Cyrillic alphabet and Tuallag in the Georgian alphabet. In 1923, all dialects of Ossetic were changed to the Latin alphabet, and in 1939, the Digor literary language was abolished and replaced by standard literary Iron.
two sons to ʿOthmān: Orkhan and ʿAli Pasha. ʿAshik-pasha-zade (ed. CAI, Tevdnkh-i Al-i ʿAli, Istanbul 1932/1913-14, 39-40) adopts this scheme, but renames ʿAli Pasha as ʿAlaʾ al-Din Pasha (q.v. ʿAlī al-Din Bey). Most later historians follow ʿAshik-pasha-zade. However, the figure of ʿAli Pasha/ʿAlaʾ al-Din Pasha is wholly fictitious, despite inclusion in the Encyclopaedia of Islam. (For the origin and development of this legend, see C. Imber, Canon and apocrypha in early Ottoman history, in C. Finkel and C. J. Heywood (eds.), Festschrift für V.L. Menage, Istanbul 1935) accepts that the Ottoman tradition making ʿOthmān a leader of the Kayi [q.v.] tribe is, at least in essence, himself an independent ruler, since the issue of ʿOthmān is claims, “was the beginning of great trouble for the issue of ca. 825/1422, also refer to ʿOthmān’s conquest of a fortress called Karağüşhâş (“Black Fortress”). This toponym may correspond to the Melangeia of Pachymeres, since alternative forms of this name are Melagina/Melaina, which resemble the Greek word melaina (f. sing. “black”) and suggest that the Turkish form is a calque of the Greek. The correspondence of these places with the general locations of ʿOthmān’s conquests to be inferred from Pachymeres suggests that in these few particulars the Ottoman tradition is historically accurate.

In general, however, Turkish traditions about ʿOthmān are clearly unhistorical and should be understood as belonging to the literary genres of folk Epic (dāsidā [q. v.] and manākbī [q. v.]). These traditions appear in their most primitive and disjointed form in the Anonymous chronicles and Oruç, which derive the core of their material from the “common source” of ca. 825/1422. The starting point of Span- dugino’s story is a stone that derives the names of ʿOthmān’s followers and companions from toponyms, and creates battles and events from folklore and popular traditions. Pachymeres presents a fuller and more coherent narrative, adding a great deal to the stories which it shares with these two chronicles. For this reason, it is ʿAshik-pasha-zade whose narrative has come to form the basis of the modern historiography of ʿOthmān’s reign. However, ʿAshik-pasha-zade’s additional material is similar in type to what he took from the “common source”. For example, he also derives the names of ʿOthmān’s followers and companions from toponyms, and creates battles and events from folklore and popular traditions.

His chronicle records a victory which ʿOthmān won over the Byzantine hetairoparches Mouzalon at Baphesus, identified as the district around Nikomedia/Izmit (Pachymeres, op. cit., 333). The battle, Pachymeres claims, “was the beginning of great trouble for the whole region.” In a second attempt to defeat ʿOthmān, the Byzantine chronicle of George Pachymeres (1242-87) identifies as the district around Nikomedia/Izmit the Byzantine Emperor Andronicus II sent another force against him under the stratopedarch Siouros. ʿOthmān defeated this army in a night attack near a fortress called Katoikia, which he had also occupied (Pachymeres, op. cit., 414). Pachymeres follows his account of this victory with a statement that ʿOthmān next occupied Belokome/Bileşik [q. v.], thereby “gaining great wealth and living in prosperity, and using the fortresses as places of safekeeping for treasures.” (Pachymeres, op. cit., 414-15). The exact sequence of events is, however, unclear. In a slightly earlier passage, Pachymeres already refers to the loss of Belokome, together with Angelokome (inégol?), Melangeia (Inönü?), Anagourdia and Platanera (unidentified), without, however, attributing these conquests to ʿOthmān (Pachymeres, op. cit., 413). It would perhaps be reasonable to assume that it was ʿOthmān who captured all these places, at about the same time of his victory at Katoikia. Pachymeres reports that he also laid siege to Prousas/Bursa [q. v.] and to Pegai on the coast, where the besieged population suffered famine and plague (Pachymeres, op. cit., 414), and finally that he made a determined but unsuccessful assault on Nikia/Izink [q. v.] (Pachymeres, op. cit., 637). His final reference to ʿOthmān reads: “So in this way ʿOthmān was greatly inspired to ambitious plans. There was nothing in the regions around Nikia, Pythia and everywhere right down to the coast which he did not control” (Pachymeres, op. cit., 642). The disjointed sequence of events that Pachymeres describes must have occurred before 707/1308, the closing date of his chronicle. One can infer from this source that by this date the occupation of Belokome/Bileşik and other fortresses had given ʿOthmān a secure base in the Sakarya valley and that he controlled the countryside westwards as far as the Sea of Marmara.

The earliest Ottoman lists of ʿOthmān’s conquests also indicate that his secure base was the Sakarya valley. The Iskender-name of Ahmed (loc. cit.) credits him with the capture of Bileşik, İnegöl and Koruhışar, at least the first two of which correspond with Pachymeres’ narrative. A Chronological list of 804/1401 lists Bileşik, Yarhisar, İnegöl and Yenihisar (C. N. Ates, Osmanlı tarihine ait takvimler, Istanbul 1961, 25), and the subsequent chronicles by Şükürullah (ca. 1460) (ed. Th. Seif, Der Abschnitt über die Osmanen in Şükürullah’s persischer Universalgeschichte, in MOA, ii [1923-61], 81) and Enver (ed. M. H. Yılmaz, Diir-i-name-yi Enereti, Istanbul 1928, 82-3) offer permutations of these earlier lists. The Anonymous chronicles (ed. Giese, 6), Oruç (ed. Babinger, 12) and ʿAshik-pasha-zade (ed. Afr, 18), all deriving their information from a common source of ca. 825/1422, also refer to ʿOthmān’s conquest of a fortress called Karağüşhâş (“Black Fortress”).
true. R.P. Lindner (Nomads and Ottomans in mediaeval Anatolia, Bloomington 1983) also postulated a tribal origin for ‘Othman and his followers, but generally modified the traditional stories to account for modern anthropological theory. P. Wittek (The rise of the Ottomans Empire, London 1938) rejected the traditions of ‘Othman as leader of a tribe, in favour of the view that he was leader of a ghazi corporation and that these ghazi origins pre-determined the future trajectory of the Ottoman Empire. (On the intellectual roots of Wittek’s famous theory, see C.J. Heywood, Wittek and the Austrian tradition, in JRAS [1988], 7-23, idem, ‘Rountree’s dreams of the Levant’. Paul Wittek, the George Kreis, and the writing of Ottoman history, in ibid. [1989], 30-50. See also R.C. Jennings, Some thoughts on the ghazi -thesis, in WZKM, lxvi [1986], 151-61.) Another thesis harmonises the ‘nomad’ and “ghazi” theories (Halil Inalcik, The question of the emergence of the Ottoman state, in International Journal of Turkish Studies, iv [1981-2], 71-80. Another view is that the Ottoman traditions concerning ‘Othman’s origins and forbears are myths of a higher level of myth than the course of the 9th/10th century and had the function of legitimising Ottoman dynastic rule (C. Imber, The Ottoman dynastic myth, in Turcica, xix [1987], 7-27; on the legitimising functions of the Ottoman genealogy, see Wittek, op. cit., 1-15; Barbara Fleming, Political genealogies in medieval states, in Osmanli Arastirmaları, vii-viii [1988], 123-37).

Bibliography: Given in the article.

‘OTHMAN II, sixteenth sultan of the Ottoman empire (regn. 1027-31/1618-22), was born on 19 Dümamd II 1012/15 November 1603; cf. Sıdilli: ‘otthamı, i, 56), the son of Sultan Ahmed I. After the death of his father in November 1617, the brother of the latter had been proclaimed sultan as Mustafa I [q. v.] but ‘Othman, taking advantage of the weak character of his uncle and supported by the Muf- ti Es’ad Efendi and the Kızlar Ağası Mustafa, seized the throne on 26 February 1618 by a coup d’état.

The youth of the new sultan at first assured the promoters of the coup d’état of considerable influence. To them was due the replacement of Khalil Paşa [q. v.] as grand vizier by Özkız Mehmed Paşa [q. v.] in January 1619. Khalil had just concluded a treaty of peace with Şāh Abba’s I of Persia, after a campaign which had to some extent undermined the confidence of the other powers, Austria and Venice, with which the capitulations were renewed, were also peaceful. But in January 1620, after Mehmed Paşa had been replaced by the very influential favourite Güzeldel ‘Ali Paşa [q. v.], who removed from the court all possible rivals, the chances of war increased. This time it was a war with Poland, which broke out through the intrigues of the voivode of Moldavia. In the battle of Jassy on 20 September 1620, the Polish army was annihilated by the ser-i asker Iskender Paşa. The grand vizier, who held office mainly by satisfying the avarice of the young sultan, never lost an occasion to irritate and provoke the enmity of Austria and Venice. He died on 9 March 1621 and under the influence of the Kızlar Ağası Suleymân and his Khodja, Möllâ ‘Omer, had begun to act independently, he had not been able to gain the sympathy of the army on account of his brutal treatment of the Janissaries, nor of the people chiefly as a result of his aversion for the use of the ‘ulëmâ. ‘Othman was particularly horrified at the sultan’s wish to take four legitimate wives from the free classes of his entourage; he actually married the daughter of the Mufti Es’ad. His unpopularity increased still further when he wished to put himself at the head of an army to fight Fakhr al-Din Ma‘n [q. v.], the Druze Amir, and to go on and make the pârigrame to Mecca. Preparations had already been made for this expedition when on 18 May 1622, a mutiny broke out among the Janissaries and Sipahîs, who plundered the house of Möllâ ‘Omer. Next day, the rebels secured the cooperation of the chief ‘ulëmâ? and demanded the heads of the Kızlar Ağhasi, the Khodja, the grand vizier and three other high officials. ‘Othman at first refused, but after the rebels had forced the third wall of the palace he had to submit to the grand vizier and the Kızlar Ağhasi. But in the meantime, his uncle Mustafa had been brought out from his seclusion in the harem to be proclaimed sultan. ‘Othman tried during the night to secure his throne through the influence of the Ağa of the Janissaries, but the latter was killed on the following morning and he became the prisoner of the Janissaries, who took him to their barracks. The rebels had no intentions against his life, but meanwhile the direction of affairs had passed to Dâwûd Paşa, the favourite and son-in-law of Mâh Pêyker, the mother of Sultan Muștafâ. Dâwûd Paşa, being appointed grand vizier, had ‘Othman taken to the castle of Yedi Kule, where he was put to death in the evening of 20 May 1622. He was buried in the turbe of his father Ahmed I. ‘Othman is praised for his skill as a horseman and for his intelligence. He was also a poet with the makâ麻烦 of Fârisî. He was the third of three sultans to lose his life in a rising, the others being İbrahim and Selim III.

Bibliography: The Turkish sources are the works of Na‘mâ, Peçevi, Hasan Bey-zade, the Rawdat al-abrâr of Kara Celebi-zade, and the Fedhleke of Hadjdji Khalifa. The Wâq‘-yi Sultan ‘Othman Khan of Tügli is specially devoted to the deposition of ‘Othman (tr. by A. Galland; cf. GOW, 157), while his whole reign is described in ‘Othman as leader of a tribe, in favour of the view of Sir Thomas Roe. See also the general contemporary western accounts, see the Relazione quoted by von Hammer, in the note on p. 806 of GÖR, ii, and that of Sir Thomas Roe. See also the general histories by von Hammer, Zinkeisen and Jorga, i.H. Uzuncaşılı, Osmanî tarihi, iv/1, 337-41, iv/2, 370 ff.; A.D. Alderson, The structure of the Ottoman dynasty, Oxford 1956, index; S.J. Shaw, History of the Ottoman empire and modern Turkey, i, Cambridge 1976, 246; R. Mantran (ed.), Histoire de l’empire ot- toman, Paris 1989; index; iA, art. Osman II (İnşâni Altundag).

‘OTHMAN III, twenty-fifth sultan of the Ottoman empire (regn. 1168-71/1754-7) and son of Muştafâ II, succeeded his brother Mahmûd I on 14 December 1734. He was born on 2 January 1699 (Sıdilli: ‘otthamı, i, 56) and had therefore reached his advanced age when he was called to the throne. No events of political importance took place in his reign. The period of peace which had begun with the peace of Belgrade in 1739 continued; at home only a series of seditious outbreaks in the frontier provinces indicated the weakness of the empire. In the absence of any outstanding personality, the sultan was able to
rule as he pleased, but his activities were practically confined to changing his grand vizier frequently (six times). His favourite, Şihhiyar ʿAli Pasha, grand vizier from 24 August to 22 October 1755, had his career terminated by execution. The appointment on 13 December 1756 of Râşîb Pasha [q.v.] was an important one, as for five years this great statesman showed himself an excellent administrator of the empire under the following sultan Mustâfa III. ʿOthmân III’s other activities were the suppression of cafés, of the liberty of women to show themselves in public and the regulation of the dress of women. His name is associated with the great mosque of Nûr-i ʿOthmânî (Nuruosmaniye), which had been begun by Mâmmûd I and was solemnly opened in December 1755. The reign of this sultan is remembered for the great fires in the capital in 1755 and 1756. He died on 30 October 1757 and was buried, like Mâmmûd I, in the tomb of the Yeni Dâniš.  

J. H. KRAMERS

ʿOTHMÂN HAMDÎ (b. İstanbul, 1842; d. Kuruçeşme, 1910; buried in Eskıhisar), Ottoman painter and archaeologist. He was the eldest son of İbrahim Edhem Paşa [q.v.], grand vizier under ʿAbd al-Hamîd II, and brother of İsmâ’il Qâhib [q.v.] and Kâhil Edhem (Edem [q.v.]). Sent to Paris ca. 1857 in order to study law, ʿOthmân Hamdî gravitated toward the École des Beaux-Arts, where he studied painting under the leading proponents of Academic painting, in particular G. Boulanger and J.-L. Gérôme. He also attended courses in archaeology. From his teachers he absorbed a knowledge of classical antiquity, a precise descriptive technique and a taste for “Oriental” themes. In 1867 he functioned as representative for the Ottoman section of the Exposition Universelle in Paris visited by Sultan ʿAbd al-ʿAzîz. On his return to the Ottoman Empire in 1869, ʿOthmân Hamdî spent two years in Bağdad in the service of Mîhad Paşa, then governor of ʿIrâk. For the 1873 International Exhibition in Vienna he served as Head of the Turkish section and compiled a book, Les costumes populaires de la Turquie. During the 1870s he served in various administrative posts, pursued his artistic interests and became associated with the newly established Müze-yi Hümayûn (Imperial Museum; continues as Arkeoloji Müzesi). In 1881 he was appointed director of this museum and shortly thereafter participated in founding the Şanâisi Altındağ. From 1881 to 1891 he served as museum director (1881-1910). ʿOthmân Hamdî was also responsible for overseeing archaeological activities in Ottoman territory and was instrumental in drafting the 1884 ʿAtâr-ı ʿAtika Nizâm-nâmesi, a law which declared all antiquities to be the property of the State, forbidding to archaeologists a share of their finds and making clandestine excavation and antiquities smuggling criminal offences; the basic provisions of this law remain in force today. His father’s position as Minister of the Interior (1883-5) facilitated the speedy enforcement of this law, which was soon to give the Müze-yi Hümayûn an outstanding collection of antiquities as well as an archive of tablets excavated in ʿIrâk and Anatolia. ʿOthmân Hamdî’s zeal for preserving the relics of the past led him to undertake excavations where finds of antiquities were reported. Most notable was his 1887 excavation of a necropolis in Sidôn which yielded a sarcophagus portraying battles of Greeks and Persians initially thought to have been made for Alexander of Macedon. The finds from Sidôn were published by ʿOthmân Hamdî in collaboration with Théodore Reinhart (Une nécropole royale à Sidon. Fouilles de Hamdî Bey, Paris 1892). Antiquities from Sidôn and other sites soon made it necessary to build a proper museum near the Çiniî Köşk of Topkapı Palace which had been used since 1876 to house objects collected from pre-Islamic and Islamic sites in the Ottoman Empire. ʿOthmân Hamdî gained international recognition as archaeologist and museum director; among other awards for him were the title of Grand Officier de la Légion d’Honneur (1906) and the degree of Doctor Honoris Causa from Oxford University (1909).

Throughout his career as administrator and archaeologist ʿOthmân Hamdî continued to paint, and his works were exhibited in both Turkey and Europe. Most of his compositions were close variants of types used by his teacher, J.-L. Gérôme, and are characterised by a painstaking attention to detail in the rendering of setting, figures and ancillary objects. Because of this, it is possible to discern that many paintings are self-portraits or contain likenesses of his immediate family. Most of the settings are also recognisable, and include buildings in Bursa, Karaman and İstanbul. Several have as a background the Çiniî Köşk and some of the objects he portrayed are known to have been part of the museum’s collection.

As a painter, administrator and scholar, ʿOthmân Hamdî devoted his life to the study and preservation of the artistic and cultural heritage of the Ottoman Empire, laying the foundations for institutions which continue to function in the Turkish Republic.  

P. and S. SOUCEK

ʿOTHMÂN PASHA, ÖZDEMİR-OGHLI, Ottoman grand vizier and celebrated commander in the Ottoman-Safavid war of 1578-90.

Born in Egypt in 933/1526-7, his father was Özdemir Pasha [q.v.], a mamlûk who became Ottoman governor (beyleybe) of Yemen and conqueror of Abyssinia (Habesh [q.v.]). The earliest documentary evidence of ʿOthmân’s holding office in Egypt dates from Dhu ’l-Hidjâd 957/December 1550; yet it is generally claimed that he had been a sangâbekî, the rank he held in Rabî 1 1668/December 1660 when appointed Egyptian amir al-Bâdî.

ʿOthmân followed his deceased father as beyleybe of Habesh, probably in late 968/mid-1561. It has been suggested (Orhonlu, Habês rayeti, 49), though without supporting evidence, that he was chosen because he had earlier served there under his father and was familiar with the province’s lands and peoples.
During his six years in this office, 'Othman Pasha apparently operated mainly in the coastal region south from Maṣawwālī [q.v.], seeking to forestall Abyssinian contacts with the Portuguese. He may also have taken measures aimed at linking Habès with Upper Egypt to counter the Fundjī [q.v.] tribes, who in 971-2/1564 besieged Sāwākīn, the province’s administrative centre.

Released from Habès in Safar 975/August 1567, 'Othman returned to his native Cairo. There he shortly learned that, from 14 Djamād II 975/16 December 1567, he had been appointed governor of Sanā’, the first of two, the other in Yemen (Maḥmūd Pasha) where a Zayādī rebellion was out of control. Although ordered to depart for Yemen immediately with a modest force in advance of a larger one under the sardār (commander-in-chief) Muṣtafa Paša Lala [q.v.], 'Othman lingered in Cairo and became drawn to Muṣtafa Paša in his bitter rivalry with Kōdja Sinān Paša [q.v.], the governor of Egypt. When finally he left Suez early in 976/mid-1568 with 3,000 troops, 'Othman found the beylerbeyi and sardār of the reunited single province of Yemen. His troops rescued the beleaguered Ottoman garrison at Zābid in Djamād II 976/November-December 1568 and quickly recovered Tā’izz in the interior. But 'Othman shortly came under close Zaydl siege until relieved in Dhu ’l-Ka‘da 976/ April 1569 by Kōdja Sinān Paša, then sardār in place of Muṣtafa Paša. Subsequent cooperation between the beylerbeyi and sardār proved elusive, owing to their dislike of each other. Thus the sardār exercised his discretionary authority to dismiss and expel 'Othman from Yemen.

The next several years of 'Othman Pasha’s career remain somewhat obscure. Proceeding to Istanbul during 977-8/1570, he was initially refused domicile in the city by the grand vizier Şokollū Mehmed Paša [q.v.], to whom Kōdja Sinān Paša had reported on him adversely. Nevertheless, his friend Muṣtafa Paša Lala [q.v.], now the popular conqueror of Cyprus, commended him to Sultan Selīm II and secured for him the governorship of al-Ḥasā’ in eastern Arabia. After a year there, he was transferred to al-Baṣra, where, as instructed, he organised for an assault on Hurmūz, before being named beylerbeyi of Dīyār Bākhr (980/1572-3). 'Othman held this office for four years, and, when replaced by a relative of Şokollū Mehmed, then one of two beylerbeyliks in the Ottoman system of awarding military fiefs and to admit non-kulls (kapukulu) into the system of the grand vizier himself volunteered to resolve it. But 'Othman was appointed grand vizier (sadr-i a’zam) on 20 Ṭa’īdib 980/24 July 1584.

When in Ramādān 992/September 1584 it was learned that there was renewed conflict in the Crimea, the grand vizier himself volunteered to resolve it. But while in winter quarters in Anatolia, the ailing 'Othman learned that matters in Bāgbī’ī Sarāy had been settled satisfactorily. He shortly also learned that he was to succeed Ferhād Paša [q.v.] as sardār of the eastern front and to exercise the vast armaments minister’s machinations by remaining in Dīyār Bākhr.

When it was decided in 985/1578 to make war on Saḥāwīd Persia, Muṣtafa Paša Lala, who was chosen sardār, invited 'Othman Pasha to participate. 'Othman accepted and was commissioned for the campaign on 20 Muharram 986/29 March 1578. Advancing with the main army east from Erzurum in the summer of 1578, 'Othman commanded forces which scored two decisive victories over the Saḥāwīds, the first on 5 Djamād II 986/9 August 1578 at Çıldır, and the second a month later near the Alazān River. These successes both gained 'Othman renown and made possible the Ottoman occupation of, respectively, Georgia and Shīrāwīn, including the key centres of Ṣamākhī and Derbend. Muṣtafa Paša subsequently withdrew the army to winter near Erzurum, having persuaded 'Othman to stay and defend the conquests with a modest army, the rank of vizier, and the status of governor-general of Shīrāwīn and Dāḡištān.

Predictably, the Saḥāwīds reappeared once the main Ottoman army had departed. Despite the arrival of a support contingent of Crimean Tatars, 'Othman was compelled, after two sieges during Ramādān 986/November 1578, to abandon Ṣamāmah and retreat to Derbend on the Caspian. He maintained this Ottoman foothold in the Caucasus until Şahbān 987/October 1579, when, at Sultan Murād III’s bidding, Mехmed Gīrāy, the Crimean gān, arrived with a substantial force. Although shortly afterwards 'Othman Pasha and the Tatars recovered Şamāmah and swept the Saḥāwīds from Shīrāwīn, Mехmed Gīrāy returned home, leaving only a token Tatar contingent under his brother, Gḥāzī Gīrāy (II [q.v.]).

Thereafter, 'Othman withdrew to Derbend, his base until 991/1583. His communicating with the sultan directly to report his desperate circumstances resulted in the Ottoman army of the Crimea, the Tatar contingent under his brother, Gḥāzī Gīrāy (II [q.v.]).

'Othman Pasha the following spring won his greatest victory when he defeated a formidable Saḥāwīd army between the Samur River and Shābīrān. This engagement, known as the “Battle of the Torches (Mesjest Sawashi)” because of the use of torches to fight by night, raged during 14-18 Rabī‘ II 991/11-15 May 1583 and resulted in a Saḥāwīd withdrawal to Shirwān and Dāḡištān for some time hence.

'Othman Pasha left the Caucasus in Shawaqwāl 991/October 1583, with more than five years’ continuous service there and a reputation as a brilliant commander. He returned through the Crimea, under orders to execute Mехmed Gīrāy Khān for not supporting the war in the Caucasus after 987/1579, and to instal as gān a brother being sent from Istanbul. Mехmed Gīrāy was eventually assassinated, but only after the arrival of the Ottoman fleet in the spring of 1584 forced him to lift his 37-day siege of 'Othman in Kafīfa and flee. The celebrated warrior reached Ṭanbul in early summer and received a hero’s welcome by all but the envious viziers of the dome [see Ṣabībe wazzik] and suspicious palace factions. Following an audience with Murād III, to whom he related his experiences, 'Othman was appointed grand vizier (sadr-i a’zam) on 20 Ṭa’īdib 992/24 July 1584.

When in Ramādān 992/September 1584 it was learned that there was renewed conflict in the Crimea, the grand vizier himself volunteered to resolve it. But while in winter quarters in Anatolia, the ailing 'Othman learned that matters in Bāgbī’ī Sarāy had been settled satisfactorily. He shortly also learned that he was to succeed Ferhād Paša [q.v.] as sardār of the eastern front and to exercise the vast armaments minister’s machinations by remaining in Dīyār Bākhr.

When it was decided in 985/1578 to make war on Saḥāwīd Persia, Muṣtafa Paša Lala, who was chosen sardār, invited 'Othman Pasha to participate. 'Othman accepted and was commissioned for the campaign on 20 Muharram 986/29 March 1578. Advancing with the main army east from Erzurum in the summer of 1578, 'Othman commanded forces which scored two decisive victories over the Saḥāwīds, the first on 5 Djamād II 986/9 August 1578 at Çıldır, and the second a month later near the Alazān River. These successes both gained 'Othman renown and made possible the Ottoman occupation of, respectively, Georgia and Shīrāwīn, including the key centres of Ṣamāmah and Derbend. Muṣtafa Paša subsequently withdrew the army to winter near Erzurum, having persuaded 'Othman to stay and defend the conquests with a modest army, the rank of vizier, and the status of governor-general of Shīrāwīn and Dāḡištān.

Precisely, the Saḥāwīds reappeared once the main Ottoman army had departed. Despite the arrival of a support contingent of Crimean Tatars, 'Othman was compelled, after two sieges during Ramādān 986/November 1578, to abandon Ṣamāmah and retreat to Derbend on the Caspian. He maintained this Ottoman foothold in the Caucasus until Şahbān 987/October 1579, when, at Sultan Murād III’s bidding, Mехmed Gīrāy, the Crimean gān, arrived with a substantial force. Although shortly afterwards 'Othman Pasha and the Tatars recovered Şamāmah and swept the Saḥāwīds from Shīrāwīn, Mехmed Gīrāy returned home, leaving only a token Tatar contingent under his brother, Gḥāzī Gīrāy (II [q.v.]).

Thereafter, 'Othman withdrew to Derbend, his base until 991/1583. His communicating with the sultan directly to report his desperate circumstances resulted in the Ottoman army of the Crimea, the Tatar contingent under his brother, Gḥāzī Gīrāy (II [q.v.]).
COTHMAN PASHA — COTHMAN PAZAR 185

44,220 Muslims and 9,660 Christians, the latter concentrated in the above four townlets and in two mixed villages (Konak and Kabdağı-i Zir' Dolnja Kabda). The 19th century kada? of Othman Pazar, an area of some 50 km in length and 25 km wide, was composed of two historical landscapes with different geographic features, a different settlement history and a different administrative history. The south-eastern half of the kada? is a hilly basin 300 m above sea level, which is surrounded on all sides by mountains. At least since the early 14th century, it was known by the Old Bulgarian name of Gerlovo, which became the Ottoman “Gerilova” or “Gerilâbâd” (first mentioned so in the Tahtâ fragment OAK 45/29 (Sofia), from 1479). The north-western half of the kada?, in popular parlance known as Tozluk/Tuzluk (officially, Slannik), constituted since at least the late 15th century the nahije of Ala Kilise/Kenisa. This name is apparently first mentioned in the Tahtâ no. 77 of 925, 1519 (BBA), which notes that a group of Yurük of the Rhodopes (Tanrı Dağı) in southern Bulgaria had “forty years ago migrated to a place called Aladja near Gerlovo, its new name was Gerilova.” Aladja or Aladja, Kilise refers to the ruins of a conspicuous church, built of alternating courses of white stone (from the nearby Preslav Balkan) and red bricks in the style of the Bulgaro-Byzantine Middle Ages. Tuzluk, or the district of Ala Kilise is an infertile plateau of about 600 m above sea level, largely covered with woods or shrubs. The population of this district, living in more than 50 small villages and hamlets (mehalit), was in the past exclusively Turkish-speaking Muslim, disregarding the two mixed villages of Konak and Kabdağı on the northern edge of the area.

Very little is known about the pre-Ottoman Gerlovo. Its centre appears to have been Gerilgrad, the forerunner of Vâbita, which is situated on the banks of the Gerila brook, a tributary of the Golyama Kamčija. The ruins of a Byzantine castle are still to be seen on the hill of Gradiste, where hundreds of Byzantine coins from the 12th century have been found. In the 15th and 16th centuries, Vâbita was by far the largest settlement of Gerlovo and almost wholly Christian. In Gerlovo are at least twenty deserted sites, called Kiliselik, pointing to disappeared pre-Ottoman settlements. Bulgarian historiography has suggested that many of these sites were destroyed during the Ottoman conquest. Yet in the 1530s by the Kosovo rebellion, in a proper manner, that near the village of Kara Demir (after 1934, Vinica), showed that this settlement, around a church, existed from the 9th till the 12th centuries. It seems that the great European economic and demographic crisis of the 14th century caused Gerlovo to become deserted, the inhabitants moving to the much more fertile lowlands, where after the depopulations there was enough room to settle. Vâbita, Çitak (pointing to a pre-Ottoman Christian Turkic population) and Kotel remaining the corner stones of the Christian settlements in the area. Yurük settlers from Asia Minor arrived in Gerlovo as early as the second half of the 15th century. The oldest preserved Tahtr of the area, the incompletely preserved Icmal of 1479 (Turks Izmor, ii, 1966) mentions six meza’s in “Gerilova” which were worked by Yürük (Yürükler ekerler): Ak Dere Yakası, Bolu’lu Süleyman, Dobroka (later known as Sağırtepe), Gagraleten, Hısaıa Sendai and Veyşel. Together they paid 2900 akçel, which might indicate a population of 40-50 Yürük families. Ak Dere, Dobroka/Şağırtepe and Veyîsel later developed into villages which still exist today (as Bja Reka, Râltina and Orlovo). According to the Tahtr of 1516, contained in the Tapu Defter 370 (BBA), pp. 549-55, which was compiled around 1530, the Christian population of Gerlovo still dominated. The Muslims lived in more than 20 very small villages, mostly bearing the name of their founders or the occupations of the first settlers. In the 16th century they witnessed a rapid expansion, partly through high birthrates but largely through the arrival of new settlers. The place names suggest a largely heterodox adherence (Aşklar, Abdalâlar, Şahl Veli, etc.). In 1936 Vasil Marinov found that the villages of Alvanlar, Kûcûkler, Topuzlar and Velredler were almost exclusively inhabited by Kizilbâbâ. Most likely the bulk of the Gerlovo Turks arrived after the suppression of the Kizilbâbâ in the reign of Selim I and after the Kalenderoghlu rebellion, causing great unrest in Anatolia. The settlement of these Turkish nomads must have caused unrest in the area. To keep the Christian population in its place, the Ottoman government gave the three above-mentioned Christian settlements derben status, so that they could defend themselves, and in the course of the 16th century formed Kabdağı and Konak as other gathering points for Christians of Dobrudja. A 1516 land census showed 736 houses, whereas “Dobrosta” became “Dobrudja” and Islamised completely after the end of the 16th century. So the ethno-religious composition remained thus till the 19th century, the only fluctuation being the number of households, which for both groups went up in the 16th century, down in the 17th and early 18th and steeply up again since the second half of the 18th century. Throughout that time, Kazahan/Kotel was the largest settlement of the area, with an almost entirely Christian Bulgarian population. Çitak was partly Islamised; Vârbitsa came to house an important group of Crimean Tatars, who around 1780 followed the deposed Kalâhat Mes’ûd Giray. Their descendants still live in Vârbitsa, Meedali Giray serving a number of decades as deputy in the Bulgarian Parliament (beginning of the 20th century). Their monumental late 18th century saray was destroyed by Bulgarian nationalists during the aftermath of the assimilation campaign of 1985. Vârbitsa is apparently the only place of the kada? 2 of Othman Pazar which is mentioned in the early Ottoman chroniclers, where Nezârî in the Codex Manisa has already described the area. A later description (in the printed edition, very much mutilated and misidentifed).

Of the district of Ala Kilise in pre-Ottoman times even less is known. It is much more fertile than Gerlovo and considerably cooler, little suited to agriculture. Disregarding the later Turkified village of Dobrosta/Dobrudja (1516, 25 Christian households; 1580, 45 of them), it must have been almost uninhabited when the first Turkish settlers arrived. Only extensive archaeological research might modify this picture. The village of Ala Kilise, 10 km to the west of Othman Pazar, was also known as Hasan Fakih. It is first mentioned in the 1752 Myusalı Avârin Tahtr, but might have existed before. The Ottoman registers (1516, 1525, 1550, 1580, 1642 and 1752) give a picture of an unstable settlement pattern, with many very small tribal villages, continuously splitting into new mahalas, often changing names and with many settlements being given up after a certain time. According to the ethnographic and linguistic research of Gadiyanov at the beginning of the 20th century, the original settlers must have come from the region of Kastamonu in northern Anatolia. The Anatolian origin of the Muslim population of the district of
Othman Pazar is also not denied by modern Bulgarian historiography (cf. art. "Omurtag", in Enüez, na Bâlg., 1984), but usually the colonisation is thought to have taken place in the 17th and 18th centuries, whereas in reality the bulk of the settlers arrived shortly after 1500. Especially for the case of Gerlovo, the majority of the Muslims are held to be Turkified. Some of the earlier settlers are thought to have been descendants of Turks who lived in Gerlovo in the 16th and 17th centuries. The exact number of Turks living in Gerlovo at this time is not known, but it is estimated that there were between 2,000 and 3,000.

In the 15th and 16th centuries, both the districts of Gerlovo and Ala Kilise were dubbed "kada" of Shumnu/Sumen. In the 1530s the northern part of this large "kada" was cut off and added to the newly-formed "kada" of Djum/yi Atik/Eski Djum/a (now Târgoviste) and Hezârgrad/Razgrad. In the 1630s the nahiye of Ala Kilise was upgraded to the status of "kada", and Othman Pazar, then just founded, was made its seat.

The town of Othman Pazar itself came into being in the first half of the 17th century as a centrally-located market place for the entire village network. At the locality of Irincik near the town are the ruins of a Late Antique castle, which in the early 9th century was restored by the Turco-Bulgarian Khan Omurtag; the modern name of the town refers to this fact. According to local legends, written down by Felix Kanitz ca. 1870, the town was founded by the Turkish cartwright Othman, who "about 300 years ago" built an inn on the lonely plateau, which became the nucleus of the new settlement. The Avariz Defter MM 7086 from 1052/1642 (BBA) is apparently the first source mentioning Othman Pazar as a district, and from 1102/1690-1 (MM 3801, BBA) mentions that no less than seventy adult male Christians were found in the kasaba of Othman Pazar doing their jobs but were not permanent residents from there. The Mufassal Avariz Defter of 1165/1752 (BBA) calls the district: "Kada" of Ala Kilise, also known as Alah Fakhi", than contained 25 Muslim households, all mentioned person by person. According to the same source, a complete new TahIR of a number of kada's in north-eastern Bulgaria, the town had 103 households, of which two were of convert Christian households. It is remarked that, "according to the old register", the town had but one mahalle. Now there were two, the Mahalle of the Mosque of Mehmeh Pasha and Orta Mahalle. After this date, the town saw a rapid development into the leading centre of crafts, especially textiles (abas, goat-hair blankets) and metalwork.

In the mid-19th century, the old "kada" of Othman Pazar was considerably enlarged. It came to include the entire basin of Gerlovo (formerly only the western parts), which until that time had been a part of the "kada" of Shumnu/Sumen, and the important Christian villages of Konak and Kapdaju/Zhir, which were detached from Hezârgrad. On the other hand, the whole chain of old Bulgarian villages to the south of the Pre-Slav Balkan, which for long had belonged to Gerlovo (Smolvce/Ca°ushk6y, Jamla, Tîrnovitsa, Cerkovna and Vardun) were now attached to the "kada" of Eski Djum/a. According to the Sülannâ of the Tuna vilayet of 1290/1873-4, which contains the results of a census of six years earlier, the district had 86 settlements, of which only two had non-Turkish place names. The town of Othman Pazar then contained ca. 5,000 inhabitants, of which one-fifth was Christian (Aubaret, Kanitz). According to the Sülannâ of 1291/1874-5, the town had 958 houses, eight mosques, 310 shops, one hammâm and one church.

During the Russo-Turkish War of 1877-8, which led to the independence of Bulgaria, the town was burned down and suffered an eclipse because of the flight of a large number of settled Turks. The religious-ethnic composition also remaining as it was. The same can be said for the villages of the former "kada" of Othman Pazar. In Gerlovo, groups of old Turkish inhabitants emigrated to Turkey, and their place was taken by Bulgarians from elsewhere (details by V. Marinov). The north-western part of the old "kada" of Othman Pazar. In Gerlovo, groups of old Turk

Bibliography: G. Aubaret, Province du Danube, in
Othman-zade was regarded by his contemporaries as the most important poet of his period. He was particularly celebrated for his chronograms (a‘râd) and kâ’âf. A chronogram on the birth of prince Ibrahim (1133/1720-1) made such an impression on Sultan Ahmed III (1115-43/1703-30) that he gave Othman-zade first, the title “chief poet” (râ‘î-i şair-ı mâna), and then that of “king of poets” (mulk [sultan] al-qawam), and granted him a special hâkimûn. Othman-zade left behind him a dîtawin of the usual type (mürettet dîtawin) which consists of 12 kâfiefs, 32 chronograms and 77 ghazels. Along with these are isolated poems, e.g. a satire (hadjîye) on Thâkib Efendi composed in 1124/1712. He also wrote in verse a commentary on the 40 hadjîye entitled Şah-i Hadîq-i arba’in, which is also known as Sihhat-i al-badâ’d; it was written in 1128/1715.

It is, however, to his prose works that he owes his fame with posterity, especially his historical works, some of which are still popular and valuable at the present day. The most important is his biographical collection Hadîkat al-wuzerîn, a most estimable and still important collection of lives of the first 92 grand viziers of the Ottoman empire, from ‘Alâ al-Dîn ‘Ali Paşa to Kâmil Mehmed Paşa, which was dismissed in 1115/1703. The 93rd vizier’s work was composed six years before his death. It was printed at Istanbul in 1217/1854.

Othman-zade’s idea was later taken up by others. His biographical collection was continued by: Dilâwer Agha-zade ‘Omer Efendi (‘Omer Wahib), a friend of Râghîb Paşa’s who wrote a Deyâ’i-i Hadîkat al-wuzerîn, also called İljâmî-i menâkib-i wuzerîn-i 4’îzâm or Gül-i zîbâ, which covers the period from the grand vizier Kowans Ahmed Paşa to Sa’dî Mehmed Paşa; also by Ahmed Dâvid Bey, who compiled a continuation entitled Wird al-muratâr which covers the period 1172-1217/1758-1802, from Râghîb Paşa to Yusuf Dîya Paşa, the conqueror of Egypt; finally, by ‘Abd al-Fettâh Shékat-i Bagdâdî, entitled Berk-i sebz, covering the period 1217-71/1802-54 from Dîya al-Dîn Yusuf Paşa to Alemdâr Muştafa Paşa.

The two sketches of Turkish history by Othman-zade also attained great popularity. The longer one, İljâmî-i menâkib (or tevâruhî-s) Selâînî-i Âl-i Othman, deals with the first 24 Ottoman sultans, from the founder of the dynasty to Ahmed III. The shorter version, Fihrist-i Şâhân or Fihrist-i Şâhân-i Âl-i Othman or Muhdân-i Ta’rîh-i Selâînî or Tuhfet al-muluk or Hadîkat al-muluk covers the period from Othman to Muştafa II. The number of varying titles shows the popularity of the work. The book, sometimes quoted as Fâdî-i Âl-i Othman, dedicated to Dâmid Ibrahim Paşa [see AL-DAMAD], seems to be only a variant title of one of these books.

In the year of his death (1136/1724), Othman-zade wrote a history of Fâdî Ahmed Paşa entitled Ta’rîh-i Fâdî Ahmed Paşa, which like most of his works is only accessible in ms. The Mundâsr-yi dextelâm ("struggle between the two kingdoms") in the form of questions and answers is also dedicated to Ibrahim Paşa (ms. in Vienna) and is an interesting contribu-
tion to the very highly developed munazara literature.

As further independent works may be mentioned 'Eizas nas'h al-hukmadi and Tuhfit al-nu'man. Here we may mention his anthology 'Dinmi al-le'tif (a collection of anecdotes, jests etc.). His stylistic collection 'Mudhaki al-ta'h.r Efendi was intended for practical purposes; it is a collection of letters in three fa'thi and a concluding chapter.

His extracts from and editions and translations of other works are very numerous. The greater part of his work is collected in his Kulliyat with an introduction by Ahmed Hanif-zade. Some titles, cited by von Hammer and Bursali Mehmed Tahir, which apparently go back to Hanif-zade, the compiler of the Kashif al-zunun of Hadjdji Khalifa, are probably not correct and refer to double or subsidiary titles.—Translations by him are: Mehariik al-anwar and Mehariik shrif, the latter entitled 'Tawsil al-matna'il on hadith.—Extracts from or versions of other works are: Akhlik-i Muhsini (or Mudhaki-i Akhlik-i Muhsini or Khosrav al-Akhlik) from the Ehihs of Husyan b. 'Ali Khashayar (or Abu 'Ali Khashayar or Khashayar), Iznik 1212, 54 ff. (ed. Fliigel, esp.). The original work, which was written in Persian for Mirzâ Muhsin b. Husayn Baykara, was translated by Pir Mehmed known as Gharami, with the title 'Ani al-sarifin in 974/1566; Akhlik-i 'Ali's, an extract of the work of 'Ali b. Amr Allah, known as Ibn Hinnân (Khalfâne ver. [q. v.]) which was written for the Amir al-Umara of Syria, 'Ali Pasha, and therefore called after him, the Menâbik: 'Inâm-i a'zam, i.e. of Abu Hanifa. We also have from his pen a synopsis of the Humayun-nâme. The Amsed-i Suhayli, the Persian version of Ibn al-Mukaffa's Arabic version from the original Indian (Pahlawi) of Bidpai, was the work of Husayn Wâzîr Kashîf, court-preacher to Husayn Baykara of Harât. This Amsed-i Suhayli was translated into Ottoman Turkish by 'Abd al-Wasi'î. Alî Molla 'Ali Celebi b. Sâlih, known as 'Ali Wâsi'î or Sâlih-zade al-İmran, with the title Humayun-nâme and dedicated to Sultan Süleyman. Othman-zade abbreved the Humayun-nâme to about a third of its length. This version was printed in Istanbul in 1256/1840 under the title Thimdr al-asmdr. In the Kulliyat this extract is entitled 'Zuddet al-nas'h al-ta'kh.r.

The version of the Nas'h (Nas'at) al-malik of Re'is Efendi Sarî 'Abd Allah entitled Talâq al-hikam is also described as a synopsis of the Humayun-nâme. A synopsis of the Naskat of al-akhar of 'Ali is also attributed to Othman-zade.

(Th. Menzel)

OTHMÂNÎDÎJK, modern Turkish Osmanî Defter, the administrative centre of an il-i or district of the same name in the il-i province of Corum [see Corum] in northern Anatolia, in the southern part of classical Paphlagonia. It lies on the Haly or Kizil Irnak [q. v.] at an important crossing-point of that river by the Tosya-Merzifun road (lat. 40°58' N., long. 34°50' E., altitude 430 m/1,310 ft.).

The town is situated in a picturesque position at the foot of a volcanic hill which rises straight out of the plain and is crowned by a castle which formerly commanded the celebrated bridge said to have been built by Bayezid I. The settlement is probably very old, as is evident from the numerous rock chambers cut out of the cliffs; it is probably on the site of classical Pimolisa (see PW, xx/2, cols. 1386-7 [W. Ruge]). The importance for us of the place, however, lies entirely in the part it has played in Islamic history. The name "Othmanîdîjk is connected with that of "Othmanî [q.v.], the founder of the Ottoman dynasty, and it is said that "Othmanî took his name from this place which had been granted him as a fief. This suggestion, which is found as early as the 15th century (probably for the first time in the Geschichte von der Turcley of Meister Jörg v. Nürnberg, Memmingen n.d. but about 1496, and again in Spandugino, van Busbeek, etc.), has little claim to credibility although it has been revived in modern times, e.g. by Cl. Huart, in JA, ser. 11, vol. ix (1917), 345 ff., and by J.H. Kramers, in GN, xiv, 403 ff., and by H. J. and R.P. Blake, in American Historical Review, xxxvii (1932), 496, note with other references. It is probable that "Othman is the arabicised form of a Turkish name which may have sounded something like Atman, Azman, and we must not forget Ibn Ba'tûta's assertion that the founder of the dynasty called himself "Othmanîdîjk, i.e. "Little "Othmanî" to distinguish himself from the third caliph. The Turkish sources are contradictory: Hadjdji Khalîfah says that the town of "Othmanîdîjk took its name from the fact that in the 10th century a leader named "Othman conquered it. Ewliya Celebi (1647-8) says (ii, 180 ff.) that many see in "Othmanîdîjk the birth-place of the amir "Othman. This opinion had become the current one about the middle of the 17th century, as may be seen from a passage in Les voyages et observations of François le Gouz (Paris 1653, 65). Ewliya does not appear in the clearer light of history till 1794/1392 when it was taken by Bayezid I from the lord of Kastamuni, Bayezid Kûrûmî, and definitely incorporated in the Ottoman empire. The fact is worth mentioning that there was evidently a considerable Bektashi settlement here at an early date, and the tomb of the famous Bektashi saint Koyun Baba [q. v.] in "Othmanîdîjk has always been much visited. The inhabitants, according to Hadjdji Khalîfah, belonged to the same order as the Bektashîs. See on this point, in reference to events in 1546, Le voyage de Moniteur d'Aramon, ed. Ch. Scherfer, Paris 1887, 66 (where Cochini-Baba should be read Koyun Baba). Makarius of Antioch mentions a place called "Othmanîdîjk near Marâsh. He visited the site there where said to have been formerly a large town of this name also called Osman Deda (= "Othmanî Deda?) (Travels, ii, 453 ff.).

The plain around modern Osmancik is a fertile agricultural region for cereals, fruit and vegetables. In 1953 the town had a population of 5,559.

I. POLITICAL AND DYNASTIC HISTORY

I. General survey and chronology of the dynasty

The Ottoman empire was the territorially most extensive and most enduring Islamic state since the break-up of the Abbasid caliphate and the greatest one to be founded by Turkish-speaking peoples. It arose in the Islamic world after the devastations over much of the eastern and central lands of the Dar al-Islam by the Mongols and survived the further onslaught at the opening of the 15th century of Timur. Also, it originated on the periphery of the Islamic world, in Anatolia, into which Muslim Turks had been infiltrating by the time of the establishment of the Saljuq sultanate of Rûm [see SALJUKS] and was to play a dominant role in the processes of Turkicisation and Islamisation—even though this was not to be completed till the very end of the Ottoman dynasty, in 1922—of the formerly Greek and Armenian land of Anatolia [see ANATOLIA], A further consequence of the rise of the Ottomans was the overrunning of most of mainland Greece and many of the Aegean islands, Albania, the Slav lands of the Balkans and much of Hungary, by the 10th/11th century, and although this tide of conquest subsequently receded, Turkish occupation has left permanent traces in the Balkans in the forms of pockets of Turkish-speaking peoples and of the indigenous peoples who adopted Islam [see MUSLIM].

The achievements of Ottoman culture, an amalgam of native Turkish traditions with Persian and Arabic literary and artistic currents, were quantitatively great and often of the highest aesthetic standard (see sections V-VIII below). The alliance of the sultans with the Sunni 'ulama' and with such Şüfi orders as the Mewlewis [see MAWLAWIYYA], later strengthened by the fact that they tacitly assumed for themselves the caliphate after the demise of the 'Abbasid puppet caliphs of Cairo in 1517 [see KHALIFA (i)], led to the dominance of the Hanafi madhab of Islamic law over the central Turkish lands and over much of the Arab lands also, an influence not quite extinguished today [see MAHKAMA, 1, 2, 4, and MEDELE].

But after the high point in the 17th century of the occupation of Crete (1645-69) and the siege of Vienna (1685), a period of slow decline set in for the empire. In the early centuries, the Ottomans had been vigorous and expansionist and the scourge of Christian Europe. Now, however, the stimuli to intellectual enquiry from the Renaissance and Reformation and the dying-down of religious passions in Europe after 1648, enabled the West to forge ahead scientifically and technologically, with the application of new ideas to the art of war and to economic and commercial activities, so that the Ottoman empire fell more and more on to the defensive, its frontiers vulnerable to superior military and naval techniques and its craft industries and commerce vulnerable to industrial mass production and new financial mechanisms evolved in the West. In the 19th century, the new forces of ethnic and linguistic nationalism released by the French Revolution meant that the subject peoples of the Balkans, for centuries peoples without history, were no longer content to accept a clearly-defined but subordinate place in the Ottoman empire, especially as, by reaction, it began in the later 19th century to grow more specifically Turkish [see PAN-TURKISM]. Hence the frontiers of the empire receded in the Balkans, until by 1913 only Eastern Thrace remained of the European territories. Nor were the Arab lands of the empire unaffected by the new ethnic and cultural nationalisms, and already by 1914 the increasingly shadowy Ottoman authority in the North African countries and Egypt had been thrown off. Turkey's decision in November 1914 to enter the First World War on the side of the Central Powers proved the crowning disaster for the empire, and in the wake of the new Turkish nationalism aroused by the post-War dismemberment of the Ottoman empire, there was no place by 1924 for the Ottoman ruling family and the old Islamic religion-based culture which it epitomised.

1. General survey and chronology of the dynasty

The Ottoman empire was the territorially most extensive and most enduring Islamic state since the break-up of the Abbasid caliphate and the greatest one to be founded by Turkish-speaking peoples. It arose in the Islamic world after the devastations over much of the eastern and central lands of the Dar al-Islam by the Mongols and survived the further onslaught at the opening of the 15th century of Timur. Also, it originated on the periphery of the Islamic world, in Anatolia, into which Muslim Turks had been infiltrating by the time of the establishment of the Saljuq sultanate of Rûm [see SALJUKS] and was to play a dominant role in the processes of Turkicisation and Islamisation—even though this was not to be completed till the very end of the Ottoman dynasty, in 1922—of the formerly Greek and Armenian land of Anatolia [see ANATOLIA]. A further consequence of the rise of the Ottomans was the overrunning of most of mainland Greece and many of the Aegean islands, Albania, the Slav lands of the Balkans and much of Hungary, by the 10th/16th century, and although this tide of conquest subsequently receded, Turkish occupation has left permanent traces in the Balkans in the forms of pockets of Turkish-speaking peoples and of the indigenous peoples who adopted Islam [see MUSLIM].

The achievements of Ottoman culture, an amalgam of native Turkish traditions with Persian and Arabic literary and artistic currents, were quantitatively great and often of the highest aesthetic standard (see sections V-VIII below). The alliance of the sultans with the Sunni 'ulama' and with such Şüfi orders as the Mewlewis [see MAWLAWIYYA], later strengthened by the fact that they tacitly assumed for themselves the caliphate after the demise of the 'Abbasid puppet caliphs of Cairo in 1517 [see KHALIFA (i)], led to the dominance of the Hanafi madhab of Islamic law over the central Turkish lands and over much of the Arab lands also, an influence not quite extinguished today [see MAHKAMA, 1, 2, 4, and MEDELE].

But after the high point in the 17th century of the occupation of Crete (1645-69) and the siege of Vienna (1685), a period of slow decline set in for the empire. In the early centuries, the Ottomans had been vigorous and expansionist and the scourge of Christian Europe. Now, however, the stimuli to intellectual enquiry from the Renaissance and Reformation and the dying-down of religious passions in Europe after 1648, enabled the West to forge ahead scientifically and technologically, with the application of new ideas to the art of war and to economic and commercial activities, so that the Ottoman empire fell more and more on to the defensive, its frontiers vulnerable to superior military and naval techniques and its craft industries and commerce vulnerable to industrial mass production and new financial mechanisms evolved in the West. In the 19th century, the new forces of ethnic and linguistic nationalism released by the French Revolution meant that the subject peoples of the Balkans, for centuries peoples without history, were no longer content to accept a clearly-defined but subordinate place in the Ottoman empire, especially as, by reaction, it began in the later 19th century to grow more specifically Turkish [see PAN-TURKISM]. Hence the frontiers of the empire receded in the Balkans, until by 1913 only Eastern Thrace remained of the European territories. Nor were the Arab lands of the empire unaffected by the new ethnic and cultural nationalisms, and already by 1914 the increasingly shadowy Ottoman authority in the North African countries and Egypt had been thrown off. Turkey's decision in November 1914 to enter the First World War on the side of the Central Powers proved the crowning disaster for the empire, and in the wake of the new Turkish nationalism aroused by the post-War dismemberment of the Ottoman empire, there was no place by 1924 for the Ottoman ruling family and the old Islamic religion-based culture which it epitomised.

2. The foundation and expansion of the Ottoman Empire

Recent research on the subject of the founding of the Ottoman state, especially epigraphic, numismatic and archival discoveries, has made clear many things that formerly had been seen mainly through the medium of Ottoman historical tradition as reflected in the sources belonging to the second half of the 9th/15th century and later, namely, the different versions of the chronicles of Alî Qâhîmân and half-legendary sources of mystic orders known as menâbî, nâmés and wâlîyât-nâmés. The nucleus of the state of the Ottomans was a far advanced outpost (ugî) in the region of the Sakarya [q.v.] river, which for many centuries constituted the frontier zone between the old Saldjûk state of Rûm and that of the Byzantines. The former had gradually relapsed into anarchy after its defeat by the Mongol army at the battle of Kôsedağ [see Kôse Dâgu] in 1243, Asia Minor at that time had already been turcised to a large degree; the greater part of the Anatolian Turks belonged to the Oğhûz tribes [see Qûzûz] who invaded the country during the second half of the 5th/11th century, especially after the battle of Malâzgîrd [q.v.] (1071). Moreover, in the first half of the 13th century, the Mongol advance in Asia caused a new migration of Turkish tribes and of fugitives into the country; many of these fugitives came from the former Khûrâzmiân state and were Persians. Part of the Anatolian Christian population, not abandoning its old religion, continued to live in the Saldjûk state in which there was no sharp social division between Muslims and Christians. On the contrary, there was a conflict between the townspeople and the nomads or Turkomans, who were roving all through Asia Minor, as they did also in the adjacent territories of Syria, Mesopotamia and Persia. These Turkomans had still preserved many pre-Islamic religious traditions within the particular form of Islam to which they adhered. This form of Islam was the result of the preaching of wandering dervishes, known under the name of Kalenderiyye and Hayderiyye, who spread from the 5th/11th century all over northern Persia and Transoxania; their preaching was imbued with mystical doctrines containing a large amount of heterodox elements. After their immigration into Asia Minor, the Turkomans had remained under the same influences and those who exercised religious authority amongst them, called babas, had still much resemblance to the pre-Islamic dûmanûn. Under these religious leaders in 1239, the fearful revolt of the Bâbâ'îs [q.v.] had taken place (cf. A.Y. Ocak, La révolte de Baba Resul ou la formation de l'hétérodoxie musulmane en Anatolie au XIIIe siècle, Ankara 1989). The government at that time had been at last to suppress the revolt, but the heterodox opposition among the lower classes in Asia Minor still deeply influenced the history of the first centuries of the Ottoman Empire. These Turkomans were indeed far more numerous that the governing classes and the townspeople, as is shown by the present geographical nomenclature of Asia Minor; numerous villages, rivers and mountains have pure Turkish names of tribes such as Kayûl, Salur, Bayat and Çepni (cf. Koprülü-zade Fuat, Öğuz etnolojisi türkîî nolâr, in Türkiyât Medemîzâtı, i. 185 ff.). Insofar as the Turkan tribes were still militant, the best use that could be made of them was as frontier guards and as conquerors of new territory. After settling down, they may have mixed with a good deal of the original rural population and this mixture explains the curious half-Christian views and customs that are reported in later times as existing among the lower classes in Anatolia. The Saldjûk government and the upper classes of society had followed the orthodox Sunni Islamic tradition, which is to be traced back to the times of the Sâmândî empire in Khûrâsân and Transoxania. These were also the regions with which the Anatolian Turks had always been in constant contact. The higher culture was mainly Persian in character. These contacts explain also how the Hanafi madzhab became officially predominant in Anatolia and afterwards in the Ottoman empire. The upper classes of society were not free themselves from a strong mystical influence of a higher order. It had likewise its source in Khûrâsân, whence had come the theologian and mystic Djalâl al-Dîn Rûmî [q.v.], who lived in the Saldjûk capital Konya and who influenced for centuries Ottoman Turkish culture through the Mewlewi order [see mawlawiya]. So the townspeople were likewise familiar with the form of their mystical lines, entering within the category of the futuwâ, [q.v.]. One of the fraternities which played an important rôle was that of the Alaîî [q.v.], and cf. F. Taeschner, in Islamica, iv/1 (1929); a similar fraternity was formed by the Qâhîmân. On this basis of religious and social controversy is to be understood the development of events since the end of the 7th/13th century. In the many small principalities that appeared during the break-up of the Saldjûk state we...
see sometimes the influence of the orthodox element and at other times that of the heterodox Turkoman element as predominant.

When the Ottoman state was founded in Bithynia, presumably around 1299, it was one among several other small Turkish states, such as that of the Karasli-oghlu [q.v.], the Sarukhân-oghlu [q.v.], the Aydinli-oghlu [q.v.], the Menteşe-oghlu [q.v.], the Dândar-oghlu or Isfendiyar-oghlu [q.v.], the Karaman-oghlu [q.v.], the Germiyan-oghlu [q.v.], the Hamid-oghlu, etc. All these states had this in common with the Ottoman one, that they were established between the frontier of the Seljuks and the Byzantine Empire, on that part of the frontier zone, that is, in the most remote regions from the Islamic cultural centre of Anatolia; their lords, bearing the Turkish title beg [q.v.] or the equivalent Arabic title amir [q.v.], were descendants of the Turkoman chieftains who were frontier guards (udî begleri). Furthermore, they had the possibility to expand by attacking the coastal regions ruled by the Byzantines and the islands ruled by the Italian colonists. It was this opportunity of westward expansion, which proved most favourable for the 'Othmân-oghlu and secured them in the end the superiority over the other principalities.

The historical tradition of the Ottomans has preserved reminiscences of the Turkoman nomadic origin of the founders of the state. The father of 'Othmân, Ertogrul [q.v.], is said to have established himself with his little tribe in the neighbourhood of Söğüt [q.v.] and the pedigree given for Ertogrul and his father Süleyman Şah shows them as belonging to the Kayal [q.v.] division of the Oghuz Turks. As the various reports about Ertogrul have a good deal of a legendary character, his very existence was put under doubt until a coin of 'Othman also bearing his father's name, was found. (I. Artuk, Osmanî beylîgîn kurucusu Osman gazi'ye ait sikke, in Papers presented to the First International Congress on the Social and Economic History of Turkey, Hacettepe University 1977, Ankara 1980, 27-33). When Ertogrul died, 'Othmân took over the leadership. It is not certain that his name was 'Othmân, that is, a prestigious Arabic name; his contemporary the Byzantine historian George Pachymeres wrote the name down as Atam, which is a simple Turkish name (cf. L. Bazin, Antiquité méconnue du titre d'Ataman?, in Harvard Ukrainian Studies, Essays presented to O. Przysiat, iii-iv [1979-80], 61-70). He was, at any rate, one of the ghaziyan-i Rûm and surrounded by other ghâzîs (Turkish alp) as well as by people belonging to the fraternity of the Âkîsî. His father-in-law, the shaykh Edebali, was deeply involved with the group of dervishes known as the Abdülâli-i Rûm, which was connected with the mystic order of the Bektâshîs [q.v.], and cf. Irène Mélikoff, Un ordre de derviches colonisateurs: les Bektachis, in Memorial Ömer Lütfi Barkan, Paris 1980, 149-57). As a result of collaboration of these various elements, a small amirate was established. Its centre was the fortress of Kârâşâ Hişâr, the exact location of which remains unknown; its identification with the Byzantine Melagina proposed by von Hammer is not valid anymore (V. Laurent, La Vita retratata e le miracoli postuma di Saint Pierre d'Atroa, Brussels 1958, 10, 66, 74); During 'Othmân's reign, the history of the amirate is not different from that of the contemporary Anatolian principalities. By organizing raids against the Byzantine territories, but also by stratagems and personal relations, he succeeded in extending his rule. In 1302 he inflicted a serious defeat on the Byzantines at Baphius and his troops reached the littoral opposite Constantinople. At his death, in 1326, the Sakarya was practically the eastern boundary of the state, while the Byzantine towns of Bithynia had been blockaded for several years. During the early years of his son and successor Orkhan [q.v.], important towns, unable to resist any more, surrendered: Bursa, which became the capital, in 1326, Iznik (Nicaea) in 1331 and Iznikmêd/İzmit (Nicomedia) in 1337. In this year Orkhan also performed his first important raid on Thrace. On the other hand, he added the adjacent amirate of Karasî to his dominions, around 1346, and by this acquisition his state became one of the prominent maritime amirates since the Karasî Turks possessed fleets of light vessels and had experience in naval warfare.

In Orkhan's years, the more orthodox Islamic traditions gradually became predominant, though the dervishes remained in high esteem as popular religious leaders. It is a noteworthy fact, however, in the history of 'Othmân and Orkhan that there apparently existed close relations with local Christian chiefs and commanders; the most representative of them was Kose Mîkâhî, lord of the fortress of Khar- mankaya, who collaborated with 'Othmân, eventually embraced Islam and was the ancestor of a notable military family in the Ottoman Empire [see mihâl-oghlu]. This early collaboration with Christian Greek elements makes it probable that, in this way, Byzantine traditions and customs early entered the Ottoman state, in the same way as was the case in some other contemporary maritime amirates. Both the Christian and the Muslim heterodox element were gradually assimilated by the growing influence of the orthodox mullaî, often indicated in the older sources as dânishmand; some of these belonged to the Alchi circles, as is said of the Kâdî Dândarî Kara Khalîl, later vizier to Murâd I under the name of Khayr al-Dîn Paşâ; many of them had also come from the more eastern parts of Asia Minor. During Orkhan's reign these fairly different elements contributed to the foundation of a typical form of administration and civilisation, from which the later development of the Ottoman state must be explained. The administration, similar to that of the other contemporary amirates, was basically a military one, following Salûdî tradition. The state belonged to the family and it was ruled by the father considered as the senior lord, or in Turkish, ulu beg. It was he who concluded treaties, struck coins and was also granted territory by the growing public prayer. The territory of the amirate was divided into domains governed by his sons. Military chiefs were also granted territory by the ulu beg and this institution may have reposed on earlier Byzantine or Salûdî ones [see 1:381]; Apparently under Orkhan there was created a cavalry force of mizûlems [q.v.], and an infantry of molas, as the irregular force of the akbânts [q.v.]; originally composed of Turkoman tribesmen, was no longer adequate. In this time also the title paşa [q.v.], originally peculiar to military dervishes, began to be given to statesmen (e.g. Sinân Paşâ under Orkhan) and military commanders.

The natural extension of the young state was towards the west, in keeping with the naval raids of the Sarukhân-oghlu and mainly of the Aydînli-oghlu on the islands and on the Greek coast. Orkhan's military expeditions on the Thracian littoral became more frequent, the amirate was no longer a temporary Anatolian principality, but the rise of his power is notably connected with his alliance with the emperor John VI Cantacuzenus during the Byzantine civil war which erupted in 1341. In 1352, however, began the conquest of towns on the European side when Orkhan's son Süleyman occupied the fortress of Tzymbe. In 1354 the Ottomans, profiting from an earthquake, occupied the
strategically-important town of Kallipolis or Gallipoli [see GELIBO\L]. In the meantime they established diplomatic relations with the Republic of Genoa and a commercial treaty was concluded in 1352. After Orkhan's death in 1362, military operations were launched by Murad I, who conquered all the Byzantine territory to the west of Constantinople; Adrianople (Edirne [q.v.]), captured in 1369, became soon after-wards the European Ottoman capital. Then followed the wars against the Bulgarians and the Serbians, and the latter were crushed in the battle of Maritsa in 1371 [see MKR]. This victory assured the Ottomans the guarantee of the Ottoman sultan against the latter were crushed in the battle of Maritsa in 1371 [see MKR]. This victory assured the Ottomans the guarantee of the Ottoman sultan against the
Serbians and Byzantines were reduced to the status of tribute-paying vassals of the Ottoman sultan (cf. G. Ostrogorsky, Byzance etat tributaire turc, in Zbornik Radova, v [1958], 49-58). The Serbians were crushed for a second time in the battle of Kosowa [q.v.] in 1399, where Murad was killed.

Bayezid I's military expeditions extended over a still wider range, including Hungary, Bosnia and Serbia. The latter were crushed by Murad I, who conquered all the Byzantine territory to the west of Constantinople, French and German armies [see SIKOL]. Bayezid began a siege of Constantinople and the end of the Byzantine state seemed to have come. On the other hand, the Ottomans began to extend their rule in Asia Minor. Murad I acquired a large part of the Germiyan-oghlu territory, which included important mines of alum, as a wedding present to his son, and also the amirate of Hamid-oghlu by sale. Bayezid I continued the conquest of the Anatolian amirates but in a brutal manner and with the assistance of his Christian vassals. Sarukhan, Aydin and Mentche were annexed in 1390 and the amirate of the Isfendiyar-oghlu in 1391. His policy provoked the intervention of the Turco-Mongol khan Timur [q.v.] who invaded Anatolia with his army, crushed Bayezid's army in the battle of Ankara (1402) and captured him. Bayezid committed suicide in captivity in 1403.

While the Ottomans conducted the military operations, the organisation was in the hands of their statesmen, among whom Dincer and Kara Khalil is the most notable (see DINDAR1 and cf. F. Taeuschner-P. Wick, The Ottoman Empire, gov. and admin., Denkmaler, in I., xviii [1929], 61-115). To him is attributed the institution of the Janissaries [see VE\XEH] in connection with the reservation of a fifth part of the war booty for the sultan. The Janissaries were usually taken from the captured Christians, but a Greek source indicates that the droshirma [q.v.] was already applied in Bayezid's days. Their organisation on the lines of a fraternity after the model of the Aghas and the ghazis, and their connection in this respect with the dervish order of the Bekta\x99i\x92a [see BKT\x9B\x9B], shows again the influence of the peculiar religious tradition of the state.

The first beg of the Ottoman dynasty, in the older sources generally bearing the titles of khan and of h
dr, had originally taken over some of the Saljuk customs and traditions, such as the bearing of lahadis [q.v.] opposed to dink and dink, and from the time of Murad I this custom was abandoned. Murad I is also the first to take the title sultan [q.v.] in inscriptions, although the Moroccan traveller Ibn Ba\xfdi [q.v.], who visited the Ottoman lands, mentions Orkhan with the title of sultan. These rulers followed also the traditions of other Anatolian rulers by marrying high-born Christian ladies: Orkhan was the first to take a Byzantine princess for his wife. To the same early time is to be traced back the investiture of the sultan by the girding on of a sword, which perhaps symbolised originally his admission to the order of the ghazis (khit\x9b alay [see TAK\x9B\x9E AL-SAV\x9E]). An important fact of the first century of Ottoman history was the enforced migration of populations (s\x96gin), which ancient oriental custom was particularly applied by Bayezid I, mostly from the east to the west.

When Timur left Asia Minor again, the country was as divided as it had been a hundred years before; from the river Euphrates up to the Aegean coast the amirates had been restored to their former lords. The Ottomans, while the Christian states tried to take the maximum advantage from the division of the Ottomans by supporting one prince against the others. Although the European possessions, where a son of Bayezid, Suleymann, resided, had been left untouched by the Mongols, the restoration of the Ottoman state had again its centre in Anatolia, where another son, Mehmed, established himself as a master of a considerable territory having Amasya [q.v.] as its capital. Suleymann first concluded a treaty with the Christian powers of Romania (1403), making territorial concessions to them, abolishing taxes paid by them and confirming old commercial privileges. Then he crossed to Anatolia to fight against his rival brothers, 4\x9b\x9b and Mehmed; another brother, M\x9b\x9a\x9c\x9c Ce\x9b\x9b, appeared in the European territories and obliged him to return there.

It was Mehmed I who finally emerged victorious from the fratricide strife and restored the unity of the Ottoman state in 1413. Three years later, in 1416, this state was shaken by a revolt with deep social roots, apparently under the spiritual leadership of sheikh Bedr al-Din [q.v.], the ex-kadi\x92akber of M\x9b\x9a\x9c. Mehmed suppressed the revolt by a huge massacre.

After a short period of peace, the chief military activity of the Ottomans was given to the expansion of their power in Europe. The Ottomans themselves rested most of the time there and led many campaigns in person. The maximum advantage from the division of the Ottoman state in 1413. Three years later, in 1416, this state was shaken by a revolt with deep social roots, apparently under the spiritual leadership of sheikh Bedr al-Din [q.v.], the ex-kadi\x92akber of M\x9b\x9a\x9c. Mehmed suppressed the revolt by a huge massacre.

During the reigns of Mehmed I and of Murad II there began a second incorporation of the various Anatolian amirates into the Ottoman state, but this time this was effected gradually and without much bloodshed, with the exception of the Karaman-oghlu state, the old rivals of the 'Ogh\x99\x9a-oghlu. But even there the Ottomans began by following a remarkably conciliatory policy. The descendants of these
dynasties were generally granted high military posts in Europe. During Murâd’s reign trade began to thrive. Venetian, Genoese, Ragusian and other merchants developed important activity in several Ottoman cities, which expanded considerably, such as Bursa with its silk market.

Murâd II died in 1451 and was succeeded by his son Mehemmed II [q. v.], who immediately began preparations to put an end to the Byzantine empire, which was then limited to the city of Constantinople, a few islands and some towns on the western Black Sea coast. On 29 May 1453, the Ottoman empire succeeded the Byzantine one. The capture of Constantinople, which made such a profound impression among the Turks as well as in the Occident, was only the realisation of a part of a political scheme of Mehemmed II, that of bringing the whole Balkan peninsula under the direct government of the Ottoman state. After continuous military campaigns this scheme had nearly become a reality. There were still Venetian enclaves in the Morea and Albania, and in the north Belgrade was still held by the Hungarians; but even Bosnia had now passed under Ottoman rule. The large Aegean islands, except Rhodes, were incorporated in the same manner. Only the Danube principalities, Wallachia and Moldavia, and, since 1475, the Crimean Khâname, had remained vassals. Mehemmed II also finished the conquest of Anatolia proper by the conquest of the empire of Trebizond in 1461 and when at last the Karamânîd dynasty was extinguished, in 1475, the Ottoman empire stood face to face with the Ak Koyunlu [q. v.] dynasty in the east and the Mamlûk state in the south-east. The dangerous policy of the Ak Koyunlu lord Uzun Hasan [q. v.] came to an end in 1473 when Mehemmed II defeated him at Otruk Beli. Under Bâyezid II, this neighbour was succeeded by the young Safawid dynasty of Persia; still, until the reign of this sultan, the Ottoman territory was not enlarged on the Asiatic front, though there were several inglorious frontier wars with the Mamlûk forces in Syria.

During all this time, the Christian powers were scheming and planning crusades to expel the Turks from Europe, while trying also to contract alliances with their Asiatic opponents. But no really great event occurred until 1455, when a disaster was inflicted on the Turks by the Hungarian Hunyadî, the Wallachian Wlad Dracul, the Albanian Skander Beg [q. v.], and by some Venetian naval expeditions. All these Ottoman military successes in the East were obviously a part of Mehemmed II’s political scheme, that of bringing the greater part of non-Turkish elements recruited from the ranks of the Christians. Under these circumstances, it was inevitable that the administrative institutions should show the influence of Byzantine ideas, as was also the case with the court organisation. By Kârim-nâmes [q. v.], of which those of Mehemmed II and later of Süleyman the Magnificent are the best known, the hierarchy of officials was minutely regulated.

Besides the older troops of irregular skîndîgis and ‘azabs [q. v.] the army consisted chiefly (a) of the cavalry of the sipahis, whose organisation was not intimately connected with the military administration of the territory [see Timâr], and (b) of the Janissaries, apparently levied in the time of Murâd II by the deuyşîrme. Agriculture, constituting the financial support of the cavalry, was closely connected to the timâr system. Firearms may also have been used for the first time during Murâd II’s reign [see Bâb-ıı bo. iv]. The fleet [see Gelibolu and Darva Beg] was mainly manned with Christian renegades, ‘azabs and Christian prisoners as galley slaves. It began to well-organised under Mehemmed II.

The revenues of the state or rather of the sultan consisted for the most part of the constanty-increasing diyaze [q. v.] and dâmâr [q. v.], both of them levied on non-Muslim subjects, and of the annual tributes paid by the vassal states. The different kinds of custom-duies were also considerable. Trade remained largely in the hands of the dirrîmîs, the merchant class having increased in number by the massive arrival of Jews from Spain and Central Europe. Exports and imports were also largely in the hands of foreigners, especially Italians, who had their communities in Constantinople [see Qalâta in Suppl.] and some other towns. These communities were treated as if they were independent non-Turkish communities; they were allowed considerable autonomy under their consuls, including consular jurisdiction. These privileges were granted by the sultans in the well-known form of ‘capitulations’, in which were prescribed also the commercial duties to be paid by the foreigners, who, in accordance with the principles of Muslim law, were considered as müstemin [see İmtiyâzat].
The civilisation of the Ottoman Empire of the later Middle Ages was not yet separated from central and western Europe by the wide gap that became characteristic for later centuries. It has been pointed out that the friendly relations between Mehemmed II and Italian princes and artists and his liking for pictorial art entitles him, in a way, to a place among the Renaissance rulers of the time. In the days of his successor Bâyazid II, however, the Muslim attitude to life began to be again more predominant.

The empire at its zenith After the relatively peaceful reign of Bâyazid II, there is no more question about Asia Minor or the Balkan Peninsula. The struggle continued in Albania and Morea, but had on the whole a local character. The empire was now strong enough to face its new Asiatic neighbours. The war waged against Persia by Selim I was in a way a continuation on an international scale of the former internal struggle against the Şhi‘ite opposition in Asia Minor itself. This war secured Turkey the temporary possession of Aŝhârâyghan and the lasting domination over Kurdistân and northern Mesopotamia. Very soon afterwards the Egyptian state of the Mamlûks, with whom the Ottoman empire had clashed under Bâyazid II in a rather inglorious way, was incorporated by Selim in one single campaign. The consequence was the extension of Turkish lordship to the holy cities of Islam and soon to Yaman. Finally, under Süleyman I the Magnificent, the empire obtained its greatest extension by the conquest of the greater part of Hungary, one of the two great mediæval opponents in Europe; in the same campaign the Turks went even so far as to besiege Vienna. Only the other old rival, Venice, was not broken by the victorious empire. After Mehemmed II's death, official wars with Venice had become rather an exception. The Ottoman empire never had acquired an absolute maritime superiority, and this weakness appeared almost immediately after the great period of conquest was over, in the battle of Lepanto. Rhodes was conquered, but Malta has never been Turkish and the maritime exploits of Kamal Re's [q. v.] under Bâyazid and those of Barbarossa Khayr all [q. v.] in [q. v.] and others which assured Turkey's political authority in the age of Süleyman on the north coast of Africa and in the Indian Ocean, never wholly lost the character of piracy. On the Asiatic side, the continuation of the conflict with Persia led for the time to the conquest of Bâghdâd and 'Irâq, so that the sultan was now in reality sulân al-barây na wa 'l-bahrayn.

At the end of the reign of Süleyman I, the Ottoman empire found itself between two powerful continental neighbours: the Austrian monarchy in Europe and the Safavid empire in Asia. In Europe, the Turkish provinces of Bosnia and Hungary were the bulwarks against Austria, while farther to the east the half-independent principalities of Transylvania, Wallachia and Moldavia, and the Tatar Crimea were allowed to exist; from the Turkish point of view also, Poland with its Cossacks, and even Muscovy, held similar intermediate positions between the two empires; during this period Turkey raised more than once claims to the suzerainty of the last-mentioned countries. In Asia, the geographical situation did not allow for the existence of this intermediary kind of state, with the exception of Georgia [see AL-KURDJ] which was invaded and brought under Turkish authority in 1578. In Asia, however, the Turkish feudal system left places for a number of petty local rulers who were given the title of Pasha. They were found on the Persian frontier in Kurdistan (the princes of Bitlis), but also in Syria (the Druze amirs). The Şhârîf of Mecca occupied likewise a vassal position, while Yaman, after its reconquest in 1568-70, was again partly a more direct Ottoman possession. After 1550 the Turks had even obtained a footing in Maşâwa [q. v.] on the African coast and had begun to interfere with Abyssinian affairs; the opportunities were came to an end after the unlucky war of 1578. Egypt was at this time still somewhat under the control of the Turkish Pasha [see MİŞ. D. 6]; the Barbary states were nearly independent; the Şhârîf of Morocco recognised in 1580 the authority of the Turkish sultan.

This general political system of the empire was maintained throughout the third period, a kind of equilibrium being established between the Ottoman empire and the great continental powers.

Under Selim II, or rather under the administration
of Mehmed Sokollu Pasha, Cyprus was conquered (1570-1), but this conquest occasioned immediately the naval defeat in the battle of Lepanto [q. v.] in 1571, considered to be the first great military blow inflicted on the Turks. The impossibility of further military expansion brought about an inner weakening of the Empire that was marked on the whole by unsuccessful campaigns against Austria (defeat of Mezökeresztes [q. v.] in 1596) and against Persia (loss of Tabriz and Erivân in 1603 and 1604) and found its expression in the unfavourable peace treaty of Zsitvatorok with Austria in 1606 and the recapture of Tabriz, which had been conquered by the Persians in 1612, under the strong rule of Shâh 'Abbâs the Great. In the last decade of the 16th century, Transylvania [see Erdel] and the Rumanian principalities even made themselves for some time independent; from 1572 Poland also played often an active role in the complicated political and military course of events on these northern frontiers of the Turkish empire. The raids of the Cossacks in the Crimea had not yet the dangerous aspect of a century later, when the Muscovite power began to appear on the horizon. A favourable circumstance for Turkey was the weakening of Central Europe by the Thirty Years' War, among the west European countries the already existing friendly relations with France, followed in 1580 by England and in 1603 by Holland, were on the whole profitable for the empire, while Spain had ceased since the end of the century to be a serious maritime danger. In view of the never very strong maritime position of Turkey, the relations with Venice remained subject to surprises on both sides, such as the annexation of Cyprus; during the 17th century this was followed by the conquest of Crete (1645-69) and about 1655 by the important Venetian conquests in Morea and in the archipelago, so that for a moment an Istanbul coup d'état seemed to be possible. Still, the relations with Venice were on the whole friendly, Turkey being the stronger power on account of its continental position. On the Asiatic frontier, Turkey's weakness led temporarily to the loss of Bagdad in 1623 and a renewed Persian danger. But here the old position of the empire was restored by the revival of its military strength under Murâd IV; under his reign and after Shâh 'Abbâs's death, Persia was again defeated by Ottoman power and by the Turks and, and finally Bagdad reconquered (1638); in 1639 there began a long period of peace with Persia. After 1640 the stronger position of the empire was used, as well as for the conquest of Crete, for strengthening the authority of the Porte in Transylvania and the Danube principalities, and for a fortification of the frontier to the north of the Black Sea, where Azov was taken from the Cossacks, now under Muscovite authority, and fortified in 1660. In this same year the hostilities with the now-recovered Austria began again and took on at first a crusading character; even France was this time an ally of Austria (Turkish defeat of St. Gotthard 1664). But this was only a prelude to the final struggle with Austria that began in 1683 with the unsuccessful siege of Vienna, and finished in 1688 with the loss of the Ottoman province of Hungary and the invasion of the Balkan peninsula by Austrian armies. Following the battle of Garagnizza (1685 [see Karlovač]) in which Turkey, considerably weakened again, had to give up nearly the whole of Hungary and its claim on Transylvania, while it had to recognise the authority of Venice in Morea.

The weakening of the Ottoman empire at the beginning of this period was mainly due to domestic reasons. During the 17th century it had already been observed that the empire in this form could only subsist by continuous warfare; it had to be adapted now to peaceful conditions, and this went beyond the possibilities of the personal rule of the sultan, which was based essentially on military conquest. The successors of Süleymân the Great were not equal to the task of meeting these new conditions; it is true that Mehmed III, Othmân II and Mehmed IV occasionally accompanied their armies, but Murâd IV was the last sultan to revive the military traditions of his dynasty, the last real şâhi. So the sultans, whatever their personal qualities were, became less directly concerned in the administration of the state, though their personality remained surrounded with the traditional veneration. This did not prevent, however, the deposition and murder of Othmân II in 1628, nor the deposition of İbrahim in 1648 and of Mehmed IV in 1688. Instead of the sultans, the statesmen and generals became now more prominent, first in time and in importance Mehmed Sokollu Pasha [see Sokollu] under Selim II, Sinân Pasha [q. v.], the great enemy of the Austrians, under Mehmed III, Murâd Pasha [q. v.] and Khalil Pasha [q. v.] under Ahmed I and Othmân II; and in the second half of the century the great members of the Köprüli family [q. v.]: Mehmed Pasha, his son Ahmed Pasha and their cousin Mustâfa Pasha; to the same period belonged also Kara Mustâfa Pasha [q. v.], the bâshbashi of Vienna in 1683. These military statesmen belonged to the numerically feeble renegade class and were supporters of the typical Ottoman government system as it had been perfected under Süleymân I, but they did not represent any considerable group of the strongly diverging population of the empire. There was not yet an Ottoman Turkish nation. Several other groups were competing with them in the direction of the state affairs; the most formidable being the military corps of the Janissaries and the Sipahis, who several times, especially after serious military defeats as at the time of the enthronement of Murâd IV in 1632 and of Mehmed IV's deposition in 1688, were masters of the political situation. The Janissaries were now even less recruited in the ancient way from the Christian populations, while many abuses had ruined the former discipline of their corps. Several Grand Viziers fell victims to their fury. Another powerful group were the Kızlars, who sometimes, as in 1660, supplemented the Janissaries in the command of the military elements, was the court circle, led several times by a powerful Wâlide Sultan or by a Kızlar Ağâhi. Finally, the 'ulûm with the Şerif al-Islâm succeeded repeatedly in playing a decisive part in the direction of the state affairs (e.g. the mufti Sa'd al-Dîn under Mehemmed III); the deposition of sultan İbrahim was sanctioned by jetsâd of the Şerif al-Islâm. These symptoms of decay were truly analysed in Koll Bey's [q. v.] famous Rısâla. Only Murâd IV was able to suppress, often by violent means, the influence of these different groups; he succeeded even in raising a new military force (the Segbans) alongside of the old military elements, was the court circle, led several times by a powerful Wâlide Sultan or by a Kızlar Ağâhi. Finally, the 'ulûm with the Şerif al-Islâm succeeded repeatedly in playing a decisive part in the direction of the state affairs (e.g. the mufti Sa'd al-Dîn under Mehemmed III); the deposition of sultan İbrahim was sanctioned by jetsâd of the Şerif al-Islâm. These symptoms of decay were truly analysed in Koll Bey's [q. v.] famous Rısâla. Only Murâd IV was able to suppress, often by violent means, the influence of these different groups; he succeeded even in raising a new military force (the Segbans) alongside of the Janissaries. In the capital there were several times outbursts of religious fanaticism directed against the Christians, as happened under İbrahim I, but it cannot be said that political events were influenced by them; the great statesmen showed on the contrary a remarkable tolerance.

The non-Muslim element, though excluded from all direct influence on the government, had adapted itself to the circumstances. A new Greek aristocracy had arisen in Istanbul, which by wealth and intrigue had powerful relations in Turkish circles, as well as in the leading circles of the Christian principalities on the Danube; they likewise were able to control the nomination of the Greek patriarchs. To this time
belongs also the definite turn of the Ottoman Greeks towards Greek Orthodoxy under the influence of the patriarch Cyril Lucaris (executed in 1638); the consequence was a decisive rupture with the Roman Church and indirectly a strengthening of the Orthodox world and of the Greek patriarchate in Constantinople. The Ottoman Turks had still many religious traditions in common with the Greeks, and Christian saints were also venerated in Turkish circles. Next to the Greeks, the Jewish element, considered since the 14th century as the most representative of this group was that of the Nasi [see NASSI and NAŞI], the favourite of Selim II.

The lower classes in Asia Minor participated as little in the direction of the state as those of European Turkey. Some dangerous revolts proved, however, that the old religious traditions of the 13th and 14th centuries had not wholly disappeared. In 1599 began the movement of Kara Yaziğlı [q.v.] in Urfa; much more dangerous was the revolt of Kalender-oglu in Sarukhan (1606), who ruled for some years independently over a great part of western Anatolia, until he was crushed by Murad Paşa. Soon afterwards, in 1623-8 took place the insurrection of Abaza Mehməd Paşa [q.v.], the relentless persecutor of the Janissaries. Farther to the east, the movement for independence under the Kurd Djanbulat [q.v.] in northern Syria like that of the Druse Fakhır al-Din Ma'n [q.v.] in the Lebanon had to be tolerated to some extent. The inclination to mysticism and veneration for mystical hikayehs (such as Məhəmməd of Scutari, where several grand viziers found asylum under ʿOthmān II) continued its hold on all classes of the population; several new mystical orders were founded during this period. The foreign trade remained as before in the hands of foreigners, Venetians and other Italians; of Italian origin were also many of the leading personalities of the Turkish navy that was rebuilt after the battle of Lepanto, such as Cığhale-zade Sinan Paşa [q.v.].

4. The period of decline

During the 18th century the inevitable action of the elements of decay began to be felt more and more in the empire and brought about a situation that has been, too superficially, described as decadence. The cause of the decline was to be sought mainly within the body politic; they were still the consequences of the transition from a conquering state to a peaceful administration, but they were now ever more exploited by foreign powers. Among these Austria was in the beginning still a formidable opponent; after the war of 1716-18 the peace of Passarowitz [see PASAROVICE] meant the loss of what had been left to Turkey of Hungary and Transylvania, and even of Belgrade, but the peace of Belgrade in 1739, in which this town itself was restored, proved that from the Austrian side the real danger had ceased. Moreover, in 1715, Morea had been reconquered from the Venetians by the grand vizier Djiq ʿAli Paşa [see MORA], which success had shown that Venice also was no more to be feared. A new and formidable enemy had risen, however, in the form of the now much enlarged Russia, which tried to implant the Orthodox Christians of Rumania and Serbia, seemed more welcome liberator than even Austria had ever been. The war of 1711 with Peter I, intimately connected with the coming of Charles XII of Sweden to Turkey, ended with a Turkish victory at Pultawa and brought back Azov to the empire in 1712, and the war of 1732, equally successfully closed by the already-mentioned Treaty of Belgrade in 1739, was not yet disastrous for Turkey; Russian navigation in the Black Sea was even formally prohibited. After 1739 there followed a period of peace for the empire in Europe. The military and peaceful relations with Persia during this time were mainly influenced by the political events in that empire, by which the Turks sought to profit. The successes of Nadir Shāh [q.v.] of Persia in 1730 were for a moment threatening; they even occasioned the deposition of Ahmad III, but at last the peace of 1736 restored the frontiers of the time of Murad IV. The real military weakness of the Ottoman empire was finally revealed after the tonkine expedition of Nasi [see NAŞI and NASSI] had begun in 1768 with a Turkish declaration of war; this war brought the Russian armies deep into Bulgaria and was ended by the memorable treaty of Kūtuk Kaynardja [q.v.] in 1774, by which the Crimea became wholly independent (to be annexed in 1783 by Russia), while Turkey had to recognize the Russian protectorate in the Danube principalities. The right of religious protection accorded to the sultan with regard to the Muslims in the treaty of Dünip also disappeared; in 1784-92, closed by the peace of Jassy, this time the Dniepr became the frontier between the two empires: Austria also had tried to profit by this war and had occupied Bucharest, but in the separate peace of Zistowa (1791) Austria did not gain the expected profits.

During all this time, the friendly relations with the western countries, France, Britain and Holland, to which Sweden was added in 1737, Denmark in 1756 and Prussia in 1763, had often been of great value to Turkey by the services rendered by them as intermediaries in the peace negotiations; especially France, which obtained in 1740 its well-known final capitulations, had considerable influence by its right to protect the Roman Catholics. At the end of the century, however, the Ottoman empire began to be a factor in the new expansionist schemes of the western powers, in connection with their colonial acquisitions and political influence in South and East Asia. These interests did not show at that time any wish to possess Ottoman territory, but they needed between themselves and their possessions a state over which they could exert control, since they saw the necessity of communicating with the Persian Gulf and India by a more direct way than the southern sea-route. The more immediate cause of the occupation of Egypt by the French in 1798 was the rivalry between France and Britain; this made for the moment Britain and even Russia allies of Turkey. But in 1802 peace with Britain was restored, to be followed some years later by a new war with Russia and hostilities with Britain (the British fleet before the capital in 1807). By the peace of Bucharest (1812), the Ottoman Empire again lost territory (Bessarabia [see BESARABIA]) to Russia, while Britain, after the elimination of France's colonial power in India and the weakening of the Ottoman authority in Egypt, was for the moment satisfied. The war, however, was again severely affected by the ups and downs of the Greek revolution that began in 1820 and ended in 1830 with the recognition of the independence of Greece, not, however, before a disastrous war with Russia—that had played from the beginning an important part in the Greek troubles—had obliged Turkey to conclude the peace of Adrianople (1829). Still, the action of the other European powers had prevented Russia from
reaising its territorial aims; it had to be contented with a strong political ascendancy over Turkey, as was proved in 1833 by the Treaty of Kuchuk-Kaikos, which, in the secret article, forced Turkey to become Russia's ally in the matter of the navigation in the Black Sea. This unnatural alliance with Russia was occasioned by the action of Muhammad 'Ali (q. v.) of Egypt (begun in 1831), who threatened for a moment to deprive the empire of Egypt, Syria and Cilicia, but led at the end only to the recognition of Egypt as a privileged part of the Empire under a hereditary dynasty (1846) which was enfranchised by the European powers. Important events of the European powers had been decisive for the territorial status of the empire. The existence of the Ottoman empire was justly considered as a political necessity; already in 1789 there had been a treaty between Prussia and Austria to guarantee the northern borders of the Empire. About the year 1830, moreover, Turkey concluded several new treaties, on the lines of the capitulations, with the United States of America, Belgium, Portugal, and Spain. The conquest of Algiers by France (1827-57) (see AL-DJAZA'R) could hardly be called a loss to the empire.

The administrative system of the empire remained much the same during this period; in every direction the central authority was, however, losing its influence. At the beginning of the 18th century this was not yet very perceptible. Istanbul was still the brilliant capital of a powerful empire, where the court of Ahmed III set the example of a luxurious life; to this time falls the curious passion for the cultivation of tulips, that makes the epoch known as lâle dewri (q. v.). In this period also belongs the expansion of higher literacy, specifically Ottoman, culture beyond the empire. At the beginning of the 18th century this was not yet very perceptible. Istanbul was still the brilliant capital of a powerful empire, where the court of Ahmed III set the example of a luxurious life; to this time falls the curious passion for the cultivation of tulips, that makes the epoch known as lâle dewri (q. v.).

The weakening of the central authority had indeed been characteristic of the Ottoman empire of the 18th century. Algiers, Tunis and Tripoli were ruled by hereditary Beys; only Tripoli was brought by Mahmud II again under the direct authority of the Porte. Egypt had seen in 1767 the usurpation of 'Ali Bey. In Rûm-iîl some powerful vassals had come forth from the ranks of the great timar (q. v.) holders or timariots; they were called aşyân (q. v.). Under Selim III and Mahmûd II the most noteworthy were 'Ali Paşa Tepedeleni (q. v.) of Yanina and Paswân-oghlu (q. v.) at Vadin. In Anatolia there had been in 1739 the dangerous insurrection of Şerif Bog-oghlu, after which the so-called derebos were as good as independent, as was also the case in Kurdistan. In Mesopotamia and 'Irâk the same conditions were prevalent; in 1706 was formed in 'Irâk the powerful Bedouin confederation of the Muntakf (q. v.), and under Selim III Bahgâ'd was ruled autocratically by Suleyman Pasha (d. 1810). In Syria, the Druses of the Lebanon had their own amirs (see DURUZ. ii), and on the coast ruled, in Selim III's time, Djâzzar Paşa (q. v.) of 'Akkâ. In Arabia, the Wahhabîs (see WAHHABIYYA) had taken Mecca in 1803, and Yaman and 'Asir could hardly be called parts of the Ottoman empire; on the isthmus of the Aegean archipelago, hardly any Turks were to be found; here, as in Syria, there was strong European influence. Still, although the Ottoman real power had sunk everywhere, the Ottoman type of administration had put its seal on the cultural life of all these different regions; the great Ottoman tradition held them together and enabled Mahmûd II and the statesmen who, after him, continued the centralisation of the Empire, to keep together their political unity for a century more to come.

5. The beginnings of reform and westernisation, and the end of the dynasty

In this period, the transition of the Ottoman empire to a national Turkish state was completed, but in a way not intended by the Christian powers, nor expected by the Turkish ruling classes themselves. The new course was followed in the administrative reorganization, and the gradual application of the Tanzimat measures (q. v.) had meant to establish, mainly after the French model, a modern state where all citizens, whatever their religion, had equal political and civil rights, under the direct authority of the Ottoman government; only Egypt, the Danube principalities and Serbia (since 1815) and in Asia the Hîjâz were allowed a privileged position. The ideal of the new Ottoman
state was, however, far from the democratic ideals that worked in Europe and which by now began to show their effect, especially among the Christian populations. The revolutionary movement of 1849 in Moldavia and Wallachia [see BOSCH-DAN and EFLAK] was equally opposed by Turkey and by Russia, but had as result the convention of Balta Liman, by which the Turkish authority in these principalities was reduced to a negligible point. When Russia, as a result of a conflict over the Holy Places in Jerusalem, invaded again the principalities, in 1853, the Ottoman empire found Britain and France at its side: this began the beginning of the Crimean War. By the peace treaty of Paris (1856) the integrity of the empire seemed secured. In reality, the intervention of Britain and France and soon again of Russia was now more firmly established than ever. This was not only the case in political questions, as for instance the armed intervention in the Lebanese and Syrian troubles of 1845 and 1860, after the troubles of Jidda in 1840 and in Damascus the formal regulation of the position of Crete in 1866. For the influence of the foreign powers was likewise extended to many points of internal administration, which kind of intervention was made possible by the capitulations. These originally unilateral privileges were looked upon now as bilateral treaties, but their contents had become incompatible with the new state conception that the Tanzimat tried to realise. From 1856, indeed, the Porte had tried in vain to get rid of this international servitude, which, at the end of the 19th century, had taken on the character of a collective tutelage of all countries possessing capitulations. Not till 1914 did the conflict between the European powers enable the Turkish government to put the capitulations aside [see IMTIYAZAT].

In 1862 the Ottoman government was able to restore its authority in Montenegro [see KARA DAGI] and Herzegovina, while, on the other hand, Serbia, and the two Danube principalities, since 1861 united in one state, recovered a nearly complete independence in 1865. Twelve years later the Bulgarian troubles again brought about an armed conflict with Russia, which country, in 1870, had already broken the conventions of 1856 about the Black Sea. The preliminaries of San Stefano (1878), mitigated by the Treaty of Berlin (1879), brought about the complete loss of Serbia, Montenegro and Rumania, while Bulgaria was constituted a semi-dependent principality; on the Caucasian frontier, Turkey lost Kars and Batum [q. v.], and Britain obtained the administration of the isle of Cyprus [see KUBURS]. This abandonment of Britain’s policy hitherto followed of respecting the integrity of Ottoman territory was followed in 1882 by the occupation of Egypt [see KHUDAW and MISR. D. 7]. The reason was in the dismemberment of Turkey in Europe: the Greek-Turkish war (1897), by which the Greek territory was enlarged towards the north, the autonomy of Crete (1898) and, after the deposition of Abd-ul-Hamid II, in 1909, the declaration of independence of Bulgaria and the annexation of Bosnia and Herzegovina by Austria. Then, after Tripoli had been lost in the war with Italy (1912, Peace of Lausanne), the Balkan War of 1912-13 reduced the territory of Turkey in Europe to Eastern Thrace, including Edirne, which town had even been occupied for some time by the Bulgarians.

During the 19th century, the relations with Persia had been on the whole peaceful; conflicts were only occasioned by frontier questions, such as the dispute about authority over the Kurdish territory of Sulaymaniyya [q. v.], which was settled in 1847 in favour of Turkey. The territory round the Persian Gulf had come more and more under the control of the British, but the territorial status in Asia remained for a long time unchanged. In the meantime, Turkey had been drawn gradually into the economic expansion schemes of the German empire as manifested by the project of the Baghdaad railway; this diminished Britain’s interest in the territorial integrity of the Ottoman state. So, when in the first year of the First World War, Turkey joined the Central Powers, Russia and British co-operated for the first time to take away Turkey. Britain’s interest in the territorial integrity of the Ottoman state was greatly diminished. The influence of the British in the Levant was now more firmly established than ever. This was not only the case in political questions, as for instance the armed intervention in the Lebanese and Syrian troubles of 1845 and 1860, after the troubles of Jidda in 1840 and in Damascus the formal regulation of the position of Crete in 1866. For the influence of the foreign powers was likewise extended to many points of internal administration, which kind of intervention was made possible by the capitulations. These originally unilateral privileges were looked upon now as bilateral treaties, but their contents had become incompatible with the new state conception that the Tanzimat tried to realise. From 1856, indeed, the Porte had tried in vain to get rid of this international servitude, which, at the end of the 19th century, had taken on the character of a collective tutelage of all countries possessing capitulations. Not till 1914 did the conflict between the European powers enable the Turkish government to put the capitulations aside [see IMTIYAZAT].

In 1862 the Ottoman government was able to restore its authority in Montenegro [see KARA DAGI] and Herzegovina, while, on the other hand, Serbia, and the two Danube principalities, since 1861 united in one state, recovered a nearly complete independence in 1865. Twelve years later the Bulgarian troubles again brought about an armed conflict with Russia, which country, in 1870, had already broken the conventions of 1856 about the Black Sea. The preliminaries of San Stefano (1878), mitigated by the Treaty of Berlin (1879), brought about the complete loss of Serbia, Montenegro and Rumania, while Bulgaria was constituted a semi-dependent principality; on the Caucasian frontier, Turkey lost Kars and Batum [q. v.], and Britain obtained the administration of the isle of Cyprus [see KUBURS]. This abandonment of Britain’s policy hitherto followed of respecting the integrity of Ottoman territory was followed in 1882 by the occupation of Egypt [see KHUDAW and MISR. D. 7]. The reason was in the dismemberment of Turkey in Europe: the Greek-Turkish war (1897), by which the Greek territory was enlarged towards the north, the autonomy of Crete (1898) and, after the deposition of Abd-ul-Hamid II, in 1909, the declaration of independence of Bulgaria and the annexation of Bosnia and Herzegovina by Austria. Then, after Tripoli had been lost in the war with Italy (1912, Peace of Lausanne), the Balkan War of 1912-13 reduced the territory of Turkey in Europe to Eastern Thrace, including Edirne, which town had even been occupied for some time by the Bulgarians.

During the 19th century, the relations with Persia had been on the whole peaceful; conflicts were only occasioned by frontier questions, such as the dispute about authority over the Kurdish territory of Sulaymaniyya [q. v.], which was settled in 1847 in
Such was the outcome of a long series of events, in which the inner development of the empire played no less a part than the outward political circumstances.

The subject period, in fact, was a matter of an inner power factor in the dissolution than the political interest of foreign powers. The Tanzimat [q.v.] were a more deliberate continuation of the reforming measures under Selim III and Mahmid II, and they were by no means the execution of a programme supported by a large group of the population. Reshid Pasha, Âli Paşa and their helpers wanted to turn Turkey into a modern state ruled by a council of a non-powerful government, whose president was the sâdiq a'sem, but their methods were those of an absolute government in the name of the sultans, who did not in the beginning interfere. When, however, the first real constitution was elaborated by Midhat Pasha [q.v.], it happened that the new sultan Abd-ul-Hamid II preferred to govern himself, and with the same absolutist methods as his predecessors; only his aim became ever less the copying of European models, but their strengthening and the securing of the position of the sovereign, to which end there was finally developed the notorious system of censorship and espionage which has made known this period in Turkish history as dever-i istibdâd "the period of despotism". This period cannot be called reactionary, in that it abolished the institutions of the Tanzimat; it opposed only some consequences of the reforms.

The reforms had brought into existence a middle class of intellectuals of Turkish speech and Islamic religious tradition, mostly divided between the army and the state functionaries and, in a less degree, the 'ulema. These intellectuals, of very different extraction, had developed a new ideal of patriotism, as reflected most eloquently in Namik Kemal's [q.v.] Wejan, and they had begun to form a public opinion that claimed a certain influence in the government of the state. About this time was also born the Turkish daily press [see EGARIDA. iii]. Gradually, as this social group took more definite forms, it became ever more separated from the different groups of the Christian and Jewish population, and also from the non-Turkish speaking Muslims in the Asiatic provinces. At the same time, however, relations between Christianity and Islam had worsened since the beginning of the 19th century as a result of the Tanzimat period, in fact, was a matter of a strengthening of the other class of the Turkish population, still strongly imbued with mystical traditions, and with the non-Turkish Muslims of the empire. Abd-ul-Hamid, while emphasising his dignity as Khalifâ, relied mainly on Islamic sentiment, though, in course of time, the persons who surrounded the ever more suspicious monarch came to be of the worst kind. Utterances of patriotism were opposed in the most drastic way and many intellectuals had to take refuge abroad. The programme against the istibdâd found at last a means of organising itself in the province of Macedonia, since 1906 governed by a Turkish governor under European control. Salonica became the centre of the new patriotic, more conscious, Young Turkish movement, led by the Committee of Unity and Progress [see ITTIHAD WE TERASKI DEM'ETYETI] and supported to a great extent by the army. Its influence obliged the sultan to promulgate again the constitution of Midhat Pasha on 24 June 1908 and to abolish at once the onerous system of censorship and espionage. In November, the first Ottoman parliament came together [see MADJLIS. 4. A. ii], but in the troubled years that followed this parliament never had the opportunity to exert a real influence on the government. On 13 April 1909 followed an attempt to re-establish the sultan's former authority; this time the Young Turkish cause could only be saved by the occupation of the capital by the Macedonian army and the deposition of the sultan (27 April).

Then, for a time, Ottomanism became the political ideal, meaning the equality of all Islamic and non-Islamic elements in the state. But it soon appeared that these elements were already too much estranged from each other, so that the foundation of a strong state on these principles became impossible. The Young Turks, under the influence of the ideas of Pan-Turkism [q.v.], began now a policy with the final object of making the Ottoman empire a state where the Turkish element should be predominant; they turned to the lower Turkish-speaking classes, especially in Anatolia, to form a real Turkish nation. Pan-Islamism, too, was propagated again by several persons as a way of attaining this aim, but this course was gradually abandoned, although used occasionally for outward political manifestations. The very unfavourable international development after the revolution, however, brought the Young Turkish rulers to measures that certainly were not originally on the programme, such as the Armenian massacres during the war and the severe government in Syria. And as a consequence of the final loss of nearly all non-Turkish territory in the war, Turkish nationalism was born at last, the simplest and at the same time the most effective form of Turkish patriotism, not hampered by any ideas of religion or original racial connections.

The statesmen who had carried out the Tanzimat programme had been careful not to offend the religious scruples of the leaders of orthodox Islam. In spite of the monstrances of foreign representatives, no measures were taken that were in direct conflict with the shari'a, though the application in practice might have been changed. The shari'a was only the basis of a political constitution of the Medjelle [q.v.]. Abd-ul-Hamid's constitution, Islam was declared the state religion and the Sheykh al-Islam was given a rank as high as the grand vizier. This wise religious policy could not prevent, however, occasional religious outbursts of which Christians were the victims, as in 1858 at Djidda and in 1860 at Damascus, both places situated outside the purely Turkish provinces. Under Abd-ul-Hamid, religious activity was mainly under the influence of Pan-Islamism, shown in the various attempts to enter into relations with Muslims in all parts of the world. Even the Young Turkish government did not refrain from proclaiming the Holy War on its entering the First World War. In their internal administration, the Young Turks clearly opposed the influence of the religious authorities, as was proved by their attempt in 1917 to bring the medreses under the administration of the Ministry of Public Instruction. Another opposition with the Islamic tradition was the reform of the calendar. In 1789 the Greek Julian calendar had already been introduced officially for the financial administration, but by a curious compromise the era of the Hijira was preserved (sene-yi mälyye); and in 1917 the Gregorian calendar was adopted. The Christian era came gradually into use after the war.

It was also through the Tanzimat measures that
domestic administration was separated from the military by the laws concerning the wildyets. The chief occupation of the Department of the Interior was still for a long time tax-gathering. The centralisation and concentration of the financial system proved to be one of the chief difficulties, as a reliable corps of functionaries had to be created at the same time. After the Crimean War, Turkey was able to conclude a number of foreign loans, but the money was not well administered nor well-used. In 1876, a state bankruptcy had to be declared, with foreign intervention as a consequence and the establishment of the 'service of the public debt'. This was very much resented in all Turkish circles. A serious hindrance for the recovery of the finances was also the antiquated custom rules of the capitations, although the original duties of 3% were several times raised. After the Young Turk Revolution, however, the greatest difficulties seemed to have been overcome.

The new Turkish army created gradually by conscription, after the suppression of the Janissaries, had during this period many occasions to show its valour. It contributed considerably to the strengthening of the patriotiс Turkish spirit and played an important role in the Revolution. After 1856 it was theoretically admitted that Christians and Jews also could be enrolled, but in practice they always liberated themselves by paying an exemption tax, the bedel-i 'askeri [see Badal]. It was only after the Young Turk Revolution that these non-Turkish elements also became Turkish soldiers.

Bibliography: Among the sources of Ottoman political history the historiographical literature of the Ottoman Turks themselves takes the first place. For this literature it is sufficient to refer to F. Babinger, Die Geschichtsschreiber der Osmanen und ihre Werke, Leipzig 1927. The study of documentary sources is still in its beginnings; historical documents have been published in various places, as in the TOEM (TTEM) and in the works of the Turkish historian Ahmed Refik. Some of the Kânân-nâmes have been published in TOEM and other Turkish publications. For the treaties of the Ottoman empire, a most valuable collection is to be found in Gabriel Effendi Noradounghian, Recueil d'actes internationaux de l'Empire Ottoman (Europeisation), 4 vols., Paris 1897-1903. On the epigraphical sources there are important monographs, such as those of Khalîl Edhem and the less ancient publications of Mübâreke Ghalîb. The chief work on Ottoman numismatics is still Îsmâ'îl Ghalîb, Takwîn-i meskûkât-i 'Ogânîyâye, Istanbul 1307, besides other publications (such as Ahmed Refik, 'Othmânîlî imperator buğundan meskûkât, in TTEM, nos. 6, 7, 8, 10; British Museum catal. oriental coins, vili); but see further on this, below, IX. Numismatics.

Of non-Turkish literary sources, the Oriental ones have been partly treated by Babinger in his bibliographical work. Among the Western sources, the Byzantine historians are of extraordinary importance for the first centuries of the Ottoman empire (Phrantzes, Ducas, Chalcocondyles, Crito-bulos). Since the 15th century a very important place is also taken by the Rezâlîn of the Venetian bailos, to be consulted in the great publications of Albéri (Florence 1839-63) and Barozzi and Berchet (Venice 1856-77). To them were added in course of time the reports of the representatives of other governments that entered into relations with the Porte. To the same category may be reckoned the numerous descriptions of travels in the Ottoman empire by European travellers, beginning in the 16th century. Not sharply separated from the travel literature are the many descriptions of the Turks and of the Ottoman empire, of which the best known is d'Ossian, Tableaux général de l'Empire Ot-{

oman, 3 vols., Paris 1787-1820. This kind of literature continued all through the 19th century (the important works of Ubicini) and the beginning of the 20th century.

The first great 'general' work on Ottoman Turkish history was Josef von Hammer's Geschichte des osmanischen Reiches, 10 vols., Pest 1827-35; a second improved edition appeared in 1854-6 (French translation: Histoire de l'Empire Ottoman, 9 vols., Paris 1835-43). This work is of great importance for the study of Ottoman history which had appeared in Europe until 1774. A work of the same scope is J.W. Zinkeisen, Geschichte des Osmanischen Reiches in Europa, 7 vols. (until 1812), Hamburg 1840 and Gotha 1854-63; Zinkeisen used Western sources much more than von Hammer, but did not draw directly from original Turkish sources. The same is the case with N. Jorga, Geschichte des Osmanischen Reiches, 5 vols. (until 1912), Gotha 1908-13. The Histoire de l'Empire Ottoman de la Jonquière, 2 vols., Paris 1914, is important for its historical treatment of the end of the 19th and the beginning of the 20th century. Among the several works that treat only a certain period of Ottoman history may be mentioned G. Rosen, Geschichte der Türk (1826-56), Leipzig 1866.

As a result of the greater interest in Turkish history after the First World War, there began to be published in 1922 the Mitteilungen zur Osmanischen Geschichte, by F. von Kraelitz and P. Wittek, the first journal published in the West, before the advent of Archivum Ottomanicum, specially devoted to Ottoman studies; it unfortunately ran for only two years, but more recently, various specialised journals and series have appeared in Turkey itself, such as Belleten, Tarih Dergisi, etc. carrying on the tradition of the Ottoman period and after TOEM (see above).

oman, Paris 1989 (authoritative chapters by various specialists).

For the earlier part of this post-1500 period, see I.H. Uzunçarşı, Osmanlı tarihi, ii-iv, Ankara 1949-59; Halil Inalcik, The Ottoman empire, the classical age 1300-1600, London 1973; M.A. Cook (ed.), A history of the Ottoman empire, Cambridge 1976 (= chs. from the Camb. hist. of Islam and the New Camb. modern history).

For the later part of this same period, there is the unsatisfactory work of H.A.R. Gibb and H. Bowen, Islamic society and the West, 2 vols., London 1950-7, and the classic by B. Lewis, The emergence of modern Turkey, London 1961, revised ed. London 1968; see also the chs. by H.J. Kissling, H. Scheel
divided into 'askeri' who served the Sultan as soldiers or officials, owing allegiance to him alone (many of them slaves, küls), and the tax-paying subjects or nəşrāy (see RA 'tārıkī'). 'Askeri' were exempt from most taxes, and society's wealth was concentrated in their hands. Ottoman authors of the 10th/16th and 11th/17th centuries, particularly the historian Muṣṭafā ʻĀli, emphasised the rigidity of the nəşrāy- ʻaskeri boundary. In their view, 'askeris' were to be recruited from among the sons of 'askerkis', except in the case of officials with religious-juridical training (ʻulama), who might rise to the rank of vizier. In reality, other 'askeris' were also recruited from among the nəşrāy. Soldiers distinguishing themselves on the frontier were awarded a timār and thus joined the ranks of the sipāhs. Christian peasant boys recruited through the dewshirme [q.v.] might rise to the rank of vizier, and the financial bureaucracy, which as a separate career evolved in the 10th/16th century, was entered by men from diverse social backgrounds. However, the status of many officials from non-'askeris' families and who were not recruited through the dewshirme was often precarious, with some of them experiencing denunciation and demotion.

As a kul, an Ottoman official was beholden for his entire career to the sultan, who could promote, demote and even execute him at will. His children did not inherit the right to any specific official post, even though by the 10th/16th century, the sons of sipāhs by virtue of their birth could apply for a timār when they had reached the appropriate age. Other officials introduced their sons to potential patrons who might further their career in the military, scribal or financial services. Special rules of promotion applied to ʻulams, who after completing their studies taught in a sequence of progressively higher-ranking madrasas before they became eligible for the office of ládd [see 'ilmivyev]. Alone among the 'askeris, ʻulams or officials' estates reverted to their heirs, while the estates of küls were in principle confiscat ed. The extreme independence of kul officials upon the ruler defined contemporaries of slavery: an Egyptian ʻaybak of the 10th/16th century challenged Ottoman officials as unworthy of ruling over free Muslims, unless they could present formal proof of manumission.

The ascendancy of the Ottoman ruling group dates to the reign of Mehemmed II the Conqueror (848-50/1444-6 and 855-86/1451-81 [q.v.]). He severely curtailed the role of the Anatolian Turkish aristocracy, from which his first Grand Vizier Candarlızāde Khâhil Paşa (killed 857/1453 [see PĄń- dârık]) had come. Khâhil Paşa was executed, and many magnates were forcibly separated from their adherents by resettlement in Kûmël. Numerous large landholdings and pious foundations were confiscated and converted into timārs. This measure increased the number of warriors at the disposal of the central state. But after Mehemmed II's death, his son Bâyâezîd II (886-918/1481-1512 [q.v.]) returned many properties and pious foundations to their previous holders.

The 10th/16th century saw the dewshirme-recruited küls at the height of their power. Their number included Grand Viziers such as Kânnûn Süleyman's one-time favorite Ubrâkîn Paşa (killed 912/1506) and his successors Rûstem Paşa (died 968/1561) and Sinân Paşa (died 1004/1596). While recruitment through the dewshirme remained a privilege of the sultan, high-ranking officials sometimes trained young küls in their own households; these might be taken over into the sultan's service. Prominent administrators often had their relatives and countrymen recruited through the dewshirme; this gave rise to the
formation of patronage networks and regional groupings. A particularly successful example was the Sokollu [q.v.] clan, founded by Sokollu Mehmed Paşa (killed 987/1579), who acted as Grand Vizier and Vizier under Kanuni Süleyman (926-1520/60-20) [q.v.], Selim II (974-1574/75 [q.v.]) and Murad III (982-1595/1584-94 [q.v.]). In the later 10th/16th century, the ‘‘easterners’’ who came from the Caucasus and often seen service in the Persian administration, opposed the ‘‘westerners’’, a group which included Serbs, Croats and Albanians.

In the 11th/17th century, the deughime became less important as a mode of recruitment into the Ottoman ruling group. High-level officials now took promising young men into their households and launched them on to their careers, thereby securing their own positions. Loyalty to one’s patron constituted one of the principal virtues of an Ottoman gentleman. Rivalries between members of different households were commonplace. The household of the Şeyhülislam Fadl Allâh Efendi (killed 1115/1703), well-documented through the Şeyhülislâm’s autobiography, demonstrates the manner in which the system operated; yet Fadl Allâh in part fell from power because of excessive nepotism. Patronage relations continued to be important well through the Tanzimat period, even though the differences in legal status between askeris and reşûys, as well as the sultan’s right to execute his servants as will, were abolished by the guarantees of life, liberty and property promulgated by the Tanzimat fermânı.

The coherence of the political structure was ensured by the sultan, in whose name the askeris ruled and collected taxes. As the victor over heretics and infidels, the sultan legitimised the entire state. Spectacular failure in war was a reason for deposing a ruler, thus Mehmed II (1066-1122/1656-1710) [q.v.] and Mustafa II (1071-1124/1661-1703) [q.v.] lost their thrones due to the outcome of the Ottoman-Habsburg war of 1095-1111/1683-99. Down to the late 10th/16th century, the ruler was expected to take the field in person, and the historian Muşafa ‘Ali censured Murad III for failing to do so. Well into the reign of Kanuni Süleyman, the ruler dined regularly in front of his soldiers even in peacetime, thereby documenting his good health and preparedness for war. However, in the later years, Kanuni Süleyman developed a different style of palace life; now the remoteness of the ruler and the fact that he rarely spoke in public were regarded as proof of his dignity. From the later 10th/16th century onwards, the sultan was no longer required to take an active role in government, and administration lay in the hands of Palace dignitaries and the Grand Vizier; the Grand Vizier’s power was particularly great during the Köprülü vizierates (1066-1122/1656-1710 [see KÖPRÜLLÜ]).

Tension between askeris and reşûys focused on the status of men serving as soldiers without possessing the rights of askeris. In the 11th/17th and 12th/18th centuries, provincial governors recruited and paid their own forces; the latter possessed no official status and lost their jobs when the employing paşa lost his, and even in the 11th/17th century, the men often rose in rebellion to safeguard their positions, or else forced the employing paşa to do so. Unemployed mercenaries turned to highway robbery, against which Anatolian villagers at the end of the 10th/16th and 11th/17th centuries defended themselves by organising their own militias. Conflicts between mercenaries in the service of a paşa, unemployed soldiers and village militias constituted the civil wars known as the Délâf rebellions [q.v. in Suppl.]. In Rumeli mercenarles of reşûys background fighting on the frontier were thrown out of employment when the Ottoman empire expanded and Viziers and Kâdis lost their pay. In the peace of Karlofca (1110-1699 [q.v.]) and later peace treaties; this was the background of the haydük rebellions.

**Peasants status and power in the countryside**

Down to the end of the 10th/16th century, the Ottoman élite’s principal means of controlling the reşûys was the timár. Timár holders (sipâhis) at this time constituted the backbone of the army, but also were in charge of local administration. Peasants were not permitted to leave their farmsteads without the permission of the sipâhi. If they did, the timár holder could have them returned by applying to the kâdî’s court within a delay varying between ten and twenty years according to the locality. However, the responsibility of proof was on the sipâhi, and many migrants were able to provide witnesses testifying to their residence for the requisite period. Ottoman regulations accepted the existence of reşûys not included in the official tax registers (sâvir) ([kânûn-ı esef]). The latter migrated, and only if they continued to reside in the same place for a prolonged period of time, were they entered in the tahrîr register.

Farmland and pasture normally belonged to the state, and the peasant owned only his house, gardens and vineyards. Peasant tenures passed from father to son, other relatives inherited against payment of an entry line (rasm-i tapu). Daughters were originally excluded; with the increasing impact of şeriat inheritance rules from the end of the 10th/16th century onwards, they were admitted in the absence of sons. Peasants in the 10th/16th century were forbidden to sell their tenures without the consent of the relevant timár holder, foundation administrator or granter of crown lands. However, such permission was often granted, and by the end of the century in some regions we encounter a lively land market. In the Kayseri area, fields formally owned as private property became widespread in the course of the 12th/17th century. The Ottoman land law of 1274-75/1858 [see Mârz. 3. In Turkey] sanctioned the transition to private property, which in the Ottoman core lands had been going on for several centuries. But in those provinces where land had historically been communally owned this law furthered the formation of large-scale private property, as tribal leaders registered communal lands as their own.

Taxation rates varied from region to region; the determining factor was often historical circumstance, rather than the productivity of a given area. The tithe (şâgir) was higher than one-tenth, as a share for the tax collector (salârâyé) was usually included. In parts of eastern and central Anatolia, where taxes were shared between the state and private landowners, the peasants paid a double tithe (mâilkân-dilwânî). In Syria and Palestine, tithes might amount to a quarter or a third of the crop. Tithes were demanded in kind; in addition, the peasants paid money taxes both to the timár holder and to the central administration. The proportion of total dues payable in money varied according to time and place.

In the early Ottoman period, peasants provided labour services for their sipâhi (eddar kulluk, “seven services”). When the regulations preceding Ottoman tax registers, the so-called kânûn-nâmé, codified peasant-sipâhi relations in the 9th/15th and 10th/16th centuries, most labour dues had been commuted to payments in money and in kind. However, even at this time, peasants were obliged to build a tithe barn for their owner, and cart the sipâhi’s grain to the
nearest market. The judges’ protocols (kâdi sâdilleri) of certain provinces record the tensions ensuing from these relationships, such as disputes as to what constituted annual payments were fixed as a moderate dues in kind into money payments caused difficulties in areas remote from the main thoroughfares, where opportunities for commercialisation were few. In the late 10th/16th and early 11th/17th centuries, reâyâ attempts to shake off sipâhî control can also be traced through the justice rescripts (sâdîlet fermânları). The sâdîlet-name of 1058/1648 explains that it was not sufficient if peasants paid their taxes to the sipâhî or other legal claimant to the village revenue; they also owed him submission and obedience. But the sipâhî’s frequent absence on campaign, the limited material means at his disposal and peasant access to the kâdi’s control made it impossible for the former to exercise full control over the peasants.

Down to the mid-9th/15th century, the Ottoman state probably was a “light” state, demanding but little from the peasantry. The campaigns of Mehmed the Conqueror led to an increase in peasant taxes, and the contemporary chronicle of ʿÂşık-pasha-zâde reflects the dissatisfaction of a member of the Anatolian aristocracy with the newly-emerging, much more costly state. In the 9th/15th and 10th/16th centuries, taxes were normally collected by the holders of timâr, zrâmet and köşâş, who owed military or administrative service and therefore did not remit much cash to the central administration. From the later 10th/16th century onward, the increasing costs of war induced the central administration to progressively substitute tax farming [see mültezmî]. Tax farmers acquired the right to collect taxes at auction. The contract in principle was awarded for three years, but could be terminated earlier if a higher bid was received. A tax farmer also acted as local administrator, but could be from the reâyâ. A wealthy villager might bid for the taxes of a single settlement, while the major tax farmers were rich men and occasionally women, often close to the court.

In 1106-7/1695, a new kind of tax farm was instituted, the mâlîkâne [q.v.], which combined features of the timâr and the old style tax farm. The mâlîkâne holder paid a large sum of money to the treasury upon entering possession. For the remainder of his or her life, and that of his or her male heirs, the estate remained in the hands of the Ottoman ruling group. The mâlîkâne was instituted to ease the pressure upon the reâyâ, as it was claimed that long-term holders would be concerned about the future of their tax base, while ordinary lizzâtam holders were concerned only with short-term gain. However, frequent subletting for short periods tended to nullify this advantage.

Tax farmers of different types were an important component of the aâyân [q.v.], local power holders who from the late 11th/17th century onward dominated growing sectors of the Ottoman countryside without necessarily being landowners. A major source of aâyân power was the right to apportion taxes, levied en bloc by the central administration, among individual settlements. This allowed aâyân holding land to spare “their” peasants at the expense of their neighbours, and taking advantage of the central government’s fiscal needs. Prominent power holders became tax gatherers for absent provincial governors, and in coastal regions with opportunities for export, marketed the produce gathered as taxes in kind, along with the saleable surpluses belonging to villagers. The Kara ʿOthmân-oghullarî of İzmir and Manisa, for instance, rose to power in this fashion. Even though the sultans of the 11th/17th and 12th/18th centuries often had the heads of aâyân families executed, the treasury needed the family’s services, and thus the following generation was allowed to follow in their fathers’ footsteps.

Only in the reign of Mahmûd II (1233-55/1808-38 [q.v.]) was this policy reversed; this sultan relied on European, particularly British, support to eliminate internal opposition. Many aâyân were executed and their possessions confiscated; those who remained were often still wealthy but no longer a political threat to Ottoman central government. Even though the major aâyân of the 12th/18th and 13th/19th centuries had considerable military forces at their disposal, only a few of them seem to have aimed at political independence. Culturally speaking, they looked toward Istanbul, and in their residences imitated the mural paintings then current in the Palace and the wealthy dwellings of the capital. Some of them fostered an interesting adaptation of rococo and empire decorative styles.

Landholdings in the hands of wealthy power holders are known as çiflik (see çiflik). Recent research downplays the importance of market-oriented large-scale production before the 13th/19th century. Such production occurred, by the end of the 11th/17th century, in the western Black Sea region with a view toward the Istanbul market. In the 12th/18th century, çiflik spread to Macedonia, and part of their production was now destined for export. Many çiflik used sharecroppers in addition to wage labourers and a small number of slaves. Most of them were not large, and those that were, often appropriated some of the produce which, under the earlier régime, had been left in the hands of the peasants. Saleable surpluses were normally produced by peasants, and the power holders reserved for themselves the profits of commercialisation.

Peasants production In its vast majority, the Ottoman population consisted of settled peasants producing mainly for their subsistence and controlling their family farms. Peasants grew wheat and barley, leaving a one-year fallow period between crops. Rice and millet were of secondary importance. Oil was gained from plants, such as sesame, linseed or poppy; melted butter was also widely consumed. Olives were important in the northern Sûleyman (see Sûleyman) region of western Anatolia. But olive oil was largely used for lighting; its use as a food seems to have been secondary. Grapes were consumed as raisins and grape syrup, most towns being surrounded by a belt of gardens and vineyards. Non-Muslims also produced wine, which Kânûnî Süleymân forbade them to sell in public. But at least in Ottoman Hungary, the prohibition was hard to enforce, as the timâr holders of this area had taken over the monopoly of wine sales during part of the year (manopâya). Honey was also produced.

Certain regional specialities were highly esteemed; thus English merchants of the 11th/17th century were granted the privilege of exporting a small quantity of Aegean raisins for the table of their king. During the same period, Malatya was already renowned for high-quality fruit, while hazel nuts were found on the Black Sea coast. Cotton cultivation, according to 10th/16th century tax registers, was significant in certain parts of Syria [see Küny. 2. In the Ottoman empire], in the Adana region and on the Aegean coast, while flax was grown in northwestern Anatolia. Tobacco appeared in the central Anatolian countryside by the beginning of the 12th/17th century, introduced by soldiers who had become accustomed to its use on the Hungarian frontier. Tobacco cultivation spread in spite of
repeated prohibitions. Many specialty crops have persisted in the same locations for several centuries.

In the 10th/16th century, rice [see ưaZe] was still a luxury. It was cultivated mainly in the areas of Filibe (Ploudiê) and Boyabat in northern Anatolia. Rice was rarely grown by ordinary peasants, but by specialised labourers, working under supervision and without any farms of their own. They were exempt from the taxes payable by other peasants. Possibly they had originally been war captives, although there is room for debate whether rice growers were better or worse off than ordinary peasants. Rice entered western Rumeli on a limited scale during the 11th/17th and 12th/18th centuries. Villagers dependent on landlords (so-called  SetUpik villagers) sometimes cultivated wheat for their masters and maize for their own consumption.

Small-scale irrigation [see yclerview], 8. Irrigation in the Ottoman empire was widespread throughout the Empire, even though 10th/16th century plans to make a "second Egypt" out of the lake districts of central Anatolia did not come to fruition. Water power was used for industrial purposes, particularly the milling of flour; 10th/16th century tax registers record the number of mills in each village, and often the number of months during which available water supplies permitted operation. In villages near 10th/16th and 11th/17th century Salonica, water power was used for the fulling of woolen cloth, while in the Bursa-Izmit area, sawing mills were also water-driven. These activities were market-oriented and therefore located in the vicinity of larger towns.

Urban merchants in certain regions intervened in village production. In the second half of the 10th/16th century, Ankara merchants had angora wool spun in steppe villages, while in the more immediate vicinity of the city, cloth was woven. Similar arrangements existed in the Bursa and Aydin cotton manufactures. This putting-out system coexisted with the direct marketing of rural products by peasants.

Most peasant marketing was probably undertaken to earn the cash needed for taxes. In many parts of 10th/16th century Anatolia, markets expanded as population increased. Only occasionally did rural dwellers demand urban goods and services, such as jewelry or repairs to a heavy plough. Itinerant artisans catered for some of this demand, repairing copper kettles or putting up mudbrick walls. These migrant artisans, sometimes enrolled in the Janissary corps, competed with urban craftsmen. Peasant-nomad exchanges were less unequal; these took place at seasonal fairs, often sited on summer pastures used by both villagers and nomads.

Nomads and other herdsmen

Nomads in Rûmeli and Anatolia often grew some wheat, barley or cotton in their winter quarters. As many villagers on the Aegean and Mediterranean coasts migrated into the mountains in summer to escape the danger of malarial infection, social differences between peasants and nomads were less pronounced here than in sub-desert areas. Yet this did not preclude disputes about fields and gardens damaged by nomad flocks, or outright robbery on the part of semi-nomadic tribes. Nomads and semi-nomads were important to the urban transport economy, as they raised the horses, camels and mules needed by merchants and officials.

But nomads were more difficult to tax than settled peasants, and due to their possession of horses and firearms, the administration regarded them as potential robbers and rebels. The settlement of Anatolian nomads was therefore officially encouraged. Animal taxes were sometimes levied in such a manner as to endanger the reproduction of flocks. If a degree of settlement had been reached, nomad groups were reclassified as low-level districts (sâhibî [q.v.]) settled by peasants. In the 10th/16th century, Anatolia was a land of peasants, with a nomad minority varying in size according to the region. Migration from eastern to western Anatolia probably resulted in a higher percentage of nomads in the 12th/17th century, which the earliest official attempts at forcible settlement did not change. Settlement projects continued in the 12th/18th centuries after the immigration of Muslim inhabitants from the Crimea and Balkan territories lost by the Empire necessitated the creation of new opportunities for peasant settlement. Particularly in southeastern Anatolia, commercial agriculture became possible after large numbers of nomads had been forcibly settled.

In Rûmeli nomads were an important component of the population, mainly in Thrace. These yârubî [q.v.] were detribalised at an early stage, and given a military organization. The yârubî were organized in units called adıjs [q.v.], some members participating in campaigns while the others financed the campaigners' equipment. From the 10th/16th century onward, nomads were no longer employed as fully-fledged soldiers but mainly as auxiliaries. Yet their services were still needed, and therefore the central administration penalised yârubî who settled by increasing their taxes. Ottoman Rumeli also was inhabited by Christian migrant herdsmen, the Vlachs, who enjoyed tax exemptions. With trade between central Europe and the Balkans increasing in the 12th/18th century, many Balkan herdsmen prospered as transportation entrepreneurs.

Trade

The bulk of Ottoman trade was internal. Istanbul was supplied through interregional trade, involving the shores of the Black Sea, the Aegean and even Egypt. Down into the 13th/19th century, wheat and barley came mainly from the western coasts of the Black Sea. Fruit, both fresh and dried, was supplied mainly by western Anatolia and Thessaly, while meat on the hoof came to Istanbul from the Balkan peninsula and to a lesser extent Anatolia. The capital's needs for raw materials, wood, the latter responding to the high demand for campaigners' equipment. From the 10th/16th century onward, nomads were no longer employed as fully-fledged soldiers but mainly as auxiliaries. Yet their services were still needed, and therefore the central administration penalised yârubî who settled by increasing their taxes. Ottoman Rumeli also was inhabited by Christian migrant herdsmen, the Vlachs, who enjoyed tax exemptions. With trade between central Europe and the Balkans increasing in the 12th/18th century, many Balkan herdsmen prospered as transportation entrepreneurs.
previously paid out as taxes. According to the price lists (narkh defterleri [see NARKH]) of Istanbul, oil, honey, skins and hides reached Ottoman territory. The merchants conducting this trade were mainly Muslims; the conquest of Genoese Black Sea bases gave the Ottomans an added incentive to control the trade routes passing through Egypt and Syria. Traders based in Cairo dealt with India, importing Indian fabrics and spices by way of the Red Sea. The importation of coffee from Yemen became more important during this 10th/16th century [see KAHWA]. This trade was profitable enough to counterbalance the loss of transit trade in spices to Venice, as the Dutch had monopolised the importation of spices to Europe at the beginning of the 11th/17th century. Aleppo was a major entrepot of the silk trade, where raw silk from Persia was sold to Ottoman, Venetian, English and French merchants [see HARRIR. ii. The Ottoman empire]. Damascene traders supplied the pilgrimage caravans, and also delivered manufactured goods to the Hijaz. This expansion of the area in which Ottoman traders operated stimulated the economy in general.

While the Venetians had specialised in the transit trade in silks and spices, the English merchants, who entered the Mediterranean during the closing years of the 10th/16th century, paid for the silk they purchased with moderately priced English cloth; their competition caused the woolens of Salonica to disappear from the market. French merchants from Marseilles bought and sold a wide range of goods, which in the 12th/18th century included woolen cloth from Languedoc. They also purchased olive oil and grain in Tunisia, and also acted as shippers. The depredations of pirates and corsairs gave European ships a competitive advantage over the Venetians and the Portuguese, as they were able to offer better security, and by the 12th/18th century, even trade between ports of the Ottoman Empire was largely effected in European ships.

During the 11th/17th century, Ottoman non-Muslims gained ground vis-a-vis their Muslim competitors, benefiting from the expansion of European trade. As the capitulatory rights granted European merchants also became more important during this period [see İMTİYAZAT], many members of the minorities were able to gain tax privileges by registering as servitors of foreign consulates. However, this did not preclude lively competition between Ottoman and foreign merchants. In the 12th/18th century Greek traders benefited from French involvement in wars to expand their merchant marine and establish a successful diaspora not only within the Ottoman, but also the Habsburg and Russian empires. Syrian Carlists competed, Serbs, in particular, cloth weavers in Vienna, while the woolen cloth weavers of Filibe (Plodiv) marketed their goods throughout Anatolia. In many areas, the transformation of local economies away from manufactured goods and toward the provision of grain and raw materials to European buyers did not take place until the 13th/19th century. Capital resources accumulated by non-Muslim merchants were often used to bolster the resistance of local economies against foreign control.

Integration into the European-dominated world market during the 13th/19th century did, however, politicise pre-existing communal tensions. In the 1260s-1270s/1840s-1850s Damascus merchants involved in the supply trades encountered serious difficulty due to the increasing export of grain to Europe in which non-Muslims were active. This was the economic background to an attack on the Christian quarters of Damascus in 1276/1860.

The Ottoman government during the Tanzamā period (1255-93/1839-76 [q.v.]) responded to the threat of economic and political disintegration by the construction of railways and telegraph lines, and permitted the modernisation of the major ports. However, these investments were expensive, particularly the kilometric guarantees demanded by foreign investors in the railways, so that the latter's benefit to the Ottoman economy is open to question. Most lines linked a port to the hinterlands, in cases where the government imposed its will, strategic rather than economic considerations determined the course of the railways. Ottoman spending on war and infrastructure having led to bankruptcy in 1296-97/1879, major sources of revenue were pledged to the settlement of debts and committed to administration by a consortium of creditors known as the Detti Ottomane. For the remainder of the empire's existence, Ottoman public spending was limited by the constraints imposed by this consortium.

Monetary developments

While the use of cash continually expanded throughout Ottoman history, even the timār system in its early shape could not operate without a money economy. Down to 882/1477-78, when the first Ottoman gold coin was minted, roughly corresponding in weight and fineness to the Venetian ducat, the Ottoman mints turned out silver coins only. The akçe [q.v.] before the devaluation effected by Mehmed the Conqueror weighed 1.01 gr. and 0.83 gr after this event. Throughout most of the 10th/16th century, the akçe stood at 0.73 gr; a new wave of devaluation occurred at the end of the 10th/16th century, at a time when imports of silver from the New World had also resulted in a price rise. The latter was viewed by contemporaries as a major calamity, affecting not only the conduct of trade but the legitimacy of the state. In spite of several currency reforms, in the course of the 11th/17th and 12th/18th centuries the akçe was devalued to such an extent that it disappeared from the market and only survived as a money of account. Its place was taken by the paşa [q.v.], originally an Egyptian coin valued at twice or three times the rate of the akçe, and by a number of European silver coins collectively known as ğırisık. These were also debased, as the importation of low-quality European coins constituted a major business at the end of the 11th/17th century. Local mints virtually ceased operation. There was a brief experiment with a trimetallic system in the late 11th/17th century. Copper, which hitherto had been used only in small transactions, was now declared legal tender. Uncontrolled inflation led to a return to the bimetallic standard after three years.

Debasement as a means of raising revenue was abandoned in 1260/1844, when a new bimetallic system was established, based on the silver kırık and gold lira (100 kırık = 1 lira). This standard was adhered to till the very end of the Ottoman Empire, as monetary stability was now regarded as essential to the needs of trade. To cope with budget deficits, the
authorities occasionally issued paper money and then allowed it to depreciate, or contracted the loans which finally caused the bankruptcy of 1296-97/1879 (see further, below, IX. Numismatics).

**Urban artisans**

Many urban producers were organised in guilds, which had adopted rituals of the Akhis [q. v.], organisations of young men which Ibn Battütä encountered in many early 8th/14th century Anatolian towns; however, the Akhis were not organised by craft, and the exact link between guilds and Akhis is little understood. Guilds were headed by a şeyk (sheykh), whose role was in common with the French guilde master. Daily business was conducted by the kekhasil and yigitbashi, who were elected by the guildsmen and confirmed by the administration; guild officials purchasing their offices are also on record. Guilds were composed of masters; apprentices and hired labourers (işçis) were not members, and masters tried to discipline their employees through their guilds. In some places, such as 10th/16th century Jerusalem or 12th/18th century Bursa, the guilds could be entered easily. At times, it was probably sufficient to pay the requisite taxes to be considered a guild member. But in other instances, masters refused the entry of newcomers under the pretext of insufficient skills; in Bursa, where such cases are also on record, rejected masters sometimes formed new “business centres” on the outskirts of the city.

Guildsmen often procured raw materials collectively, by agreement with the farmer of a mine or else another guild. Yigitbashi and kekhasil were in charge of distribution among individual artisans, and often the small masters complained that their more successful colleagues obtained more than their due; or else suppliers found it advantageous to sell to merchants at higher prices, particularly if the goods in question were also in demand in the export market. If the artisans whose interests were hurt by this intrusion of the free market made their complaints heard in Istanbul, export prohibitions were promulgated. In other instances, guildsmen preferred to abandon collective purchases altogether.

In the 11th/17th to early 13th/19th centuries, guildsmen developed a form of property known as the gedik [see şinva], which encompassed the locale and tools necessary for the exercise of a given trade. This was a response to increased demands for rent from property owners, particularly uykış, which resulted from the demand for revenue placed upon the latter by the Ottoman administration. Once a given property had been recognised as forming part of a gedik, it could only be turned over to another guildsmen, and guild officials had to approve the transaction. This arrangement protected the interests of craftsmen in contracting trades, but made overall adjustments to changing demand more difficult. The Ottoman administration, torn between the need for increased revenue from uykış and the wish to protect its urban tax base, did not prevent kâdis from recognising the gedik.

From the government’s point of view, the guilds were important as a means of securing control over the urban population. In wartime, the guilds were obliged to provide artisans accompanying the army and undertaking the maintenance and repair work needed by the soldiers. Other guilds were obliged to find rowers for the navy. Assessment was not equal, and gave rise to frequent disputes.

Prices demanded by artisans were decreed by the market inspector (mühisib [see şinva]) or kâdi, after consultation with the heads of the relevant guilds. In Istanbul and other large cities, official prices were recorded in special registers or entered into the kâdi süçilleri; in smaller towns only the prices for basic foodstuffs were officially promulgated. The Palace often demanded goods at less than the official price. Profit margins for artisans ranged between 10 and 20 per cent, while long-distance traders were much less closely controlled. Capital formation by artisans was difficult, although there were instances of craftsmen branching out into trade without severing their links to manufacture.

Craft guilds retained their vitality throughout the 13th/19th century, particularly in Istanbul. With European investment growing, especially in the transportation sector, guilds defended the interests of dockyard workers and others whose livelihoods were threatened by technical and organisational reshaping of enterprises. The Ottoman government, both before and after the revolution of 1326/1908, saw the revaluation of these guilds as a means of augmenting its own bargaining power vis-à-vis foreign interests, and adopted a neutral or even favourable stance. In the long run, however, the restructuring of enterprises within the framework of dependent capitalism weakened the power of the guilds.

Not all urban handicraft workers were guild members. In 10th/16th and 11th/17th century Bursa, slaves were employed by silk weavers and merchants; after manumission, some of them set up independent businesses and then joined the guilds. Women working for artisans also were not usually members. New migrants to the city, unable to enter a guild, often made a living as street sellers; this was resented by the guildsmen, as these unorganised competitors paid no taxes. During the migrations which accompanied the Djelali rebellions (late 10th/16th-early 11th/17th centuries) many such migrants were active in towns along the principal routes to Istanbul. Some of the migrants were destitute; at the end of the 10th/16th century, a prison was built in Üsküdar to facilitate catching these people and sending them back to their places of origin.

**Urban society and spatial structure**

In Ottoman cities, most artisan activities took place in the carşı, a district filled by khanas, the covered market (bedesten) and uykîf-owned shops. Only transients renting accommodation in tugars and küfbars. Down to the middle of the 13th/19th century, construction in residential quarters was not planned by any central authority, which only from time to time decreed that encumbrances in public thoroughfares needed to be removed, or that non-Muslims must not reside in Muslim quarters so that existing mosques would be ensured of a congregation. Most day-to-day affairs were in the hands of the kekhasil of town quarters or communities, disputes being adjudicated by the kâdis. From the Tanzimat period onwards, newly-founded town quarters were sometimes designed according to a master plan; the Ottoman administration was concerned about securing streets wide enough for wheeled traffic and the passage of fire trucks. In Istanbul and Bursa, neighbourhoods in fashionable areas were reorganised according to criteria derived from contemporary French urban planning; by the late 13th/19th century, the results of such planning were seen in Anatolian provincial towns as well. To administer these projects, special administrations were instituted; these involved the creation of representative bodies through which urban elites influenced planning.

Building styles in vernacular architecture varied according to the region but also the time period involv-
ed. The impact of Istanbul models can be discerned in 13th/19th century houses in present-day ... 233-9; Mustafa Akdag, Turk halhnin dirlik ve diizenlik kavgasi, "Celali tsyanlan", Ankara 1975; Mehmet Gene, Osmanh...
maliyesinde malikane sistemi, in Osman Okyar and Unal Nalbantoglu (eds.), Turkhiye iktisat ... 299-328; C.A. Bayly, Imperial meridian, the British Empire and the world 1780-1830, London 1989; Faroqhi, Merchant

The literature to which the name of Ottoman is now generally given arises out of the literature of the Oghuz Turks, who settled in Asia Minor in the Seljuk period and later in the time of the Ottomans in Rum-ili, where they founded a powerful empire. This literature, which had an uninterrupted development from the time of the Seljuks up to the beginning of the 20th century, was based on the literatures of still older dialects and remained in touch with these in all periods of its evolution. Especially since the 16th century, it became the most important and richest branch of all the Turkish literatures and exercised an influence on the literature of the other dialects. Here the general evolution of this literature will be sketched, noting its main genres and principal personalities. We shall deal not only with the classical literature which was confined to the upper classes, but also—in their general features—with the literature of the masses, that of the poet musicians (saz şəvəleri) and the literature of the various mystic groups.

Ottoman literature may be divided into three great periods, corresponding to the general development of the history of Turkey:

a. Muslim literature from the 13th century to the end of the 16th century.

b. After 1600 A.D.

c. European-type and national literature, arising out of the development of the nationalist movement, to the end of the Ottoman dynasty.

These will be examined in chronological order, in order to avoid arbitrary distinctions.

(a) Until 1600 A.D.

1. The beginnings

We find the first written examples of Ottoman Turkish literature already flourishing in the 13th century, and the works of that literature can be divided into three types:

1. Classical mystical (Şūfi) literature;
2. Religious mystical folk literature; and
3. Classical (later called Divan) literature.

Given that the Mongol invasion of Anatolia gave an impetus to the spreading of mystical views there and to the literary activities based on them, we shall have to consider this period as the starting point. During the Mongol invasion, the migration from Persia and Turkestan to Anatolia was intensified: scholars, Şūfs and dervishes of various sects (e.g. Nadjin al-Din Kubbâ [d. 1226 (q.v.)], Kubî al-Dîn Haydar), and rich merchants settled down in Anatolia. Amongst them were major poets as well, such as Fâqir al-Dîn ‘Irâkî (d. 1289 (q.v.)), author of the theosophical poem Lamâ’sî, Awâd al-Dîn Kirmâni and Sheykh Nadjin al-Dîn Dâyâ (d. 1256). These Şūfs settled in the cultural centres of Anatolia, such as Tokat, Konya and Sivas, and enjoyed the patronage and respect of the Rûm Seljuk sultans, and attracted extensive popular followings. In this way, Şūfi concepts and ideas spread effectively amongst the folk masses over wide areas. In addition, when we consider that Ibn ‘Arabi (d. 1240), and his step-son and interpreter шadr al-Dîn Kownawî, both settled in Konya after having found peace and tolerance at the Sâlûqû court, we can assume that already in the 13th century a cultural impulse for the future development of classical Şûfi literature had been prepared. Moreover, Rûmî both elaborated and popularised Ibn ‘Arabi’s mystical ideas within the spiritual and formal framework of classical Islamic literature. Thus he introduced the aesthetic conceptions and formal constructions of classical Islamic literature to Anatolia; he also played a most important role in the furthering of both classical (buzzûn) literature and the classical Şûfi literature, the ‘Arabi order which arose after him [see mawlawiya].

Alongside this Şûfi folk literature there developed a religious folk literature based on the tradition of singing of poetry with musical accompaniment (sâz) [see also nêfes]. This became widespread among the army and the city folk, the Turcoman tribes and the frontier ghâzîs, and the folk minstrels, under the influence of the religious atmosphere, and it included heroic epic cycles and also short pious tales (e.g. the Bastâl-nâme, Dânînhmend-nâme, the Tale of the Gazelle, Tale of the Dove, etc.) This religious folk literature should accordingly be added to the Turkish literature of the 13th century.

The works belonging to the classical Şûfi literature of this period were composed with the metres and forms of classical Islamic literature. This meant that the first principle was to face the difficult task of applying the rules of the ārâd metre to the phonetic system of Turkish. As a result, we witness in these early poems a lot of unnatural and forced expressions. Amongst these works we should mention the following: two religious maddana, the Cârkhah-nâme and the ‘Ewâfî-nesâbûd-i sherefi of Hadîjî Ahmed Fakhî [q.v. in Suppl.] from Konya, the Turkish ghâzîs of Mawlânâ Rûmî (d. 1273 (q.v.)), the Turkish poems found in Sultan ‘Abîd’s (d. 1312 (q.v.)) Rehâh-nâme and ‘Ibtîdâ-nâme, Seyyûd Hamza’s ghâzîs and his maddana called Dânînî-yi ‘Uyûf, and Şîlî Fâkîh’s ‘Uyûf u Zûlekhânî which deals with the same story.

One may also include yet another version of this very popular biblical story, the maddana ‘Uyûf u Zûlekhânî, translated by Khâfî-oghlu ‘Ali from a Kip枝 original composed by a certain Mâhuûd from the Crimea into Anatolian Turkish, using the syllable metre and quatrain form typical of traditional folk poetry.

The first example of classical Turkish literature in this century came from the pen of Köhdjâ Dehâmî, poet at the court of ‘Alâ’ al-Dîn III at Konya; he wrote haşîdes and especially ghâzîs with non-religious themes, and was the first Turkish classical poet to sing
of the beauty of nature, and of carnal love, wine and the other pleasures of life.

2. The 14th and 15th centuries

With the collapse of the Seljuk central government in Konya around 1300, Turkish culture and art came to flourish in the capital cities of the beyliks, such as Kutahya, Aydin, Antalya, Kastamonu, Kayseri, Sivas and Konya. The material wealth of these cities and their lords, who did not know any language other than Turkish, attracted poets and writers who started to produce their literary works in their mother tongue. With the rise of the Ottoman Empire, the authors started to write in standardized Ottoman Turkish, over the Anatolian beyliks, cultural and artistic activities were channelled into the emerging Ottoman centres situated on important trade routes such as Bursa, Edirne, Amasya and Manisa (1410-53), and finally to Istanbul, so that the scholars, poets and writers who used to be active at the courts of the Anatolian beyliks now began to produce their works under the direct patronage of the Ottoman sultans and princes and of Ottoman dignitaries.

Among those poets who formerly served Germiyanoglu Yakub II (1387-1428) and who transferred themselves to the court of the Ottomans, were Ahmed-i Dahi (d. after 1421), and Sheykhi (d. 1429); they were finally active at the courts of Bayezid I, his son Amir Suleyman (d. 1412), Mehmed Celebi (d. 1421) and Murad II (d. 1451). These rulers were frequently poets themselves, e.g. Murad II had the pen-name Muradi, Mehmed II the Conqueror used that of Awani, Prince Korkud (d. 1512) that of Harimi and Bayezid II (d. 1512) that of Adli. From amongst these sultan-poets, Mehmed II, his son Djem (d. 1495) and Bayezid II wrote enough poetry to form independent divans.

The Ottomans took special care to promote culture and the arts in order to preserve their cultural identity and not to be absorbed by the neighbouring Christian culture. To achieve this goal, they also had to prove themselves victorious in the cultural rivalries that had been going on for some time among the Anatolian principalities. The following example will illustrate just how strong this rivalry was. When Molla Fenari was seriously offended by the Ottoman sultan, he transferred to Konya, where the Karamanoglu ruler offered him a salary of 1000 akces per day, as well as 100 akces for each of his students, unheard of until that time. The flourishing economy of the Ottoman state (see section II, above) greatly contributed to the success of these literary and cultural activities, so that the living standards in provincial cities located on the trade routes across Anatolia to southeastern European such as Amasya, Trabzon, Bursa, Manisa, Antalya and Edirne increased significantly. That Mehmed Celebi became governor of Amasya, Prince Korkud in Manisa, Prince Selim (II) in Trabzon, Djem Sultan in Kastamonu and Karaman, was not at all accidental! They brought with them their own scholars and poets, but they also encouraged and protected local literary figures. For instance, Neghati Bey [q. v.] (d. 1509), one of the greatest poets of the 15th century, was first at the court of the prince Celebi, then at the court of Prince Korkud and after the prince died, he also served as the head of the divan of the crown prince Mahmud in Manisa.

The most striking characteristic of the cultural and literary activities of the Ottomans during the 15th century was the admiration which the Ottomans felt towards the art and literature of the Timurids at their courts in Samarkand and Harat, and especially towards Caghhatay literature; it would not be unfair to say that classical Ottoman literature was under the spell of Mir 'Ali Shir Naw'at\textsuperscript{[q. v.]} whose influence reached its apogee at the end of the 15th and beginning of the 16th century, including also in the Persian literature of the time. Indeed, Persian literature, music, miniature painting and architecture were greatly refined under the patronage of the Timurid sultans Shahrui\textsuperscript{[d. 1447]}, Ulugh Beg (d. 1449) and Husayn Baykara (d. 1506) [q. v.], and the attraction of this renaissance of Persian culture under Turkish political hegemony strongly influenced the Ottoman court, with echoes of that influence felt up to the 19th century.

The Timurid court was taken as a model first in the political field. As is well known, at the cultural centres of Samarkand and Harat, the Uyghur alphabet was used side-by-side with the Arabic alphabet in literary texts as well as in the chancery. Wishing to compete with this Central Asian Turkish court, the Ottoman sultan Murad II (d. 1451) kept at his court in Edirne secretaries capable of composing firmans in the Uyghur alphabet. The crown princes themselves were taught the Uyghur alphabet. Even at later dates, some Ottoman firm\textemdash\textsuperscript{ans} were composed in Caghhatay and written down in both the Arabic and Uyghur alphabets. Thus Mehmed II announced his victory over the Ak Koyunlu Uzun Hasan in the form of a feh-n\textsuperscript{nime}, in which he addressed the local rulers of Eastern Anatolia in Caghhatay written down in Uyghur letters with an interlinear text in Arabic letters. However, all the Ottoman firm\textemdash\textsuperscript{ans} addressed to the European powers in Ottoman Turkish were in the Arabic script.

The Timurid court was also taken as a model in the literary and artistic fields, since Ottoman poets and intellectuals took a great interest in Caghhatay and Persian literature. Ahmed Paz\textemdash\textsuperscript{a}, who was Mehmed II's vizier and later on Bayezid II's sanger-bey of Bursa, used to await with enthusiasm and excitement 'Ali Shir Naw'at\textsuperscript{[q. v.]}'s latest ghazels carried with the caravans to Bursa. At one point, Naw'at sent 33 ghazels to Bayezid II, and Ahmed Paz\textemdash\textsuperscript{a} wrote naz\textemdash\textsuperscript{as} to them at the order of the sultan. To write naz\textemdash\textsuperscript{as} to Naw'at's poems remained fashionable among Ottoman poets up until the 19th century, and even the greatest and proudest Ottoman poets such as Nedin [q. a.] and Sheikh Ghalib followed that fashion. In the field of science many young men went to Central Asia to get a good education, and scholars and scientists from these lands were esteemed on Ottoman soil. One of these was the famous Uzbek sheyk Suleym\textemdash\textsuperscript{n} Efendi who dedicated his Caghhatay-Ottoman dictionary to 'Abd al-Hamid II. The influence of the courts in Samarkand and Harat found its echoes in the music festivals of the Manisa court of the crown prince Korkud, so that during the 17th century Ewliya Celebi talks about music festivals called Hu\textemdash\textsuperscript{us}ayn Baykara\textemdash\textsuperscript{faj\textemdash\textsuperscript{illari}}.

An important characteristic of the 14th and 15th centuries was the intensive translation movement from Arabic and Persian texts. Even though the Anatolian beyliks and the early Ottomans considered themselves as Islamic political entities, they still had not completely broken away from their ancestral Central Asian traditions, nor had they fully assimilated the new civilisation of which they were now part. So in order to bring Islamic culture to a wider audience, a concerted effort was undertaken to translate works in every field of Islamic learning and practice into a simple and clear Turkish. These translations may be classified as follows:

1. Works of 'ilm\textemdash\textsuperscript{
-\text{h}al}, a kind of catechism of the
basic principles of worship and of behaviour within the family and the community. Alongside these, or perhaps later, there were made interlinear translations of the Kur'ān and translations of ṣafīr, of the stories of prophets (kiya, al-anbūyiba), legends of saints (mendikā, al-awluj), etc.

2. Encyclopaedic manuals on medicine and drugs, on geography, astronomy and the interpretation of dreams, music treatises and dictionaries.

3. Translations in maḥnawī form of love stories of typical Near Eastern content, as well as mystical Sūfī maḥnawīs. The first texts to be translated in this category were Nizāmī's (d. 1140) Khvānawī sea Shams ʻAjṭār's (d. 1193) Manṣūk al-tayr and Farīdawālī's (d. 1020) Shāh-nāma.

It must be emphasised that these so-called translations were not direct word-for-word ones, but rather adaptations made by the Turkish writers, who, besides putting in their own phrases, frequently added chapters and their own corrections or improvements, so that sometimes the translation would be three times as long as the original text.

The strongest supporter of the translation effort was Murād II, who was a passionate lover of poetry and the fine arts and who attracted large numbers of artists and writers to his court.

 Naturally, original creations exist side-by-side with these translations. Amongst them are to be noted the Qhārīb-nāme of ʻĀshīk Pağā (d. 1532) which resembles Rūmī's Maḥnawī, the allegorical maḥnawī Gang-nāme of Ahmed-i Dāšī (d. 1421) which expresses man's longing for immortality, the Khvānawī-nāma by Sheykhi (q.v.) which is one of the best satirical works in the entire Turkish literature, the Maḥwāz-nāma by Tajdīzādē Dīfтар Celebi (d. 1516) which describes Istanbul, the Mawṣūl of Suleyman Celebi (q.v.) which narrates the Prophet's birth, his miṣrāj and death, and finally, the Muḥannadīn of Yazzīlī-oglu Mehmed (d. 1449) (q.v.) which also deals with the Prophet's life and his miracles. Besides all this, we have to mention the greatest mystical folk poet, Yunus Emre (q.v.) who has a place of his own within Turkish literature; soon after he died, many poets imitated his style, without however attaining the universality of his appeal.

All these literary activities raise the issue of the history of the written language: was the Old Anatolian Turkish the language of the migrations from Central Asia? Or did it arise in Anatolia after the migration? Some scholars have argued that the Oğuz tribes had established their own written language already in Central Asia before their migration into Anatolia. However, this assumption does not seem to meet the basic precondition for the creation of a written language, namely that there should be a distinct political entity under whose auspices the written language can develop. Such a political structure existed in Konya after the 11th century, but was absent for the Turkomans in Transoxiana. Thus we have to assume that the Turkomans established their written language for the first time under the political patronage of the Rūm Saldık and the beys of the Anatolian principalities. There is strong material evidence for this, namely, the fact that in the very first Old Anatolian Turkish texts we witness a typically Kūrīc orthography: defective writing of the vowels and excessive usage of tawrus for Turkish endings and any final syllables of words. This would indicate that they did not bring with them an orthography already established in Central Asia, where the Karakhānid system was based on the full (plene) writing of the vowels.

3. Classical Ottoman literature during the 16th century

At the beginning of the 16th century, the Ottomans were established as a world-empire, and the literature of this century reflects well the new political situation. Starting from the most famous poets like Bākī (d. 1600) and Fudūlī (d. 1556) (q.v.), down to lesser poets, one finds a strong feeling of confidence and self-assurance. Of course, this feeling finds diverse expressions. In Fudūlī it becomes a sense of pride that defies the world, especially in his famous complaint, Shikāyet-nāme, whereas in Bākī and in other poets it is evident in their majestic style and their placing themselves on an equal footing with the famous Persian poets. In Usuli (d. 1538), Hayreti (d. 1534) and Khayālu (d. 1557) (q.v.) it appears as an expression of disdain for the worthless material world, but in most works one can detect a celebration of victory and denial of humility. Considering that this atmosphere, one taken for granted in the historical writings, permeates love tales and even lyric poetry, one has to acknowledge that the psychology of triumph brought about by the successes of the Ottoman expansion deeply affected the literary works of this period. A love tale Dām-Shāh a 'Alm-Shāh of Ramādān Bihīghī, a less than first-rate poet, which was dedicated to Suleyman the Magnificent (d. 1566), clearly expresses this ideal image of world domination in between the lines, for all that the poet presented his poem to his audience as a symbolic work expressing his own mystical ideals.

The literature of this age is mostly preoccupied with the material and living world, despite the great number of religiously-inspired works. The simple religious atmosphere of the previous centuries had vanished, and with it the simple language, which now gives way to a floridly idiom of word-plays and refined rhetorical devices. In prose, however, Turkish entered a mature period of clarity and accuracy of expression, despite the heavy borrowings from the Arabic and Persian vocabulary. The scribes of the secretarial class, increasing in size along with the empire's expansion, especially those attached to the re'sūl-ū-kītāb and the ništāndjī (q.v.), well-versed in poetry and chancery skills, played a significant role in the emerging literary trends. A good number of the poets of this period came from this class of government officers, e.g. Muṣṭafā 'Ali Efendi (d. 1599) (q.v.) the famous historian who wrote the Kānî nūl-āhkārā and first introduced critical method into Ottoman historiography. It is not surprising that these secretary-poets had to extoll the pleasures of the material world, as this was part of their duties to please and entertain their superiors, up to the sultan himself. This would explain why suddenly the kasıfāt or ode became fashionable, and every poet of significance had to compose kasıfāt for the sultan and the high dignitaries. Thus, in this period when the kasıfāt was so widespread, the poet was in essence forced to arrange both his inner and outer worlds according to the palace hierarchy: the sun, moon and stars of the universe and of the poet's personal world. This imagery was already present in its incipient form in the earlier centuries, but now acquired precision, continuing until this literature exhausted itself.

The most important representative of the classical literature flourishing in the palace circles was Bākī,
the court poet of Suleyman the Magnificent who was himself also a poet writing under the pen-name Muhibb. Baki wrote kasides for Suleyman and his successors, Murad II (d. 1593) and Mehemmed III (d. 1603). His superb skill in composing meticulously designed, geometrical and artistic poems remained unsurpassed by contemporary or even later poets, a skill seen in the elegy which he composed while still in his forties for the dead sultan.

Baki's dîwân is quite voluminous, revealing not only refined feelings but a brilliant intelligence and eloquence. Escewing ugliness, he made nature and real-life experience the primary means of expressing his refined feelings but a brilliant intelligence and eloquence, as he hid his intended meaning under perfectly chosen words.

The second most important poet of this period is Fudûlî, who excelled because of the liveliness of his artistic skill and the sincerity of his emotions in his kasîdes dedicated to the prophet Muhammed and the sultan Suleyman. What distinguished him sharply from all other Ottoman poets is that he was not a poet from the capital but from Bağdadî, which is fairly typical of all Fudûlî's poems. The court poets, all written in Aধārî or Azerî Turkish. He was influenced by the Sufî poet Nesîmî (d. 1418 [q.v.]) and especially by 'Alî Şîr Navaâî; the latter's poems provided inspiration for a lot of his compositions. He may be considered the poet of suffering. All his poems express a suffering and love that directly emanate from his nature. For all that his skills are as superb as Baki's, this is not immediately apparent. In the 16th century, the mathnawi was still a very popular genre. In fact, we see an increasing number of poets who wrote love tales as well as mystical and religious subjects in the mathnawi form. Among the poets who wrote mâyînasî in the fashion of the famous Persian poet Nizâmî (q. v.) with his Khamsa, two well-known poets can be mentioned here. One of these was Taşhidîlî Yabây (d. 1582 [q.v.]). His Khamsa consists of the following five mâyînasîs: Gendîn-i râz, Usîl-nâmé, Şah-u gedâ, Yânu's-u Zâleykhâ and Gûlîn-ii evârû.

The second poet, who not only wrote one but two Khamsas, was Lâmi'i Cebeli (d. 1592 [q.v.]), very well versed in Persian culture and literature, as well as Câğıdshâvî and very much influenced by the works of Djâmî (d. 998/1492 [q.v.]). Mir 'Alî Şîr Navaâî and other famous Persian poets. As a result of this, they translated their works into Anatolian, namely, Ottoman Turkish. Because of his great interest in Dâmî and because of his translations of the latter's works, he was given the title of Dâmî-i Rûm ("the Dâmî of Anatolia"). Lâmi'i was an outstanding figure in both Ottoman verse and prose. Being very productive, he introduced works of diverse forms into Turkish literature. Among them, his mâyînasî included: Abûsîl u Salâmnîn, Wâmîk u Âdinghî, Wîs u Râmîn, Fihdâh u Şirîn, Tuhfî-yi Lâmi'i, Şehrengîz-i Bursâ, Gûy u Çeşmîn, Mabîl-i Hûsîn, Şemî u persânî, and Heft peyker (unfinished at his sudden death).

Along with the poets writing in the elaborate classical style we should mention Taşawwâlî Mahâmî (d. 1535) and Edîrmîlî Nağmî (d. 1548 [q.v.]) who represented a group of poets who tried, with reasonable success, to apply the 'ârîd metres to a Turkish relatively purified of foreign borrowings. Whether writing love or mystical poetry, there was a conscious effort to address the larger audience of the folk masses; it may be that these poets took their inspiration from the popular story-tellers and their stories recited at various meeting places.

The absence of a religious and mystical atmosphere from classical poetry is the characteristic peculiarity of this period. (This is the only period during which the above peculiarity is valid for all poetry.) This is not to say that there is no mystical thought in these poems, only that this is pushed into the background.

These poets used Sûfî terminology, but expressed their own personal emotions, so that there emerges, for the first time, a distinction between the mystical (Sûfî) and the mystical-style (muâtasawwâfî) poet. Even in the love mathnawi Leylî ve Mehmân of Fuğûlî, which is permeated with a mystical atmosphere, a story of worldly love by the young hero Beyaz the romance as the love adventures and sufferings of two loving people in love. The same can be said of the mathnawi Şah u gedâ by the period's greatest mathnawi writer, Taşhidîlî Yabây.

This interest in the material world made the poets of this period less and less interested in the classical themes of Persian literature, and they started to turn to stories taken directly from real life rather than from immediate vicinities and to contemporary human types, along with the traditional classical topics; this so-called mahâllîyetî movement continued well into the 17th and 18th centuries, but, with the exception of Nedîm, eventually lost its impetus without ever achieving the creativity and universality which the poets were hoping for.

The main reason for this tendency to be interested in the real and material world is perhaps connected with entertainment literature. Translation activity here had started in the 15th century, but was now intensified. In particular, Dînâlî-zâde Tâhir Cebeli translated the tales of Firûz Şâh and the extensive story collection in Persian Dâmî al-hikâyât wa-lawâmî of Muhammad Awfî (q. v.) for the benefit of the sultans and grand viziers. However, these stories were not read only in palace circles; the people would listen to them in coffee houses and public gatherings.

Story-tellers had been active narrating religious-heroic cycles, love stories and excerpts from the Şah-nâmâ from the 13th century onwards. During the 16th century, their repertory came to include unusual events and characters taken from everyday life. The custom of employing such story-tellers in the palace had been going on since the reign of Bâyezîd I, but acquired new forms from the beginning of the 16th century. At the court story-tellers started being educated persons, to the point that some of them became the sultan's personal courtiers. New themes emerged. For instance, Mûsâfâ Dîşnînî (d. 1585) wrote his collection of stories for Murâd II, who loved the new stories. Most likely the same motivation was behind the collection Ibrât-nâmâ of Lâmi'i, the very knowledgeable translator of the Persian poet Dâmî. (It is in the Ibrât-nâmâ that we find the first serious mention of Nasr al-Dîn Khodî [q. v.] and his extremely popular anecdotes.)

Finally, we have to mention one event of lasting consequence. In the 16th century the Ottomans became in closer touch with the Western world. This was the result both of accident and necessity, and the relations with the West were not deliberate and conscious but accidental. The following example will illustrate how these contacts were reflected in literature: a writer using the pen-name Eşrî ("prisoner") narrates in his Serâtîddîrî the story of his captivity during one of the Ottoman campaigns, his escape and adventures before reaching home again.

Another significant event in this regard was the introduction of the printing press into the empire since the reign of Bâyezîd II by the non-Muslim subjects, including Christians and the Jews who had been
welcomed into the Ottoman domains after their expulsion from Spain in 1492. Books on Judaism, such as the Seydhat-ndme in verse of the merchant Ahmed b. Ibrahim, describing his voyage to India. The Mendzir al-^awdlim of poetry during the 16th century literature and culture was still considerably influenced by the Turco-Persian literature flourishing in the theatrical traditions and the Italian folk-comedy, certainly influenced by the Sephardic Jewish Orta oyunu old Turkish theatrical representations, although the book is based entirely on earlier Arab policy of the Turkish empire. It is based in part on older cartographers like $afa°i Bahriyye of Plrl Re Bahriyye of Murad III. The celebrated Ta^nkh (by Sipahl-zade) and al-Istakhn (by Sherlf Efendi) and of Nafsari-zade (see Mift Tetebs'lar Me^musa'i, no. 3).

Among historical works, those which deal with literary history occupy an important place. The first Ottoman tedhke is the He^shi bedk written in 945/1538 by Sehi [q. v.], in imitation of the Ma^qalat al-^awdlim of Nawâî. He was followed by Lafiî [q. v.], A^shkî Celebi [q. v.], Abdi of Baghdad and Hasan Celebi [q. v.]. Ali also gives important notices of poets in his Kûnî al-^akkîr. The compilation of collections of nasâîr on poems of other poets, like the Lâmî' al-^nâzâr written in 918/1512 by Hâdjî Kemal, containing poems by 266 poets, and others, is a custom which is also found in the 16th century and has contributed greatly to our knowledge of Turkish poets.

It is in this framework that works which deals with political and other state documents. In religious works intended for the people, every endeavour was made to write as simple language. The prose which we possess by Bâkî and Fu'dîli shows an elegant and comparatively simple language.

We shall begin with the historical works, a field in which great progress was made in this century, mainly on account of the interest taken by the educated classes in the military successes of the empire. Beside the rhymed chronicle, in continuation of the Seljuk tradition we find from the time of Bâyezîd II and Selim I historical works in prose. The official Ottoman history written in Persian by Idris Bâdîli was translated into Turkish by his son. Other general histories were those of Ibn Kemal, Djielâzâde Mu^斯塔fa Celebi, entitled Tabakâl al-^amâlîk, of Mu^hiî al-Dîn Djiemâî, of Lufî Pasha [q. v.], of Khâ^da Sa'd al-Dîn and of A^li [q. v.]. There are also a number of special histories, dealing with particular periods or certain events (the Pen-nâmes) and biographical works (like the Dhu^sirî al-manâkîh relating to Sokollu Me^meh Pasha). At the same time, the office of Sheh-nâmeh was maintained at the court. In the time of Süleyman, it was filled by Feth Allah A^rif Celebi, whose successors included Eflâtûn Şirîwânî, Seyyid Lukmân and Ta'lîhî-zâde (d. 1013/1604). These were also Turkish poets, but tradi-

tional demand that the official Sheh-nâmeh should be written in Persian in the mû'tekârîh metre, until Mehemmed III ordered it to be written in Turkish. From the time of Ta'lîhî-zâde, prose began to appear scattered through the text. From the historical point of view, these Sheh-nâmef are naturally of less importance than the non-official chronicles. While works like the Tâcli-l-tawârikh of Sa'd al-Dîn were regarded as models of style, the Ta'rîh of Lufî Pasha, whose style more resembles that of the old chronicles, and especially his A^saf-nâmeh, are very important for our knowledge of the social history of this period. The Ta'rîk of Mosâfah Efendi shows how corrupt the administration was at the end of the century. We must regard A^li as the greatest historian of the time, and his other works reveal him as a man of almost encyclopaedic learning. Not only his Kûnî al-^akkîr, but also his Nasîbat al-salatîn, Kau^ûdî l-madqâlîs and Menâkî-i hâmûrûrû shows that the author was a severe critic, well informed about the conditions of life of his time. The style of his historical works is relatively simple (on his life and works, see the introduction by Ibn âlmîn to the edition of the Menâkî-i hâmûrûrû, Istanbul 1926). To this century also belongs the Shokâ^kî-i Nû'mânîyev written in Arabic by Tâshköprû-zâde [q. v.] and translated into Turkish with additions by Me^dji [q. v.] of Edirne and Khâ^kî of Belgrade; also, an extensive biographical literature among which the biographies of the Turkish Sâfî Sheh-nâmehs are of considerable historical interest. A similar interest is contained in a few light works of badinage (mizâjî) like the Na^f al-amr-nâmeh of Lâmiî and of Nîskârî-zâde (see Millî Tetebs'lar Me^musa'i, no. 3).

Throughout the 16th century, then, Ottoman literature and culture was still considerably influenced by the Turco-Persian literature flourishing in the courts of Khûrûsân and Samarkand, while themes from everyday life inevitably crept into them as well; furthermore, Ottoman society, was beginning to be influenced by the West, without being fully aware of it.

Bibliography: See the articles on the various literary figures mentioned in the article and the general surveys of earlier Turkish literature given in the more detailed Bibli. at the end of this section on Literature.

4. Historical and geographical prose literature and popular poetry during the 16th century.

Prose in this century assumes a heavier and more artificial form, exaggerating Persian models, the simplest ideas are expressed by the most complicated images to the detriment of the subject. This lack of taste is found in the greatest stylists of the period: Lâmiî, Kemal Pasha-zâde [q. v.], Djielâzâde Mu^斯塔fa Celebi [q. v.], Feridîn Beg [q. v.], A^zîmi, the translator of the Humâyûn-nâmeh, A^li Celebi, Kûnî-zâde A^li Celebi [q. v.], Khâ^da Sa'd al-Dîn [see Khûpûga Efendi] and others. This artificial tendency had a much more marked influence on prose than on poetry. Works written in simple language were despised by the educated classes. We find, however, that in very long works, it was only the preface that had a much more marked influence on prose than on poetry. Works written in simple language were despised by the educated classes. We find, however, that in very long works, it was only the preface that was written in this turgid and clumsy style. Many literary, historical, religious or moralising works of the period were in fact written in more simple language. The same applies to official correspondence and other state documents. In religious works intended for the people, every endeavour was made to write as simple language. The prose which we possess by Bâkî and Fu'dîli shows an elegant and comparatively simple language.
Mehmed 'Ashîk of Trebizond is very important, based on the old Arab geographies, it gives valuable new information about the Ottoman lands. Finally, we may mention a Tar'âfi: Hind-i şarkî on the discovery of the New World, translated in 990/1582 from a European language by Mehmed Yusuf al-Herewi (on this literature see F. Taeschner, in ZDMG, Ivxxvii [1923]).

Alongside classical Turkish literature, we find the literature of the people increasing, the knowledge of which was spread by the kîjî-khân, the meddâh and the 'ârîdî, and in the battle-songs of the Janissaries. Many classical poets also wrote türkîs [q.v.] intended for the masses. These türkîs are in the 'ârîdî metre and in the form of mîrâbeh'; later they were called şarkî [q.v.]. This form of poem goes back to the earliest forms of verse among the Turks. But the works of unlettered poets, like Enverî, Thîyâbî, Rîyîl, Râfiî and others, written in imitation of the classical poets, were more to the taste of the people. In popular gatherings such things as Asbî Musîlîm, the Hamsa-nâme, Bâjîlî Ghâzî, etc. were enthusiastically received. This encouraged Hâşîmî of Istanbul to write the mehnewi entitled Barkî uve-pâlalî taken from the Hamsa-nâme, and inspired several authors and poets to write similar works. Sûlîn Sûlîmân had the story of Fîrzâ-şâh translated into Turkish in 8 vols. by Sâlih Efendî, translator of the Qâmu's al-hîkâyêt of 'ârîfî. There were kîjî-khân even in the palaces of the sultans. Alongside of old Islamic and Persian subjects, we find also collections of stories of everyday life like the Bursalî Khâ'îdje Abî al-Re'îf Efendî, which the poet Wâhaiî, also called Ana Bâdîhî hîkâyetî. The stories of everyday life by Muştafa Dîqânî of Bursa in an unaffected style give us a valuable insight into different aspects of the life of the people in these days. Another poet of this kind is Mehîî [q.v.], whose real name was Derwîsh Hasân, who was the meddâh of Mûrîdî III (see Rieu, Cat. of Turk. mst., 42).

In the 16th century we are a little better informed regarding the activities of the ozan [q.v.], although they are now generally known as şîhîk or cügûnü, these wandering musicians were to be found wherever the people congregated and used to recite the later works of earlier heroes, heroic tales, merêhîyes and türkîs. At the beginning of this century we have a portion of Bakhshî's epic on the Egyptian campaign of Selim I, and at the end of the century we have the names of Kûl Mêshîd (d. 1014/1605), Oksûz Dede, Khâyâlî and Kûrûghûlî, and, in the garrisons of the Maghrib, Cirpanî, Armodîlî, Kûrûlkishî, Gâdamalû (see also Küprülu-zade M. Pûdlû, Türk sâz êvâret, Istanbul 1930). The influence of the various classes of society on one another even had the result that symmetrical metre was sometimes used among the cultured classes (but especially in the ozan) and the 'ârîdî metre in popular poems, just as had been the case formerly for poems of a religious character. The mystic poets however, following the tradition of Yûnus Emre, wrote their il-âdhî in symmetrical metre. We may note the names of Urnî, Şâhî, Nâmîsî, Merîstânî, Abû'l-Mâtî, Sâbîrî (d. 952/1545), İdrîs Muâhkîfî (d. 1024/1615) and Seyvîdîî Şâyîlî Khalwetî (d. 1010/1601). But the greatest successors of Yûnus and Kâyûhuszuz were found among the Berkâtshîs and Kizlîbâshs, such as Kûl Himmet and his pupil Pîr Sûlûn Abdâl, a native of Sîwâs who was executed in 1008/1600 by order of Khîtarî Pasha (cf. Sa'dî al-Dîn Nûzhez, Pîr Sûlûn Abdâl, Istanbul 1929). Other products of the popular literature of the period were Hasân-oghûl tükâlûrî, Kûra-ciqân türkûsî and Çekî destânî.
describes and criticises the social life of his time. His young contemporary Thabit [q.v.] endeavours to
show his originality by mingling proverbial expressions with his poetry. Among the masters of the ghzal in the
17th century we may also mention Nâşıî Mewlewî, Djevri and Râmi Mehmed Pasha.

'Azmi-zâde Hâleli [q.v.] excelled in all political
genres and is best known for his rubâ'în. The lughz [q.v.] and the muwallâmâ became very popular, as did the târîkh (chronogram). The hidijî and mizâh, composed in different forms, caused poets of the first rank to
write on such themes. Some of the most typical examples of this genre, however, can be appreciated, like the tedkîrî in the form of a melûnâvî in Gûlit in which the author
depicts contemporary poets; the târîkh of Fehim and of
Djevri, written in the form of mulamâs, are curious
because the text is scattered with passages in non-
Turkish languages.

Some melûnâvâs of the first half of the century show
a remarkable perfection. The subjects of the old khâmsas are gradually replaced by more topical subjects.
The greatest representative of the style is Newîrâzâde,
'Atayî, Bûhreddin and Râyîdî. It was mainly in this
century that it became fashionable to write Sâkî-nâmâs in imitation of the Persian poet Zuhûrî, although this
genre is already found earlier, as is shown by the
lâyret-nâmâ of Rewânî (16th century). Among the
Sâkî-nâmâs we may specially note those of 'Atayî, Râyîdî and Hâleli; all are tinged with mysticism. The melûnâvî thus served for all sorts of subjects taken from
daily life, stories, descriptions, speculative works,
tales of actual events, etc.

The number of religious and mystical works, lives of Sûfî saints and didactic works connected with the
different jarîkâs, is very great in this century. Poetical
forms were often used for them. Very well-known is the Mi'tâdîyye of Nâdirî. There then were panegyrics of the Prophet (nâ's), translations in verse of the
Hadîth-i arba'in, of mawlidîs etc. Among the Sûfî poets there were some who used the syllabic metre; we may
not overlook those of the Khalâlî-îêrî of the Chalîwetî order, whose poems were long popular; the Bektâshîs also numbered several poets in their ranks. There are also a large number of historical works in verse, Sâh-nâmâs, Ghasâz-nâmâs, etc., like the Sâh-nâmâ of Nâdirî of the time of
'Ôthmân II and others. The Shâh-nâmâ of Muhammad by Mûhamîr by order of Murâd IV has only the pre-
fact in Turkish; the rest is Persian in keeping with the
old tradition. It is in this century also that the custom
begins of writing brief Ottoman histories in verse; we
have that of Tâlibî, written in 1017/1608, of Nîhzîrî (d. 1075/1664) written for Mehmed IV, and the
Fîrîst-i Sâhîn, dedicated to Mehmed IV by Solâk-
zâde Hemdî, and continued by a series of poets
down to Dîyâr (Zîyâ) Pâsha in the 19th century. This
kind of work has neither much historical nor literary value.

Literary prose follows the same lines as in the
preceding century. The great stylists (mûnâshî), like
Weystî, Nergisî [q.v.], Odkûz-zâde [q.v.] and others,
carried affection of language to a still more advanced
degree. A fine specimen is given by the official
documents addressed to the Persian court and written by mûnâshî like Hûkmî; this same style was sometimes
used even in private correspondence. The works
which were considered to have no literary value in
their day are those which are now most appreciated,
like those of Köûtî Beg, Katîb Cebeli, Ewlyîa Cebeli
and Na'îmî. Histories, in this century also, take first
place among prose works. There are several which
have the character of semi-official chronicles like the
Sâh-nâmâ written in prose by Taqihkâpûrûzâde [q.v.] for
'Ôthmân II. Murâd IV appointed Köbîlî as u'da'a-
nâvitî for the Erivan campaign. In 1074/1664 the
Nihatî [q.v.] Abîl Ra'mân Pasha was appointed by
Mehmed IV to chronicle events, as was Mehmed Khâflîf [q.v.] of Fîndîkîlî by Musta'fâ II. It is only later
that Na'mî has appointed u'da'a-nâvitî. The historical works of this century are translations of the
general histories of Islam, original works on the same
subject, general and special works and monographs
on Ottoman history. From the historical point of
view, the most important are the Dîmânî [q. v.]
dwójal, written in Arabic by Mûnedîçîm Bashî [q.v.], the
Fedikâk of Katîb Cebeli, the Ta'rîkh of Peçewî and the
best of Na'mî. The great encyclopaedist Katîb Cebeli
[q.v.] also reveals himself in his Misâl al-îlak and
Desde'ir al-aman as a historian of penetrating in-
sight. Peçewî [q.v.], who made use of Christian
sources, is also very valuable for his sound judgment
and impartiality. Na'mî [q.v.] who possessed de-
scriptive powers of the first order, gives vivid psycho-
logical analyses of historical characters. Köûtî Beg
[q.v.] examines in his celebrated Rû'ûl the causes of
the decline of the empire. Kara Cebeli-zâde is a mûnâshî
rather than a historian. We must also mention chronicators like Weqîji, Hasan Bey-zâde and Solak-
zâde, as well as the dîyeyî to the Shâkî'î-r umânîyye by
Newîrî-zâde 'Atayî and the continuation by
Ustânî-zâde.

The tedkîrî is much below the level of the 16th cen-
tury; the most notable is that of Riyâdî written in
1018/1609. The Riyûdî al-a'zârî of Kâfî-zâde Fâ'idî,
composed in 1030/1621 also contains specimens of the
work of the poets dealt with in it. There is also the
dîyeyî to this work by Mehmed 'Asîmî (d. 1086/1675),
the concise tedkîrî of Ri'dî and that of Gûfitî already
mentioned. The Mülâtî [q.v. al-nazî-rîr] by Khiçiâîî (d. 1062/1652) is a collection of mata'a.s.

In the field of geography, the most important works
are those of Köûtî Cebeli and Abî Bakr Dimâşgî. They use European as well as Muslim sources. The
Shâh-nâmâ of Ewlyîa Cebeli [q.v.] is important for
the history of all aspects of social life. In spite of its
defects it is a work without an equal in Turkish
literature. In this century also the first sefîret-nâmâs
appear.

The greatest popularity of the shîhna, mëdâbah, karagödîjî, etc. continued in this century in all classes
of society. At Bursa we have Derwîsh Kâmilî, Kur-
bânî 'Âlîsî and others, at Erzûrûm Kaşşâb Kûrd,
Kandîl-îghulî, etc. In Istanbul there were eighty mëdâ-
 bahs, who were organised in a guild (esnâfî); the best
known is Tîfî [q.v. who was nizzîm to Murâd IV.
Towards the end of this century, the mëdâbah Kîrîmî (d. 1120/1708) flourished.

The musician-poets (sâ'î şâhîrîn) became very
numerous in the 17th century. We find them among
the janissaries, the sipîdîs [q.v.], the lezâNdâs [q.v.], the
Djelâlis [see Djalâlî in Suppl.], and in the religious
bodies like the Kızîlbaş and the Bektâshîs. They were
always to be found in military retinues.

The writer of this article succeeded in collecting and
identifying the works and names of about thirty musician-
poets of this century. The most notable are Gewhîrî
and 'Omer 'Ashîkî [q.v.]; the latter has almost become
the patron saint of the şâ'î şâhîrîn (cf. Köprülû-zâde
The influence of this popular literature is felt even among the upper classes, as in the poems of the Khan of the Crimea, Mehmed Giray, who wrote under the makhlas of Kamil, and a metrihy of Affif Sultan, one of the favourites of Mehmed IV. Several "classical" poets also wrote şarkı̆s for the masses. The poem on the hero Genç Othmán by Kayı̆kdeli Mustafa has actually given rise to a folk-tale which still survives in Anatolia (Köprülüler-zade, Kayı̆skul Mustafa ve-geom osman hakret, Istanbul 1930). It is probable that several other folk-tales originated in this century, like those called Şahı̆k Kerem, Şahı̆k Şahrı̆b, and Şahım İmâdĭl. Lastly, we see from the statements of Ewliya Çelebi that it was in this century that the orta oyunu [q.v.] began to be popular with the people.

2. The 18th century

Literature and culture in this century continued to follow the same lines as in the preceding centuries. There was a vast output in prose and poetry, while the intellectual links with Persia and Transoxania continued to exist. Persian poets, especially Şawkat and Sâlĭb, exercised a great influence on Turkish poetry. But in spite of all this, the tendency to a more individual development gained in strength and was shown in the endeavours to simplify the language. It is mainly due to the great poets of the beginning of this century that classical Turkish poetry followed a path entirely independent of contemporary Persian poetry.

The period of Dâmĭd İbrâhîm Paşa [see İbrâhîm Paşa, Dâmĭd] is a very important one. Many works were written and translated by his orders or those of Sultan Ahmed III. Committees were appointed to translate important works rapidly. Among the poets of this century we may mention 3. Oğuzîn-zade Ahmed Tȧrîb [q.v.], who was called the king of poets, Seyyid Wehbi, Şâmĭr, Râghid, Neyli, Şefim, Kâmĭ of Edirne, Durdi, Thâhiba, Arif, Şâlĭm, Çelebi-zâde 3. Aşim, and 4. İzet 3. Afĭ Paşa, Nedim [q.v.] in particular acquired a great reputation in the second half of the century and later. His şazels and his şarkı̆s recall the period of Sȧdȧbâd [see Lâl Dewr] and by his original subjects, rich imagination and harmonious language, he surpasses his predecessors and his contemporaries. In the əshı̆h he reached a level which neither Nâzîm before him nor Fâdil Enderûn after him attained. It was also through the patronage of Dâmĭd İbrâhîm Paşa that İbrâhîm Mütteferrika [q.v.] was able to inaugurate Muslim Turkish printing [see Mâtbaâ. 2]; but for several reasons printing remained confined to a very restricted sphere throughout this century and did not exercise any particular influence on intellectual or artistic life.

Among the great poets of this century we must also make special mention of Kodja Râghib Paşa [q.v.], the greatest representative of the school of Nâbî, and Şeykî̆h Şahrı̆b [q.v.], the last great poet of the classical period. In the kâside it was the influence of Nefî that dominated, while in the şazel there was a rivalry between the disciples of Nedîn and Şâmĭr on the one hand and the adherents of Tȧrîb on the other. But towards the end of the century, a decline in both schools became apparent; poets like Fâdil Enderûn [q.v.], and Şunbûl-zâde Wehbi [q.v.] are only mere imitators. The poets of this century practised all forms of poetry and special attention was devoted to genres characteristic of an epoch of decadence, like the hı̆se, the hı̆z, the mu'ammâ (enigma) and the tarîh (chronogram), while immorality and a general decline in good taste increased. On the other hand, true religious inspiration still continued, as may be seen from the mu'addâ of the na't of Nâzîm [q.v.], the Mi'âdhîyyes of poets like Nayî̆ 3. Othmân Dede, Nâhîfĭ [q.v.] and 3. Arif Sülêymân Bey and the verse translation of the Mevîne of Mevlânâ by Nâhîfĭ. The mevînevis of this period are numerous but of little literary value, the old subjects of the khamas are entirely dropped, with the exception of the Hüs-stûr of Şeykî̆h Şahrı̆b, the last masterpiece of this class. Finally, the rhymed historical works of this period and the Şüfĭ poems by initiates of the various orders are of little importance.

Literary prose tends to become gradually simpler, although we still find imitations of the style of Nergisî and Okîl-zâde. A well-known stylist like 3. Othmân-zâde Tȧrîb openly declared against exaggerated artificiality in prose. Historical works occupy the first place. Among authors serving as vakâ's-nâwi[s] [q.v.] we may mention Râghid, Çelebi-zâde 3. Aşim and Wâsîf, but none of them can be compared to his predecessors like Na'sîm, although hundreds of people were writing biographical and historical works. The political and military decline of the empire caused a large number of lâbiha ("memoirs") to be written investigating the causes. The most remarkable of these memoirs is that of Kodja Sebîn Bashi. From the point of view of geography, we may note a number of important safaret-nâmes of which the Fransa safaret-nâmesi of Yûrîm-Sekiz Çelebi Mevînedîni [see Mevînedîni Viirmisez] is a typical example; these works were occasionally, although rarely, written in verse. The sâr-nâmes written to celebrate the splendid festivals held by the sultans are important sources for sociological research. Those best known are the Sûr-nâmes of Sefiyyeh Wehbi and of Haşgmet. The collections of biographies of poets are even more numerous than in the preceding century. We may mention the safaret-nâmes of Şefiyyeh and Şâlĭm and that of Belîq [q.v.]; the teṣbih of Esrâ Dede [q.v. in Suppl.] is specially devoted to Mewlêwi poets; to this century belong also the Wâkâ'iy al-fudâlîâ of Şeykî̆h, which is the final continuation (şefili) of the Şâskûh. Lastly, the Tuğrî̆-yi khatîafîn of Mustakîm-zâde [q.v.]—whom we may regard as the greatest encyclopaedist of this century—is the most important source for the Muslim and Turkish calligraphers (khatîa). In the field of geography, we find only translations and excerpts from European works.

The medâdî, karaqâdĭ and orta oyundusı̆ continued to enjoy the same popularity among all classes of society. The works of the musician-poets were also known everywhere; we may mention Kömetî, Nûri, Leñwî, Kaba Sakal Mevînedî and Faşĭhi, but the popularity of Gewherî and 3. Ashîk 3. Omer continued; some of these poets were of Armenian origin, like Mevînedîn and Wartax who lived at the beginning of the century. This influence of Turkish musician-poets on the poems of the Armenian 3. oshî perhaps begins as early as the 16th century (see Köprülüler-zâde, in Edebiyat Fakültesi Mevînedîni'vi[1922], i, 1-32). The best example of the way in which the literary taste of the people had penetrated among the upper classes is the fact that the greatest poet of this century also wrote a tarîh in the popular metre. This tendency became more marked as the century advanced.

3. The 19th century

At the beginning of this century, Ottoman literature had sunk to a very low level which continued till the period of the Toncîmûh. Wâsîf Enderûn [q.v.], and 'Îzet Mölla [q.v.] alone show some originality. Wâsîf appeals to the popular taste and shows the influence of Nâzîm as well as that of Fâdîl...
Enderunl, ızzet Molla, while strongly influenced by Nedim and Sheykh Ghalib, is, however, a much greater poet than Wâsit, especially as regards the poeticality of his language. In addition to the style and critical ability; the author uses even simpler language in his translation of the Burhan-i kâfi and of the Kâmüs. The wâqa'-nâviseâ Es'ad Efendi [q.v.], translator of the Mustatraf of Abî-îbâhî and author of the well-known Üsî-i zafer on the extermination of the Janissaries, is far below ızzat Bey, with his insipid Janissaries, is far below who, in spite of several poems written in the popular language, efforts such as we observe in Fâdîl Enderunl and Wasîf, only resulted in vulgarity and artificiality and platitude. As a result of continually repeating the same conceptions by the same limited means of expression, all the vitality of Turkish poetry was destroyed. Even great artists like Nedim and Sheykh Ghalib had not been able to escape the rigid rules of the old models. On the other hand, the attempts to draw upon the language and literature of the people and to appeal more to popular taste and language, efforts such as we observe in Fâdîl Enderunl and Wâsit, only resulted in vulgarity and banality. In spite of the political and economic connection with Europe which had existed for centuries, the social structure of the Ottoman people had never emerged from the frame of traditional Islamic civilisation, which had kept it imprisoned in a mediaeval system of ideas. It is true that the continual military defeats and the gradual economic decline had impressed upon thinking people the material and technical superiority of Europe and that, as early as the 18th century, they had begun to take advantage of European skills to reorganise the army and the fleet. But it was much more difficult to adopt the superiority of Europe in the field of culture. The medreses, which were in a very backward state compared with earlier centuries, still clung tenaciously to the mentalities and tastes of the Middle Ages. Modern science was beginning to be introduced only in institutions founded for the army, like the Engineering School (muhendis-êhâne) and the Medical School (ibbê-êhâne). These innovations owed a great deal to a few individuals, who had studied western languages and modern sciences, like Khodja Ishâkh Efendi, Gelenberi and Şâhîn-zaâde. It was the need felt by Selim III, and especially by Mahûmî II, to reorganise the army and navy and to establish a central administration to prevent the empire being parcelled out between feudal chiefs, that led them to consent, in spite of the opposition of the medreses, to the reform of the teaching of mathematics and natural sciences.

From the end of the 18th century, there were in Turkey men who knew French and recognised the cultural superiority of Europe. In bringing teachers from France and sending students to Europe, the movement of Europeanisation was encouraged in Turkey. It was natural then that, as a result of all these needs, European influence began to show itself little by little in every branch of life, including the fields of thought and art.

(c) "European-type" Turkish literature.

The period of the Tanzimât and the new literature

The great industrial and capitalist development in Europe as well as the political expansion and rivalry of the imperialist Great Powers could not long ignore so vast and rich a field of exploitation as Turkey. At the same time, the mediaeval institutions of the empire had lost their power of resistance, and the revolutionary movements in France had propagated the principle of nationality among the non-Muslim elements. All these circumstances made the urgent need felt of introducing reforms in the social and administrative institutions of the empire. These reforms were to meet with considerable resistance, not only among the lower classes but also among those members of the educated classes who had been educated in the medreses. It was due to Mustafa Reşîhd Paşa [q.v.] and his little group of followers that the reforms were gradually introduced into the country. In Turkish history these reforms are known as Tanzimât [q.v.].

The Tanzimât were not confined to the fields of administration, justice and finance; with the object of...
securing the progress of education among the Muslim Turks, primary and secondary schools were opened and plans made to found a university. An Əndənmən-i dənış was formed to prepare schoolbooks (1269/1853) and students were sent to Europe. The Əndənmən-i dənış was soon replaced by the Əndənmən-i Əfdar (1277/1860), which began to publish its own organ, Medjmu'a-yi funun. In the following year, the Girls' School was opened and in 1279/1862 University courses were begun. In 1282/1865 was adapted from western secondary schools and students were sent to Europe. The University was opened and in 1294/1877 a School of Political Sciences opened in 1286/1869, but the intrigues of the conservative elements forced it to be closed two years later. In 1297/1880 the School of Law (Hükûk mektebi) was opened and in his Əfdar, which was followed by the Medjmu'a-yi funun in 1278/1861 [see q. v.].

Nadjıl, who obtained great fame under the protection of Ahmed Midhat. Nadjıl was well versed in Turkish and literary school, and his disciple Namık Kemal ad-

The program was well defined; he wished to free himself from the trammels of the old unintelligible language, and although he was not able to realise all this programme, his theories exercised a great influence. The presentation of his ideas, wished to revive national culture, and proclaimed the ideas of "new" writers had not been able to produce in reality anything really new.

It was undoubtedly Namık Kemal who assured the definite success of the new school. He was a great artist, a keen fighter, a prolific author and a great patriot. For him, art was a means of provoking a revival in the land and he contributed vigorously to the cultural and political revolution in Turkey by his political articles, his dramas, his novels, his patriotic poetry, his historical works, his critical essays and even by his private letters. He exercised a profound influence in the development of the Turkish press, which at the beginning moved on the model of the Latin and the French literature of the 18th and 19th centuries, and in Turkish. Ahmed Wefîk, animated by western Islamic learning and author of a Turkish grammar in collaboration with Fu'âd Paşa, wrote beautiful prose works in Turkish. Ahmed Weffîk, a great patriot. He claimed the fact that the Turks of Anatolia were a branch of the great Turkish nation. He compiled the first dictionary of Anatolian Turkish, collected proverbs and translated the Shadârâ-yi Turk of Abu 'l-Qâzâ. By his adaptations of the comedies of Molière, he played a great part in the development of the Turkish theatre. Süleyman Paşa, who reorganised the military schools, was a great patriot. He claimed that the language and literature should be called "Turkish" and not Othmânlî; and in his Ta'rîkh-i 'Alem he devoted a special chapter to the early Turks, taking his material from J. de Guignes and other sources.

Lastly, Ahmed Midhat wrote and translated hundreds of volumes of popular nature, beginning with books of the alphabet; he thus trained the people to read and contributed to raising the level of education, which was his only aim, for his books have no scientific or literary value. Süleyman Paşa was a worthy successor of Weffîk Paşa in his Kâmis al-âlâm and Kâmis-i türkî.

At the end of the 19th century appeared Mu'âllim Nâdî [q. v., who obtained great fame under the protection of Ahmed Midhat. Nâdî was well versed in from the popular language and literature. In reality, Ziyâ Paşa had neither the strength nor the courage to put these theories into force.

'Abd al-Hâkk Hâmid [q. v.], a pupil of Nâmik Kemal, brought about a great revolution in the field of poetry, which hitherto had not been able to free itself from ancient forms. This extremely prolific poet introduced into Turkish the lyric and the drama in which his models were Dante, Racine, Corneille and Shakespeare. Even Nâmik Kemal acknowledged that the new Turkish poetry begins with Hâmid. Other important figures were Redja-i-zâde Ekvrem [see q. v.] and Sâmi Paşa-zâde Sezâl [q. v.], but in proportion as the pressure of despotism increased, the second generation of the period of the Tanzimât began to pursue purely artistic ends.

Many other thinkers or writers contributed to the cultural evolution of the country. We may mention the famous historian Ahmed Djevdet Paşa [q. v.], Ahmed Weffîk Paşa [q. v.], Süleyman Paşa, and the great writer and encyclopaedist Ahmed Midhat Efendi [q. v.], as well as the lexicographer Şâms al-Dîn Sâmi Bey [q. v.]. Djevdet Paşa, well versed in Islamic learning and author of a Turkish grammar in collaboration with Fu'âd Paşa, wrote beautiful prose and political articles, his dramas, his novels, his patriotic poetry, his historical works, his critical essays and even by his private letters. He exercised a profound influence in the development of the Turkish press, which at the beginning moved on the model of the Latin and the French literature of the 18th and 19th centuries, and in Turkish. Ahmed Wefîk, a great patriot. He claimed the fact that the Turks of Anatolia were a branch of the great Turkish nation. He compiled the first dictionary of Anatolian Turkish, collected proverbs and translated the Shadârâ-yi Turk of Abu 'l-Qâzâ. By his adaptations of the comedies of Molière, he played a great part in the development of the Turkish theatre. Süleyman Paşa, who reorganised the military schools, was a great patriot. He claimed that the language and literature should be called "Turkish" and not Othmânlî; and in his Ta'rîkh-i 'Alem he devoted a special chapter to the early Turks, taking his material from J. de Guignes and other sources.
Islamic culture and wrote ghazels in the classical style alongside good poems in the new style. The followers of the old school expected from him almost a resurrection of classicism, although Nâzî did not at all a champion of such a reaction, as is shown by his beautiful simple prose (as in *Omerî mekâlakâhîgâh*). His quarrels with Ekrem Bey originated rather in personal reasons. At the same time Nâbit-zâde Nâzîm, who died very young, came to the front; his novel Zehra makes him a figure of first importance in literary history.

The most important event at the end of the 19th century is the literary movement begun by a group of youthful men of letters who had associated themselves, at the instigation of Redjîz-zâde Ekrem, with the periodical *Therwet-i Fûnûn* [q.v.]; this movement marks the second and last stage of the Europeanisation of Turkish literature. It is dominated by the figures of Tewfik Fikret and Khâlid Ziyâ (Ziyyâ) [q.v.] and is very much under the influence of the literary movements in France at the end of the 19th century. Started in a period of absolute despotism and having only a short life of five or six years, this movement produced works of a neurotic and pessimistic sentimentality. Its motto was "art for art's sake". If we except Dejanb Şihâb al-Dîn, who acquired after the revolution the reputation of a great prose writer, Süleyman Nazîf, who may be considered a pupil of Namik Kemal with an originality of his own, Fikret Câli, an imitator of 'Abd al-Hakk Hâmid, and Ismâîl Şafî, an independent figure, who found his subjects in everyday life, all the poets who wrote in the *Therwet-i Fûnûn* were imitators of Tewfik Fikret. Khâlid Ziyâ, who had a very choice style, was the true founder of the literary novel in Turkish. He takes his subjects generally from the upper middle classes, but some of his short stories describe the life of the people. The latter genre was more successfully treated by the novelists Ahmed Hikmet and Huseyîn Djaîbîdî, in more simple language. Mehmed Ra'afî [q.v.] was a novelist who made excellent psychological analyses, but his language was imperfect. In the field of science, philosophy and criticism, the collaborators on the *Therwet-i Fûnûn* did no more than translate. But the severe censorship and the short life of the group did not enable them to show greater vitality. Tewfik Fikret and Khâlid Ziyâ reflected only the life of the upper classes, Hûseyn Rahmî [q.v.] depicted in his novels various aspects of the life of the people; and at the same time the notable publicist Ahmed Râsim [q.v.] was dealing in several of his works with the same subject. Among the poets of this period, we may further mention Ridâ (Rizâ) Tewfik [q.v.] who wrote the finest lyrics in the style of the Süfi poets and Bektaşîû, but in syllabic metre, the poetess Nîqâr Khânîm and lastly Mehmed Emin Bay [q.v.], who suddenly became celebrated during the Turco-Greek war by his *Türkîe shî'îrler*. Mehmed Emin employed a very simple language in the syllabic metre and wished to reach the people directly (*khalîka dögra*), although the existing popular literature with its mentality, tastes and traditional forms were entirely unknown to him. As a man of letters he was entirely of the school of Fikret; he was not, however, an imitator like his contemporary, but the populist spirit (*khalîka dögra*). This was the first occasion on which a Turkish poet had descended to the level of the people. Perhaps it is right to charge him with a lack of lyrical feeling, but this does not prevent us from regarding him as an interesting figure in literary history. At the same time, the movement to simplify the language continued and even gave rise to an exaggerated purism. By the translation of the works of European scholars, the early history and culture of the Turks became known, while the journalistic activities of the young Turks abroad began to envisage Turkish nationalism from the political point of view. These were the main elements in the cultural and literary life of Turkey before the Young Turk Revolution of 1908.

This event, having brought about the abolition of the censorship, caused an extended literary activity. The patriotic pieces of Kemal and Hâmid reappeared in the style and a large number of works of a sociological, philosophical and artistic nature were translated into Turkish. At the same time, great improvements were made in education and the relations with Europe raised the general cultural level to a height never before reached.

The most important literary movement after the Revolution was that of the *Fejîr-i aîî* [q.v.], although it was a literary circle which lasted only a short time; its members began by following the school of Fikret and Khâlid Ziyâ, but the majority of them ended up as members of the national literary movement. Ahmed Hâşîm alone continued to develop in the way he had first chosen. He never abandoned the *süre* metre, nor the conception of "art for art's sake" in its strictest form. Besides, he had ideas of his own on the relation between music and poetry (see H. Duda, *Ahmed Hâşîm*, in *WT, ii* [1928], 300-44). The poet Yabây Kemâl (Bayâthî) [q.v.], who had a great influence after 1912, had literary views entirely different from those of Ahmed Hâşîm, for he sought music rather in the exterior elements of his poems, while he retained the motto "art for art's sake". Another poet, who remained outside the national literature, was Mehmed Akîf (Ersoy), the advocate of Pan-Islamism [q.v.] and univalled master of the *süre* metre; in simple language he described the life of the people in its most realistic aspects. Akîf, whose lyrics sometimes rose to great heights, remained quite uninfluenced by western poetry; he was a democratic poet, born of the people. In the work of these three poets, very different from one another, we see Turkish poetry striving to free itself from the too limited sphere of Tewfik Fikret and his school; but under the stimulus of the great development of the nationalist movement, which manifested itself in the whole field of art, poetry also ended by entering on new paths.

(d) The national literature

After the Revolution of 1908, it was the ideal of Ottomanism (*otmânîlî*) that animated the governing classes. But the political events which rapidly followed, soon proved that this ideal was a chimera, by the attitude of the Muslim elements no less than by that of the Christians. The Turkish element, which was dominant in the empire, thus needed a new ideal; it was a literary circle which lasted only a short time; the political events which rapidly followed, soon proved that this ideal was a chimera, by the attitude of the Muslim elements no less than by that of the Christians. The Turkish element, which was dominant in the empire, thus needed a new ideal; the political events which rapidly followed, soon proved that this ideal was a chimera, by the attitude of the Muslim elements no less than by that of the Christians. Yusuf. The movement was violently opposed by the followers of a badly-understood occidentalism (Özbek-şiihlük) on the one side, and by the partisans of Pan-Islamism (tülkü-İslâm) on the other. At the same time, the periodical Genç vật Kalemier, published at Salonika, again started, under a pretentious name, a campaign to purify the Turkish language, and Ziya (Diya) Gök Alp [see gökalp, ziya] a member of the Committee of Union and Progress [see iftihat ve terakki ısmâîrîyetî] began his activities. With the transfer of the central office of the Turkish Yurtç on the one side, and by the partisans of Pan-Islamism (tülkü-İslâm) on the other. At the same time, the periodical Genç Kalemier, published at Salonika, again started, under a pretentious name, a campaign to purify the Turkish language, and Ziya (Diya) Gök Alp jointly published his book Türkçülükü esâltar (Ankara 1339/1923, Istanbul 1940, Engl. tr., Principles of Turkism, 1968). His death, soon after, was a cause of general mourning throughout the land.

As in all branches of life, the national movement made its influence felt in literature: the syllabic metre attained the dominant position in poetry; the language was simplified; the motto "art for art's sake" was replaced by "art for life"; writers began to borrow from popular literature and its traditional forms; literature began to reflect the life and characteristics of all branches of society. Philological and historical studies were made on the works of the musician-poets, on the popular literature, the music and poems; all his life, from the time of the Balkan War to the Armistice, when he was exiled to Malta, and later during his sojourn in Dıyâr Bakr and Ankara, he displayed an uninterrupted activity: the résumé of his teaching is contained in his book Türkçülükü esâltar (Ankara 1339/1923, Istanbul 1940, Engl. tr., Principles of Turkism, 1968). His death, soon after, was a cause of general mourning throughout the land.

devotion, a current which in Anatolia went back to the time of the Seljuks of Rûm, the Dânîhâmîns [q.v.] and the succeeding beyliks. Before they reached Anatolia, the Turks‘ Central Asian background had been strongly influenced by the Sûfîm of such holy men of Türkistan as Ahamad Yasâwî [q.v.], and this was subsequently reinforced in Anatolia by the establishment in Konya [q.v.] during the time of the Mongol invaders of the father of Djalâl al-Dîn Rûmî, Mawlânâ himself and his son Sültân Walad [q.v.], making this capital of the Seljuks and then city of the Kâramâns [q.v.] a centre of spirituality whose luminaries included also a figure like Sadr al-Dîn Kânî [q.v.], the stepson of Ibn ʿArabî; the influence of Ibn ʿArabî [q.v.] was to be important in later Turkish mystical thought and poetry. As well as these religious elements of pre- and early Ottoman religious life stemming from Kârûsân, there seems also to have been considerable interaction at the popular level with the Christian and even pre-Christian substrata in Anatolia.

This is probably the case with a Sûfî order like that of the Bektâshîyya [q.v.], in which a distinct Sûfî tinge is also discernible. The Bektâshî became especially strong amongst the Turkish communities of the Balkans, and remained so up to the 20th century, latterly in a somewhat clandestine manner after the official suppression of the order‘s patrons, the Janissaries, in 1826. The Mewlewî [see MAWLAWIYYA] especially strong amongst the Turkish communities of the tinge is also discernible. The Bektâshî became in which a distinct Shi‘i [q.v.], of the Bektashiyya latterly in a somewhat clandestine manner after the Balkans, and remained so up to the 20th century, included an especial emphasis on some ways a more aristocratic one, the order being linked with the dynasty and the higher reaches of the administration—included an especial emphasis on their own particular forms of dhikr and sama‘ [q.v.]. But numerous other orders such as the Khadwatiyya, Şâhidîyya and Naşhindîyya [q.v.] were to play important roles until the official suppression of the orders and their tekkûs by Artûrûk in 1926, and the Sûfî element in Turkish popular religious life is by no means unimportant today [see e.g. NURÇULUK].

A product of this very perceptible Sûfî imprint is further seen in Sûfism‘s contribution to Ottoman literature, in both its Turkish and Persian emblems, in the tradition of the simple mystical poems and hymns of Yûnûs Emre (d. 721/1321 [q.v.]), exemplified in the Bektâshî hymns of the 9th/15th century poet Kayghusuz Abdal [q.v.]. Also, prose hagiographical works in both Persian and Turkish developed from the simple cubes of such small mosques as that of Hâjjî Ozbek at Iznik (734/1333). Tillodge. From this court, steps led to the dome lit by an oculus. From this court, steps led to the fine monumental complex to Mehemmed §ehzade in Istanbul, built by ʿAtîlî Sinân, failed to accommodate this influence, but the mosque of Bâyezîd II (911/1505) achieved a rigid version. Both mosques had grand courtyards and re-used Byzantine columns. At the Bâyezidiyye, the bulky minarets [see MANÂRÂ] set abnormally far apart were the last before the evolution of the slender, stone style which were emblems of Ottoman supremacy.

In 1537, Sinân ʿAbd ul-Mennân [q.v.] was appointed chief architect. As a soldier, he was trained in organising large work forces and supplies. His strictly-disciplined subordinates could carry out his plans independently from the immaculate mosque of Selîm II, at Karapınar (971/1564) to the elaborate foundation of Murâd III, at Karaman (987/1586). At Sinân’s memorial complex to Mehemmed Şehzade in Istanbul (955/1548), four semi-domes brought the centralised plan to a logical conclusion, but the subordinate buildings of the complex lacked significant unity. This was achieved with the much larger educational and charitable complex (see KULÎLIYYE) built for Sûleymbânî in Istanbul (964/1557). The mosque is set on a vast esplanade raised on massive vaults. The fine quality of the decoration, including İznik [q.v.] tiles, contrasts with the puritanical structure where no stone is purely ornamental. The subordinate courtyards are remarkable, and in that of the hostel, where the corner columns are the same size as the rest, a sense of flowing movement is achieved in the Italian Renaissance manner.

Sinân was skilled in the use of awkward sites. At the mosque-medrese of Şokollu Mehmend Pâsha [q.v.] in Kadirgâra (780/1572), broad staircases lead up to the mosque-like courtyard to the central hall of the college. The tiled mabâb wall is unvarnished. At Edirne [q.v.], Sinân built his masterpiece for Selim II. The use of eight piers inside create a sense of circular movement, and the decoration is sparingly but splendidly used. The four minarets abutting the dome are the tallest in Islam (70.89 m) and the dome is as broad as that of Hagia Sophia (31.28 m). Only the work of...
Sinan's most gifted student, Dawud Agha, absorbed the influence of the Selimiye at the mosque of Nihârandî Mehmed Pasha in Istanbul (997/1588). The mosque of Mehmed Agha in Istanbul (1026/1617) and the betailed Yeni Valide Camii at Eminönü (1074/1663) ended the Sinan era.

The palaces of Topkapı and at Edirne expanded pavilion-by-pavilion, and the Baghâd Köşk (1048/1638), built for Murâd IV at the former of these, is the noblest Ottoman room. Grander domestic architecture centred on a first floor chamber with rooms at each corner. The 18th and 19th centuries built standard wooden-frame mansions capable of infinite variation, often to create rectangular spaces where a site was mishapen.

Newshirli İbrahim Pasha and Ahmed III [q.v.] imported a modified French rocco which blossomed into elegant water kiosks [see SABIL]. The flowering of imported a modified French rococo which blossomed into elegant water kiosks [see SABIL]. The flowering of imported a modified French rococo which blossomed into elegant water kiosks [see SABIL]. The flowering of imported a modified French rococo which blossomed into elegant water kiosks [see SABIL]. The flowering of imported a modified French rococo which blossomed into elegant water kiosks [see SABIL].

The carpets termed by scholars "Ottoman" are in fact an atypical sub-group of Turkish carpets, utilising a technique technically related to that of the Mamlûk carpets of Egypt, and patterns stemming from 16th-century designs created in the Mamlûk-Marâqeh [q.v.] on the Bosphorus were massively built, but their architecture owed much to that of their enemies. Köşks (kiosks, belvederes) were, in a sense, permanent tents.

The 19th century was dominated by the buildings of the Balkan family, whose palaces included those at Dolmabâche (1270/1853) and Beylerbey (1282/1865) on the shores of the Bosphorus. They built extensively in the Beaux Arts style. Foreign architects dominated commercial building, but Kemâl-ü-Din led a revivalist movement. His fourth Wâkî Khan in Istanbul (1335/1916) achieved monumentality, but generally, pastiche replaced that discipline which was at the heart of Ottoman architecture.

ple, is extensively documented in Russian archives, and the Orthodox sacerdotal garments made from Ottoman silk frequently bear embroidered Russian dates and inscriptions.

The artistic as well as the commercial history of silk in the Ottoman empire is enormously complex [see Harik]. While it has long been known that the Bursa silk market was a major source of cocoons for the Italian silk-weaving industry, it now appears that there was close collaboration between Turkey and Italy in weaving finished silks as well; many fine silk fabrics which technically appear to be within the Italian orbit exhibit impeccably Ottoman designs.

Both artistic traditions emerged in the 15th century, owing much to the Mamlûk silks woven in Syria or Egypt, including the popular ogival or diaphanous design format. Typically Turkish floral motifs, such as the ubiquitous tulip blossom, actually appear in Italian 15th-century silks depicted by quattrocento painters such as Uccello, while the earliest surviving Turkish examples with the motif probably date from the early sixteenth century. Fifteenth-century Turkish sources abound with references to Ottoman silks, such as the famous zatma velvets of Bursa, but few examples seem to have survived.

By the mid-16th century Ottoman silks are more easily documentable, in part through their appearance in dateable European paintings, in part from their use in dateable European sacerdotal garments, but primarily through their depiction in Turkish historical manuscript illustrations and through the growing use of designs originating in the nakkâb-khâne in the arts of textile-weaving, ceramics, carpets, bookbinding, and architectural decoration, each of which may help serve as collateral dating for the others. Large numbers of 16th- and 17th-century Ottoman silks are preserved in museums and collections worldwide.

In the 16th century and later, Bursa continued to be a major source of velvets (zatma, kadiye), whose designs tended to be more traditional; the brocaded silks (seraser, kemkâha, serenk and zerbâft), on the other hand, appear to have been woven in or near Istanbul, and their designs show an astounding variety based on the full repertoire of motifs and styles in use in the nakkâb-khâne. In addition, an important subgroup of 16th- and 17th-century Ottoman silks with figural designs and Christian—specifically Orthodox—iconography were woven for use in Orthodox churches both within the Empire and in Russia.

Some of these textiles appear to have been woven directly under court control or on court commission by members of the ehl-i hâfez; new research indicates that there is a wide variety of technical quality exhibited in pieces of similar design, possibly an indication of differences between finer pieces woven for the court on commission, and somewhat coarser silks woven for export or for sale in the bazaar. Ottoman documents from the early 16th century onward indicate that maintaining standards of quality in textiles was a concern both for the mahkeme and for the law courts.

In addition to the artistically important carpets and silks, Ottoman weaving centres from Damascus to Kâhta, Iznik, Nizza, and Kavalla served as sources for commercial sale; many such manufactories also produced goods destined for the army. It is quite difficult to identify specific surviving examples of this kind of weaving, as they are without dateable design or ornamentation. Because of their low value very few examples have been preserved, except occasionally as military booty and trophies in European collections.

Later Ottoman woven textiles in general show a marked decline in artistic and technical quality from those of the 15th until the 17th centuries; the exception is the tradition of Ottoman domestic embroidery, which continued to produce works of high artistic quality through the 19th century.

(W. B. DENNY)

VII. CERAMICS, METALWORK AND MINOR ARTS

(a) Ceramics
The Saldıbek tradition of glazed pottery and tiles of a hard, white composite ware found at Konya and at Koubadabad [q.v.] in the 12th-13th centuries AD was superseded in Anatolia by a crude red earthenware, covered with a white slip and decorated in blue, green, purple or black under a lead glaze. This simple, utilitarian ware, misnamed "Miletus" ware after large quantities were excavated in that town [see miâtas], was in fact produced at Iznik. At Bursa in the early 15th century, the Yeşil Cami and Yeşil Türbe were elaborated and decorated with cuerda seca tiles, in Timurid style; the names of the tilemakers, "the masters of Tâbrîz" and "Muhammad al-Madjnûn", are recorded on the tilework, as well as the fact that the decoration in the Yeşil Cami was completed in 1424 AD by ʿAli b. Ilyâs ʿAli (Nakkâsh ʿAli). The Yeşil Türbe contains the elaborated tiled cenotaph of Mehmed I (1413-21) and a fine mihrâb in similar style. In the second Ottoman capital, hexagonal tiles of off-white ware decorated in underglaze blue with a wide variety of designs are found in the mosque of Murând II, built in 1435. The mihrâb is a mixture of cuerda seca and underglaze elements, these, like the hexagonal tiles, betray a strong influence of imported Yuan and early Ming Chinese porcelain, arguing that such imported blue-and-white was already a current feature of Ottoman life before the conquest of Constantinople in 1453.

With the establishment of the capital in Istanbul, a new industry flourished there, to supply both vessels and tiles. Both were made of a hard, white composite ware similar in composition to the fritware produced in Kahân described in Abu ʿl-Kâsim's treatise on ceramic manufacture of 1301 AD, suggesting an influx of new technology rather than the development of the existing Edirne-Iznik tradition. Initially decorated in cobalt blue, a supplementary turquoise was added by the first quarter of the 16th century, and later a full range of softer colours by the mid-16th century, culminating in the brilliant colours of the mature Iznik style from c. 1565 onwards, with cobalt and turquoise blue, viridian, and a relief red apaly compared to sealing-wax in appearance. While the early monochrome blue designs were in a tart, manuscript style with strong Chinese influence, by the middle of the 16th century Iznik ware develops a distinctive iconography of elaborate floral and arabesque forms on a white ground and this is continued in a great quantity for the new mosques, palaces and other buildings in the city; acknowledged as the finest is the mosque of Rûstem Paşa [q.v.] (1561). Iznik ware was also appreciated outside Ottoman Turkey, and has been found as far afield as the Crimea, in Hungary, England, Germany and Nubia.

The history of the Iznik industry is further complicated by the existence of a parallel industry at
Kütahya [q. v.] in western Anatolia; two inscribed and dated pieces of 1510 and 1529 AD have Armenian texts and refer to Kütahya as the place of manufacture; they are in the general Iznik style. Further, texts refer to the continuing production of Kütahya ware in the 16th and 17th centuries, and the precise identification of these wares is the subject of current research.

By the mid-17th century, the Iznik industry had more or less collapsed, with the withdrawal of Ottoman court patronage, and a minor factory was established at Tekfur Saray in Istanbul, as well as provincial manufactories in Diyarbakir and in Syria, working in a provincial style. A major work was the restoration of the Haram al-Sharif in Jerusalem, undertaken by Sultan Süleyman from 952/1564-5 onwards. The Jerusalem tiles were made in situ by Persian craftsmen who had previously been employed for the decoration of a number of royal structures in Istanbul in the cuarda seca technique. In Jerusalem, the decoration is in tile mosaic and cuarda seca, and underglaze tiles developed independently of the Iznik tradition. An inscription above the north porch is signed "Abd Allah of Tabriz" and dated 959/1551-2.

In the 18th century, the Kütahya industry came into its own, with Armenian potters producing both tiles and pottery in a new style. A major enterprise was the manufacture of a series of tiles with Biblical subjects, and pottery in a new style. A major work was the decoration, of Balkan origin; a number of these are parallel to Turkish design in other crafts, notably in ceramics and textile design.

century there was a considerable production of silver vessels, particularly of bowls with repoussé and engraved decoration, of Balkan origin; a number of these are stamped with the jügfer of Bayezid II (1481-1512), and it has been noted that their patterns of interlacing arabesques had a direct influence on the design of early Iznik monochrome blue ceramic ware of the same period. Like the other arts, decorative metalwork reached its peak during the mid-16th century, and many examples remain in the Ottoman treasury of Top Kapı Saray, amongst the most distinguished of which is undoubtedly the sword made for Süleyman the Magnificent with its "chinoiserie" panels of dragons and phoenixes in relief, its ivory hilt inlaid with gold arabesques and cloud-scrolls, and its elegant gold relief Arabic ishlih inscription on both sides of the steel blade dedicating it to Süleyman and dated 933/1526-7; see Rogers and Ward (1988), no. 83. The spine bears Persian nasîhî verses and the name of the craftsman, Ahmed Tekkelu.

 Mention should also be made of the use of gold inlay and gem settings on vessels of other materials, such as jade, zinc and even imported Chinese porcelain (Krahô, 1986).

(c) Bookbinding

The art of bookbinding in the Ottoman empire continued the general tradition of Islamic bookbinding, the salient features of which were the use of a triangular envelope flap to protect the fore-edge of the textblock, the linkstitch sewing of the gatherings or fascicules, the use of traditional Islamic chevron endbands, often of contrasting coloured threads, and the joining of the textblock to the covers with hinged doublures. See Bosch, Carswell and Petherbridge (1981) for a detailed description of these characteristic features, based on an analysis of mediaeval bindings, early bookbinders' manuals (cf. Bosch, 1961) and modern practice in the Islamic world.

The design of Turkish bindings follows the Timurid tradition of the 14th-15th centuries as exemplified at Harât and Tabriz (cf. Aslanapa, 1979), often with a pointed central medallion either stamped or built up from individual petit fer motifs, with quarter-medallions at the corners. Titles were often incorporated on the spine (Islamic books being designed to be stored horizontally, rather than vertically as in the European tradition). A particularly Turkish feature was the use of marbled papers (qirâ) for the lining of the covers. For more lavish courtly bindings, instead of pastebord, covers were made of expensive materials such as jade, tortoise-shell, and gold and silver cloth, further embellished with precious stones, jewels and pearls set in gold mounts.

The binders themselves would have been an integral part of the nakkâh-khâne [q. v.] or court scrip-
torium, generally credited with being the inspiration and source of designs for all the Ottoman crafts, though the importance of the role of the nakkâh-khâne in standardising Ottoman taste may be somewhat ex-
aggerated. While the tradition of arabesque ornament continues, along with foreign elements such as the Chinese cloud-scroll, specifically Ottoman elements include spiral designs of tiny rosettes, bold asymmetrical compositions in the feathery cloud style, and even the use of naturalistic floral motifs—all of which parallel Turkish design in other crafts, notably in ceramics and textile design.

(d) Glass-making

Although the Ottoman empire came to include a region of great importance for the history and evolution of glass-making, sc. the Syro-Egyptian littoral, the indigenous tradition in Syria was ended by
Timur's deportation in 1400 of the Syrian craftsmen to Samarqand. In a curious reversal of roles, the Ottomans, Marcan-tonio Barbaro, ordering from Venice for Istanbul 900 mosque lamps of two different types, for which he supplied two drawings.

But at least as early as the late 16th century, there was glass-making in Istanbul itself, for in 1582 a Turkish guilds procession included glass-blowers on their imperial tour. Throughout the 17th century, imported European glass was very popular, often featuring in diplomatic exchanges of presents, and by the early 18th century Bohemian glass became a significant export of the Habsburg empire. There were Bohemian glassware in Istanbul, Izmir, Beirut and Cairo. Even English and Spanish glass was imported into Turkey at this time.

From the late 18th century onwards, the local glass-making tradition was well established in Turkey, with a factory founded at Beykoz on the Anatolian shore of the Bosphorus, and workshops sprang up in nearby villages throughout the 19th century. The earliest Beykoz ware appears to have been of clear glass, often with sprigged gold decoration; the more typical opaque glass with enamel decoration dates from the mid-19th century. The most popular form was the rose-water sprinkler, with a threaded, pierced glass stopper and floral decoration in gold and enamel colours. Other shapes included ewers, cups and tulip-shaped vases, dishes and covered bowls, and also fantastic pieces in the shapes of doves and pistols. The highly-successful modern glass industry at Paşabâche is located close to Beykoz on the Asiatic shore.

With the expansion of the empire's eastern and
western frontiers during the reigns of Selim I (1512-20) and Süleyman I (1520-66), an increasing number of artists joined the nakkash-name from Persia, Syria and Egypt in the east and the Balkan provinces in the west, bringing an eclectic style into Ottoman painting. The literary taste of the time called for Persian classics and for works in Çaghatay Turkish by 'Ali Şir Newâi. Illustrated copies of Newâi's works (Khamsa dated 937/1530-1 in TSM, H. 802, and Dituâns ca. 1530 in TSM, R. 804, 806) combine features from the Harât, Şirâz and Tabriz schools of painting representing the style of Bâyezid II's period. It was with the illustrated historical manuscripts produced in Süleyman I's reign that a distinctive school of painting was established, to reach its classical age in the reign of Murâd III (1574-95).

The outstanding feature of Ottoman painting is the genre of illustrated histories unmatched by any other Islamic painting school. Predominating in the 16th century, these histories written by the official paid annalists, the şahâ-nâme, and illustrated at the court studios, visually recreated the achievements of the sultans, their appearance and activities with documentary realism. When illustrating scenes of accession ceremonies, military campaigns, receptions or royal hunts, the Ottoman artist had to introduce a new iconography for which no prototypes existed in other schools of Islamic painting. The monumental illustrated history of the Ottoman Empire written in five volumes by Arifi, annalist at Süleyman I's court, documented historical events and served as a prototype for future artists in iconography and compositional schemes (e.g. Süleyman-name, TSM, H. 1517 dated 965/1558). A series of histories were written in the second half of the 16th century by Lokmân, Arifi's successor, and illustrated by a group of artists headed by Othmân, in which a classical Ottoman style was achieved by eliminating foreign elements and formalising rigidly observed compositions, strong colours and powerful figures. The Tarih-i Sultân Süleyman on the life of Süleyman I (Chester Beatty Library, T. 413, dated 987/1579), Şahâ-nâme-i Selim Khan on Selim II (TSM, A. 3595, dated 989/1581), the two-volume Hân-nâme covering the history of the Ottomans (TSM, H. 1525 and 1524, dated 1584 and 1588) and the Sur-nâme narrating the royal circumcision festival of 1582 (TSM, H. 1344, dated ca. 1582) replete with illustrations, all realistically documenting the events, personages and their settings, mirror the political and social history of the empire in the 16th century.

This realistic approach was maintained in religious manuscripts as well. The Ottomans' interest in their ancestry resulted in the production of world histories where the sultans are linked genealogically with the prophets. The illustrations in Lokmân's Zübett al-tevarîh (Türk Islam Eserleri Müzesi, 1973, TSM, H. 1321 (Bl., T. 414, dated 1583-86) and the six-volume work on the life of Prophet Muhammad, the Sîyer-i Nebî dated 1595 (TSM, H. 1221, 22, 23, CBL, T. 419 and New York Public Library), follow the compositional schemes in the historical manuscripts.

One other distinctive genre in Ottoman painting is royal portraiture. Set by Mehmed II, the tradition of portraiture continued into the 16th century with works by Nigârî, who painted Süleyman I, Selim II and Khâyri al-Din Barbarossa [q.v.] (TSM, H. 2134). Later in the century, portrait albums were produced. A Şahâ-nâme-i-name describing the appearance of the first twelve sultans, written by Lokmân in 1579 and illustrated by Othmân, set a model for all later images of the sultans (TSM, H. 1563, İstanbul Universitesi Kütüphâni T. 6088).

Interest in imperial histories resulted in one other feature of Ottoman painting, namely topographical illustration, which was foreshadowed early in the 16th century in the works of Pirî Re'is [q.v.], captain and cartographer known for his sea charts and map of the Atlantic Ocean. The works of Nâsîh al-Matrâşı al-Sîlähi [q.v.], an officer and historian who wrote and illustrated Süleyman I's campaigns, are the basic examples of this genre (e.g. Beşân-i menâzî-i sefer-i İtrâk, dated 1584-7, and Zâcînâme, TSM, H. 1608, dated ca. 1543). Topographical illustrations continued throughout the 16th and 17th centuries in historical manuscripts.

With the empire entering a period of stagnation in the 17th century, there was a decline in the production of illustrated histories. The artist, no longer having to record imperial achievements, turned to single-figure studies and scenes from daily life. Along with the westernising efforts of the sultans in the 18th century, painting took a new course. During Ahmed III's reign (1703-30) the last manuscript of a historical nature was produced by the poet Wehbi and painter Lewni. The illustrations of the Sur-nâme (TSM, A. 3593) relating the circumcision festival of 1721 are full of innovative elements such as shading and perspective. Lewni and his contemporary Bukhârî also painted single figures dressed in glorious costumes. Costume studies were produced throughout the century, the best examples being displayed in the Khubân-name and the Zanân-name of 1206/1793 (İUK, T. 5502), where figures seem to have acquired European postures and more volume. The same is true for the sultans' portraits painted in the 18th and 19th centuries. Manuscript illustration ended in the 19th century, and other forms of painting, such as painting on walls and small furniture, emerged with easel painting in the western sense taking over at the end of the century.

(Günsel Renda)
IX. NUMISMATICS
When Īmân b. Ertoghrul (ca. 699-724/1300-24) established his base in Sogiid in Bithynia there was a probable change in the coinage of any kind in circulation. The principal Islamic coin he would have encountered was the Rûm Sâlîdî coin, dirham. The Byzantinebasilikon, the Venetian grosso and smaller dmier-sized silver from various European mints may also have been found in trade or as booty of war. The Rûm Sâlîdî coinage continued to be based on the classic Islamic dirham, weighing 2.8-2.9 gr., until the coinage reform of the Ilkhan Mâhîdî Qâhzaan (694/1295-1304) in 696/1297. However, with the continued devaluation of the new coinage under Qâhzaan’s successors, Oldjeytû (703-16/1304-16) and Abû Sa’îd (716-36/1316-35 [q. e. v.]), the eastern Islamic world gave up the long-established currency system of dinårs and dirhams, whose metrology was enshrined in the Shāri’â, for one where the weight standard was regularly manipulated (and usually devalued) by the governing powers.

Oldjeytû’s early 8th/14th century coinage in Western Anatolia consisted of light silver dirhams weighing about one gramme, but the earliest known Ottoman coin, struck in the name of Īmân b. Ertoghrul, weighs 0.62 gr. Following his capture of the city of Bursa, ca. 726, Oldjhan b. Îmân (724-61/1324-60) issued his first coin, an akçe, weighing about 1.10 gr based on a conventional Ilkhanîd prototype, with the kalîma and the names of the four Orthodox Caliphs on the obverse, and that of the ruler and mint (Brusa) on the reverse with the date 726 written out in Arabic in the margin. Oldjhan issued several subsequent series of akçes, all without mint names or dates, the last of which, introduced after the Ottomans obtained their first foothold on the European shore of the Dardanelles at Gallipoli ca. 752, was notable because it omitted his father’s name. A special five-akçe weight, 3.80 gr., issue of this type also was struck, probably as a donative for Oldjhan’s victorious troops.

Oldjhan’s son and successor, Mûrât I (761-91/1360-89) issued three types of akçes, one, ca. 762, with a line dividing the reverse field, a second, ca. 772, with two lines dividing the obverse and reverse fields, and a third, ca. 782, which was the first to omit the kalîma, the four names and the three lines dividing the reverse field. Mûrât also struck copper manghirs in his own name, one with the unusual date of Ramazân 790.

Bâyezîd I (791-804/1389-1402) continued his father’s practice of numbering his issues. The first has a numeral 4 and the date 792 on the reverse, and the second, ca. 802, has a pellet on the dividing lines. These early issues simply give the names of the ruler without any titles. When Tûmîr invaded Western Anatolia and overthrew Bâyezîd at the Battle of Ankara in 804/1402, Bâyezîd’s four sons competed for the former Ottoman territories. Amîr Sûleymanî held Rumelia and struck coins in Edirne dated 806 and 813. Mîhemmed Çelebi held Bursa and Amasya, where he issued coins first acknowledging Tûmîr as overlord, then, after Tûmîr’s death, in his own right. Mîsâ Çelebi struck coinage in Edirne in 813 and Mûrât II in Edirne and Serez in 822 and 824.

After his consolidation of power Mîhemmed (816-24/1413-21) struck coins dated 816 on which he called himself al-Sûlîn, but he removed this title, probably at the urging of the Tûmîrids, on his 822 issue. Mûrât II (824-48 and 850-5/1421-44 and 1446-51) struck a one-year issue dated 824 and a second in 825 from various mints in Rumelia and Anatolia. On these he inscribed his name in a tugalî, a practice introduced by Amîr Sûleymanî in 806. On Mûrât’s third issue of 834 the obverse and reverse are divided by two interlaced lines without a tugalî. After his first abdication his son Mehemmed II (first reign 848-50/1444-46) issued akçes bearing the date 848, and when Mûrât II resumed power he copied his son’s coinage, unobtrusively changing the order from Mehemmed b. Mûrât to Mûrât b. Mehemmed by moving the position of the word ibn from the left to the right of the names.

Until the 848 issue the weight of the akçe had remained roughly constant at 1.1 gr, but during Mehemmed II’s second reign (855-86/1451-81) it was regularly reduced each time a new issue was introduced, first in 855, and then in 865, which was the first coinage to experiment by striking a ten-akçe coin, the akçe-i hazire. His fifth issue was dated 880, and two years later he brought out the first Ottoman gold coin, the sultânî, which adopted the weight standard of the Venetian ducat, ca. 3.52 gr. A second gold issue was dated 883 and a third 885. In the last year of Mehemmed’s life his sixth and last series of akçes was struck with the date 886. After the death of the Timûrid Shâh Rûkh (807-50/1404-46), Mehemmed cast aside his inhibitions over the use of titles, and introduced two royal styles that were to remain in use for centuries. The first was Sulânî al-barayn wa-ghânîn al-bahrayn al-Sâlîn ibn al-Sâlîn and the second Dârîb al-nâdîr wa-sâbîh al-izz wa l-nâs fi l-bahr wa l-bahr. Like his forebears he also struck manghirs in his own name in several mints.

On the accession of Bâyezîd II (886-91/1481-1512) it was decided to date the coinage by the sultan’s accession year rather than by issue as had been the previous practice. This was probably to avoid public anger caused by the repeated debasements of the akçe under Mehemmed II. The short-lived rebellion of Djin b. Mehemmed was marked by an issue of akçes from Bursa following the design of his father’s last coinage dated 886. Bâyezîd II also struck coins in Gelibolu (Gallipoli) and Trabzon (Trebizond). The dies for the latter may actually have been cut by his son and successor Selîm Shâh whose private crafsmanship in die-cutting rivals that of his father’s. The official Ottoman coinage from both Rumelia and Anatolia was uniform in style, and was, in effect, the ‘national’ coinage of the Ottomans.

With the conquests of Selîm I (918-26/1512-20) and his son Süleymanî (926-74/1520-66) the character of the Ottoman coinage developed from a national to an imperial one. After Selîm conquered Syria and Egypt he continued the coinage of the Burdji Mamlûks who struck gold qabariys substantially lighter than the contemporary Ottoman sultanîs, and silver medins based on the half-dirhâm, which by then was considerably heavier than the Ottoman akçe. Selîm also introduced the custom of striking conquest coins to signal the submission of the important towns he had captured, including Amîd (Diyarbakîr), Bitlîs, Dimâlûq (Damascus), Halab (Aleppo), al-Djazira, Hisn Kayf and al-Rumî (Constantinople) [q. v.].

Sûleymanî I retained a uniform akçe coinage for Rumelia and Anatolia. After the Ottomans conquered the Maghrib the broad flan heavy weight gold coinage of the Zîyânids of Tîlîmân (Tlemcen) remained in use, as did the square silver nasrî of formerly Hafsid Tunisia. After the conquest of ‘Irâk and Adhar-îbâdîân from the Safawîs, a heavier miqâli-weight silver coinage was introduced for use in these lands,
but shortly thereafter its weight was reduced by a quarter. Under Suleyman's son Selim II (974-82/1566-74) minting activity declined, but Murad III (982-1003/1574-95) and Mehmed III (1003-12/1595-1603) expanded the number of mints to no fewer than fifty, the greatest in Ottoman history.

During Murad III's reign the Empire was engulfed by a tidal wave of silver from the New World. European traders imported silver in coin and bullion in order to purchase gold which they then exported and sold in Western Europe at considerable profit. As a result the akce suffered a rapid devaluation, producing both inflation and great hardship for the peoples of the empire. This decline in prosperity was reflected by a decrease in the number of active mints and a great scarcity of gold coinage struck in the names of Ahmed I (1012-26/1603-17), Mustafa I (1026-7 and 1031-2/1617-8 and 1622-3), 'Othman II (1027-31/1618-22), and Murad IV (1032-49/1623-40). The quick succession of sultans demanded frequent distributions of dulk adedagh, accession donations, which required the modification of existing types of coinage, the most needed to defend the state against its enemies.

'Otthmâni Il was the first to issue ten-akce coins in large numbers, because by then the one akce's weight had fallen to 0.30 gr and a larger coin was needed for everyday use. The ten-akce was rapidly debased under Mustafa I and in the economic crises of Murad IV's reign. Midway through the latter Kemâneşh Kara Mustafa Paşa attempted to revive and protect the coinage by closing down most of the provincial mints in Rumelia and Anatolia, and introduced the para, valued at five akces, to the Constantinople currency. This reform was continued in Ibrâhim's reign (1049-58/1640-8), when the Constantinople coinage consisted of the 10, 5, 2 and 1-akce, and Egypt's of the gold sulânî, the medin valued at 5 akces and the 1-akce. Since the reign of Bayezid II, the striking of copper manghâls had been the prerogative of local tax farmers who forced the public to buy new issues in return for payment in silver or gold. By now, however, the purchasing power of coinage had fallen so low that it had virtually disappeared from circulation.

The spiral of economic decline continued under Mehemmed IV (1058-99/1648-87), when the striking of silver and gold virtually ceased in Constantinople, and the currency was decimated marked against the Venetian ducat, or sequin. It continued to appear sporadically in Algeria, Tunisia and Tripoli, and there are also unique examples of gold coins from Belgrade and Bagdad. During the 11th/17th century European coinage virtually supplanted that of the Ottomans in their own territories, because the population had lost trust in the products of their local mints. In the last year of Mehemmed's reign a European renegade called Frenk Mustafa was called upon to reform the Constantinople mint. His first act was to prepare dies of very high artistic quality to return a sense of pride to the imperial mint, and a few specimens of this work have survived.

The accession of Suleyman II (1099-1102/1687-91) saw three major reforms. The first was to strike broad flan gold coins for conversion into jewellery, the second introduced a large-sized silver coinage on the European pattern made up of the zolota, 18.5-19.7 gr, and half-zolota, 8.65-9.85 gr, and, most important, a new copper coinage to compensate for the great shortage of silver akces. The new manghâl bore the sultan's tugra on the obverse and was originally valued at one akce. Its great popularity led to the opening of a second mint for copper in Saray Bosna (Sarajevo) in 1609, and for a time its value rose to two akces. By the time Ahmed II (1102-6/1691-5) acceded, however, its value had plunged to virtually nothing, and it was withdrawn soon after. Ahmed II's coinage followed the pattern established by Suleyman II.

Fresh attempts at reform were made under Mustafa II (1106-15/1695-1703). He added mints in Edirne, Izmir and Erzurum to that of Constantinople so that European and Safawid coins could be restruck as they reached the frontiers of the state. A new gold coinage called the aghraji, bearing the sultan's tugra, was introduced to replace the discredited sulânî, as was a kurîsh valued at 120 akces compared to the 90-akce zolota, but both were too scarce to prevent the economic chaos caused by the wars with Austria.

During the reign of Ahmed III (1115-43/1703-30) the coinage was repeatedly taken in hand, and a degree of stability was established. In the early years the aghraji and zolota with the mint name Kustantiniyya were the dominant coins. These were succeeded by a gold funduk, or zargiri alam, bearing only the sultan's tugra on the obverse and dariba of 'Isâm b. Murad on the reverse, accorded the value of the former 40 paras or 120 akces, whose theoretical weight was approximately 24 gr, with its fractions half, quarter and eighth. In the last years of Ahmed's reign, a three-quarters weight gold coin, 2.64 gr, was introduced, called the zar-i mahbub. Both this and the funduk had fractional and multiple denominations in the broad- span zinet, ornamented jewellery coins. This coinage pattern continued under Mahmid I (1143-68/1730-54) and 'Otthmâni Il (1168-71/1754-7). The Barbary regencies continued to strike gold coins whose weight was comparable to the Venetian sequin and the Constantinople funduk, while the silver coinage maintained various standards based on local usage, but was struck in the name of the sultan as nominal overlord. These coins were dated by the actual year of their striking rather than by accession year only, as they were in Constantinople and Cairo.

Under Mustafa III (1171-87/1757-74), the coinage of Constantinople became even more complex, consisting of the gold funduk and half-funduk, the zar-i mahbub and its half, the zinet, 5, 3 and 1 1/2 funduk, the silver kurîsh series, full, 40 para, half, 20 para, quarter, 10 para and eighth, 5 para, and the double zolota, 60 para, the zolota, 30 para and the half-zolota, 15 para. There was also the double para, and the akce itself. At this time the Constantinople mint modified the traditional dating system by placing the actual year of striking on the coin, abbreviated to (1171) 1-9 and (11) 80-87 as well as the accession year. With the accession of Abd-ul-Hamid I (1187-1203/1774-89) came the final change when coins were dated both by accession year and dulk adedagh (regnal) year. (The actual date of striking is found by subtracting one from the number of regnal years and adding the remainder to the accession year.) In 1203, the last year of Abd-al-Hamid's reign, the double kurîsh, 80 para, was introduced to meet the cost of the war with Russia. Selim III (1203-22/1789-1807), added the silver 100 para (1/2 kurîsh) to the series. Towards the end of his rule an imbalance in the gold and silver ratio caused an increase in the amount of gold and a decrease in that of silver placed in circulation.

The coinage of Egypt was the Ottomans' primary source of gold, whose tribute was of the greatest importance to the imperial finances, became more prominent during this period. Its minor coinage was still based on the medin, now a debased and ugly little coin which people stored in their cheeks to keep it from being lost in the seams of their robes or blown away by the Khâmin winds. Following 'Ali Pasha's
revolt in 1183 Egypt struck its first large-size silver coins, the kurush, half and quarter. When the French seized Egypt during Selim III's reign the Cairo mint issued its broadside goals and quarters bearing the regnal year 13, and then, when Ottoman authority was restored, another issue with the "sun" of Shemsi Paşa to the left of the tughra was struck in the year 16.

Selim's overthrow in 1222/1807 led to the enthronement of the feeble Muştafa IV (1222-3/1807-8). By this time the coinage of Algiers, Tunis and Tripoli (Tarabulus al-Gharb) had undergone a major revival thanks to the proceeds of piracy in the Mediterranean. This was due mainly to the introduction of the gold quarter, the quarter kurush, in gold, but allied their silver coinage to the Spanish eight reales, striking double, single, half and quarter real dirhams with the approximate weight and fineness of the Spanish silver coinage. The Beys of Tunis were too poor to sustain a gold coinage, and issued a billion riyâl/kurush, half and quarter. In Tarabulus al-Gharb, now held by the Karamânlî dynasty [q.v.], the sulûname remained in use, but was of varying quarter face to find circulation largely as a means of raising taxes from their unhappy subjects.

The coinage of Mahmûd II (1225-55/1808-39) is the most complex in Ottoman history, and the word "chaos" might most aptly describe it. Many points concerning it are still obscure. At the beginning of the reign it was still traditional in form, but the tremendous political and economic upheavals of the time transformed it into something new and different. A bewildering variety of gold and silver coins were in circulation whose exchange rates fluctuated constantly, whose weights and alloys were inconsistent with one another, and whose designs and legends departed from past conventions. Added to this was the usual host of foreign coins circulating in the Empire, as well as counterfeit coins which created further confusion in the public mind.

The financial situation was never easy, and often desperate, with the state living from hand to mouth, and the manipulation of coinage was seen as an unavoidable expedient to help close the wide gap between income and expenditure. By this time the government fully appreciated that debasing the coinage was self-defeating, and that a stable medium of exchange had to be created if the state was to help fund the state pensions scheme.

The most important part of the currency reform reduced seigniorage to the point where it merely covered the costs of running the mint. In the absence of any other means of raising revenue the government was forced to close the shortfall between tax receipts and expenditure through the expedient of taking government loans. This brought about the bankruptcy of the Empire and the fall of 'Abd ül-Âziz (1277-93/1861-76). He was succeeded by Murâd V, who ruled for three months in 1293/1876, 'Abd ül-Hamîd II (1293-1327/1876-1909), Mehmed V Resgâd (1327-36/1909-18) and finally Mehmed VI Wâhid al-Dîn (1336-41/1918-22). The new coinage carried the reigning sultan's tughra on the obverse, with the regnal year beneath, and on the reverse the legend "âzâ nasruhâ durbâ fi Kustantiniyâsî with the accession year. A gold zinät coinage was introduced during 'Abd ül-Hamîd's reign, the proceeds from which were used to help fund the state pensions scheme.

The most popular denominations in the currency series were the lira and the five-kurush (quarter-mabûdye). The small gold coins were used as presents on the occasion of circumcision celebrations or gifts for brides, while the large ones were converted into jewellery to be kept as family savings. The Imperial mint also struck special series of coins to commemorate the sultans' visits to Edirne in 1247/1831, Edirne in 1262/1846, Bursa in 1277/1861, Bursa in 1327/1909, Edirne in 1328/1910 and Selânik (Salonica), Monastir (Bitola) and Koşowa (Fridgehina) in 1329/1911. The last Muslim state to strike a full range of denominations: gold 500, 100, 50, 25, 10, 5, 1 kurush, and the copper 40, 20 and 10 para, and copper coinage of the medjidiyye (20 kurush) was suspended in 1295 after the fall of Selânik in the price of silver following the development of the Comstock Lode in the United States. It was reintroduced in the last year of the First World War to pay the Turkish troops fighting in Syria and Palestine.

Egypt's coinage was hampered because the minting machinery could not keep up with the needs of the province, and foreign coins circulated more freely than did local pieces. However, the Cairo mint did strike a full range of denominations: gold 500, 100, 50, 25, 10 and 5 kurush; silver 20, 10, 5, 2½, 1 kurush, 20 and 10 para, and copper 40, 20, 10, 5, 4 and 1 para. After the British Protectorate was established the coinage was taken in hand and struck in European mints from 1302/1884 onwards. This coinage continued to bear the name, and accession and regnal year of the Ottoman Sultan until the Ottomans joined the German side in the First World War, when the British deposed the Khedive 'Abbas Hilmi II [q.v.] and made his brother Husayn Kâmil [q.v.] sultan of Egypt. In Tunis the Husaynî Beys started to place their own names on the coinage during the reign of 'Abd ül-Medjid. They introduced European coinage machinery in 1263, and based their unit of value on the riyâl [q.v.] weighing 3.20 gr.
The coinage consisted of the 100, 50, 25, 10 and 5 riyal, silver of the 5, 4, 2, 1 and ½ riyal (qadr). These coins were struck in the names of both the Ottoman Sultan and the Bey of Tunis until the establishment of the French Protectorate in 1298/1881.

**Bibliography:** There is an extensive literature on Ottoman numismatics, much of it in short articles, but only the principal works are mentioned in this bibliography.

(R. E. Darley-Doran)

**OTRANTO** [see ITALY].

**ÖTÊKÊN**, a forested, mountain area of Inner Asia which had a special religious and moral significance for the early Turkish peoples.

It seems to have been located in the eastern part of the Khangai Mts. along the headwaters of the Orkhon and Tamir rivers (the latter river corresponding, according to R. Giraud, *L'Empire des T'uyuq*, pp. 80-104). It was the heartland of the Kaghans of the Eastern Türk or the Khaqan who constituted their empire in the latter 7th century A.D. (see W. Thomsen, *Alltürkische Inschriften aus der Mongolei*, in ZDMG, lviii [1924], 123-6; R. Grousset, *L'Empire des steppes*, Paris 1951, 131-2, 154, Eng. tr. 106, 561 n. 2). It was a region of cosmic significance for these Turks, the navel of the world, a holy site, idur Ötükên yihş "sacred, forested Ötükên", mentioned many times in the Kül Tigin and Tonyukuk inscriptions of the Eastern Türk empire and also in the Tariyat and Sine Usu ones from the 750s of the Uyghurs who succeeded in Mongolia to the Eastern Türk Kaghans, although it was probably not the only sacred site for the Turks. In the annals of T'ang China, it appears as Yu-tou-kin (see P. Pelliot, *Le mont Yu-tou-kin (Ütökên) des anciens T'ues*, in *T'oung-Pao*, xxvi [1929], 212-19). The religious significance of Ötükên later passed to the Mongols who came to this region of Inner Asia, appearing in the 13th century as the Mongol earth and fertility goddess Atügin or Itügan (John of Plano Carpini's Itoqa, see W. Heissig, *Die religions der Mongolen, Sibirier und die Mongol. Geschichte* and Tonyukuk, 1841-4; the Mongols' sacred mountain region of Burkhan Galdun played for them the rôle which Ötükên had earlier played for the Turks).

Only the name, without consciousness of Ötükên's part in the life of the early Turks, persisted into the Islamic period: Mahmûd Kâshgârî (late 5th/11th century [q. v.] defines Ütükên as "the name of a place in the Tarâr deserts near the Uyghur" (Dârân 1bâghî al-turk, Tkal, tr. Atalay, i, 138, Eng. tr. R. Dankoff and J. Kelly, *Compendium of the Turkic dialects*, Cambridge, Mass. 1982-4, i, 159), but on the map accompanying the manuscript of his dictionary he apparently places it somewhere near the source of the Irîsh river [q. v. in Suppl.] and the steppe of the Yımâk [see KIMAK] (schematic reproduction of the map in Dankoff and Kelly, *op. cit.*, i, at p. 82, and see also V. Minorsky, *Sharaf al-Zamân Tâhir Maraşı on China, the Turks and India*, London 1942, comm. 73-4); obviously, Kâshgârî had only the haziest idea of Ötükên's real location.

**QYO**, a West African Yoruba empire in what is now Nigeria [q. v.] and rivalling Ile, where kingship existed from at least the 12th century. Qyo grew in importance from the 16th century with the rise of the Atlantic slave trade. The empire linked northern trade routes along the Niger with the Atlantic. Muslims from Bornu, Hausa, Nupur, the former Mali and Songhay were resident in its capital and along the route to the sea, but the Alafin, the local chief, and the vast majority of the people followed their traditional religion.

Struggle between central and provincial government produced a series of serious internal crises. At the death of the Alafin Awole in 1796, the governor of Ilorin, Afonja, broke from Qyo. To secure his independence against a resuscitating Qyo, he allied himself in 1817 with Fulani Muslims [see FULBE] connected with Sokoto [q. v.]. Their leader, Sâlib, conducted a successful djihâd against Qyo with the help of pastoral Fulani and Muslim town residents and slaves. His son 'Abd-al-Salam turned on Afonja and was recognised by Sokoto as 'Amir of Yoruba'. After a sustained campaign, by 1836 the capital, Qyo Ile, was destroyed and the heartland of the empire incorporated into the Ilorin amirate.

Ilorin's djihâd to the sea met resistance from new Qyo, Ibadan, and later the British in Lagos, but was ultimately blunted by the disappearance of its economic target, the Atlantic slave market.

OZAN (tr.), in Turkish society “troubadour poet/singer/story-teller”. The term comes from the verb oz- “to outstrip, go ahead in the race” (see Clauson, Etymological dictionary of pre-thirteenth century Turkish, 279), already attested in Kahshgari’s [q.v.] Diction triyakt al-turk (6th/11th century), as also in the Diwdn lughid al-turk Etymological dictionary of pre-thirteenth century Clauson, oz- “to outstrip, go ahead in the race” (see the verb ozan living tongues of Kirgiz, Sagay and Koybol of Central 9th/15th century called himself Ozan. In Turkmen, in Seljuk times. An Anatolian Turkish poet of the 9th/15th century was used for the singers who accompanied the army in Anatolia, it has survived with the meaning “popular improvisation, story, song”. At the present day, in modern Turkish, it has replaced the Arabic term ibdær (jazz).

ÖZBEG (ÖZBAC, ÜZÜK) (tr.), a term with a variety of uses in pre-modern times. 1. Historical aspects (a) As a generic term, it was applied to the Turk-Mongol nomadic tribal groups in Central Asia, especially Trans- and Cis-Oxiana and Khârazm, which from the mid-15th century onwards comprised the military support for Djuftd-Cingizíd lineages such as the Şibânids [q.v.] (Arabbáhâhids) of Khârazm (16th and 17th centuries), the Şibânids (Abu ‘l-Khayrids) of Trans- and Cis-Oxiana (16th century) and the Tukûy Timûrs (Djâïdjs [q.v.]) in Trans- and Cis-Oxiana (17th century). By the 16th century, there were two well-established traditions listing 32 or 92 distinct “ÖZBEG” tribes (il, kastem, silas, tâffy) (T.I. Sultanov, Kolyevel plemena pri-ral’ya v XV—XVII vv., Moscow 1982, 7-51). Of these, the ones which figure most prominently in the history of Khârazm [Khwa [q.v.]] and Trans- and Cis-Oxiana from the beginning of the 16th to the end of the 19th century also are the Manglûr, Kungrât, Arghûn, Kârgûz, Kîngî, Kârlûk, Kalmuk [q.v.], Alcîn, Kiyâit, Üyyrât (Oyra), Nûymân, Kâtaghan, Kângî (Kântul), Uûtûrî, Dûr- man, Arûlî, Keriyyî, Mûg, Djalâ’îr, Sarûyî, Onggu, Tânggu, Merkit (Makrit), Kâri, Oghlân, Üghûn, Kenikas, Tattar, Kîri, Kûshî, Üyyhûr and Bahîrî. Many of these tribal entities, or at least their names, disappeared over the centuries from written records; others, like the Manglûr, Kenikas, Kataghan, Kungrât, Mûg and Üyy survived the eventual breakdown of Cingizíd authority in the region and formed successor amirates (or begates) which survived to modern times.

The meaning of the term Özbeg is closely linked to the emergence of two new Djuftd lineages at the beginning of the 16th century in Central Asia, the Abu ‘l-Khayrid and the ‘Arabbâhâh ïydâgîr. Both traced their origins to Şhîbân b. Djuftî b. Cingiz Khan. Their supporters, apparently because of their earlier affiliations with the Djuftd Golden Horde and Uzbek Khan, are known (in Persian) as the Ôzbegân and Üzûkân (Uzbek, and Sunan), and all the Cingizids, however, these same Turco-Mongol tribal groups are called Mughuls (see e.g. Zahir al-Dîn Muhammad Bâtûr, Bâtûr-nâmâ, tr. A.S. Beveridge, London 1922, 2; also Section IV of the introduction, E.D. Ross (ed.) and N. Elias (tr.), A history of the Moghuls of Central Asia, being the Tarikh-i-Rashidî of Mirza Muhammad Haidar Dughlî, London 1898). To contemporary observers like Bâtûr and later Iskander Beg Munâbi [q.v.], the term meant both the Turko-Mongol supporters of the Central Asian Cingizids and, by extension, and in the Persian case, derogatorily, the Cingizids themselves.

The Djuftd agnates held exclusive right to the titles khan (sovereign) and sultan (prince), while their Özbeg military backers were generally distinguished by the title of amîr. Although a court ceremonial with apparently ancient precedents established a traditional hierarchy of the Özbeg tribal groups, it had little to do with their actual political power. The early 17th century writer Mahmûd b. Amîr Walli wrote a detailed description of court protocol at Balkh which, when compared with the biographies he also compiled of contemporary amîrs, shows little correspondence between court status and political prominence (see e.g. R.D. MacCulloch, Amîr of seventeenth century Muslim Central Asia, in JESHO, xxxvii, 41-2).

The leading amîrs were granted rights in revenue known variously as iktâb, suyurghid, tiyâl [q.v.] (see e.g. M.A. Abduraimov, Olerki agrarnôtnogo otnosheni v Bukharskom khanstve, Tashkent 1966-70, ii, 100-24), which gave them and their kinsmen and allies an interest in the regions from which they derived their income. Through the 16th and early 17th centuries the Cingizid lineages followed a policy of periodically transferring their amîrd backers, perhaps to limit the degree of attachment they might feel to any particular locale. By the middle of the 17th century, this policy was becoming more and more difficult to enforce. Attempts by Nadîr Muhammad [q.v.] (r. at Balkh 1015-51/1606-62 and 1055-61/1645-51), for example, to move amîrs like Yalangtdî Bl Alcîn from what was a long-time iktâb in the region south of Balkh contributed to his downfall after a brief reign at Bukhârâ (1642-5). His Cingizid successors did not make the same mistake.

Through the 18th century, the Özbeg groups consolidated their local ties and by the beginning of the 19th century some of them had established independent dynasties—at Bukhârâ and Samarkand (Manglûr), Mayma (Mûg), Khokand (Mûg), Kungrât (Kungrât), Arghûn (Kîngî), and Uzbek Khanate (Kenikas). The new petty dynasts tended to prefer the title amîr or mir, perhaps in deference to the power which the idea of Cingizid legitimacy still retained long after the last of the Cingizids had disappeared from the scene.

(b) More specifically, the term was also used as part of a proper name, perhaps designating urbanised Turkish-speakers who did not identify themselves with any of the above tribal organisations. In the archives of the Djuybarî shaykhs of Bukhârâ (see
The Ozbegs are one of the predominant ethnic groups of Turkistan [q.v.] or Central Asia, with their territory extending from the Caspian Sea to Sinkiang. They are found in the former Soviet republics of Turkmenistan, Ozbegistan, Tajikistan, Kirghizia, Kazakhistan, across northern Afghanistan and in Kâbul, the capital of Afghanistan, and in the People's Republic of China. In the former Soviet Union, there are approximately 20 million Ozbegs, indicating a rapidly increasing population. The number of Ozbegs in Afghanistan [q.e.v. (ii)] has probably been underestimated as one million since the 1960s. In Sinkiang there are about 14,000 Ozbegs, about whom little is known in outside world.

In Pakistan, Saudi Arabia, Turkey and now Europe and the United States have provided a home for Ozbegs who have left their traditional territory because of political, economic, social and environmental related either to Soviet or Chinese expansionism or the on-going Afghanistan conflict. During Russian and later Soviet control in Central Asia, the Ozbegs periodically rebelled and through spontaneous uprisings expressed nationalistic feelings [see BASMACHIS]. In Afghanistan, competition and hostility has been directed most toward the Pashtuns [see AFGHANS], a group economically and politically dominant there. Ozbegs from northern Afghanistan are currently (1992) involved in the Afghan resistance movement against the Marxist government.

The groups of Ozbegs divided by national boundaries have been somewhat isolated from each other during much of the 20th century. For example, Ozbegs were traditionally written in Arabic script, but since 1940 Cyrillic script has been used in the Soviet Union, hampering communication with those in other countries who retain Arabic script as in Afghanistan or those who utilise Latin script such as Turkistam exiles in Turkey. However, recent contacts between Ozbegs have been facilitated by construction of the Karakorom highway through Pakistan and the disintegration of the Soviet Union.

The Ozbeg khânates of the late 19th century [see BUKHARÀ, KHIWA and KHOKAND] had a complex socio-political organisation with dynastic rulers, standing armies, governmental and religious bureaucracy, social stratification and specialisation. Villages were traditionally led by an aksabad, a respected older headman who mediated disputes. The ethnographic literature of late 19th and early 20th centuries have been somewhat isolated from each other. Ozbegs had become sedentary by the 20th century. Vestiges of a semi-nomadic past remain for some who still construct yurts, portable felt-covered round tents with wood frames, in the household courtyards for use during the summer. Agricultural Ozbegs live in permanent villages which are either compact with surrounding agricultural lands or dispersed with homesteads in linear arrangements following irrigation canals. Some rural and urban household compounds are still built of adobe brick, mostly with flat roofs, but some structures exhibit a “beehive” style. Agriculturalist Ozbegs grow rice, cotton, wheat, barley, sorghum, alfalfa, various vegetables and fruits, especially melons, and raise sheep, goats, cows and horses. Mulberry, which has leaves used in the raising of silkworms, is cultivated. Traditional commercial activities include black-, tin-, lock- and coppersmithing; silk, textile, saddle, sheepskin coat, leather, felt and pottery manufacture, soap making, barbering, oil pressing, butchering, baking, rice hulling and milling. Carved plaster made of gypsum and decorative wood work are important decorative crafts. Ozbeg women are known for their flat-weave rugs and embroidery. A brightly dyed silk cloth made into cloaks and dresses is another specialty.

(c) Contemporary indigenous sources often applied the term Ozbeg to uncultured and unlettered individuals, usually nomads or rural peasants (see e.g. for the mid-17th century, Mahmûd b. Amîr Wali, Bahar al-asrâr fi mânâdib al-asghâr, i, ed. and Russian tr. as More than a passing event, 1st edition, Budapest 1978, col. 147b, where a yâsh is an encounter with a drunken “Ozbeg” in a Bukharan street).

Finally, in the late 19th and early 20th centuries the term Ozbeg was used by the politically-dominant Durrânî Afghans for long-term residents in northern Afghanistan, whether Turkish-speaking or not (see R.D. McChesney, Waqf in Central Asia, Princeton 1991, 303-4; N. Tapper, Bartered brides: politics, gender and marriage in Afghan tribal society, Cambridge 1991).

Men’s and women’s activities are spatially regulated. Women traditionally perform their duties around the age of puberty. In the former Soviet republics, Ozbeg women work outside the home in factories, offices and agriculture. However, they remain the primary homemakers. In the former Soviet republics, Ozbeg women work outside the home in factories, offices and agriculture. However, they remain the primary homemakers.

Historically, tax-farming was the primary land tenure system, especially north of the Amu Darya. In the khanate of Bukhara, provinces were divided into tax districts administered by appointees of the amir of Bukhara. Each beg retained the amount of revenue which he considered necessary to maintain his court and forwarded the rest to the amir. The situation of the common people was not substantially altered after the Russian annexation of Central Asia except in Farghānā, where the Russians instituted cotton mono-cropping and eliminated the traditional bureaucracy.

In the late 1920s to 1930s, agriculture was collectivised in Turkistan. Despite Sovietisation, many Ozbegs continued to market some of their own crops. Increasing cotton production in the late 19th to 20th centuries has led to integration into the world market. Depending on location, one-third to one-half of urban Ozbegs in the former Soviet republics currently own their own households. In northern Afghanistan, the most important land tenure system is currently freehold or private ownership which entails full rights and disposal through sale and inheritance. Most of the holdings are small, typically 5-10 acres.

The basic kin group is known as the kaum (other terms are also used), which in its basic sense consists of related households comprising a community. The kaum contains several groups of patrilineally-related families who regard themselves as descended from a common ancestor. However, kaum is a structural category which is adjusted by the people to suit their own social situation. The word is used to include not only agnates, but also persons who assist each other, share goods and live nearby, including affinal kin who are not related by blood but who marry in and become viewed as part of the group. Ideally, the nearest households in the village or urban neighbourhood who have close co-operative relationships and who may have their own mosque or other common interests form a kaum. A village may be composed of one or more kaums. An urban kaum is often associated with a craft or occupation. An important feature of kinship terminologies is the emphasis on special terms for older brother, aša, and older sister, āpā.

In the traditional marriage system, marriage preference is for one to whom a kin connection can be traced. There are norms against marriage with members of other ethnic groups. Although polygamy has become rare, parental arrangement and consent to marriage have been retained. A cash payment from the groom’s side to the bride’s is part of marriage negotiations. Among the poorest, there is a practice of the household items for the bride. Divorce is governed by Islamic law or by the laws of the country, although community pressure limits its use.

The ideal is the patrilocal extended family with the senior married couple, their sons, the sons’ wives and children and the unmarried daughters of the senior couple all residing in the same household compound. Nuclear families are also common, since extended families may break up as the sons mature and the senior pair age. Ozbegs generally favour large families. In northern Afghanistan, the baby is strapped into a special wooden cradle on rockers beginning forty days after birth. Outside of the cradle, the baby is swaddled. Circumcision of boys, practiced by all Ozbegs, is generally done at some time between the second and fourth year. A Kur'dānic education was traditional, but now public high school and university education are increasingly common, especially for boys.

The ruling dynasties in the Central Asian khanates from the end of the 18th to the 20th centuries were the tribal groups of Mangit [q.v.] in Bukhārā [q.v.] and Kungrāt [q.v.] in Kh'ārazm [q.v.], which came to be called Khīwa [q.v.]. The leaders of the Khokand khanate were from the Ming tribe. Some Ozbegs still remember a tribal designation and may use this as part of their personal identity. Important tribes are Kungrāt, Mangit, Kipčak, Kanghi, N̄iw'mān, Khität, Dürmen, Chaghatay, Ming, Kenikas and Lākā. Other ‘non-tribal’ Ozbegs use either a district or town as an identity marker. Gender, age, dialect and Islamic observance are important components of personal identity and status.

The Ozbegs are Sunni Muslims who follow the Haniffsya [q.v.] legal tradition. Nakhsbändiyya [q.v.] Sūfism has been a social and political force. For some, folk beliefs like the evil eye and harmful possessing spirits, djinn [q.v.], or part [q.v.], are part of daily life and necessitate the use of amulets or written verses of the Kur'ān. Diseases may be classified as ‘hot’ or ‘cold,’ with oppositely-classified foods used in their curing. The 'ulama’, religious scholars and teachers, traditionally were very influential, since Bukhārā was for long a centre of Islamic learning. Shāmanistic healing, especially the removal of spirits, was done by a practitioner called a bāghkhi, pārdīsān or du'ād̄ān, often a mullah learned in the Kur'ān. In the folk tradition, there is also belief in albasti, a witch-like djinni.

In addition to the celebration of Islamic festivals and holy periods such as Ramādān, a non-Islamic holiday, the New Year, held at the beginning of spring, is celebrated by the distribution of a pudding-like food made of sprouted wheat, sumulak, to family and friends known for their cuisine, which includes many noodle dishes such as mantu, a steamed dumpling. The musical tradition includes indigenous instruments such as the two-stringed dūnā and the dā'āra, a tambourine, for use in public and private entertainment. To celebrate weddings and circumcisions, men play ǔlak, a sport in which men on horseback battle to carry the carcass of a cow to a goal.

*Ernest G. Engel*
family [see Ildenizados] who ruled in Adharbaydjan during the later Saldjuk and Khwarazmshahi periods. He married Malika Khatun, widow of the last Great Saldjuk sultan Toghril III (killed in 590/1194 [q.v.]).

He married Malika Khatun, widow of the last Great Saldjuk sultan Toghril III (killed in 590/1194 [q.v.]). During the early part of his career, he ruled in Hamadhān as a subordinate of his brother Nūsrat al-Dīn Abū Bakr, during the time when much of Adharbaydjar and ‘Irāq ‘Adīmi was falling into anarchy in the post-Saldjuk period. His freedom of action was often circumscribed by powerful Turkish amirs, nominally his agents and protectors, such as Ay-Aba, Qudshsī and Ay-Toghmānī, until in 607/1210 he succeeded Abū Bakr as Amāri in Tabriz and head of the family.

Under military pressure from the resurgent Georgians [see AL-KURDJ], he had to come to an arrangement with the Kh“arzm-Shāh ‘Alāʾ al-Dīn Muhammad whereby he was confirmed in Adharbaydjan and Arrān but as the Shāh’s vassal, acknowledging him in the shahba and sikka (614/1217).

In 617/1220 the Mongols first came to Tabriz, and on 22 June 1225, however, the Shāh Djalal al-Dīn [q.v.] occupied the Ildesizid capital, whilst Ozbeg withdrew to Gansū, where he landed while returning from Yemen, and the Shah forced Ozbeg to divorce his wife Malika Kḥāṭūn, whom he married himself, till intervention by the Ayyūbīd al-Malik al-Aḥfāţīr rescued her and brought her to Khīlāt. Ozbeg now lost Gandja also, and died in humiliation at the fort of ‘Iḥrāq in 620/1225, probably on 22 April. Attracted by the prosperity of the eastern Red Sea port of Sawākīn, where he landed while returning from Yemen, and filled with enthusiasm to conquer the Abyssinian littoral to further Islam and check Portuguese ambitions, Ozbeg subsequently persuaded Sultan Suleymān in person to appoint him commander (beylārī) of an Egyptian force of 4,000 to achieve that goal. When an initial attempt to reach his objective via the Nile River failed, Ozbeg established his base at Sawākīn, the centre of the new Ottoman province of Hābesh, which was officially created on 15 Shawābād 962/5 July 1555 with Ozbeg Pasha as beylerbeysi. From Sawākīn, the Ottoman forces first seized and secured the Abyssinian coastlands, including the key port of Masawwā [q.v.], before in 965/1558 commencing successful forays into the province of Tigre. An inland Ottoman base was secured in 966/1559 at Debrāwā, where a fortress and mosques were constructed.

It was at Debrāwā that Ozbeg Pasha died during 967/1560, after which the vastly outnumbered Ot- toman troops began retreating towards the coast. His body was interred at Debrāwā, but later it was transferred to a mausoleum in a mountain fortress called Masawwā by his son ‘Oṭmān Pasha [q.v.], who succeeded him as beylerbeysi of Hābesh and who eventually became Grand Vizier (sār-t‘azam). Ozbeg is usually portrayed as an indefatigable warrior with frugal personal habits and an incorruptible loyalty to the Ottoman sultan.
ÖZI, Özi, the Turkish name of three related features: the river Dnepr, the coastal fortress of Oțakov (both in the Ukraine), and the Ottoman eyalet and sancak Bey of Silistre (roughly a coastal area bracketed by the lower Özi/Dnestr on the east and the lower Dnube with the nearby river port city of Silistre on the south-west; its bayler beyi resided at Akkırım or Silistre but not at Özi/Otakov, more often the seat of a sandjak beyi).

Both the river and the fortress played an important but complex role in the history of the two Turkish Muslim powers in the Black Sea area, the Crimean Tatars and the Ottomans. The river’s lower course first represented a dividing line between the Lithuanians and Poles on the west and the Tatars on the east, and later, in a similar manner, between the eyalet of Silistre (Özi) and the khanate, although within the framework of the Ottoman empire of which the khanate became a vassal. The Dnepr approaches the Black Sea from the east through a long and wide estuary which also receives the river Bug from the north; this estuary, known by its Russian term (but possibly a loanword from Ottoman Turkish) as liman, at the same time separates the mainland from the Crimean peninsula which ends up in a spur named Kinburnskaya kosa (“Kinburn spur”; lit. “scythe”), a distortion of the Ottoman name Kilburnur “Hair-thin cape”) two km/1.3 miles south of Oțakov. It was on the western bank of the Bug’s estuary that King Vytautas of Lithuania built a fort named Dashiv (and another such form given by Ewliya Celebi, as well as that of Ocakov, more frequently the seat of a sandjak beyi). Notwithstanding these circumstances, the town came under the influence of the Crimean Khan Mengli Giray acquired it in 1400, which was renamed Djankirman after the same name in the Crimea, and the Danubian provinces. Although Özi failed to deter the Cossacks (who founded their famous base of Sîf further upstream on the Dnepr) from raiding it and sailed past it on their forays all over the Black Sea, it did help the Ottomans maintain their own presence on this frontier and delay the success of the eventual Russian onslaught. Nevertheless, by the 18th century the latter showed its force in two Russo-Turkish wars: that of 1736-9 and that of 1787-92. Özi was taken on both occasions (July 1736, but 92. Ozi was taken on both occasions (July 1736, but 92. Ozi was taken on both occasions (July 1736, but 92. Ozi was taken on both occasions (July 1736, but 92. Ozi was taken on both occasions (July 1736, but 92. Ozi was taken on both occasions (July 1736, but 92. Ozi was taken on both occasions (July 1736, but 92. Ozi was taken on both occasions (July 1736, but 92. Ozi was taken on both occasions (July 1736, but it clearly consists of two elements, qan (possibly the Persian term “soul, something dear”) and kirmân (Persian “fortress”); the latter word appears in a number of place names in the Ukraine (for example Akkırım, the Slavic Belgorod), but not elsewhere (except for the Persian cities of Kirmân and Kirmân-şâh); a Scythian (thus Iranian) origin is probable, a remarkable case of the permanence and resilience of toponyms. Although the place became known in Ottoman Turkish by the name of the river as Özi kalesi (but was on occasion also called Uzun kale), the citadel part was called Akkırım (or Oska), which was then extended in Russian and Ukrainian (as Oțakov and Oțakiv) to the whole fortress.

ÖZKEND, Özkend, sometimes written in the sources Yûzând or Üzând, a town of mediaeval Islamic Farghâna [g.e.] in Central Asia, lying at the eastern end of the Farghâna valley and regarded as being near the frontier with the pagan Turks. Already in the mid-3rd/9th century, Özkend had a local ruler called by the Turkish name Khurtigin (?Curtigin) (Ibn Khurradadhbih, 30). The geographers of the next century (i.e. that of the Sârnâids) describe it as having the tripartite pattern typical of eastern Islamic towns, with a citadel in the madina or inner city and a suburb; from it led the way towards the Turkish lands (Ibn Hawkal, ed. Kramers, 131-14, i, Wiet, 491-2; al-Muqaddasi, 275; Haddâd al-şâm, tr. 116, comment. 255; Yûkî, ed. Beirut, i, 280, Le Strange, Lands, 476). Under the Karâkhânids [see ILEK-KHANS], it became the capital at the opening of the 5th/11th century of the ilg Nasb of ‘All, and then the capital of the eastern wing of the confederation, with Yûsuf Kâdir Khan b. Hûrin Bugha Kâhan minting coins there from 416/1025. Mahmûd Kâshghâri mentions Üzkend and defines it as the chief town of Farghâna and as meaning in Turkish balad anfusina “city of our souls” = “our own, special city” (Dîwân lughat alturk, tr. Atalay, i, 343 = R. Dankoff and J. Kelly, Compendium of the Turks dialects, Cambridge, Mass. 1982-4, i, 270). It remained a centre of the Karâkhânids until the invasions of Cîngiz Kâhan, and Karâkhânid coinage continued under the able but inadequately-supported kaptanpaşa Qâzî Hasan Pasha and the Russian one, marked by the rivalry between its two commanders, John Paul Jones (a hero of the American Revolution) and the German prince Charles of Nassau-Siegen.

A matter of some interest is Özi’s earlier name, Dânkirmân (and another such form given by Ewliya Celebi, Dehâkirmân), as well as that of Oțakov. The specific origin of the name Dânkirmân is obscure, but...
PA³ or bā'-i farsi or bā'-i yadjami, i.e. the bā’ with three points subscript, invented for Persian as supplement to the Arabic bā’ and to represent the unvoiced, as opposed to the voiced, bilabial plosive (for the voiced b, see b²). It is sometimes interchangeable with bā’ (e.g. asp and ash, dāhīr and dāfīr) and, more frequently, with fā’ (e.g. sāfīd and safīd, Pārs and Fārs). The regular use of the letter in manuscripts is comparatively modern, but it is found in good ones of the 7th/13th century while at the same time it is often omitted in manuscripts of much later date (GIPh, I/iv, 74; G. Lazard, La langue des plus anciens monuments de la prose perse, Paris 1963, 142).

The usage of the letter pā’ passed into Ottoman Turkish, for both original Turkish words (early Turkish had distinguished both voiced and unvoiced versions of the sound, and the first writing system for Turkish, that of the Yenisei and Orkhon inscriptions (7th-8th centuries A.D.), had had separate signs for p and b, see Tañ' Tekin, A grammar of Orkhon Turkic, Bloomington, Ind. 1966, 24, 27 n. 10, 75) and for Persian loanwords (see J. Deny, Grammaire de la langue turque (dislette Osmanli), Paris 1921, 51-2, 77-8). Pā is likewise used in Urdu both for Persian and Turkish loanwords and for words stemming from the Indoeuropean basis of the language.

In loanwords into Arabic, pā’ may be rendered as bā’, e.g. in bāḥā for Turkish pāša; bāstā/bastā for Italian posta; bārūh for Fr./Eng. pétrole/petroil. But it was often rendered, especially in Classical Arabic at a time when Persian cultural influences were strong, as fā’ also, e.g. furāṭīn < MP pārūnak, NP pārūnā “messenger, courier with despatches”; fānish < Skr. pāṃti, NP pāntī “sugar-cane syrup”; frind < NP pārand “damascening on a sword” (see A. Sididiqi, Studien über die persischen Fremdwörter im klassischen Arabisch, Götingen 1919, 71).

(R. Levy [C.E. Bosworth])

PĀDUHSĀN [see RŪYĀN].

PĀDIŠĀH (v.), the name for Muslim rulers, especially emperors. The Persian term pād-i šāh, i.e. (according to M. Bittner, in E. Oberhumer, Die Türken und das Osmanische Reich, Leipzig 1917, 105) “lord who is a royalty” in which the root pād is connected with Sanskrit pātis, lord, husband, fem. patni, Greek πάτως and हेषत्र, Lat. potens (G. Curtius, Griech. Etymol., 377), was originally a title reserved exclusively for the sovereign, which in course of time and as a result of the long intercourse of the Ottomans with the states of the West also came to be approved for certain Western rulers. In the correspondence of the Porte with the Western powers, the grand vizier Kuyudju Murād Pāghā (d. 7 Diqāmād II 1021/5 Aug. 1612) probably for the first time applied the title pād-i šāh to the Austrian emperor Rudoíd II. At the conference of Nemirow (1737), Rusta demanded the title for its Tsars (cf. J. von Hammer, GIPh, vii, 488) and claimed it again at the negotiations at Bucarest (1773; cf. ibid., viii, 412). When pād-i šāh came to be applied to the sultan, the pād-i šāh-i dā’-i Oltmān, does not seem to be exactly known. In any case it is found in conjunction with all kinds of rhyming words as early as the beginning of the 10th/16th century in Ottoman documents. Pād-i šāh therefore may have come to be used towards the end of the 9th/15th century, presumably instead of khanāk (from khanāw-endkār, cf. JA, ser. ii, vol. xv, 276/572), an obsolete word, as well as sultan (cf. Is., xi [1921], 70) all ready found in dervish Sūfism, and was regularly used till the end of the sultanate (cf. the cry of pād-i šāh-i 3k or bi 37 37 37 y 37 with which the sultan was greeted by his troops and subjects).

In Persian usage, followed by that of the Indo-Muslim rulers such as the Mughal emperors, pād-i šāh became a normal designation for the ruler, though regarded as lower than that of shāhāngāh [see gāh], and in more recent times it was used by Persian monarchs in diplomatic documents addressed to European kings. Already the Hūdūd al-šā’ām (end of the 4th/10th century) uses pād-i šāh(“ruler” and pād-i šāh-i pād-i šāh even for petty princes of the upper Oxus region and northern Afghanistan (tr. Minorsky, 108, 109, § 23.65, 75; idem, Addenda to the Hūdūd al-šā’ām, in BSOAS, xvii [1955], glossary, 257). When ‘Ali, son of the head of the Safawi order Haydar b. 3nayd, adopted the title of pād-i šāh in his struggle with the Ak Koyunlu [q.e.] towards the end of the 9th/15th century, it was a clear indication of the ambitions of the Safawi family (see R.M. Savory, Iran under the Safawīids, Cambridge 1980, 20). In the later half of the 19th century, A. de Biberstein Kazimiri noted that some of the officials of Nāṣir al-Dīn Shāh [q.e.] had taken to describing their master, not only as shāhāngāh, but also as pād-i šāh-i 3k-i mamālīk-i 3rān, apparently in imitation of the Tsar’s designation “Emperor of all the Russians” (Menoutcheht, poste persan du 11ème siècle de notre ère (du 5ème de l’hégire), F. Barininger [C.E. Bosworth])

(P. Barininger [C.E. Bosworth]).

PĀDRI, the name of a major Islamic revivalist movement in Minangkabau [q.e.], Sumatra, 1803-38. The application Padri is derived from orang Pādīr “men of Pedir (Pīdī)”, in reference to those who made the pilgrimage to Mecca by way of the At-jēhνec port of Pīdī. The Padri built on earlier Minangkabau reform movements initiated by the two major Sūfī 3rakats which had been the instrument for converting the central highlands of Sumatra, the Naksyabandiyah (Nakshabandiyah [q.e.]) and the Syattariyah (Shaṭṭāriyah [q.e.]). Operating by the late 18th century in a society which was only partially Islamised, these taretak flourished around surau or centres for religious studies which attracted hundreds of students from throughout Minangkabau.

In the 1780s the hilly regions surrounding some of the major surau in the valley districts of Agam, Tanah
Datar and Limapuluh Kota in the Minangkabau highlands were experiencing a major economic revival caused by European and American demand for coffee and spices. Overcome by booming demand, the society exhibited an inability to organise a secure trading network to the coastal ports or a suitable method of settling disputes in the marketplace. It was the suara which was able to offer an alternative to the existing mode of regulation, especially in commercial affairs. Both the Syattariyah and Naksabandiyah tarekat had instigated "back to the syariat (gurih q. e.)" movements in other parts of the Islamic world, and now for the first time in Sumatra conditions became ripe for a similar movement: for Minangkabau Muslim suara, such as those of the Syattariyah syekh (shaykh) Tuanku Nan Tua in Agam, to challenge further accommodation with society, and to coach this challenge in terms of elevating Islamic law, including the commercial provisions of the syariat, to a position of pre-eminence.

It was against this background that in 1803 there returned to Minangkabau three pilgrims who had observed the Wahhabi conquest of Mecca [see WAAHABIYYA]. They were well aware of the difference between "back to the syariat" and a return to the fundamental tenets of the Prophet and his Companions. The most distinguished of these three Padri was Haji Miskin, who had worked with Tuanku Nan Tua prior to his departure for Mecca. He now settled in the coffee village of Pandai Sikat in Agam and worked to improve the state of the marketplace and to rationalise commerce. He gained the support of certain lineage heads and in fact during the Padri movement a number of religious teachers and adat [see ADA] leaders worked together to introduce a new commercially favourable regime where cockfighting would disappear from the market and bandit villages would be eliminated. It is certainly misleading to see the Padri movement as an uncompromising attack on the adat leadership.

Ultimately driven out of Pandai Sikat, Haji Miskin joined the religious teacher Tuanku Nan Rinceh in the coffee- and casta-rich hill area in the north of Agam. Also a pupil of Tuanku Nan Tua, Tuanku Nan Rinceh had been trying to put his master's ideas into practice, but piecemeal action no longer seemed adequate. Haji Miskin was able to indicate another way. Tuanku Nan Rinceh now concluded that each village must be turned into an Islamic community as rapidly as possible, using the simplicity of the Wahhabi system as a model along the lines of which such new communities were to be organised. He proclaimed a dikhdt and announced to his own village the PADRI — PAHLAWAN

 ultimately victorious. Prominent among the Padri war leaders was Tuanku Imam Bonjol. Having established his village at Bonjol, north of Agam, in 1807, like other Padri leaders he tried to build up a trading network to the west coast, away from outside control. The Dutch after their return in 1819 were a threat to this, and Bonjol launched its first attack on Dutch forces in the interior in 1822. From this period until 1837, Dutch and Bonjol forces were periodically engaged despite Bonjol's attempt to expand away to the north into the Batak country. Bonjol finally fell to the Dutch in 1837, Tuanku Imam Bonjol was exiled and Dutch victory over the last Padri remnants took place at Daludalu in 1838.

During this period, the Padri movement itself altered in character. Mecca had been lost since 1813, and by the 1820s Minangkabau began to pay attention to the reports of returning pilgrims and the rigours of the original Padri system began to soften. The returning hajis were aided by the fact that no Padri leader had ever been able to acquire unchallenged dominance over a wide area and there was no more village war leaders was Tuanku Imam Bonjol. Perintis Djalan ke Tengah, 1784-1847, Jakarta 1992. (CHRISTINE DOBBIN)

PAHANG [see MALAY PENINSULA].

PAHLAWAN (p.), from Pahau, properly "Par-

Violence was particularly marked among the Padri of Tanah Datar, the home of Tuanku Lintau, who became notorious for his slaughter, in 1815, of many members of the Minangkabau royal family at a meeting arranged for negotiations. He went on to pursue a career of raiding and burning of opposition villages. In fact, throughout the Padri period all villages were heavily fortified and their male population kept almost constantly on a war-footing.

Just as a Padri victory over the whole of Minangkabau seemed certain, the Dutch returned to the chief Minangkabau coastal port of Padang in 1819. Invited into the highlands by anti-Padri adat leaders and remnants of the royal family, in February 1821 they signed a treaty in which these supplicants surrendered Minangkabau to Dutch sovereignty. So began the Padri War of 1821-38, in which, despite strong Padri resistance, the colonial forces were ultimately victorious. Prominent among the Padri war leaders was Tuanku Imam Bonjol. Having established his village at Bonjol, north of Agam, in 1807, like other Padri leaders he tried to build up a trading network to the west coast, away from outside control. The Dutch after their return in 1819 were a threat to this, and Bonjol launched its first attack on Dutch forces in the interior in 1822. From this period until 1837, Dutch and Bonjol forces were periodically engaged despite Bonjol's attempt to expand away to the north into the Batak country. Bonjol finally fell to the Dutch in 1837, Tuanku Imam Bonjol was exiled and Dutch victory over the last Padri remnants took place at Daludalu in 1838.

During this period, the Padri movement itself altered in character. Mecca had been lost since 1813, and by the 1820s Minangkabau began to pay attention to the reports of returning pilgrims and the rigours of the original Padri system began to soften. The returning hajis were aided by the fact that no Padri leader had ever been able to acquire unchallenged dominance over a wide area and there was no more village war leaders was Tuanku Imam Bonjol. PAHANG [see MALAY PENINSULA].

PAHLAWAN (p.), from Pahau, properly "Par-
thian"), acquired in pre-modern Persian and thence in Turkish, the sense of "wrestler, one who engages in hand-to-hand physical combat", becoming subsequently a general term for "hero, warrior, champion in battle". From this later, broader sense it is used as a personal name in the Persian world, e.g. for the Eldiginiz Atabeg [see ILDENIZIDS] Nusrat al-Din Djahan-Pahlawan (reigned in Adharbaydjan, d. 581 or 582/1186 [see PAHLAVAN, MUHAMMAD B. ILEDENIZ; and see Justi, Iranisches Namenbuch, 237, for other bearers of this name]. The word's origin in Arabic is clearly an orthographic metathesised form), on the evidence of Ewliya Celebi. Bibliography: Given in the article.

(C. E. Bosworth)

PAHLAVAN, MUHAMMAD B. ILEDENIZ, NUSRAT AL-DIN, Atabeg of Adharbaydjan in the later 6th/12th century. His father Iledeniz [q.v.] had in course of time risen to be the real ruler in the Saldjuk empire; the widow of Sultan Toghfl [q.v.] was Pahlawan's mother and Arslan b. Toghfl [q.v.] his step-brother. In the fighting between Iledeniz and the lord of Maragha, Ibn Aksunkur al-Abhmadfl, Pahlawan played a prominent part [see MAUSA]. From his father he inherited in 568/1172-3 Arran, Adharbaydjan, al-Dbijfl, Hamadhan, Isfahân and al-Rayy with their dependent territories and a few years later he also took Tabriz, which he gave to his brother Kizî Arslan. Like Iledeniz, Pahlawan also became the real ruler. Sultan Arslan b. Toghfl was completely under his control, as was also his young son Toghfl [q.v.], whom Pahlawan put on the Saldjuk throne, after Arslan had been disposed of by poison. Pahlawan died in Dhu 'l-Hijja 581/February-March 1186 or the beginning of 582/1186 and his brother Kizî Arslan succeeded him. Ibn al-Aghir (xi, 346) pays a high tribute to Pahlawan's statesmanlike qualities, and during his tenure of office peace and prosperity prevailed in his government. After his death, however, bloodshed and unrest broke out. In Isfahân the Shahîfs and Hanafs fought one another, and at al-Rayy the Sunnis and Shi'fs, until order was gradually restored.

(K. V. Zetterstêen)

PAHLAVÎ, PAHLAVI, the name of the short-lived dynasty which ruled in Persia from 1925 to 1979. Its two members were Rıdâ Şâh (r. 1925-41) and his son Muhammad Rıdâ Şâh (r. 1941-79) [q. v.]

(PA'TI (Hindi "quarter"), English form "pie", the smallest copper coin of British India = 1/12 of an anna. Originally, in the East India Company's early experiments for a copper coinage, its name implied, was the quarter of an anna or pice [see PAYAS]; after the Acts of 1835, 1844 and 1870, however, the pie was 1/12 of a pice.

PAI YEN-HU (Muhammad Ayyub), a noted leader of northwestern Chinese Muslim rebellions against the Ch'ing-Manchu rule during the 1860s and 1870s. A native of Ching-Yang in Shensi province, he was born in 1841 into a traditional ahung family. In 1862 he joined the Muslim rebels in Shensi province, his military skills and family background making him one of eighteen rebel leaders. After most of these had defected to or been killed by the Imperial troops, Pai assumed overall leadership of the anti-Manchu campaign. When most of his followers defected in 1869, he was driven out of Shensi and joined forces with Ma Hua-Lung [q. v.] at Chin-ch’i-pao, Kansu, but deserted him again when he realised that Ma also intended to surrender. Pai and his troops next took the area around Hsi-Ning, but with the accompanying problems of inadequate housing and transport facilities. Pakistan has a developing mixed economy, with a complex of buildings: a Friday mosque, tomb of the Shaykh, and descendants’ shrines. The descendants of the Shaykh and his descendants Shaykh Shihab al-Din and Shaykh ‘Ala’ al-Din, a sama’-khana (hall for musical sessions), residential quarters and various graves.

PAKISTAN, the Islamic Republic of Pakistan or Islâm-i-Djumhuriyya-yi Pakistan is bounded by Iran, Afgânistân, the former Soviet Union, China, India and the Arabian Sea. It covers an area of 706,495 km² and has a population of 114,071,000 (1990 estimate which includes the population of the disputed state of Djamnî and Kashmir as well as Afgân refugees). The country is divided into four distinct physical regions. In the north, the Himalayan and Karakoram ranges reach an average of more than 6,100 m/20,000 ft. and include some of the world’s highest peaks. The Balûcûstân plateau to the west and south-west is a broken highland region crossed by many ridges. The western portion of the Indo-Gangetic plains—the Indus valley—extends southwards from the Potwar plateau to the Arabian Sea. It is watered by five major rivers—the Indus, Chenab, Jhelum, Ravi and Satlaj—and their tributaries, and is Pakistan’s most prosperous agricultural region. The Thal, Cholistan and Thar desert areas are found in the south-east of the country, bordering on India. The climate is characterised by extremes of temperature and aridity. A weak form of tropical monsoon climate occurs over much of the country with arid conditions in the north and west where the wet season is from December to March. Elsewhere, rain is mainly between July and December. Summer temperatures are high, in places exceeding 45°C., but the mountains in the north experience cold winters.

Pakistan is made up of the four provinces of the Pandžāb, Sind, Balûcûstân [q. v.] and North-West Frontier Province (NWFP), together with the Tribal Areas, Gilgit Agency [q. v. in Suppl.], Islâmābâd Capital Territory and Azâd Kashmir, whose possession is disputed with India. The bulk of the population is concentrated in the Indus Valley plain and remains rural in occupation. Rural to urban migration, however, has resulted in rapidly growing cities such as Karachi, Lahore, Rawalpindi, Multān, Fâysâlabâd and Haydarâbâd, together with the accompanying problems of inadequate housing and transport facilities. Pakistan has a developing mixed economy, there, it was a deserted town, having forests full of ferocious beasts and reptiles. Gradually, it became a great centre of spiritual culture and people from far and near came to venerate the shrine of the Shaykh Farid. Ajodhan stood at a strategic place on the Multān-Dihlī road. Caravans and armies passed through it and carried the Shaykh’s fame to different regions (Fawā’id al-fu’ad, Lucknow 1885, 99; Ibn Bâjtûta, Rihla, Cairo 1928, i, 13). The name Pāk Pātān was given by the Mughal emperor Akbar in homage to the memory of the saint. Situated on a high mound, it has a complex of buildings: a Friday mosque, tomb of the Shaykh, and descendants’ shrines. The descendants of the Shaykh and his descendants Shaykh Shihab al-Din and Shaykh ‘Ala’ al-Din, a sama’-khana (hall for musical sessions), residential quarters and various graves.

largely based on agriculture, light industries and services. Agriculture, which is almost dependent on an extensive irrigation system, employs more than 50% of the labour force and in 1986 provided 26% of GNP and 45% of foreign exchange earnings. The main crops are wheat, cotton, maize, sugar cane and rice. The country is agriculturally self-sufficient although there are often shortages of staple products. Industry employs only about 10% of the labour force and produces nearly 20% of GDP. Textiles, especially cotton, are the main manufacture and leading export commodity. Under-employment is widespread and there has been significant emigration by professional and skilled workers, in particular to the Middle East and Gulf States. Social welfare and health facilities are limited. Zakat [q.v.] has been used by governments to provide funds for welfare provision. Although primary education is free, less than half the number of school-aged children attend and literacy remains limited to only about one-quarter of the population and only one-sixth of women.

The national language is Urdu, but English is used in central government and business. The main regional languages are Pandjâbî, Sindhi, Balûchî, Pashto, Brahui and Siraiki. No single language is common to the population as a whole. According to the 1981 census, 96.68% of the population are Muslims, with Hindus constituting 1.59% and Christians only 0.03%. Most Muslims are Sunnis and belong to the Hanafi school. There is a significant Shi'i minority which is divided into sub-sects, primarily the Iltûnî Aghâris and Ismâ'îllis, both Agha-Khâns and Bohrûs. Members of the small but influential sect of the Khâdiyya [q.v.] are also found.

Pakistan, which achieved independence on 14 August 1947, was the first modern state to be set up on the grounds of religion. Its name, meaning “land of the pure”, is said to have been constructed in 1933 by Chaudhri Rahmat 'Ali, an Indian Muslim student at Cambridge, from letters taken from the names of its component provinces (Pandjâb, North-West Frontier or Afghanîyâ, Kashmîr, Sind and Balûchîstân). Its creation was seen as the logical outcome of the so-called two-nation theory advanced by Sir Muhammad Ali Jinnâh in 1930. The two-nation theory held that India, which was 80% Muslim, and Pakistan, which was 80% Hindu, should be divided so that Muslims could form a separate state. The idea of two-nation theory was not new; it had been proposed by the Muslim League in 1906 with the formation of the All-India Muslim League. Suspicion of Congress was especially common in parts of northern India where Muslims, although a small minority, still enjoyed the legacy of their former status as rulers of the region during the period of Mughal rule. They feared that Congress agitation, Hindu revivalism and constitutional reform would undermine their position, and hence supported policies of protecting Muslim “rights” and culture. Aligarh College, founded by Sir Sayyid Ahmad Khân [q.v.] in 1877, played an important part in generating the kind of Muslims who were attracted to this political path. The diversity in British Muslims, however, prevented them from coming together in a single political organisation until the 1940s. Indeed, the intervening years saw periods of collaboration with Congress, such as 1919-22 when Muslims from all over India joined with Hindus in the Khilafat-Non-Cooperation movement [q.v.] to agitate against British rule. In Muslim majority provinces such as the Pandjâb and Bengal, there was also significant support for provincial parties which represented class rather than communal interests. League activity remained slack for much of the 1930s, as highlighted by its poor showing in the provincial elections of 1937. But constitutional reforms which retained communal electorates meant that Muslims were increasingly encouraged to think of themselves as a separate political category, while the growth in communal feeling on the part of both Hindus and Muslims reinforced this trend.

The turning point for the League came with the outbreak of the Second World War. Efforts made at the centre by its leader, Muhammad 'Ali Jinnâh [q.v.] (Jinnah) meant that the British recognised the League as the representative of Muslim aspirations and, in the face of Congress opposition to the way in which India had been taken in the conflict, an alternative organisation through which to legitimise the war effort. Under these circumstances, in which more people were listening to what it had to say, the League in March 1940 issued its Lahore demand for a separate Muslim state or states, the precise meaning deliberately vague in order to keep the League’s options open. The party’s main task was to persuade its co-religionists in the Muslim majority provinces that provincial autonomy would not protect their position if Congress held power at the centre. Gradually, it won over local landowning and religious élites and with them their considerable political influence. This success was reflected in the striking gains made in the 1946 elections in which the League won an overwhelming majority of Muslim seats. Deadlock in negotiations with Congress, together with growing communal tension in parts of northern India, including the Pandjâb and Bengal which the League had expected to receive in full, Jinnah, therefore, was not happy with the “truncated” and “moth-eaten” state which it was offered and, with the alternative of conceding power completely to the Congress, the League finally accepted this option in the summer of 1947.

Pakistan faced independence with both strengths and weaknesses. On the one hand, it could be argued that, composed of an overwhelming majority of Muslims, it had the basis of a strong national identity with which to contemplate the future. On the other hand, it still had to contend with the fact that, although predominantly Muslim, its people were divided ethnically, linguistically, theologically and by caste and class. In addition, it had the added problem that its two wings—East and West Pakistan—were separated by over 1,600 km of Indian territory. In the event, these obstacles to a united Pakistan proved too great and the country, in the form that it was created, survived only 24 years before East Pakistan broke away to form Bangladesh. Pakistan’s new leaders by and large had supported Jinnah’s campaign, not so much because they desired an Islamic state, but because Congress rule had become synonymous with Hindu domination. Islam represented different things to them, ranging from an ethic on which to base per-
sonal behavior within a modern democratic state to a total way of life requiring a theocracy. With the removal of the direct threat of a Hindu majority, these, together with other non-religious differences, became more apparent. As a result, Pakistan's history has been characterised by the failure of the new state to build workable political institutions which could reflect the diversity present within the country. Provincial rivalry, the intervention of the military in politics and recourse to Islam as a potential source of unity have been important features of Pakistan's political development since 1947. In particular, the country's "Islamic" identity has generated tensions within the political system, caused to a great extent by the need to reconcile Pakistan's creation as a homeland for Indian Muslims with pressure to translate it into some kind of more self-consciously Islamic state.

Pakistan's position in the years immediately following independence was fraught with difficulties. There was the immense task of resettling about eight million refugees known as muhajirs [q.v.] who had begun to stream across the border at partition, as well as the need to establish its economy in the aftermath of a war fought with India over the disputed state of Jammu and Kashmir. The task of framing a constitution was entrusted to a Constituent Assembly which also functioned as an interim legislature. The structure of the state was a federal one, with the Governor-General and the Constituent Assembly as the centre of power and governors and provincial assemblies in the provinces.

Jinnah's death in September 1948 meant that power passed into the hands of Liaqat Ali Khan [q.v.]. Liaqat Ali Khan, someone who shared his commitment to a democratic and essentially secular state but whose removal of the direct threat of a Hindu majority, Pakistan had been created as a state for Indian Muslims, but there was a significant distinction between this and an Islamic state. Indeed, Jinnah himself had stressed that religion was to be an essentially private affair from the point of view of the state. Liaqat's position, however, meant that he needed to gain support where he could, and so in 1949 he wooed the country's religious spokesmen by issuing a resolution on the aims and objectives of the constitution which emphasised Islamic values. The debate on the relationship between religious development since 1947. In particular, Assembly where religious groups played an active role. It was affected by the appointment of Khwaja Nizamuddin, an individual of great personal piety, as Governor-General following Liaqat's assassination in October 1951, as well as by religio-political campaigns such as that led by the Ahrars demanding both the purification of political life in general and, in 1953, the outlawing of the Ahmadiyya sect in particular. This action led to rioting in some of the country's larger cities, and martial law was imposed to restore order in Lahore. When Pakistan finally achieved its first constitution in 1956, it tried to resolve the debate by accommodating as many different opinions as possible. The constitution embodied the Islamic provisions of the 1949 Objectives Resolution and declared Pakistan to be an Islamic republic. Its preamble accepted Allah's sovereignty over man; recognition of an Institute of Islamic Research "to assist in the reconstruction of Muslim society on a truly Islamic basis"; and Clause 205 reiterated that "all new laws should be repugnant to Islam and established various councils to advise on these matters. All the same, the government was not popular with religious leaders who objected to the treatment of Islam in the 1962 constitution. It confirmed their alienation, much enhanced by the Family Laws Ordinance of 1961 which had included notable reforms such as the restricting of polygamy. Religio-political parties, such as the Jamaat-e-Islami led by Mawlana Sayyid Abul l'Ala Mawdudi [q.v.], increased their support. Modernisation under Ayub, however, took place above all in the economic field, which experienced increased growth during the 1960s. But this growth was unevenly distributed, and the imbalance between East and West Pakistan increased, leading to greater disquiet among Bengalis. Despite victory over Miss Fatima Jinnah in the presidential election of January 1965, Ayub's problems mounted in the aftermath of an unsuccessful war against India also in 1965. In March 1969 the strength of opposition to his government finally forced him to hand over responsibility to General Yahya Khan, who once again placed the country under martial law.

Yahya immediately set about dismantling Ayub's political system. In March 1970 he published the Legal Framework Order which defined Pakistan as a federal democratic republic with a Muslim head of state; representation would be on the basis of population rather than parity between east and west; and West Pakistan was redivided into its former provinces. Elections were held in December 1970 but produced the unexpected result of a decisive victory for the East Pakistani Awami League with 167 out of 300 seats. Faced with the loss of power at the centre and the Awami League's call for virtual autonomy for
East Pakistan, West Pakistani politicians, notably Zulfikar Ali (Dhu 'l-Fikar 'Ali) Bhutto, leader of the Pakistan People's Party (PPP), decided to boycott the National Assembly. The country’s military leadership, keen to ensure the shift in power which was taking place, cooperated by suspending the Assembly. This in turn led the Awami League’s leader, Shaikh Mujibur Rahman, to call for a complete secession. The Pakistani authorities launched Operation Searchlight and arrested Mujib, but a stalemate ensued which was only broken with the entry of India into the war in December 1971 on the side of the Bengalis. With its help, the East Pakistani Muktı Bahini (Bengali freedom fighters) took Dhaka (Dacca) and established the independent state of Bangladesh in January 1972.

The main victor in what remained of Pakistan was Bhutto, who established a patriotic image for himself at negotiations at the United Nations in New York and was sworn in as President following Yahya’s resignation at the end of December 1971. Pakistan’s third constitution adopted in April 1973 sought to reach consensus on the sharing of power between the federal government and the provinces, the divisions of responsibility between President and Prime Minister, and the role of Islam in politics. Bhutto’s advocacy of Islamic socialism led to little tangible change but did provide, in the short term, a way of keeping Islamic fundamentalism at arm’s length. The populist of his economic and social programme was also successful at first, but its failure to live up to popular expectations led to growing disillusionment with his government. This was reinforced by increasingly acrimonious tendencies on the part of Bhutto and other PPP members.

The drift to the opposition, in particular to religious political alternatives, gathered pace and demonstrated its threat during elections in March 1977. Although the PPP won a large victory, the opposition coalition, known as the Pakistan National Alliance (PNA), claimed that massive vote rigging had taken place. Mounting protest brought chaos to Pakistan’s cities and Bhutto was himself forced to proclaim martial law. Eventually, the military under the Chief of Staff of the Army, General Muhammad Diya al-Haqq (Zia-ul Haq), took over power in July 1977.

The new military regime, in line with its Operation Fairplay, aimed at allowing the possibility to restore democracy and that fresh elections would be held within 90 days. Following Bhutto’s arrest in early September on charges of attempted murder, however, these elections were postponed, supposedly to allow for Bhutto’s trial to take place. In reality, it was clear that Bhutto remained the only politician with mass national appeal. Bhutto was eventually hanged in April 1979 following a Supreme Court review of the case, but elections promised for November 1979 were again postponed, political parties banned and strict censorship imposed on the press. Meanwhile, Zia had proclaimed himself President. In February 1979, he embarked on his programme of Islamisation by introducing Islamic criminal punishments. Zia’s own strongly held religious views, however, did not change in the political mood which swept as the roots of his policies on Islam. Zia firmly believed that Pakistan’s political system had to be Islamised in order ostensibly to forge national unity, and he used Islamisation as a populist weapon to disarm the moral opposition to his régime. His determination was helped by changes in the international climate caused by the Soviet Union’s intervention in Afghanistan in December 1979. Substantial support provided by the United States and Muslim countries such as Saudi military while the influx of millions of Afghan refugees produced enormous amounts of foreign economic aid. In March 1981, despite the failure of a specially-appointed committee of scholars, jurists and ‘ulama’ to reach a consensus on recommendations for the structure of an Islamic system of government, Zia promulgated a Provisional Constitutional Order which allowed martial law to continue indefinitely and gave the President powers to amend the constitution. Its main provisions included the setting up of a Majlis-i Shura or Federal Consultative Council on the grounds that parliamentary democracy was not compatible with Islam. Partisan political activity, however, was allowed to resume gradually albeit subject to official censure. An amendment to the Political Parties Act of 1962 meant that parties could be denied registration if their manifestos did not include Islamic provisions. A referendum held in December 1984 Arabia allowed him to strengthen the position of the confirmed Zia’s Islamisation policy, which included economic reforms to the banking system as well as the controversial Zina Ordinance, which limited the role and rights of women. Opposition groups strongly contested the result. The official majority of 98% was also taken as a mandate for Zia to remain in office for a further five years.

National and provincial elections, boycotted by the opposition, were held on a non-party basis the following February and Muhammad Khan Junejo was appointed Prime Minister. By then, however, Zia had moved to concentrate political power even more firmly in presidential hands by promulgating an order which introduced sweeping changes in the 1973 constitution. Martial law was eventually lifted in December 1985 and the constitution, in its amended form, restored in full. Zia remained President as well as Chief of Staff for the Army which effectively redefined the relationship between civilians and the army. In January 1986 Junejo revived the Pakistan Muslim League and later in the year Benazir Bhutto, daughter of Zulfikar Ali Bhutto, returned from exile to lead the PPP. Anti-government agitation increased, as did levels of ethnic violence in the province of Sind and in Karachi in particular. Zia stepped in to dissolve the national and provincial assemblies in May 1988, accusing them of corruption, and once again announced elections within 90 days. As before they were postponed until November 1988, but in August Zia himself was killed in an unexplained air crash along with other senior military officers and the United States ambassador to Pakistan. The Chairman of the Senate, Gulham Ishaq Khan, became acting President and proclaimed a state of emergency promising that the elections would take place as scheduled later in the year.

Benazir Bhutto’s PPP failed to win an overall majority but, with the help of coalition partners, came to power as the largest party in the new National Assembly, and Bhutto herself became the first woman in modern history to be elected premier of a Muslim state. Gulham Ishaq Khan was subsequently chosen by an electoral college to serve a five-year term as President. In the context of severe economic difficulties and mounting ethnic violence in Sind, the latter’s hold on power became increasingly tenuous. The government’s failure to introduce a populist socioeconomic programme increased widespread dissatisfaction, and party members were also dismayed at their leaders’ attempts to win over the opposition by apparently compromising the party’s position.

In August 1990, the President dismissed Bhutto
and an interim premier, Ghulam Mustafa Jatoi, was appointed. Elections were held in October in which the opposition Islami Jamhoori Ittehad (III) and its allies won convincing victories on both the national and provincial level. All four provinces returned anti-PPP majorities. While the voting was generally considered to be free of rigging, the low turn-out of no more than 50% reflected continuing popular disillusionment with the political process. The IJI leader, Nawaz Sharif, a PandjabI industrialist and former protege of Zia, was sworn in as Prime Minister. Pakistan was badly affected by the Gulf crisis 1990-91. Remittances from workers employed in the Middle East, already declining, dropped further, and the government was caught in a dilemma between honouring long-standing alliances with the West and strong pro-Trāk sentiment at home. In the event, Pākistānī troops were sent to Saudi Arabia with the provision that they did not come under United States control. Pakistan was badly affected by the Gulf crisis 1990-91. Gujarat, when the distribution of population according to religion was as follows: Hindus, 222,714; Muslims, 28,690 and Jains, 12,542. Since Partition, many of the Muslims have emigrated to Pakistan.

Palembang, the capital city of the province of Sumatera Selatan (South Sumatra) in Indonesia, situated on the shores of the Musi river. It lies in long. 104° 45' E. and lat. 2°59' S., and has a population of ca. 790,000 (1990), of whom some 85% are Muslims.

The area of Palembang, united with neighbouring Malauy (Jambi), was the centre of the (Mahajan) Buddhist empire of Sri Vidjaya (4th-14th centuries A.D.), renowned especially in the 8th-10th centuries for its famous study centres for Buddhism and Sanskrit. After the 11th century, tantric Kala-Cakra-Buddhism with a strong magical component became dominant. In 1377 Palembang was conquered and partly destroyed by the ruler of Majapahit, the great Hindu-Javanes empire (14th-15th centuries). A royal prince, after his escape, founded Malacca [q. v.] in 1403 and became its first sultan after adopting Islam in 1413. The Javanese-Chinese adpati of Palembang, Arya Damarr (after his conversion to Islam: Arya Dilal = ‘Abd Allâh, 859-91/1455-66), became the ancestor of the later sultans of “Palembang Darussalâm”. Sultan Susuhunan Arya Kusuma [q. v., :Abd al-Rahman Khan, 1045-1099/1635-1706] was the first ruler to adopt this title. After a pleader struggle between Sultan Mahmud Badaruddin and Sultan Ahmad Najamuddin in 1811-21, a struggle used by the British and Dutch for their conflicting interests, the Dutch finally exiled the last sultan, Najamuddin’s son, in 1825, following a last abortive attempt to regain his independence. Thus the history of the sultanate came to an end.

In the second half of the 18th century especially, some Muslim scholars from Palembang achieved international fame, such as Shughrîn, Ikhâshmî, Wakhlî, Yâdzhâhâlî, Sangîlî, Mundî, etc. [see Iran, iii. Languages, no. 105].

Being so topographically and climatically unattractive to all but a few agriculturists in the valleys and nomads on the plateaus, the only part of the region of historical significance has been the upper Ouxus valley, along which an important commercial route led to passes across the Hindû Kush [q. v.] mountains to the Panjdir [q. v.] valley of Afghanistan and southwards into Citrâl [q. v.] and Gilgit [q. v. in Suppl.]. It was doubtless for this reason that the region was known to the Chinese, with Shughrîn [q. v.] appearing in Chinese sources, such as the travel account of the early 7th century Buddhist pilgrim Husen-Tsang, as Shek-ni (“the kingdom of the five Shek-ni (gorges)”), apparently referring to the Ouxus’s name here of Pandî. In Islamic times, al-Ya’kûbi, Budîn, 292, tr. Wiet, 199, mentions the principality in the upper Tughrâristân [q. v.] of (?) Khumûr Beg or Khumûr Tîgîn, ruler of Shikinân (Shughrân) and Badakhshân [q. v.]; the people there were still pagan, though apparently tributary to adjoining Muslim princes (see Ibn Hâwkal, ed. Kramer, 467, tr. Kramer and Wiet, 449-50; Barthold, Turkestan, 65). The Hubdî al-’âlam (4th/10th century) situates in the Patmir region the “Gate to Tibet”, dar-i Tukbîr, and the seat of the malak of Wakánh at Ishkâmîgh, its chief-lieu (tr. Minorsky, 120-1, § 26.12-18, comm. 365-9; cf. Marquart, Erânsahr, 224-6).

Towards the end of the 13th century, Marco Polo passed through the Patmir region, from Badakhshân to the Wakánh valley and thence northwards to Kâshghar [q. v.;]: he describes the sparse inhabitants there as warlike Muslims, with a chief called (?) None (Yule-Cordier, The book of Ser Marco Polo, London 1903, i, 170, and Itinerary map no. 112).

Subsequently, in the upper Ouxus region of the Patmir was mainly under the political authority of Nizârî Ismâ’îlî hereditary mîrî based on Shughrân, who managed to survive pressure and attacks from the local Timûrid governors; this isolated Ismâ’îlî community has been significant for its rôle in preserving many theological and legal texts of the sect (see F. Daftary, The Ismâ’îlis: their history and doctrines, Cambridge 1990, 436, 441, 486-7, 544). Toward the end of the 19th century, the upper Ouxus/Pandî river was established, after disputes between the Amir of Afghanistan ‘Abd al-Râhîn Kân [q. v.], the Amir of Bukhârâ and the Russians, as the political boundary between the Russian Central Asia and Afghanistan (the Russo-Afghan Agreement of 1895) (see L. Dupree, Afghanistan, Princeton 1973, 424).

Pamir, the name (of unknown etymology) of a mountain massif of Inner Asia. Its core is in the modern Gorno-Badakhshan Autonomous oblast of the former USSR, but it spills over into Kirghizia and Tadjikistan to the north and west, and into the Sinkiang Uighur Autonomous Region of China to the east, and Afghanistan (including the Wakân corridor) and Pákistânî Kâshmîr (Azád Kâshmîr) to the south. Comprised mainly of east-west-running ranges, its many river valleys being right-bank affluents of the upper Ouxus (here called the Pandîr “Five [rivers]”), its mountains reach a height of 7,495 m/24,584 ft, on Communism Peak. It is extremely thinly populated: the population of the western Pamirs is in the main ethnically Tadjik and Ismâ’îlî Shî‘î in faith, whilst that of the eastern Pamirs is mainly Turkish Kirghiz and Sunni Muslim (some of these last, from the Wakân corridor, fled via Gilgit and eventually settled in Turkey after the 1978 Communist takeover in Afghanistan; see Muhajîrî. 2. In Turkey and the Ottoman lands, at vol. VII, 353b). As a typical refuge area, it is in the Patmir region that there survive certain archaic eastern Iranian languages, such as Shughrîn, Ishkâmîgh, Wakhlî, Yâdzhâhâlî, Sangîlî, Mundî, etc. [see Iran, iii. Languages, no. 105].

Pan-Arabism, an ideology advocating an overall union of Arabs (waḥdat al-‘Arab, al-waḥda al-‘Arabîyya). Ideologues of Pan-Arabism have consistently recommended such a union on the basis of several elements of commonality: (a) Language and culture, considered the ultimate expression of the entire Arab nation and one of its major links with the
past (including the Islamic past; many Arabs have expressed their nationalism in Islamic terms). (b) History, preoccupation with which accorded immersion in a common past glory differing from the 20th-century situation. (c) Ethnic-origins, increasingly called "race" in the first half of the 20th century. (d) Territorial contiguity from the coasts of Morocco to those of 'Irak and Saʿūdī Arabia, which maintained a common culture and history and could naturally promote political and economic relations. The methods advocated were primarily aimed at focusing on the establishment of federations and confederations as a step towards a general union, to be achieved either by persuasion or force.

The history of Pan-Arabism is largely a record of these attempts. In the early 20th century, several writers and journalists, such as Negib Ajoury, discussed the Arab nation in terms of long-extend primordial sentiments. Their works were mostly read by relatively small elitist circles, however, and rarely served as guidelines for achieving an all-Arab union. Only after the end of the First World War, with the consequent breakdown of the Ottoman Empire and the establishment of mandated Arab entities (see mandates), were political moves made by several Arab leaders towards federating Arab-inhabited territories. The Hashemite rulers of 'Irak and Transjordan were prominent in this sphere.

The long-range aim of Faysal I [q.v.] of 'Irak was to establish a confederation, embracing 'Irak, Syria, Transjordan, Palestine and the Hijaz. He sought to bolster his own position and that of his country in a highly competitive environment, while gaining access to Mediterranean shores. French-mandated Syria was the key to Faysal's success or failure; he strove to persuade the Syrians, French and British of his plans' feasibility. Certain nationalist groups supported Faysal and his Pan-Arab plans during the 1920s and 1930s, not only in 'Irak, but in Syria as well. In the Pan-Islamic Congress that convened in Jerusalem in 1931 (see pan-Islamism), a group of activists from Damascus and Jerusalem met and drew up a Pan-Arab charter, whose first paragraph declared the indivisibility of the Arab nation and Arab lands. Pan-Arabists from 'Irak, Lebanon and Egypt proclaimed their solidarity with this charter. Plans to convene an all-Arab congress in 1932 floundered, however, because of the strife between 'Irak and Saʿūdī Arabia, as well as British opposition.

Following Faysal I's death in 1933, his brother 'Abd Allāh [q.v.], then Amir of Transjordan, intensified his own efforts at achieving a partial Arab union. Having been involved in Syria's affairs in the 1920s, in the succeeding decade 'Abd Allāh renewed his plans to create a confederation of Transjordan with Syria (and 'Irak and Palestine, eventually), with himself as its ruler. Once the British had ousted the Vichy French forces from Syria, he again tried to promote his Greater Syria project, persisting in these efforts after the Second World War as well. His failure was due not only to Saʿūdī opposition and Egyptian reservations, but also to the activities of the 'Irak Prime Minister Nun al-Saʿūd, who was working along the same lines on behalf of his own state, attempting to persuade the British to help in shaping up a union among 'Irak, Syria and Palestine (including Transjordan). 'Abd Allāh, however, opposed this scheme, which would have diminished his own chances of heading such a union. Another complicating factor was a proposal in 1936-7 by 'Abd al-'Azīz Al Saʿūd [q.v.], King of Saʿūdī Arabia, to set up an Arab federation headed by himself.

The more factors involved in such moves, the less practicable they became. Even Egypt joined these efforts. Since the early 20th century, a significant part of the political spectrum had identified supra-national objectives and defined itself in Pan-Arab or Pan-Islamic terms, based on the commonality of the Arabic culture and language for an all-Arab nation. Egyptian Pan-Islamists, too, considered Pan-Arabism as a vital step in the struggle for their own ideals. In the 1930s, political groups advocated Pan-Arabism, emphasizing Egypt's solidarity with Arabs elsewhere. At the same time, elitist groups in 'Irak and Syria expressed themselves in similar political language. Cultural cooperation among Arab governments and other organisations also increased in the 1930s and early 1940s, much of it expressed in political action; cultural and professional associations were formed and politico-literary conventions held. Pan-Arab terminology was increasingly employed by these groups and others.

Towards the end of the Second World War, chiefly after 1945, Arab wishes and British interests combined to bring about consultations for the establishment of the Arab League (Džāmi'at al-duwal al-ʿArabiyya, literally, the League of Arab States [see al-Džāmi'at al-ʿArabiyya in Suppl.]). A preparatory committee met in 1944 and the League itself was set up in Cairo in the following year by Egypt, Saʿūdī Arabia, 'Irak, Syria, Lebanon, Transjordan and Yemen (along with a representative of Palestine's Arabs). It has meanwhile grown to comprise twenty-two states, including Mauritania, Somalia and Djibuti. The League, the most important organisational instrument of Pan-Arabism, could not have been founded without the increase in the number of factors propounding Arab unity; its rather limited political success, on the other hand, reflects strong elements of divisiveness. The League's main objective has been to promote all-Arab unity through cooperation and policy coordination amongst its member states in economics, culture, health, law, communications and social affairs. Its committees have achieved results in all these areas, but much less so in politics and military matters, due to clashes of interests amongst its members and power struggles between rival groups of member states. Paragraph 7 of the League's charter, which allows for vetoing any decision, reflected this situation. Consequently, cardinal decisions in inter-state relations have been reached by direct negotiations between the states, not via the Arab League, where members agree to disagree. The League's most important service to Pan-Arabism remains its very existence as a regional organisation of sovereign Arab states, a framework for debate and consultation amongst its members and an instrument for crisis management, as in its mediation in the civil war in Lebanon during the 1980s (it failed, however, in its attempt to mediate between 'Irak and Kuwayt in 1990).

Twelve summit meetings of Arab heads-of-state or their delegates took place between 1964 and 1982 in various capitals. These were useful occasions to coordinate policies regarding the Palestine problem and to attempt to resolve conflicts of interest among Arab states. They accomplished but little, however, insofar as rapprochement was concerned. More meaningful were various moves for unification, starting with Egypt and Syria (in February 1958), soon joined by Yemen, and the 'Irāqī-Jordanian unification shortly thereafter. These, however, proved ephemeral, as did several similar moves, e.g. in North Africa. While widely proclaimed as steps towards an all-Arab union,
they were regarded by many as merely intended to serve regional self-interests. Djamal Abd al-Nasir was seen by many as a natural leader of a future Arab union. Similarly, various groups and political parties, chiefly in Syria and Lebanon, strove to promote Pan-Arabism. Of these, the most important was the Ba'th movement. Its particular importance lies in its widespread impact (it has numerous political parties, chiefly in Syria and Lebanon, strove to become a near-dominant force in Lebanon since 1990 (Arab critics, however, accuse it of "Pan-Syrianism" rather than Pan-Arabism); and its ideology: Syria did so by becoming a near-______________________________________________________________________________
ly oriented, developed nationalist aspirations from the third quarter of the 19th century onwards. While mostly centred on the specific problems of the Tatars, Azeris and some other groups, their nationalist sentiments borrowed heavily from both Pan-Islam and Pan-Turkism [q.v.]. The reason was self-evident; isolated from one another by huge empty spaces or by masses of other populations (non-Turkic and non-Islamic), the Tatars, Azeris and others sought the support of their brethren-in-faith, and particularly that of the largest independent Islamic state of the time, the Ottoman Empire. These Pan-Turk, Pan-Islamic and Russian Muslims, in 1905-6, served to sharpen nationalist and Pan-Turk sentiments and even create several organisational elements. In 1917, these Pan-Islamic and Pan-Turkic organisations intensified their political activities, but were soon broken down by the new Soviet régime and its Red Army. During Soviet rule, at least until recently, a persistent atheist propaganda was carried out, intensified by anti-Pan-Islamic activities. Many Soviet publications of the time reveal a basic fear of the competition of Pan-Islam with the régime's own universalist ideology, Communism.

In another part of the globe, India was one of the largest concentrations of Muslims masses. While signs of an Islamic revival were noticeable even before the First World War, it was mainly subsequent to that war that political Pan-Islam came into being there, soon becoming a significant force. Hemmed in by what they perceived as a threat by the huge Hindu majority, political leaders of India's Muslims naturally sought allies among Muslim populations abroad, with increasing emphasis being placed on the Pan-Islamic element of commonality. Moreover, India's Muslims, like the Hindus there, already had a tradition of organising politically on European lines, a feature rarely observable elsewhere. The spark which ignited Pan-Islamic political activity in India was the threat to Turkey and, most particularly, to the caliphate, immediately after the end of the First World War. The defeated Ottoman Empire was being dismembered, Constantinople had been occupied by the Allied Powers and the office of the sultan—who claimed to be the caliph—was being threatened. Two brothers, Muhammad Ali [q.v.] and Shawkat Ali, and other Muslim political leaders gathered in a Khilafat movement [see KHILAFA] to save the caliph and the caliphate. This comprised hundreds of thousands of adherents, collected large sums, which were sent to Turkey, organised mass demonstrations, published manifestoes and newspapers, and despatched missions abroad to intercede with the Allied Powers. The movement grew during the early 1920s, but petered out after 1924, when the Republic of Turkey abolished the caliphate and exiled the last sultan-caliph. This act deprived the Pan-Islamic movement of its titular head and dealt it a blow from which it has not yet recovered, remaining without a common leader to look up to.

Thus in the inter-war period, particularly since the mid-1920s, political Pan-Islam receded in such importance as a Muslim centre as Russia, India and Turkey. Pan-Islamic congresses in that period, mentioned above, only served to emphasise this retreat. Most of its activities and publications focused in the Arab-populated countries of the Middle East and North Africa. However, in these, too, Pan-Islam had to compete with rival ideologies, such as modernisation, secularisation, nationalism, and Pan-Arabism [q.v.]. But the first expressions of the revival of Islam comprised an obvious element of Pan-Islam as well, for example in Egypt, where the organisation of the Muslim Brethren, set up in 1928, adopted some of the slogans of Pan-Islam, as in the speeches and writings of its founder, Hasan al-Banna [q.v.]. This could be noticed even better, at the time and subsequently, in Saudi Arabia which, after all, had been established on the foundations of classical Islam which served as the most prominent element cementing the inter-tribal union on which rested the new Kingdom of Saudi Arabia.

The situation changed radically after the Second World War. The number of independent states with Muslim populations grew visibly. Although only some of these emphasised their Islamic character, it soon became clear that Islam was again a factor to be reckoned with in local, regional and international politics. True, Islam and Pan-Islam had to compete increasingly not only with the impact of Europe, as before (to which that of the United States was added later), as well as with that of nationalism, particularism and secular modernism, but also with the influence of rival universal ideologies in Muslim lands, like Pan-Arabism, Pan-Turkism and Pan-Iranism. An answer was found by the Pan-Islamists in due course, on both the ideological and pragmatic-organisational levels.

On the ideological level, the more extreme Pan-Islamists, rooted in faith, still advocated a religious-political union of all Muslims; their model was the early history of Islam, as warmly preached by Muslim fundamentalists everywhere; for these, a religious and political Pan-Islam was a sine qua non. For numerous others, more moderate, some accommodation with reality was deemed necessary. Well aware of the immense power of nationalism in many of the new Muslim states, they argued for solidarity among all these, as a transitional stage to the universal state canvassed by fundamentalists and their partisans. They maintained, moreover, that complete solidarity—political, military, economic and cultural—would create a huge force, capable of achieving its own ends in any conflict or clash of interests with European and other Powers. On the pragmatic level, no less significantly, it appeared for the first time that achieving Pan-Islam, at least on the level of solidarity, was feasible. Not only were there independent Muslim states with which the political and social organisations could promote the fulfillment of Pan-Islam, such as Saudi Arabia and Pakistan, and later Egypt, Persia and Libya; but at least some of these also had the economic capacity to do so. Indeed, some—chiefly Saudi Arabia, Persia and Libya—had become gigantic oil producers since the 1973 boycott. Several, notably Pakistan and Saudi Arabia, had set up efficient structures for furthering the political and economic aims of Pan-Islam, largely in the context of promoting solidarity and cooperation. Three of the most important organisations should be mentioned specifically.

(a) The Muslim World Congress was set up in Karachi in 1949, very probably with official Pakistani encouragement; it now comprises some thirty-six member states, although branches exist in sixty countries. Among its tenets are propagating Islam, cooperating with all Muslim lands in order to promote Islamic unity, persuading Muslim governments and peoples to renounce their differences, instilling Arabic as a lingua franca of all Muslims, co-operating in trade policies, framing constitutions and laws based on the shari'a (or Islamic jurisprudence). (b) The Muslim World League was founded in Mecca in 1962 as an unofficial agency of the Saudis. It serves, however, as an umbrella organisation of many other Islamic
associations and groups. Richly funded by the Saudis, the League’s activities in all fields continue to be varied. As a non-governmental body, it is concerned not only with Islamisation and propaganda for religious education, but also with promoting Islamic solidarity (and paying for it): it promotes many publications and international seminars, preaches unified Islamisation and Islamic law and assists Muslim minorities with the aim of drawing them into a common Islamic activity, both political and economic. (c) The Organisation of the Islamic Conference, also Saudi-inspired, was established in 1969 as an association of Muslim states complementary to the Muslim World League. The Organisation of the Islamic Conference, made up of some forty-five states, combines the principles of Islam with the mechanisms of a contemporary international body. Both its charter and its activities emphasise the consolidation of Islamic solidarity, co-ordination and co-operation, with a view to strengthening the integration of all Muslim states in the future. For this purpose, the Organisation has set up the instruments for active policies—political, economic and cultural. Meetings of the Organisation’s Heads-of-State and Foreign Ministers have initiated and furthered some common institutions, as an Islamic Development Bank (modelled on the World Bank), an Islamic Educational, Scientific and Cultural Organisation (patterned on UNESCO), and an Islamic Academy for Jurisprudence (to achieve the unity of the Islamic world in the legal sphere). See further, Mu'tamak.

PAN-TURKISM, one of the Pan-ideologies originating in the late 19th century. It expresses strong nationalist interest in the welfare of all Turks and members of Turkic groups, recognisable by kinship and culture. It addresses itself chiefly to those in Turkey, Cyprus, the Balkans, the former Soviet Union, Syria, Iran, Persia, Afghanistan and East Turkistan (or Sinkiang). Pan-Turkism should be distinguished from Turkism (sometimes called Pan-Turanism), a broader concept, whose ideologies hail as fellow-Turks all those originating from Türān, a mythical plateau in Central Asia; this would include all the above groups as well as the Finns, Estonians, Hungarians, Yakuts, Mongols, Manchurians (even the Chinese and Japanese). Generally termed Türkçülük in modern Turkish, Pan-Turkism is confined at times with Türklik, or Turkism, which more usually refers to the commonality of Turkish civilisation. It is not always easy to distinguish, historically, between the more moderate cultural Pan-Turkism, aiming at solidarity, and the relatively extreme political trend, seeking an irredentist union for all Turkic groups and the lands they inhabit. As in some other Pan-ideologies (such as Pan-Slavism), the cultural trend frequently precedes the political movement, with the latter generally predominating afterwards.

While Arminius Vambéry, the Hungarian-Jewish Turcologist, seems to have been the first to use the term Pan-Turkism, in the late 1860s, and to consider its political potential, it was left to intellectuals from the Tatars, Azeris, and other Turkic groups in Tsarist Russia to work out an ideology and attempt to set up organisational structures. Practically all of them were Muslims, resentful of policies of Russification and Christiansation being carried out by the ruling classes of Tsarist Russia. In defence, Muslim sentiment grew stronger and nationalist feeling began to spread. The latter, which proudly asserted the characteristics of each Turkic group, instinctively sought allies amongst its ethnic and linguistic kinsfolk, all of which led to the concept of Pan-Turkism. These nationalist intellectuals tended to be secular-minded, without being anti-religious. Their rallying slogans were Turkism and Pan-Turkism, of which Islam and Pan-Islam [q.v.] were occasionally added. Indeed, their call for the latter seems to have been in direct ratio to their isolation and their need for allies.

Not surprisingly, among Pan-Turkism’s most prominent initiators in Tsarist Russia were the Tatars, who had endured Russian rule longest and were the chief sufferers from the effects of Pan-Slavic-minded Russification. Further, although they were surrounded by non-Turks, they were located relatively close to the Ottoman Empire with its preponderant Turkish-minded élites. A Tatar bourgeois class had been developing, and in the late 19th century it had found itself capable of raising the twin banners of nationalism and Pan-Turkism. The Tatars were well aware that linguistic commonality was the key factor in a rapprochement and ensuing joint activity among the Turkic groups. Realising that literacy levels were low and that linguistic and dialectal variations prevented effective co-operation, they strove for improved education and language reform, and the publication of journalistic propaganda. The life’s work of Ismā‘īl Gasparrī [q.v.] exemplifies this trend.

A schoolmaster and mayor, he revised the curriculum in his town to include Turkish, along with Arabic; then he devised a lingua franca for schools and newspapers (he himself published a newspaper, called Terjumān “Interpreter”, from 1883), emphasising the common vocabulary of the Turkic languages and attempting to minimise phonological differences. Preaching “unity in language, thought and action,” Gasparrī’s brand of Pan-Turkism was chiefly cultural.

Other Tatars, like Yusuf Akkūra, ʾAbd al-Rahmān ibn ʿAbī Jahlīl ibn ʿAbī Jahlīl, and Azeri like Ahmed Aghaoglu, preached political Pan-Turkism. Akkūra, in particular, in his lengthy article in Al-Türk ("Three systems of government"), anonymously published in Cairo in 1903, rejected Ottomanism and Pan-Islam, arguing that Pan-Turkism was the only feasible ideology for unity, which ought to be a union of all Turks, with Turkey at its centre. These and others were encouraged in their action by the revolutionary trends current in Russia of that period. In addition to publishing newspapers, they organised three
congresses of all Russia's Muslims (1905-6), presided over, again, by Tatars, in which a Pan-Turk union was discussed; Azeris and Turkestanis joined in. Such congresses were repeatedly held in 1917 and revolved around Adharbaydjan, Turkistan, Buhkara, Khiwa and Khokand. Most of these uprisings were suppressed by the Red Army in the following years. The Soviet authorities banned Pan-Turkism, along with other universal ideologies competing with Communism. A harsh campaign of propaganda for Communism, strict censorship, and personal and economic pressures drove Pan-Turkism underground until the breakdown of the Soviet Union, when it is showing signs of a revival.

In most other areas where Turks and Turkic groups have held a minority status, Pan-Turkism has been low-keyed in expression, making itself heard mainly in times of discrimination or persecution. It was only in the Ottoman Empire, chiefly in its last decade, that it flourished. Writers and journalists, émigrés from Tsarist Russia and other countries, promoted it, joined by such distinguished Turkish intellectuals as Ömer Seyfeddin and Mehmed Emin [Yurdakul] [q.v.], or even Ziya Gök Alp, a Kurd, and Tektin Alp, a Jew. Their literary and political organisations inspired further activities, and their books and newspapers have remained the treasured heritage of Pan-Turkism to this day. No less important politically is the fact that from ca. 1910, a part of the ruling Committee for Union and Progress adopted Pan-Turkism as the official state ideology. Chiefly supported by Enver Pasha, the Committee used the state bureaucracy (including secret agents) and finances for Pan-Turk propaganda and activity both within the Empire and abroad, among Turkish-Turkic concentrations. The very entry of Turkey into the First World War was at least partly motivated by Pan-Turkism. The main contributors to these periodicals were from among the émigrés, referred to above. Nonetheless, organisationally Pan-Turkism in Turkey itself remained weak and limited to élite circles.

This situation was partly changed by Alparslan Türkeş. Born in Nicosia in 1917, he emigrated with his family to Turkey and chose a military career, reaching the rank of colonel. His connections with the Pan-Turks began at least as early as the mid-1940s, when he participated in their street demonstrations. A controversial figure, he entered politics in 1965, when he took over the leadership of a medium-size political party whose name he changed to the Nationalist Action party (Millîyeti Hareket Partisi). This ultranationalist grouping, active in politics until the military intervention of 1980, which banned all parties, and subsequently re-established as the Industrial Unions Party (Çalıspa Partisi), still with Türkiye as chairman, obtained—at least for a while—the support of Pan-Turkists. In recent years, though, they have abandoned it, since Türkiye did not achieve results that satisfied them, and, also, because Türkiye increasingly took a pro-Islamic stand (in order to gain more votes), which Pan-Turkists did not consider consistent with their basic ideology.

In the late 1980s and early 1990s, there seems to have occurred, again, an upsurge in Pan-Turk sentiment, in Turkey, where public feelings identified with the “Outside Turks” (Dış Türklər) first in Bulgaria, then in the Union of Independent States, heir to the Soviet Union, as both sides of the border increasingly wished for greater co-operation and solidarity. Nonetheless, the ideal of a Pan-Turk union has not been achieved, for several reasons. Among external factors, the general reluctance of the Powers to alter the status quo co-operated with opposition by the former Soviet Union and by China, as well as their protégés, to political (and even cultural) Pan-Turkism. Among internal ones, no less crucial, have been opposition by most of Turkey’s political establishment, strong competition by rival ideologies, paucity of numbers (and no grassroots support) and lack of effective organisation.

Bibliography: Several periodicals in Turkey still carry the message of Pan-Turkism. Some of these advocate the cause of a specific area and are edited and published largely by émigrés. Such are Azerbaycan, Turkistan and Emel (the last caters to Tatars). Two scholarly periodicals advocate Pan-Turkism more generally, the monthly Türk Kültürü (Ankara) and the bi-monthly Türk Dünyası Araştırmaları (İstan-

One possible connecting link among the various enumerations of the Pānc Pīr is the idea of martyrdom, since the tomb of a pāhil — which may come to have its own attached pīr — commonly attracts a particular devotion. For example, away from north India — where in north-eastern India — are visited as much by Hindus as by Muslims. The “doubtfully Islamic fair” (musulmdm dewtdr), and have certain ceremonies performed by Muslim drummers (dafdšl, strictly “tambourine”). Crooke’s lists, which enumerate the offerings (not excluding spirituous liquor) presented to the Five at different places and by different kawm, show an amazing diversity of practice between one community and another, as though the Five were Hindu household or village gods, and as though any conformity were only a matter of kawm organisation. The household worship of the Five may simply be directed to an iron bar or three-pointed spear, representing Ghāzī Miyān, or five wooden pegs in the floor of the courtyard. There may be some cohesion through the songs of the itinerant dafšams, but otherwise the Pācipirī have no formal organisation; the cult is discouraged by orthodox Muslims, and their “priests” are nothing but opportunists operating upon an illiterate and gullible public.

Specimens of the ballad poetry of the dafšams and others, given by Greven, are largely adaptations to Muslim ideas of tales found in the Indian epics, and the glorification of Ghāzī Miyān and his family.

(See Panjāb below.)

PANDJĀB (p., “land of the five rivers”), a province of the northwestern part of the Indo-Pakistan subcontinent. In pre-Partition British India it comprised all that part of the Indian Empire, with the exceptions of the North West Frontier Province and Kāşmīr, north of Sindh and Rājpūtāna and west of the river Djamna. Geographically therefore it includes more than its name implies, for, in addition to the country watered by the Djjelum, Ĉināb, Rāwī, Bēa, and Sāleḍ, it embraces the table-land of Sirdh between the Sāleḍ and Djamna, the Sīnd-Sāgar Dāl, and the Sāleḍ and the district of Dērā Ghāzī Khān. Since 1947, the province has been divided between Pakistan and India, the eastern, Indian portion being now divided into the states of Pandjāb, Haryana and Himachal Pradesh (see 2. below).

Under British rule, the province of Pandjāb was administratively divided into two parts, British territory and the Pandjāb States. British territory, which had
an area of 99,265 square miles and a population in 1931 of 23,580,852, was divided into 29 districts, each administered by a deputy-commissioner. These districts were grouped into the five divisions of Ambala, Dhillundur, Lahore, Rawalpindi, and Multán, each under a commissioner. The Pandžáb States had an area of 37,699 square miles and a population in 1931 of 4,910,005. The conduct of political relations with Dughdāna, Patawdl, Kalsia, and the 27 Simla Hill States was in the hands of the Pandžáb Government. The remaining states of Lohār, Sirmür, Bilsāpūr, Mandi, Khoā, Kapurthala, Maler-Kotla, Faridkot [q.v.], Čambā, Bahāwalsūpur [q.v.], and the Phulkian states of Pāṭiālā, Dīnd, and Nabhā, were directly under the Government of India.

1. History until 1911

The history of this area has been profoundly influenced by the fact that the mountain passes of the north-west frontier afford access to the Pandžáb plains. For this reason, it is ethnologically more nearly allied to Central Asia than to India. The excavations conducted since 1920 at Harappa in the Montgomery district are evidence of a culture which probably flourished in the Indus valley about 3000 B.C., and which bears a general resemblance to that of Elam and Mesopotamia (Sir John Marshall, Mohenjo-Daro and the Indus Civilization, 3 vols., London 1931). But the first migration of which we have any evidence is that of the Aryan-speaking peoples who established themselves on the Pandžáb plains in pre-historic times. Centuries later, successive waves of invaders swept west devastating torrents through the mountain passes of the north-west. Persian, Greek, and Afghan, the forces of Alexander and the armies of Mahmūd of Ghazna, the hosts of Timūr, Bābur, and Nādir Shāh, and the troops of Ahmad Shāh Durrānī [q.v.], all advanced by these routes to lay waste the fertile plains of the Pandžáb. All these migrations and invasions added to the heterogeneity of the existing population in the land of the five rivers. The history of invasions from Central Asia proves that the Pandžáb and the frontier zone from the banks of the Indus to the Afghan slopes of the Sulaymān range have never presented any real barrier to an enterprising general. The Sulaymān range itself has seldom formed a point of resistance to the tribesmen who established themselves on the mountain barrier.

The capture of Multān [q.v.] by Muhammad b. Kasīm [q.v.], in 947/13, extended Arab power to upper Sind and the lower Pandžáb, but the real threat to Hindustān came from the direction of modern Afghanistan. The Ghaznavīs invaded the powerful Hindu Ghāznavīs dynasty of Wayhand [see HINDU GHANZWIN] ruling between Lamghān and the Čināb. The power of this Hindu state was completely shattered by Mahmūd of Ghazna [q.v.], who annexed the Pandžáb, which became a frontier province of his extensive empire with its capital at Lahore (Lāhāwār [q.v.]) and the sole refuge of his descendants when driven out of Ghazna by the Šahsābānī sultans of Ghūr [q.v.]. However, the country had remained in Muslim hands since the days of the Arab conquest, but the fact that its rulers were heretical Kārmātians (i.e. Ismāʿīlīs) was one reason for Mahmūd's attack in 396/1006. Muḥammad Ghūrī annexed the Pandžáb in 582/1186 and on his death in 602/1206 it definitely became a province of the Sultanate of Dihlī under the rule of Kūṭb al-Dīn Aybak [q.v.]. With the exception of occasional rebellions and raids from Central Asia, it remained under the Sultanate of Dihlī until the defeat of Ibrahim Lōdī [q.v.] by Bābur at Panipat [q.v.] in 932/1526 paved the way for the foundation of the Mughal empire. Under Akbar [q.v.] the modern province of the Pandžáb was included in the Šubān of Lahore, Multān, and Dihlī, a detailed description of which will be found in the Aʿlāʾīn Akbarī (tr. Jarrett, ii, 278-341).

The more intransigent policy of Akbar's immediate successors, above all, of Awrangzīb [q.v.], led to the growth of Sikh political power in the Pandžáb and transformed a band of religious devotees, founded by Guru Nanak [q.v.] in the 15th century, into a military commonwealth or Khāḷṣā animated with undying hatred toward Muslims [see SIKHS]. The weakness of the central government and the unprotected condition of the frontier provinces under the later Mughals exposed Hindustān to the invasions of Nādir Šaḥ [q.v.] and Ahmad Šaḥ Durrānī [q.v.]. On the bloodstained field of Panipat, in 1761, the Marāṭhās [q.v.], who were aspiring to universal sovereignty, sustained a crushing defeat at the hands of the Afghan invaders. In the following year, at Barnālā near Ludhīnā, Ahmad Šaḥ dismastrodly defeated the Sikhs who had taken advantage of his absence in Kābul to possess themselves of the country around Lahore. The Sikhs, however, soon extended their sway to the south of the Sablēlj and ravaged the country to the very gates of Dihlī, but the further advance was checked by the Mughals who had rapidly recovered from their defeat at Panipat. It was the defeat of the Marāṭhās by Lord Lake, in 1803, which facilitated the rise of Randjī Singh and enabled him to found a powerful Sikh kingdom in the Pandžáb. His attempts to extend his authority over his co-religionists, the cis-Sablēlj Sikhs, brought him into conflict with the British, and, by the treaty of 1814, he pledged himself to regard the Sablēlj as the north-west frontier of the British dominions in India (Aitchison, viii, no. iii). After the death of Randjī Singh in 1839, his kingdom rapidly fell to pieces under his successors. Revolution succeeded revolution, and during the minority of Dalīp Singh the Khāḷṣā soldiery became virtually rulers of the country. Unprovoked aggression on British territory produced two Sikh wars which ended with the annexation of Punjab by the British. At first the newly-conquered territories were placed under a Board of Administration. This was abolished in 1855, its powers and functions being vested in a Chief Commissioner. In 1859, after the transfer of the Dihlī territory from the North-Western (subsequently the United) Provinces, the Pandžáb and its dependencies were formed into a Lieutenant-Governorship.

The annexation of the Pandžáb by advancing the British administrative boundary across the Indus brought the Government of India into closer contact with the Pathān tribes of the north-west frontier and the Amir of Afghanistan [q.v.]. Because this frontier was too long and too mountainous to admit of its being defended by the military alone, much depended upon the political management of the tribes. At first there was no special agency for dealing with the tribal tracts, and no fixed boundary was conducted by the deputy-commissioners of the six districts of Hazāra, Peshāwār, Kohēt, Bānī [q.v.], Dērā Ismāʿīl Khān, and Dērā Ghāzī Khān [see DERĀGĀJT]. In 1876, the three northern districts formed the commissionership of Peshāwār, the three southern ones that of the Dērāgājt. The system of political agencies was not adopted until 1878, when a special officer was appointed for the Khyber [see KHJAB] during the Second Afghan War. Kurram
PANDJAB

[q. v.] became an agency in 1892, while the three remaining agencies of the Malakand, Tochi, and Wana were created between 1895 and 1896. The Malakand was placed under the direct control of the Government of India from the outset, all the other agencies remaining under the Pandjab Government. This was the arrangement until the creation of the North-West Frontier Province in 1901.

The Pandjab attained its latest dimensions within British India in 1911 when Dihlī became a separate province. It was not, however, until 1921 that it was raised to the status of a province.

2. History after 1911

The course of British policy profoundly influenced political developments in the region after 1911. The British created a system of control based on their alliance with rural powerholders. They also encour-
gaged the growth of an “agriculturalist” political iden-
tity which the status of a governor’s province. This policy was largely dictated by the need to secure rural stability in a region which was the major centre for recruitment to the Indian Army. The Government of India’s in-
troduction of improved communications, the spread of western education and missionary activity, how-
ever, stimulated religious revivalism. The com-
munities of the Pandjab’s towns thus developed a communal political ideal which challenged the British definition of society. Two systems of politics emerged, the rural politics of mediation, and the urban politics of faith. The Government of India’s political institutions largely excluded the urban communities from power. Only members of the statutory “agriculturalist” tribes could stand for election in the rural constituencies which accounted for the majority of the seats in the Provincial Assembly, newly created in 1937. Because the rural voting requirements were low and large numbers of soldiers were enfranchised, agriculturalists comprised nearly three-quarters of the restricted electorate. This greatly handicapped both the Indian National Congress and the All-India Muslim League, as their supporters were concent-
trated in the Pandjab’s towns.

The Unionist Party was the dominant political force. The Party was founded in 1923. It won the sup-
port both of the Muslim landholders from the West Pandjab and the Hindu Jat peasants of the eastern Ambala division. Its main policies concerned the elimination of rural indebtedness. Its cornerstone was the 1900 Alienation of Land Act which limited land transfers and divided Pandjab society into the categories of “agriculturalist” and “non-agricul-
turalist”.

Urban politicians, however, stressed communal identities. The Ahīrs championed the rights of Kashmīri Muslims and also attacked the heterodox Ahmadi community (see Ahmadiyya). The Khāñks also preached a revolutionary Islamic nationalism. The Sikhs Akāls were the first to successfully infuse com-
munal values into rural politics. They wrested power from the landholders of the Khālsa National Party through their militant struggle in the early 1920s to secure control of the Sikh shrines and temples. Muslim politics continued to move along the same track as before. The Unionist Party triumphed in the 1937 Provincial elections, reducing the Muslim League to a single seat. Jinnah received some consola-
tion when the new Unionist Premier, Sikandar Ḥāyāt Ḫān, agreed to support him in All-India politics in their Pact of October 1937. But the cost was the Unionist domination of the reorganised Pandjab branch of the Muslim League.

The Second World War dealt a series of blows to the Unionist Party. It had to agree to the unpopular measure of the forced requisition of grain. The War also undermined it by raising Jinnah’s status and signalling an imminent British departure from India. Simultaneously, the Party was internally weakened by the sudden deaths of Sikandar and Chhotu Ram, its leading Jat figure. Ḫidr (Ḵizr) Ḥāyāt Ḫān Tiwana succeeded Sikandar as Premier early in 1943. He remained wedded to the Party’s intercommunal stance, but he lacked his predecessor’s ability to unite all its Muslim factions. Jinnah seized the opportunity to reassert his authority over the Pandjab Muslim League. After protracted negotiations, he expelled Ḫidr from the party in May 1944. Thereafter there was a steady drift of Muslim Unionists into the Muslim League, while their Hindu counterparts joined the Congress.

The Unionist Party was reduced to a rump of 21 members following the 1946 Provincial elections. Ḫidr remained as Premier of a Coalition Ministry until March 1947. His resignation sparked an out-
break of communal violence which had become endemic by the summer of 1947. The disintegration of the police and other services helps explain the chaos which afflicted the region following the British departure.

The Partition of the Pandjab resulted from the ac-
ceptance of the 3 June Plan. The boundary commis-
sion drew a line passing between Lahore and Amrit-
sar. The decision to award an area of about 5,000 square miles of contiguous Muslim majority areas to India to retain the “solidarity” of canal and road systems evoked great controversy. In the chaotic two-
way flight of August to November 1947, 13 million people crossed the new boundaries. In 1956 the Par-
tiāla and East Pandjab States Union was merged with the Indian Pandjab State. This was, however, further reorganised along linguistic lines in 1966 with the Hindi-speaking areas being carved out into the new State of Haryana. The Himalayan Hill Tracts were also taken away to form part of what became the State of Himachal Pradesh. The Sikhs were left as a majori-
ty in their homeland for the first time. By 1981 they
comprised 56% of the State's population of 16,800,000. The West Pandjáb has undergone much less territorial reorganisation. It has incorporated the former State of Bahāwadār [q.v.]. From 1955-70 it was merged into the single province of West Pakistan. When it was reconstituted, it comprised 28 districts in five divisions and a population of 37,400,000.

Both the Indian and Pākistānī Pandjáb were historically well placed to benefit from the Green Revolution of the 1960s. They possessed good existing roads and canals and agriculturally skilful populations. With the introduction of the improved seeds and technology of the Green Revolution, agricultural production was further increased, with the result that they became the wealthiest regions in their respective countries. The Pākistānī Pandjáb possessed the additional favourable inheritance of a stranglehold over military recruitment.

The colonial legacy has also shaped political developments in the Pandjáb region. The Akālī Dal's dominant position in Sikh politics dates from its capture of the resources of the Sikh shrines and temples. The genesis of the Khalisṭān demand is complex and engendered by Mrs Gandhi's rule. Nevertheless, the sharpened Sikh communal identity during the colonial era, and Sikh distrust of the Congress following the failure of the Sikhs to demand in 1947, are important historical influences.

An important colonial legacy for the politics of the Pākistānī Pandjáb, and indeed for Pakistan as a whole, has been the region's establishment as a major army recruitment centre. For the virtual exclusion of non-Pandjabis from the continued military association with power has reinforced regional imbalances and increased alienation from the centre. Military service, landholding and political power have become increasingly intermeshed. Equally important, however, has been the inheritance of an unresolved tension between a political authority based on the mediation of local leaders and Islamic ideals. This boiled over in the anti-Ahmadi riots in Lahore of 1953 which were reminiscent of the Ahhrās' agitations of the 1930s. The riots resulted in the introduction of martial law in Lahore and the downfall of the Premier of Pakistan.

The colonial legacy has also shaped political developments in the Pandjáb region. The Akālī Dal's dominant position in Sikh politics dates from its capture of the resources of the Sikh shrines and temples. The genesis of the Khalisṭān demand is complex and engendered by Mrs Gandhi's rule. Nevertheless, the sharpened Sikh communal identity during the colonial era, and Sikh distrust of the Congress following the failure of the Sikhs to demand in 1947, are important historical influences.

An important colonial legacy for the politics of the Pākistānī Pandjáb, and indeed for Pakistan as a whole, has been the region's establishment as a major army recruitment centre. For the virtual exclusion of non-Pandjabis from the continued military association with power has reinforced regional imbalances and increased alienation from the centre. Military service, landholding and political power have become increasingly intermeshed. Equally important, however, has been the inheritance of an unresolved tension between a political authority based on the mediation of local leaders and Islamic ideals. This boiled over in the anti-Ahmadi riots in Lahore of 1953 which were reminiscent of the Ahhrās' agitations of the 1930s. The riots resulted in the introduction of martial law in Lahore and the downfall of the Premier of Pakistan.

Within the Pandjáb itself a similar pattern of influence from west to east may discerned in the pre-modern period. The local Muslim literary language, as often as not described by its authors in the usual Indo-Muslim fashion as "Hindi" or "Hindvi" rather than "Pandjábī" freely incorporates many Lahnda forms alongside those more strictly characteristic of the central Madjhl dialect of Lahore, the provincial capital. This may be accounted for by the continuing importance of Multān as a spiritual and political centre in the south-west, and by the fact that many of the most important writers came from the districts west of Lahore, where Pandjábī shades into Lahnda. The broad dialectal base of the literary language is to be seen in the simultaneous use of numerous western (Lahnda), mid-western (Lahnda-Pandjáb) and central (Madjhl) forms, e.g. feminine plural akẖi, akẖhīyān, akẖhīn "eyes", or future akẖhī, akẖhī, akẖhīgā "he will say". Only from ca. 1750 is it possible clearly to distinguish the Siraiki of south-western Pandjáb, more exclusively based on Lahnda [q.v.] from this composite Muslim Pandjábī literary idiom.

2. Muslim Pandjábī literature. The prolonged cultural
supremacy of Persian in the Panjâbi, only ended by the imposition of Urdu following the British conquests in the mid-19th century, accounts for the quite restricted nature of the typical genres of pre-modern Muslim Panjâbi literature, whose linguistic base has been indicated above. Written in Persian script and drawing extensively upon Perso-Arabic vocabulary, this Muslim literature may largely be considered in isolation from the contemporary Sikh scriptural and post-scriptural literature, whose dialectal base incorporates many more Hindi forms alongside their Panjâbi counterparts, which is recorded in the sacred Gurmukhi script, and whose abstract vocabulary is largely Sanskrit in origin. The two literatures coincide only in the isolated small corpus of pre-16th century šahâd and hymns attributed to Farîd al-Dîn Gând-ji Shâhâr (571-664/1175-1265 [q.e.j]) which is preserved in the Sikh LEASE GRANT (1604). While valuable as uniquely early examples of Muslim vernacular poetry in the Panjâbi, and as linguistic records (especially since the Gurmukhi script records such archaic features as morphemically significant distinctions of short vowels, never systematically indicated in the Persian script), these verses must in many ways be regarded separately from the later Muslim literature.

This abounds in the difficulties of attribution and dating, not to speak of the uncertainties of textual transmission, to be expected from its semi-popular character in relation to Persian. Also consistent with its popular nature is the fact that it is all composed in verse, whose patterns are based not upon the learned ʿarâd certainly familiar to many of its authors but on local metres characterised by regular accentual beats. The literature may be classified under three broad headings. The first consists of versified Islamic treatises on fundamentals of the faith or prescriptions of the gharāʾ. Although quite copious in quantity, this genre is of the least literary interest, even in the well preserved works of its first and best known exponent, Mâwlawâ Shâh “ʿAbd al-Lâh “ʿAbdī” of Lahore (d. 1075/1664).

A far greater literary significance attaches to the Šûfī lyric associated with kauwaštī performance. Here the previous genre is the kâfi, a lyric consisting of rhymed couplets or short stanzas having a refrain repeated at the end of each verse, and normally following the usual Indian poetic convention whereby the poet assumes a female persona, typically that of a young girl yearning to be united with her husband/lover, allegedly to be understood as an expression of the soul’s yearning for God. The 16th-century malamaṭī of Lahore, Shâh “Mâdhû Lâl” Hussayn, is considered to be the first exponent of the Panjâbi kâfi, although it must be observed that the transmission of the verse attributed to him has been largely through the oral kauwaštī tradition. The master of the genre is the Kâdîrî, “ʿAbd al-Lâh “Bullhe Shâh” (1680-1758), whose tomb is at Kâsîr, and in whose kâfis the combination of a lyrical poignancy underpinned by imagery from local legends and local life with widening Islamic references creates a local expression of Šûfī teaching and ideals still rightly regarded as classic. His reputation is matched only by that of another Kâdîrî, Sultan Bâbî of Jâhnâ (d. 1102/1691), whose more sober poetry is cast in the quafrâin form called dōhârā.

The third genre consists of longer narrative poems, composed in one or other of the two local metres called başî, and arranged by rhyme either in mathnawi-style couplets, or more usually in stanzas (paurî) of four or more lines, whose contents are often headed by Persian prose rubrics. Although more obviously designed for reading than the Šûfī lyric, at least the most famous of these narratives are equally performed as ballads to more or less set tunes. One category of such narratives indeed consists of historical ballads (sâr) on martial themes, the best known examples being the 18th-century Nadîr Shâh dî sâr by Nadîsâbâr, and the mid-19th century sâr on the Anglo-Sikh wars by Shâh Muhammad.

The largest and most popular class of narrative poems belongs, however, to the romance or kîsâ. Well attested from the 17th century, the Panjâbi kîsâ reaches its peak in the 18th-century Sîd Shâh (“Shâh Muhammad”) of Khanbâd (1180-1766). Comprising some 4,000 lines, this version of one of the most famous local legends is rightly regarded as the masterpiece of Muslim Panjâbi literature, not merely for its narrative skill but for its encyclopaedic vision of Panjâbi society, its exploitation of the total stylistic range of language from the most refined Perso-Arabic to the most earthily obscene, and its challenging mixture of the sardonic with the romantic. Classic treatments of other local legends, besides adaptations from the Persian of such widely diffused romances as Laylî- Majnûn or Shîrîn-Farhrad, followed in the early 19th century, and many further imitations were inspired by the development of Lahore as a major publishing centre from the 1860s. The only later kîsâ to achieve a popularity rivalling that of the Wârid Shâh Hîr was, however, the lengthy and elaborate re-working of the Arabian Nights’ romance of Sayy al-Mulak (1272/1855) by the Kâdîrî Miyaq Muhammad Bakhsh of Mîrpur (Kashmir) in some 10,000 lines as a Šûfî allegory incorporating a vast range of references to Islamic learning and local culture, characteristically concluding with the first history of Muslim Panjâbi literature.

3. Modern Panjâbi. While Panjâbi literature of a traditional type, if no longer of very high quality, continues even now to be produced in Pakistan, pre-modern patterns have been increasingly affected by the major linguistic and political changes which have overtaken the Panjâb in the 20th century.

The intimate association in modern South Asia between Urdu and Islam facilitated the ready acceptance during the British period by educated Panjâbi Muslims of Urdu in place of Persian as their main cultural language. The adoption of this modern standard Panjâbi was therefore left to the Sikh reformists and writers who from 1900 onwards used it as the medium of a modern prose literature. Being written in the Gurmukhi script, this literature was, however, unintelligible to nearly all Muslim readers, from whose ranks only a very small number of writers began to experiment with newer poetic forms, including adaptations of Urdu and English models into Panjâbi. This profound cultural barrier was naturally reinforced by the partition of the Panjâb in 1947, and the wholesale exchange of populations between its Indian and Pakistani parts [see PANJAB. 2. after 1911].

The place of Pakistan Panjâb as one of the stoutest continuing bastions of Urdu in South Asia was challenged in the succeeding decades only by very small groups of intellectuals and writers who began to lay the foundations of a modern standard. Panjâbi, inevitably profoundly influenced by Urdu, but consciously differentiated from it by the adoption of some elements from modern Sikh Panjâbî, and of a more carefully distinguished orthography (e.g. through the adoption of super-dotted nun to mark the retroflex r). The efforts of these pioneers have borne some fruit in recent decades, when political
developments have encouraged an increasing role for linguistic and other manifestations of local ethnicity in Pakistan. Their reversal of direction in the historic centring of Lahore, but at the cost of emphasising its distinctiveness from other regional standards, notably the Sirākī of Multān-Bahāwalpūr. For the present, therefore, Urdu continues to represent an attractive alternative to the greater adoption of Pandjābī as literary language, even in the specialised world of Pakistanī Pandjābī scholarship.

PANDJĪDĪ (Pandjīdī), a village now in the Turkmen Islamic Republic, situated to the east of the Kūshk river near its junction with the Murghāb at Pul-i Khištī. The fact that the inhabitants of this area, the Sarik Turkomans, were divided into five sections, the Sokīts, Harzaqīs, Khurāsānīs, Bāyaṝa, and the ‘Allī Shāh, has been put forward as a possible explanation of the origin of the name Pandjīdī, but it carries no weight as the Sariks were only 19th-century immigrants, whereas the name was in use in the 15th century.

This obscure oasis owes a somewhat melancholy importance to the ‘Pandji Incident’ of 1885, when an Afghan force suffered heavy losses in an engagement with Russian troops, and which threatened to become a major Anglo-Russian military confrontation in Central Asia. History proves that an ill-defined boundary is a potential cause of war. It was a knowledge of this and the Russian occupation of Marw in 1884, with an intention in Imperial Russian minds of extending power over all the Turkmen peoples of the region, that gave the necessary impetus to negotiations which ended in the appointment of an Anglo-Russian Boundary Commission, for the delimitation and demarcation of the northern boundary of Afgānistan. Trouble immediately arose in this quarter, for while the Russians contended that the inhabitants of Pandjīdī were independent, the British held the view that they were subjects of the Amir of Afgānistan. According to the British, the district of Pandjīdī, which comprised the country between the Kūshk and Murghāb rivers from the Band-i Nādir to Ak Tepe, together with the rest of Bādgīs, formed part of the Harat province of Afgānistan. During the first quarter of the 19th century, Pandjīdī had been occupied by Djamshīdīs and Hazāras. Towards the end of this period, some Turkomans of the Ersari tribe, whose settlements were scattered along the banks of the Oxus between the Cardjuy and Bālgh, moved to Pandjīdī and obtained permission to settle there. Salor Turkomans had also settled in this area. About 1857, the Ersaris migrated from the oasis of Pandjīdī, and soon afterwards the Sarik Turkomans, forced southwards by their more powerful neighbours, the Tekkes, occupied Yulatan and Pandjīdī and compelled the Salor families to migrate elsewhere. Although, therefore, Pandjīdī had from time to time been occupied by various tribes, they had all, whether Djamshīdīs, Hazāras, Ersaris, Salors or Sariks, acknowledged they were on Afgān soil and paid tribute to the nādīb or deputy of the Afgān governor of Harat. The Sarik Turkomans had even supplied the Amir with troops. The British therefore contended that the district of Bādgīs, of which Pandjīdī formed a part, had long been under Afgān rule (Foreign Office mem. 65, 1205).

The Russians, on the other hand, contended that the people of this oasis had always enjoyed independence. Lessar, a Russian engineer, who visited Pandjīdī in March 1884, discovered no trace of Afgān authority, but a Russian doctor, named Regel, who visited it in June of the same year reported the presence of an Afgān detachment. In their opinion, therefore, Pandjīdī had only recently been occupied by Afghan troops.

The fact that the Afgāns had not permanently garrisoned this area was no proof of its independence. On the contrary, it was only natural that, after the Russian occupation of Marw and Pul-i Khāštī, ‘Abed al-Rahmān Khān should have taken steps to indicate his sovereign rights over this area. When, therefore, an Afgān garrison occupied Pandjīdī, the Russian Government immediately protested and disputed the Amir’s claim to the territory. While negotiations were taking place between London and St. Petersburg, events moved swiftly on the frontiers of Afgānistan. On 29 March 1885, General Komarow sent an ultimatum demanding the withdrawal of the Afgān garrison. The Afgāns resolutely refused to withdraw, whereupon the Russians attacked them, driving them across the Pul-i Khištī with the loss of some 900 men. It must be admitted that the possibility of war drops in Pandjīdī, and the Russian advance to Yulatan on the Murghāb and to Pul-i Khāštī on the Harat Rūd, were both provocative actions almost certain to precipitate war. The whole incident should have been avoided, but the confusing reports of Sir Peter Lumsden, the British Commissioner, to the Foreign Office, and the delay of Zelenoi, the Russian Commissioner, in arriving at Sarākhs complicated matters still more.
At the time, this incident seemed likely to embroil Russia and Britain in war, but, fortunately, the good sense of the Amir, who was at this critical moment on a State visit to Rawalpindi, and the diplomatic skills of the Viceroy, Lord Dufferin, prevented this, for even the pacific Liberal government of Gladstone had proposed to Parliament that £11,000,000 should be expended on preparations for war.

It was finally agreed that Pandjdh should be handed over to Russia in exchange for Dhu 'l-Fikrār, and by the year 1886 the northern boundary of Afghānistān had been demarcated from Dhu 'l-Fikrār to the meridian of Duktī within forty miles of the Oxus. After a dispute as to the exact point at which the boundary line should meet the Oxus, the process of demarcation was completed in 1888. This recognition of a definite frontier between Russia and Afghānistān led to a decided improvement in the Central Asian question.

In the history of mediaeval Islamic literature, Pandjdhī appears as the home, or the place of ultimate origin, of at least two poets: Abū Ḥanīfa Pandjdhī, whose Arabic verses are quoted in al-Bāḥkharī, Dumyāt al-kāz, ed. al-Hilī, Caire 1388-91/1968-71, ii, 257 no. 303 = ed. al-ʿĀrī, Baghdād 1390-1/1980-1, ii, 154; and Muẓaffarī Pandjdhī Marwī (Marwarīṭdhī ?), a Persian poet included by Niẓāmī Ṭārābī, Čahār maqāla, ed. Lūdīb al-ʿalābb, ed. Browne and Kāzżīnī, ii, 65-3, amongst the eulogists of the Ghaznawīs.

(C.C. Davies)

**PANDJHĪR,** the name of a river and its valley in the northeastern part of Afghānistān. From the river it flows southwards from the Hindu Kuğh [q.v.] and joins the Kābul River at Sarobi, and near this point a barrage was constructed in the 1950s to supply water for Kābul. The Pandjdhīr valley has always been important as a corridor for nomads who winter in the Lāmhānī-Djalalābād [q.v.] regions and then travel to summer pastures in Badakhshān [q.v.].

In mediaeval Islamic times, Pandjdhīr was a famed centre for silver mining [see MA[r]GON at V. 964, 967, 968 for details], and coins were minted there by the Saffārīds [q.v.], Abū Dāwūdīs and Bānījīdīrīs [q.v. in Suppl.] and Sāmānīds [q.v. see E. von Zambaur, Die Münzprägungen des Islam, i, Wiesbaden 1968, 79]. Pandjdhīr seems to have produced a poet in Persian of some renown (the "well-known" al-Bandjhdhī of Yākūt, Buldān, ed. Beirut, i, 499f, Abū 'l-Muẓaffarī Makkī al-Pandjdhīrī, eulogist of the Quz̄awīnīs; see A. Awdhī, ināj al-dīrāb, ed. Browne and Kāzżīnī, London-Leiden 1903-4, ii, 66).

In the 1980s, the Pandjdhīr valley was a particular centre of Muhdījī [q.v.] resistance to the Communist régime in Kābul and its Soviet Russian supporters.

**PANJDIH — PĂNĪPAT**

**PANDJHĪR** [see KANDAHAR].

**PĂNĐU’Ā, a mediaeval Islamic town of the Bengal Sultanate [see BENGAL], now in the Mādā District of the West Bengal State of the Indian Union, and situated about 16 km/10 miles to the south of modern Mādā town, in lat. 25° 8' N. and long 88° 10' E. It was the residence of Shams al-Dīn Íyās Shāh of Bengal (746-59/1345-58) and his five successors, and it was at Pandu’ā that he mounted the throne. Pandu’ā continued as the capital of the Bengal Sultanate till the reign of Djalal al-Dīn Muḥammad Shāh (817-35/1414-31), who transferred the capital to Gawr or Lakhnawī [q.v.]. On coins, Pandu’ā is referred to as Firūzābād. It was deserted due to its unwholesome climate and the rise of swamps and marshes. It is now a deserted town—a square mound, five miles in diameter with archaeological evidence of fortification.

Pandu’ā developed as a brisk centre of spiritual activity in Bengal. Djalal al-Dīn Tabrītī established his khānah dīkh at Deotala, near Pandu’ā. In 1742/1342 al-Dīn ‘Alī Shāh built his tomb at Pandu’ā. Shāykh Sirāj al-Dīn Uthmān, known as Ḥakīm Kāirānī, a distinguished disciple of Shāykh Nīzām al-Dīn Awlīyā’ [q.v.], planted the Čighār order at Pandu’ā. His successors—Shāykh ‘Alī al-Hakk, Nūr Kūtb-i ‘Alam and others—played an important role in the cultural life of Bengal. According to the 1941 census, Pandu’ā was a State visit to Rawalpindi, and the diplomatic skills of the Viceroy, Lord Dufferin, prevented this, for the tomb of Nūr Kūtb-i ‘Alam. We find eminent sainats, like Shāykh Ahmad ‘Abd al-Hakk of Rudawli, visiting his shrine (Anu’d al-Uṣūn, 1213/1895). The site of Pandu’ā contains some splendid Muslim buildings, mostly in a ruinous condition, including the remarkable Adīnā or Friday Mosque, the largest and most significant mosque in Bengal, the “well-known” al-Bandjhdhī of Yākūt, Buldān, ed. Beirut, i, 499f, Abū ‘l-Muẓaffarī Makkī al-Pandjhdhī, eulogist of the Quzuwnīs; see A. Awdhī, ināj al-dīrāb, ed. Browne and Kāzżīnī, London-Leiden 1903-4, ii, 66).

In the 1980s, the Pandjdhīr valley was a particular centre of Muhdījī [q.v.] resistance to the Communist régime in Kābul and its Soviet Russian supporters.

(Ed.)
PANTHAY, a term applied to the Chinese Muslims of Yunnan and their rebellion in the 19th century.

In the second half of the 19th century, Chinese Muslims in Yunnan province (in south-west China, bordered by Burma, Thailand and Vietnam) were known to the Europeans as Panthay, a term which had never been used anywhere in China. The Yunnanese Muslims were known as Hui-Hui or Hui-Tu.

Views concern the etymology of the term Panthay. If it derives from Chinese, it may have meant indigenous (Pen-ti) or rebellious brigand (Pan-Tie), although there is no reliable evidence. If, alternatively, it derives from Persian or Burmese, it might have been a corruption of Pan-se, a Burmese term, referring to Indo-Burmese of northern Arakan, who had converted to Islam in the early 13th century, and originating from Persian Parsi of which the sound was dropped by Burmese, who called Muslims Path or Pasi. The most likely etymology is that the term was a British coinage, corrupted by colonial officers in British India from the Burmese term Pan-se to designate the Yunnanese Muslims during their 1855-73 rebellion against the Manchu authorities. For today's Yunnanese Muslims in Burma, Panthay carries a pejorative meaning.

Sources concerning the first entry of Muslims and Islam to Yunnan vary in accuracy and credibility. Tang (618-906 A.D) and Sung (960-1279 A.D) records have left no adequate summary of the religious status and activities of Central Asian migrants in Yunnan, although archaeological evidence from the Tang period suggests that they were enslaved in the Buddhist Tali Kingdom of the native Yunnanese at that time. This accords with the fact that, when Tibet invaded the Tali Kingdom in 801, many of those taken prisoner were found to be conscripts from Samarkand. An unofficial history of the Tali Kingdom dating from the Sung period maintains that the first Muslims were Persian merchants and Southeast Asians on a tribute mission. According to Chinese Muslim legend, however, the first settlers were Arab merchants in the middle years of the Tang dynasty, and there is no evidence of Islam taking root in Yunnan prior to the Mongol conquest of the whole of China (1279), after which mass Muslim immigration into Yunnan was carried out by the central government through their own Muslim generals.

After the conquest, Muslims migrated to Yunnan in three waves, in 1253, 1256 and 1267. Various Muslim ethnic groups (Tanguts, Tatars, Uyghurs, Persians, etc.) were introduced, following their overlords as the province was settled. The Muslim immigrants were allocated lands and scattered all over the province, so that camps or villages, known as Hui-Hui Yin or Hui-Hui Chun, gradually developed. Furthermore, Central Asian Muslim soldiers were continually sent thither from other parts of China as part of a political and military strategy aimed at pacifying Burmese or local insurgents. This also served to promote social integration in that the Muslims intermarried with local Han women or to adopt non-Muslim orphans and bring them up as Muslims to become natural suitors for their daughters.

In order to maintain control of the Muslim population, the Mongol-Yüen court appointed Muslim generals as provincial governors, amongst whom the most eminent was the Bukhārī general, Sayyid Ajjali Shams al-Dīn ʿUmar, who was entrusted by Kublai
Khán [q. v.] with the task of sinicising not only the local tribes but probably also the Muslims. Under his governorship, many mosques were built, although he did not intentionally promote Islam. By the end of the Yuan period, the Muslims had gradually abandoned their Central Asian traditions in order to adopt Chinese customs and had developed their religion into a syncretised one.

During the Ming period (1368-1644), Muslim migration continued. However, unlike the Mongols, who had allowed their non-Han subjects to retain their traditions, the Ming rulers imposed Confucianism on the Han, and the Han and Muslim populations gradually gravitated towards a common Han culture. Under these conditions, Muslims were forced further to integrate, but managed to preserve their religious freedom and their numbers grew. As military activity decreased, soldiers engaged in other occupations, the most important of which, in mineral-rich Yunnan, was mining. The early Ming period also saw the start of the caravan trade, and eventually six trade routes linked Yunnan, Burma, Tibet and other parts of China. Porcelain manufacture also flourished. Hwei-Ch'ing (Islamic blue) was made chiefly in Yunnan for Muslim patrons abroad. By the onset of the Manchu-Ch'ing period (1644-1911), leather and carpet manufacture also significantly contributed to the Yunnanese economy. By the mid-19th century, the province of Yunnan was home to the second largest Muslim population centre next to that of Northwest China [see KANSU].

The national economic crisis prevailing in the 19th century was chiefly reflected in Yunnan in the mining industry, in which there was much Han-Muslim interaction, particularly in firing Han Chinese hatred against Muslims for their own interests. With all these factors ranged against them, the Muslims vainly tried to seek justice from the central government, but eventually they were driven to rebel against the Manchu authority itself.

The rebellions took place in the early 1850s in most parts of Yunnan, but were concentrated around Yunnan Fu (present-day Kunming), the provincial capital in the east, and the Tali region in the west. From the middle of 1856 onwards, local, uncoordinated insurrections gradually gravitated towards a few centres of leadership. In the eastern Yunnan, the grand imam, Yusuf Ma (Chinese name Ma Te-Hsing or Ma Fu-Chu) was elected as spiritual leader, but military responsibility was in the hands at first of his ahund disciples, mainly Hsu Yüen-Chi, later a military degree holder, Ma Ju-Lung.

Imám Ma, a prolific writer and Islamic educationalist, under whom Yunnan became one of the three Islamic learning centres in China, was a moderate theologian who advocated a negotiated solution to the Muslims' problems. On the other hand, Ma Ju-Lung, who had also been one of the imám's disciples, was an opportunist who sought privileges with the ruling Manchu.

Muslim forces were able to lay siege to Yunnan Fu three times between 1855 and 1862, causing severe strains on the imperial army and local Han militia, but failed to take the city. The response of the Manchu provincial government was to adopt a policy of 'Pardon and Pacification' and to reward the eastern rebel leaders with governmental posts and honorary titles. Imám Ma was appointed the Beg of Yunnan, which was the equivalent of Şaykh al-Islâm of Yunnan. This bought off the loyalty of the eastern rebels, who later became the main force led by Ma Ju-Lung to subdue the rebellion in the west.

This had been led by Tu Wen-Hsiu, also known as Sultan Sulaymán to the Europeans, who was more committed to the political and religious cause of Islam. His experience of the brutality of Manchu rule towards the Muslims in northwest China during the Djahriya (a Nakshbandiya [q.v.] Sufi sub-order) movement, inclined him not to yield to the Manchu's inducements and to hold out instead for an independent Muslim state within China.

Thus in western Yunnan, the situation was different. Here, the rebels seized Tali as capital of their sultanate (Ping-Nan-Kuo, in Chinese, "Southern Pacified Kingdom") in 1855. An Islamic court was set up and Islamic law implemented, but this only applied to Muslims, while the old Ming laws were retained and applied to non-Muslim subjects. Islamic learning was encouraged, Islamic schools were established to educate Muslims and many conversions took place, although these were not forced.

During the course of the rebellions, the two rebel groups were at odds and the only opportunity for them to unite to drive the Manchu out of Yunnan was wasted for two reasons. First, Tu Wen-Hsiu offered Ma Ju-Lung a high-ranking post in his court. Ma, who was politically and militarily more ambitious, rejected this, saying that he could serve under no-one other than the grand imám, Ma Ju-Lung. Secondly, there was considerable sectarian conflict. The eastern rebels belonged to the traditional conservative Kê-Ti-Mu (Ar. al-Kadim) who opposed new teaching or reform. The Tali court, on the other hand, was dominated by the Djahriya reformists who had been exiled to Yunnan after the suppression of their movement in northwestern China by the Manchu government. The grand imám, who himself belonged to the
Kê-Ti-Mu, was once courteously invited by the Tali Sultan to lead religious affairs, but the invitation was turned down. Under these circumstances, the Kê-Ti-Mu rendered assistance to the Manchu government to suppress the Tali rebellion for the sake of preserving their own religious interests.

After only 18 years, the Tali sultanate collapsed. Its fate was sealed following the defection to the Manchu of most of its Han leaders and its lack of modern weaponry in order to continue to fight. The defection of the Han leaders resulted from unbalanced power-sharing in the Tali court. The sultan was accused of favouring Muslims following her administrative and military affairs. Towards the end of its rule, the Tali court sought military assistance from Western powers. At the beginning of 1872 a Panthay mission, mediated by the British Government of India, and headed by the sultan’s adopted son, Prince Hasan, was sent to London to secure arms and recognition from Queen Victoria as a tributary of Britain. However, at that time the British government’s relations with Peking, from whom they hoped to gain further trade advantages, outweighed other considerations and the mission was not well received. Nor did it obtain the support of the Ottoman government in Istanbul, where it stopped on its way back to Yunnan.

The Yunnanese Muslim rebellion was not simply a political uprising against Manchu corruption, as it has been sometimes viewed. It was in reality a search for ethno-religious identity and social status. Prior to the Manchu period, Muslims were included in the Middle Kingdom, China, as Muslim Chinese and were treated equally with their Han counterparts. Under Manchu rule, they were classified as a minority, and their previous equal rights were gradually eroded. In these circumstances, a rejection of Manchu rule developed and was fanned by the religious undercurrents of refutation brought by the Sufi shariyina movement, these currents thus crystallising in the ideology of a secession movement, fighting for its own separate future.

The suppression of the rebellion was highly significant in Chinese history. It was another triumph of the Han supremacy and Confucianism which had never been challenged or set aside by non-Han elements. The status of Yunnanese Muslims was now reduced to its lowest level. They were forced to abandon their ethno-religious identity and to assimilate further into Chinese society. Many of those who did not want to live under these conditions fled to Burma [q.v.] and formed solid communities there in order to maintain their traditions, these being the forebears of the present-day Chinese Muslims in Burma.

Bibliography:

PAPYRUS, a term of Greek origin, ἀπὸ ρυσόν, is one of the world’s oldest writing materials; it seems to have been used in Egypt, the land of its provenance, since the 6th dynasty, ca. 2470-2270 A.D. As an equivalent for this word the Arabs, after their conquest of Egypt, used ṣawark al-bardī. However, these expressions were not of widespread usage, and in Egypt the term employed was fāfir, corresponding more closely to the original Greek. Elsewhere, the word kirti was also used, derived from the Greek χερτι, through the intermediary of the Aramaic kurti. And since this last term denoted not only papyrus but also parchment and later even paper, it became necessary in this context to add the adjective miṣrī ὑπὲρ ἑλληνικῶν, as was done by Ibn al-Nadim in his Fihrist, ii, 10 f. The use of this material extends over some seven centuries, lasting until the 8th/14th century. Its utilisation increased following the arrival of the Arabs in Egypt and remained dominant even in the 3rd/9th century, despite the introduction of paper [see KAQP].

Arab papyrology is the scientific study of texts written on papyrus, although it is conventional, as A. Grohmann (Einführung, 3, 1) has pointed out in his definition of this branch of scholarship, to include automatically within its scope non-literary documents written on other materials, such as leather, parchment, cloth, paper, ostraca, bone or wood. However, the mass of documents on papyrus is by far the most important.

Despite the antiquity of papyrus as a writing mate-
In Arabic culture, Arabic papyrology has developed quite recently. In fact it was only in 1824 that the subject first emerged as a science in its own right, this being the year in which two papyri were discovered in a small sealed pottery, located in a tomb or in a well near the Pyramids of Saqqāra (see Grohmann, Aperçu, table IX; N. Abbott, The rise, table IV). A. Silvestre de Sacy published them and thus became the founder of this discipline, which was nevertheless not to attain real prominence until 1877, the year in which sensational discoveries of papyri were made in the ruins of the old Arsinōe—Krokodilopolis (Kōm Fāris and Kōm al-Khayrāna) to the north of the town of al-Fayyūm. In subsequent years excavations continued, bringing to light a mass of material. The pieces found were sold to the museums of Berlin, to the Bodleian in Oxford, and to the National Library of Vienna, where the Archduke Rainer of Austria purchased 1,000 pieces; thus began the gradual development of the famous PER collection (Papyri Erzerzog Rainer), which currently holds the world's greatest accumulation of Arabic pieces and which celebrated its centenary in 1983 (see Festschrift zum 100-jährigen Bestehen...).

Sales terminated and other collections came into being around the world: in Hamburg, Heidelberg, Strasbourg and elsewhere. Excavations also continued in the hills of Old Cairo (Fustāt), in other ruins including those of the Memphis Necropolis, Ābūsir al-Malāk, and those of Ahnās (Herakleopolis), and, with fewer pieces found, at al-Ushmuīnayn (Hermopolis Magna) and Kōm Ṣdhāw (Aphrodito) where in 1901, during the digging of a cistern, two metres of papyri were found. Other discoveries were made in Upper Egypt, at Akhmīm (Panopolis), at Gabalayn (Pathyris), the Memphis Necropolis, Abūsir al-Malāk, and those of Ahnās (Herakleopolis), and, with fewer pieces found, at al-Ushmuīnayn (Hermopolis Magna) and Kōm Ṣdhāw (Aphrodito) where in 1901, during the digging of a cistern, two metres of papyri were found. Other discoveries were made in Upper Egypt, at Akhmīm (Panopolis), at Gabalayn (Pathyris), the source of part of the Heidelberg collection (see the works of C. H. Becker and R. G. Houry) and also at Elhī (Apollinopolis Magna) where the Institut Francais d'Archéologie Orientale of Cairo found some important pieces, including the well-known codex on papyri of al-Dāmīsī by 'Abd Allāh Ibn Wahb (d. 197/812) (see the edition by J. David-Weill), the only relatively complete book written on papyrus which has been preserved.

Outside Egypt, there have been few discoveries of papyri. In Arabia (some 600 pieces were found including about a dozen in Arabic) in the course of British excavations conducted at Awdājī al-Hafir in 1936-7, and a few other texts, which Grohmann has published by C. H. Becker (see Becker, Umayyad governor of Egypt, which has been published by C. H. Becker (see Becker, FSR I, and Arabische Papyri); (2) the oldest existing version of the Qurʾān is that of the Library of the University of Michigan (Ann Arbor) which has yet to be classified and made available to scholars, as well as countless fragments.走势 has studied several hundreds of these, in various forms, as have, more recently, Khoury, W. Diem and Y. Rāḥib (Ragheb) (see Bibli.)

In Germany, numerous collections exist: in Giessen, and especially in Hamburg: in Hamburg, Heidelberg, Strasbourg, and elsewhere. Excavations also continued in the hills of Old Cairo (Fustāt), in other ruins including those of the Memphis Necropolis, Ābūsir al-Malāk, and those of Ahnās (Herakleopolis), and, with fewer pieces found, at al-Ushmuīnayn (Hermopolis Magna) and Kōm Ṣdhāw (Aphrodito) where in 1901, during the digging of a cistern, two metres of papyri were found. Other discoveries were made in Upper Egypt, at Akhmīm (Panopolis), at Gabalayn (Pathyris), the source of part of the Heidelberg collection (see the works of C. H. Becker and R. G. Houry) and also at Elhī (Apollinopolis Magna) where the Institut Francais d'Archéologie Orientale of Cairo found some important pieces, including the well-known codex on papyri of al-Dāmīsī by 'Abd Allāh Ibn Wahb (d. 197/812) (see the edition by J. David-Weill), the only relatively complete book written on papyrus which has been preserved.

Outside Egypt, there have been few discoveries of papyri. In Arabia (some 600 pieces were found including about a dozen in Arabic) in the course of British excavations conducted at Awdājī al-Hafir in 1936-7, and a few other texts, which Grohmann has published by C. H. Becker (see Becker, Umayyad governor of Egypt, which has been published by C. H. Becker (see Becker, FSR I, and Arabische Papyri); (2) the oldest existing version of the Qurʾān is that of the Library of the University of Michigan (Ann Arbor) which has yet to be classified and made available to scholars, as well as countless fragments.走势 has studied several hundreds of these, in various forms, as have, more recently, Khoury, W. Diem and Y. Rāḥib (Ragheb) (see Bibli.)

In France, in the Louvre and in Strasbourg, there are hundreds of contracts and letters of all kinds, including texts or fragments of texts belonging to the celebrated correspondence of the governor Kurra b. Shārīk. J. David-Weill began the systematic study of some of these collections, in particular that of the Louvre (see Bibli.) and this work has been continued by C. Cahen and most notably Rāḥib, who has edited two unpublished letters of Kurra b. Shārīk and has undertaken, with considerable success, to classify series of papyri according to common central themes (see Bibli.)

In England, there is a small but valuable collection in the British Museum, and another, of equal impor-
tance, in the John Rylands Library at Manchester; the Bodleian Library of Oxford holds about a hundred texts, to which more have recently been added.

In Italy, there are a few items in Milan and in Florence. In addition, Arabic pieces have come to light from time to time almost everywhere: in Oslo, Istanbul, Geneva and, in particular, St. Petersburg and Moscow. Prague also has about a thousand fragments. There exist, besides these, many other libraries which hold Arabic papyri, as well as private collections, often unknown to the academic community; not only here, but especially in the important collection mentioned above, in the East and in the West, there is an enormous quantity of material to be classified, examined and studied, which cannot be utilised until it has been treated and placed at the disposal of specialists. All these items need to be closely examined, as has been done, for example, in Vienna, Heidelberg and elsewhere, with the object, first of all, of saving the pieces from destruction; they can then be subjected to the appropriate scientific scrutiny.

It is unnecessary to stress the importance of papyri for the study of Arabic paleography and orthography, in spite of the fact that it is possible only to trace in part the history of these two auxiliary disciplines and to give examples of the possible methods of writing. However, since papyri constitute the preferred material for writing used in the period before the proliferation of paper, documents on papyrus have acquired a pre-eminent importance, not only in the two areas just mentioned, but also, and especially, in that of the Arabic language: scrutiny of such documents does not relate exclusively to the study of certain particular philological phenomena, such as, for example, the history of Kur'anic vocabulary, an area in which the fragments on papyrus are very numerous (see especially the analysis of Abbott, The Rise, 60-91), but also to the study of classical Arabic of the first three centuries of the Islamic calendar, as has been shown by S. Hopkins (Studies in the grammar...). Furthermore, it is clear that papyri afford considerable interest to scholars of the later centuries of the Arabic language, in particular the language of the Middle Ages (for more detail on this point, see Grohmann, Einführung, 88 ff.; Khoury, Papyruswissenschaftliche, 263-68; G. Endress, Herkunft und Entwicklung der arabischen Schrift, in GAP, i, 165-97; and Handschriftenkunde, in ibid., 271-96). This is to say nothing of the sometimes unique value of much of the testimony, authentic and usually dated, supplied by the papyri, of which more will be said in due course.

Particularly interesting are those documents which may be classified as texts of protocols, official or private documents:

1. **Protocols.** As early as the Byzantine period, for example, the start of each scroll was usually introduced by an official formula or protocol (πραγμάτευμα). The Arabs borrowed this method at a quite early stage, no doubt from the Byzantines: this is attested for the first time (among the texts currently available) in a bilingual text found at 'Awdija al-Hafir and bearing the date Dhu 'l-Ka' dā 54/674. Around 105/724 the unilingual genre began to replace the bilingual.

2. **Official and private documents.** Unfortunately the number of official documents available is too small to permit close study of the functioning of Islamic institutions in the early years. In the majority of cases one is at the mercy of later historians and scholars, who have not always left a reliable picture of preceding periods; this fact has been definitively established by the celebrated correspondence of the above-mentioned governor of Egypt, Kurra b. Sharīk (90/5/709-14). All of the important elements of this correspondence have been published so far (Becker, PSR, i; Abbott, The Kurraḫ papyri; Raghib, Lettres nouvelles), show him in a quite different light to his received image: equitable, zealous for the public good, resolute, etc. These administrative letters are all the more important in that they constitute a source of a unique kind, and that nothing comparable regarding the other Islamic provinces has survived in original and authentic form. We thus remain dependent on these letters, which are of considerable elegance, concerning the functioning of the administration of the earliest Islamic periods.

It is appropriate to draw attention to the opening of these letters, which usually begin with the basmala, followed by the name of the governor, who is himself the sender, and that of the addressee of his letter. The final formula al-salām 'aḍā ma'suṭāhā l-ḥādā ('peace be upon him who follows the Guidance') accompanies every letter written by a Muslim to a non-Muslim; in general, and notably in the correspondence under consideration here, the letter concludes with the name of the scribe and the date of composition (concerning such usages, see for example, al-Sūf, Adab al-kutūb, 225; al-Kalkashandi, Subh, vi, 344, 366). Other official letters, of equal rarity and of no less worth, such as, for example, the reasons stated above, the above formula but conclude with the classical phrase wa l-salām 'alyaka wa-raḥmat Allāh ('may peace be upon you, and the mercy of God'), before introducing the name of the scribe and the date of the letter.

As for private documents, these concern official or strictly private relations between individuals: marriage, divorce, purchase, sale, complaints and legal proceedings of all kinds, etc. Grohmann undertook in his CPR (see Allgemeine Einführung, 17-88), and subsequently in his Einführung, 107-30, a study of the theory of diplomatic study (Urkundenlehre) of the papyri. The form of these documents varies to some degree according to the content: ratification of a marriage contract, simple business contract, receipt concerning a sum of money received or outstanding, business letter, etc. Beneath the surface, however, as has been shown by Grohmann, Jahn and others, a comprehensive account of the theory of diplomatic has yet to be written. For such a project it would be necessary to examine the maximum possible number of papyri and to compare all the documents which bear a resemblance, close or distant, to others, first within the Arab-Islamic culture, subsequently in the neighbouring civilisations (Byzantine, Coptic), from which Islam profited in this respect.

The value of the various documents of papyrus cannot be over-stressed: value for the study not only of purely philological problems, but in particular of those relating to the administration and the social and private life of the early Islamic centuries in general, all the more so since this type of source is authentic, and often unique in its original authenticity. This opens the way to more reliable methods of investigation and constitutes a firm basis for further, more thorough studies.

Leben in den ersten islamischen Jahrhunderten, vorbereitet von A. Grohmann, neu bearbeitet und erweitert von R.G. Khoury, Wiesbaden 1994 (CAAI, III), 156, 168-169); the local influential families were also directly involved in the

Munabbih, BSOAS, iv (1930), 249-71; idem, Arabic in Islamica, (1880), 685-91; D.S. Margoliouth and EJ. Lammens, in Österreichischen Nationalbibliothek, Vienna 1982; O. Loth, Zwei arabische Papyrus, in ZDMG, xxxii (1900), 685-91; D.S. Margoliouth and EJ. Holmyard, Arabic documents from the Monneret Collection, in Islamica, iv (1930), 249-71; idem, Arabic papyri in the Bodleian Library reproduced by the collotype process with transcription and translation, London 1893; 

Turkish raids began within the intricate period of the Archipelago Duke's failure to greet sultan Mehmed I at Izmır as master of the western Anatolian coast; extensive looting was followed by the abduction of many Parions (Ducas, ed. Bonn, 109; Critoibulos, ed. Reinisch, 92; cf. M-L, ii, 371; Krantonelle, 25, 192, 257, 400; Uzuncarsih, Osmanli tarhi, ii, 1988, 30; Melas, 10), yet subsequent treaties (1419, 1426, 1446, 1454, 1458) were not sufficient to deter the Venetians from making raids; the last Venetian attack was in 1490 (M-L, ii, 394), while the information that extensive ravages took place in that raid is to be taken with reservations (Th. and N. Aliprantes, Paros-Anapides, 48-9, 168). Being a base for western espionage against the Sultanate in the early 16th century made Para one of the targets of Khayr al-Din Pasha [q.v.] in the Ottoman's Cycladic raids; its last ruler, Sagredo, surrendered Képhalos fortress (Dec. 1537) and 6,000 Parions and Antiparians suffered massacre, the young men ending up as oarsmen in the Pasha's vessels and young girls entering his harem, apart from many spoils (see NAKSHE; cf. M-L, ii, 404, 406, 407 ff.; Pitcher, 138 and map XIV; Vakalopoulos, iii, 151 and map, Krantonelle, 198). The last Turkish conquest of the Cyclades, 1537-8 [in Gk.], in Kimolika, vii (1978), 62 ff.; idem, Archipelagos, 75 ff.; Frazee, 83, 90, 253; M. Roussos-Melidones, in Pariana, xxxvi (1990), 20 ff. [acc. to W. sources]. Ottoman control was ratified by the 1540 treaty, which allowed for semi-autonomy under a kapudan pasha, while a semblance of Latin power continued until the eventual annexation of 1566 (see Th. and N. Aliprantes, 49-50, 66 ff.; 156, 168-9); the local influential families were also directly involved in the
island's affairs, predominantly the Kondylai and the Mavrogenai (see Th. Blancard, Les Mavrogeni, Paris 1909; cf. Pariana, xviii [1985], 71 ff. [Mavro]; xvii [1987] 71 ff. [Shepallios]; xxxvi [1995], 95 ff. [Desyllai]; also refs. in N. Aliprantes, in DEECE, v [1985], 42-119 [on families and coats of arms]).

After the Jewish Duke Nasi's death in 1579 [see NAKŞE], extensive privileges were granted by Murād III (Tab-râme of 1580, renewed by İbrahim in 1646, shortly after the ravages against Para in 1645-6) (cf. Zinkeisen, iv, 766; Vakalopoulos, iii, 491, 502, n. 2; Polemis, Η Παρά του Ηπείρου, 74 ff.; N. Aliprantes, 95 ff. [Desyllai]; also refs. in N. Aliprantes, in DEECE, v [1985], 42-119 [on families and coats of arms]).

In the later years of the Ottoman empire, the larger copper pieces were replaced by nickel. The seat of the Cycadic sandjak, enjoying privileges until the early 19th century, while Para was to suffer from incessant piratical raids in the course of the Turco-Venetian wars of the 16th-17th centuries (Vakalopoulos, ii, 139, n. 39, 144 ff.; iii, 503; iv, 134 and map, 192, 198; N. Kephalleniades, in Pariana, v, 197, 199-201; cf. Roussos-Melidones, in Pariana, vi, 1981, 181-93, 194-9; on the Bourtzi fortress). Meanwhile, the first waves of Capuchins and Jesuits established themselves on Para, particularly on its northern fortified sandjak, enjoying privileges until the early 19th century, while Para was to suffer from incessant piratical raids in the course of the Turco-Venetian wars of the 16th-17th centuries (Vakalopoulos, ii, 139, n. 39, 144 ff.; iii, 503; iv, 134 and map, 192, 198; N. Kephalleniades, in Pariana, v, 197, 199-201; cf. Roussos-Melidones, in Pariana, vi, 1981, 181-93, 194-9; on the Bourtzi fortress). The vocabulary is extended in the tomb of Ghiyath al-Din Tughluq (ca. 725/1325), where marble spandrels and a fretted tympanum contrast with grey panels in the red stone, and the treatment is echoed in the interior. At Dhrāʾ the mīhrāb of the Kamāl Mawlā Masjid (795/1392-3) is surrounded with black and white fillets in the architrave, and in the Dājmī Masjid (Lāt Masjid) (807/1404-5) this treatment is extended to white lines trimming the black spandrels. In the Dājmī Masjid at Ahmadābād (827/1424), all five mīhrābs are surrounded with white fillets and a single open flower in coloured stones that may be the first application of true pietre dure. By 858/1454 contrasting marble trims to the mīhrāb of the Dājmī Masjid at Māndū are combined with the use of blue tile infill between the merlons of a frieze above; the trim and contrasting spandrels are repeated in the main entrance. Combinations of this kind reached a sophisticated level in the Purānā Khilā complex at Dihlā a century later, where intersecting white arches surround panels of ultramarine tile mosaic, alternating geometric and floral, with traces of turquoise green: these suggest a technique imported from Persia by Humāyūn [q.v.] on his return in 1555. In his Shāh Mandāl (pre-1556) the dados at both levels outside are filled with geometric inlay, white marble stars and kite-shaped lozenges in the Iranian range of cut brick shapes set in linear rosettes of structural stone. The spandrels are trimmed with a single white line and inlaid with a six-pointed star on either side. The internal dados, however, are of faience. At the roughly contemporary Masjdī-i Kuhna nearby, the tympanum of the central bay is filled with square and rectangular panels of this geometric inlay, framed with white strips, while the inner architrave is of successive rectangular panels inlaid with frets of white lines to form a geometric spider’s web. Black outlines to the inscribed panels define mīhrāb cartouches which were to be used regularly thereafter. The white semidome of the mīhrāb is divided into sectors by a fine black trim. Use of tilework combined with stone, both in contrasting colours, continued until the mosque and tomb of Tāsā Khān were built in 954/1547-8.

Geometric marble set in a red stone matrix, however, gained ascendancy in the metropolitan style during Akbar’s [q.v.] minority. The elegant little tomb of Atiga Khān (974/1566-7) at Niẓām al-Dīn has a fully Persian pīshkāh [q.v.] with inlaid white geometric tesserae on both dados and spandrels, the latter alternating with smaller areas of dark blue tile and green centres. Those in the lateral panels are reticulated in black lines rather than the red background stone; yet tile mosaic is fitted to the blind arches of the western enclosure wall. Larger-scale marble inlay appears in the merlon frieze and in a display of six-pointed stars among hexagons on the drum. This appears again on the drum of Humāyūn’s tomb (969/1561-2 to 1570), probably reflecting his preoccupation with astrology, and notably in stars set in the floor of the main chamber, though the exterior is trimmed only in the earlier linear style. It has been suggested by Koch (in Bīb., iv, 447-51) that the choice of red and white here refers deliberately to India’s tradition under the Sultanate, in contrast to Transoxania where such stone is absent, and that the star was used to symbolise both Humāyūn and his successors. Tessellated inlay is consummated in the great mosque at Fathpur Siḵri (979/1571-2), where geometric networks are used extensively on the intrados of arches and in bands framing blind arches, niches, and rectangular panels, modestly inside: again, some are set off with black lines and some with accents
of faience. The main mihrab is inlaid with black and white marbles, but the lateral ones, though on the same model, vary in detail, two being set with tilework in different colours.

The transition to floral forms is marked by the southern gateway to Akbar's tomb at Sikandra (1022/1613). Though the wings are decorated with superimposed panels of geometric work, the background alternates in buff and red. The framing bands are in bannāṭ technique, and the spandrels carry diagonal palmettes with arabesque scrolling—but translating that intricate arabesque into stone. The two large extrados within the pishtākh transforms the usual interlocking rosettes into boldly stylised petals and leaves in a sequence of giant flowers reminiscent of block-printing: black, white, and green marble are used. The scheme is repeated in the pishtākh of the tomb itself. In the gateways to the tomb of I'timād al-Daula (1031-7/1621-7) at Agra the character of these features is already changed: the inlay on the extrados is intrinsically canted, and the spanded arabesques are spread more loosely but more evenly, while the side elevations are articulated with arched outlines framing vases and flasks. The tomb, wholly in white marble, astonishing by its wealth of miteculous surface ornament of polished pietra dura work, establishing a fully Persianate vocabulary under the aegis of Nūr Dzhāhān [q. v.], and epitomising the new technique and its overall use: the inlay is in black, grey, brown, buff and white, blue accents being introduced only in the pavilion roof near the skyline. The material includes khattū, agate, jasper and yellow porphyry. The dados both outside and in are in continuous geometrical work, some of interlocking angular pieces. Similar panels on the upper wall outside are subdivided by plain marble fillets, with borders of countered arabesque meanders throughout, and vivaciously coiled arabesques in the spandrels. The arch reveals are decorated with grouped trees, flasks, flower-vases and cups set within outlines of niches, cartouches, and lobed rondels, the round corner towers with ovate polemedallions. As the interior is largely painted, it is clear that this work was intended for more exposed positions. The floor of the upper chamber, however, is inlaid with swirling arabesques. It may be noted that there is a curious exchange of tendril motifs in the two adjacent pavilions of the audience hall (1037-46/1628-37), with trefoil arced arches anāt the rear wall and panelling reliefs and pietra dura. The Mū’azzam Burdī apart from banī-durara in the Red Fort at Dihlī (1048/1648) are inlaid with marble dados, panelled with marble columns in which the inlay is differentiated between powerfully serrated leaves framing the pedestal carving, and delicately framed floral repeats in the collars; all the dados are bordered with floral strapwork of the angular type.

At Agra Fort [see MAHALI], geometrical work is no longer in evidence. The Muḥammad Burdī apartments (1626-30) combine floral and arabesque inlay with floral relief carving in the marble dados, and for the first time the faceted columns are inlaid from base to scrolled brackets; even the sculpted leaves of the pool spread among inlay. The qarākā of the public audience hall (1057-66/1628-37), with three trefoil arched niches and a cīnī-khana wall at the rear, is of a more curvilinear design, in which the convex arched soffits, the concave ceiling coving, and the swelling capitals are inlaid. The spanded arabesques are without central palmettes, and the ceiling is articulated with foliate strapwork with sharp angles and claps at intervals like wrought iron work. As Koch has pointed out (op. cit., 20), the increasingly florid fullness in marble forms is in contrast to an increasing stylisation, slenderness, and symmetry of the floral inlay accompanying them. The deliberate choice of white marble as an image of purity was combined with a floral evocation of paradise referring to both legendary and Kurānic sources, as both inscriptions and contemporary historians consistently make clear. The developed medium thus played an essential rôle in the Mughal idea of divinely-endowed kingship. By 1045/1635 the Dawlat-khana-yi Khāṣ was built with marble columns in which the inlay is differentiated between powerfully serrated leaves framing the pedestal carving, and delicately framed floral repeats in the collars; all the dados are bordered with floral strapwork of the angular type.

This répertoire is that of the Tādī Mahal (1041-57/1632-47 [q. v.]). The relatively bold spandrel scrolling still centres on palmettes, or a lyre-shape, and vestigial use is made of the coarser technique of alternating chevrons for framing dados, but the work tends to incorporate elements of the florid style, and the spandrel becomes less articulated: it is subordinate to the sculptured forms. The mosque and its counterpart continue the older red stone style, with geometric inlay on the dome drum. The great mosques at Agra (1058/1648) and at Dihlī (1066/1656) make no use of the finer technique, though their red stone is set off by white accents and outlined paneling, with chevron work at Agra and reeding at Dihlī, both extending to the bulbous domes themselves. At Dihlī a new element is introduced in an outlined network of panels in the curved zone of transition under the domes. It appears that the imagery of floral inlay was appropriate only to the palace. It is significantly absent in the marble court mosques at Agra, the Misn Mašjid, the Naghina Masjīd, and the Mū‘azzam Mašjid, though the quintessential Mughal feature, the marble charkha, continues. Black outlines of the ābāz-yi namāz on the floor. At those in Lāhawr and Dihlī it is allowed a discrete appearance on the skyline. A final stage in the development can be recognised in the Red Fort at Dihlī (1048-58/1638-48), where the tendrils in borders are wavy meanders linking predictably-placed foliage and flowers. The main motifs, though finely executed, are reduced to a display of buds and blooms scarcely connected by their stems. The Bangālī vault of the baldachin in the public audience hall is plainly elaborated from that at Agra, with its convex arch soffit and coving. It is the wall behind which this is clad with work from Florence, with a figure of Orpheus at the apex and surrounding panels of birds amongst foliage and fruit, with lions at the foot, unique in Mughal architecture. The black matrix of these 318 panels, typical of the Grand Dāwlat workshops, is itself an innovation, accomplished by dint of composing it in an arboreal setting with Indian birds on the usual white ground, probably done in situ by local craftsmen. Koch has shown (op. cit., 23-33) that the whole is to be interpreted as a Solomonic setting for the ruler, as bringer of harmony to nature, hence of natural justice, with reference to David's pacification of the natural world through music.
In this instance, a convergence between the interests and crafts of the Mughal and European courts could lead to a cross fertilisation which, however, seems to have led no further. That the main impetus for the development of parcín-κari came from faience mosaic is clear in such details as the inclusion of centres of a different colour in peripheral leaves. A stimulus may well have been received from Bidar, as the Rangin Mahall there (ca. 1542-80) was decorated not only with faience mosaic but exceptionally fine mother-of-pearl inlay on dark basalt; Shah Jahān had passed through Bidar during his rebellion of 1623-4, and the complex seems to have been emulated at the Muḥammad Burdż at Agra on his accession. Patterns on textiles, and the floral painting as found in some tombs at Burhānpūr, are likely to have contributed to its evolution.

With the exception of the Mūtī Masjid at Dihlī (1073/1662-3), little use was made of parcín-κari after Shah Jahān’s death, and the craft had so declined by the mid-19th century that it could only be revived by a British initiative (Koch, op. cit., n. 24). At the Pādghānī Masjid in Lāhāwar (1084/1673-4), the exterior makes further use of red and white work, but though some strips are inlaid flush, the central pishtāk is ornamented with marble inlay standing out in relief: the spandrel scrolling is centred on a sunflower, with petals, leaves, and tendrils all embossed, and the soffit of the arch carries continuous floral scrolling articulated by a sequence of vases, both highly stylised, and possibly under Italian influence (Chaghatai, op. cit. in Bibli., 1972, 26-7). The contrast between sculpted marble and inlay is thus finally resolved by sculpting the white inlay itself.

Technique. The Muslim craftsmen still practising at Agra, who claim descent from those who worked for Shah Jahān, state that the work is properly called parcī-kārī from a Hindi root meaning “joined, stuck together”, as in Platts’ dictionary. The design, khākā, is first drawn in pencil, and then chiselled out with a burin, narzā (?), tapering conically to 1.5 mm with a 30° point held between the fourth and fifth fingers like a pen; another chisel, tākh (tankht), with a point 2.5 mm square is used to clean out the edges with a digging action, narānā. The white marble sang-i marmar, for the Makrī series, is only 100 km by 200 km; a road of 1000 km leads west of Dījāpur. The inlaid stones include malachite, dāna-fārang, lapis lazuli, lāqīward, cornelian, tākh, mother of pearl, sip, black onyx, sang-i mūsā, coral, marāji, turquoise, frūza, besides garnet, moonstone, smoky topaz, golden or yellow topaz, and all types of agate. Of these the malachite is now from the Congo, the lapis lazuli from Afghānistān, the cornelian from India, the mother-of-pearl is abalone from Australia, and the coral is from Sicily—a black variety is more expensive. The inlay in general is called parcī-kārī, the petals and leaves are parcī, and the stems dand. The flowers, seen as roses, gulāb, or jasmine, tāmūtī, are inlaid first, and then the stems.

The marble, once blasted, is cut with a bamboo bow, kamānā, with a wire blade: seven pieces can be cut at once with seven blades. It is then reduced with a hammer, hatīrāl, and chisel, Aghā, to the required shape, shakī; its edges are ground, ghāndā, with a broken piece of grinding wheel, sān. The inlay is cut roughly to shape with shears, kāthī, and ground on a wheel, ca. 30 cm diameter by 2.5 cm thick, set on a steel axle and operated by a bow 90 cm long. The composition of this wheel, regarded as the essential secret of the craft, is of river sand, sugar-cane juice, and brown resin: it should last 30 years, and if pitted can be restored by heating it with charcoal and rubbing it with marble. The flat surface of the wheel is used to grind the inlay surface, and its bevelled edge for the profile; it takes half an hour to shape a flower of 3 or 5 petals by eye, rakam hanānā, to fit one another. The marble is usually hollowed, kāyānā, to twice the depth of the inlay, the profile being exact. After the fit of each piece has been tested, a glue mixed from white cement, plaster of Paris, and beeswax, is put in the hollow and softened by holding a red hot coal over it with tongs, ēnta, for 5-10 seconds, and the stone pressed in place: it sets in 25 seconds. In some cases the parts are glued together; they are pre-assembled with beaten resin, sarēs, on a mica table. Once set, the work is ground smooth, sāf kārā, with a piece of grindstone, water, and river sand, and finally polished with white zinc powder, water, and a soft cloth. A piece of work some 40 cm across takes two craftsmen seven hours to complete (informant: Usūd Muhammad Asaf Khan b. Muhammad ʿAbd al-Kāhn b. ʿAbd al-Salām b. ʿAbd al-ʿAzīz, 1981).

PAREDĀN, a small town and fortress, formerly in the native state of Haydarābād, now in the Šīhpol, is attributed, like many of those in the Deccan, to the Bahmani minister Muḥammad Gāwān [q.v.], i.e. to the third quarter of the 9th/15th century, but may well be earlier [see BURG, iii. at vol. I, 1323b]. Paredān was for a short time the capital of the Niẓām-i Shāhī [q.v.] after the capture of Ahmadnagar [q.v.] by Akbar’s forces in 1545, but was conquered by Avarangbāb when he was governor of the Deccan in Shāh Dājmān’s reign. The fortress and old town subsequently fell early into ruins.

Bibliography: Imperial gazetteer of India 2, xx, 1-2. (Ed.)

PARGANA, a Hindi word, ultimately from a Sanskrit root “to compute, reckon up”, a term in Indo-Muslim administrative usage denoting an aggregate of villages, a subdivision of a district or sarkār [see MUQAMAL 3. Administrative and social organisation]. In later Anglo-Indian usage, the term was often rendered pergunnah, see Yule and Burnell, Hobson-Jobson, a glossary of Anglo-Indian colloquial words and phrases, 698-9. The first reference to this term in the chronicles of the Sultanate of Dihli appears to be in the Tarikh Fīrus Shāh of Shams-i Sirāj ‘Afīt (Bibliotheca Indica, Calcutta 1891, 99), for it is not used by Hasan al-Nāzm in his Tāj al-maḍar, or by Minhād-i Dījmān i in his Tabakht-i Nāẓīrī. Although it first came into prominence in the 8th/14th century, partially superseding the term kāza, it is, in all probability, based on still more ancient divisions in existence before the Muslim conquest. The exact date of its creation is therefore uncertain.

An account of the internal working of a pargana occurs in the chronicles of the reign of Shīr Shāh Sūrī (947-52/1540-5), who learned the details of revenue administration in the management of his father’s two parganas at Sasārām in Bihār. When he became ruler of Hindūstān he organised his kingdom into administrative units known as sarkārān which were divided into collections of villages termed parganas. Each pargana was in charge of a shikbār or military police officer who supported the amīn or civil officer. The amīn had for his civil subordinates a foudarī or treasurer and...
two kdrkuns or clerks, one for Hindi and the other for Persian correspondence. It does not seem correct to hold the view that in this respect he was an administrative innovator, for the provincial officials and institutions which he has been credited with creating were already in existence before he ascended the throne. This remained the administrative system until Akbar organised the Mughal empire into sdbas (provinces), which were divided into sarkars. The smallest fiscal unit under Akbar was the pargana or mahalli. Thus, for example, the sdb of Oudh was divided into five sarkars, five parganas (A^in-i Akbar, tr. Jarrett, Bibl. Indica, Calcutta 1891, ii, 170).

Under the Mughal emperors, the chief pargana officials were the kdnungo, the amn and the ghdar, who were responsible for the pargana accounts, the rates of assessment, the survey of lands, and the protection of the rights of the cultivators. Similarly, in each village a pataut or village accountant was appointed whose functions in the village resembled those of the kdnungo in the pargana. It must not be imagined that the pargana was a stable and uniform unit. Not only did it vary in area in different parts of the country, but often a new land settlement was followed by a fresh division and re-distribution of these fiscal units. The co-extensiveness of a pargana with the possessions of a clan or family has given rise to the suggestion that it was not only a revenue-paying area but that it was founded on the distribution of property at the time of its creation.

The Twenty-four Parganas: these were a district of Bengal lying between 21° 31' and 22° 57' N. and 88° 21' and 89° 6' E. It derives its name from the number of parganas comprised in the zamindar ceded to the English East India Company in 1757 by Mir Dja^far [q. v.], the Nawb Nazim of Bengal. This was confirmed by the Mughal emperor Alamgir II in 1759 when he granted the Company a perpetual heritable jurisdiction over this area. In the same year, Lord Clive, as a reward for services rendered by him to Mir Dja^far, was presented with the revenues of this district. This grant, which amounted to £30,000 per annum, made Clive both the servant and the landlord of the Company. The sum continued to be paid to him until his death in 1774, when, by a deed sanctioned by the emperor, the whole proprietary right in the land and revenues reverted to the Company.

(C.C. Davies)

**PARI (p., t. perii, borrowed into English as peri, French péri), a supernatural being of stories and legends, and likewise forming a whole category of popular beliefs. The word stems from Pers. par "wing"; and the being is sometimes pictured as being winged. Turkish tradition considers it as a beneficent spirit. However, amongst the Kazaks it is sometimes represented as an evil genie. In the Anatolian tradition, it is conceived as a being belonging to both sexes, and the compound form peri kizi "girl peri" is used for peris of the female sex. It was believed that marriage with human beings was possible. Peris form the main characters in the action in a whole category of tales of marvels; they bring aid to good persons but punish-
princess in the Black Pavilion, is a typical instance of the delusions experienced in a fairy-land. Another example of the use of folklore in polite literature is Dastan-i Djamal wa Daláli by the Timurid poet Muhammad Āsafi (d. 923/1517), an allegorical madhna'vi about the search of prince ""Glory"" for ""Beauty", the latter being personified as the daughter of the king of the paráis. The unique copy of the last-mentioned work, preserved in the Uppsala University Library (Nova 2, dated 1502-5), is also an important source for the iconography of Persian miniature painting. The fairies were depicted like angels, as the latter were commonly represented in Timurid art (see Stichoukine, 116). Other subjects giving occasion for picturing paráis were Nizámí's story of the Black Pavilion (see e.g. Robinson, Rylands, no. 418) and throne scenes of Sulaymán and Bilkís (cf. e.g. Tiley, 98, Pl. 14).

PARIAS (the word arose from such Latin countancy terms as paria facere "to settle an account" already current in Imperial Latin; Du Cange considered Mediaeval Latin pariae as from the Spanish) in the mediaeval Iberian peninsula "tribute paid by Muslims to Christians. The taxes raised to pay the freebooters; the Cid was despatched southwards to chastise the trouble-makers and to collect instalments overdue. (That we have to do with historical reality here is unlikely; what is important is that this was how the system was thought to function.) During the period following the Almoravid collapse, and again as Almohad power waned, payments resumed. From the initial agreement between the Castilian and Muhammad I Ibn al-Ahmar [see NASRIDs] in 1246 onwards, parias formed an important part of the relationship between Granada and Castile. As seen by Carriazo, such tribute bore an ambiguous status of the Nasrid kingdom; as seen by the Granadans parias were a way of buying respite from damaging tulas ("forays"). Carriazo has shown that the story that the penultimate Nasrid ruler, Abu l-Hasan ʿAllī, refused to pay parias to Isabel, saying "the kings of Granada who used to give parias were dead, and the places in Granada where they used to strike the coins to pay the tribute were being used to forge lance-heads" is apocryphal.

PARSA'IYYA, a sub-order of the Central Asian Nakhbandiyá [q.v.] Súfí laríka and the most prominent ghâybhí family of Balkh from the middle of the 9th/15th century. The eponymous founder of the line was Kh-ʿádja Muhammad b. Muhámmad (or Muham- mad) al-Háfíz al-Bukhari (d. 822/1419), who adopted the nickname Parsa ("the devout"). His tomb in Medina became a shrine for Central Asian pilgrims and the burial place of at least one Central Asian grand khan, the Tukáy-Timúrid, İmâm Kül (r. 1020-51/1611-41).

Kh-ʿádja Muhammad Parsaʾs son, Abū Našr, seems to have been the first of the line associated with Balkh. When he died there in 864 or 865 (1459-60 or 1460-1), his patron, the Timurid general Mir Mazīd Arghún, would hold at least until the beginning of the 12th/end 11th century. The Parsaʾís remained prominent in Bukhara well into the middle of the 10th/16th century, but the headquarters of the family and its order shifted to Balkh. The appointment of a great-grandson, ʿAbd al-Hādī b. Abū Našr (II) (d. ca. 967/1559) as shaykh al-islām at Balkh during the reign of the Abu l-Khayrid/Shībānīd ʿUbayd Allāh (r. 940-6/1533-40) established the family in an official position which it would hold at least until the beginning of the 12th/end of the 17th century. Parsaʾís appearing in the literary record after the mid-10th/16th century are almost always from Balkh. Among the most prominent members of the family were ʿAbd al-Walī Parsaʾ (alias Kh-ʿádja Dān Kh-ʿádja, d. ca. 995/1587), who is portrayed as populist leader, political advisor and mediator; Kāsim Kh-ʿádja, architect of the royal madrasa constructed by Nadīr Muhammad Khān [q.v.] before 1045/1635 as well as shaykh al-islām; and Sālih Muhammad (fl. 1100s/1690s), who was briefly installed as vice-khan (kāgān) at Balkh in 1107/1696. From the early 18th century onward, the
family's fortunes appear to have ebbed along with those of the city, although the survival of the shrine suggests that the family and the order it administered retained some importance for some time.

(R. D. McChesney)
Parsî (Pahlavi, parsî, np parsî, lit. "inhabitants of Fârs", "Persian"), the name given to those descendants of the Zoroastrians who migrated to India, mostly to Gudjarat (see V), from the 4th/10th century onwards (see magûs). The Parsis are described in the Kissa-yi Sangân, written in 1600 but using older oral tradition. In detail it is unlikely to be historically reliable but it probably has a valid overall perspective. It reflects the Parsi conviction that their move to India was divinely-inspired and that they have been treated tolerantly by the Hindu majority.

From the 17th century onwards, when European traders were arriving in western India, Parsis emerged from their previous relative obscurity to rise to positions of considerable wealth, significant educational status (both in terms of building schools and colleges and in attending them), from which base they introduced the industrial revolution into India (first in the textile industry, then in steel), developed Indian commerce (notably banking and insurance), were foremost in many of the professions in western India (notably law and medicine), became leaders in Indian politics, especially before the rise of the militants in the Indian National Congress in 1906. The major figures were Dadâbah Naorjî (1825-1917), popularly known as the "Grand Old Man of India", who was a founder of the Indian National Congress and the only person to be its president three times (1886, 1893, 1906). He was also the first Asian to be elected a Member of the British Parliament (1892-5). (The only other two Asian M.P.s elected prior to the 1900s were also Parsis: Bhownagree (elected in 1895) and Saklatvala (elected in 1923).) Two other major Parsi politicians in India were Sir Phirozeshah Mehta (1845-1915) and Sir Dinshaw Wacha (1844-1915). The former was especially important, not only in the Indian National Congress, but also in the government of India's commercial capital, Bombay. A brilliant lawyer and orator, he was mentor to many Indian politicians, especially Muhammad Ali Jinnah, founder of Pakistan (see jhnâ), (Jinnah had several Parsi connections, notably his wife and his doctor, who nursed him throughout his final illness).

The popular image of 20th century Parsis is of a community in decline. Numerically that may be true. In the 1981 census they totalled 71,630 throughout India, a decline of 20% in a decade, and subsequent demographic studies suggest that the rate of decline is likely to increase. The cause is partly emigration, but also a low fertility rate due to late marriages (Parsi living standard expectations being high, young people commonly delay marriage until the age of 30), and with high levels of female education and career success many do not marry at all. Converts are not accepted, at least in the traditional areas of Gudjarat and Bombay, though in Delhi the children of mixed marriages may be accepted as Zoroastrians.

However, Parsis are typically a high-status social group, mostly professionals (the civil service, law and medicine) and of course figures in commerce, with some important political figures. (Mrs Indira Gandhi was married to an active Parsi politician, Ferezo, so Parsis sometimes claim that her sons were Parsis; this is especially claimed for Rajiv who is said to have resembled his father.) Since independence, Parsis have held the post of head of each branch of India's armed forces. They own India's largest industry, Tata, and South Asia's largest private company, Godrej Brothers. Recent studies have further established that the general standard of living of the average Parsi in Bombay is higher than that of the general population of the city and this is almost certainly true for other parts of India, with the possible exception of parts of rural Gudjarat. Throughout their history in India, Parsis have been noted for their charitable activities, not only among their own people but also among the wider community, especially in the subcontinent, back in Iran (see magûs, v, p. 1115) and indeed on a wider international scale.

From India, Parsis have migrated to most continents in pursuit of trade and education. The first Parsi to visit China was Hirjee Jivanjee Readymoney in 1756. Their main bases were in Hong Kong (some Parsi traders were there before the British take-over in 1841), Canton (the Zoroastrian Association was started in 1845) and Shanghai (the Association was founded in 1854). The main Parsi business was opium, but they diversified into many branches of the import-export trade and into property and banking.

The first Parsi to visit Britain arrived in 1723, but it was the mid-19th century before Parsis came in any numbers. Mostly they came for education, both formal and informal, and to find a successful career in the Indian industry, especially the textile trade and engineering. Others came for business. The first Indian firm in Britain was that of the Parsi Cama brothers (with Naoroji) which opened in London and Liverpool in 1855. The Zoroastrian Association was formed in 1861, the first Asian religious body in Britain. A burial ground was purchased in 1861 and the first building obtained in 1909. Prior to World War II, there were about 200 Parsis in Britain at any one time. More Zoroastrians migrated, along with other South Asians, in the 1960s and after. They came mostly from urban centres, above all Bombay, but also from Pakistan and East Africa. Typically, they are well educated (over 70% have a university education), concentrated in London and are professionals. There are a few Iranian Zoroastrians who settled in the 1970s and 80s.

Also from the 1960s Parsis began to migrate to Canada and to America. There are now some 21 Zoroastrian Associations on the continent with buildings in New York (opened in 1977), Toronto (1980), Los Angeles (1982), Chicago (1983), and Vancouver (1987). Following the fall of the Shâh a number of Zoroastrians migrated from Iran and they settled mostly in New York, Vancouver and California. It was an Iranian Zoroastrian, Arbab Rustom Guiv and the charitable foundation he endowed, which provided most, in some cases practically all, of
the funds to open the Zoroastrian buildings. It is typically the very well-educated Parsis and Iranian Zoroastrians who have migrated (in America most are scientists) were opened in 1862. These are known and estimates vary greatly. They are steadily increasing, mostly through migration, but it is also a young population so that the birth-rate exceeds the death-rate. Current plausible estimates suggest around 10,000.

The latest centre for migration is Australia. The Sydney-based "Australian Zoroastrian Association" was formed in 1971 and its building was opened in 1987. Numbers in Australia are probably little over 1,000, but they are increasing for the same reasons as in America.

The problems facing the younger Parsis in the "New World" and Australasia are those experienced by most South Asian migrants: the changing perceptions of successive generations; debates on intermarriage; and competition to build the city. Typically, these diaspora communities give greater emphasis to religious education than do the communities in the "old country" because the elders are conscious of the dangers of acculturation. The result, over a number of years, could be that the Zoroastrian youth in the diaspora know more about their history and teachings than do those in the "old country". However, what they are taught tends to be those facets of the religion more readily intelligible (rather than the purity laws). Consequently, the result of the geographical dispersal could result in a greater religious diversity.

There are also Parsi communities in Muslim lands (other than Iran). The most important of these is in Pakistan, mostly in Karachi, but with about 100 in Lahore (and until recently Quetta). Parsis played a significant role in the development of Karachi. The first Parsi firm to move to Sind was Jessawalla and Co (approximately 1825) and several others soon followed. The burial ground was opened in 1839; the first temple was built in 1849 and the first Parsi school in 1859. Numbers grew so that a second temple was built in 1869 and another adāma ("Tower of Science") was opened by 1872. The Zoroastrian architectural style is evident in the "West" than in South Asia (for example, certain philosophies or ritual interpretations are stressed rather than the purity laws). Consequently, the result of the geographical dispersal could result in a greater religious diversity.

Zoroastrian traders probably arrived on the east coast of Africa centuries ago, but the first known to have been on the mainland, Jehangir Bhoodar, came in 1870 and built the dockyard at Mombasa. The architect, Sorabji Mistry, was an important early arrival for he built many of the major municipal buildings. From around 1896 many lawyers, engineers and accountants came in connection with the building of the East African railway. The Zoroastrian Association was started in 1897 and began to acquire land in Nairobi from 1902. The main period of growth was post-World War II when numbers reached about 400 in each city, but with the process of Africanisation in the 1960s most emigrated, some to India and Canada but most to Britain. At present (early 1990s) there are only approximately 40-50 Zoroastrians in the two cities, mostly business men and professionals.

In East Africa, as in Pakistan, Parsis have remained within their own tightknit community (though there have been strong internal divisions) and as a result have, on the whole, retained their religious beliefs and practices. They have not been subject to the same processes of acculturation that those in the West have. Whereas Parsis in Bombay have been subject to marked Hindu influences, not only in dress and language but also in customs and concepts (e.g. wedding rites, symbolic decorations around the home, ideas on caste and rebirth, veneration for modern Hindu holy men), the deep reservations which have arisen from Islamic persecution in Iran have in practice meant that most, though not all, Parsis in Muslim lands have sought to preserve their distinctiveness. Although many feared for their fate in the 20th century, they have not experienced overt oppression from Muslims. Their situation in Iran is documented elsewhere [see Madjus]. The homeland remains the country in which there is the most widespread concern for their future. Many feel vulnerable and oppressed, generally their career prospects are limited (especially in government and the forces) but some stress that there has been no actual persecution and a few Zoroastrian businesses continue to flourish. Government estimates put the number of Zoroastrians in Iran in the 1990s at over 90,000—
tian economic growth, project Malays into the modern sector and, ultimately, break down communal compartments. PAS joined the ruling coalition in 1974 and, campaigning as part of the BN, it won 14 of the 154 federal seats in the elections of 1974. Led by Mohamed Asri Haji Muda (acting president 1964-71, president 1971-82), PAS reached the high-point in its electoral fortunes in 1969-74, but in the late 1970s it went into decline. Torn by internal disputes, PAS lost control of Kelantan and was forced out of the Barisan National, at the end of 1977 the federal government established it in Kelantan, and elections the following year (which PAS fought in opposition to the Barisan) not only confirmed the end of PAS rule in Kelantan but also reduced the party's seats in the federal parliament from 14 to 5.

Nonetheless, PAS kept up its attacks upon UMNO and, from the late 1970s onwards, these coincided with the upsurge of fundamentalism elsewhere in the Islamic world, notably the Iranian revolution. After Asri resigned as president following another poor performance in the elections of 1982 (when PAS won five seats), the more militant Yusuf Rawa (president 1982-89) assumed the leadership of PAS. Under the influence of the umma and professing its goal to be the creation of an Islamic state, PAS issued its fatwa declaring all supporters of UMNO to be infidels. The phenomenon of one Malay Muslim branding another as infidel—known as the "kafi-r-mengkafir dispute"—became particularly intense in Trengganu, Kelantan and Kedah, where UMNO and PAS vied with each other for support and where Malay kampong divided in their allegiance to one or other of the parties.

Competition between UMNO and PAS for power and authority has been a major feature of Malay politics while Dr Mahathir has been president of UMNO and Prime Minister of Malaysia (1981 to date). PAS ideas were spread by speakers at ceramah (private political meetings) and through the distribution of thousands of audio-visual cassettes. In its attacks both upon UMNO as guardian of Malay nationalism and mainstay of the Malaysian government and upon the Barisan's New Economic Policy, PAS received backing from Islamic universities, many Malays in local higher education institutions and Malay students. UMNO also established links with ABIM (Angkatan Belia Islam Malaysia, the Malaysian Islamic Youth Movement) led by Anwar Ibrahim. Committed though it was to Malay interests, UMNO could not countenance an ideology that rejected secular nationalism and worldly materialism; UMNO leaders rejected the PAS strategy as a recipe for disaster in a country where Malays (i.e. Muslims) amounted to only a little over half of the total population. UMNO took the dakwah (Islamic revivalist) challenge seriously, however, with the result that government adopted a more obviously Islamic stance on certain issues (such as banking, higher education and the construction of mosques). Moreover, in 1982 Mahathir co-opted Anwar Ibrahim into the government, thereby diminishing the influence of ABIM. In 1984 a TV debate between UMNO and PAS leaders vied to de-legitimise the idea in the eyes of Malay Muslims was cancelled at the last minute on the intervention of the Agong (Malaysia's king). Tension did not fade; on the contrary, confrontation between government and PAS came to a head at Memali (Kedah) in November 1985, when Malay policemen opened fire on Malay farmers, and PAS acquired 14 martyrs for Islam.

UMNO's hold over Malays appeared to be endor-
ed by the 1986 elections when only one PAS candidate was returned to the federal parliament, whose total membership had been increased to 177. UMNO's success can be put down to its efficiency and control of the media, the five-fold increase in the election deposit required of candidates, and, perhaps most significantly, PAS's overtures to Chinese voters. Its attempt to line up an opposition front in co-operation with non-Malays, though vain, compromised its "Malay-ness"; Malay voters opted for ethnic interests rather than Islamic principles.

Although circumscribed by government restrictions, not least by the Internal Security Act, PAS was provided with an opportunity to advance its position by a power struggle that racked UMNO in 1987-90. In 1987 UMNO was split by a vicious leadership battle when Tengku Razaleigh challenged Dr Mahathir for the presidency of UMNO. A new political configuration seemed to be taking shape; the multi-racial coalition of the Barisan, which Mahathir's UMNO continued to dominate, was for the first time challenged by an alternative coalition of racially and ideologically disparate parties. PAS and Semangat '46 ('spirit of '46', a party composed of UMNO dissidents led by Tengku Razaleigh) formed the Anangat Perpaduan Ummah (Muslim solidarity movement), and together they joined the Chinese-dominated Democratic Action Party in the Gagasan Rakayat or People's Front. During the 1990 electoral campaign, PAS tempered its fundamentalism and adapted the slogan "Developing with Islam", but the three disparate parties failed to resolve their differences. The Barisan as a whole and UMNO in particular were returned with formidable majorities; Malays rejected PAS and Semangat '46, except in Kelantan, where APU formed the state government, while in the federal parliament PAS increased its representation from one to seven.

To some extent, the myth of Malay solidarity has been cracked in recent years by the emergence of PAS's challenge to UMNO and by the latter's internal rifts. Both UMNO and PAS have inherited and continue to appeal to the traditions of Malay culture, but, whereas PAS has presented itself as a fundamentalist Islamic movement, UMNO's reputation as guardian of Malay nationalism, its command of government and its capacity to respond to and generate social and economic change, and the breadth and depth of its organisation have all assisted its continuing political dominance.

PARWÂN [see PARWÂN].
PARWÀNA [see muʿīn al-dīn sulaymān parwāna].
PARWÂNACI, "relater", term used in Persian administration for the official who noted down the instructions for the promulgation of deeds, and who forwarded them to the chancery.
The function is recorded for the first time under TTmur, and is then found among the Tlmurids, the other of the Council for Finances (dīsam-i māl) and of the administration of the Ṣadr (sarkdr-i siddrat) [see ṢADR]. Only occasionally did each of these three departments have its own relater, or did there exist one single relater for the three together. In addition to Persians, there were also Turkish amirs among the relaters. In ranks, they were under the secretaries of the chancery (munšis [q.v.]), but subordinate to the viziers. As a rule, they apparently transmitted the orders for the deeds to the chancery in writing. The related documents were called parwāna, parvānā or rišāla, and they were sealed with the muhr-i-parwāna [see MUHR], which usually was in the hands of a keeper of the seal (muhrdr) and only exceptionally (see KHĀNdamī), during the Safawid period. According to Khwāna Bahar, Parwin I’tisāmī may be regarded as a poet in the classical mould. Among the literary influences detected in her poems are chiefly those associated with such former poets as Nasīr-i Khusrw, Anwārī, ʿAttār, Saʿdī, and Rūmī [q.v.]. Barring a few exceptions, her poems adhere to conventional verse forms, and include ḵāṣīlas, muḥnawwīs, kūfā, and ghazals. As regards the subject matter of the poems, it is dominated by moralistic and ethical themes. The poet is largely indifferent to the real social concerns of her time, and shows only a passing appreciation of the problems pertaining to her own sex. Still, Parwin’s poetry has a charm of its own resulting from a deep feeling of tenderness and compassion. As her favourite device, she uses the form of munšāra (strife poem) [q.v.] and dialogue, a technique borrowed from earlier sources but featuring more extensively and devoted to better use in her works.

name was Arabised as Abarwiz (see Justi, Iranisches Namenbuch, 19).

The main events of his long reign (dominated by the struggle with the Byzantines over the buffer-state Armenia and over control of the Fertile Crescent in general, culminating in the Persian invasion of Egypt in 619, but then the riposte by the Byzantine emperor Heraclius, which brought the Greek armies as far as Mesopotamia in 627-8), see Christensen, L'Iran sous les Sassanides, Copenhagen 1944, 445-96, and R.N. Frye, The political history of Iran under the Sassanids, in Camb. hist. of Iran, iii/1, 163-72. Most relevant for us here are Khusraw Parwiz's relations with the Arabs on the fringes of Mesopotamia and, in particular, with the Lakhmid dynasty of al-Hira [q.e.], outlined in LAKHMIDS and chiefly significant for the fact of Khusraw Parwiz's overthrow of the last Lakhmid king al-Nu'mān III b. al-Mundhir IV in 602 and the establishment of direct Persian rule soon afterwards, ending the power of this Arab dynasty which had acted as a protective force against pressure from the Bedouins of the Arabian interior. The Sāsānids' flank in western Mesopotamia was laid open to attack, and a foretaste of the Muslim Arab invasions of the 630s given in the battle or, more probably, skirmish of Dhu Kār [q.v.] in central 'Irāk, when the tribe of Bakr b. Wā'il defeated a coalition of other Arab tribes plus Persian regular troops, demonstrating that the Persian army was not invincible (see further, C.E. Bosworth, Iran and the Arabs before Islam, in Camb. hist. of Iran, iii/1, 607-9).

In later Islamic literature, such as adab works and the Mirrors for Princes [see NAṢĪḤAT al-MA'LŪK], Khusraw Parwiz became renowned for the splendour and luxury of his court. He was a devotee of music and poetry, and the famous musician Bābāzhān, allegedly the inventor of the rhythmic musical modes known as dastānū (see H.G. Farmer, A history of Arabian music, London 1929, 198-9), was one of his courtiers. His famous horse Shābdīz is mentioned, but above all he is linked with his favourite wife, the Christian Shīhrūr, as part of the very popular theme in Persian literature of Shīhrūr and her humble lover Farḥād, dealt with by inter alio Nizāmī and Amīr Khusraw Dihlawī [q.v. see Farḥād wa-šābdīz]. See further on Parwiz's image in later literature, Nizāmī al-Mulk, Siyāsāt-nāma, index, and al-Qhāzālī, Naṣīḥat al-mulūk, Eng. tr. F.R.C. Bagley, Ghazālī's Book of counsel for kings, London 1964, 192, 194 and the references there.

PASANTREN [see PASANTREN], the Ottoman Turkish form of the Yugoslavian town of Požarevac, better known in European history under its Germanic form Passarowitz. Požarevac is now a prosperous commercial town, situated in lat. 44°37' N. and long. 21°12' E. Some 60 km/40 miles to the southeast of Belgrade in the fertile plain of Serbia between Morava and Mlava, and only a short distance from the Danube port of Dubravica.

The town, whose name is popularly connected with the Turkish word pozar ("fire") (M.D. Milčević, Književna Srbija, Belgrade 1876, 172, 1058), is first mentioned in the very end of the 9th/15th century. It must, however, have been previously in existence and have become Turkish like the surrounding country in 1459. According to the Turkish treasury registers of Hungary of 1565 (A. Velicë, Magyarországi török kincstári defterek, ii, Budapest 1890, 734), Pasarofca belonged to the Turkish sandjak of Semendre (Semen-dria, Smederevo), and in the middle of the 11th/17th century, Hādji Khalīla describes it as the seat of a judge (ṣābīlī). (cf. Speroni, xviii, Belgrade 1892, col. 26). Towards the end of the century, many Serbs migrated from Pasarofca and at the beginning of the 18th century it is sometimes mentioned as a village.

Pasarofca was, however, destined soon to become famous through the peace which ended the Austro-Turkish war of 1716-18. At the end of 1714, the Ottoman sultan Ahmed III [q.v.] had already declared war on Venice on the pretext that the peace of Carlovitz was being abrogated, and in 1715 occupied the Morea and some of the Ionian Islands. Austria, which at first intervened to negotiate as an ally of Venice, in 1716 entered the war herself and her armies, led by Prince Eugene of Savoy, won three great victories, at Peterwardein, Temesvár and Belgrade, so that England intervened to secure peace. After long preparations (see von Hammer, GOR, iv, 159-64), the congress of Passarowitz was convoked. The negotiations at which plenipotentiaries of Turkey, Austria, Venice with England and Holland as mediators took part began on 5 June 1718 and the Treaty of Passarowitz was signed on 21 July.

Peace was concluded on a basis of the territory actually held by the opponents at the time (uti possidetis): Austria retained the eastern part of Sirmia, the banate with Temesvár, the whole of northeastern Serbia, with Belgrade, Požarevac, etc., and Little Wallachia; Venice also retained a few places she had taken on the Dalmatian and Albanian coasts, received certain commercial preferences and the island of Cerigo (Kythera), but had to restore to Turkey the whole of the peninsula of the Morea and the southeastern districts of Hercegovina. By a commercial agreement which was also concluded at Passarowitz on 27 July, Austria secured certain trading, consular and other privileges such as preferential tariffs, in the Ottoman Empire. The Imperial Ostend Company was formed to exploit these concessions, and in 1719 commercial activity began from the new "free port" of Trieste. The actual Treaty of Passarowitz in effect proclaimed that the Ottomans were no longer a serious military danger to their European neighbours.

Following the traditional formalities observed after the conclusion of a treaty of peace, the first Turkish plenipotentiary İbrahim Pasha Newaḥehiši went to Vienna with his retinue and Count Wirmont, the Austrian representative in the negotiations, to Constantinople. A member of the Turkish embassy wrote in 1726 an interesting account which has been published by Fr. van Kraelitz in text and translation (Brief über den Zug des Gross-Botschafers Ibrahim Pasha nach Wien im Jahr 1719, in SB Ak. Wien, chvii [1908]; in TOEM, vii [1332/1916], 211-27, the Turkish text of this edition was reprinted by A. Refik).

During the Austrian occupation (1718-39), Pasarofca was the most important place in this territory. In the Serbian war of independence against Turkey, it was besieged for a long period, but had finally to surrender to the Serbs (1804). In 1813, the town again fell into Turkish hands but became Serbian again (see Serbia, Okt. 1917, i, 298-9).

In the years of peace that followed (1815-1915), Požarevac developed. Prince Mišl in 1825 made it his second residence and had two konaks (palaces) built there. Shortly afterwards, a Prussian officer visited the town and left interesting notes on the conditions there (Otto von Pirch, Reise in Serbien im Spätherbst 1829, Berlin 1830, part i, 119-71). In the second half of the 19th century, the population increased steadily,
At the beginning of the 20th century, the town was under German occupation and later by the Bulgarians. It was occupied by the Germans in 1915 and by the Bulgarians from October 1916, but in the autumn of 1918 it was again occupied by the Serbs. Since then it has belonged to Yugoslavia since 1919, becoming part of the Kingdom of Serbs, Croats and Slovenes, which was later renamed Yugoslavia. The town was part of the Yugoslavian Republic of Serbia (Jugoslavija) and later the Socialist Federal Republic of Yugoslavia. It was occupied by the Germans in the First World War and, after the First World War, it was occupied by the Serbs. Since then, it has belonged to Yugoslavia now.

PASAROFCA — PASHA

At the beginning of the 20th century, the town was under German occupation and later by the Bulgarians. It was occupied by the Germans in 1915 and by the Bulgarians from October 1916, but in the autumn of 1918 it was again occupied by the Serbs. Since then it has belonged to Yugoslavia now. The town was part of the Yugoslavian Republic of Serbia, which was later renamed Yugoslavia. The town was occupied by the Germans in the First World War and, after the First World War, it was occupied by the Serbs. Since then, it has belonged to Yugoslavia now.

PASAROFCA — PASHA

At the beginning of the 20th century, the town was under German occupation and later by the Bulgarians. It was occupied by the Germans in 1915 and by the Bulgarians from October 1916, but in the autumn of 1918 it was again occupied by the Serbs. Since then it has belonged to Yugoslavia now. The town was part of the Yugoslavian Republic of Serbia, which was later renamed Yugoslavia. The town was occupied by the Germans in the First World War and, after the First World War, it was occupied by the Serbs. Since then, it has belonged to Yugoslavia now.

PASAROFCA — PASHA

At the beginning of the 20th century, the town was under German occupation and later by the Bulgarians. It was occupied by the Germans in 1915 and by the Bulgarians from October 1916, but in the autumn of 1918 it was again occupied by the Serbs. Since then it has belonged to Yugoslavia now. The town was part of the Yugoslavian Republic of Serbia, which was later renamed Yugoslavia. The town was occupied by the Germans in the First World War and, after the First World War, it was occupied by the Serbs. Since then, it has belonged to Yugoslavia now.
Efendi, seized power before the Karamanoglu [q. v.] and in the same region, after the defeat of the Seljuk Sultan Chiyyah al-Din Kaykhushraw II [q. v.] at Köse Dagh which took place in 641/1243 (cf. Gibb, *A history of Ottoman poetry*, i, 177).

At the end of the 8th/14th century, the title of *pasha* seems to have been added to the names of certain members (restricted in number) of the petty Turkish and Turkoman dynasties which shared Asia Minor, these are sometimes members, sometimes members of their families. It was the same in the principles of Tekke, Aydin, Defilali and Kızıl-Ağ海拔ad and probably also in other little kingdoms of Anatolia (cf. for Sarukhan’s, *Alî Pasha*, according to Şehibâ al-Din Ibn Fadl Allâh al-‘Umari, al-Tâ’rîf bi l-‘mastahâl al-shâfî, quoted by al-Kalkâshandî, Şuh al-ašâr, viii, 16, l. 14).

In the family of ‘Othmân, two individuals are credited with the title of *pasha*: *Alî* al-Din, son of *Othmân*, and Süleyman, son of Orkhan.

The case of *Alî* al-Dîn is very obscure. Two different individuals of this name have even been distinguished: the one being *Alî* al-Dîn Bey, son of *Othmân*, the other *Alî* al-Dîn *Pasha, ważîr* [q. v.] of *Othmân*, and the two may have been confounded (cf. Hüseyin Hüsameddin, *Aldeddin Bey*, in *TTM*, years xiv and xv, 4 articles). It may be added that the same individual or one of the two individuals in question may also have been a *beylerbeyi* (cf. Oruç’s chronicle, ed. Babinger, 15, l. 15). Whatever be the case with this insoluble problem, it seems certain that the title of *pasha* was given early to statesmen (cf. a Sinân Pasha under Orkhan).

The title of *pasha* in any event very soon became the prerogative of two classes of dignitaries: 1. the beylerbeyis of the provinces, and 2. the *ważîr* of the capital. It was later extended to officials with similar functions.

In the second half of the 8th/14th century (in 760/1359 or 763/1362?), Lala Şâhîn who, according to the Ottoman historians, was the first (?) *beylerbeyi* of the *Othmânîs*, was given the title of *pasha* at the same time as he received this office. The same title was then given to the *beylerbeyi* of Anatolia (thus keeping up the idea of the two beylerbeyis, one of the right and one of the left wings) of the provinces, and 2. the *ważîrs* of the provinces, and 2. the *ważîr* [q.v.]. The number of the *pashas* was given early to statesmen (cf. a Sinân Pasha under Orkhan).

The increase in the number of *pashas* was due to the growing empire, extended to the other beylerbeyis, beylerbeyi of Anatolia (thus keeping up the prerogative of two classes of dignitaries: 1. the beylerbeyis of the provinces, and 2. the *ważîr* of the provinces, and 2. the *ważîr* [q.v.]). The number of the *pashas* was very rapid. M. d’Aramon mentions only 4 or 5 *pashas* in any event very soon became the prerogative of two classes of dignitaries: 1. the beylerbeyis of the provinces, and 2. the *ważîr* of the provinces, and 2. the *ważîr* [q.v.]. The number of the *pashas* was given early to statesmen (cf. a Sinân Pasha under Orkhan).

The title of *pasha* was given early to statesmen (cf. a Sinân Pasha under Orkhan).

does really seem to come from *bash-ogh" but, contrary to what the present writer at first thought, has nothing to do with *pasha*.

*pasha* is in Arabic "sovereign". This etymologically, the only admissible one (with however the possibility of the influence mentioned under 5), was proposed by the Turkish-Russian dictionary of Bougadov (1869) and later revived by the Russian encyclopedia of Brockhaus and Efron. It had previously been proposed by d'Herbelot (under *pascha*, à propos of the spelling with final *h*). This explanation is based on the use of the words *baskak* and the forms *baskaks* and *baskaki* (variants in *bashkak?, bashkan?*, *bashkak*, *bashkak?, bashkan?*), sometimes also *bashagha*, both in the Tatar and in the Crimean-Tartar. The popularity of the formation *baskak* with the name *Pasha* is explained by the fact (a. *baskak*, *bashagha*, *bashagha*, *bashagha*) that *Pasha* is a softened form of the word *basha*. This etymologically, is wrong.

5. Turk* bashak* (*varianis banakhk?, banakhn?) (Pavet de Courteille, *Dictionnaire*, and under *baskak* in that of Boudagov). This word of the *"Khârâzamian language", according to Vullers, came into use in Persia (Ilkhanid period). Among the Mongols, it meant the commissioners and high commissioners sent by them to the conquered provinces (or the West only?), notably in Russia. The accepted etymology is from the verb *basmak* ("to press, impress (e. g. of a seal)" (not, however, with the extended meaning of "to oppress, tyrannise over", giving the meaning of "oppressor" for the bashak), an official whose main duty was to collect taxes and tribute, cf. G. Doerfer, *Turkische und mongolische Elemente im Neupersischen*, ii, Wiesbaden 1963, 241-3). However extraordinary such an explanation of an official title may appear, it seems to be confirmed by the parallelism with the Mongol equivalent of *baskak*, which is *daruga* or *daruga* (*daruga* or *daruga*) (var. *darghak*), a Mongol verb synonymous with *basmak* in the sense of "to impress". These may, however, be popular etymologies.

Schefer, in his edition of the *Voyage de M. d'Aramon* (238, n. 3), says "The etymology of the word pacha given by Geffroy (from the Turkish bakh) is wrong. Pacha is a softened form of the word *bachteq* or *bachtq* which means a military governor." 

Carpini calls the Mongol *bashaks* *bashachi* (variants in the ms.: *bashati, bastaci*; cf. *The Texts and versions of John de Pl. Carpinii,*, Hakluyt Soc., London 1903, 67 and 264, notes). In the edition of 1596 (Hakluyt) there is a marginal note "Basha, vos Tartarica qua utuntur Turci". This also implies a confusion between the words *baskak* and *pasha*.

It is not impossible that there was actually some confusion among the Turks themselves between *pâdişâh* (*pasha*) and the title *baskak", the synonym of the Mongol *dârâgâh*. It may be noted that the title of *pasha* (which is sometimes given to an Egyptian secretary, according to Muhammad Kazwini) is applied either to Anatolians, subject in fact or in theory to the Mongols, or to officials of the Mongol *Ilkhan* (like the governor of *Baghdâd* mentioned above; cf. also *piser-i Ali Pasha* alluded to in the *Bezm-i rezem* of *Azîz b. Ardashîr Ashârbâbâdî*). This explanation was confirmed with the spelling *bashagha* instead of *pasha*, but which is not found in Persian sources, according to Meninski (*Al Pasha* by al-Dîn Sulaymân, of the dynasty of Kizîl Sulaymân, is called *Shâh* Sulaymân, of the dynasty of Kizîl Shudjâ). This title, which is not to be confused with *bashagha* (variants in *bashkak*, *bashkan*, *bashkak*, *bashkan*), is also called *Câbed*, *Câbed*, *Gal Pasha* in *al-Dîn Sulaymân*, of the dynasty of Kizîl Sulaymân, of the dynasty of Kizîl Shudjâ). This title, which is not to be confused with *bashagha* (variants in *bashkak*, *bashkan*, *bashkak*, *bashkan*), is also called *Câbed*, *Câbed*, *Gal Pasha* in *al-Dîn Sulaymân*, of the dynasty of Kizîl Sulaymân, of the dynasty of Kizîl Shudjâ).

As the lexicographers have sometimes confused *basha* and *pasha* some have thought that *basha* also meant "elder brother" (Mehemd Şalâh, *Kâmil-i 'ottomâni*, ii, 291 ff., followed by Chilors). It seems that there are two separate problems and that *basha* is really for *basha*, but with the meaning of *aoga* (military title) in chief". The *kavas* (also called *Janissaries* or *yasakè*) were called *basha-aoga* (according to Roehrig). On the other meanings of *basha-aoga*, and in general for more details on some of the points dealt with here, see Deny, *Sommaire des Archives turques du Caire*, Caire 1930.

A note on the accentuation: In the word *pasha*, the tonic accent is on the last syllable (*pasha*). In the word *basha*, it is on the first (*basha*), as is shown by the weakening of the final vowel in the pronunciation *bâshî*, already mentioned.

(J. Deny*)

**PASHA KAPUSU, WEZÎR KAPUSU**, a term of
Ottoman administration denoting the building presented by Sultan Mehemmed IV in 1064/1654 to the Grand Vizier Derwisch Mehmed Pasha and intended to serve both as an official residence and as an office; after the Tanzimat [q.v.] period it became known as the Bâb-i Âli [q.v.] or Sublime Porte, and soon came to house most of the administrative departments of the Diwân-ı Hümâyûn [q.v.].

**Bibliography:** M.Z. Pakalin, Osmanlı tarih dévleri ve terimleri sözlüğü, Istanbul 1946-54, ii, 757.

-- (Ed.)

**PASHALIK** (t.), means 1. the office or title of a pasha [q.v.]; 2. the territory under the authority of a pasha (in the provinces).

After some of the governors called sandjak-beyi (or mir-liwa) had been raised to the dignity of pasha, their territories (sandjak or liwa [q.v.]) also received the name of pashalik.

Early in the 19th century, out of 150 sandjaks 70 were pashaliks. Of these, 25 were pashaliks, i.e. sandjaks in which were the capitals of an eyâlet, the residence of the governor-general or wâli of a province. For further details, cf. Mouradjea d’Ohssoon, Tableau général de l’Empire Ottoman, viii, 307.

**PASHTO** [see AFGHÁN].

**PASHTÚNÍSTÁN**, a name given to a projected political unit based on the North West Frontier province (NWFP) of Pakistan. The project had a dual origin, in the NWFP and in Afghanistan.

Although Pashtún possessed a strong sense of cultural identity deriving from language, genealogy, law and custom, there is no evidence before the 1920s of any desire for political expression of that identity. A precondition of the formulation of political demands was the creation of a political arena in the form of the NWFP. The origins of the province may be traced to the conquest of the trans-Indus lands of the former Durrání empire by the Lahore state between 1819 and 1837. In 1849 this region of the Sikhsâhâni passed into British hands and in 1901 four trans-Indus districts (Peshawar, Kohâr, Bânû and Dêra Isma’il Khân), together with the cis-Indus districts of the NWFP, passed into the British Empire as part of the North-West Frontier Agency (as in 1930). On several occasions after 1919, particularly during the Second World War, Afghan governments raised claims to the trans-Indus lands, including the territory of Balûchistán [q.v.] and its dependencies, possession of which would have given Afghanistan an outlet to the sea. In 1947 Afghanistan modified its position (following contacts with the KK) and demanded that the Pâhkîns of NWFP should be offered a choice between joining Afghanistan and an independent Pashtúnistán. Afghanistan maintained this demand after 1947 and in 1949 encouraged the emergence of a phantom national assembly of Pashtúnistán with the Fâkhèr of Ipi [q.v. in Suppl.] as president. During the prime ministership of Muhammad Dâwûd (1953-63 [q.v.]) the dispute between Afghanistan and Pakistan over Pashtúnistán reached its height during 1960-4. However, in 1965 the Pakistani government agreed to the proposal of the royal commission of the NWFP that the region should be included in West Pakistan’s one-unit scheme in 1955. Diplomatic relations were suspended in 1955 and 1961, and during 1960-1 there were armed clashes in Bâdjawr. In 1963 the dispute was patched up, but Pashtún nationalists in Afghanistan maintained the claims. During the period 1973-5 relations deteriorated again (although mainly because of the insurgency in Balûchistán rather than NWFP) and during the 1980s the Afghan government gave encouragement to dissident Pâhkûns in Pakistan. The extent of the territory embraced in the Afghan claim for Pashtúnistán was uncertain. It included not only the NWFP but also the tribal territories, areas outside the NWFP inhabited by Pâhkûns, and, in some versions, Balûchistán as well. The Pashtûns of the Afghan Pashtûn tribal belt were, however, not included. Although India and the USSR occasionally issued vaguely sympathetic statements, neither they nor any other state supported Afghan claims.

**Bibliography:** Sir Olaf Caroe, The Pathans, 550 BC-AD 1537, London 1958; Sir William Barton, India’s North-West Frontier, London 1939; Khalid B. Sayeed, Pakistan: the formative years, 1857-1948, London 1968; A.T. Embree (ed.), Pakistan’s western frontiers: the transformation of a political order, New Delhi 1977; S.M. Burke and L. Ziring, Pakistan’s autonomous component of an all-India confederation. The KK dominated political life in NWFP under British rule until 1947, when the party began to lose support to the Muslim League, which demanded that the NWFP become part of the projected Pakistan. When it became clear that there was little support for NWFP joining what was perceived as Hindudominated India, the KK switched to advocacy of an independent Pakhtunistan (Pathanistán). This option, however, was not included in the referendum of July 1947, which was boycotted by the KK and yielded an overwhelming majority for Pakistan. Thereafter, the KK accepted the decision and agitated for the greatest degree of provincial autonomy within Pakistan, and this became the main plank of the programme of its successor party, the National ‘Awami Party led by ‘Abd al-Wâli Khân, the son of ‘Abd al-Ghaffâr. A permanent problem for the Pakhtuns was that Pakistan was not a majority within the NWFP, despite their dominant position in the adjacent tribal areas.

Afghanistán’s interest in the fate of the frontier Pakhtûns derived from an historic claim (Afghanistán contended that the Durand Agreement, although frequently confirmed by Afghan governments, notably in the 1921 Anglo-Afghan treaty, had been accepted by Afghanistan under duress and had lapsed in 1947), ethnic links, geographical propinquity and political concern about Pakistan interference in Afghan politics (as in 1930). On several occasions after 1919, particularly during the Second World War, Afghan governments raised claims to the trans-Indus lands, including the territory of Balûchistán [q.v.] and its dependencies, possession of which would have given Afghanistan an outlet to the sea. In 1947 Afghanistan modified its position (following contacts with the KK) and demanded that the Pâhkîns of NWFP should be offered a choice between joining Afghanistan and an independent Pashtúnistán. Afghanistan maintained this demand after 1947 and in 1949 encouraged the emergence of a phantom national assembly of Pashtúnistán with the Fâkhèr of Ipi [q.v. in Suppl.] as president. The Pashtûns of the Afghan Pashtûn tribal belt were, however, not included. Although India and the USSR occasionally issued vaguely sympathetic statements, neither they nor any other state supported Afghan claims.

**PASHTUNISTAN — PASIR**

(M.E. YAPP)

**PASIR,** a former sultanate in southeastern Borneo, now in the province of Kalimantan Timur of the republic of Indonesia. It comprises the valley of the Pasir or Kendilo river, which, rising in the north on the borders of Kutei runs in a southeasterly direction along the eastern borders of the Beratos range and, turning east, finally reaches the straits of Makassar through a marshy district. The country, about 1,125 km² in area, still contains primitive forest, in so far as the scanty population, which is found mainly in Pasir, the residence of the sultan, and in Tanah Grogot, that of the official administration, has not cleared the trees to make ricefields. Although some gold, petroleum and coal are found in Pasir, Europeans have not exploited them, still less do they practice agriculture. A European administrative official was first stationed in 1901 at Tanah Grogot at the mouth of the Kendilo river. Pasir was therefore a good example of the Borneo coast state which, as regards Islam, developed independently of European influence. The population of the sultanate was in the 1930s estimated roughly at 17,000. It consists of Dayaks who live by growing rice, of immigrant Bandjarese and Buginese from Celebes, who control the trade; they are found chiefly in the flat country at the river mouth. On the coast, the Badjos, a people of fishermen, live in their villages built on piles in the sea. Of the 9,000 Dayaks, about 4,000 had by the 1930s adopted Islam, while 5,000 in the highlands were pagans. The Buginese have a predominating influence in view of their large numbers and their prosperity; the Bandjarese are of less importance. There are very few Europeans and a small number of Chinese and Arabs in Pasir.

Half of the population are therefore foreigners, but like the Dayaks they belong to the Malay race and mix with one another.

Whilst Borneo formed part of the Netherlands East Indies, i.e. until 1949, Pasir was despotically ruled by the sultan and the members of his family; the people had no voice in the government. Alongside of the sultan and his presumed successor was a council of five notables, which the sultan consulted on important occasions; this was also the highest court of the country. These notables and a number of other members of the sultan’s family had estates as fiefs. Since 1844 each sultan on his accession concluded a treaty with the Netherlands East Indian authority. In 1908 they declared themselves vassals of that government. In 1900 the right to collect duties on imports and exports and taxes, as well as the monopoly of opium and salt, was ceded to the government in return for compensation. This amounted in the 1930s to 16,800 gulden yearly, of which 11,200 went to the sultan and 5,600 to the notables. The sultan still collected the following taxes: a poll-tax from adult males; 1/10 of the yields of the ricefields and forest products; 2 coconuts from each fruit-bearing tree; and military service. He also had an income from the administration of justice in the capital. From the very legendary history of the country, it may be gathered that this despotic government, which is foreign to the Dayaks, was introduced from eastern Java. Under the ruling caste were the chiefs of lower rank, priests and landowners and freemen as a middle class. At the beginning of the 20th century, there were still slaves and debtor-slaves as the lowest class in Pasir, although slavery had long been abolished in other states of the Indies under Dutch influence. As was usual among other Dayak tribes, slaves went about like free people, took part in festivities and games, might own property and were not even distinguished by dress. If their debt was paid to their master by someone, they went over to the latter. Slaves were not sold.

The following remarks are confined to the pagan Dayaks and their Muslim relatives, the Pasirese.

According to tradition, an Arab (Tuan Said) brought Islam to Pasir. His marriage with the daughter of the reigning chief did much to further the progress of Islam in the country.

As to the Pasirese, their social life was only superficially affected by Islam. In their daily life, a pagan conception of the worship of the deity and of the world of spirits still prevails. The old belief in the important influence of spirits on the fate of man and reliance upon their signs are evidence of this. The fact also is significant that, throughout Pasir, there was in the 1930s only one missigit and a few smaller places of worship. The number of Muslim religious leaders and badijis was also small, nor was the enthusiasm to make the pilgrimage to Mecca great. On important occasions, appeal is made for assistance to the spirits; this is particularly the case with illness among the Pasirese, who hold the pagan blian feasts, which are also celebrated in South Borneo. Amid a great din of gongs and drums which can be heard a long way off, the pagan priest (balian) becomes possessed by the spirit which then communicates to him the remedy for the illness. Even in the capital Pasir, exclusively inhabited by Muslims, the advice of the balian is sought; only during the month of Ramadān did the sultan forbid this.

How attached the upper classes of Pasir were to animistic views is evident from the legend still current according to which sultan Adam in the middle of the 19th century used to isolate himself for several days in the year on the mountain of the spirits, Gunung Melikat; he had concluded, it was said, a marriage there with a female djim from which a son named Tendang was born. This son, who has the gift of making himself invisible, is said to live on the island of Madura where he married a princess of the djim. He appears from time to time in Pasir, when he is invited by a great sacrificial feast (formerly also human sacrifice). These feasts are still celebrated occasionally, especially in order to free the land from misfortune and sickness. In the village of Busui, a house was built for Tendang with a roof in three parts, which was built on a large pole and thus resembled a dove-cote.

The revenues of the priests consist of what they collect at the time of the month of fasting in Lewau (balian) and pitia, everyone giving what he can and the chiefs exercise no pressure. A priest also receives a small fee at the end of the month of fasting in Lewau (balian) and pitia, everyone giving what he can and the chiefs exercise no pressure. A priest also receives a small fee at the marriage or divorce.

The calendar now in general use in the sultanate is the Islamic one. As elsewhere among the Dayaks, the tilling of the fields begins when a particular constellation becomes visible in the heavens.

The family life of the Pasirese has developed to some extent according to Muslim ritual. Among the
followers of Islam, marriage is performed through the intermediary of a religious leader, with the father or another man as wifii, but only after an agreement has been come to about the very considerable dowry. This is paid to the parents of the bride; she herself only receives a small part of it. According to Dayak custom, young people are allowed to meet very freely before marriage. A marriage feast is marked by a very considerable consumption of palm-wine. The man remains at least a year in the home of his parents-in-law before he can take a home of his own. Divorce is very frequent, but the attention bestowed is seldom devoted to the wishes of the woman in the negotiations between the parents. Man and woman retain their property after marriage; after a divorce, this goes back to the family. Property acquired during marriage is divided into two equal portions between husband and wife. After the death of one or the other, the survivor inherits all. Only a few families follow the Muslim law. The followers of Islam are buried with Muslim rites.

(A.W. NIEUWENHUIS)

PASISIR (Old Javanese, pasisi or pasir; Indonesia, pasir “shore, coast”) originally an administrative unit of the Central Javanese kingdom of Mataram encompassing Java’s northern littoral from Cirebon in the west to Surabaya in the east. Historically, its importance comes from the establishment during the 15th-16th centuries of small Muslim enclaves within the prevailing religious mix of Hindu, Buddhist, and animistic beliefs. While traditions of the conversion to Islam at the hands of the wali sanga, or Nine Saints, differs from place to place, common to them are direct experience of Islam in the Middle East, or transmission by one who had such experience, and an element of Islamic egalitarianism. Under the guidance of the wali sanga these enclaves rapidly developed into independent Islamic principalities.

Explanations for Java’s conversion to Islam at this time range from those emphasising the “mood of the times,” through influences of the Sufi tariqa (q.v.) to a race with Christianity. More significant here is the region’s response to the changing economic environment, itself an outcome of the economic interests in the island.

Culturally, the pasisir played a key role in the introduction of important Arabic texts, especially those dealing with the sharia (q.v.). Of those cited in the early 19th century Surat Centini, only a half-dozen are attributable to the pasisir era. These include the Mukharar (al-Mukharar of Abu ʿl-Kāsim Abī al-Karīm b. Muḥammad al-Raṣīfī) [see AL-NAWAWI], the Kitab Naswai (Mutāj al-ʿakīn in al-Nafṣi), the Kitāb Nuṣrat b. Ṣaḥḥaṭ (Ṭufayl al-muḥāḍīr bi-dhār al-Mīnāhād) of Ibn Ḥaḍīr al-Haytami (q.v.), the Ṣaḥāba (Ṣaḥāba “Ṣuṣum”), and the Sūjar (al-Muḫḥasar fi ṣāḥīḥ “ṣaḥīḥ al-muḥāḍhab al-ʿImām al-Saḥḥābī al-Maṭbāʿūn al-Muṣṭaḥṣir) of Ahmad b. al-Ḥasan b. Ahmad al-Īṣāfānī). To this can be added an important work on Sufism, the Hulūmadin, a corrupted title of the Ṣaḥāba ʿulamāʾ al-dīn al-Ṣaḥḥābī (q.v.).

PASIR — PASWAN-OGHLU

The first Muslim states on Java, from the 15th and 16th centuries were, with their companion volume Islamic states in Java 1500-1700; a summary, bibliography and index, in Verhandelingen van het Koninklijk Instituut voor Taal-, Land- en Volkenkunde, ix/s, bx (1974, 1976); Th.G.Th. Pigeaud, Literature of Java, catalogue raisonné of Javanese manuscripts in the Library of the University of Leiden and other public collections in the Netherlands, 3 vols., The Hague 1966-70; Soebardi, Santri-religious elements as reflected in the book of Tjentini, in BTLV, cxxvii/3 (1971), 311-428.

(M.C. HOADLEY)

PASSAROWITZ [see PASSAROFCA].

PASWAN-OGHLU (written Pashön-oghü, as if from Pers. pāshān “guard, shepherd”, cf. Kamās al-ʿĀlam, i, 1467) or Pāzwānd-oghlu (as in Abd al-Rahmān Sheref, Taʿrīkh-i, 280) or, according to modern Turkish orthography, Pazvantoğlu (Ḥamīt Muhīs, Türkîye tarhî, 423), but on his own seal “Pāzwānd-zāde ʿOṭmān” (in Ḍevıkî, see Bibli., the rebel Pāga of Vīdin (1758-1807). His family originated in Tuzla in Bosnia, but his grandfather, Paswan Ağa, for his services in the Austrian wars was granted two villages near Vīdin (q.v.) in Bulgaria in ca. 1739. ʿOṭmān’s father ʿOmer Ağa Paswan-oghlu not only inherited these villages but as boyrakdar, etc., was also a rich and prominent man (aṣbāḥ); on account of his defiant attitude, however, he was put to death by the local governor.

ʿOṭmān himself only escaped death by escaping into Albania, but after taking part in the war of 1787-9 as a volunteer, he returned to his native town. Very soon he was in the field again and fought with distinction, returning to Vīdin in 1791. From there he organised with his men raiding expeditions into Wallachia and Serbia. When the sultan wanted to punish him for this, he cast off his allegiance in 1793, took to the mountains and at the end of 1794 captured Vīdin with his robber band and became the real ruler in the pāgālīk there. Vīdin, which he fortified again, thus became a meeting-place for robbers and discontented Janissaries who were driven out of Serbia in 1792, and he himself became the popular leader of all those who opposed the reforms of Selīm III.

In 1795 Paswan-oghlu even attacked the governor of Belgrade, Hadjlī Mustafa Pasha, a supporter of Turkey and Russia, the Porte in 1798 sent an army of 100,000 men against him under Admiral Khâčik Hüseyin Pașa. He besieged Vīdin in vain until October, and had to withdraw with heavy losses. This defeat and Bonaparte’s invasion of Egypt induced Turkey to come to terms, nominally at least, with Paswan-oghlu and to give him the rank of Pașa of three tails (1799).

Nevertheless, he declared himself again against the reforms, against the central government and even
against Selim III; he also sent several expeditions to plunder Wallachia (1800 and 1801) and incited the Janissaries, who had in the meanwhile returned to Belgrade, to occupy the fortress (in the summer of 1801) and to murder Hādīdī Mustafā Paša (at the end of the year).

At this time, he repeatedly asked the Tsar to number him among his faithful subjects and also offered his services to France. The Porte, which shortly before had forgiven Paswan-oghlu everything, from 1803 declared war on him again, but the Serbian rising of 1804 restored his autonomy. Paswan-oghlu himself had to fight in the western part of his territory against Pintzo’s rising (1805). The appearance of the Russians on the left bank of the Danube (1806) induced him to offer his services to the Porte, but the latter instead gave the supreme command to the commander of Rusçuk [q.v.]. This embittered him so much that he resolved to defend only his own territory against the allied Russians and Serbs, but he died soon afterwards on 27 January 1807.

That Paswan-oghlu was able to hold out so long was due to the state of the Ottoman empire at the time, to his personal ability and foresight (he never abandoned Vidin), but for the most part to luck. Within his area he collected customs and taxes, ruled strictly and despotically, although not entirely without mildness and justice. In Vidin, he was active in public works, built many mosques, madrasas, khānakahs (see F. Kanitz, Donau-Bulgarien und der Balkan, Leipzig 1882, 4, 8). Although his health was rather poor as a result of too great mental strain, ambition led him to aim at independence, as evidence of which we have the coins struck by him and known as Pazzanetca.

**Bibliography:** Various notes on Paswan-oghlu are already found in the contemporary travels of G.A. Olivier (1801) and L. Pouqueville (1805), but it is not till the Notes sur Paswan-oghlu 1758-1807 par l’adjutant-commandant Mériaig, of the French agent in Vidin (1807-8), that we have a complete picture of him which is still the best account of his career; these Notes were edited by Grjur Jakšić in La Revue Slave (i [Paris 1906], 251-79, 418-29; ii [1906], 139-44, 436-48; iii [1907], 138-44, 278-88) and tr. in the Glasnik zemaljskog muzeja (xvii [Sarajevo 1946], 175-216; xviii [1948], 1-183). The Herzog von Gotha, in his Geschichte der Blutigen in Europa, vii, Gothia 1863, 230-41; C. Jireček, Geschichte der Bulgaren, Prague 1876, 486-503; Iv. Pavlovít, Ipsini iz francuskih arhiva, Belgrade 1890, esp. 103-28 (diplomatic reports regarding Paswan-oghlu, 1795-1807); M. **PATTANI** (Thai: Pattani), a region of Southeast Asia, formerly a Malay Sultanate but now included in Thailand (as a result of the Treaty of Bangkok, 1909, between Great Britain and Siam), and at present comprised of the four southern provinces of Pattani, Narathiwat, Yala (Jala) and Satun. The population of these four provinces is approximately 1,500,000, 80% of whom are Malay Muslims.

From the 14th to 18th centuries, Pattani was a leading entrepôt for trade between China and Southeast Asia. The conversion of the royal court to Islam, reported by the mid-15th century, enabled it to profit from the economic and political advantages which affiliation with the Muslim community offered. Because of the relatively early date (in the local context) of conversion, the community was regarded as one of the cradles of Islam in Southeast Asia.

For the history of Islam, Pattani is chiefly famous for two reasons. The first is a lengthy and continuing tradition of *kitab* literature, that is, works on *fikih*, *kalam*, and *tawawuf* written in Jawi (Malay using the Arabic script). The founder of this tradition and its most prolific author was Dāwūd b. ʿAbd Allāh b. ʿIrīs al-ʿAlā, [q.v.]. He has been followed by a line of in-
fluential and versatile scholars, the most prominent of whom was Ahmad b. Muhammad Zayn (1856-1906), who supervised the Malay printing press in Mecca and attracted many pupils from the Malay-speaking world, among them Tok Kenali (1886-1933), a famous teacher and influential figure for the practice of Islam in Northeast Malaysia. Ahmad b. Muhammad Zayn is remembered chiefly for al-Fatdwd al-Fataniyya, which is a substantial collection of his rulings. They are technically excellent, show a secure command of Arabic sources and illustrate the adaptation of Islam to the realities of Malay life in the late 19th century. The tradition of kitab writing is maintained to this day and is influential in the northern Malaysian states of Kelantan, Kedah and Perak, as well as Patani itself.

Second, and related to the first reason, Patani was, and to some extent remains, famous as the home of a distinct tradition of Islamic education and learning as conducted in the pondok (literally "hut") schools [see PESANTREN]. These are privately-run traditional Islamic institutions, headed by a tok guru (religious teacher), often with Middle Eastern education, where young Muslim men and women are instructed in a wide range of Islamic subjects. Traditionally, many pondok graduates went on to study in Mecca, Medina and Cairo (al-Azhar), and, more recently, also in the Philippines, Malaysia and Indonesia. The pondok is regarded by Patani Muslims as a guardian of their religion, language and culture and for that reason has been an object of considerable concern to the Thai government throughout this century.

This brings us to the final point. Patani, and the present northern Malaysian states, came under Siamese (now Thai) domination during the 19th century. The relationship between Thais and Muslims was, and remains, strained, Thais still referring to Malays as khak (aliens, visitors). In the modern state of Thailand the Muslims of the south are a tiny minority (3% of Thailand's 50 million largely Buddhist population). The history of Patani Muslims has been one of prolonged struggle to remain independent in religion, language and culture. The traditional past is kept alive by a vigorous tradition of oral and written histories which emphasise the pre-19th century period, when Patani was outside the sphere of Siamese influence. The policy of the Bangkok government towards the southern Muslims has oscillated between a grudging tolerance on the one hand, and an aggressive policy of Thaiisation on the other. The latter was especially prominent in the 1940s and 1950s, giving rise to strong local reaction and bloody clashes between the government and the Malay Muslims. Imprisonment of religious leaders resulted in an even greater determination by their followers to sustain their traditional Islamic way of life.

From the 1960s to the present, Bangkok's attitude tends to be one of assimilation, as expressed in policies such as grants to religious schools providing that they teach secular subjects as well as Islam; attempts to set up councils of religious leaders to advise (but as yet there are no ghar'a courts); the publication of Thai language translations of the Qur'an, and some concessions to the wearing of Muslim dress. These policies are intended to chip away at the Muslim attempts to diminish the practice of their religion. In fact, throughout this century, the Muslim response to efforts at assimilation has been to strengthen their devotion to Islam.

The economic condition of Muslims in the four southern provinces has been deteriorating since the 1950s and 1960s. In the 1970s, Bangkok recognised that the subsistence-level living standard of the Malays was a factor in the increasing political unrest, banditry and separatist activities which were occurring in the area. Efforts to improve the economic conditions of the region have so far met with little lasting success, the reasons being complex, but including a reluctance to invest capital in an area whose history has been so troubled.

There are a number of separatist movements among the Malays, which since the late 1940s have struggled for either independence or irredentism with Malaysia. Since the displacement of their traditional leaders by the Thais, the people have turned to religious figures for leadership, and the existing national fronts have leaders from this group. These movements have been dealt with severely by the Thais and are currently in a period of quiescence. The occasional separatist violence is followed by rapid suppression, but the determination of the separatists, and their continued support by Muslims outside Thailand, indicates that the "problem" will be an ever-present one for the Bangkok government.

Bibliography: There is as yet no standard reference work on Patani. The following Bibliography has been divided into subject headings for ease of reference.

(VIRGINIA MATHESON HOOKER)
published, disclosed Sasanid-Islamic pottery in levels of ca. ante 750, below a 15th-century mosque with two mihrabs, one incorrectly orientated. The former large town was much depopulated, leaving a large ruin field, in which numerous Arabic epitaphs, none of them recorded, protrude from cemeteries which are overgrown by tobacco crops. The growing of tobacco for snuff is the principal industry.

At least twelve versions are extant of the Habari za Pate, the traditional Swahili history. They record the Nabhanī dynasty, claiming that it was founded ca. A.D. 1290. It is not claimed that the rulers were descended from the Nabhanī maliks of Umānī [see NABHAN], but rather from collaterals of the same tribe. Widely-held Swahili traditions report that it and other Swahili towns were founded under the umayyad caliph ʿAbd al-Malik b. Marwān. In spite of their 19th-century date, recent archaeological evidence here and in the vicinity at some twenty-six sites suggests that there is some nucleus of truth: they may be a plausible reminiscence of the increase in demand for mangrove roofing timbers consequent upon the extensive building operations of that reign.

This dynastic record consists thirty-five rulers, and is remarkable in repeating a complete isnād for each of the first twenty-five. It appears to be a composite work, the account of the first twenty-five rulers having been composed ca. 1810, with additions in distinct styles ca. 1888 and 1911. A highly glossed version was published in English by C.H. Stigand, with some work, the account of the first twenty-five rulers having been published. The Portuguese had a customs post on the island from ca. 1510 until 1698, and an Augustinian mission from 1596. The most important trade was in mangrove poles and ivory, and later in tobacco. The island came under Umānī suzerainty in 1698, intermittently paying customs dues to Zanzibar. Following a revolt, the island was garrisoned from Zanzibar in 1861, when the Nabhanī islām, with his family, slaves and followers, migrated to Witu on the mainland. A surviving item of the regalia of Pate, an intricately-carved ivory horn, with an Arabic inscription, is exhibited in the museum.

PATRAN [see APRATAN].

PATRNA, a city in Bihar Province of the Indian Union, situated on the right bank of the Ganges (lat. 25° 37’ N., long. 85° 8’ E.) and with a population (1971 census) of 474,000. In the years 1912-36, it was the capital of the province of Bihar and Oriissa of British India, and subsequently, of Bihar alone.

From 1116/1704 onwards, it is known in Muslim chronicles as Azimābād, after Awrangzib’s grandson Āṣīm al-Shān who made his court here. Patnā, how-
Persia worsened the effects of the socio-economic problems of the day. The Divan was not in session that day; the sultan and grand vizier were absent from Istanbul and the kâşım-mâkim [q. e.] was at his private residence in Çengel Köy on the Bosphorus. The government was not able to organise any effective resistance. The rebellious 'ulema', led by Arnawud Zulâli Hasan Efendi, a former kadî of Istanbul dismissed in 1140/1728, successfully pressed the sultan to appoint a new government. Before this the Grand Vizier Newghêiri İbrahim Paşa and other prominent members of the sultan's entourage, were murdered (18 Rabî' I 1143/1 October 1730). The new sultan Mahmud I [q. v.], who acceded to the throne on 6 October, was urged to grant a general amnesty to the rebels following a huddjet issued by the new Şeyhülislâm (14 Dümâdâ I 1143/11 November 1730). Patrona Khalil, instead of seeking high office, aimed to effect a counter coup. Kabakulak İbrahim Ağa (notorious for his bloody suppression of the revolt in Dort-Yol in the Hatay/Antakya nahiye [q. v.]), the admiral Djanim Khodja Mehmed Paşa, and a former khan of the Crimea, Kaplan Giray, were arrested and totally compromised by the new government. Before this the rebellious leaders, was invited to attend the meeting of the Divan, at which the sultan was to appoint him beglerbegi of Rumeli. During the meeting in the seraglio, the three leading rebels were set upon and killed. 'Ulemâ' such as Zulâli Efendi were arrested and secretly executed later. In Ramadân 1143/March 1731 a riot ensued, purportedly instigated by a group of Albanians in revenge for their fellow-countryman Patrona Khalil; this was quickly suppressed by the newly appointed grand vizier Kabakulak İbrahim Paşa.

Paintings of these bloody events were made by the French painter Jean-Baptiste Vanmour (Rijksmuseum Amsterdam, Inv. A 2012 and A 4082 i.a.).

PAWLÁ, the name given in the Mughul emperor Akbar's monetary system to the ¼ dâm (¼ payâs). (J. ALLAN)

PAYÁS, the Ottoman Turkisch form of modern Turkish Payas, a small town at the head of the Gulf of Alexandretta 18 km/12 miles north of Iskandarûn [q. v.] (lat. 36° 46' N., long. 36° 10' E.). Lying as it does in the very narrow coastal corridor between the sea and the Amanus Mountains, the modern Turkish Gavor Dağlari, Payâs has always been a strategically important point on the route from Cilicia to Antioch; the name itself goes back to that of the classical Greek town of Baiae (see PW, ii/2, col. 2775 [Ruge]).

In the early Islamic period, Payâs was on the road connecting Iskandarûn with the frontier fortress against the Byzantines of al-Massûsa [q. v.] (Mopsuestia), and the classical Arabic geographers name it Dâyâ, which may indicate that it was a small town under the control of the Usûmans, with their acquisition of Syria, it became in the 10th/16th century quite a significant port; the vizier Şükollu Mehmed Paşa [q. v.] built there a large caravanserai, a mosque, madrasa, imâret and baths. In the next century, Ewliya Celebi describes the port as strongly fortified and with batteries of cannon. In the 19th century it came within the vilâyet of Adana, and Cuinet numbered its population at 6,325, slightly more than half of whom were Muslims. With the 1921 agreement between France and the Nationalist Turkish government in Ankara, Payâs came just within the boundaries of Turkey. After the 1939 incorporation of the Hatay vilâyet in Turkey, Payâs was included within this last, and is at present the chief-lieu of a nahiyé in the île of Dört-Yol in the Hatay/Anthaky il. The population in 1950 was 2,653.

Bibliography: Ewliya Celebi, Seyhântâme, Istanbul 1314/1896-7, iii, 42-3; Sâmi Bey, Kdnûs al-âlam, Istanbul 1894, ii, 1571; V. Cuinet, La Turquie d'Asie, Paris 1891, ii, 105-8; L. Strange, Palestîne under the Moslems, 422; R. Dussaud, Topographie historique de la Syrie antique et médioâle, Paris 1927, 453, 503; I.A. art. Payas (Besim Darkot), on which the above article is based.

PAYGHÜ (r.), a Turkish name found e.g. among the early Saldjuks, usually written P.y.ghü or B.y.ghu. In many sources on the early history of the Saldjuks these orthographies seem to reflect the old Turkish title Yahyû, which goes back at least to the time of the Orkhon inscriptions (see C.E. Bosworth and Sir Gerard Clauson, in JRAS [1965], 9-10), and it was the Yahyû of the western, Oghuz Turks whom the eponymous ancestor of the Temir-Yâliq (Yahyâ) Temir-Yâliq, the 'Iron-bow' served (see O. Cahen, in Orisins, ii [1949], 42; Bosworth, The Ghaznavids, their empire in Afghanistan and eastern Iran 994-1040, Edinburgh 1964, 219 and n. 46). But the orthography P.y.ghü, B.y.ghu, is so frequent in the sources that it has been suggested (e.g. by P. Pelliot and O. Fritsak) that we have here a totemistic personal name used by the early Saldjuks, stemming from bigulplgu [the name of falcon] (see M. Th. Housiaux, Ein türkisch-arabisches Glossar, Leiden 1894, 28). See the lengthy discussion in J. Marquart, Über das Volkstum der Komanen, in W. Bang and Marquart, Osttürkische Dialektstudien, in AGW Göttingen, N.F. xii, Berlin 1914, 423 n. 5, 44. In support of this, it is true that the name/title Payghû / Bîghû Khân re-appears amongst the Karâkhânsids [see ILK-KHANIDS] in the 6th/12th century (see Fritsak, Die Karâkhânids, in Is. xxvi [1953-4], 54).

Bibliography: Given in the article.

PAYSA, Pâsâ (Hindi), English form pice, a copper coin of British India = 3 pries or ¼ anna. Under the Mughals, the name pâsâ became applied to the older dâm, introduced by Shâh Shâh, 40 of which went to the rupee, as the unit of copper currency; the name found on the coins however is usually simply fullü or rawâni. Pâsâ is the general name for the exten-
sive copper coinage coined in the 18th and 19th centuries by the numerous native states which arose out of the Mughal empire (see J. Prinsep, Useful tables, ed. E. Thomas, London 1858, 62-3). In the currencies of modern India and Pakistan, 100 paise = one rupee, and in that of Bangladesh, one taka.

(1. ALLAN)

PECENEGS, a Turkic tribal confederation of mediaeval central and western Eurasia. Their ethnonyms appears in our sources at times: Be-lo-nag, Abu-ch-ke-Pecheneg, Basy, Be-ca-nag, Bakhan, Arm-Pecheneg, Greek Patwazidati, Patwazison, Rus'. Pecheneg, Lat. Pecenici, Bisseni, Byseni, Besi, Besmen, Pol. Pleczynowie and Hung. Besenyö (< Belgenlä Pechënäk). It has been etymologised, with some uncertainty (cf. Prztsak, Pechenegs, 211; Bazin, A propos du nom des Petchéniéques), as a variant of badjanakl-badjanak "in-law." (Old Church Slav. Pecenicka, i.e. "the in-law clan/tribe.") Their earliest history and origins are unclear. They have been identified with the Per-iyu (= Middle Chin. *Pak-nízık = Pecheneg (?), according to Pelliot, Quelques noms, 226, n.1), noted in a 7th century A.D. Chinese source, the Sui-shu, a T'ieh-le tribe, located near the En-ch'ü (Onoghur?) and A-lan (Alans). But, this is far from certain. More reliable is a notice in a Tibetan translation of an 8th century Uyghur source on the "northern peoples" which tells of Be-lo-nag hostilities with the Hor (Oghuz), probably in the Syr Darya region (Bacot, Reconnaissance, 147; Ligeti, Rapport, 170, 172, 175, 176). Oghuz traditions (cf. Jahn, Geschichte der Oguzen des Rasid ad-Dîn, 24-5; Abu '1- Ghazâ Bahadûr Khân, Shagdara-yî Tarakism, ed. Kononov, 41-2) appear to confirm this. The presence in their union of the Kangar/Kenger (Kâyraf) sub-confederation (Const. Porph., De admin. imperii, 170-1) may also point to a tie to this region. Kangar has been connected with the Kengeres people mentioned in the Kül Tegin inscription and the Kangarâya (< *Khangarâye) nomads who settled in Transcaucasia. These, in turn, may be related to the Türk toponym Këngû Tarban and the Chinese Kang-ch'ü (a term designating the middle Syr Darya and adjoining lands, see Klyashtorniy, Die Inschriften, 156-78) and Old Iran. Kangû. Prztsak (Pechenegs, 212-14) derives this ethno-toponym from Tokharian *kânû "stone." (cf. Turk. Taghtaken "stone city," Kengeres < kânû + Łopso) > *drş > *ärs > *äs = Kengeri) and suggests that they were Tokharian-speaking, mercantile city-oasis (Taghtaken) dwellers. The difficulty here is that although Kang, etc., may be connected with *kânû, *äs cannot be derived from *Łopso (= Iran. Łordel which produces Uralic), Prztsak further conjectures that the Kangars, driven into the steppe by an Oghuz-Karlu-Kimek coalition, became nomads, forming a confederation consisting of Tokharian, Eastern Iranian and Bulghar Turkic elements. Their connection with Eastern Iranian elements is hinted at in the remark of al-Biruni (Tabûdî, tr. Alli, 19) regarding a people that "are of the race of al-Lan and that of al-As and their language is a future form of the languages of the Khwārzamians and the Bajgânajâk."

This is echoed in the Old Rus' translation of Josephus Flavius (ed. Meshchersky, 454) which adds "the Yas, as is known, descended from the Pecheneg clan/tribe." Németh, followed by Ligeti, however, on the basis of their fragmentary linguistic remains, view them as Common Turkic-speakers (most probably, Kıpçak, see Németh, Die Inschriften, 16, 50-1; Ligeti, A magyar nyelv, 568, 569, and Györföly, A Besenyő nyelv, 170-91). Anna Commena (ed. B. Leib, ii, 142) remarks that the Pechenegs (whom she calls "Seythians") speak the same language as the Komans (= Kuman-Kıpçak). Mahmûd al-Kâshgari (tr. Dankoff, i, 84), however, seems to lump them together with the Bulghar and Swäw speaking a "Turkic of a single type with clipped ends." The available linguistic material points rather in the direction of Kıpçak. The possibility that they adopted Turkic is not to be excluded.

Islamic geographers (cf. al-Istakhri, 10; al-Mar'ûfi, Khwarazmshâh, 180-1) were aware that the Pechenegs had entered the Western Eurasian steppes in a series of migrations, the source of some confusion of the Pecheneg habitat in other Islamic authors. This confusion is furthered by the use of the ethnonyms Basджi=m-BAшджи, etc., to denote both the Başğırs (Başkort) and the Hungarians in both their Transitional (Magna Hungary) and Pannonian homelands. Warfare with the Oghuz (who absorbed some of them, cf. the Oghuz Pechen, Karluks and Kimâks drove the Pechenegs from Central Asia into the Volga-Ural/Yayik mesopotamia and later, with added Kazakh pressure in the late 9th century (Const. Porph., DAI, 166-7), into the Pontic steppes. Here, they were nomadised from the Don to the Danube. They were, as Kâshgari notes (tr. Dankoff, i, 92), the closest, of all the Turkic peoples, to Kûmû. The Islamic authors, without indicating which of their abodes is meant, note that they were the objects of annual raiding (for slaves and booty) by the Khazars, Burdâs/Burtâs and others of their neighbours (Ibn Rusta, 140; Gardissi/Barthold, 35, 36; Hudûd al-'alam, 101, 142, 160 (commenting that the slaves brought from Khazaria to the Islamic lands "are mostly from here") i.e. the "Khazaric Pechenegs"); al-Bakrl, ed. tr. Kunik and Rozen, 42; Gardissi/Barthold, 35, however, perhaps using information pertaining to their earlier homeland, describes them as rich in cattle, horses and sheep and possessing "many vessels of gold and silver. They have many weapons. They have silver belts..."

The Byzantines, in Constantine Porphyrogenitus' day (d. 959) were eager to use them to control the steppe approaches to the Empire. According to the De adm. imp., the Pecheneg union was composed of 8 tribal groupings, and it was thought that they were controlled by "great princes," four on each side of the Dnieper (reflecting Turkic bipartite, left-right organisational principles). These further subdivided into 40 "districts" (mäellungen), clan groupings (?). This internal organisation, like other steppe polities, was dynamic. Thus Cedrenos (ii, 381-2) reports 13 tribes in the 11th century. The names of the 8 tribal groupings, consist of two parts, the name proper, usually a horse colour, and with some possible exceptions, the titles of their rulers, e.g. Xäbûw-yn-gälta Kabûkin-Yul "the tribe of the Yula with bark-coloured horses," Çwrmow-kahlizâ Sara Kûl Bey "the tribe of the Kûl Bey with greyish horses." The De adm. imp. also notes the names of the "great princes" (hereditary positions, passed from cousin to cousin) at the time they were expelled from their Volga-Ural/Yayik habitat, ca. 889 (DAI, 166-9; Németh, Die Inschriften, 50-1; Ligeti, A magyar nyelv, 507-11). None of the contemporary sources (Byzantine, Rus' or Islamic) notes the presence of a supreme executive authority in this tribal confederation. The Hudûd, 101, merely comments that they were ruled by an "elder" (mäisht) and had no towns. The notice in Abu Sa'id (d. 1286, preserved in Abu 'l-Fidâ, d. 1331), reporting that they had a town, Badjânâkîyya, and were ruled by a Khâşkân (Abu 'l-Fidâ, Takvim,
(205), should be viewed as a topos. The Pečenegs, like most of the nomadic polities in the Western Eurasian steppes, were stateless. The Bulgarian Tsar Symeon (893-927), used them to defeat the Hungarians, allies of Byzantium during his war with the Empire (904-6). Formal relations with Rus’ were established in 915 so that the Pečenegs, now Byzantine allies, could attack Bulgaria. After 920, Pečenegs-Rus’ relations were largely hostile. On occasion, Pečenegs served as mercenaries in Rus’ campaigns (e.g. Igor’s 944 raid on Byzantium PSRL, i, cc. 72, 73). Relations with Rus’ worsened under Vladimir I (978-1015), producing several decades of war (988-ca. 1006-7). They were decisively defeated by Yaroslav of Kiev in 1036 and thereafter pushed (by Rus’, Oghuz and Kuman-Kıpçeşk pressure) toward the Byzantine Danubian frontier (PSRL, i, cc. 150-1; Diaconu, Les Petchenègues, 39-49) which now became their primary area of focus. Military defeat and the loss of pasturages led to internal conflicts which resulted ultimately in their movement into Byzantine lands from which a weakened Empire could not dislodge them. The Rus’ defeat of the Western Oghuz (1066) and the entrance of the Kuman-Kipc’aks into the Pontic steppe increased the pressure on the Pečenegs, who retaliated with their own depredations. The Byzantine Emperor Alexius I (1081-1118), aided by the Kuman-Kıpçeşks, delivered a mortal blow to Pečeneg military might at Levunion in 1091. Some Pečenegs fell under Kuman-Kıpçeşk overlordship, others took service as borderguards with Byzantium, the Hungarian kingdom (where they also settled) or Rus’ (where they became part of the Černii Kloboucí (“Black cowls”) noted in Rashid ad-Din, ed. Alizade, ii/1, 1.62-3, as the kazem-i kuldh-i siyahân), a Turkic, nomadic force in service to the Kievian rulers. In their heyday, the Pečenegs had extensive commercial ties with Rus’ (where they sold horses, cattle and sheep) and the Islamic world. Al-Mas’udi notes their introduction to Christianity in the late 10th century (the conversion of the Christians) by a captive Muslim, along with Byzantium, the Byzantine, the North Caucasus (Bab al-Abwâb, Murudj., IstakhrT; Mas udî, ed. 2. Studies.

PECEWİ — PECS

Pecewi was born in 982/1574 in Pécs in south-western Hungary, whence his epithet Pecewi (or, alternatively, Pechewi, from the Hungarian pécs [peĉ]). His family had a long tradition of Ottoman military service. Both his great-grandfather Kara Dâwud and his grandfather Djafer Beg served as slay begi in Bosnia; his father (name unknown) took part in campaigns in Bosnia, and in Irák during the 1530s (Pecewi, Ta^rikh, i, 87, 102-6, 436-7, ii, 433). Pecewi’s mother was a member of the Sokollu [q.v.] family. At the age of 14, after the death of his elder father, he joined the household of his maternal uncle Ferhad Pasha, beglerbeg [q.v.] of Buda, and then of that other Sokollu relative, Lala Mehmed Pagha [q.v.], in whose service he remained for 15 years until the Pagha’s death while Grand Vizier in 1015/1607 (Ta^rikh, ii, 323). He participated in many of the campaigns of the Ottoman-Habsburg war of 1593-1606. Thereafter, Pecewi was appointed ʻahār (land census) recorder in the Rumelian sanjak of Egrîbî, Inebakhî and Karîlli-li (1015/1606), then mumâkîd [q.v.] (clerk) to the Grand Vizier Kuyudju Murâd Pagha (ca. 1607-11). Following a fire at his home in Pécs, he returned to Hungary for several years, but by 1031/1622 was again in Istanbul, where he witnessed the deposition of Îljâmân II (Ta^rikh, ii, 380-8). He subsequently resumed an official career, serving as defterdar [see Daftrdar] of Dijâr Bakr (ca. 1033/1623-4), from which he was sent as beglerbegi of Rakka [q.v.] with 200 sekân troops to the defence of Mârdin (1033/1624), and then as defterdar of Tokat (1034/1625) (Ta^rikh, ii, 391-2, 394-5, 403). His next recorded post was defterdar of the Tuna (Danube) province, from which he was dismissed in 1041/1631-2 to be appointed defterdar of Anadolu (Ta^rikh, ii, 421). His next post may have been as governor of Istonîl Belgrad (1042/1632-5), after which he became defterdar of Bosnia (1043/1633-4) and then of Temesvár (1047/1638) (Ta^rikh, ii, 445, 442). Retiring from official employment in 1051/1641, Pecewi spent his last years in Buda and Pécs writing his history.

Pecewi’s History as published (2 vols., Istanbul 1626-3/1864-6; repr., 1 vol., with intro. and index, ed. F.C. Derin and V. Çabuk, Istanbul 1980) covers the period from the accession of Süleyman in 1520 to the death of Murâd IV in 1640, and is one of the principal sources for Ottoman history, particularly for the period ca. 1590-1632 when the historian was a close observer of many events. It is a compilation (described repeatedly by Pecewi as a maktûa) drawn upon the histories of Djelâl-zâde Muṣṭâfa [see GAJÂLZÂDE], Râmadân-zâde, ʿAlì, Hasan Beg-zâde [q.v.], Kâtiç Mehmed [see KATIG CEBELI] inter alios (Ta^rikh, i, 3; on his use of the Hungarian histories of Heltai and Istvánffy, see Karacson Imre, Pecewi İbrahim’in tercüme-i hali, in Türk defterleri [1327], 1/3, 89-96), but also including much unique material garnered orally from leading viziers and other Ottoman officials and military men. It is particularly rich for events on the Hungarian and Bosnian frontiers, incorporating details which Pecewi learnt from his family and local acquaintances, and for the critical period of the early 1620s. Though written in relatively simple Ottoman Turkish, the text contains much anecdotal material and some less usual terms (occasionally of Hungarian origin) which render it lively but not without difficulty. There is a strong authorial presence, which contributes to its value as an original source.

Pecewi’s History was a major source for Kâtiç Cebeli’s Feçlikâ, Na’tim [q.v.] and Djewri, and was used extensively by von Hammer. No other historical work by him is known.

(Å. BABBING-[CHRISTINE WOODHEAD])

Pechina [see peçejan]

Pécs (Ottoman Pécs, German Pünklim, Latin Quinque Ecclesiæ), town and centre of a sandjak in Transdanubian Hungary.

Founded on the site of Roman Sopianae and preserving remnants of buildings from the first centuries of Christianity, Pécs became an episcopal see in 1009, housed the first university of the country (established in 1367) and was the most important economic centre south of Lake Balaton throughout the Middle Ages.

The town surrendered without fight to the forces of Kâsi, sandjak-begi of Mohâc [q.v.] and Murâd, sandjak-begi of Pozség (Põshchega), during Süleyman the Magnificent’s sixth Hungarian campaign, on 17 Rabî II 950/20 July 1543. Until 1570, it belonged to the sandjak of Mohács, although the name of this administrative unit alternated between Sekcső (Sékcsy) and—rarely—Pécs. Around the middle of September 1595, the liwa of Pécs was attached to the newly-created vilâyet of Széptető (Sigtétár) (cf. Istanbul, İstanbul Osmanlı Arşivi, Kâmil Kepeci Tamsîfi 314, p. 362) and remained so until 1597. Then it was transferred to the province of Kânişa [q.v.], established in 1600. There was one serious but unsuccessful attempt by Count Nicholas Zrinyi to retake Pécs in 1664, which caused great damage. Ottoman domination ended on 3 Dhu ‘l-Hijja 1097/21 October 1666 when Louis of Baden captured the town.

The 16th century Ottoman surveys present the original population of Pécs as purely Hungarian. Their number shows a markedly decreasing tendency, as in most administrative centres of Hungary. This meant that out of 351 married and 58 unmarried Christian heads of households with their 10 priests in 1546 (Báshbakan Osmanlı Arşivi, Tafter defteri 411, fols. 3b-9a) there were only 195 heads of families and 2 widows left by 1579 (ibid., Tafter defteri 585, fols.
5b-7a). On the other hand, the number of Ottoman mercenaries getting regular pay diminished from 828 in 1545 to 220 in 1568. Some of them, however, had received timars, 237 persons being so listed in 1570. In the same year, there served 22 za'ims and 98 timariots plus their ğebelius in the sandjak (Tapu defteri 480). Muslim civilians are not listed in the defters at all. The total number of inhabitants can be estimated at 4,500–5,000 in 1546 and at 2,500–3,000 around 1580. Population data from the 17th century are very scarce. The first Habsburg survey in 1687 found 363 houses, mostly within the city walls, which permits us to draw the conclusion that there had been no radical changes in the meantime. The Muslim majority may have become dominant with a not-negligible Slav infiltration.

The Reformation (Unitarian, Calvinist and also Lutheran) strongly affected the town, which was the scene of open disputes among Protestant theologians. In the 17th century, however, the Jesuits restored Catholicism.

Local grain and grape cultivation was modest. In spite of that, the town was a significant centre of viticulture, producing wine from the crops of the neighbouring settlements. In 1687, as many as 3,334 units of vineyards, cultivable in one day, were registered, naming 387 actual and/or former owners, the latter being mostly Muslims. The number of mills was traditionally high, amounting to 40 wheels both in 1546 and 1687, some of which being ruined at the latter date.

Pécs remained an important emporium in Ottoman times as well. Transit cattle and horses passed through the town both in the directions of Vienna and Venice. Local shops were numerous (46 in 1570), mostly in Muslim, rarely in Christian possession.

The town had remarkable Muslim religious and cultural institutions. Among the țakıhâ of its mevlevi-khané there were outstanding personalies such as Ahmed Dede, later head of the Yeni-bâşı melevi-khané in Istanbul (cf. Gábor Agoston, 16-17. azírdá Macaristan'da tasavvuf ve mevlevilik, in I. Millîlerarasi İnkarcı Hali Konferansı Tebliğleri, Konya 1987, 228-9). Today, two ğiurmi's (those of Gazi Kâsin Paşa and Yağovali Hasan Paşa) and a ğürbe (that of İdris Baba) still survive in their original form.

PEDROCHE [see BITRAWS]; PEHRLEWÁN [see PHALAWÁN]; PELOPONNES [see MORA]; PEMA, an island of East Africa. It appears in Yâkût and other authors as al-Djázira al-Khadrâ', and lies to the north of Zanzibar [g.v.] off the Tanzania coast. There has been much debate whether the Menouthias mentioned in the Periplus of the Erythraean Sea is Pemba or Zanzibar, with the balance in favour of the former. At ca. A.D. 50, it attests Egyptian and Arab trade in the area.

Nothing is heard of it until al-Djâhâz (d. 255/868-9), who mentions Landjîja, a corruption of al-Unguđa, the Swahili name for Zanzibar, pairing it with an island of forests and valleys which he calls Kanbalû. Geographically this is satisfactory, for Pemba is hilly and wooded, as opposed to the flatness of Zanzibar. Al-Masû'dî travelled thither with 'Ummân shipowners in 304/916, and gives an account of its trade. Buzurg b. Shâhriyâr (d. ca. 956) speaks of it as a trading station on the way to Sofâla, but in spite of these dates the thirty ancient sites so far identified suggest a misuse of these dates by the 10th century. At these the principal remains are of mosques, some in actual use, and occasional houses.

Yâkût mentions two cities on the island, called Mtanby and Mkanbalu, recognisable in modern Swahili as Mtambwe and Mkumbuu [see MTAMBWE MKUU]. Each had a sultan. The first-named had as ruler an Arab who was stated to have emigrated from al-Kûfa. At this place in 853-6 a hoard of more than 2,000 silver pieces was recovered, naming ten local rulers, accompanied by seven Fâtimid dinârs. The ten rulers covered three to four generations in a hoard formed ca. 1070, which would place the earliest of them in the 10th century. Al-Masû'dî speaks of kings (mûlûk) of the Zândî people (Mûrîdî, iii, 6, 29-30 = §§ 848, 871), and it may be suggested that (like the Ayyûbîds) these would have reigned in different places at the same time. There is no historical record of their vicissitudes.

Pemba was a vassal of the Portuguese Crown from 1506 until 1695, with a king. After 1698 it fell to the 'Ummânîs. It served Mombasa as a rice-growing area, for which its very rainy climate (76° a. p. a.) made it suitable. Under Sayyid Sa'id of 'Ummân and Zanzibar (1806-56), clove cultivation was introduced ca. post-1822, making it eventually, with Zanzibar, the greatest clove exporter in the world. The clove plantations were almost all in Arab hands, and exploited until 1873 by slave labour. A disastrous hurricane had destroyed many plantations in the preceding year, and the abolition of slavery came as a further disaster.

PENANG (Malay name Pulau Pinang), a state of the Federation of Malaysia consisting of the island of Penang (113 sq. miles) in the Straits of Malacca and a strip of land on the mainland opposite known as Province Wellesley or Seberang Prai (285 sq. miles) linked by a road bridge since 1985. The capital, Georgetown, ranks with Johor Bahru as Malaysia's second most populous urban centre (both a little over
400,000 in 1980) behind the Federal capital Kuala Lumpur.

The sparsely inhabited island was acquired from the Sultan of Kedah in 1786 for the East India Company as an islet for country trade. After initial success, it was overtaken by Singapore, remaining a subsidiary centre until the establishment of plantations in eastern Sumatra stimulated it again early this century. From 1805 it briefly had the status of a presidency under the English East India Company, from 1829 joined with Malacca and Singapore as the South-East India presidency. From 1836, and in 1867 became a British colony. After the Japanese interregnum from 1942 to 1945, Penang was joined to the rest of Malaya in 1948 as a state of the Federation of Malaya (since 1963, Malaysia [q.v.]). It retained the free-port status it had enjoyed under British rule for some time. In 1970 it opened Malaysia's first free trade manufacturing zone, and soon became a significant centre for electronics component manufacturing.

Reflecting the commercial history of the settlement, the population is ethnically mixed. There is a Chinese majority, Penang having the lowest proportion of Malays found in any peninsular Malaysian state (Malays being dominant numerically and politically in the Federation as a whole; see MALAYSIA). Georgetown is a predominantly Chinese city (68% in 1980), with Malays (19%) and Indians (13%) in the minority. Muslims in Penang comprise the whole Malay population and a small proportion of the Indian population, including the so-called Jawi Peranakan or Jawi Pekan, Muslims of South Indian extraction who have to some degree adopted Malay language and customs. The latter, being urbanised, have provided political and intellectual leadership to Penang Muslims. Unlike Singapore, Penang has not had an important Arab community. As elsewhere in Southeast Asia, the Shari'iat law school is followed.

In the Malay states, the hereditary Ruler (Sultan) is head of religion, administering and regulating Islamic affairs through the agency of an advisory council of religious notables (Maljîs Ugamâ Islâm) and secretariat (see MALAY PENINSULA, 8). Such control was absent in the British colonies, beyond the appointment of a Muslim Advisory Board and a Muslim and Islamic courts (Mahkamah Kadi) to administer the Shari'iat. In 1957 under the independence constitution, Islam became the official religion of the Federation of Malaya, of which Penang was a component state. The head of Islam in Penang was thenceforth the Federal Ruler or Yang Dipertuan Agung (chosen in rotation from the hereditary Rulers of the Malay states) and a religious administration parallel to that of the Malay states was set up under the Administration of Muslim Law Enactment of 1959. This provided for a Malay Ugamâ Islam headed by a state Mufti, including among its activities the support of Islamic schools, propagation of Islam, supervision of the khatâ, and administration of zakât and fitra. A system of fitra. A system of jizya courts (Mahkamah Kadi) to administer şerî'ia law was also instituted, though as elsewhere in Malaysia this jurisdiction extends only to Muslims in the areas of family and testamentary law, immorality, false preaching, and failure to fulfill religious obligations.

Given their cosmopolitan urban society, historically higher educational levels, and lack of governmental concern with religious matters, the British Straits Settlements became, in Roff's words, "sniping posts" for critics and reformers. In education, reformist ideals found expression in the foundation of the Madrasa al-Mahfûr in 1916, which used Arabic and English as the media of instruction, while the Jawi Peranakan in general embraced the government English education stream. In the 1920s, thanks in large measure to the scholar-publisher Sayyid Shaykh al-Hâdi, a Malacca-born Malay of Haçdrî descent, Penang emerged as the centre of reformist thought and Muslim publishing in Malaysia, promoting the values of the young Turks or kaum muda, who stood for informed idljîhâd rather than blind taklîd. Reformist journals like the Malay-language Al-İkhwân (1927-31) circulated from Penang throughout Malaya, southern Thailand and Sumatra. Among other achievements were the publication of several collections of sermons and the printing of the holy book in Malay.

Within Malaysia, Penang has retained its non-conformist milieu, as an urban centre removed from the centre of power. From Penang in the 1970s and 80s, Chandra Muzaffar, born in Kedah of Indian background, has been prominent in advocating the need for a liberal Islamic sociology unfettered by ethnicity in a modern plural society.

PENCE (t., from Persian pandé, "palm of the hand"), a term of Ottoman Turkish diplomatic. It was a mark, somewhat resembling an open hand and extended fingers, affixed (on either of the left- or right-hand margins or at the foot of the scroll) to documents, such as ferman (see FARMÂN) and buyurulanlar [q.v.], issued from the Ottoman cagares by higher officials such as viziers, beylerbeys and sanâgûbs begs.

PENDIK (t., from Persian pardj yak "fifth"), a term of Ottoman Turkish financial and administrative usage. It denoted the fifth which the sultan drew as the ruler's right (equivalent to the Arabic khâlīfah) and was charge of the process of thus extracting the sultan's fifth. This involved, in particular, the collection of young boys from the Christian Balkans and Greece by the process of the dewrózirmâ (see DEVIRZIRMÊ), and these were then trained for either palace or military service as the kâfî kullarl, the official in charge of the process of thus extracting the sultan's fifth who termed the pekw Presbyterian.

the secular courts. The 1931 Regulation also pre-

scribed the foundation of an Islamic Court of Appeal,

as a substitute for the former term of

penghulu para nabi). In more Javanised areas the word indicated the highest religious judge but it was also often used for the various sultanes and at places where the authority was exercised by a provincial governor (regent, bupati).

In these places the penghulu exercised authority in all religious affairs, with the implementation of Islamic jurisprudence as his first and the administration of the mosque as his second task. The common Javanese and Sundanese term for this functionary was also pengulu. He would be discussed in subsequent developments in the role and position of the Islamic judges in Indonesia through history and also the role of judges in areas outside Java even if they had other names such as, inter alia, hakim, lukum, serambi (after the place of the religious court: in the serambi or front veranda of a mosque), gadi, mufti, syarat or even "priest" and "chief priest" (hoofd-priester) by the Dutch colonial government.

In Malay historical writings since the 16th century religious functionaries under a rich variety of colour-

ful titles took a position at the court of the sultanes. Very often these religious dignitaries also received im-

portant tasks in the general administration of the country. Shams al-Din al-Samatranl (ca. 1605-30) as well as a later successor Nur al-Din al-Ranlri (1637-

43) served the Achenhese court not only in religious affairs, but also as a Minister of Foreign Affairs. Col-

lections of Malay law show a clear awareness of the differences between customary law and Islamic law, with priority given in most cases to customary law and only verbal respect to the latter. Only in matters of family law and inheritance was the judgment of the Islamic officials to be taken as the final decision. (Cf. Liaw Yock Fang, Undang-undang Melaka: the laws of Malacca, The Hague, 1976. Classical Islamic Javanese literature since the 17th century depicts the penghulu as the court official assigned to execute Islamic regulations, as being often in conflict with mystical wanderers and teachers. In masterpieces of this literature such as the Serat Jatiswara and the Serat Censthini, the penghulu (some-
times together with his following called kaum) is depicted as a stubborn official and as being not reliable as a guide for religious matters. Also, in the poetic genre of suluk (shorter mystical poems) we find many descriptions of the penghulu as a stupid and ridiculous figure, clearly of a lower standard than the mystical teacher, kyahi or guru, living in his pondok or periaapan (hermitage, outside the towns), centres of real spiritual life. At the end of the 19th century Snouck Hurgronje found a cleavage between the penghulas, closely related to the realm of politics, and the penghulu as religious teacher at pesantren [q.v.], independent of, neglected or sometimes even opposed by the "administrative" religious leaders. Snouck Hurgronje felt that there was a clear preference for the independent leaders on the part of the Indonesian population. He related a number of cases where the penghulu urgently needed the scholarly advice of good leaders of the pesantren [q.v.]. (Verspr. geschr., iv/1, 281; idem, Adviezen, 's-Gravenhage 1957, 762-97). Still, at

several Javanese courts the penghulu held a high posi-

tion. In many cases he was a member of the family of the ruler. Several penghulas are also well known for their literary skills and are also known as authors of babad, traditional Javanese history-writing. The rich variety of Islamic administration in the dozens of Muslim kingdoms in the vast Malay archipelago became more centralised after the tighten-

ning of colonial rule in the 19th and early 20th cen-

turies. The Dutch administration in the 19th century recognised the Islamic courts in the traditional fields of family law and inheritance, while a penghulu also served as a "council of priests", used in the 1882 regulation. The various editions of the basic colonial legislation (Regeringsreglement, 1815, 1830, 1836, 1854) recognised the indigenous rulers (sultans and regents) as "head of religion", with the task to supervise and control the "Islamic priests" (i.e. penghulas, hajis and religious teachers). The penghulu then was only nominated by the Governor-General in his function as adviser to general law-courts. In 1882 the first law on religious courts was promulgated. This law made the "clerics" (i.e. penghulas) the chairman of a judiciary council. After many debates (started between L.W.C. van den Berg, the main author of the 1882 law, and Snouck Hurgronje, who denied the "priesthood" of Muslim judges and the collegial character of Islamic courts), the 1931 regulation on penghulu courts corrected this law. An effect of the 1882 law was the diminishing influence of the local native rulers on Islamic courts because the penghulu as religious judge became nominated by the Governor-General. This tendency became stronger after C. Snouck Hurgronje was nominated as "Adviser for Native Affairs" (1899-1906). Snouck and his successors were deeply involv-
ed in the functioning of the penghulu, especially as religious judges. They gave advice for nominations, reprimanded corrupt and ignorant penghulas and finally even organised formal examinations of candidates (a number of examples in G. Pipper, Studien over de geschiedenis van de Islam in Indonesie, 1900-1950, Leiden 1977, 63-96). The various activities of this colonial of-

cice created a climate of centralised administration in the field of religion, taken over by the Indonesian government and its Ministry of Religion since January 1945.

Urmiya. In his early youth he came to the capital
justice and from free gifts presented to them as heads
of mosques and judges in religious courts.
Since the independence of the Indonesian Republic
and the creation of a Ministry of Religious Affairs
(1946), the title of penghulu has been officially abol-
ished. His tasks in the field of religious courts have been
taken over by the Kapela Pengadilan Agama, head of all
religious courts in a district (kabupaten), while his tasks
as administrator of marriages, divorces and reconc-
iciations are committed to the Kapela Kantor Urusan
Agama, head of the local branch of the Ministry of
Religion on the sub-district level (kecamatan) and his staff.
The administration of mosques has commonly
become a private undertaking, not directly related to
the government. Many Muslims, however, are still
using the officially abolished term for the Kapela Kantor
Urusan Agama in his function as administrator of mar-
riages.
In 1974 the parliament of the Republic of Indonesia
passed a bill on marriage which strengthened the posi-
tion of the personnel of the Ministry of Religion,
because all cases of divorce now had also to be con-
sorted to by this part of the bureaucracy. During the
1980s, the Ministry of Religion carried out an exten-
sive survey concerning the procedures at religious
courts, and in 1989 the parliament passed a bill on
religious courts, where the subordination of these
courts to the general courts was abolished; the former
no longer need the approbation of the latter. Also, the
differences between Java-Madura and the (outer)
islands were abolished by the laws of 1974 and 1989,
which meant the ultimate centralisation of the Islamic administration.

PERAK, a sultanate on the west coast of the
Malay peninsula. It became politically independent in
the early 16th century following the fall of its overlord
Malacca [q.v.] to the Portuguese in 1511. Sometime
after 1528, the elder son of the refugee Malacca sultan
fled to Perak where the people accepted him as ruler.
Perak was already known for its extensive tin deposits,
and under this new régime it began to expand economi-
cally. But although it inherited many of Malacca’s cultural traditions, including adherence to
Sunnî Islam and Şafiîî law, Perak never developed into a similar Muslim centre because it remained a distribution point for tin and jungle products rather than being fully integrated into the international Islamic trade network.

The 18th century court text, the Misâ Melayu,
nonetheless suggests that by this time a loose Islamic hierarchy was already developing. Like other Malay courts, Perak attracted a number of Hadrami Sayyid migrants who were accorded great respect and who
have been seen as a powerful impetus to the growth of religious orthodoxy. However, the ability of the Perak court to act as a patron of Islam diminished sharply
from about 1800 because of a series of succession
disputes, invasion by neighbouring states, and a
growing Chinese mining population. In 1874, one of
the contenders for the throne signed the Pangkor
Treaty with the British, which obliged him to appoint
a Resident whose advice he was to follow in all matters
‘except custom and religion’. But this secular-
religious distinction proved impossible to maintain
because Islam was so much a part of Malay life. In
order to facilitate their own administration, British
advisors, through the sultan and the State Council,
actively fostered the clarification of Malay Islamic law
and the establishment of statewide religious hierar-
cy and court system. In the development of Malay
Islam during the colonial period, Perak is important
because many measures were initially introduced here
and later adopted in the other Malay states.
When the Federation of Malaya (later Malaysia
[q.v.]) gained independence in 1957, each state was
given responsibility for administering Islamic law. In
Perak, as in the other Malay states, Islam was con-
formed as the state religion, headed by the sultan who
acts in consultation with the Majlis Agama Islam dan
Adat Melayu (Council of Religion and Malay Custom).
The Majlis is empowered to issue fatwas and
through its executive arm, the Religious Affairs
Department, supervises matters such as the collection
of zakat and fitrah, and the teaching of Islamic doc-
tine. A system of syariah (shari‘a [q.v.]) laws court is
maintained to deal with religious offences committed
by Muslims. Like the rest of Malaysia, however,
Perak stops short of being a fully Islamic state because of the necessity of accommodating its considerable
non-Muslim population.

PERAK, the name of two Ottoman
statesmen.
I. Pertew Mehemed Pasha, Ottoman admiral
and vezir, started his career on the staff of the imperial
harem, became kapudâ•î basiç [see kapudan], later
Agha of the Janissaries, and in 962/1555 he was ad-
anced to the rank of vezir; in 968/1561 he was ap-
pointed third vezir, in 982/1574 second vezir and
finally commander (serdar) of the imperial fleet under
the kapudan pasha Mu•âûdühüm-zâde ’Ali Pasha. He
had fought at the Battle of Lepanto [see AVNAR, iv, nos.
382, 438; Mehmed Thüreyû, Şâhîî-i ’elbâmî, ii, 37-8.
II. Pertew Mehemed Sâ’d Pasha, Ottoman
dignitary and poet (1785-1837). He was of Tatar descent and was born in the village of Darîdja near
Urimya. In his early youth he came to the capital
Istanbul and entered upon an official career. In Muharram 1240/September 1824 he became minister for civil affairs (mülkiyye nāzir) and given the title of marshal (mujār). In the spring of 1836 he was given the title of Paşa but was dismissed by the autumn. In the beginning of September 1836 he was banished by Mahmud II to Scutari in Albania. Pertew Paşa set out a few weeks after his banishment to his place of exile but did not reach it. He died in Edirne on 5 Ramadan 1253/33 December 1837, three hours after a banquet which the governor there, Mustafa Paşa, gave in his honour (according to Gibb, HOP, iv, 333: Emin Paşa), and was buried there. No-one doubted that his sudden death was due to poison, and public opinion ascribed the crime to Mahmud himself. On his family, see Sıdıqi-i əğmənə, ii, 38. His son-in-law, who shared his views, was the intrigue-prone private secretary to Mahmud II, Wessaf Bey, a highly educated man but lacking in character and accessible to bribery, who lost his office about the same time as Pertew Paşa and was banished to a Tokat in Anatolia; cf. G. Rosen, Geschichte der Tuerkei, i, Leipzig 1866, 255-6. Pertew Paşa’s successor was his political opponent 2Akit Paşa, cf. Babinger, GOW, 357-8. As a statesman Pertew Paşa took up a pronounced anti-Russian attitude and was no less hostile to the Christians, whom he oppressed with long obsolete and forgotten laws. His feeling against the Christians increased with advancing years.

As a poet, Pertew Paşa composed a Dithen, which was esteemed as a model of the poetical art of the period of Mahmud II. There are two editions of it: Bülak 1253 (8°, 91 pp.) and Istanbul 1256 (8°, 130 pp.). On other works by Pertew Paşa, see Bursali Mehmed Tahir, Əğmənə müəllifleri, ii, 114-15. His valuable library, rich in manuscripts, was in what was formerly the Sellmiyye monastery in Uskudar, and is now the New Istanbul. This Pertew Paşa is not to be confused with the statesman and poet Pertew Edhem Paşa, who died on 7 Dhu ‘l-Ka‘da 1289/6 January 1873 as governor of Kastamuni [q. v.], a number of whose poems have been published e.g. a Şahmâne and Lêbhka, n.p. [Istanbul] n.d., and 18kâl ə-əfhâk r’sêkd al-abkâr, Istanbul 1904. On him, see Mehmed Tahir, op. cit., ii, 114-15; IA, art. Pertew Paşa (Şerafdîdît Turan).

Rosen, Geschichte der Tuerkei, i, Leipzig 1866, passim, esp. 255-6; Gibb, HOP, iv, 332-5, with references to Jouanno and J. van Gaver, Turquie, Paris 1843, for an account of the death of Pertew Paşa in Edirne; Mehmed Şüreyya, Sıdıqi-i əğmənə, ii, 38; Sâmi Bey Frâherî, Râmiya al-əlâm, 1494-5; Bursali Mehmed Tahir, Əğmənə müəllifleri, ii, 114.

(F. Babinger)

PERZEREN [see PRIJEN].

PESANTREN, Javanese “santri-place”, the educational institution of Indonesia where students (santri) study classical Islamic subjects and pursue an orthoprax communal life. Pondok (“hut, cottage”; cf. Ar. funûk) is an alternative term, meaning “lodgings” and, by extension, “Islamic religious boarding school”. Pesantren is used most often in Indonesia (especially Java), whereas pondok is the preferred term in Malaysia and the Patani region of southern Thailand. Sometimes the two terms are combined in Indonesia, when the speaker means to make clear that a traditional Islamic boarding school, a “pondok pesantren”, and not merely a religious day school (such as the more modern madrasa), is meant. The Minangkabau [q. v.] region of Sumatra has a parallel type of Islamic school, called surau. This article treats mostly the Indonesian institution, although some references to peninsular Malaysia are included.

The indigenous origins of the Javanese pesantren are thought by some scholars to be in the rural Javanese Hindu-Buddhist mandala and in the perceptions of the Javanese community of the world of the cosmos, in which the traditional charismatic teacher—versed in magical and healing arts—became the kiai (“venerable religious teacher, respected old man”), cf. šaykh of Islamic times. The traditional Islamic Kur‘ân school—the kuttâb—easily blended with the Javanese prototype, which helped to domesticate and, through a dominant Şâhîfî fiq, inform and integrate, if not unify, Islam in Java. There was also considerable Şûfi content in the programmes of many pesantren; and Islam, not different, Şûfism continues to be an important factor in a sector of pesantren life in Indonesia (see Madjid, 1983; Nasution et alii, 1990). The historical evolution of the pesan- tren is a complex matter, requiring analysis of its premodern existence in a dynamic, triadic relationship with the rulers (kraton) and the market (see Abdûllâh, 1986), before it became more of an independent, somewhat separatist venture in Islamic communal life in late colonial times and even more in the present.

The origins of the Malay pondok were probably in Patani [q. v.] (southern Thailand) in the 15th-16th century. Patani Muslims are proud of their tradition in Islamic education, their close ties to the Islamic Middle East, their success in resisting assimilation to Thai language and customs (in large part because of the pondok system in the sustaining of an Islamic microcosm), and the many Malay religious books written in Arabic script (kitab jau). To this day, Patani and neighbouring Kelantan in Malaysia have a strong pondok tradition, which resembles that of Indonesia in most respects (see Matheson and Hooker, 1988, 43-6; Winzeler, 1975).

The pesantren was well established in rural Java by the 17th century and has contributed much to the spiritual, cultural, social and economic character of Islamic village life down to the present (see Geertz, 1956, 144 ff.; Oepen and Karcher, 1988, passim). The Javanese pesantren was the dominant Islamic educational institution in Indonesia during the colonial period, when it was a bulwark against Dutch penetration into Islamic faith and order in the countryside (see Raharjo, 1985, 245, on the gradual post-independence shift of pesantrens from closed, guarded institutions to open and more independent schools).

Usually, pesantrens have been built in undeveloped space near a village or in a separate part of a settled location. Most students have traditionally travelled to attend pesantrens outside their native districts. Traveling for study was a hallmark of early Islamic education in Java, and it had both pre-Islamic Javanese as well as classical Islamic precedent. Thus there is often a somewhat alien character attaching to santris, because they are not connected with the local kinship
and adat. In recent years, pesantren students at selected institutions have begun to provide some social and economic services in their rural locations, as part of modernisation and development. One ‘specialised’ (takhasus) pesantren, Darul Fallah, in Bogor, West Java, is sponsored by teachers from the Bogor Agricultural Institute, for the purpose of training students in farming and crafts within a strong Islamic ethos devoted to useful careers in rural development (for an overview, see S. Widodo, in Oepen and Karcher, 1987, 140-5). But East Java’s ‘Pondok Modern’ students, for example, are forbidden to have social contact with the townspeople of Gontor and the idea of service to the immediate community is lacking. However, ‘Pondok Modern’ does have a strong sense of being a waqf that belongs to the world-wide Muslim community (short description, 26).

In Java (as in Nazareth) it is thought inappropriate for a spiritual leader to have been educated in his own community; the one who has returned, however, after gaining wisdom and power through foreign experience and travel, may find a receptive attitude in his home territory. In addition, the pesantren holds up an ideal of affinity based on a common, transcending Islamic faith and discipline, whereas so much of archipelago life centres on local custom and traditional social patterns. On the other hand, pesantren life provides for youth a laboratory for self-government and socialisation into that larger community of togetherness and consensus that residents of the Malaysian-Indonesian archipelago also value highly. Pesantren-educated Muslims have tended to criticise their compatriots for what they perceive to be their less than pure Islamic belief and lax ritual observance. This Islamist attitude has given Indonesia (mostly in the 20th century) its (much analysed) santri type of orthoprax Muslim, as contrasted with the vast community of abangan, that is, Muslims who have not been educated in the formal Islamic education in the Arabic classical curriculum and who perishes when the kiai dies, with advanced training in Mecca or Cairo, and there have been virtually untouched ones, with strong personal charisma and little in the way of formal Islamic education in the Arabic classical curriculum. Although often a pesantren perishes when the kiai dies, sometimes institutions endure and even flourish in the hands of the kiai’s heirs, who may include former students who marry the kiai’s daughters and carry on the teaching tradition.

The physical plant of a typical pesantren consists of the kiai’s house and lodging for assistants, a building for regular prayers and instruction, an open space for community activities and sports, latrines/bath with ablution facilities, student dwellings (the pondok proper), and utility buildings such as granaries, and surrounding fields that are worked by the students. There is a great range of physical accommodation found among pesantrens, from minimal necessities (the majority) to elaborate campuses, such as the Pondok Modern, in Gontor, East Java, with its Friday mosque, tall minaret, staffed library, bookstore, student laundry, guest quarters, playing fields, ball courts and other facilities.

Earlier accounts remark on the extreme filth of the students’ quarters, clothing and persons (e.g. Snouck Hurgronje, 1906, ii/30-1), resulting among other things in chronic skin disease. In the writer’s visits to pesantren, the range of personal cleanliness and housekeeping among males has appeared to be about what one would find in men’s college dormitories in the west, that is, from acceptable to unsanitary. Female lodgings have appeared to be clean and orderly and the women students very well groomed. The pondok has served as the main form of Islamic educational institution in Indonesia until the early 20th century, when modern schools—such as the madrasa—began to be established. A distinctive aspect of the pesantren is its character as a nearly total institution. Although students freely come and go, and although the curriculum is often largely accessed by means of private study and individual interaction with the kiai, or his assistants, the regime of the typical pesantren is a 24-hour-a-day way of life, with morning classes and/or tutorials, Kur’ān recitation, afternoon study and work in the fields, with the rest of the time spent preparing meals and taking care of personal maintenance tasks, perhaps doing errands for the kiai and his staff, and honourable begging (in earlier periods especially). The all-important regular prayers punctuate each day’s progress.

The pesantren is often a place of little comfort, extreme crowding, and scanty means. Student body sizes range from scores to thousands, with some Javanese establishments drawing students from throughout Indonesia and abroad (see Direktori Pesantren: I, passim, for specific enrollment figures and curricula of 255 selected institutions from the more than 5,000 in Indonesia). As no or minimal fees are charged, depending on the institution, poor students can benefit from the régime of strict moral and religious

more than in recent reformist times, often provided Ṣūfi indoctrination, both to the santris and to people in the community. Of no small consequence is the kiai’s personal property—land and buildings—which may be inherited, donated as waqf, or acquired by means of his industry. Whatever goes on in the way of teaching an Islamic curriculum—and this has varied greatly in the past, although today standardisation of the curriculum has widely set in—the kiai nevertheless bestows on the operation a special blessing and legitimacy. There have been extremely learned kiais (and gurus), with advanced training in Mecca or Cairo, and there have been virtually untouched ones, with strong personal charisma and little in the way of formal Islamic education in the Arabic classical curriculum. Although often a pesantren perishes when the kiai dies, sometimes institutions endure and even flourish in the hands of the kiai’s heirs, who may include former students who marry the kiai’s daughters and carry on the teaching tradition.

The physical plant of a typical pesantren consists of the kiai’s house and lodging for assistants, a building for regular prayers and instruction, an open space for community activities and sports, latrines/bath with ablution facilities, student dwellings (the pondok proper), and utility buildings such as granaries, and surrounding fields that are worked by the students. In the writer’s visits to pesantren, the range of personal cleanliness and housekeeping among males has appeared to be about what one would find in men’s college dormitories in the west, that is, from acceptable to unsanitary. Female lodgings have appeared to be clean and orderly and the women students very well groomed. The pondok has served as the main form of Islamic educational institution in Indonesia until the early 20th century, when modern schools—such as the madrasa—began to be established. A distinctive aspect of the pesantren is its character as a nearly total institution. Although students freely come and go, and although the curriculum is often largely accessed by means of private study and individual interaction with the kiai, or his assistants, the régime of the typical pesantren is a 24-hour-a-day way of life, with morning classes and/or tutorials, Kur’ān recitation, afternoon study and work in the fields, with the rest of the time spent preparing meals and taking care of personal maintenance tasks, perhaps doing errands for the kiai and his staff, and honourable begging (in earlier periods especially). The all-important regular prayers punctuate each day’s progress.

The pesantren is often a place of little comfort, extreme crowding, and scanty means. Student body sizes range from scores to thousands, with some Javanese establishments drawing students from throughout Indonesia and abroad (see Direktori Pesantren: I, passim, for specific enrollment figures and curricula of 255 selected institutions from the more than 5,000 in Indonesia). As no or minimal fees are charged, depending on the institution, poor students can benefit from the régime of strict moral and religious
training, socialisation into community self-government, and time for meditation on life from an Islamic perspective. Students generally range in age from around ten to twenty-one, although in some cases children as young as seven attend a pesantren (as at the Pesantren Ihyaul Ulum, near Gresik, East Java). In larger pesantrens, the older students act as preceptors for the younger ones and self-government is the rule, with the kiai standing aloof, his house and his face turned away from the pondok part of the campus where the students reside. He is approached for help and intervention only for special and urgent reasons.

The pesantren curriculum has always been centred on the Kur'an, both its recitation and interpretation, and Arabic language (or Malay or Javanese in Arabic script) texts on jurisprudence, doctrine, classical Arabic grammar and rhetoric, ethics, mysticism, hadith and devotional practices (e.g. collections of prayers, praise, invocations blessings). (See Matheson and Hooker, 1988; and van Brunissen, 1990, for genres and titles of Arabic script books used in pesantrens and pondoks over the past century.) Pesantren textbooks are often referred to as kitab kuning "yellow books" because of the orange-tinged paper they have often been printed on. Modernist pesantrens, such as have been supported by the Muhammadiyah, use textbooks in Romanised Indonesian (as well as Arabic language and script), which are called, by contrast, buku putih "white books." The distinction between the two types of Islamic education—traditionalist and progressive—symbolised by the colours, is much less pronounced than a generation ago.

Today, most Indonesian pesantrens have augmented their traditional course of studies to provide instruction in modern subjects in a curriculum divided into three levels: ibtidaiyah ("primary" with ca. 60% general content); tonaatuniyah ("middle" with ca. 40-50%); and aliyyah ("higher" with only 20%) (Rahardjo, 1985, 241). Some pesantrens also have an advanced level, takhsasir, "specialised", where students study only Islamic subjects, such as Kur'anic studies, fiqh, tasawwuf and others. Many pesantrens are still rural and provincial, with a curriculum dominated by Islamic subjects taught by rote. Arabic proficiency varies considerably, but there are students who are able to test their students' competence to a level sufficient for studying advanced classical texts rather than simpler summaries. Moreover, students are often obliged to study at more than one pesantren (whether in Indonesia or the Malay world) if they would cover a sufficient range of the classical Islamic studies curriculum. However, the contents and methods of pesantren instruction have undergone considerable modernisation in the more progressive institutions, such as the aforementioned ones at Gontor and Bogor, where modern secular subjects—such as social studies, natural science, mathematics, history and English—are also taught.

Traditional pesantrens, based on individualised instruction under the authority of a kiai, although still serving a mostly (but not exclusively) poor, rural clientele, have steadily diminished in importance since independence, when the more modern madrasas, in Islamic education, and the sekolah or "secular" school, with a minimum of religious instruction, have come to dominate. The bureaucratically regulated (whether by government or voluntary religious associations) madrasa offers modern subjects alongside Islamic studies, but, unlike the pesantren, has neither kiai nor an all-encompassing social environment of Islamic discipline. The madrasa continues to be a major part of Indonesian education, although the sekolah is continually gaining ground as universal public education gradually becomes a reality in Indonesia (see Steenbrink, 1986).

The modern type of pesantren is far different from the old-style institution. At Gontor, for example, the more than 1,900 students are required to converse socially only in Arabic and English (Indonesian is the instructional medium in general courses, with Arabic the medium in Arabic and Islamic studies and English for teaching that language). Lapses into Indonesian or Javanese in daily life are punished by a short haircut, which is a major humiliation for youth acquainted with rock culture and Jakarta or Surabaya street life (to be "sent to a pondok pesantren" is a proverbial parental threat when children become unruly at home). The strict Arabic- and English-only rule testifies to the institution's commitment to training its students to be capable participants in both the global Islamic and economic communities. A number of outstanding Indonesian religious, civic, governmental and educational leaders have graduated from Gontor, which since the later 1960s has also granted the B.A. degree (in usul al-din). And unlike most old-time pesantrens, the "Pondok Modern" has been placed on a secure foundation for continuing development and growth as a rational organisation with a large and capable professional staff and foreign as well as internal funding (e.g. the Saudi government provided the resources for a major academic building on the campus).

The modern pesantren, whether in Bogor, Gontor or a number of other places, does not exist in name only, for it continues, like its predecessor, to sustain a closely regulated, full-time Islamic communal ethos set apart from the differing but equally worrisome seductions of syncretistic Javanese culture and modern secular materialism. Java, particularly, is experiencing increasing urban encroachment on its rural areas, so that once isolated pesantrens are being surrounded by inexorable development. It is likely that some of the special qualities of pesantren education will be preserved, but in new ways. One widespread development in Indonesia is pesantren kiti ("express pesantren"), intensive Islamic education for youth during the summer vacation, held on university campuses and in other facilities. As the Indonesian social scientist, Taufik Abdullah, has summarised the situation, "the future of the pesantren will be determined by its ability to maintain its identity as an ulama-dominated educational system, while at the same time clarifying its role as a complementary feature of national education." (102)

Bibliography (in alphabetical order of authors):

(From M. Denny)

PESHAWAR, a city of Muslim India, in the northwestern part of the subcontinent, now in Pakistan (lat. 34° 01' N., long. 71° 40' E., altitude 320 m/1,048 ft.). In modern Peshawar, it is also the name of various administrative units centred on the city (see below). The district is bounded on the east by the river Indus, which separates it from the Punjab, and on the south-east by the Nangarhar, and on the south by the river Indus, which separates it from the Pandjab. The Swat valley, the country is still studded with crumbling Buddhist stupas. Here, too, have been found one of Asoka's rock edicts is to be found near the village of Shahbazgarha in the Yusufzay country. Both Fa-hien, in the opening years of the 5th century A.D., and Huen Tsang, in the 7th century A.D., found the inhabitants still professing Buddhism. It is also on record that Pühragahara was the capital of Kanishka's dominions. Through centuries of almost unbroken silence we arrive at the era of Muslim conquest, when, between the 7th/13th and 10th/16th centuries, numerous Pathan tribes from Afghanistan spread over and conquered the country roughly corresponding to the modern North-West Frontier Province (T.C. Plowden, Kabul-i Afghān, chs. i-v; Selections from the Tārikh-i Murāshā). The town of Peshawar is an ancient one, and as Paraghawara or Puragahara it was once the capital of Gandhāra.; it was also called Bagram, apparently such in early Pashto poetry. The present name of the town is popularly ascribed to the Mughal Emperor Akbar (q.v.) and is said to derive from Persian peshawar "frontier [town]". Islam first appeared there in the time of the Ghaznavids (q.v.). Sebuktīgīn fought over the surrounding region against its then possessor, the Hindūshāhīs (see hindooshāhīs) ruler Diypāl in ca. 376/986-7, and his son Mahmūd like- wise combated and defeated there Diypāl's son Anandpāl in 396/1006. Thereafter, it came firmly within the Ghaznavid dominions, forming an important link in the route down from the Afghan plateau to the Ghaznavid capital in northern India, Lahore (Lāhāwār [q.v.]). In 575/1179-80 Peshawar was captured by the Gūrid Muḥīr al-Dīn Muhammad b. Sām [q.v.], but destroyed by Čingiz Khān some forty odd years later. The town has therefore retained its strategic importance, it is somewhat surprising that Peshawar is so little mentioned in the Indo-Muslim sources.

Towards the end of the 9th/15th century, according to local tradition, two large branches of Pathan tribes, the Khakhs and the Ghūriyya Khel, migrated from their homes in the hilly country around Kābul to the Djalalābād valley and the slopes of the Safiād Kōh. The most important divisions of the Kākhāb were the Yūsufzay, Gugiyanī and Tarkhānī; the Ghūriyya Khel were divided into five tribes, the Mohmands, Khāllīs, Dāwūdzhāys, Čamkannī and Zerānīs. The Yūsufzay, advancing into the modern Peshawar district, expelled the inhabitants, known as Dilāzhāiks, and finally conquered the country north of the Kābul river and west of Hōtī Mārdān. By the opening years of the 10th century, the Ghūrids had already reached the Khaybar area. Eventually these powerful tribes dispossessed the original inhabitants, driving some to the Swāt Kōhīstān and forcing the Dilāzhāiks across the Indus. Later, the Ghūriyya Khel attempted to oust the Kākhā branch but were signally defeated by the Yūsufzays.

Since the modern Peshawar district lay athwart the route of invading armies from the direction of Central Asia, much of its history resembles that of the Pāндāb. The Pathans of this part of the frontier proved
a thorn in the side of the Muslim rulers of India, and, although nominally incorporated in the Mughal empire, they were never completely subjugated, even Akbar and Aurangzeb contending themselves with keeping open the road to Kabul. Bâbur [q.v.] had used Peshawar as a base for campaigns into Kohâr, Banâ, and Bangâh, and Awrangzib's governor of Kâbul, Mahâbat Khân b. 'Ali Mârdân Khân [not to be confused with Mahâbat Khân Zamâna Beg [q.v.]], used Peshâwar as his winter capital, building there his great city (see below). With the decline of Mughal power, Peshawar fell (in 12th/18th century) into the hands of the Persian invader Nâdir Shâh Afârân [q.v.] and then subsequently taken over by the Afghan chief Ahmad Shâh Durrânî [q.v.] of Kandahâr; under his son and successor Tîmûr Shâh, the Mughal practice was revived of using Kâbul as the summer capital and Peshawar as the winter one.

With the militant expansionism in the Pandjab of the Sikhs in the early 19th century, Peshawar in 1834 was captured by the Italian commander in Sikh service, General Paolo di Bartoleomeo Avitabile, but with the defeat of the Sikhs by British forces in 1849 and the annexation of the Pandjab, the Peshawar valley came under British control for nearly a century; administratively, it remained part of the Pandjab until the formation of the North-West Frontier Province in 1901. (For British administration and development with the 'viceroy' and 'trustee' theory of the region, see C. Collins Davies, The problem of the North-West Frontier 1890-1908, 2nd ed. London 1975.) In the 1930s, the Peshawar region was violently disturbed by the agitation of the Khudâi Khudâmadârs or 'Red Shirts' of 'Abd al-Ghaffâr Khân [see Khân, 'Abd al-Ghaffâr, Suppl., allied with the Indian National Congress; this rather unnatural alliance, against all the trends in other Muslim parts of India, gave a peculiar flavour to NWFP local politics in the run-up to Partition in 1947, although after that date the Muslim League took over from the previous Congress-inclined provincial government (see J.W. Spain, The Pathan borderland, The Hague 1963, 165-73, 211 ff.).

Peshawar city was the capital of the NWFP of Pakistan for eight years, until in 1955 the NWFP was amalgamated, together with the provinces of the Pandjab, Sind and Balâdîstân, into the 'one-unit' province of what then became West Pakistan. The city (population in 1981, 555,000, since Partition, almost entirely Muslim, the great majority ethnically Pathân) is situated near the left bank of the Bârâ river about 21 km/13 miles east of the Khyber Pass. Its importance as a trading centre on the main route between India and Afghânistân increased after the construction of the Khyber railway to Landi Kual in 1925. It has 16 gates which are closed every night and opened before sunrise. The richest part is the Andar-Shahr where before Partition the wealthier Hindus had taken up their abode. In this quarter, conspicuous on account of its high minarets of white marble, stands the mosque of Mahâbat Khân. On the north-west the city is dominated by a fort known as the Bâlâ Hişâr. The Shâhî Bâgh with its spacious and shady gardens around the ancient fort is a favourite resort of the inhabitants in the spring. The fame of the Khâs Khâ'ânî or Storytellers' Bazaar is known throughout the length and breadth of the frontier and beyond.

Two miles to the west of the city are the cantonments, the principal military station in the province. Some three miles to the west of the cantonments is the former Islâmînîya College, since 1950 erected in Peshawar University and now with five constituent and eighteen affiliated colleges.

Peshawar is also the chief-lieu of a district and of a division (area 38,322 km²/14,798 sq. miles) which comprises the districts of Mârdân, Hazâra, Kohâr and Peshawar plus tribal agencies.

PESHWA, a Persian word for 'leader' with various connotations (Pahl. peshpây). As a title, it was used for one of the ministers of the Bahmaní sultans of the Dakhan and, more specifically, the hereditary ministers of the Marâthâ kings of Satara [see MARATHES]. At first, the Peshwa was only the mukhya pradhân or 'prime minister' of Ávâdji's Council of Eight, and this post was not hereditary up to 1125/1713, the year of the accession of Ávâdji Visvânâth, when the Peshwâ began to outstrip the other pradhâns and the Pratinidhi in importance. When the Peshwâ transferred his capital to Pûna [q.v. (Poona)], the Council of Eight fell into disuse. With the promotion of Ávâdji Visvânâth to the post of Peshwa by Shâhû, a great number of Brahmans from his subaste of the Cit-pâvans or Konkanasthas began to migrate from the Konkan to the Dakhan. Brahmins of all subastes had figured prominently in the early part of Shâhû's reign, but by the 1730s the Cit-pâvans had already gained ascendency in the Marâthâ state. Before the rise of Marâthâ power, these Brahmins had occupied a rather low position in the Brahmâ hierarchy. Now, however, they began to derive a sense of caste superiority from their association with the Peshwâ.

Ávâdji Visvânâth in 1131/1719 obtained the farâns for svârgâda, cauâth and sardeimukhi from the Mughâl emperor, after which he began to re-organise the revenue administration through the promulgation of an elaborate scheme of quota repartition, both in the Western Dakhan and the newly conquered areas where the Mughals had not yet gained full control but only levied cauâth and sardeimukhi. Marâthâ expansion to the north began to gain momentum under Ávâdji Visvânâth's son Bâdji Râo, who succeeded him in the Peshwâship in 1132/1720. This proved to be of great importance for the consolidation of the Peshwâ's power in opposition to the older Marâthâ sardârs, who were adherents of the Râdjâ of Satara but jealous of the Peshwâ's supremacy. The Peshwâ later gave out to have received sanction from the Mughâl emperor for levying tribute from the sikhs of Gujârât and Mâlîwâ. According to the Shâhâ carîta, the Peshwâ's attempts to extend Marâthâ power in Gujârât, Mâlîwâ and Hindustân were for some time opposed with success by the Pratinidhi, who proposed an expansionist policy into the Konkan and the Kanknata, to complete the conquests begun by Ávâdji. But it was the Peshwâ who received the Râdjâ's sanction to pursue the expansion to the north as the latter's delegate, and from then on the Peshwâ steadily acquired more and more power and wealth. The Râdjâ of Satara became almost entirely a figurehead already under Bâdji Râo, who promoted his own sardârs, Pawâr, Holkar and Sindhîâ, to strategic commands in the north. Bâdji Râo himself was also, up to his death in 1153/1740, incessantly campaigning: in Mâlîwâ, the Dakhan, Gujârât and in the Konkan.
Badji Rao was succeeded by his eldest son, BaladjI Badji Rao, in 1153/1740. Now the conquests of Malwa and Gujjarat were completed. And it is in BaladjI Rao that many of the Brahman families who were prominent at the turn of the 18th century date their rise. There now arose two distinct groups of sardars: on the one hand, the relations and adherents of the Râdjâ of Satara, the Bhônâle of Nâgpur [q.v.] the remainder of the Council of Eight and the Pratîni-di, on the other, the new men put forward by the Peshwâ, most important of which were Sindhiyâ and Holkar. In 1153/1174 BaladjI's claim to Malwa was recognised by an imperial farman of the maâb-sabadâr or "deputy governorship" of that province. Between 1153/1174 and 1161/1174 the same Peshwâ organised four other expeditions to the north: twice to Râджâstân, to Bihâr, Bengal and Bundelkhand, and against the Afghân Ahmad Shâh Abdali [q.v.] in Hindustân. After the death of the Marâthâ king Shâhâ in 1162/1749, BaladjI assumed power in all but name. The new king of Satara, Râmârdjâ, was left in almost complete isolation; the Râdjâ's attempts to regain control were unsuccessful, and in 1164/1751 he, in effect, renounced all sovereign power, agreeing to sanction the Peshwâ's policies unconditionally. Shâhu's widow Tarâbâr subsequently made a final attempt to subvert "the Brahman government" of the Peshwâ, but again without success. The Râdjâ, however, continued to invest each new Peshwâ with the khilat or robes of honour [see KhiLua] and similar ceremonial of state. The Peshwâ continued to travel, as the Râdjâ's "prime minister", to Satara every year in order to submit the revenue accounts.

BaladjI did not survive the catastrophic Battle of Pânipat [q.v.] in 1174/1761, in which the Marâthâs were defeated by the Afghân. His son Mâdâvâ Rao then received the investiture from the Râdjâ, who remained in confinement. Mâdâvâ Rao reigned for eleven years, a period in which he succeeded in restoring the prestige of the Brahman râdj. Cîpîvan power reached its peak under Nânâ Phadnis, the regent in the name of the child of Mâdâvâ Rao's murdered brother Nârâyân Râo. Still, the Râdjâ of Satara continued as the de jure sovereign. From 1188/1775 to 1209/1795, Nânâ Phadnis's power was supreme. Although he was almost 1,000 in 1541, close to 1,500 in 1543, and 734 in 1628. The total number of the economy), Budapest 1985, 490.) As regards number diminished rapidly, as in most administrative centres of Hungary: 122 Christian heads of families were found here in 1546, of which there remained 63 by 1590 (intermediate values: 1559-110, 1562-98, 1580-66 heads of families; cf. Gyula Kâldy-Nagy, A Budai szandzsak 1546-1590. évi összefoglalás. Demográfiai és gazdasági közösségi adatok ("Registers of the sangak of Buda in 1546-1590. Data on demography and economy"), Budapest 1985, 490.) As regards Muslims, our knowledge is limited to mercenaries, who were almost 1,000 in 1541, close to 1,500 in 1543, and 734 in 1628. The total number of the population could not have exceeded 2,500-3,000 people, although it is difficult to guess at the proportion of possible Muslim civilians.

The role of Pest as a commercial centre was significant both for local and transit trade. Its importance was enhanced by the immense floating bridge erected in 1566 when Sokollu Mustafa was governor of Buda. The náhije of Pest was the largest within the fluid of Buda, with more than 200 settlements and mezraus.

(G. DÁVID)

PETRO VADÁN [see VARÁDIN].

PETRUS ALFONSI, Andalusian polemicist and translator (fl. A.D. 1106-ca. 1130), convert to Christianity in 1106, composed his Dialogi contra Iudaos in 1108 or 1110. Staged as a debate between the Arab Abû al-Maslî b. Ishâq b. Ismâîl b. Khâlid (i.e. Petrus) and the heretical Christian self (Peter), the Dialogi ridicule Talmudic Aggadah, showing that they contradict principles of Graeco-Arabic philosophy and science (in particular astronomy); the Dialogi became the most widely-read anti-Jewish text of the Latin Middle Ages.

In the fifth chapter of the Dialogi Alfonsi attacks Islam, following—to a large extent—the Arabic text attributed to ʻAbd al-Masîh b. Ishâq b. Ismâîl b. Khâlid (i.e. Petrus) and the heretical Jew, Abd Allah b. Salâm (q.v.) and Chabalahabar (Kaâb al-Alhâbar [q. v.]). He gives a curious description of pre-Islamic cult rituals at Mecca (based, if we may, on the Jewish sources), asserting that current Islamic practice is tainted by these pagan origins. Later Latin writers on Islam used Alfonsi’s tract extensively.

Alfonsi taught astronomy in England and France. In 1116, he produced an inept Latin adaptation of the Zijd al-Sindhind of al-Khârîzmi [q. v.]; subsequently, Adelard of Bath (probably with Alfonsi’s help) produced a somewhat better version. He later wrote an Epistolae ad Peripateticos, urging French scholars to study astronomy and arguing for the superiority of Arab texts to those of Latin authors such as Macrobius.

Alfonsi’s Disciplina clericalis is a collection of proverbs accompanied by short, illustrative fables; it is one of the earliest Latin texts to contain stories of Arabic provenance. The Disciplina was extremely popular for centuries (both in Latin and in its many vernacular translations); its fables were used by preachers as exempla, incorporated by Boccaccio into the Decameron, and in the 13th and 16th centuries in printed editions of Aesop.

J. Tolan.

PHILBY, Harry ST. John BRIDGER (1885-1960), Arabien explorer and traveller, adviser to King ʻAbd al-ʻAzîz b. Suṭûd (Ibn Suṭûd) [see Suṭûd, ʻAI.] and British convert to Islam.

Born of parents connected with planting and with official service in the Indian subcontinent, he had a conventional public school and Cambridge University education, and himself entered the Indian Civil Service in 1908. Already he showed a flair for learning Indian languages and for immersing himself in the cultures of India, until the First World War found him in ʻIrâk (1915-17), where he first acquired what became a lasting love for the Arab world and made his first trip into the interior of Arabia as part of a government mission in 1917-18 to persuade Ibn Suṭûd (Ibn Saud) to attack Ḥâ’il and its pro-Turkish rulers the Al Râḥîd [q. v.]. After the War, he remained in the Middle East and in 1920 was persuaded then to enter the newly-created kingdom of Transjordan.

But in 1924 he decided to resign from government service, disillusioned with British policy in the Middle East and its failure to recognise the new forces of Arab nationalism. In the ensuing lean years, he became involved, with little success, in business ventures in the Middle East and in pro-Arab, anti-British press polemics. He had often mentioned the potential advantages for his business activities in becoming a Muslim, and in 1930 became one at the hands of Ibn Suṭûd, though most Arabs were subsequently to consider him insincere and most Europeans to regard his Islam as a convenience rather than an act of genuine faith. It did, however, give him the entrée to Ibn Suṭûd’s court and the King’s companionship. He was now able to make his great cross-Arabian Desert journeys, including the Rubâb al-Khâlîf [q. v.] in 1932 (although he had been beaten to this by Bertram Thomas two years previously), and in 1936-7 around the southern fringes of Nadîd [q. v.] and the northern fringes of the region to the east of the Aden Protectorate, where his appearance with a Suṭûd armed party prompted British fears that his mission involved Suṭûd designs on the South Arabian shaykhdoms; a deliberate intention in various of his journeys of enlarging Suṭûd borders was in fact almost certainly a motive as well as the pure love of exploration (see J.B. Kelly, Jeux sans frontières: Philby’s travels in southern Arabia, in C.E. Bosworth et alii (eds.), The Islamic world, from classical to modern times. Essays in honor of Bernard Lewis, Princeton 1989, 701-32). Philby’s journeys were nevertheless heroic ones, during which he took meticulous records of all aspects of natural phenomena, and much of this material is deposited in the Royal Geographical Society, London). Further business projects involved him with American oil companies and with the import of Ford cars. He was back in Britain during the Second World War, but returned to Arabia in 1945, and between 1950 and 1953 undertook further journeys of exploration—to Kûrast al-Faw [see AL-FA‘AW], to Midian [see MADYAN sū‘ayb] and into the south, where he gathered petroglyphs and Thamudic and South Arabian inscriptions. But the new king, ʻAbd al-ʻAzîz’s son Suṭûd, was displeased at Philby’s denunciations in his writings of the laxity of morals and habits of luxury amongst the ruling elite which newly-found oil wealth had brought; in 1955 he had to leave Saudi Arabia for Beirut; and after returning twice to al-Riyâd [q. v.] died in Beirut in 1960.

Philby’s varied public careers were vitiated by his at times immoderate language and hectoring behaviour, for he lacked the qualities of the diplomat and conciliator. His fame rests upon his many books about the peninsula and his acute observation of its geographical and scientific features. He never claimed to be a professional historian, and was careless about checking dates and consulting parallel sources in his books on Suṭûd history (see G. Rentz, Philby as a
the introduction of Islam to the island of Mindanao, however, is believed to have come not from Sulu but from Johore, with the arrival at the mouth of the Pulangi River (the present site of Cotabato) around 1515 of Sharif Muhammad Kabungsawan and a group of Samal people. (Maguindanao legends also tell of earlier visits by the foreign Muslims Sharif Awliya and Sharif Maraja, who married Awliya's daughter.) Kabungsawan, the son of an Arab father from Mecca and allegedly descended from the Prophet, and a Malaccan princess, is a powerful figure in Philippine Muslim history. He is generally credited with the spread of Islam in Mindanao, by a combination of proselytising, military conquest and diplomacy, and he provided the foundation for the Maguindanao Sultanate, though it appears to have been his great-grandson, the celebrated Kudarat, who first adopted the title of sultan. From the Cotabato area, Islam spread inland to Lanao and other parts of western and central Mindanao, from the north coast to the Gulf of Davao in the south.

In the late 15th to early 16th centuries Islam also spread from Borneo to Mindanao in the northern islands of the Philippines. Muslim leaders Rajah Sulaymān and Rajah Lakandula, both kin of the Sultan of Brunei, controlled areas around Manila and Muslim influence extended south of Manila into what is now Batangas. Thus by the late 16th century, Islam was well established in Sulu and western Mindanao and was spreading eastwards on Mindanao and to the northern islands. In the southern Philippines there were powerful sultanes and, encouraged by visits from foreign missionaries, religious institutions were growing in number and influence. Jolo was an important centre for trade, and intermarriages linked Philippine Muslims with Malay states to the west and south.

2. Islam in the colonial Philippines

When the Spanish arrived in the Philippines in 1521 they recognised among the local Muslims their old adversaries the “Moro”, and in effect resumed the crusades in Southeast Asia. Following their permanent settlement in the islands in 1565, the Spaniards reversed the spread of Islam in the north and embarked upon a series of Moro Wars against the Muslims in Sulu and Mindanao as well as in Bornéo. Spanish policy in the Philippines was to Hispanise and Christianise the native population, and the commander of the first military expedition to Mindanao and Sulu was specifically instructed to prevent the teaching of the “doctrine of Mahoma” and to destroy places in which “that accursed doctrine has been preached”. The Spaniards partially succeeded in halting the easterly spread of Islam on Mindanao and
established footholds in western Mindanao, notably at Zamboanga. In addition to religious and political objectives, Spain sought to displace Moros in local and regional trade, to stop Moro piracy against Spanish shipping, and to put an end to Moro raids against Spanish and Christianised indio settlements in Luzon and the Visayas. These objectives were pursued strongly in the 17th and 18th centuries as Dutch commercial activity in the area increased, as Jolo became a major entrepôt in the European trade with China, and as attacks on Visayan settlements increased along with the growing importance of slavery to the regional economy.

In 1637 Lamitan, the capital of Sultan Kudarat of Maguindanao, fell to Spanish forces; Jolo was captured the following year. Eight years after the fall of Lamitan, however, the Spaniards again withdrew, signing a treaty with Kudarat which recognised his sphere of influence from Zamboanga to the Gulf of Davao and eastwards to Maranao territory. Fighting broke out again in 1656 with a dghay led by Kudarat and the sultans of Sulu, Ternate and Makassar. In 1663 the Spaniards again withdrew, not returning until 1718, when another round of the Moro Wars began. Finally, with increasing European rivalry in the area, the balance of advantage shifted in favour of Spain with the introduction of steam gunboats in the mid-19th century. In 1884 Spanish authorities set up a “Government of Mindanao”, and eighteen years later the Sultan of Sulu acknowledged Spanish sovereignty. When in 1898 the Philippines were ceded by Spain to the USA under the Treaty of Paris, the Muslim areas of Sulu and Mindanao were still not fully under Spanish control, but this did not prevent their being included in the settlement, notwithstanding Muslim protests.

Under an agreement signed with the Sultan of Sulu in 1899 the occupying US army at first adopted a position of “non-interference” in the Muslim areas. This was soon abrogated, however, and replaced by policies designed to “develop, civilise and educate” the Muslims. The American administration made some attempt to accommodate aspects of Muslim social life, particularly in relation to Islamic law and education. Proponents feared an undermining of traditional authority and attempts to assimilate them into the larger, Christian, society. Resistance to American rule resulted in a series of military confrontations, culminating in the battle of Bud Bagsak on Jolo in 1913. Two years later the Sultan of Sulu surrendered his temporal authority to the US government. Under a “policy of attraction” health and education services were improved and public works programmes undertaken.

Initially administered by US army officers as the Moro Province, Mindanao and Sulu subsequently came under a separate department headed by a civilian governor and later (until 1935) under the Bureau of Non-Christian Tribes. With increasing Filipinisation of government, however, the special provisions granted to the Muslim areas of Mindanao and Sulu were progressively withdrawn, including, in 1936, recognition of civil titles such as sultan and datu. In response, there were several local uprisings and in a series of petitions in the 1920s and 1930s Moro leaders asked the colonial government either to incorporate Mindanao and Sulu, with special provisions, within the USA or to recognise the separate independence of a Moro Nation.

3. Islam in the independent Republic

What came to be referred to as “the Moro Problem” (though Peter Gowing suggested as a more appropriate term, “the Moros’ ‘Christian Problem’”) was inherited by the independent Philippine Republic in 1946. Moreover, heavy immigration from the northern islands, encouraged by the colonial government earlier in the century but increasing in scale after the Second World War, exacerbated the situation insofar as it created tensions between Muslim communities and immigrant settlers, especially over land ownership, and undermined the political authority of Muslim leaders. In 1954 a special committee of the Philippines Congress was created to investigate “the Moro Problem”. As a result of its report a Commission on National Integration was set up to promote “the economic, social, moral, and political advancement of the non-Christian Filipinos”, but it achieved little before being abolished in 1975. A subsequent report of a Senate Committee on National Minorities identified immigration and land grabbing as the major sources of Muslim grievances, but provided no solutions to the growing unrest.

As in earlier periods of Moro history, a feeling of grievance among Muslim communities promoted a heightened sense of Islamic identity. In the 1950s and 1960s this growing Islamic consciousness was reinforced by tendencies towards “Islamic reassertion” internationally. Within the Philippines it was reflected in a proliferation of mosques and masjids, a burgeoning of Islamic organisations, increasing contacts with overseas Muslims including missionaries, and a growing sense of resentment against the Christian-dominated government in Manila. A significant reflection of this was the formation in 1968 of the Muslim Independence Movement (MIM) under Datu Udtog Matalam. The MIM’s stated objective was to create an independent Islamic Republic of Mindanao, Sulu and Palawan. The following year a group of young Muslims, recruited through the MIM, began guerrilla training in neighbouring Malaysia. This group became the nucleus of a more radical Muslim separatist group, the Moro National Liberation Front (MNLF). Elections in 1971 proved to be something of a watershed in Muslim-Christian relations in the southern Philippines. With the position of the Moro elite in traditional authority under threat from Christian immigrants, and with increasing Christian-Muslim tension, the election campaign in Mindanao was marked by a number of violent incidents. When the following year Philippine President Marcos declared martial law, the conflict in the southern Philippines was listed as a reason for such action.

In 1972 leadership of the Moro movement was assumed by Nur Misuari as chairman of the MNLF. The MNLF received assistance initially from Sabah and subsequently from Libya. Leadership of the MNLF came mostly from the young men of traditional elite families, though Misuari himself was a commoner and had been associated with the Left while at the University of the Philippines. As well as demanding restitution of Muslim lands and recognition of a separate Bangsa Moro Republic, the MNLF also called for social reform within Moro society to reduce the power of the traditional aristocracy. A second prominent Moro organisation, the élite-dominated Bangsa Moro Liberation Organization (BMLO), began with similar ethno-nationalist objectives but decided to co-operate with the Marcos government; in 1974 its leader, Rashid Lucman, was recognised by President Marcos as the “Paramount Sultan of Mindanao and Sulu”.

Over the next few years the MNLF maintained a
Map of the Philippines

Areas of Muslim concentration

(source: Gowing 1979)
state of insurgency against the Philippine government, with heavy casualties on both sides and considerable disruption of Muslim communities. Over 100,000 Philippine Muslims took refuge in Sabah. The MNLF's demands were supported by the Organization of Islamic Conference and the Islamic Conference of Foreign Ministers. Following negotiations in 1976, the "Tripoli Agreement" was signed by representatives of the MNLF and the Philippine government. The agreement contained general provision for the granting of autonomy in the Muslim areas of Mindanao and Sulu; however, as a result of decades of immigration, only five of the twenty-three provinces of Mindanao and Sulu contained Muslim majorities and disputes arose between the MNLF and the Philippines government over the terms of a proposed plebiscite on autonomy. In the event, the MNLF rejected the plebiscite, which was heavily boycotted, and further talks broke down. The government nevertheless went ahead to set up autonomous governments in the two administrative regions with substantial Muslim populations, though these were generally judged to be ineffective. As well, the Marcos government adopted a number of measures to promote Muslim interests. These included commitment to the codification of Muslim laws and the introduction of Sharia courts, establishment of a Muslim Amanah Bank, removal of restrictions on the historic barter trade between the Muslim Philippines and Borneo; creation of an Institute of Muslim Studies within the University of the Philippines, proclamations of Muslim holidays; and several economic development programmes in Mindanao-Sulu. Grants of land, jobs, and scholarships were offered to MNLF surrenderees.

Between 1977 and 1982 there were two major splits in the MNLF, the first with the formation of the Moro Islamic Liberation Front (MILF), a second with the breakaway of a MNLF-Reformist Group. These splits reflected personal, ideological, and ethnic divisions within the movement. There was also during the 1980s some scaling down of the armed conflict. Following the overthrow of President Marcos in the "People Power Revolution" of 1986, the incoming government of President Aquino secured a ceasefire with the MNLF and reopen negotiations with MILF. When the new constitution of 1987 made specific provision for autonomy in "Muslim Mindanao", negotiations again broke down, however, and implementation of the autonomy provisions was marked by acrimonious debate in which Muslim-Christian rivalry was strongly evident. In a subsequent plebiscite, only four of the thirteen provinces and none of the nine cities polled opted for autonomy.

Given the demographic situation of Philippine Muslims, outnumbered in all but a few parts of their traditional homeland, attempts to resolve age-old tensions through the granting of Muslim autonomy on a geographical basis are bound to run into problems. However, while inequalities persist and separatist sentiments remain strong, Philippine governments appear to be showing greater sensitivity to the demands of Philippine Muslims and many Muslims are playing important roles in national social and political affairs.

PICKTHALL, MOHAMMED MAHRINDUKE WILLIAM (1875-1936), English traveller, novelist, polemist and educationist, who became a convert to Islam at a time when British converts to Islam were much rarer than later in the 20th century, and is now best remembered for his Kur'ân translation, *The meaning of the Glorious Koran*.

Born in London, the son of an Anglican clergyman and with two step-sisters who were Anglican nuns, his boyhood and formative years were spent in rural Suffolk, from which he acquired a nostalgic view of a countryside way of life which was then passing. He was at school at Harrow as a contemporary of Winston Churchill, and after failing to enter the Army and the Levant Consular Service, lived as a country gentleman in Suffolk, a life interspersed with extensive travels in the Near East, where he became fluent in Arabic (and later, also in Turkish and Urdu). His extended stay in Palestine, Lebanon and Syria of 1894-6, with a return through Ottoman Turkey and the Balkans, inspired him with a romantic view of the Islamic East which was to determine the future course of his life. He subsequently became a fervid partisan of the Ottomans and of the Young Turk reformers [see YENÎ OTTOMANLAR], thereby ranging himself with such contemporaries as the Conservative MPs and Middle Eastern publicists Aubrey Herbert and Sir Mark Sykes in his dislike for Philhellenes and Gladstonian liberals.

All this time he had been writing novels, and after 1903 was at work on one a year about British (mainly Suffolk) settings or Near Eastern ones. The best-known of the latter was Said the Fisherman (1903) (reprinted, with an introduction on Pickthall by P. Clark, London 1986), set in Syria and Egypt during the latter half of the 19th century and which went through fourteen editions; another of these novels, *Knights of Arabiy* (1917), was set in the 11th century Yemen of the Sulayhids and Nadjâhidîs [q.v.].

The First World War, with his beloved Turkey
ranged on the side of the Central Powers, gave him a profound emotional shock. He campaigned for a separate peace with Turkey, and in 1917 announced his conversion to Islam, at once becoming a leader among the small band of the indigenous British Muslims and functioning as Acting Imam of the London mosque, then in Notting Hill. His acceptance of Islam came from an empathy which had existed for some two decades between his own naturally conservative temperament and the faith, with its attitudes of dignity and fortitude in the face of suffering and adversity and, as he saw it, its essential justice and tolerance. In 1920 he was invited by Indian Muslim colleagues to the subcontinent, and spent fifteen years there as a Muslim journalist and in Haydarabad, Deccan [q.v.], as Principal of a Muslim high school and as an adviser and publicist for the Nizam [q.v.]; he felt that in Haydarabad he was living in a society which had been itself the basis for further translations, e.g. into Portuguese (in Mozambique) and into Tagalog (for Shaykh Abd Allah al-Ansarf al-Harawi [q.v.]). In Islamic law, these terms were used for a tavern keeper, (iv) As part of proper company one derives spiritual benefit; (v) To indicate spiritual allegiance to the same spiritual mentor and therefore brother; (vi) To denote spiritual links with some khanaqah, community, etc.: as Pir Manki Sharif, Pir Taunsa Sharif, Pir Bhucri, pir after scrutiny, both of very high esteem; (vii) To indicate spiritual kinship: e.g. pir bhai, disciple of the same spiritual mentor and therefore brother; pir bahn, woman owning spiritual allegiance to the same spiritual mentor and therefore sister; pir zada, son of the pir. (viii) In sayings: pir di kis sagat m ier di kai yahan, pir has his relations with m ier, with people of the same status; pir ko na faktir ko, pahlay kanayu har ko, a low status man receiving precedence over pir and fakir; pir i man khas aitr, i etkaid i man b b art, my pir may be (worthless) like straw, but my faith in him is firm; pir to ap dar manda hayn, sho fa at kai kai nair g, the pir is himself helpless, how will he help others; pir miyan bakti, mudrdiyan banga, a gh takti cap gai banga, the pir is the goat and his disciples the fodder; barh d aen to amr, phaten to faktir, maren to pir, if they thrive they are nobles; if they die they are holy ascetics; when they die they are saints; paidi, drinking key, key, drink water after straining, select pir after scrutiny. (ix) In mythology: Pir Bhuori, pir of the eunuchs; Pir Bhuori ki karhai, food distributed while admitting a eunuch to the fold; Pir Hatailay, a mythical figure, like Shaykh Saddo, in whom woman have great faith; Pir-i Didar, a legendary saint who arranges intermixture of breeds; Pir-i Didar kai kund, offered making by women longing for the return of some relative. (x) To indicate
things old and aging: pir-i āsmān or pir-i falak, or pir-i dihkān falak, for the sky; pir-i ḵaḥaf, old man without senses; pir-data, man with a bent back; pir-i zal, an old man with gray hair; Umr-i; pir-i Sarandāt, Adam; pir-i ḵaḥān, Jacob; pir-i ḵaḥān ḵhd-ḏil, Ridāwān; pir-i fāntā, an old man about to die; pir-i fārtā, very old; pir-mard, old man; pir-i nā bāği, old man with child-like habits; pir-i ṣan ḵor pir-i ḵal, old woman. (xi) In a derogatory sense: to behave as if under the influence of some evil spirit; pir ḵanān, under the spell of some evil spirit; pir-i payghāmbar manānā, to pray, to beseech for the fulfillment of some desire; pir-i gāhīd manānā, to bless the soul of some saint through offerings, (xiii) To show cultural status: bay āp, without a pir and therefore, uncultured and uncouth (Sir Syed Ahmad, Stratiṯ-i farādīyā, Agra 1896, 37). Thus in Indo-Muslim usage, the term pir either becomes symbolic of excessive attachment with a spiritual mentor, or else it becomes surrounded by superstitious and mythological concepts or assumes a derogatory connotation and passes into proverbs and sayings.

(K.A. NIZAMI)

**PIR SADR AL-DIN,** Indian Muslim holy man, considered to be the founder of the Khodja [q.v.] Nizārī Ismāʿīlī community in India. Most of our biographical information is derived from the gīnāns (poetical compositions in Indian vernaculars), the largest number of which is ascribed to him, hence we are not on firm ground. He lived probably between the second half of the 8th/14th and the beginning of the 9th/15th centuries. The centre of his activity was around Kotri and Ucch in Sind, where he converted large numbers of Hindus from the Lohana caste and gave them the title of Khodjas (derived from Persian khudā, honorary title like “sir”) because the Lohanās were addressed by the honorary title thāḵār in Hindi. He seems to have played a key role in the communal organisation and is credited with the establishment of the first gīmāna Khānā (a congregation hall for the community) in Kotri. He is also said to have visited the Imām Ḥusayn in Persia to hand over the dawnd (tithes) collected from the Indian community. His shrine is located in Dījpur, near Ucch, but the overseers of his shrine consider themselves as Twelver Shīʿis and call the Pir Ḥādīḏi Sadr Shah.

(I. POONAWALA)

**PIR SHAMS or SHAMS AL-DIN,** Indian Muslim holy man, regarded as the second important figure after Nūr Ṣaṭgur [q.v.], whose name is traditionally associated with the commencement of Nizārī [q.v.] or Satpanth (i.e. the true path) Ismāʿīlīsm in Sind. Historically he is an obscure figure surrounded by legends. Most of our information is derived from gīnāns ascribed to him. The latter, being poetic compositions in Indian vernaculars resembling didactic and mystical poetry, are often anachronistic and legendary in nature. The dates mentioned for his activities, centred in Sind and working within a Hindu-Muslim milieu, cover a long period from the first half of the 6th/12th to the 8th/14th centuries. The overseers of his alleged mausoleum at Multān, however, identify him with Shamsa-Ṭabriz [q.v.], the spiritual guide of Mawlānā Djalāl al-Dīn al-Alfārī [q.v.], and a descendant of the Twelver Imām Mūsā al-Kāzīm [q.v.]. The Nizārīs attributed their activities to the Shamsīs living in Ḥandābād and chiefly in Multān, on the other hand, claim to have been converted by Pir Šams and have preserved the gīnāns of the Pir in Ḥandābādi dialect.

(I. POONAWALA)

**PIR MEHMED PASHA** (?399/?1532-3), an Ottoman Grand Vizier, belonged to Amasya and was a descendant of the famous Djalāl al-Dīn al-Asṣārār and therefore traced his descent from Abū Bakr. He took up a legal career and became successively kāfī of Sofia, Silwiri and Galata, administrator of Mehmed II’s kitchen for the poor (imānī), and in the beginning of the reign of Bayezid II attained the rank of a first defterdar (bāṣt defterdar). In the reign of Selim I, he distinguished himself by his wise counsel in the Persian campaign (see J. von Hammer, GOR, ii, 412, 417 ff.), was sent in advance to Tabriz to take possession of this town in the name of the sultan, and at the beginning of the Šaḥbān 920/920 in September 1514 was appointed third wezir in place of Muṣṭafā Pasha, who had been dismissed (see GOR, ii, 420). He temporarily held the office of a kāfī-makām in Istanbul, and after the end of the Egyptian campaign was appointed Grand Vizier in place of Yūnus Pasha, who had been executed on the retreat from Egypt in 923/1517. In this capacity he took the conquest of Bagdad in 927/1521. Soon after the occupation of Rhodes, Pir Pasha fell from the sultan’s favour as a result of the slanders of the envious Ahmad Pasha, who coveted his office, and was dismissed with a pension of 200,000 aspers on 13 Šaḥbān 929/27 June 1523. His successor was Ibrāhīm Pasha [q.v.], a Greek from Parga. Pirī Mehmed lived another ten years and died in 939/1532-3 at Silwiri, where he was buried in the mosque founded by him. One of his sons, Mehmed Beg, had predeceased him in 932/1526 as governor of Iç-il. Pirī Mehmed Pasha created a number of charitable endowments, among them a mosque in Istanbul called after him (cf. Hafız Hüseyin, Hadīkāt al-giwašāmī, i, 308), a medrese and a public kitchen as well as what was known as a tāb-khān. While his laḳab was Pirī, he used Remzi as a maghālā for his memons and his name in documents (cf. von Hammer, Geschichte der osmanischen Dichtkunst, ii, 327 ff., with the wrong year of death and also i, 187, under Pirī without the identity of the two being recognised, also Ləfšī, Teğkhere, 168 under Remzi).

**Bibliography:** Mehmed Thūreyyā, Sidqiyl-i ʿoṭmānī, ii, 43, more fully in ʿOṯmānīzāde Mehmed Taʿīb, Hadīkāt al-wuṣūrāt, Istanbul 1271, 22 ff., and the Ottoman chronicles of the 10th/16th century; I.A. Pirī Mehmed Pasha (Şerāfeddin)
PIRİ MEHMED PASHA — PIRİ RE'İS

Turan).—Bursali Mehmed Tahir, ^Othmanli mu^ellifleri, ii, 111 ff., deals with Plrl Mehmed Paþa a little by way of background. According to him, he wrote a small collection of poems (dîvânî) and an exposition of a part of the mevlînuwi and of the şâhidî entitled Tuﬁh-i mi'r, but both works are described by Mehmed Tahir as still in ms. (F. Babinger)

PIRÎ RE'ÎS b. Hâdîdî Mehmed, a Turkish mariner, cartographer and author (b. probably Gallipoli, date of birth unknown; d. Cairo, 961/1553-4). His uncle, Kemal Re'îs [i^.] served as a captain in the Mediterranean and of the islands of the western and southern Italy and the islands of the Aegean and Eastern Mediterranean, molested by the Mediterranean Christians for his exploits as a corsair; it was in this earlier profession by his uncle's side that Piri Re'îs first learned the trade of seaman. Generally welcomed by their Arab fellow-Muslims to use the coasts of Tunisia and Algeria as a base, refuge and place for selling their booty, they preyed upon Christian shipping and the coasts of Spain, France, western and southern Italy and the islands of the Mediterranean. During these campaigns, which spanned much of the first half of Bayezid II's reign (sc. 886-900/1481-95), Piri Re'îs acquired an intimate knowledge of both the Mediterranean and of the "haven-finding art"—various tools aiding navigation and the expertise in using them—as it existed among his fellow-sailors of that sea. Both personal experience and assiduous gathering of sources (primarily Italian and Catalan), combined with an original creative mind, later enabled Piri Re'îs to produce a remarkable body of cartographic and hydrographic work.

The second stage in Piri Re'îs's life began in 900/1495 when the sultan summoned his uncle to serve in the Ottoman fleet. From then on until Kemal Re'îs's death (either in 916/1510 or 917/1511; for this date see S. Soucek, Piri Reis and Turkish map-making after Columbus, 164), he participated, always by his uncle's side, in various naval assignments such as conveying supplies to Mamlûk Egypt or patrolling the sea-lanes between Istanbul and various points of the Aegean and Eastern Mediterranean, molested by the Hospitallers of Rhodes [see rodos]: Kemal Re'îs especially distinguished himself during the 1499-1502 war with Venice, an event again witnessed by Piri Re'îs, who was busy by then as a mariner, cartographer and author (see also the map produced by Columbus during the first voyage to America or describing the new continent's treasures of the Topkapi Palace: the world-wide interest it has stirred has also provoked some eccentric interpretations. The recent and ongoing interest in Piri Re'îs's world map stands in sharp contrast to the apparent indifference with which it met in the author's lifetime. Another work of his, the Kitâb-i Bahriye ("Book on seafaring"); completed in 1521, and reworked in a second version in 1526; a facsimile of one of its best manuscripts, Aya Sofya 2612, now in the Süleymaniye library, was in 1935 published by the Turkish Historical Society. For the cartographic sources: a map made by Columbus, as well as between one and four Portuguese charts, according to the author's own statements and to internal evidence. The map is torn longitudinally in such a way that what must have been its major part, including the bulk of Europe and Africa and all of Asia, is missing; how and when the mutilation occurred is unknown, but it may have happened in Cairo where Piri Re'îs had sailed with several ships of the Ottoman navy at the conclusion of Selim I's 1517 conquest of Egypt, for he states in another work, the Kitâb-i Bahriye (p. 5 in the 1935 facs. ed.; see below), that the sultan had at that point graciously accepted the map. It then lapsed into oblivion until its 1929 discovery in the Topkapı Palace library; the map's identification as a work partly based on an early but no longer extant map made by Columbus had an effect that transcended the bounds of scholarly interest, and it became an international sensation as well as a matter of pride for the young Turkish republic, especially for its founder Kemal Ataturk. Upon instructions from the president, the Turkish Historical Society published in 1935 a facsimile together with, in a separate brochure, a full transcription as well as translation of its legends into modern Turkish, German, French, English and Italian (Piri Reis haritasî; repr. in 1966; many smaller scale reproductions exist, the best in M. Mollat du Jourdin and Monique de La Ronciere, Sea charts of the early explorers: 13th to 17th century, New York 1984, pl. 28). The documentary value of the chart, which has sometimes received such inaccurate labels as "the earliest map of America" or "the lost map by Columbus in a Turkish version," is missing in its entirety, for Piri Re'îs tells us that he had used both European and Oriental sources in the construction of the map. Put in modern terms, the result must have been a work of unique kind and value. Even in its truncated state, the map is viewed as one of the prime treasures of the Topkapı Palace; the world-wide interest it has stirred has also provoked some eccentric interpretations. The recent and ongoing interest in Piri Re'îs's world map stands in sharp contrast to the apparent indifference with which it met in the author's lifetime. Another work of his, the Kitâb-i Bahriye ("Book on seafaring"); completed in 1521, and reworked in a second version in 1526; a facsimile of one of its best manuscripts, Aya Sofya 2612, now in the Süleymaniye library, was in 1935 published by the Turkish Historical Society. and marine charts, their "portolan" label further specifies a genre created and perfected in the Mediterranean between the 13th and 17th centuries; moreover, it was a primarily Christian (Italian and Catalan) speciality, with only marginal Muslim (Arab and Turkish) participation. The Kitab-i bahriyye is an up to a point original and remarkable exception, not unlike the author's 1513 world map, for Piri Re'is again gave free rein to his genius and produced a volume of texts and charts such as none of his Christian models had ever done: a description of the entire Mediterranean embodies in itself charts of the western Mediterranean accompanied by a chart of the area described. Moreover, a long versified introduction written for the second version discusses subjects related to navigation, oceanic geography and the ongoing voyages of discovery. The first version consists of 130 chapters and charts, the second of 210. Both have a brief preface in which Piri Re'îs tells why he composed the work: to provide a handbook for his Turkish fellow sailors, and to offer a present to Sultan Süleyman on the occasion of his accession. This preface in prose is then followed by the versified introduction in the second recension (pp. 7-85), and by the main body of the text in prose with charts (86-848); the second version ends in a versified epilogue (849-55), in which the author tells how in 1524 the Grand Vizier İbrahim Paşa [q. v.] had encouraged him to produce a more polished version of the work and thus worthy of the august recipient. Neither recension's autographs are known to have survived, but copies of both (23 and 10, respectively, plus several adaptations and modifications; a list of the known manuscripts compiled by T. Goodrich can be found in *The history of cartography*, iii/1, 290-1) have survived and mostly carry on either original's structure, form and function. Those of the first version are less polished but meant as manuals for sailors; those of the second are often calligraphed, and their lavishly coloured charts pertain to the art of miniature illustration and were clearly produced not for use at sea but as bibliophile artifacts for wealthy or important customers. Especially striking are elaborate sketches of many port cities, including topographic views of Istanbul, Venice and Cairo (Walters Art Gallery, Baltimore, ms. 658, and its facsimile edition 660, respectively; the best examples). Despite all these additional documentary and artistic features, however, the second version does not quite supersede the first; in fact, one of the special assets of Piri Re'îs's portolan—personal and topical reminiscences from the Turkish corsairs' main base, eastern Algeria and Tunisia—exists in the second version only in an abridged form. Moreover, this truncation may have been performed not by Piri Re'îs himself but by one Seyyid Murad or Murâdî, the editor of Khayr al-Din Barbarossa's [q. v.] *Qezelvâzî*, who claims to have ghost-written also the second version of the Kitab-i bahriyye (see H. Yurdavidin, Kitab-i bahriyye' nin telfi meslesi, in *AUDTCP* x, 1952, 143-6).

In 935/1528-9 Piri Re'îs produced his last known work, another map of the world of which again only a fragment has probably survived (Topkapı Palace library, Hazine 824; parchment, 69 x 70 cm; see colour reproduction in *The history of cartography*, iii/1, pl. 21). It covers the north-western part of the Atlantic and the New World from Venezuela to Newfoundland and the southern tip of Greenland. This map, too, is signed by the author, and combines the artificial qualities of a "presentation copy" with those of a valuable document. The quality of this fragment suggests that in its original state, the map may have been another brilliant example of the subsequently stifled attempt by Muslim cartography to join Renaissance Europe's exploration of the world. Aside from writing and cartographical work between 1513 and 1529, all we know of Piri Re'îs during this period is that he may have on occasion accompanied Khayr al-Din Barbarossa to North Africa, and that he must have remained active as a pilot in the Empire's home waters, as his assignment to steer İbrahim Paşa's ship to Egypt (1524) suggests. After 1529, however, all trace of him disappears until he re-emerges in 1547 as commander of the Ottoman fleet based at Suez. In this capacity, Piri Re'îs carried out the reconquest of Aden (1549); but his luck turned in 1552 when reports of the approach of an enemy relief fleet made him raise the siege of Portuguese-held Hormuz [q. v.] and withdraw to Başra; worse still, his subsequent decision to leave the bulk of his ships there and return with three vessels (one of which was lost en route) to Suez led to a death sentence by the government which was carried out at Cairo (some Orhonlu, *Hıntı kapınlığı ve Piri Reis*, in *Belleten*, xxxiv (1970), 234-54). This bizarre end of the great cartographer does not seem to have been questioned by Ottoman observers, but it has puzzled modern historians; some have wondered if two namesakes are not being confused (the age factor for example: by 1553 the cartographer would probably have been an octogenarian). A more likely explanation is the fact that the Ottoman elite, with the exception of İbrahim Paşa, failed to grasp the value of his cartographic and hydrographic work, and that, personally, Piri Re'îs never managed to penetrate the otherwise broad spectrum of that elite and thus receive the totally different treatment reserved for its members (as exemplified by the case of Khâdîm Süleyman Paşa [q. v.], who in 1538 failed before Dju much as Piri Re'îs did before Hormuz but instead of being executed became Grand Vizier). [See also SELMAN RE'IS, SEYYİD SÂLIH RE'İS, TA'RİH-İ HIND-İ CHUBRİ.]

**PİRİ-ZÂDE MEHMET ŞÂHÎ EFENDÎ (1085-1162/1674-1749), Ottoman Şerif-ı-İslâm [q. v.] in Istanbul and the pioneer translator into Turkish of Ibn Khaldûn**

Ibn Khâdîmîn *Mukaddimâ* was quite early known in Ottoman Turkey, being cited by e.g. Mâhâmid b. Ahmed Hâfiz al-Dîn (d. 1550/1555) and by HâÆîdji Khalîfî in his *Ka'bîl az-zumân*. But during the years 1318-43/1725-30 Piri-zade translated the *Mukaddimâ* from the beginning to the end of the fifth chapter, i.e. about two-thirds of the whole, and this was lithographed at Cairo in 1275/1859, with Ahmed Djewdet Paşa [q. v.] shortly afterwards translating the final, sixth chapter. Piri-zade's translation circulated in manuscript, and thus helped considerably in making Ibn Khâdîmî a familiar figure in 18th and 19th century Turkey.

PIRLEPE

PIRLEPE, PRILEP, a town of more than 40,000 inhabitants situated on the northern edge of the fertile Pelagonian Plain at the foot of the Babuna Mountains in the southern part of the former Yugoslav Macedonia. In the Middle Ages, Prilep was the capital of a Slav principality. In Ottoman times (1395-1912) it was the centre of an extensive kadište stretching from the modern Greek border in the south (Nidze and Kajmakcalan Mountains, 2521 m/8,268 ft) and the Solunskia Glava (the highest mountain of Macedonia, 2540 m/8,331 ft) in the north, an area which in 1900 contained 141 villages. Especially in late Ottoman times, Prilep was the commercial metropolis of northern Macedonia. It was also an Islamic centre of regional importance.

Prilep is first mentioned in the edicts of the Byzantine emperor Basil the Bulgar-Slayer (1014), but must be much older. From the early 11th century till 1201, Prilep was in Byzantine hands; from 1201 till 1246 it was included in the Second Bulgarian Empire; then Byzantine again till 1334, when the troops of the Serbian king (later Tsar) Dusan conquered it and included it in the short-lived Serbian empire. After Dusan's death, it was included in the principality of Vukasin, which in 1335 contained 141 villages. Especially in late Ottoman times, Prilep was the commercial metropolis of northern Macedonia. It was also an Islamic centre of regional importance.

It is clear that during the rule of Mehemmed the Conqueror, the town of Prilep received an important group of Muslim Turkish settlers, mostly craftsmen, as the registers show (tanners, coppersmiths, tailors, weavers, etc.). The link between the arrival of this group and the construction of a large mosque in 1476-7 is evident. At first, the settlers developed along natural patterns, but after the mid-16th century, when the Muslim community grew, especially through the conversion and linguistic assimilation of a part of the local Christians. The early defter also show that the villages on the plain, which in the late Ottoman period were inhabited by Albanian Muslims (Aldanci, Belušina, Borino, Crnilše, Desovo, Drenovo, Gorno Zitoše, Norovo, Sačevo and Vrboec) were still almost entirely Slavic and completely Christian, only a few incidental Albanian households being registered. The later, entirely Slav Muslim villages (Pomak/Torbeš) of Debrelje, Lažani and Petralevo, were also entirely Christian. The nine Muslim Turkish villages which the kadaš was to have later did not exist in 1445 and 1455. Ali Obasi (Alinci), Dedebalci and Šeleverci are mentioned as places where a few Yürük families lived, serving in the army in time of war. Dedebalci were also the no-longer-existing hamlet of Timur existed already in the time of Murad II. The same defter also mentions groups of Christian ekkëndjës, serving in the Ottoman army in time of war and enjoying important tax facilities. The important monasteries of the Archangels of Prilep and that of Treskavac, 10 km/6 miles from the town, a Byzantine imperial foundation, were the property (mülki) of the Metropolitan of Prilep, David.

In the second half of the 16th century, almost the entire nahiye of Moriovo, constituting the mountainous south of the kadaš of Prilep, was transformed from khaş to waźf property of the Sulejmáníye complex in Istanbul. The waźfikası of this largest of all Ottoman socio-religious foundations, written between 1558 and 1566, does not yet mention these villages among the waźf property of the foundation. They must have been added later, most probably towards the end of the 16th century, when the wave of inflation caused financial difficulties. The Düzce Defter F 16 A, a.e. 60 A, in the Sofia National Library, a newly-made tabrır from the year 1023/1614, mentions 28 villages and the number of their households, from which Düzce was part of the waźf, together with all other taxes. Four of these villages were situated outside the nahiye of Moriovo, four others no longer

exist, and 20 of them survive to the present day. The fact that the Moriovo ndhiye was part of this important
wakf
time of the 17th and 18th centuries. When
many other villages wholly or partly converted to
Islam to escape fiscal and other pressures, the entire
Moriovo remained Christian and some of its villages
grew from a few dozen households into the largest of the entire
kada. This little-known phenomenon finds parallels in the clusters of
wakf
central Greece (wakf of the Wâlide Sultan Kösem Mâhpeyker) and in Bulgaria (Plevna, wakf of
Mihâlbolgolu 3 Ali Bey) and elsewhere.
In the first quarter of the 16th century, six more
Muslim Turkish villages came into being in the plain
south of the town: Budaklar (now called Budjakovo), Büyük Oba (Golemo Kojnari), Elekler (Erekovci), Kanatlarci, Kuçûk Oba (Malo Kojnari) and Musa Oba (Musinci). Their names and notes in the
defters
tell us that they were Yârûk villages. Their migration to Macedonia must be seen in connection with the
persecution of the Kizilbash 3 Alewi groups in Anatolia under Selim I. In the important village of Kanatlarci
there was since a while long back a large Bektashî
tekke, which still exists today, being together with the
one in Kırçova/Kitçevo, the only tekkes of this order surviving in Slav Macedonia.
Ewliyâ Çelebi, who visited Prilep in 1071/1660-1, describes it as a town of 1,000 to 1,100 houses, il-
ustrating the stagnation of the 18th century. Prilep's
great time was to come in the 19th century, when the
population almost quintupled, the Macedonian Chris-
tians growing at a much faster rate than the Muslims.
In this time, Prilep became the commercial metropolis
of inland Macedonia. A disastrous fire of 1273/1856-7
could not stop this expansion. In 1861 von Hahn
noted a "richly-stored, newly-built bazaar". In these
years the entire town centre was rebuilt on a regular
chess board plan. A monumental Clock Tower was
added and the old mosque from 1476-7 was restored
and doubled in size by a huge annex.
At the end of the 19th century, the town had more
than 24,000 inhabitants, 16,700 being Macedonian
Christians, 6,200 Muslim Turks and the remainder
Gypsies. Sâmi Bey in his Kâmûs al-âtâm, ii, Istanbul
1316/1898-9, describes Prilep as having ten mosques,
three tekkes, five medreses, two hamâms, a Rûghidiye
school, an Ibûlîddeve school, seven Muslim primary
schools, six Christian primary schools and two chur-
ches. He also mentions the famous Prilep Fair in
August-September. The greater part of the populati-
on was, according to Sâmi Bey (but this is an incor-
rect source), Muslim. The Muslims spoke Ottoman
Turkish and Albanian, the Christians spoke
Bulgarian and Rumanian.
For the composition of the population of the district
of Prilep in the late Ottoman period, we have the data
from the Nûfûs Defters of 1884 and 1890, the numbers
of the Sânâmê of 1305/1888, and Kânçev's detailed
and reliable numbers. They are as follows:

It is evident that the numbers of the Sânâmê, in-
tended for public use, are gross distortions, of a kind
known also from elsewhere [see ogâgl]. The real state
of affairs is reflected in the numbers of mosques and
churches in the 141 villages of the kada of Prilepe as
given by Sâmi Bey on the basis of the Sânâmê: 34 mos-
ques, in the 18 villages with Muslim inhabitants and
the town together, and 101 churches in the 122 Chris-

The population of the kada of Prilepe according to various late 19th century sources
tian villages. The proportion of Muslims to Christians was 20% to 80%, that of mosques and churches 25% to 75%, or almost the same.

During the First Balkan War, Prilep was taken by the Serbian Army in 1912. Town and district remained part of Serbia, later Yugoslavia, till 1992, although interrupted by harsh Bulgarian occupations during both World Wars. The population of the town changed considerably through the emigration of a large part of the Muslim citizens to Turkey in the 1950s. In the post-war years, the town, which had stagnated because of war-time shortages in the trade routes and economic system, was "modernised", in which process most of the Ottoman buildings disappeared. In 1990 the old mosque of 1476 was still standing, together with the Clock Tower from 1280/1863-4 and one wall of the monumental Kuršun ğahan of Kodja Arslan Pasha from the 17th century.

In the villages of the former kada, the changes were less drastic. The greater part of the Pomak [q. v.] and Albanian Muslim populations remained where it was, although both communities grew, but slowly, due to emigration. The Turkish population of the former Yürük villages is also still present and saw a slow emigration. The Turkish population of the former

Kiel, Some little-known monuments of Ottoman Turkish architecture in the Macedonian province: Štip, Kumanovo, Prilep, Strumitsa, in Günay-Dogu Ayrusa Arastırmaları Dergisi, 6-7 (Istanbul 1978), 153-78 (updated repr. in Kiel, Studies on the Ottoman architecture of the Balkans, Variorum, London 1990); A. Stojanovski, Gradovi na Makedonija od kra-

juz na XIV do XVII vek, Skopje 1950; Eliza Maneva, Srednovekovna naselba, crkva i nekropola Sv. Dimitrija, Prilop-
Holders of tuyuls and soyurghah, unless given immunity, were subject to the payment of pishkash, as also were the leaders of dhimmī communities (cf. documents in A.D. Papazyan, Persidskie dokumenty Matenadaran. 1. Uakzi, vlozpuh vtoroi (XV-XVI vv.), Erivan 1956 and idem, Persidskie dokumenty Matenadaran. 2. Uakzi, vlozpuh vtoroi (1601-1650), and H. Busse, Untersuchungen zum islamischen Kanzleiewesen, Cairo 1959, 212-13). As in the case of other taxes and funds, drafts were sometimes drawn on pishkash and collected locally. The Dastār ad-mulūk of Mirzā Raḥf (Muḥammad Tādż Dā mbox{rāmī]) is extolled by, for example, Mīrzm Dā Ṣafwān, Tadhkirat al-mulūk-i Mirzā Shafwān, in Tehran University, Rev. de la faculté des lettres et sciences humaines, xv/5-6 [1968], xvi/1-6 [1968-9] and the Tadhkirat ad-mulūk (Persian text in facsimile, tr. and explained by V. Minorsky, London 1943) record late Safawī practice and also the levy of commissions and fees on pishkash made for various officials. Occasions for the exaction of ad hoc pishkash were numerous. They included conquest of a town or district, the circumcision of princes, royal marriages, royal "progresses" and the progress of governors through their provinces. If the Shah visited one of his subjects, his host was expected to give him a present in return (R. du Mans, Stat de la Perse en 1660, ed. C. Schefer, Paris 1890, 33). The grant of immunity from pishkash is attested in a number of documents (cf. Sayyid Hossein Modarresi Tabataba'i, op. cit., and Papazyan, op. cit.) and farmānās (cf. a farmān of Shāh Tahmāsp, dated 932/1526, engraved at the entrance of the Amir Ṣaḥib al-Dīn mosque in Kashān (Abd al-Husayn Jimad al-Dīn), whose significance appears to be connected with the Arabic dikhr as the palace vestibule where the ruler appeared for public audience, as at 'Amman [q.e.]). It draws on the images of pre-Islamic wonders, particularly on the great Sāsānids Tāk-i Kīsrā [q.e.] at Ctesiphon (3rd century A.D.), as extolled by, for example, al-Buṭṭūrī [q.e.] and the Bahī Djayrīn became identified (see Soucek, op. cit. in Bibl.), and ultimately on Solomon's buildings, with which the Bahī Djayrīn was associated (cf. A.K.S. Lambton, Jahrbuch für Iranistik 2 (1953), xxvii, cols. 316-19.

(C. E. Bosworth)

PISHTAK (p.), literally, "the arch in front", hence the portal of an important building, the term being appropriate to the advancing of the structure, at least in its developed form, forward from the plane of the façade: it is formally typified by this projection, and the articulation of receding planes to the entrance within. Though initially used throughout the Middle East and Hindūstān, the portal came to be most typical of Perso-Indian architecture. The Persian concept appears to be connected with the Arabic dikhr as the palace vestibule where the ruler appeared for public audience, as at 'Amman [q.e.]. It draws on the images of pre-Islamic wonders, particularly on the great Sāsānids Tāk-i Kīsrā [q.e.] at Ctesiphon (3rd century A.D.), as extolled by, for example, al-Buṭṭūrī [q.e.] and the Bahī Djayrīn became identified (see Soucek, op. cit. in Bibl.), and ultimately on Solomon's buildings, with which the Bahī Djayrīn was associated (cf. A.K.S. Lambton, Jahrbuch für Iranistik 2 (1953), xxvii, cols. 316-19.)

was that at Hatra; it formerly had an arced archivol. In niches at the palace at Buhāpur (A.D. 260) the arch is framed by key-pattern friezes within the flanking pilasters. The gateway of the 6th century Sāsānīd palace at Dāmghān, now in the Philadelphia Museum of Art, incorporates two concentric arches recessed one well within the other. The roughly contemporary rock-hewn iwdān of the Tāk-i Bustān near Kirmāngāh incorporate stucco angels in the span-drels and a garlanded archivol. A façade shown on the post-Sāsānīd Fortress Plate in the Hermitage, which as a type has features in common with the Parthian shrine at Taḥkī-Sulaymān, already shows the arched door set in a clearly defined rec-tangular frame, of which the upper panel ends in a cresting different from that on the flanking walls. The pre-Islamic prototypes thus occur in both sacred and palace buildings. This dual use was to continue in Muslim buildings.

Cresswell (op. cit. in Bibl., 1958, 197) identified the iwdān arch on the south side of the Court of Honour at al-Ukhayyār (ca. 140-60/760-80 [314]) as the first example of the pishtāk, but it has fallen, and the reconstruction of a rectangular frame is conjectural; it does, however, show the taller arch as the inevitable example of the liwdn. Pre-Islamic prototypes thus occur in both sacred and non-sacred contexts. The roughly comparable, with a frame rising from above the crowns of the lateral arcades, much as in the ensemble of the Masjīdi-i Djamī at Nā'īn (ca. 340/950). In the Great Mosque at Sāmarrā (234-7/848-52), the complete format can already be recognised in the mibrāb, with its tall, recessed rectangular frame, two concentric pointed arches supported on paired angle shafts of rose marble on each side, and mosaic spandrels. At Córdoba, the Bāb al-Wuzara'ī (Puerta de San Esteban) of 241/855-6 has a horseshoe arch recessed close within a rec-tangular frame (afīs) set above the level of the door lintel, a treatment which persists in the Maghrib: there are traces of flanking elements on either side in the flush wall. The full expression of this raised framing, with a cresting of five intersecting arches above, survives in a side door built by al-Ḥakām II in ca. 364/975. In the tomb of the Sāmānīs at Bukhārā (pre-391/903) the portal still retains the two-storied wings, whose original arrangement of contiguous arches dates from an earlier era. The main arch derived from Roman practice, as can be seen in the projecting portal of the great mosque at Madīyā (308/920-1) [314], whence it appears to have been brought to Fāṭimid Egypt, in the Mosque of al-Ḥākim (393/1003) and the Mosque of al-Ākmar (519/1125) at Cairo; the latter has a semidomed archway with radial ribs, flanked by similar superimposed niches with angle shafts, and, for the first time, square-framed mukarnās hoods over the lower pair. The absence of minarets in these mosques is due to the connection between the portal itself and the call to prayer in Fāṭimid Egypt. The Aκmar front is angled so as to adjust the line of a pre-existing street to the kibāa-orientated interior. The derivation may have proceeded separately in Persia.

The 18 m outer arch of the Ribāt-i Malīk on the Bukhārā-Samarkand road (pre-1078), standing 6 m higher than the walls, is framed by a broad architrave of contiguous stars in relief, housing a smaller outer arch within a plain outlined frame for contrast. That of Sanjār's Ribāt-i Șaraf (508/1114-15 [1958]) on the Marw-Nīshāpur road is framed by a Kūfī inscription in deep relief contrasted with smooth mouldings, around a similar four-centred arch and diplayed spandrels; in the comparable inner portal the inscription rises from piers indented with tall arched niches on either side. By the early 6th/12th century the sanctu-ary iwdān of the Masjīdi-i Djamī at Ǐsfāḥān probably had a pishtāk rising more than twice the height of the two-storied wings on either side, whose original form appears to have incorporated lateral frames of arched panels set one over the other, and a pronounced archivol; the north entrance was built in 515/1121, and, according to Māfarroḵī, was flanked by paired minarets. The Salājūk format of a four-centred arch flanked by superimposed niches is established clearly but simply in the iwdān of the Masjīdi-i Djamī at Ǐsfāḥān proba-bly had a pishtāk rising more than twice the height of the two-storied wings on either side, whose original form appears to have incorporated lateral frames of arched panels set one over the other, and a pronounced archivol; the north entrance was built in 515/1121, and, according to Māfarroḵī, was flanked by paired minarets. This page discusses the architectural elements of Islamic architecture, focusing on the use of arched stone in medieval and later works. It mentions the development of the pishtak, a triangular profile of successive arcs, and its various applications in Islamic architecture, such as in the Great Mosque of 'Ali Shahr Na♀ā in Masqhad.

The text also highlights the use of arched stone in structures like the Ribāt al-Sharaf front, which was to be emulated in the deeply-carved screen of the Masqдждд KuWhatsApp downloadut-al-Islām (599/1199) at Dihlī, particularly in the Lodī and Tughlukid mosques. It notes the use of arched stone in the monumental entrances and domes of Tughlukid mosques, with a description of the Masqдждд-i Djami at Ashtardjan (715/1315) and the Buland Darwaza at Fathpur (765/1364), twice its width in height, with four tiers of grouped openings. The text concludes by discussing the role of arched stone in the architecture of Islamic India, with a focus on the Great Mosque of Baybars (667/1269) in its massive domed entrances and stone slabs in the entrances, to be copied by Ṭāmūr in his Masqдждд-i Djам-.
housing a hemi-octagonal recess with a squinch-netted semidome above. Each splayed face and the three in-
the structures in cartouches on the architrave celebrate prayer as a gateway to paradise. The pishtak ac-
tains a new independence in the Nil Kanth belvedere at Mândû (982/1574-5), where three are
grouped to surround a courtyard with a cascade. In Akbar's tomb at Sikandra, the gateway (1022/1615) has
the arched format of Ağmûr, but is flanked by wings housing two superimposed arches of the same depth.
The inlay is the first to include floral motifs. Above each bevelled corner stands a tall marble minaret, still reeded at the base. The rise of the pishtak inherently tended to obscure the dome of a makûra behind it, as evident at Fathpur Sikrî [see MUGHALS, 7, pl. xx, 2]. A solution to the problem was found in the little Nagina Masjid (ca. 1650) in the Agra Fort, where the newly popular Bangâli curve was used to raise the chadjdja line over the centre bay. Other devices were tried in smaller mosques [see MASJID, vol. VI, at 697-8]. In the major metropolitan mosques at Agra (1058/1648), Dihlî (1060-6/1650-6), and Lâhawr (1084/1673-4), however, the pishtak was retained, with a relatively wide arch surrounded by an unpunctuated architrave, framed by angle shafts enlarged to slender, lanteroned minarets, and a single entry arch within [see MUGHALS, 7, pls. xxxi-xxxii]. Palace pavilions [see MAHALL] generally had straight, uninterrupted eaves, and the function of the pishtak at court was restricted to entrance gates, often with a raised gallery for the musicians [see MUGHALS, 7, pls. xxiv, 2 and xxviii, 2].

PIYALE PASJA, Ottoman Grand Admiral, came according to St. Gerlach, Tage-Buch (Frankfurt a/M. 1674, 448), from Tolna in Hungary and is said to have been the son of a shoemaker, probably of Croat origin. Almost all contemporary records mention his Croat blood (cf. the third series of the Relationi degli ambasciatori Venezi al Senato, ed. E. Alberi, Florence 1844-5, and esp. iii/2, 243: 'dalla nazione croata, vicino ai confini d'Ungheria; 357: 'dalla nazione croato; iii/3, 294: 'dalla nazione unghera; 418). Following the custom of the time, his father was later given the name of 'Abd al-Rahmân and described as a Muslim (cf. F. Babiner, in Literaturdenkmäler aus Ungarns Türkenzeit, Berlin and Leipzig 1927, 35, n. 1). Piyale came in early youth as a page into the Serai in Istanbul and left it as kapudan bashi [see KAPUDAN]. The year 961/1554 saw him appointed Grand Admiral (kapudan pasja [q.v.]) with the rank of a sandjakbey, and four years later he was given the status of a beşerkey (J. von Hammer, GOR, iii, 406). He succeeded Sinân Pasja, brother of the Grand Vizier Rüstem Pasja [q.v.], in the office which he had held from 955-61/1548-54. When after his capture of Djerba and other heroic achievements at sea he thought he might claim the rank of vezir with three horse-tails, Sultan Süleyman, thinking it too soon for this promotion and regarding it as endangering the prestige of the vizierate (see Hâdîdî Khalîfî, Tuhfat al-kibrî, first edition, fol. 36, and GOR, iii, 406), managed to talk him down to his grand-daughter, Fatmah, the Beautiful, of the Holy Land, London 1935, 41.

Illustrations of Nâ'in, Ribât-i Sharaf, Ardîstân, Zawar, and Zawar, Zawar, and other places in Persia, specifically with the use of two in number, before Valona in Albania in order to watch the enemy fleets there which were preparing an enterprise against Djerba and Tripoli. The 31 July 1560 saw his greatest exploit at sea, namely, the capture of Djerba, which had shortly before been taken by the Spaniards; this he did with 120 ships setting out from Modon. On 27 September 1560, he held his triumphal entry into Istanbul, to which he had sent in advance the news of his victory.

by a galley (see GOR, iii, 421 ff.). The Grand Admiral did not take to sea again till four years later when, in August 1564, he took the little rocky island of Petőn de Vélez de la Gomera from the Spaniards in order to prepare for the conquest of Malta, which the sultan’s favourite daughter Mihrimah [see RÜSTEM PASHA] was conducting with all her resources. This time, however, fortune no longer favoured him, for the siege of Malta in June-July 1565 failed against the heroic courage of the Christian defenders, who performed miracles of bravery and inflicted heavy losses on the Ottomans. During the Hungarian campaign of Süleyman in the spring of 973/1566, Piyâle Pasha was placed in charge of the harbour and arsenal of Istanbul (see GOR, iii, 438), after previously undertaking a successful raid on Chios and the Apulian coast (ibid., iii, 506 ff.), in which the island of Chios and its harbour passed into his hands (Easter Sunday 1566).

Under Selim II, his father-in-law, he was disgraced and deprived of office of Grand Admiral because, it was alleged, he had kept the greater part of the booty of Chios for himself (according to the report of the embassy of Albrecht de Wijs of May 1568, in von Hammer, GOR, iii, 782), and replaced by Mu‘üeddîhin-zade ‘Ali Pasha. He at once endeavoured to regain the imperial favour by new exploits at sea. In Dhu ‘l-Ka‘da 971/April 1570, he set sail with 75 galleys and 30 galleasses, all of them returning to Istanbul, which he captured and next took part in the conquest of Cyprus. On 20 January 1578—according to Ottoman sources on 12 Dhu ‘l-Ka‘da 985/21 January 1578—he died in Istanbul, according to Stephan Gerlach (cf. his Tage-Buch, 448). His vast estates passed in part to the imperial treasury and in part to his widow and children. His widow later married the third vezir Mehmed Pasha and his second son became sandjak bey of Kha (Cilicia) and a sandjak bey of Dalmatia) in 992/1584 (cf. the Italian record quoted in von Hammer, GOR, iv, 104, n. 1: La Sulitana fu mogiite di Piale ora di Mohammmedbassa terzo vezir, ha ottenuto dal Sign. il Sangiaco di Cissa per il secondo suo figlio con Piale). Piyâle Pasha was buried in Istanbul in the Kasim Pasha quarter in the mosque founded by him (cf. Hafiz Huseyn Aýwasarayi, Hadiat al-qâlidamîn, ii, 255 ff.).

Bibliography: In addition to works quoted in the text, see the histories of Zinkeisen and Íorga, and Râmiz Pasha-zade Mehmed Efendi, Khwariz-yi Kapudanîn-i Deryâ, Istanbul 1285; also Mehmed Thüreyyâ, Sîqilî-i sîqîmânî, ii, 41-2; Jurien de la Gravière, Les corsoires barbaresques et la marine de Soliman le Grand, Paris 1887; IA, art. Piyâle Pasa (Serdifedin Turan).
In the 1480s, these two places, and 20 uninhabited sites (mezraty, were acquired as mulk property by Mihâl-oglu Gâzi-‘Ali Bey, who subsequently brought together several hundred Bulgarian Christian and Muslim Turkish settlers, with whom he founded 20 villages and the town of Plewna, built in the depression below the ruined castle, at the site of Plewnye-yi Zîr. The new town developed around the socio-religious buildings provided by ‘Ali Bey, among which were many shops. In the 957/1550, the town suffered much damage when a flood swept away the houses and shops of the lower depression below the ruined castle, at the site of Pleven, which a Bulgarian extract remains (Trifonov, K6sk, no. 1457, fol. 359-60). The settlers of the town were attracted by freedom from the ‘award and tekâtîf taxes. The Christians of the town and the villages paid only half the dîjizye. ‘Ali Bey had also invited Spanish Jews to his new town, who came by way of Selanik and Sofia (1516: 69 families). In 910/1505 an important addition, Bâlp, was made to the wakf, of which a Bulgarian extract remains (Trifonov, Grad Pleven, 40-1). ‘Ali Bey died in 913/1507-8 and was buried in a tahrîbeh behind his mosque. His life as a warrior of Islam was sung by the poet Süzî Celebi of Prizren. His sons and grandsons continued his policy of promoting the town, adding numerous fountains and paving for the streets (kulaîtrîm). In 981/1573-4, Süleymân Bey completed the Kûrgbünh Dîjîmî, a monumental, domed mosque in the best classical Ottoman style (good photograph by Trifonov, at 43). Khâdir Bey added a second medrese, where the poet Daîsî worked as madderris. Together with the great medrese of ‘Ali Bey, this made Plewna an important provincial centre of Islamic learning. Besides these buildings, the 957/1550 tâbrîr mentions five smaller mosques. The 987/1579 tâbrîr mentions a mosque of Khaqânî Sultan, the daughter of ‘Ali Bey’s successor Mehmed, and the new Friday mosque of Süleyman Bey, son of Hasan Bey b. ‘Ali, and a number of mezrûds. When in 952/1562 the Ottomans took Budâiîn (pest), a part of the Jews of that city was invited to settle in Plewna (according to the 957/1550 tâbrîr, T.D. 382, pp. 685-6, 41 families). The same source also mentions 62 households of Jews from Germany, of which seven were headed by widows, and 84 households (15 headed by widows) of Jews from the Latin lands (Vahidîyâtî-i Frenk). In the 1570s, these Jewish groups rose to over 200 households, making Plewna one of the largest Jewish centres of the Balkans. Throughout the centuries, Plewna remained a predominantly Muslim town, which in the course of time absorbed and turkified a part of the local Bulgarian population (in 1550, 20% of the Plewna Muslims were of convert origin). A survey of its demographic development, based on the Ottoman tâbrîrs, a mezrûd ‘award defter, dîjizye defters, is a gross exaggeration. The imdret of Qhâizî, was still in full operation. Ewliya noted that especially in the prosperous 10th/16th century, the Christian wakf villages around Plewna, and the monasteries of St George near the town and Sadovec outside it, developed an important scribal activity, writing Bibles and church books for the Bulgarian Orthodox churches of northern Bulgaria (survey of preserved copies by Trifonov, 53-6). Of great importance was the literary production of the Plewna Jews, of whom Joseph ben Ephraim Karo, who came from Spain and worked as Hâdâm in the Plewna synagogue, should be mentioned.

In 1659 the town was visited by the Bulgarian Catholic archbishop Philipp Stanislavov (ed. Hermanzicz, 1887), who mentions as its inhabitants 500 Orthodox Bulgarians, having two churches, and no less than 5,000 Turks with seven mosques. Three years later, Ewliya Çelebi visited the town (Spahot-nâmê, vi, 1890-9 164-5; more detailed in the autograph, Topkapi Sarayi Müzesi, Revan Köşk, no. 1457, fol. 59n), who recalls the Wallachian legend of 1659/1562; but most of his ‘history’ is purely legendary or, at best, full of misidentifications of historical persons. In his time, Plewna consisted of “2,000 houses” , which is a gross exaggeration. The ‘ Kimi-yi Wildyet-i Tuna and the first Bulgarian censuses, is given in the following Table:

In the 11th-12th/17th-18th centuries, the town apparently declined, a process which, in addition to internal reasons, was triggered off by the sack and the destruction of the town by the Rumanians under Michael the Brave in 1064/1596, who also carried off thousands of the inhabitants of the wakf villages and forcibly settled them in Wallachia. After the invasion, the treasures of the medieval castle were taken down and the stones used for the construction of a large new khân bedesten.

In 1659 the town was visited by the Bulgarian Catholic archbishop Philipp Stanislavov (ed. Hermanzicz, 1887), who mentions as its inhabitants 500 Orthodox Bulgarians, having two churches, and no less than 5,000 Turks with seven mosques. much bigger families, the number of Bulgarians in the town also grew in a natural way, eroding the percentage of Muslims ever faster. In the decades before World War I, most of the Ottoman buildings of the town were demolished. A huge Russian neo-

Byzantine mausoleum came to occupy the site of the mosque, medrese and 'imaret of Ghazi Ali Bey. The mosque of Süleyman Beg was still standing in 1931, but was then replaced by the Military Club. On the site of the great Kerwânsaray, the new building of the provincial administration was erected. Great tree-

tiled boulvards and roads then replaced the old Turkish quarters. A name like “Tekiiskija Bair” still keeps the memory of the great zaı̀ye of ‘Ali Bey. The bones of the Russian and Rumanian soldiers of “77” were partly placed in the huge mausoleum, partly in large war cemeteries, the Rumanians having their own one, New Grivitsa, where they had fallen in the curious fights around the Grivitsa Redoubt. The village of Grivitsa had been until the end of the Ot-

toman period one of the major possessions of the waqf of Ghazi ‘Ali Bey. The skeletons of the tens of thousands of Ottoman soldiers, however, were dug up and sold to a British firm to be turned into fertiliser used for English agriculture. A part of the earthworks and trenches of ‘Othmân Pasha was maintained as a memorial and can still be seen. In the 1970s, an enor-

mous memorial building, with a magnificent panorama of the battlefield, was constructed, one more beautiful even than that commemorating the Battle of Borodino (1812) near Moscow.

Ghazi ‘Othmân Pasha’s defences around Plewna left a deep imprint on subsequent Western fortification, the Plewna profile and concept of defence being used in the newer works around Verdun, the principal fortress of France, as well as in the “Position Amster-

dam” and in the forts of Chatham (Twydale Redoubt).

After World War II, the city of Pleven, which already before the war had a considerable amount of industry (textiles, canned food, chocolate and metalwork) shot up to become one of the largest in-

dustrial centres of northern Bulgaria, with a present population of over 100,000. Until the early 1970s, only one miserable wooden mosque was still standing in Pleven, much to the dismay of the Bulgarian Muslim community. Disregarding the earthworks of 1877, not a single Ottoman building remains to testify to the long Islamic past of the town, a situation exemplary for the fate of Islamic culture in south-eastern Europe after the end of Islamic rule.

count); I. Penkov, Pleven, Sofia 1962; Şerafettin Turan, IA, art. Pleven; M. Tayyib Gökbilgin, IA, art. Mihâloğlu; Tsv. and G. Todorova, Pleven, putevoditel, Sofia 1977; Mihaila Stajnova, Osmanskite biblioteki v bulgarskite semy, Sofia 1980, 150-4; Ent-
“Torbeši” is very little known in detail. In any case, the adoption of Islam did not take place everywhere at once but was gradual and at different periods. A beginning was made immediately after the battle of Marica (1371) and after the fall of Trebizond (1393). many Serbs and Bulgars at this time, and especially, as Jireček thought, the nobles and the Bogomils among these, adopted Islam. After these first conversions under Bayazid II, considerable numbers of converts were made according to native tradition in the reign of Selim I (1512-20); for this purpose he is said to have sent his “favourite Sinan Paša” into the territory of the Balkan mountains. The highlands of Cepino (in the Rhodopes) were converted, according to local histories, in the beginning of the 17th century; according to Jireček (Furstenthum, 104), however, not until the middle, in the reign of Mehmed IV (1648-87); the Grand Vizier Mehmed Koprulu is said to have taken a leading part in the work. The conversion to Islam of the Danube territory (Loveč, etc.) is put in this period. Towards the end of this century (sc. the 17th), further conversions took place among the Serbs in the Debar region. In some districts Islam only gained a footing on a large scale in the course of the 18th century and sometimes not till the beginning of the 19th (e.g. in Gora, south of Prizren).

Until the early 20th century, one was very often inclined to believe that these conversions to Islam were made under compulsion, even by force of arms, but subsequently the view began to prevail that the authorities never took any direct steps to proselytise their Christian subjects; conversion was on the contrary voluntary and for quite different reasons except in a few exceptional cases (cf. e.g. H. Vasištev, Muslimani..., esp. 53-61).

Towards the end of the 19th century, when the process of conversion had ceased for decades everywhere, the great majority of the Slav Muslims (Bulgarian and Serb) were to be found in the Rhodopes and the mountains of eastern Macedonia and in groups of considerable size up and down Macedonia as far as the Albanian frontier, a wide area which stretched in the north from Plovdiv (Philippopolis) to Salonika in the south and in the east from the central course of the Arda over the Vardar and even beyond the Crni Drim, i.e. from the borders of the Vardar basin to Gottuv and Prizren to the west. At that time only a small part of this territory, which was interspersed with Christian areas, belonged to the principality of Bulgaria; the greater part was still Turkish, and only after the Balkan War passed to Serbia or after the First World War to the former Yugoslavia. In addition to the main body of Muslim Bulgars in the Rhodopes mountains, there were at the same time also sporadic groups north of the Balkan range in the Danube territory, in the circles of Loveč, Plevne (Plevna) and Orechovo (Rahovo).

Since then, however, the frontiers of the “Pomaks” have receded considerably. During the siege of Plevna almost all the Bulgarian Muslims fled from the Danube districts to Macedonia; although they returned in 1880, they soon afterwards migrated into Turkey. After the union of eastern Rumelia and Bulgaria and the establishment of the “Bulgarian and Serb” s there was a considerable scale, and it was carried out by force and constraint (Ischirkoff, ii, 15). In 1933, Iv. Lekov (see Bibli.) explained the name Pomak from the verb *pomoci* “to help” and means helper (pomagat), i.e. auxiliary troops of the Turks, was first given by F. Kanitx (Donau-Bulgarern und der Balkan, ii, Leipzig 1882, 182), but was soon afterwards (1891) declared by Jireček (see Bibli.) to be illegitimate. Another equally improbable etymology is that which explains Pomak by the Bulgarian word *mâk* = “torment, force”, and justifies this explanation by saying that the conversion of the Bulgarians to Islam on a considerable scale was carried out by force and constraint (Ischirkoff, ii, 15). In 1933, Iv. Lekov (see Bibli.) explained the name Pomak from *poturnjak* (lit. “one made a Turk”). Whether the word *dâmak*, which in Turkish means “rub, beat, cudgel”, in Uyghur “Muslim” and in South Russia “pedlar” (cf. Barthold, Histoire des Turcs d’Asie Centrale, Paris 1945, 73-4), is in any way connected with Pomak, or has been influenced by the Bulgarian *poturnjak* or confused with it, still has to be investigated.

1. History of the Pomaks from their origin to the Second World War.

The history of the conversion of the “Pomaks” and
Bulgaria Jireček estimated (1891) their number at most 28,000 souls, and before the Balkan War there were within the old frontiers of Bulgaria (according to official statistics of 1910) 21,143 (0.49% of the population). In the lands acquired in the Balkan War in Southern Bulgaria there were, however, many more Pomaks, mainly in the regions of the rivers Arda, Mesta and Struma, so that the official census of 1920 makes their number 88,399 (1.82% of the whole population). A somewhat higher figure was given by the Bulgarspeaking Muslims of Macedonia (cf. H. Vasiljevic (Muslims in Southern Serbia) in Kustendil 1931, according to Camalovic (see Bibli.)

A century or so ago, the songs and ballads of the "Pomaks" were the subject of much dispute. A Bosnian ex-cleric, Stefan Verković (1827-93), an antique dealer in Seres, published under the title of Veda Slavena (i.e. the "Veda of the Slavs"), Belgrade 1874, vol. i a collection of songs which were alleged to have been collected mainly among Pomaks and which celebrated "pre-Christian and pre-historic" subjects (chiefly the immigration into Serbia of the Indians of the Veda, the discovery of corn, wine, of writing and legends of gods with Indian names, of Orpheus, etc.). A. Chodzko, A. Dozon (Chansons populaires bulgares inédites, Paris 1875; cf. also Revue de littérature comparee, xiv [1934], 155 ff.) and L. Geitler (Poetische tradice Thrátki a Bulharu, Prague 1878) also strongly supported belief in this "Veda"; it was even assumed that the Pomaks were descended from the ancient Thracians, who had been influenced first by Slav culture and then by Islam.

But of ballads on such subjects neither the Muslim nor the Christian Bulgars knew anything, and Jireček, who investigated the question on the spot, repeatedly described this "Slav Veda" as the fabrication of some Bulgarian teachers (Fürstenthum, 107).

We now know that Verković's chief collaborator was the Macedonian teacher Iv. Gologanov (cf. Pentscho Slawejkoff, Bulgarische Volkslieder, Leipzig 1919, 15). In view of this fact it seems strange that their religious substance and language were sometimes careless handed over to the Turks. Moreover, some statistics were not completely free from chauvinistic and political bias. The European estimates, finally, were based on approximations or were quite arbitrary.

Bulgaria Musulmans in particular occasionally (esp. in 1876-8) fought alongside the Turks against the Christian Bulgars may be ascribed to the fact that, as a result of their low cultural level, they made no clear distinction between nation and religion and that their Christian fellow-countrymen treated them as Turks and not as kinsmen. These mistakes were repeated in the Balkan War, when the victorious Bulgarspeaking Muslims and the Transylvanians were led so far as to convert the Pomaks in the Rhodopes and other districts to Christianity, mainly by pressure and force of arms. But on the conclusion of peace, they returned to Islam again. This was frankly admitted by the Bulgarian geographer Iširko (Iširkoff) and the Bulgarian writer Iv. Karaivanov (in his Bulgar periodical National Education, Kustendil 1931, according to Camalovic (see Bibli.)

The number of Pomaks (in reality of Muslim Slavs) in Macedonia was, according to S. Verkovic (1889; see Bibli.) 144,051 men.

As regards the number of Serbian-speaking Muslims in Southern Serbia, they were estimated by H. Vasiljevic (Muslims in Southern Serbia) in Furstenthum Bulgarien, 305, namely that their religion these Muslim Slavs were sometimes carelessly counted with the Turks. Moreover, some statistics were not completely free from chauvinistic and political bias. The European estimates, finally, were based on approximations or were quite arbitrary.

In spite of the fact that the Pomaks and Torbeši are occasionally included among the Turks and in spite of the fact that they sometimes call themselves Turks, they are nevertheless the purest stratum of the old Bulgarian or Serbian population, as the case may be, who have preserved their Slav type and Slav language (especially archaic words) very well, sometimes even better—as a result of their being cut off from the Christians and their isolation in outlying districts—than their Christian kinsmen, who have been constantly exposed to admixture from other ethnic elements. They have a firm feeling of assimilation for the Turks, whose language they do not understand. It is only in the towns that we find that in course of time some of these Slavs have adopted the Turkish language. What bound them to the Ottomans was not language, but principally a common religion, with its prescriptions and customs (e.g. the veilig of women), which along with Turkish rule naturally imposed upon them many Arabic and Turkish words. In spite of this, there have survived among them many pre-Islamic customs and reminiscences of Christianity (observation of certain Christian festivals, etc.).

That the Bulgar Musulmans in particular occasionally (esp. in 1876-8) fought alongside the Turks against the Christian Bulgars may be ascribed to the fact that, as a result of their low cultural level, they made no clear distinction between nation and religion and that their Christian fellow-countrymen treated them as Turks and not as kinsmen. These mistakes were repeated in the Balkan War, when the victorious Bulgarspeaking Muslims and the Transylvanians were led so far as to convert the Pomaks in the Rhodopes and other districts to Christianity, mainly by pressure and force of arms. But on the conclusion of peace, they returned to Islam again. This was frankly admitted by the Bulgarian geographer Iširko (Iširkoff) and the Bulgarian writer Iv. Karaivanov (in his Bulgar periodical National Education, Kustendil 1931, according to Camalovic (see Bibli.)
"Muslim Bulgar" settlements are specially marked; J. Cvijic, Osnove za geografiju i geologiju Macedonije i Sjeverne Srbije, Belgrade 1906, 1915. VI. R. Djordjević, U Srednjem Rodopima, pitomice bjelede ot Plovdiva do Čepelara, in Nova istra, Year 8 (Belgrade 1906), 172-6, 198-205 (interesting description of a Serbian journey in the year 1905 on the life and customs of the Pomaks); M. Gavrilović, in Grande Encyclopédie, s. v.; A. Ischikoff, Bulgarsen, Land und Leute, ii, Leipzig 1917, 14-17; J. Bonamy, Les musulmans de Pologne, Roumanie et Bulgarie, in REI (1932) (deals with the Pomaks (p. 88) very superficially); Iv. Lekov, Kâm zdrobi za imeto pomak (On the question of the name "Pomak"), in Snorn polucelovana Bugarija, Sofia 1933, 38-100 (cf. Bibliographie Geographique Internationale, Paris 1933, 317, which also quotes a short article by G. Ivanov on the history of the Loveć-Pomaks (Za minaloto na lovčenski pomaci), appeared in Loveć i Lovćensko, v, Sofia 1933); Annuaire statistique du royaume de Bulgarie, Sofia 1934, 23, 25, 28.

(E. Bajraktarević)

The preceding article skillfully brings together what was known of the Pomaks on the eve of the Second World War. One can, however, add to the bibliography for that period certain items not noted there or which have appeared since 1935, such as: L. Miletić, Lovčenski Pomaci, in Bălgarski Pregled, v/5 (Sofia 1939), 67-78; St. Stîtkov, Pomacite in trije bălgarski oblasti: Trakija, Macedonija i Mizia, Plovdiv 1914 (cf. a notice on this work, Les Bulgares mohomendans des Rhodopes et les traces du christianisme dans leur vie, in En terre d'Islam, vi/5 [Nov.-Dec. 1931], 387-8); idem, Bălgaro-mohomendani (Pomaci). Istoriisko-zemepisni i narodoušen pregled i obraz, Plovdiv 1936 (cf. an especially useful review by M.S. Filipović, in Pregled, xi/166 [Sarajevo, Oct. 1937], 673-9; Ahmet Čeçev Eren, Pomaklar, in IA, ix, 572-6; idem, Pomaklara dair, in Türk Kâltürü, i/4 (Ankara 1963), 37-41; Ch. Vakarelski, Alitirelmenche Elementa in Bulgarien Kultur der Bălgaro-mohomendani, in Zeitschr. für Balkanologie, iv (Berlin 1966), 149-72; N. Kaufmann, Pesni na Bălgarite mohomendani ot Rodopi, in Rodopski Zbornik, ii (Sofia 1969), 41-130; B. Lory, Une communauté musulmane oubliée: les Pomaks de Loveć, in Turcica, xix (1987), 95-116.

In regard to the thorny problem of the Islamisation of the Pomaks, see the viewpoint of St. Dimitrov, Demografsko otnosenje i pronikvaneto na islama v zapadnite Rodopi i dolinata na Mesta prez XV-XVI v., in Rodopski Zbornik, i (1965), 165-84.

2. The Pomaks during the Second World War.

Being one of the Axis Powers, Fascist-controlled Bulgaria was awarded by Hitler, on the one hand, the southern territories of contemporary Serbia (or Old Serbia, Sava Srbija or Južna Srbija) and on the other, western Thrace (belonging to Greece), which meant that, from 1941 to 1944, the Pomaks of the Balkans found themselves united within one state. Our knowledge of their situation at that time varies from region to region, but everywhere it was extremely bad: social and economic deprivation, a deplorable health position and continual discrimination on the part of the authorities, religious and cultural oppression, driving the Pomaks towards a "religious fanaticism", according to the expression used by Bulgarian authors themselves.

On the Bulgarian occupation of south Serbia (which in 1944 became part of Yugoslavian Macedonia), see the collective work (from a pro-Macedonian, extremely anti-Bulgarian viewpoint) called Denacionalizatorska dejnost na burgarskite kulturno-prostetni institucii vo Makedonija (Skopje i Bitolsko okupaciona oblast 1941-1944), Skopje 1974.

On the Pomaks of Bulgaria proper, see V. Božinov, Bălgarii mohomendani prez Vizorata svetovna vojna (1939-1944), Skopje 1975, 19-99; idem, Is mohomendi Bălgarii mohomendani vo Rodopite, Sofia 1958, 137-44; idem, Bălgarii mohomendani i vânzărirea borba sreltu falsizma, in ibid., 144-51, where some further references can be found. (It should be mentioned in passing that a law is said to have been passed on 8 July 1942 concerning the compulsory Bulgarianisation of names borne by the Pomaks, and that 60,000 of them had to change their names at this time.) On the participation of some Pomaks in the anti-Fascist struggle at the side of the "partisans" (i.e. Bulgarian Communities) towards the end of 1944, see Is minaloto..., 148-51; Jv. Memišev, Uzgaboteto na bălgarske Turci protiv kapitalizma i falsizma 1919-1949, Sofia 1977.

As for the Pomaks of Greek Western Thrace (the southern part of the Rhodope Mountains) at this time, we possess a piece of evidence (rapid and incomplete, it is true, but completely first-hand) from the Orthodox Bulgarian Patriarchate Kiril, who visited these regions in 1943-4: Kiril, patriarh bălgarski, Bălgarmohomendanski seltiva vo Južni Rodopi (Kantyitsko i Gjumyrdzitamento) toponimni, etnografski i istoritsko iszvedvane, Sofia 1960. This contains much information on the daily life of this people (especially on the ethnographic level), but also on the general atmosphere in these isolated mountain villages. The local Pomaks were often hostile to their visitor; they spoke Bulgarian and knew no Turkish whatsoever; their womenfolk were only very rarely veiled; polygamy was unknown; divorce was very rare; but the villages adjacent to the plain were, more and more, becoming slowly Turkicised. On the religious and cultural level should be noted the survival of certain Christian customs, the fact that the dead were buried in the orientation of Mecca and the existence of mosques in the villages (but only one tekke is mentioned, in the district of Sahin, whilst the medresen were all in ruins).

3. The Pomaks from the end of the Second World War to the present time.

Since 1945, the history of the Pomaks in the Balkans can be followed in two countries only, Bulgaria and Greece, in the light of the fact that, the Communist Yugoslavian authorities having set up a "Socialist Federal Republic of Macedonia", all the Slavonic-speaking Muslims of the region became ipso facto the Muslim Macedonians. There are, moreover, relatively few works on this group of Muslims of former Yugoslavia. See e.g. J.F. Trifunski, Za torhelite vo porecieto na Markovo Reka, in Godišten Zbornik (Fil. Fak.), iv/1 (Skopje 1951), 3-11; D.Hr. Konstantinov, Macedonci musulmani, in Prirozi, Društvo za nauka i umjetnost, v (Bitola 1970), 139-44; and above all, N. Limanovski, Etno-soziale karakteristike islamizezanih Makedonaca, Belgrade 1991 (unpubl. thesis); and then, in a much wider perspective, A. Popovic, L'Islam balkanique. Les musulmans du sud-est européen dans la période post-ostrmame, Berlin-Wiesbaden 1986; idem, Les musulmans yougoslaves (1945-1969). Médiatres et métaphores, Lausanne 1990. One can nevertheless wonder whether the present dissolution of the Com-
mnist countries into ethnic and regional groups may not bring about the re-appearance some day of the former entities of this land, such as the Pontic Turks or the Gorani (Slavonic-speaking Muslims of Skopska Crna Gora) alone speak amongst these diverse groups, the Gorani ("nationalistic-speakers") alone may seem to display a certain cohesiveness, through the medium of a handful of spokesmen, notably vis-a-vis the Turkish and Albanian Muslims of Macedonia.

In the Pomaks of Bulgaria (peasants and shepherds of the Rhodopes and the region of Razlog and a few other places, numbering from 150,000 to 200,000 persons) continued to endure an extremely difficult situation, within a climate of permanent hostility from the Greek state is not only resolved to begin a new process of assimilating the Pomaks—until now considerably suppressed and not allowed to have any public expression—within a climate of permanent hostility from the Greek state is not only resolved to begin a new process of assimilating the Pomaks—until now considerably suppressed and not allowed to have any public expression—within a climate of permanent hostility from the Greek state is not only resolved to begin a new process of assimilating the Pomaks—until now considerably suppressed and not allowed to have any public expression—within a climate of permanent hostility from the Greek state is not only resolved to begin a new process of assimilating the Pomaks—until now considerably suppressed and not allowed to have any public expression—within a climate of permanent hostility from the Greek state is not only resolved to begin a new process of assimilating the Pomaks—until now considerably suppressed and not allowed to have any public expression—within a climate of permanent hostility from the Greek state is not only resolved to begin a new process of assimilating the Pomaks—until now considerably suppressed and not allowed to have any public expression—within a climate of permanent hostility from the Greek state is not only resolved to begin a new process of assimilating the Pomaks—until now considerably suppressed and not allowed to have any public expression—within a climate of permanent hostility from the Greek state is not only resolved to begin a new process of assimilating the Pomaks—until now considerably suppressed and not allowed to have any public expression—within a climate of permanent hostility from the Greek state is not only resolved to begin a new process of assimilating the Pomaks—until now considerably suppressed and not allowed to have any public expression—within a climate of permanent hostility from the Greek state is not only resolved to begin a new process of assimilating the Pomaks—until now considerably suppressed and not allowed to have any public expression.

Meanwhile, they are considered in Bulgaria (and they are still taken into consideration) rather as "lost children" of the nation. Their religiosity (which is, in fact, little more than a sort of "popular Islam") has had to suffer since 1945 the ravages of time (notably under the continual attacks of Soviet-style "scientific atheism"). Official Bulgarian publications on the local Pomaks (since 1945) are somewhat condescending. They set forth unanimously their very backward cultural state in relationship to the rest of the Orthodox Bulgarian population, but strongly insist that they are indigenous Bulgarians which various forces and "malevolent" tendencies have tried, on many occasions, either to assimilate to the Turks or to separate from their ethnic brothers and homeland. See e.g. P. Marinov, Iz miragleda na sredno rodopskite Balgari-mohamedani, in Balgarski narod, ill/1, Sofia 1947; N. Vrančev, Balgari mohamedani (Pomaci), Sofia 1948; V. Božinov, Balgari mohamedani pri narodnata vlast, in Iz minuloto..., 151-6; K. Vasiliev, Rodopi, Rodopi, Sofia 1961; Nevertheless, Balgari mohamedani-naradzhalna chast ot balgarskija narod (preporučitelna bibliografija), Blagoevgrad 1971 (with a lengthy bibliography); C. Monov, Prikazatelno delo sred Balgariite s mohamedanska uvaara v rodopskija krajo prez godite na narodnata vlast (1944-1968), in Rodopski Zbornik, ill (1972), 9-51; A. Prozorovski, Bist i kultura na rodopskite Balgari, Sofia 1974; P. Petrov, Razprostranenieto na isl- vampam v Rodopite, in Rodopite v bulgarska istorija, Veliko Tarnovo 1974, 62-86; K. Kanev, Srednorođopski (svdavni) narod i obicaja, in Rodopi, 1974/10, 22-6; idem, Srednorođopski obicaja, in Rodopi, 1974/11, 22-4; etc. For a diametrically opposed view, amongst numerous publications of this type, see Rodopodaraki son Turk katidmimn if yiizu, Istanbul 1972.

The feeling that forcible (and all other means) assimilation of the Pomaks by the Bulgarian Communist authorities increased to a brutal pitch after 1979 (see e.g. K. Yanatchkov, Entrez le croissant et le manteau: les musulmanes bulgares, in L'Alternative [Paris, Jan.-Feb. 1980] 22-3), culminating dramatically in the events of February-March 1985. From this date onwards, the Western press began to speak on numerous occasions of several dozen (even, of several hundred) deaths: murders committed in the course of the Bulgarianisation of names campaign (first amongst the Pomaks, then amongst the Turks of Bulgaria), an action which involved not only the change of names of living persons but also (by means of the civil govern- ment registers and the gravestones in cemeteries) those of parents and ancestors. The fall from power of Communism stopped this barbarous policy, and the governments formed after this time have made numerous acts of appeasement and goodwill towards the local Pomaks, especially since the necessity of a coalition (probably tactical and ephemeral) with the political Party of the Bulgarian Turks.

We are relatively well informed about the life of the Pomaks of Greece (around 25,000 to 30,000 persons, and living in the Rhodopes, along the Bulgarian frontier) during this period. These form an exclusively village society, apart from those settled in the towns and settlements of Western Thrace, where they are undergoing a slow Turkification process because of the presence there of a Turkish community, much better organised and three or four times as numerous. It is very much an introspective community, living in a mountain region to which access (since it is a military zone) was forbidden until very recent times to Greeks and foreigners alike and only to be entered with a special permit, difficult to get. The cultural level of this population seems to have remained fairly modest, and in any case we do not have (as is the case for the Pomaks of Bulgaria) any written eye-witness information. What we know at present of it rests on several works which are mainly of an ethnographical and sociological nature. See e.g. B. Vernier, Rapports de parenté et rapports de domination ... Représentation mythique du monde et domination masculine chez les Pomaques, diss. Paris, EHES 1972 unpubl. (a brief analysis of it in Popovic, L'Islam balkanique, 169-70); E. Arvanitou, Turcs et Pomaks en Grèce du Nord (Thrace Occidentale). Une minorité religieuse ou deux minorités nationales, sous une administration hellénique chrétienne, diss. Univ. de Paris VII, unpubl.; F. de Jong, Names, religious denomination and ethnicity of settlements in Western Thrace, Leiden 1980; E. Sarides, An ethnic-religious minority between Scylla and Charybdis. The Pomaks in Greece, in La transmission du savoir dans le monde musulman périphérique. Lettre d'information, 5 (April 1986), 17-25; idem, Ethnische Minderheit und zwischenstaatliche Streitobjekt. Die Pomaken des Thrakischen Nordostens, Berlin 1987. As for the official attitude of the Greek authorities (and of some local authors), this is disconcerting. It is currently maintained that this is a Greek population (or else the descendants of ancient Thracian tribes) completely separate from the Bulgarian Pomaks, a population which was allegedly first of all Bulgarianised, and then Islamised, some time later. See e.g. N. Xirotiris, Personal remarks on the distribution of the frequencies of blood groups amongst the Pomaks [in Greek], Salonica 1971; Ph. Triarkhis, The Rhodope administrative district yesterday and today [in Greek], Salonica 1974; Pan. Photias The Pomaks of Western Thrace (a small contribution to a great subject) [in Greek], Komotini 1976; and finally, three works, also in Greek, recently have appeared: P. Hidrogloou, The Greek Pomaks and their relations with Turkey, Athens 1989; Y. Mavroglou, The Pomaks or Rodopeoi, Athens 1990; and P. Mylonas, The Pomaks of Thrace, Athens 1990, on which one can find a lucid analysis by M. Anastasiadou, Trois livres sur les Pomaks de Grèce, in La transmission du savoir ... Lettre d'information, xi (March 1991), 64-6, who writes specifically, "The feeling which one gets from reading these three works is that the Greek state is not only resolved to begin a new process of assimilating the Pomaks—until now con-
demned to isolation—but above all wishes to prevent at any price the Pomaks from drawing closer to the 'Turks of Western Thrace'. There is, moreover, no doubt that the fall of the Communist régime in Bulgaria will have as a result the opening-up of this region of Greece and, as a result, the end of the isolation of the local Pomaks.

PONDOK [see Pesantren].

PONTIANAK, the name of a part of the former Dutch residency 'Wester-Afdeeling' of Borneo, also of the sultanate in the delta of the river Kapuas and of its capital; these are now in the Kalimantan [p. v. in Suppl.] region of the republic of Indonesia [p. v.].

As a Dutch province Pontianak included the districts of Pontianak, Kubu, Landak, Sanggau, Sekadau, Tajan and Meliau. The administration was in the hands of an assistant-resident whose head-quarters were in Pontianak where the Resident of the 'Wester-Afdeeling' also lived. The Dutch settlement is on the left bank of the Kapuas, where also is the Chinese commercial quarter. The Malay town lies opposite on the right bank.

The sultanate of Pontianak with its capital of the same name was independent under the suzerainty of the Netherlands and was 4,545 km² in area. In 1930 the population consisted of 100,000 Malays and Dayaks, 562 Europeans, 26,425 Chinese and 2,378 other Orientals. The term Malays includes all native Muslims, among them many descendants of Arabs, Javanese, Buginese, and Dayaks converted to Islam. The Dayaks in the interior are still heathen. Roman Catholic missions are at work among the latter and the Chinese. The very mixed population is explained by the origin and development of Pontianak.

The town was founded in 1772 by the Sharif Abd al-Rahmān, a son of the Sharīf Husayn b. ʿĀhmad al-Kadrī, an Arab who settled in Matan in 1735 and who in 1771 died in Mampawa as vizier, revered for his piety. In 1742 Abd al-Rahmān was born, the son of a Dayak concubine, and very early distinguished himself by his spirit of enterprise. He attempted to gain the ruling power, successively in Mampawa, Palahubu and Bandjarmasin, from which he had to retire with his band of pirates, although the sultan had been his patron, after he had taken several European and native ships. By this time, he had married a princess of Mampawa and Bandjarmasin and possessed great wealth. On his return to Mampawa, his father had just died. As he met with no success here, he decided to found a town of his own with a number of other fortune-seekers. An uninhabited area at the mouth of the junction of the Landak with the Kapuas, notorious as a dangerous haunt of evil spirits, seemed to him suitable. After the spirits had been driven away by hours of cannon fire, he was the first to spring ashore, had the forest cut down and built rude dwellings there for himself and his followers.

The favourable position of the site and the protection which trade enjoyed there soon attracted Buginese, Chinese and Javanese merchants to it so that Pontianak developed rapidly and Sharīf ʿAbd al-Rahmān was able by his foresight and energy to hold his own against the neighbouring kingdoms of Matan, Sukadana, Mampawa and Sanggau.

He appointed chiefs over each of the different groups of people and regulated trade by reasonable tariffs. He was able to impress representatives of the Dutch East Indian Co. in Batavia to such an extent that they gave him the kingdoms of Pontianak and Sanggau as fiefs after the company had bought off the claims of Banten to Western Borneo. As early as 1772, the Buginese prince Radja Hadjdji had given him the title of sultan. After his death in 1808, his son Sharīf Kāsim succeeded him. He was the first to change the Arab ceremonial at the court for more modern ways.

According to the treaty concluded with the Dutch Indies government in 1855, the sultan received a fixed income from them while they administered justice and policed the country. The relationship to the Dutch Indies government was defined in a long agreement of 1912, which also solved the administration of justice and the taxes. From the local treasury, then constituted, the sultan received 6,800 guilders a month; he also received 50% of the excise on agriculture and mines.

In keeping with the nature of its origin, Pontianak is predominantly Muslim in character and a relatively large number take part in the pilgrimage to Mecca. For these pilgrims, who are known as Qāwās Funţiana, the sultan, when he performed the pilgrimage in the 1880s, founded several wadî houses in the holy city.

The main support of the whole population is agriculture and along with it trade in the products of the jungle. The exports are copra, pepper, gambir, sago, rubber and roton, especially to Singapore and Java. Rice, clothing and other articles required by the Europeans and the more prosperous Chinese and Arabs are imported. The import and export trade is mainly in the hands of the Chinese. They live together in the Chinese quarter in the European half of Pontianak on the left bank where also the other foreign Orientals have setted. This is therefore the centre of trade and commerce in the valley of the Kapuas.

In the swampy lands of Pontianak, intercourse with the outer world is almost exclusively by water. Only in the 1920s and 1930s were motor-roads laid over the higher ground from Pontianak to Mampawa and Sambas, to Sungei Kakap and from Mandor to Landak.

POONA [see Pūṇa].

PORPHYRY [see furfūryûs].

PORT SA'ID (a. Būr Sa'id), a seaport on the Mediterranean coast of Egypt at the northern extremity of the Suez Canal and on its western bank (lat. 31° 16' N., long. 32° 19' E.). It is connected with Cairo, 233 km/145 miles away, by a standard-gauge railway constructed in 1904 via Zagázig and Ismā'īliyya, and also with Damietta and Alexandria. After the construction of the Suez Canal, it became the second seaport of Egypt after Alexandria, and is now the chief-lieu of a governorate (muḥāfaza) of the same name. The population of the governorate (1986 estimate) was 382,000 and of the town itself 374,000.

Port Sa'id was founded in 1859, as soon as the Suez Canal was decided, during the reign of Sa'id Pāsha [g.a.], Viceroy of Egypt and was named after him. Except for the strip of sand which, varying in width between 200 and 300 yards, separates Lake Manzala from the Mediterranean, the site of the present town was under the water. This site was selected by a party of engineers under Laroche and de Lesseps, not on account of being the nearest point across the isthmus to Suez, but because the depth of the water there corresponded most favourably to the requirements of the projected canal. As soon as work was started on the
Canal, five wooden houses were constructed above the water, supported on massive piles and equipped with a bakery and a water-distillery for the use of the pioneers. A year later, dredgers began to deepen the water. The Khedive Isma'il ordered four lighthouses to be erected at the expense of the Egyptian Government at Rosetta, Burullus, Burдж al-I'zba near Damietta, and Port Sa'id. The latter one was 174 ft. high and its beam distant from those of the other three and visible at a distance of 20 miles. It lay at the base of the western mole which, at its seaward extremity, carried a colossal statue of Ferdinand de Lesseps by E. Pernot, unveiled in 1899.

In 1956 the Egyptian President Gamal 'Abd al-Nasser (Nasser) nationalised the Suez Canal. In the ensuing war of Britain, France and Israel against Egypt during late October-early November 1956, Port Sa'id was severely damaged by air attacks and during the British and French landings, with the statue of de Lesseps, amongst other things, being destroyed. After the war, the damages were repaired and the Canal re-opened, but during the Six Days' War of June 1967 Israeli forces advanced to the eastern bank of the Canal and occupied the territory of western Sinai up to that bank. The Canal remained closed for several years. But after the Camp David Accords of 1978 and the Israel-Egypt Peace Treaty of 1979, the use of the Canal revived and the revenue from transit dues has become a significant part of Egypt's income, with Port Sa'id returning to something of its former prosperity.

Mary Briddrick) and Cook's (ed. Sir E. A. Wallis Budge).

(A.S. Atyia*)

**POSTA** (Ital. *posta*), borrowed into Ottoman Turkish and Arabic in the 19th century in the forms *plibista*, *plibista* to designate the new conception of European-style postal services in the Near East. In more recent times, it has been replaced at the formal level by *barid* [q.v.], a revival of the mediaeval Arabic term for the state courier and intelligence services, but *bista*/*bista* and *bista*/*pastarnak* "postman" continue in use in the Arab Levant at the informal level, and *posta* remains the standard term in Modern Turkish. In modern Persian also *post*, from the French *poste*, is used.

(E. D.)

**POSTA,** postage stamps. Postage stamps (Ar. طوابع [barid]; Pers. *hamzāb*; Tk. *pu*) are a Western innovation. The world's first postage stamp—the "penny black"—bearing the portrait of young Queen Victoria—was issued by Great Britain in 1840. There exists an evident connection between the spread of the "postage stamp revolution" and European overseas expansion. Besides Great Britain, other European countries, above all France, but also Austria, Germany, Italy and Spain were responsible for the founding of postal services and the diffusion of stamps in North Africa and the Middle East. Foreign post offices of these countries were opened e.g. in Lebanon, Syria, Palestine, Morocco, Libya, and Egypt. They issued the stamps of their countries, and as a result the dispatching point of these stamps is only to be identified by the postal cancellations. Later, overprints were added. Here, as in other cases, the foreign post offices cut into revenues that would otherwise have gone to the national post office. The first Middle Eastern countries which joined the parade of stamp-issuing states were: India (1854 with a portrait of Queen Victoria on the issued stamp, after long trials of the East India Company for two years); the Ottoman Empire (1863); Egypt (1866); Persia (1868); and Afghanistan (1871). The first three of them opened post offices in their "satellite states" using the same practice as the European countries.

Despite the more than one hundred year-old history of stamps in North Africa and the Middle East, "Islamic philately" has not received much attention until recently. This intensified interest is mainly to be explained by the fact that, since the 1960s and the 1970s, the themes on stamps have been diversified and several Islamic countries have begun to use postage stamps as instruments of propaganda. Philately is considered as an ancillary historical and socio-scientific discipline, although its skilled use as such is rarely revealed. Unlike its honoured sister disciplines philately cannot of course provide information on dark periods where written evidence is scarce or unavailable. But it can be of additional value for the analysis of official viewpoints and of cultural and political history; stamps are excellent primary sources for the symbolic messages which governments seek to convey to their citizens and to the world. The same is true of banknotes, because "both are a monopoly—i.e. a sovereign attribute of the state as
well as an efficient iconographic propaganda vehicle thereof. They can tell us something about the ideological hegemony of the state, the one for which it attempts to ensure ideological hegemony" (Sivan 1987, 21). For modern times, the symbolism of stamps is more useful for the historian than that of coins because stamps are more varied and less conservative.

Which types of historical evidence are to be found on stamps in detail? Stamps can be studied from the beginning and the end of the series. Under the latter we understand the stamps as "objects of economic interest" (cf. Hazard 1959/1980, 200 ff.), made up of paper, ink, glue, etc., marked by inscriptions, overprints and denominations. An enquiry into the quantity and quality of these components (kind of paper, method of printing, perforation, watermark, overprint types and settings, etc.) is not merely of limited interest for the collector or the historian of printing technology and paper manufacturing; an investigation of these aspects can give indications concerning the political and economic situation of the issuing country. A large quantity of new issues has normally two causes: either the state is fully appreciating the propaganda value of stamps (as was the case, for instance, in Iran under the last Shah, in Libya since the mid-1970s and also in 'Irak at present under the leadership of Saddam Husayn), or else it is seeking additional revenue. Numerous countries, mostly small and poor, have abandoned their prerogatives to represent themselves in favour of financial advantages. They have entrusted Western agencies with the production of stamps on any possible occasion and with their promotion to dealers and collectors. Many of these stamps never touch the shores of the countries that issue them. The stamps display themes which have mostly nothing to do with the heritage of the issuing state. European paintings, famous people of the world (such as J.F. Kennedy, the Prince of Wales and Princess Diana), or international sports events. For the Islamic countries, this practice was used e.g. by Afghanistan under the reign of Zahir Shah, by North Yemen (since 1962), by Mauritania, Katar (since 1961), and the poor Persian Gulf shaykhdoms (A'jaman, with even special issues for its exclusive Manama, Dubaiy, Fudaysra, Ra'a) by the autocratic Al-Bahrayn of the last 14 years. More often, overprints have been used by the Ottoman Empire under foreign control, and of war-time Libya, becomes clear why the watermark of the Pahlavf stamps was not imported such stamps for the wars against Israel and the young Turkish Republic printed a large quantity of foreign rule, the degree of dependence and control. Whereas Egypt had the right to issue special stamps of its own, other Ottoman provinces were less autonomous. The French for 'Irak used to overprint "TE.O." on French-made stamps. These stamps were overprinted "T.E.O.", for "Territoires ennemis occupés", later changed to "O.M.F.", for "Occupation militaire française", protecting, mandatory, and colonial powers. The date and type of overprints indicate the severity of foreign rule, the degree of dependence and control. Algeria, being constitutionally part of metropolitan France, had stamps of its own only after 1924. In that year, French stamps were overprinted "ALGÉRIE". Even the post-war issues have continued to omit Arabic, to stress French culture and interests to the exclusion of Arab ones, and to emphasize French dominance. Similarly was the case with the Italian colonial power in Libya, whereas the French protectorate in Tunisia replaced the monolingual inscription "REGENCE DE TUNIS" in 1906 by another one in French and Arabic; Palestine as a British mandate after 1920 even used a trilingual inscription in Arabic, English and Hebrew. The autonomy of the 'Alawi areas, guaranteed by the French after 1924, can be deduced from French stamps overprinted "ALAOUITES-AL-SALAWIYIN". In the case of nominally independent shaykhdoms, like al-Kuwayt or al-Bahrayn, the stamps indicate that they were actually under firm British control. After using Indian stamps with no indication of the issuing state's name, the stamps were overprinted (in 1923-4 and 1933 respectively) "KUWAIT/BAHRAIN". After the Partition of India (1947), the same was done with British stamps. The use of postal districts overprinted is thus a sign of foreign control, and of war-time Libya, becomes clear by observing the diversity of overprints and used stamps.

Pakistan's first stamps illustrate the hasty creation of the nation. The first issue consisted of Indian stamps (portrait of King George VI) overprinted "PAKISTAN" by the Indian Security Press at Nasik. Owing to the events after Partition, grave shortages of stamps occurred in many places. It was
therefore necessary to supplement the Nasik prints by local overprints in Pakistan. Machine-printed, typewritten and manuscript overprints thus appeared in many places and under varying conditions; they were sanctioned by the central or provincial governments, and sometimes even by minor authorities down to the village postmaster. All these issues were governed by the same conditions, namely, an acute shortage of Pakistani stamps, a surplus stock of unwanted Indian stamps, and the determination to do something in order that the posts could carry on (Martin 1959/1974, VII. 20). A similar situation in independent Algeria caused at the outset the overprinting of former French issues with the initials “E.A.” for “État Algérien”.

Overprints indicating the new state’s name, and similar techniques like the obliterating with black bars of the former ruler’s portrait, have been employed in other countries following a drastic change in regime in order to use old stocks of stamps while demonstrating a complete departure from the past (see e.g. Egypt, 1953, or Iran, 1979). Sometimes former sets are overprinted in order to commemorate an important event in the history of a particular country; in Transjordan, for instance, stamps of 1927 were overprinted one year later, in Arabic script, with the word dastăr in order to mark the promulgation of the constitution. Frequent changes in denomination may well reveal economic problems and inflation.

We have yet to mention some further conclusions which can be drawn from the mono- or bilingual inscriptions. The exclusive use of the national language in Islamic countries either underlines the continuity with the Islamic past (by confirming the sanctity of the Arabic script and language; see also the using of Islamic/Christian dates) or growing nationalistic feelings. To quote some examples: Ottoman stamps up to 1876 used exclusively the Turkish language and “Turkish”-style numerals. The inscriptions translate “The Ottoman Empire” and “Postage” (the latter being the western-derived poşta, however, rather than the Arabic barid). In 1876 a French inscription and a “Western”-style numeral were added to a set of stamps in order to conform to membership of the newly-established Universal Postal Union. With the advent of the new young republic of Turkey, the Arabic was given way to Latin, after a brief transitional use of both scripts for writing Turkish (1926-8). Hijāz stamps (1916-25) used only Arabic (compare Yemeni stamps from 1926 till 1930); not until four years after the unification with Najd, in 1929, did the Latin script appear for the recording of the state and value. National feelings in Egypt came through, when, during Isma‘īl’s rule, Arabic replaced Turkish as the usual language of administration. The first Egyptian stamps of 1866 (nos. 1-7) bear Turkish-language inscriptions; one year later, Arabic replaced Turkish on stamps (nos. 8 ff./1867). The change in the language came at the time of Ismā‘īl’s hard-won acquisition of the title of Khedive, and a few years later (nos. 14 ff./1872) the stamps proudly displayed the Khedivial title. After the recession of British influence on Egypt in 1922, an overprint exclusively in Arabic announced the formal independence of “The Egyptian Kingdom” in that year (nos. 69-81/1922; notice also nos. 82-93/1923-4). This nationally-induced omitting of any Western script except for a numeral of value was obviously soon found impractical, because French re-appears from 1925 onwards (nos. 94 ff.).

Mutilinear inscriptions on postage stamps can also indicate the use of several national languages or be interpreted as a concession to linguistic minorities. Postage stamp series of Haydarābād from 1871 show a value label in four languages (English, Marathi, Persian-Urdu and Telugu). Thecession of East Pakistan (later Bangladesh) can be observed on Pakistani stamps by the reduction of the former tri-lingual inscription (English, Urdu, Bengali) to a bilingual one.

Stamps may be considered as a prima facie evidence of the existence of postal services, but not as an evidence of postal sovereignty, as the cases of Manāma and Bahāwulpūr (q.v.) show. Until 1947 Bahāwulpūr stamps were privately printed in British India; afterwards forming part of Pakistan, it issued its own stamps between 1947 and 1949, although the post offices in Bahāwulpūr used stamps of Pakistan. The introduction of airmail and special delivery stamps ordinarilys indicates the initiation of such a service in a particular country.

The studying of the stamp’s “inside”, i.e. of its iconography, can be quite illuminating and will be of central concern here. Several factors predetermine stamps to propaganda purposes. First, since the discovery of offset printing, stamps are easy and cheap to produce; second, a worldwide spread is potentially possible; third, visual messages are not difficult to understand, i.e. it is possible to make them accessible to persons who are not reached by other communication means; this is especially true of Third World countries, where the percentage of illiterates is high; in regard to Arabic countries, one has to bear in mind also the problem of diglossia. But, whereas the message which is intended to be transmitted to the observer of the stamps is comparatively easy to discern, it is almost impossible to assess its impact upon its target population.

Subjects often dealt with on stamps can be grouped in the following way: national symbols; local deceased heroes; cultural heritage; significant historical and political events and commemoratives; reforms, national progress, and social, economic or cultural achievements; foreign policy (regional, Arabic or Islamic solidarity, international ties); diverse (expositions and fairs, international congresses, etc.).

Primary visual symbols of the modern state include, beside the national flag, emblems, coats of arms, official seals, the personified state, i.e. the presiding head of state (a hereditary monarch or an elected president). With regard to the head of state’s portraits it is interesting to find out when the first portraits appeared, on which occasions they are issued, how often the head of state is portrayed, in which manner he is represented, and how he is dressed. Further, the question arises whether there is any difference between monarchies and republics.

Several Islamic countries followed in the beginning the Islamic proscription of portraits. Instead, they employed—as the Ottoman stamps did until 1913—three specialised motifs: the crescent [see Ṣūlā], sometimes accompanied by a star; a coat of arms; and the ṭuḥrah [q.v.], along with more general calligraphical and arabesque designs. The turning-point in Ottoman stamp design came in 1913, when a set of stamps showing the Istanbul post office swept aside the obligation of avoiding portraits (nos. 212-21/1913). In 1914, a further step was made by portraying Sultan Meḥməned V Rεshād (no. 245/1914). On the other hand, in Persia, where a vigorous tradition of pictorial painting had long flourished, the Shāh appeared on stamps as early as 1876 (nos. 19-22). In Egypt, religious inhibitions about portraying living things have been ignored since 1924 (nos. 82-93), and Islamic symbols were replaced by
monarchical watermarks after 1926. King Faysal of Iraq followed this example in 1927/31. Afghanistan was... to ‘de facto-secularisation’ in 1975 and his unorthodox interpretation of Islam since 1964, in the following period several times, in contrast to North Yemen where the only president ever portrayed until now has been President Hamdã in 1978.

Ayyub Khan was the first president to be shown on Pakistani stamps (nos. 229-30/1966); thereafter they followed the portraits of the deceased national heroes Muhammad Ali Djinna and Muhammad Ikbâl could appear on stamps (1967); previously, the days of their death were commemorated and their contributions to the establishment of Pakistan were honoured by showing a memorial inscription or their monograms (e.g. nos. 44-6/1949 or nos. 96-8/1958). Republics such as Turkey, Syria, Lebanon, Tunisia and ‘Iraq depicted the portraits of their presidents from the beginning.

Another practice was followed in Egypt and Libya after the revolutions there. Despite his popularity and the personality cult of him allowed in other media, President ‘Abd al-Nâsir (Nasser) kept his portrait off stamps (1966-7); previously, the days of their presidency were portrayed (1956, 1965, 1967). After his death, however, he was commemorated on Egyptian stamps in 1970-2, and on stamps of several other Arabic countries. Al-Kadhâfî (Gaddafi) appeared for the first time on a souvenir sheet in 1975; in subsequent years he has become the central figure on the stamps. Remarkable exceptions are Algeria and Iran after 1979. No Algerian president has appeared until now on stamps during his lifetime (H. Boumedienne/Hawarf Buma-dyan was for the first time portrayed after his death in 1979); on the occasion of the (re-)election of Boumedienne or Şâh Şah b. Djâdîl, instead of a portrait, inscriptions in Arabic were used which translate ‘Election of a Brother ... as President ...’. Whereas in the Šâh’s days a portrait of the monarch was almost always displayed, the Islamic Republic of Iran has only honoured ‘martyrs’ on stamps (see also banknotes). For this reason, Ayatullah Khomeini was depicted for the first time after his death (1989 ff.), although already in his lifetime huge posters of him were plastered on walls of most Iranian towns and were carried in processions. As Chełkowski has pointed out, ‘This is a clever symbolic manipulation to suggest that Khomeini has not imposed his rule but is the ‘chosen’ representative of the people who carry his portrait out of love and devotion’ (1990, 92-3).

Several monarchs of Islamic countries (Egypt since Fu’âd I, Afghanistan under Zâhir Şâh, Iran since the Pahlavis, Jordan under the reign of Huseyn II, and Morocco under the reign of Hâsan II) have depicted their portraits on the occasion of commemorating special royal events: births and birthdays (especially of the male heir), royal birthdays; weddings; deaths and coronations (esp. Iran, nos. 1365-7/1967), etc. Another practice was followed, for instance, in Libya, where King Idris I was only once portrayed, directly after independence. Ruling predecessors are honoured, sometimes together with the reigning monarch, to show the continuity of the particular dynasty. The Pahlavis even tried to base their reign on a fictitious continuity of the Persian monarchy since the time of the Achaemenids. This intention was revealed also in 1935 when Persia was renamed Iran (nos. 149 ff.; ‘Postes iraniennes’, instead of ‘Postes persanes’).

Regularly, the hereditary heads of state have attempted to enhance their legitimacy, either by combining their rule (in a portrait) directly with symbols of progress (see below), or by stressing the dynasty’s role in the fight for independence (e.g., in Morocco under Muhammad V and later; in Jordan). In this respect, differences between monarchies and republics seem to be blurred: republican heads of state are portrayed on similar occasions, as Independence or National Day, Revolution Day, etc.; the personality cult of Habib Bourguiba (Abû Rakîba) is intertwined with his role of Supreme Mudâjîhî, his life history marking the major milestones of the Tunisian fight against the French. Other heroes of that same era appear on stamps only if they are long dead. Bourguiba was often shown together with female figures; this is an allusion to the improvement of the women’s status as a result of the revised Personal Status Code in 1956. Sometimes even the birthdays of the presidents (e.g. of Saddâm Huseyn since 1984) are celebrated on stamps; frequently, they invoke their contributions to the modernisation process. Turkish presidents present themselves as the sons of the ‘Father of the Turks’.

A souvenir sheet (no. 25) in 1987 shows the hitherto-existing presidents from Atatürk to Evren in the shape of a family tree; the picture seems to suggest that Turkey is still firmly adhering to the political principles and aims of Atatürk. On another stamp issued in 1939 (no. 1052), the role of Atatürk is compared to that of George Washington for the United States.

Monarchs often appear on stamps in traditional (Bedouin) headgear and robes (see Faysal I of ‘Iraq in the 1920s, and his brother ‘Abd Allâh in Transjordan, and moreover, the rulers of the U.A.E. and Saudi Arabia), later, they also underlined their links to the army (see Rida Şâh Pahlavi) by wearing military uniform, or their support for reforms and westernisation by appearing bare-headed and clothed in Western style. The first presidents (e.g. of Turkey, Syria) were shown in Western style coats and ties, thereby expressing their intent to modernise and secularise the country. The fez, once a modern symbol, disappeared gradually and by the 1950s it was finally becoming old-fashioned. Soldier-politicians, as Atatürk or Sadât, alternated between military uniform and civilian garb; Asad was always depicted in civilian clothes despite his military vocation, thereby underscoring his legitimacy, while Sadât preferred the military uniform. Al-Kadhâfî is shown in different garbs; the most favourite one, beside the military uniform, seems to be Bedouin garb; sometimes the ‘revolutionary leader’ is sitting on a horse, surrounded either by fighting people, or jubilating masses, or ‘Green Books’, propagated as his ‘Third Universal Theory’, with a liberating message for the whole world. The described style of illustration is itself a hint at the contents of the ‘Green Book’ (hâdîd); in this manner, the author is professing the Bedouins for their practising of ‘national sports’ (e.g. mounted games), instead of merely watching sporting events.

Like Saddâm Huseyn (1988), al-Kadhâfî is represented on stamps as an ideal Muslim on the hajj, or during the Muslim worship (1983). This confirmation seemed necessary after al-Kadhâfî’s open shift to ‘de facto-secularisation’ in 1975 and his unorthodox interpretation of Islam since
then (rejection of the Sunna as a source of Islamic law, etc.).

Other important and specific national symbols and emblems which are often seen on stamps should be mentioned. In the case of Persia, the national emblem next to the portrait of the Shah was the Lion and the Sun, under the Pahlavl crown; and on coins, Turkey used sometimes (1926, 1929, 1931, 1961) the mythical grey wolf (bozkurt), an embodiment of the unification of its people. An allegorical figure, the embodiment of the nation, usually represented in the form of a woman, so popular on French stamps, represents Syria in one case (1956), but this particular symbolism seems to have been too foreign to the Islamic tradition to have taken root in Syria.

Another category of symbols of power is that of historical notables or local heroes. Every régime has its own pantheon, and this becomes clear on stamps too. The emphases shift with the change of régimes, although local heroes are generally more often honoured than famous persons who have had an impact on the whole Arab-Islamic world. Whereas monarchies have emphasized the role of their ancestors, especially the forerunners of the pan-Arabic political nationality (e.g. monarchic Egypt frequently depicted Muhammad ʿAli; Libya the founder of the Sanusiyya, Ṣidī Muhammad b. ʿAli al-Sanūsī; Saudi Arabia Ibn Saʿūd), republican régimes have issued stamps to commemorate a variety of nationalists (e.g. Turkey memorialised Namîk Kemâl and Divâ (Ziya Gökalp; Egypt ʿUmar Makram, ʿUrâbī Paşa and Muṣṭafâ Kâmil; ʿIrâk honoured Shîrī al-Husūrī, progenitor of the various pan-Arab ideological trends; Syria, instead, preferred to honour a native-born theoretician of Pan-Arabism, al-Kawâkbî, reformers (al-Tahâwî, al-Afghânî, ʿAbdu, Tâhir Haddâd, etc.), freedom fighters (e.g. Pâkîstân 1979, 1989-90), and cultural leaders (in literature, arts or creative fields). A myth of the peoples' continuous struggle for independence is created in some cases (e.g. on Libyan stamps since 1971-2, esp. since 1980, and on Iranian stamps after 1979). The Islamic Republic of Iran marked the abrupt departure of the past and the changing orientation from Western ideology and apparel of the ʿShâh's era to the traditional Islamic attitudes by a series of stamps (since 1979) devoted to the "forerunners of the Islamic movement". The role of the clerical opposition is overemphasised; but, besides firm supporters of Kûmûymî (like Ayâtullâh Bihâghtî, died in 1981), or forerunners of an Islamic republic (as Faḍl Allâh Nûrî, died in 1909), other famous persons are represented in this set who would not have supported the "reign of the Ayâtullâhs", if they were still living (e.g., Mirzâ Kûkî Khân, Muṣâdîkî, Al-i Ahmad, Shîrīʿaṯî, Tallâkî). Most of the forerunners are considered as "martyrs" for the "right cause", pointing to the glorified idea of martyrdom which is also one characteristic of Shiʿism. Another Shiʿi feature commemorated on postage stamps is that of the Shiʿi Imams or works connected with them, such as the Nahj al-balâgha [q.v.] (e.g. in 1981). The search for historical heroes to honour on Lebanese stamps is a difficult task. The choice of Druze and Maronite princes is an indication of Christian dominance there till the outbreak of the Civil War and of the neglect of the Islamic heritage.

Harmless illustrations of traditional costumes, national handicraft, festivals and musical instruments, animals and flora, fauna, scenery, as well as antiquities, archaeological excavations, historical monuments (mosques, forts, and palaces etc.) and modern buildings (hotels, banks, museums, etc.) are found on the stamps of nearly every country with the aim of underscoring the national heritage and, probably, of convincing the public of a clear-cut national identity. So, even the representation of antiquities and other common motifs can throw light upon the political aims or the ideological orientation of the régimes and its self-identification. Despite the post-colonial Pan-Arabic and Pan-Islamic rhetorics of some régimes, they often lay particular stress on the pre-Islamic and pre-Arabic history, a sign of the specific national pride and patriotism. In Egypt, Pharaonic monuments are as prevalent today as they were in 1866 when the first issues bore a pyramid watermark. All stamps issued between 1867 and 1919 featured pyramid-and-spinx designs, and the Giza pyramids have been a favourite subject ever since, although after 1952, as the interest in other themes increased, the pre-Islamic heritage was less often depicted. ʿIrâk places great emphasis on its Babylonian forerunners (cf. already a set from 1963, here together with Islamic monuments; and from 1988, on the occasion of the Babylon Festival), especially since Saddam Kusayn shifted his foreign policy towards a specifically ʿIrâkî watanîyya; a Mesopotamian-inspired culture is seen as a convenient vehicle to introduce and support the change in fundamental ideology (compare the results of A. Baram’s study, Mesopotamian identity in Ba’thi Iraq, in MES, xix [1983], 425-55). Jordanian stamps frequently show the Nabatean city of Petra or the Temple of Djahâl (since 1935). This pattern is repeated also in other Arab (Algeria, Tunisia) and Islamic (Pâkîstân, Afgânistân, etc.) countries.

Depicting antiquities or other signs of national heritage can be seen as a means of advertisement and as evidence for the tourist industry (e.g. Lebanon in the 1960s until 1975; Egypt since the 1950s, with a short interruption as a result of the 1967 events). But, as Sivan has pointed out, the impressive continuity in the patterns of postage stamps produced over the last thirty years shows that touristic considerations have not been a purely aesthetic tendency but the result of conscious political decision. These visual symbols should be mainly interpreted as official attempts to create a common national identity and loyalty to the territory. “Thus, the ancient past is part and parcel of the legitimating genealogy of the modern state” (Sivan 1987, 23). Noteworthy exceptions are the Gulf emirates with no past to speak of, and Saudi Arabia, where the pre-Islamic past of its territory is associated with the paganism of the Djâhiliyya. An extraordinary shift has occurred in Iran. Whereas the emphasis in the ʿShâh's era was almost exclusively on pre-Islamic architecture and art, the revolutionary Islamic régime started to neglect the pre-Islamic era; in this context one has to recall the strong protests of the Islamic religious classes against the ʿShâh's bombastic celebration of the twenty-five centuries old history of Iran. Lebanon, again, is a special case in the opposite direction, because of the Maronite élite’s support of the "Phoenician ideology".

Stamps illustrate most of the period of colonial expansion, as well as its end. After using their own
stamps, with or without overprints, the colonial powers in the Islamic lands under their control passed on to the "colonial-picturesque style"; i.e. one foreign from the paper to the design; the favourite subjects on pictorial sets were scenes of monuments and landscapes; local allusions were rare, natives appeared only occasionally on horse or on camel, whereas representatives of European colonialism (as Marshal Lyautey on Moroccan stamps (1935/1948, 1951), General Gordon on Sudanese ones (1931/37, 1933)) were commemorated. While the colonial powers were shown as civilised and modernised, the dependent territories were depicted as backward countries and societies, needing the import of progress through colonialism. After independence, postage stamps rapidly became a means of asserting sovereignty, of seeking for self-definition, and of furthering economic and social development. The pictorials now often employ a semi-abstract style and international iconography; the national flag represents independence; broken chains and rising suns, flames etc. stand for liberation and a very promising future; doves for peace; globes for universal themes; balance scales for justice; the Asclepian serpent and staff for medicine; books and torches for education. In tracing the evolution of some national holidays and national days, we find instances of discontinuity (particularly in revolutionary states) and continuity (mostly in countries with a traditional culture). But all these memorial days have a common feature, that they celebrate national events, as e.g. Independence (National) Day; Evacuation Day, to commemorate the departure of foreign forces (e.g. the British evacuation of the Suez Canal Zone, the evacuation of US bases in Libya, the evacuation of French occupation forces in Syria); Revolution Day (8 March 1963 in Libya; 1 September 1969 in Egypt), which signified a change in legitimation; or Army Day (when the army was the vehicle of the revolution, as in Iraq). Other major political events and changes in legitimation which may be memorialised philatelically include constitutional, legal or programmatic reforms (e.g. Pakistan 1973, on the occasion of the promulgation of the new constitution; Algeria, 1976 (new constitution, Charte Nationale), 1986 (Charte Nationale); overthrows of old regimes (e.g. Sudan, 1966; Tunisia, 1988); the first regular elections after a long period of military/authoritarian rule (Turkey, 1950; Pakistan, 1970); decisive plebiscites (Iran, referendum of 1979, commemorated in 1984, 1991; Pakistan, 1985, "overwhelming mandate by the people" for Diya al-Haqq and his Islamisation policy in the 1984 referendum); nationalisations (of the Suez Canal in Egypt, 1956, 1961/66, or of the oil industry (Iran, 1953, "Irak, 1973)); and the "corrective revolution" or accession day of the present ruler (Asad's Syria or Sadat's Egypt). Several authoritarian regimes commemorate the single mass party (as in Tunisia, the Destour, later PSD; in South Yemen, the National Liberation Front, later Yemen Socialist Party; in Syria and Iraq, the Ba'th; in Egypt, the Arab Socialist Union, and in Algeria, the FLN) Postage stamps reinforce a myth of popular struggle for independence. Turkish stamps memorialised famous battles during the Liberation War (e.g. that at İnönü). Libya somehow managed to find two dozens of major and minor battles against the Italian occupiers during the period of 1911-43 (stamps issued since 1980). Iranian stamps after the Revolution in 1979 have frequently recalled the heavy toll of lives, also mentioned in the constitution, so that their characterisation as "stamps of blood" is justified. The Iranian stamps reflect the central theme of the revolution, the "Karbala'-martyrdom-paradigm". The uprising of 5 June 1983 is seen as the beginning of the revolutionary movement (1979, 1982, etc.)—an obvious, but typical, misrepresentation of the facts. After military coups toppled monarchies, "the people" begin to be shown on the stamps (e.g. post-1952 Egypt). For the first time, social groups such as peasants and industrial workers appeared, joining soldiers, whose role as the people's vanguard was stressed (e.g. Libya 1969/nos. 284-9 and 1970/nos. 290-95 with the inscription "Ihotysa al-birz" of "our army is our protective shield"). The scarcity of pictures of other classes and occupational groups was not accidental at that time. Most of the women are shown in modern dress; whereas in conservative countries, either no females are featured, or they are shown in their traditional role, or in typical female professions, South Yemen and Libya even depicted women as factory workers (South Yemen 1975, 1979-80; in the case of the People's Republic of South Yemen this is to be seen in connection with the labour shortage and the encouragement of working women) and in military uniform (South Yemen 1971/77; Libya 1984). Turkey honoured Halide Edip (1966), Egypt the national pioneer feminists Kāsim Amin (1958) and Hūdā Sha'rawī (1973). A set of Turkish stamps on the occasion of the Twelfth International Women's Congress was issued in 1935, i.e. one year after the introduction of universal suffrage for women. Concerning the Islamic Republic of Iran, the changed orientation of the new régime becomes evident in this aspect also; women are rarely depicted, but if they are, they are veiled, marching in a crowd under a banner, portrayed in a militant way (with a rifle over the shoulder), or as the mothers of future martyrs, following the "model women" of Shi'i Islam, i.e. Fātima, the daughter of the prophet and mother of the third Imam Husayn, or Zaynab, the sister of Husayn. Despite the protests from the side of conservative religious circles, some states propagate their promotion of family planning on stamps, symbolised by a three-, mostly four-headed-family (Pakistan, 1969; Iran, 1973; Libya, 1977; Tunisia, 1976). Whereas a revolutionary ideology is shown in 'Abd al-Nāṣir's Egypt in a less explicit way, Libya after 1977 has turned to propagating the contents of the "Green Book", e.g. by quoting central statements in Arabic and English on postage stamps. Since the 1950s and 1960s, particularly, symbols of national development and progress are standard. A difference between monarchies and republics is not noticeable any more, with the exception of the Islamic Republic of Iran which stresses much less than Muhammad Riḍā Shāh achievements in the economic and social spheres (compare regular issues commemorating the reforms since the "White Revolution" in 1962). The symbols follow the Western ideals of progress: cogwheels and smokestacks, etc. stand for a modernised industry; tractors or modern irrigation works for the mechanisation of agriculture. Postage stamps' use for the promotion of independence, industrialisation, urbanisation (modern buildings and cities), industrialisation (industrial plants, e.g. steel and cement works, oil refineries), electrification and irrigation (high dams, irrigation pumps). The importance of the water problem in the Middle East is
shown by the underlining of great irrigation projects, as the Libyan one (al-nahr al-sindî “the artificial river”), illustrated as the lifework of the “revolutionary leader”, which has become one of the main subjects on stamps since 1983; Saudi Arabia and the Gulf states depict plants for the desalination of sea water (e.g. Saudi Arabia 1974, 1989). Scenes from the oil industry are illustrated on stamps from several Arab countries (“petro-philately”), and trace the Middle East’s growth as an oil-producing region. A portfolio of Arab countries’ stamps portrays almost the entire range of petroleum products and their various users; some of the most detailed oil industry stamps have been printed for Dubayy and Kuwait. Other main export articles also appear on stamps (cotton on Egyptian and Syrian stamps, jute in Kuwait. Other main export articles also appear on stamps (cotton on Egyptian and Syrian stamps, jute in Kuwait). Economic plans promise a prosperous future.

Stamps underline the interest in providing free educational and medical services; new university and school buildings are illustrated proudly, alphabetisation campaigns are propagated. Occasionally, new themes and technologies (pollution control or solar energy) are advertised philatelically (“Trâk, 1985; Tunisia, 1988).

Stamps alluding to foreign relations are related to regional as well as international ties. Demonstrations of regional solidarity (e.g. with the R.C.D./Regional Cooperation for Development between Turkey, Iran, and Pakistan, existent till 1979, or the Gulf Cooperation Council) are of minor interest, if compared to the philaetelically-delineated regional tensions and border disputes which are pieces of evidence for territorial claims. Since the annexation of a part of the former Spanish Sahara in 1975, Morocco has printed annually a stamp on the occasion of the so-called “Green March”, firstly, to underline its legitimate claims on this territory, and secondly, to use this cause as a unifying national factor (compare Mauritania, the occupier of the other part of Spanish Sahara—according to an agreement with Morocco—which has only once (1976) printed a stamp showing the map of North Africa with the inscription Mauritanie reunifiée). On the other hand, Algeria (1976) demonstrates its solidarity with the “green martyrs”, which has become one of the main subjects on stamps in the earlier, and the new U.A.R. flag was frequent subjects on stamps from then onwards. Regular annual issues celebrating the anniversaries of the short-lived union followed. After the break-up (1961), only the continuing use of the name “United Arab Republic” by Egypt remained.

Nearly all Arab countries, and some Islamic ones, frequently print stamps demonstrating their solidarity with the Palestinian cause. Standard are issues showing the Dome of the Rock or al-Aksa in Jerusalem with an inscription indicating solidarity; the memorialising of massacres (e.g. the Dayr Yâsin one in 1948; Sabrâ and Şâtîlâ in 1982); and issues pointing to the refugee problem (see esp. Jordan, 1969) or the outbreak of the Intifâda and the proclamation of the Palestinian state. More militant standpoints are expressed on stamps of South Yemen, Syria, “Trâk, and Iran, Libya and the new Palestinian state. Arafat, the PLO’s chairman and the “Mobilisation of the Oppressed”, “Day of the Army”, etc.) are printed. War victims are glorified as martyrs on both sides. “Trâk accuses Iran of committing war crimes and vice-versa (1988). “Trâk even refers to the Geneva Convention on one stamp (nos. 1275-6/1995). The aggression and the formation of “Trâk’ Völkölse” bring to mind the开始了邮票的发行 (1985-15/1988), whereas Iran shows the resolution no. 598 of the UN with an interrogation mark (1989), indicating thereby its doubts concerning the durability of the agreement. The reconquest of occupied territory (“Trâk, 1988; Iran, 1985) and later, the reconstruction of destroyed areas (1989 for both countries) is celebrated.

Pan-Arabic themes became popular since the 1940s. In general, events associated with the Arab League, Arab conferences on different subjects, Arab Boy Scout Jamborees, Pan-Arab games, the Arab Postal Union, etc., are commemorated. An exception is found on stamps commemorating the unification attempts of several Arab states, e.g. the formation of the U.A.R. in 1958 was proudly marked by stamps showing an arch uniting the maps of Egypt and Syria. The eagle, a revolutionary symbol which had appeared earlier, and the new U.A.R. flag were frequent subjects on stamps from then onwards. Regular annual issues celebrating the anniversaries of the short-lived union followed. After the break-up (1961), only the continuing use of the name “United Arab Republic” by Egypt remained.

Religious loyalties are commonly expressed by printing stamps on the occasion of the beginning of the 15th century A.H., of Islamic conferences or of the pilgrimage to Mecca. Mediaeval Islamic history is referred to on stamps through monuments, personalities and events dating from that period. Still, it is noteworthy that many of the Islamic symbols are usually local mosques (apart from the Ka’ba in pilgrimage stamps and the famous mosques of Jerusalem). Mediaeval Islamic personalities are quite often native sons. Mediaeval persons who do not perturb to the country on whose stamps they appear are usually those representing the Muslim contribution to world civilisation (esp. science and technology, such

whole earth is Karbala”, all months are Muharram”. “Trâk has issued several stamps propagating “Sad-dâm’s Kadisiyya” (1981, 1985-6). Special commemorative issues on the occasion of improved Memorial Days (“The Preparation Day”, “Mobilisation of the Oppressed”, “Day of the Army”, etc.) are printed. War victims are glorified as martyrs on both sides. “Trâk accuses Iran of committing war crimes and vice-versa (1988). “Trâk even refers to the Geneva Convention on one stamp (nos. 1275-6/1995). The aggression and the formation of “Trâk’ Völkölse” bring to mind the开始了邮票的发行 (1985-15/1988), whereas Iran shows the resolution no. 598 of the UN with an interrogation mark (1989), indicating thereby its doubts concerning the durability of the agreement. The reconquest of occupied territory (“Trâk, 1988; Iran, 1985) and later, the reconstruction of destroyed areas (1989 for both countries) is celebrated.

Religious loyalties are commonly expressed by printing stamps on the occasion of the beginning of the 15th century A.H., of Islamic conferences or of the pilgrimage to Mecca. Mediaeval Islamic history is referred to on stamps through monuments, personalities and events dating from that period. Still, it is noteworthy that many of the Islamic symbols are usually local mosques (apart from the Ka’ba in pilgrimage stamps and the famous mosques of Jerusalem). Mediaeval Islamic personalities are quite often native sons. Mediaeval persons who do not perturb to the country on whose stamps they appear are usually those representing the Muslim contribution to world civilisation (esp. science and technology, such
as Avicenna/Ibn Sinā, Averroes/Ibn Rushd, al-Fārābī, al-Kindī, Rhazes/al-Razi). Conservative countries such as Saudi Arabia, significantly enough, do not carry such persons on their stamps, preferring to depict in their stead such people as the founders of the four Islamic schools of law (in the shape of an inscription; nos. 625-28/1977). The anti-Crusader myth has been exposed by almost all Arab countries (in most cases by commemorating the battle at Ḥisān [q.v.] and the victorious Ṣāḥāb al-Dīn/Ṣalādīn). The only exception was Maronite Lebanon, which celebrates all Muslim leaders as allies. The total neglect of a country's Islamic past, as for instance in Lebanon, can also reflect the ruler's secular attitude, as was the case in pre-revolutionary Egypt. Most of the countries hesitate to exploit Islamic sentiments because of the growing fundamentalist opposition. A remarkable exception is again given by the Islamic Republic of Iran; here, stamps commemorate the calling of Muhammad to the prophethood (‘Īlād al-muḥājad, commemorated since 1982) and the birthday of the Mahdī (celebrated since 1980), which is called "The Universal Day of the Oppressed". Islamic unity is the subject of stamps issued annually on the birthday of the Prophet Muhammad. Most of these feature the Holy Kaʿba surrounded by the faithful of all races. Such stamps attempt to depict Iran as a unifying force for all Muslims; they bear the message that the Islamic Republic of Iran is a leader of world-wide resurgence. Its frequent use of Kurʾānic quotations, the regime is trying to depict itself as a vanguard of the Islamic world.

Solidarity with other fundamentalist movements and the intention of exporting the revolution are reflected on Iranian stamps which honour the martyrdom of Muhammad Bākīr Ṣadr (an old friend of Khuṭaymān and a noted theologian, executed by the ‘Īrākī régime; no. 2023/1982), President Ṣāʿīdāt’s assassin (Ḵwālid al-Isāmī; no. 2029/1982), an Egyptian soldier who shot Israeli civilians (Sulaymān Ḥāṣrī; no. 2146/1986), or a leading ideologist of the Egyptian Muslim Brothers (Sayyid Ḥuṣb; no. 2078/1984). Solidarity is expressed with Afghanistan during the Soviet occupation (1985-8) and the militant Hizb Allah in Lebanon (no. 2208/1987). The intention to export the state’s ideology is also revealed on Libyan stamps since 1977. Yet before the Egyptian régime of Mūṣṭafā Ḥaqqānī and ‘Abd al-Naqīr had cheered the arrival of new converts to the left at camp; stamps marking the ‘Īrākī and Yemeni Revolutions and Algeria’s independence from France (1958, 1963, 1962) reflect a feeling of triumph and revolutionary brotherhood. Algeria showed its solidarity for Vietnam (1973), Zimbabwe and Namibia (1977). Some countries are underscoring their ties with Africa (Egypt, 1964, 1965; Mauritania, 1966, 1973, etc.) and to the non-alignement movement (e.g. Algeria, 1973).

Anti-Americanism is shown on Iranian and Libyan stamps. A series of Iranian stamps were issued to represent the hostage crisis that occurred during the Carter administration (1983, 1985, 1987); Libyan stamps condemn the USA for its aggression against Libya in 1986, representing Ḥaqqānī and the Egyptian régime of Mūṣṭafā Ḥaqqānī. In contrast to these examples, Turkey depicted its engagement in the Korean War on the side of the Western powers (nos. 1337-40/1952) and the ensuing alignment with NATO (1954, 1959, 1964, 1989). Afghanistan since 1980 printed several stamps portraying Lenin—a sign of the occupation by Russian forces at that time; stamps marking the centenary of Lenin’s birth were, however, frequently printed in other Islamic states (e.g. Egypt and Syria, 1970). Standardised international subjects have been frequently featured on stamps since the 1960s, honouring UNICEF, WHO, FAO, UNRWA, and UNESCO, as well as the parent UN itself. Other world themes have included an International Day for the Elimination of Racial Discrimination, Mothers’ Day, Children’s Day, etc. A major exception is again to be found on an Iranian stamp, issued in 1983 for United Nations Day, which indicates a criticism of the five superpowers’ veto power in the Security Council and the struggle of the Islamic Republic against this unjust distribution of power. Anti-racism is interpreted as an Islamic achievement by depicting a black muʾadhhdīn, an allusion to the first muʾadhhdīn in the history of Islam [see Bīlāb b. Rābāḥ]. These international subjects are also stressed for economic reasons, for they are popular with stamp collectors around the world.

National pride and heritage is sometimes revealed on stamps which treat the subjects of sport and traditional activities. As an instance of this intention, one may mention Iranian or Libyan stamps which depict "old Iranian" or "national" sports; Afghanistan has issued several stamps with the motif of traditional mounted games; Turkey and Pakistan have displayed wrestling and hocky respectively, and the Arab states of the Gulf, falconry.

POTIPHAR [see Kitfr].

PRANG SABIL, the name in Malay of the djihad [q.v.] in the East Indian archipelago; prang = war.

The course of recent history has made it difficult for Muslims to fulfil their duties with respect to the djihad. The representatives of the ottoman empire, and the masses readily believe that arms should only be allowed to rest against the kafir so long as any success must be despised of. In a Muslim country under non-Muslim rule, as were the Netherlands East Indies under Dutch colonial rule, the teachers, however, preferred to be silent. At most they said that under the prevailing conditions there was no legal inducement to conduct the djihad, in view of the superior forces and the comparative freedom enjoyed by believers. Or, on the other hand, they expounded particularly those texts which removed the more serious feuds between Muslim and kafir to the next world. When political events, catastrophes, misfortunes of any kind resulted in disturbances, it was not at all uncommon for the Muslim population of what is now Indonesia to look at these things from a religious point of view. It may happen on such an occasion that the feeling of being bound to fight the unbeliever is aroused again. If the leaders utter the war-cry prang sabil, it finds a ready answer. It is true that according to the law, the signal for the djihad should be given by the ulama; there is now no imam; but even in the time when the Ottoman sultan was still recognised as imam, any misgivings were easily overcome if the imam remained inactive. Outside the boundaries of the territory in which the holy war is proclaimed, the silent sympath}

of the believers was with the fighters. Any forcible conversion which took place anywhere in the East Indies, was generally praised by Muslim chiefs and represented as a fulfilment of the more solid obligations of the djihad.

This practical teaching of the prang sabil was of particular importance in Atjeh [q.v.] in the last quarter of the 19th century. Circumstances were very much in its favour. The Atjehnese were a self-satisfied people, convinced of their own superiority, and also of a warlike disposition. Non-Muslims were everywhere hated or at least despised. At the same time, those individuals who had any way come under the influence of the Muslim cult were held in great honour. These qualities were, however, not in themselves sufficient to conduct a prang sabil with success against a disciplined attacking power. A military leader was necessary. There was indeed a sultan in Atjeh, but he was a negligible factor as regards the situation in the country. The chiefs, the real rulers of the land, preferred to confine themselves to their own territory; they were not fitted for co-operation. Bands of armed men ravaged the country, doing the kafir as much damage as possible, but they could raise no claim for general co-operation and assistance as they were not waging war in the way Allah had willed. The law lays down the sources from which the costs of the djihad can be met; pillage and plundering, as was the practice of these bands, could never be blessed by Allah. In addition the organisation of these bands was such that they never held together long. In these circumstances it was the ulama [also used as a singular] who took in hand the organisation of the war; among these the most prominent were the ulama of Tiro, from olden times a centre of study of sacred learning. They reproached the chiefs with their slothfulness and the people with preferring worldly advantages to heavenly rewards. Going up and down the country, they preached the doctrine of the djihad and there was no one who could openly oppose them; indeed, they represented the divine law. In order to be able to wage war, a war-chest was needed. The ulama claimed the share of the zakat set aside for Allah’s purposes; the ulama of Tiro in particular used it to train a strong force of duly converted recruits. The ulama were for a long time the soul of the war. It is, however, clear that the authority which they had gained over the secular rulers could only last so long as they were able to inspire the people to continue fighting. When the war was over, they returned to their old, still very influential position as representatives of the holy law. Various writings which, together, formed a regular war literature, proved an effective means of inspiring their warriors with enthusiasm. They were an accompanying feature of the prang sabil. ‘Ulama wrote pamphlets and epistles in which attention was called to the duty of waging the holy war; emphasis was laid on the courage and contempt for death of those who heard it.

PRÈM ÊNDAH (1880-1936), Indian writer of fiction in Urdu/Hindi, best known for his short stories,
which gained him wide recognition as a pioneer of the genre.
During his lifetime, and a hundred years previously, apart from English the official language of the British Government of India was often called Hindustani. It was usually written in Persian-style script by and for Muslims, and in Devanagari script by and for Hindus. The former type, when used as a literary language, was also referred to as Urdu (“the language of the army camp, urdu [see ordu]”) and the latter type as Hindi (formerly Hindawi). When written in the Persian script, Hindiustani was characterised considerably Arabo-Persian vocabulary. In the Devanagari script, the literary language had much vocabulary taken from Sanskrit and the Prakrit vernaculars. Even before Independence in 1947, Urdu and Hindi began to be considered distinct languages, and they were recognised as official languages in Pakistan and India (Bharat) respectively. It must, however, be noted that when we read of Prém Cand writing novels or short stories in Urdu or Hindi, and then translating them from one language to the other in subsequent editions, we should not assume that major alterations were made in translation. Changes were largely in the script used than in the actual text. Thus Prém Cand’s fiction should be regarded as a single corpus, rather than as two separate corpora from a bilingual author. He depicted social life and preached social reform in the India of his time, with its rich variety of races, classes and religions, but he dealt more with rural than urban life and more with Hindus than with Muslims.

Prém Cand was born in a village near Benares (Banaras) and named Dhanpat Rāḍē. At the start of his literary career he adopted the nom-de-plume first of Nawâb Rāḍē and then of Prém Cand. His father was a poor postal clerk, and Prém Cand’s education was somewhat haphazard, and depended increasingly on private studies and tuition. At one time he had to walk ten miles to Benares for lessons, yet in 1919 he graduated B.A. as an external student. His home and family life was not easy; he was orphaned, and had to look after the rest of the family. Before this, his father had arranged Prém Cand’s marriage at the age of 15. Some years later, Prém Cand married a second and younger wife, by whom he had a son and two daughters. He was never robust in health, and always had to work very hard for his living. He acquainted himself with earlier and contemporary Urdu fiction, ranging from the dāštān to the works of Surūr, Saraghār, “Abd al-Hallm Sharār and Mirzā Muḥammad Hādī Ruswā [see kīsā. 5. in Urdu]. He obviously had ambitions as a writer, especially of fiction, though he began as a dramatist at the age of 14, writing two Persian plays, both now unfortunately lost. Earning a living presented problems, and he changed his occupation several times. He started as a teacher, then as an inspector of education. He later worked for publishers, including the well-known Nawal Kashgīr in Lucknow. For a time he kept a shop. Finally, he went to Bombay as a film script writer. But he could not get on with directors and producers, and was ill at ease in the film studio environment. He returned to Benares, where he died in 1955.

He was a prolific writer. As we have seen, his juvenilia included two plays. Later in life he wrote a major historical drama, Rambhāmi (“Earthly terror”) in Hindi, the title of whose Urdu version, Karbahāl, indicates its theme from Arab-Islamic history. Prém Cand had studied Persian for eight years, and at first showed preference for the Urdu script. But despite his brilliant command of the language, he did not find favour with Urdu readers, and increasingly wrote in the Devanagari script. After his death, however, he became recognised as a master of Urdu, particularly for his short stories. He also wrote numerous magazine articles, many published in Zamāna from 1901 onwards. He championed Hindu-Muslim cooperation and social reform. Strange to say, he first won fame as a writer of novels: some short, others full-length, some published in parts, some in instalments, others as a whole, some originally in Urdu, others in Hindi. Saksena, writing presumably in about 1926, mentions several Hindi novels which he says are to be published in “Urdu translation” (op. cit. in Bibl., 344). His short novel, Arsrā-i-mahabat, appeared in 1898, and his Hindi novel Prēmā in 1904. Bāzār-i-husn (“Brothels”) described by Sadiq (op. cit. in Bibl., 346-7) as “perhaps the most satisfactory of his novels”, appeared in 1918 in two parts. It is the story of a reformed “fallen woman” who finds that the world will not forgive her. She is led astray by a wealthy prostitute, and ends up “saved” and working as head of an orphanage. An account of this and other novels will be found in Muhammad Sadiq, op. cit., 344 ff. These novels are now somewhat dated and appear to have lost some of their popularity.

It is for his short stories that he had gained lasting fame. These, numbering over 200, were published in eleven collections between 1907 and 1936, among the best known being Prēm Paccisi, Prēm Battisi and Prēm Cēlisi. Many of them deal with the misfortunes of poor village-dwellers who are “more sinned-against than sinning”. They perhaps justify Sadiq’s description of him as “an idealist ... a reformer ... and a dreamer’. Many of them are masterpieces, though Saksena’s panegyric of praise is as excessive in its way as is Sadiq’s lukewarmness. Allowance must surely be made for the taste of readers and writers for melodrama in those days. The rich harvest of Urdu and Hindi short stories in the Subcontinent during the last hundred years owes a great debt to Prém Cand. Moreover, as Sayyid Wakkār ‘Azīm says, op. cit. in Bibl., 592, Prém Cand’s fiction “paints a true picture of social and political life in the early 20th century”.

Bibliography: A detailed bibl. would contain few works in English but a good deal not only in Urdu but also in Hindi. There should be made to the bibl. in Sayyid Wakkār ‘Azīm’s art. Prém Cand, in Urdu Encyclopaedia of Islam, v. Lahore 1390/1970, 590-4. For general accounts, see Muhammad Sadiq, A history of Urdu literature, London 1964, 344-55, a very perceptive and informative account, which some may find rather severe. Ram Babu Saksena, A history of Urdu literature, Allahabad 1927, 343-4, contains a little additional information and is full of enthusiasm, but was written a little too early, while Prém Cand was still alive, and is very brief. There are many editions of Prém Cand’s short stories in both Urdu and Hindi, and most anthologies of prose in both languages include examples. Among general works on Urdu fiction containing useful sections on Prém Cand, see Sha‘īsta Akhtar Bānū Suhrwardī, A critical survey of the Urdu novel and short-story, London 1945; and, in Urdu, ‘Ībādat Brīwī, Tankītā zāwūn, 1952, Karachi 1957, a detailed history of the Urdu short story.

(J.A. Haywood)

PREVEZE, PREVEZE, Greek Preveza, a coastal town in the southernmost part of Epeiros, in western Greece, situated on the upper entrance of the Ambracian Gulf opposite the ancient Cape Actium and associated with the Italian prévèze ("provisioning"), the Slavonic perevæ ("passage") and the
Albanian preveza or preveze ( = "transportation") (cf. Phourikes, Zur Etymologie von Prevesa, in Philolog. Wochenchr., xvii [1927], 509; idem, in EEBS, i, 283-93, and in Epetr. Chr., iv, 265-6; Soustal-Koder, 242). The old mediaeval settlement’s foundation (Palaeo-preveza) is associated with the destruction of the near-by Nicopolis, 6 km/4 miles north of modern Preveza, by the invasion of the Turcophone Uzex (Ouzoi) in central and southwestern Hellas (1064-5) (Chronicle of Galaxidi, ed. E. Anagnostakes, Athens 1985, 20-2, 78; cf. A. Savvides, art. Turks [in Greek], in World. Encyclopedia of Ethnic Groups, ed. D. Nicol, 649, with references to the scarce fully-documented mediaeval period, the first definitive reference appears in the Greek version of the Chronicle of the Morea (ed. P. Kalaronos, Athens repr. 1989, vv. 9108, 9119; see also Italian version, ed. K. Hopf, Chroniques grec-romanes, Athens repr. 1961, 468 and French versions, ed. J. Longnon, Paris 1911, §§ 636, 649, with references to the vieile cite de la Preveza and to the latter’s harbour as port de Saint Nicolas de Tort), which is, however, connected with the new mediaeval Preveza and its despoliation in 1292 by the Genoese allies of the Byzantine emperor Andronicus II Palaeologus, during the latter’s operations against the Epeirotes despot Nicophorus I (cf. Phourikes, in EEBS, i, 281 ff. and in Epetr. Chr., iv, 266 ff.; Schreiner, Kleinchroniken, ii, 528; Soustal-Koder, 242; D. Nicol, 714; Despots of Epirus, ed. E. Anagnostakes, Cambridge 1984, 38 ff., 229 f.). The only direct reference between 1292 and the Ottoman conquest of the 15th century, associates new mediaeval Preveza with Nicopolim vetutissimam civitatem, according to the antiquarian humanist Cyriac Anconensis, who visited the Ambracian area in 1436-7 (cf. E. Ziebarth, Cyriacus of Ancona in Epetros [in Greek], in Epetr. Chr., i [1923], 111, 114; Phourikes, in Epetr. Chr., iii [1928], 141 and iv, 271-2; Soustal-Koder, 214).

The gradual Ottoman annexation was recorded by four Byzantine anonymous short chronicles (cf. Schreiner, i, 422, 548, 552, and ii, 528; Soustal-Koder, 242): no. 71/7 dates the conquest to A.M. 6986 (= A.D. 1477-8), i.e. to Mehemmed II’s reign, while nos. 58/23a and 70/39 date the first Ottoman “foundation” (Greek ktitosis, here signifying “fortification”) to A.M. 6995 (= A.D. 1486-7), i.e. to Bayezid II’s reign, while nos. 58/23b and 649, with references to the first Venetian rule (1717-18 to 1797) was terminated by a brief French rule (1797-9), which ended abruptly by the decimation of the French guard and the destruction of the town by ‘Ali Pasha Tapedelenli [q.v.] in October 1798 (Phourikes, op. cit., 280-9). The first ‘Ali Pasha period (1798-9) was followed by the third Turkish rule (1800-7), following the Turkish-Russian treaty of 1800, and the second ‘Ali Pasha rule (1807-20), connected with widespread property confiscations and terrorist involvements of Bekir Qajar of the Albanian guard, but also with an extensive plan of fortifications and building constructions, was eventually followed by the fourth and final Turkish rule (1820-1912) (Phourikes, op. cit., 289-94). The Ottoman period in Preveza ended during the First Balkan War with the entry of a revolutionary corps of Presveians in the town on 21 October 1912, following the defeat of the Turkish forces near ancient Nicopolis.

PRISHTINA (Serbo-Croat, Prizhtina), a town in Serbia, the administrative centre of the region of Kosovo. It is situated in the valley of a small river called the Prishteva (a western affluent of the Sitnica) and on the eastern fringe of the Kosovo Plain (Kosovo Polje), at the foot of the western part of the Butovac mountain, at an altitude varying (according to the different quarters of the town) between 585 m/1,918 ft. and 670 m/2,197 ft. The origin of its name is unknown. Archaeological investigations have shown that the district of the town has been inhabited since the Neolithic period (3000-2500 B.C.) and then in the Bronze and Iron Ages. The first Illyrian colonies come from the 4th century B.C. In Roman times, the place was known as an important crossroads, notably between the towns of Naisus (Nis [see nin]) and Lissum (Ljek) and Skupi (Skopje), but also as a centre for roads leading towards Bosnia and Dalmatia. In the 2nd century A.D., at about 12 km/8 miles from the modern Prishtina, the Roman town called Ulpinia (Lipljan) grew up, the centre of the province of Dar-dania. It was rebuilt in the 6th century by Justinian I, and the town became "Justiniiana Secunda", but then deserted during the Slavic invasions, and the Slav peoples’ installation in these districts. In the mediaeval Serbian state, Prishtina was early known as the main town of the Kosovo region. Its rise was linked with mineral exploitation in the nearby region of Novo Brdo and Kopaonik; with the fertility of the Kosovo plain, which was always a real agricultural granary; and with its position, moreover, as the crossroads of the main communication routes in the Balkans. Soon afterwards, at the time of the first
exploitation of mineral resources in the reign of king Millutin (1282-1321), Pristina became the capital (first the royal one, then the imperial one) of the Serb-074ian state (at that time under the Nemanjić dynasty, founded by Stevan Nemanja, 1170-96). The king Stevan Dečanski (Stephen Uroš III, 1231-32) often lived there, but much more frequently, his son (king, then emperor) Stephen Uroš IV, known as “Dušan the Strong” (Dušan Silni, 1331-55). It was in his palace at Pristina that Dušan in 1352 received the Byzantine emperor Michael II. Among the numerous imperial charters that the latter had fled from Constantinople, and it was there that Dušan issued a certain number of imperial charters (e.g. that of 1351). According to the description left by Cantacuzenus, Dusan’s palace was situated in the area which is today between the Clock Tower and the Pazar mosque (Čarši-Džamija), very likely on the site of the present-day headquarters of the military garri- son. Pristina continued to be the capital under the next king, Stephen Uroš V (1355-71), and then (at a time when the capital of Serbia, in face of the Ot- tomans menace, was moved further north, first to Krusevac and then to Belgrade) it became the capital of the son-in-law of the “Tsar” (in reality of the Prince) Lazar, Vuk Branković (d. 1398), and this even after the decisive defeat of the Serbian armies by the Ottomans on the “Field of Blackbirds” (Kosovo Polje) not far from Pristina (1389). One might finally add that it was always at Pristina that the descendants of the Serbian royal family continued to reside until the end of the 15th century.

In the first half of the 15th century, corresponding to the period of the Serbian “despotate”, Pristina remained one of the main commercial and trading centres of medieval Serbia. In particular, there was an important colony of merchants from Ragusa [q. v.], who also operated a sophisticated banking system, linked on one hand to the customs duties and on the other to the possibilities of cash loans granted to mer- chants and local business men and to various passing Ragusan emissaries. Thus it is known that the “despot” Djuradj (George) Branković granted to the Ragusans of Pristina the customs rights in 1411 and 1415. It was also within the framework of this grant that the revenues for refining the silver ore extracted from the nearby silver mines of Novo Brdo (see Trepča) functioned, and at Pristina that the famous knightly tournaments took place, in which not only local people from the town and its neighbourhood took part but also people coming from a distance, such as the citizens and nobility of Ragusa.

The Ottoman advance was felt more and more, through the numerous raids which made the roads less safe and to a large extent injured trade. On the fall of the Serbian “despotate” in 1459, the Ottomans in- stalled as their representative in Pristina Iskak_Bey of Skopje, son of Ishak Bey [see Bosna. 2. (a), at vol. I, 1263a], and a Turkish kadı is mentioned in the town from 1448. Pristina became definitively Ottoman in 1455. The palace of the Serbian kings was destroyed at a time when the first Ottoman buildings appeared, some of which, however, had been already built at the time when the Ottoman conquest was notable in the case of the “Pazar mosque” (situated in the eastern part of the main market of the town), founded by Murād II (824-55/1421-51) and completed by Mehmed Fātih (855-86/1451-81). The latter also had a further mosque built in Pristina bearing his own name. Finally, it may be mentioned that not far from the town was constructed the türbe of Murād I, killed during the battle of Kosovo Polje in 791/1389 [see Kosovo].

Under the Ottomans, Pristina (now only the cen- tre of a nāhije) lost its political and administrative impor- tance to the town of Vučitrn, the centre of the janṣūb before 1462. Pristina remained nevertheless an important economic centre, thanks mainly to the Ragusan colony and to the permanent consulate there of Ragusa; to the proximity of rich mining centres (lead and zinc); and to the numerous trading establishments filled with goods of all kinds handled by the Ragusan and Italian merchants (e.g. those from Verona, Genoa, Mantua and Florence). The 16th century saw the fall of the famous free city of Skoplje, son of Ishak Bey [see BOSNA. 2. (a), at vol. I, 1271], and the Ottoman authorities naturally helped as far as possible (see S. Skendi, The Albanian national awakening 1878-1912, Princeton 1967, 7).

Pristina declined greatly in the course of the 18th century, firstly because of a fresh epidemic of plague in 1707, and then because of a new Austro-Turkish War (that of 1737) and its consequences. From that time, profiting from the growing anarchy in the Euro- pean lands of the Ottoman empire (an anarchy which made the Ragusan colony and foreign merchants leave), Pristina and its district fell under the control of an Albanian Muslim family, the Gjinolli (in Alban- nian, Gjinollëve, in Serbo-Croat Đinichi), a domina- tion which lasted, in the shape of an hereditary pashalik, for about a century. Towards the end of this century, the town was fortified by means of solid pallisades and had around 7,000 inhabitants; at this time it was the seat of a pasha.

There is naturally a lot to say about Pristina in the
PRISHTINA — PRIZREN

19th century. In 1812, France opened a consulate there, followed soon afterwards by other powers, including (in 1899) the kingdom of Serbia. In ca. 1836, the town had a population of about 9,000 (the figures cited in the course of this century vary between 9,000 to 12,000), and it was often described as “a small town fortified by a double wall, and rather dirty in appearance”. But it was also mentioned as an important trading centre “between Sarajevo and Istanbul”, where two fairs were held annually (in April and in September), frequented by merchants “emerging from the Nish, Skadar, Edina and Salonica”. After the two great fires of 1859 and 1863, which seriously damaged the town, there was only one fair annually held in the second half of May and lasting for two weeks, frequented by traders “from Sarajevo, Skadar, Peć and Prizren” (“within a much more restricted radius). Despite a famed body of local artisans, the town’s economy continued to decline, especially as the “local Turks” (in reality, more Muslim Albanians than Turks proper) in 1875 prevented the line of the railway coming through the town, thus cutting Prizhina off from its commercial relations with Skadar and Sarajevo. At that time, afterwards “hardly anything except sheep and goat skins” were exported from it. However, in 1877 Prizhina became the seat of the newly-created wilayet of Kosovo, plan of that of Prizren, but not for long, since a dozen years later, in 1888, the seat of the province was transferred to Üsküb/Skopje, and Prizhina became once more a mere palanka. During this short period (1877-88) there appeared at Prizhina five S'ilalmeci wilayet-i Kosova (in 1878-9, 1882-3, 1884-5, 1886-7 and 1887-8), forming an interesting historical source which has not yet been sufficiently utilised. During the period between Serbian-Turkish Wars of 1876-8 and the Balkan Wars of 1912-13, the more or less continuous terror perpetrated by the local Albanian governors (often in open or latent conflict with the Ottoman central government) on the local Orthodox Serbian population of the town reached heights of savagery. In ca. 1910 Prizhina had (according to J. Cvijić) “about 4,000 houses, Albanian, Serb, Jewish, Gypsy and Cerkes, including 3,200 of Muslims, 531 of Orthodox Christians and 65 of Jews”.

The town was liberated by the Serbian army of 1912. From this time onwards there began an exodus of the local Muslim population which continued all through the First World War and even after it. In 1913 the town had 18,174 inhabitants. In 1915, Prizhina was occupied by the Bulgarian army, then again liberated by the Serbian one in 1916. From then till 1941, it formed part of the “Kingdom of the Serbs, Croats and Slovenes” and then of the “Kingdom of Yugoslavia”. During 1941-4 it was incorporated (with the entire region of Kosovo and of Metohija) into a Fascist “Greater Albanian”, at that time under Italian and then German domination.

After the end of the Second World War, it formed part of the “People’s Federal Republic of Yugoslavia” as the main town of the “Autonomous Region Kosovo” (with Prizren as seat, “of Kosovo”). As the cultural and political centre of the Albanian minority in Communist Yugoslavia, during this latter period it played a preponderant role in the more or less clandestine (but in fact upheld in a perfectly obvious fashion by the Titosist authorities) action aimed at making the non-Albanian population of the region (Serb, Montenegro and Turkish) flee by terror and intimidation or simply by demographic pressure, an action marked by various abrupt changes of policy, but one in the end successful. As a result, the Albanian population (which is 95% Muslim and 5% Catholic) now forms more than 90% of the total population of Kosovo and Metohija. Prizhina is now the seat of the official “Muslim community of Serbia” and of a madrasa (of lower rank in relation to that of Sarajevo), the “Alaudin medresa”, where instruction is given in the Albanian language. The Albanian Muslim religious journal called Edukata Islame (which is generally considered as a version, meant for the Albanian population of the region, of the official Yugoslav Muslim journal, Glasnik Vrhovnog Islamskog Starjesinства of Sarajevo) appears there and also a Muslim annual in Albanian called Takvim.

(A. POPOVIĆ)

PRIZREN (in Ottoman Turkish orthography, Perzerin), the second largest city of the former Yugoslav autonomous district of Kosovo-Metohija with about 40,000 inhabitants, the greater part of which are Albanian-speaking Muslims, the remainder Orthodox Serbians, Muslim Turks, Orthodox Vlachs, Roman Catholic Albanians and some Gypsies. Prizren is the only trilingual city of the Balkans. Until the dismemberment of Yugoslavia, Albanian, Serbian and Turkish were fully recognised, with newspapers and periodical published in all three languages and trilingual street name plaques. Till today, Prizren preserved its Ottoman physiognomy of the 19th century better than any other city of the Balkans, entire districts being placed under protection of the law on monuments of culture.

In Ottoman times (1455-1912), Prizren was one of the largest cities of the Balkans interior and was an Islamic centre of considerable importance, possessing dozens of mosques and baths, a number of madrases and dervish convents of no less than seven different orders (among which is the Asitane of the Karabasijev branch of the Kudvetiyye) and a library with a number of Islamic manuscripts. Prizren was the centre of a sanghat throughout the Ottoman period, and a number of important poets and writers of Ottoman literature lived and worked in this city.

Prizren is situated at the southern edge of the fertile plain of Metohija, at the place where the small river Bistritsa (a tributary of the Beli Drim) comes out of the picturesque Dunvskia Klisura (gorge). The town is partly built on the northern slopes of the Shar Mountains, beneath the ruins of a huge mediaeval and Ottoman citadel, and partly in the plain. Prizren is situated 55 km/34 miles north-west of Üsküb/Skopje and 125 km/77 miles east of the important northern Albanian city of Iksandere/Shkodër, with which it is linked by a good road over a pass through the Albanian mountains, one since 1912 largely disused, however. According to C. Jireček and those following him, the present town is in the place of the Alto-Ottoman village of Theranda; but extensive archaeological research in the present town has found nothing older than the Middle Byzantine period. The town is first mentioned in 1019 as the seat of an Orthodox bishop. It seems that between 1169-90, as a result of the Serbo-Byzantine wars, the town was in Serbian hands. In this last-mentioned year it became again Byzantine, and in 1204 it was included in the Second Bulgarian Empire. In the mid-13th century, when the Bulgarian
The stability of the internal situation in the 16th century can be seen from the size of the garrison of the castle of Prizren; in 1530 and 1550 it contained only 2-4 hundred metres to the north of the castle. The Defter mentions: Mesjid-i Sultan Mehmed Khan, Mesjid-i Katib Sinan and the Mosque of Sultan Mehmed had no wakf of its own but was financed from the poll-tax of the district of Prizren, a rather common procedure for sultanic mosques in the Balkans (cf. Mal. müd. 5625, p. 17).

In the course of the 16th and early 17th centuries, the town did not grow very much, but gained slowly a predominantly Islamic character, due to the slow conversion of the local population (1570: 13% converts) and through the erection of a large number of Muslim buildings. This process of change can be followed with help of the three tabrîz defters available, some poll-tax registers and a müfassal 'awdred defter:

The town, which still exists today, and had the road from the Albanian ports of Lezhë and Shkodër secured by the construction of 17 caravanserais. In the town, he built 117 shops providing revenue for his foundations. Another indicator to the growing commercial impor-
tance of the town is the presence of 80 shops belonging to the wakf of Ewrenos-oghlu Ahmed Bey (died 1506) and a hamam, providing revenue for his foundations in Yenidje-yi Varдар in (Greek) Macedonia. In 1570 the number of shops had grown to 95. In 1573 the sanjak bey of Iskenderiye/Shkoder, Mehmed Pasha, had a large domed mosque erected in Prizren, which later became known as the Bayrakli Djamati. This foundation included a medrese, a mekteb, a large double bath, a library and a turbe for the founder. All these buildings still exist today, the mosque and the hamam largely in original shape. The library contains a large number of manuscripts, on religion, medicine, mathematics and history. The Grand Vizier Yemen Fâtihi Sinân Pasha was to add books to this library in 1589. The medrese of Mehmed Pasha functioned till 1947. In 1022/1613, the vizier Şo faith Sinân Pasha, a native Albanian from the Prizren area, erected the largest mosque in the town, whose huge dome became one of the architectural dominant features of the town. A medrese once belonged to it. For the construction of the mosque, the stones of the by now deserted Monastery of the H. Archangels were used, and these are clearly visible at the structure. In the literature, Sinan Pasha is often confused with Yemen Fâtihi Sinân Pasha, who originated from the same district (Lume belonging to Prizren), as did Şo faith Sinân, who was governor of Buda, Bosnia and finally of Dalmatia. He died around 1613. His Prizren mosque belongs to the largest and most monumental ones of the entire Balkans. The expansion of Islamic life in the town can best be shown in a table, based on the surveys of the waqfs as indicated in the tahrir:

In 1606 and 1614 Prizren is described enthusiastically in the reports of the visiting Catholic bishops Mario Bizi and Pietro Masarechi, who praised the beauty of the houses, all having courtyards and fountains and a multitude of green and trees. Bizi maintains that Prizren contained 8,600 houses, of which only 30 were Roman Catholic, having their own church. There were many schismatic kilises (Orthodox), with two churches of their own. It is interesting to remark that the bishop maintains that 'in this part of Serbia the inhabitants speak Albanian'; a remark also made by Masarechi as pertaining to the town itself. For the villages, the presence of Albanians is confirmed by the Ottoman tahrir. In Serbian historiography, the Albanisation and Islamisation of Kosovo has to be seen as a result of the mass emigration of the Serbs after the Christian revolts and the Ottoman conquest of the region. The Ottoman conquests of 1377 led to a repopulation of these events. After these disturbances a certain Sâlih Agha from the village of Nenkovac near Prizren, who had exerted himself in the expulsion of the Austrians, repaired many mosques and schools in Prizren and reorganised normal life in the district, for which he received the title of Paşa. Sâlih Paşa is the founder of the hereditary dynasty of the (Albanian) Paşas of the Rotulla family, which was to rule Prizren till well into the 19th century. Sâlih was succeeded by his son Emr Allâh Paşa. The son of the latter, Tâhir Paşa, fought against Kara Mahmûd Bughâšî, the powerful Albanian derebey [q.v.] of Shkoder, who occupied Prizren in 1795 and drove Tâhir Paşa away. In 1805 Saîd Paşa, son of Tâhir, became sanjak bey of Prizren. In 1806 he fought against the rebellious Serbs, a fact memorialised in numerous folksongs. From 1809 till 1836 Prizren was governed by Mahmûd Paşa, the most important of the Rotulla dynasty. In 1809 he helped to destroy the Serbian insurgents near Niš [see Niš] and subsequently conquered Semendere/Smederevo and Belgrade. As symbols of his victory, he took the bells of the clock towers of Smederevo with him and placed them in three new clock towers which he constructed in the citadel of Prizren and in the large villages of Orlovicava and Mamula. In 1821 Mahmûd Paşa participated in the suppression of the Greek Revolt. He is especially known for the large mosque, the medrese and the mekteb he had erected in Prizren. Mahmûd Paşa also rebuilt the mosque in the Prizren castle and repaired the great hamâm of Mehmed Paşa and the Mosque of Hajdži Kasîm, which is already mentioned in the waqfiyye of Kukli Mehmed Bey from 1537-8. In 1831 Mahmûd Paşa sided with the rebellious Albanian vezir Muştafa Bughâšî but was beaten by the forces of Reşid Paşa. He was finally removed in 1836, banished to Anatolia and executed there. His brother Emin Paşa Rotulla succeeded him and remained in charge till his death in 1259/1843. In 1247/1831, Emin Paşa constructed the last great mosque of Prizren and the fourth and last medrese of the city. The mosque still stands, a large domed structure which is visibly inspired by the 200 years' earlier mosque of Şo faith Sinân Paşa. Emin Paşa had only one child, his daughter Umm Kulhüm, which is the reason that the rule of the Rotulla paşas over Prizren ended. In 1327/1909, Umm Kulhüm, then living in the Istanbul suburb of Üsküdar, drew up her waqfiyye for the mekteb she had founded in Prizren.

In 1843, within the framework of the reorganisation of the eyles, Prizren became the capital, instead of Üskûp/Skopje, of a large administrative unit. This had a positive effect on the population of the town, which grew rapidly. In 1865 the experienced traveler Johann Georg von Hahn called "Prisrend" the "largest city of Albani", bigger than Yenişehr/Larissa, Yannina or Shkodër, and probably even bigger than Monastir. According to the statement of the Austrian consular agent Dr. von Petelenz, who lived many years in the city, there were 11,540
houses, of which 8,400 were Muslim, 3,000 Orthodox and 150 Catholic. In them lived 46,000 inhabitants, according to the same source, Prizren had 26 mosques, two Orthodox churches and one Catholic church, as well as 17 tekbiets for boys and nine for girls, one Rüüdıyye school, and a school for the Orthodox and Catholic communities each. At this time, Prizren was the arms factory of the Balkans, producing swords, all sorts of rifles and pistols as well as excellent saddlery leather and a large textile production; silversmiths were especially famous. The population was Turkish, Albanian, Bulgarian/Serbian and Vlach, and most people spoke all these languages because they lived mixed together and not in segregated mahalles, a situation which can be seen as early as 1643 in the atıverdi defter of that year. From 1688 till 1744, Prizren was the capital of the wilayet of Perzër. In 1288/1781, a bilingual Turkish-Serbian weekly Prizren started its existence.

In 1744, however, the large wilayet was split up into several different units, apparently to counteract the too strong Albanian influence. After this date, the expansion of the city began to stagnate, especially when the new railway from Selanik/Thessaloniki to Kosovo caused a change in the trade network and left Prizren largely outside it. From 1878 till 1881, the Albanian nationalist movement called the "League of Prizren" noted in the sources as the movement of Ahmed Pasha in Prizren, trying to keep to the "Four Albanian orders" (Shkoder, Kosovo, Manastir and Yanya) together and to prevent Serbian and Greek annexation, attempts which ultimately failed.

In October 1912, during the First Balkan War, the Serbian army under General Jankovic took Prizren, which was accompanied by a massacre of the Muslim population, according to contemporary press reports amounting to 12,000 victims. After the conquest, the city had been at its height in the 19th century. Neglect and poverty, however, saved it from ugly modernisations. After World War II, the city remained smaller than it was in 1912, having only 28,056 inhabitants. Even after the settlement of some refugees from the greater part of the building, its three-domed porch was not of all of the former Yugoslav territories.

In the 16th century Prizren was, in the words of the biographer and prolific writer Čaghi Celebi [g.v.], himself a native of Prizren (born 1518 or 1520, died in Uskübi/ Skopje 979/1541), a "fountain of poets". Besides Süzi Celebi, Nehrâi and Čaghi himself, there lived the poet Mu'min and the mystical poet Sem'i Behrî, who wrote Karamînî, a wakfiyye in the name of Tekke of Mu'min in Prizren. It was read at the mosque of Sultan Mehmed the Conqueror in Prizren, causing a change in the trade network and left Prizren.

After the War, extensive works of restoration and conservation were carried out on the Christian as well as Serbian, Bulgarian and Vlach, and most people spoke all these languages because they lived mixed together and not in segregated mahalles, a situation which can be seen as early as 1643 in the atıverdi defter of that year. From 1688 till 1744, Prizren was the capital of the wilayet of Perzër. In 1288/1781, a bilingual Turkish-Serbian weekly Prizren started its existence.

P’u and his family were devout Muslims, sponsoring Muslim communities in Fu-kien, donating money to repair Ch’uán-chou city wall and wofâ/land for Muslim cemeteries. P’u’s son donated money for the reconstruction of the city’s Ch’ing-chin-ssu mosque. Ch’uán-chou became the biggest trade port and important centre for Muslim missionaries and travellers to China. During the Ming period (1368-1644), however, its significance declined and P’u’s descendants were banned from civil posts by the Ming rulers on account of his previous disloyalty to the Ming. One, however, distinguished himself as a scholar during the Manchu-Ch’ing period (1644-1911). P’u Sung-ling’s Lia-Chai Chih-i ("Strange tales from a Make-Up Studio") shows Central Asian characters and reflects many Islamic traditions.

P’u, now officially Pône, conventional European rendering Poona, a city of South India located in a District with the same name, on the Dakhan plateau, at 18° 31’ N. latitude and 73° 51’ E. longitude. The Pône district is first mentioned in Rashtrakuta inscriptions of the 2nd/8th century as Punya Vignaya and Punaka, which had “a thousand villages.” The town was a hamlet of about fifteen huts in 613 A.D.

There are no historical records concerning Pône from the 5th/11th to the 8th/14th centuries. During the reign of Ala al-Din Khâlid [see KHALJD], the Sultan of Dîhil from 696/1296 to 716/1316, Pône came under Muslim control. Hindu temples were now converted into dargâhs, the town became a Muslim kasaba and a military base surrounded by a mud-wall. Within the wall there were the Muslim army and a few villagers, outside were the Hindu cultivators, traders, village officials, and brahmans. Pône commanded the communications to its immediate hinterland, the Mâval Hills, but was not situated along any of the major trade routes of the Dakhan. The kasaba was subsequently included in the Bahmani Sultanate [see BAHMANI], from the 15th/16th century onwards, and in the Nizâm Shâhi Sultanate [see Nizâm SHâH] in the late 9th/15th and early 10th/16th centuries, both Dakhan-based Muslim powers, which did not, however, make Pône their capital. The Russian traveller Nikitin mentions Dìnnar, not Pône, as the main town, while travelling through the area in the late days of the Bahmani Sultanate.

In 1004/1595 the kasaba of Pône, with its surrounding district, was part of a dājî [see DÅJÎ] conferred by the

PUNA — PUR-I BAHĀ’

Niẓām Shāhī government on the ancestors of the future Marāṭhā king Śivādji. The town was destroyed severely in 1060/1650 when it was capturred and burnt by the Ḥāṣūl Shāhī army. About 1074/1667 Śivādji’s father first made his residence in the town of Pūna, which started to increase substantially in size. Śivādji, however, spent most of his time at Śatara, in his hill-forts, or campaigning. Pūna changed hands between the Mughals and the Marāṭhās [q. v.] before it came into the possession of the Pēẖāwās [q. v.] early in the 12th/18th century. Due to the Mughal presence, the number of mosques increased, as did the Muslim population of the town. Khaḍī Khān speaks of Pūna in the time of Awrangzēb as “situated in a treeless plain.” By 1133/1720, the old kaşaba may have had a total population of 20,000 to 30,000. By 1164/1750, Pūna had officially been acknowledged as the Marāṭhā capital, and, as the residence of the Pēẖāwās, expanded dramatically, while “a million mango trees” were planted in and around the town. The Pēẖāwās built the Shānwar Palace, the most magnificent building of Pūna, which was, however, destroyed by fire in 1243/1827. Numerous temples were erected, especially on Paravī hill, to the south-west of the city. From about 1143/1730 to 1234/1818, Pūna was the city of the Pēẖāwās, a bureaucratic-military capital with a largely Citpavān-brahman constituency. It did not have the economic base of such Muslim cities as Agra, Dihlī, Lahore, or Murghābād, nor did it have the commercial promise of the new British cities of Madras, Bombay or Calcutta. Pūna had a peculiarly brahman character, and, for the most part, was a creation of the Pēẖāwās, who transformed it into a city of 150,000. Muslims were only a small community in 12th/18th-century Pūna, and many of them were converts from the Hindu population of the period before the rise of Śivādji. But both Shī'a and Sunnī groups were represented. Later in the same century, Mu'mins and Bohorās [q. v.] came to the city to trade, and there were also a small number of Sūdīs, descendants of African Muslims, and mercenaries in the city of 1225/1810 there were in Pūna 412 Hindu temples and 10 Muslim shrines or mosques. The Pēẖāwās generosity towards Muslim shrines in Pūna (as elsewhere) is never doubted. In 1143/1730, Pūna was much influenced by Indo-Muslim culture. The Pēẖāwās, for instance, affected a semi-Mughal style of dress for formal occasions.

In 1233/1817 Pūna was occupied by the British, and British troops remained in Pūna until 1368/1948, in a separate cantonment. The population increased again, to 276,000 in 1360/1941. In the post-Independence period, Pūna became an industrialised city of over 800,000 in 1391/1971, and over 1,500,000 in the 1400s/1980s. The percentage of Muslims in the city has, from the mid-12th/18th century onwards, never been more than ten, and is less now. But the city of over 800,000 in 1391/1971, and over 1,500,000 in a separate cantonment. The population increased, as did the Muslim population of the town.

3 Pur-i Bahā’ was the madadān of several high officials, who all belong to the reign of the Ikhān Abaka (1265-82 [q. v.]). While living in Khurāsān he praised ʿIlī al-Dīn Tāhīr al-Fāryūmādī (d. ca. 668/1270) and his son Wadjīd al-Dīn Zanjī (executed in 685/1287) who both were appointed wazzīr-nābī of that province, the former in 1265, the latter in 1270 and again in 1282. Another prominent maddādān was Naṣīr al-Dīn Tūsī (d. 672/1274 [q. v.]). When Pur-i Bahā’ left his native province he lived in Tabriz, Isfahān and Baghādād where he became the panegyrist of several members of the Qiwānī family: Shams al-Dīn al-sāḥib diwān (executed 1284), ʿAlāʾ al-Dīn ʿAṭā Malīk, the famous historian and governor of Baghādād (d. 1283 [q. v.]) and Bahāʾ al-Dīn b. Shams al-Dīn, the governor of Isfahān (d. 1279). Nothing is known of his fate after the death of these patrons, a fact which must also have affected his life in Madrās, Bombay or Calcutta.

Hamd Allāḥ Mustawāfī Kāzwīnī (d. after 740/1340-41) confirms in his Taṣbīḥ-i gusūla that Pur-i Bahā’ s diwān was well-known. Verses of Pur-i Bahā’ are quoted in anthologies, biographical or historical works. By far the most comprehensive collection of his poems is to be found in a comparatively late manuscript dated 1029/1619-20, written for the Kuttbhāshās [q. v.] of Haydarābād in South India, and entitled Kitāb-i Pur-i Bahā’; but as it does not contain all the verses cited in other sources it can hardly represent his complete diwān.

This manuscript comprises 41 kašīda, 13 muktaṣīāt, 1 tarkīb-band, 1 maḥnaws called Kān-nāma-yi auḵāf, 2 ghazals and 73 rubāʾiyāt, altogether totalling 25,216 verses. With the exception of the rubāʾiyāt, his poetry is devoted to panegyrics (madḥ), satire (ḥādgī) or quite often a mixture of both. The mùiḏ̄ānī, Saḥīḥ and Baha were his favourite poets and admired models.

Pur-i Bahā’ shows a predilection for complicated metres and rare words. He makes frequent use of financial and administrative technical terms, and is famous for his macaronic pieces that mix Persian with Sanskrit words. He makes frequent use of metaphors and obscure words; this may have been a predilection for complicated metres and rare words. Pur-i Bahā’ indulges in pornographic images and obscene words; this may have been the true motive for the copying of his poems for the Kuttbhāshās [q. v.], who all belong to the reign of the Ikhān Abaka (1265-82 [q. v.]).}

2. Editions and translations: Browne, LHP, iii, 111-15; Dibghudâ, Lughat-i-nawâ, s.v. Pur-i Bahâ; V. Minorsky, Pur-i Bahâ’s ‘Mongol Ode’, in BSOAS, xviii (1956), 261-78 (also in Arabic, twenty articles by V. Minorsky, Tehran 1964, 274-91); idem, Pur-i Bahâ and his poems, in Chrestomathia orientalis (Festschrift for Jan Rybka), Prague 1956, 186-201 (also in Arabic, twenty articles, 292-305); Iraj Afshâr, Kâr-nâma-yi akses, Aflah-i Tâdż-al-Dîn Nâsâ‘î, in Farhang-i Iran-zamin, viii (1339/1959), 5-22, based on a 17th/13th century manuscript, wrongly ascribed to a certain Tâdż-al-Dîn Nâsâ‘î, who is only a protagonist of that satire. This edition of the Kâr-nâma-yi akses was compared to its more comprehensive version in the Kitâb-i Pur-i Bahâ, re-ed. with German tr. Birgitt Hoffmann, Von falschen Asketen und «unfrommen» Stiftungen, in Proceedings of the first European Conference of Iranian Studies, in Turin, 7-11 September 1987, Part 2, 409-85.

Pûr-i Dâwûd, Ibrahîm, Persian scholar, poet and patriot, born in 1886/1264 at Rashq [q. v.], the son of a merchant-landowner of Sayyid descent. From boyhood he delighted in poetry, and himself became an acclaimed romantic and patriotic poet (Browne, p. XVIII; Rypka, 376). As a student in Tehran in 1906 he witnessed the struggle for constitutional reform, which affected him deeply. He studied law briefly in Paris, but abandoned it for ancient Iranian studies, which he pursued in France and Germany for a number of years. In 1924 the Pârsîs [q. v.] invited him to translate Zoroaster’s Gûhûs into modern Persian. He accordingly spent some time in India, where this translation was published in 1927, to be followed by renderings of the Avestan Yâls (1931), Khordâ Avesta (1932) and Yama (1934) (Tarapore, 14, 19-22, 34-6). His great aim was both to serve Iranian Zoroastrians and enlighten Iranian Muslims about their cultural heritage. In 1938 he became professor of Avestan, Pahlavi and ancient Iranian history at Tehran University, publishing thereafter other scholarly works on Iranian religion, history and folklore, as well as poems. He died in 1347/1968. Bibliography: E.G. Browne, The press and poetry of modern Persia, Cambridge 1914; J. Rybka, et alii, History of Iranian literature, Dordrecht 1968, 385; J.C. Tarapore, in Professor Poure Davoud memorial volume, ii, Bombay 1951, 1-48. Further sources in his obituary, in Rahnâmâ-yi Kitâb xii/8 (1347/1968), 486. (M. BOYCE)

Pûshûtûnîstân [see Pûshhtûnîstân].

Pûst (p.), skin, Turkish pûst or pûsât, a tanned sheepskin, used as the ceremonial seat or throne of a pûr or shaykh of a dervish order. The head, sides and foot had mystical significances ascribed to them. It corresponds to the Arabic bâb. According to Ewlyā Ėlebî, in Ewlyā Ėlebî, Istanbul 1314/1896-7, i, 495, the murîd, after passing the test by the pûr, is called gâhîb pûst. On ceremonial occasions amongst the Bektâshî order, the head or conical was said to have been set out with twelve pûsts of white sheepskin in remembrance of the twelve Imâmîs or standing symbolically for twelve great figures in Bektâshî history, but in the last days of the order’s open existence in Turkey (i.e. before 1925; see Bektâshîyya), the number of special pûsts was restricted to not more than four, in the experience of Birge (see Bibli.).

Pûst-nêsîn (p.), lit. “the one sitting on the [sheep’s] skin”, the title given to the baba or head of a dervish tekke in Persian and Ottoman Turkish Şiûf practice, e.g. amongst the Bektâshîs [see Bektâshîyya].

Pûwâsà [see Suppl.].

RÂ the tenth letter of the Arabic alphabet, transcribed as /r/, and with a numerical value of 200, according to the eastern letter order [see Add].

Definition. Vibrant, apical, alveolar and voiced. This trilled consonant is produced by a series of movements of the tongue produced a little behind the gums of the incisors. Sibawayh calls the consonant /r/ “hard” (shadda) and “repeated” (muqam), because of the repetition (akata) of the tongue’s movement during the sound’s production. For al-Khallî, the /r/ is a “pointed” (dawâlak) consonant because it is produced with the tip (dawâlak) of the tongue. In phonology, the phoneme /r/ is defined by the oppositions /r-\, r, r-\n/ and r - gh; the phoneme /r/ is thus non-lateral, non-nasal and anterior.

Velarisation (tafkhîm). As well as the simple realisation of /r/, the grammarians describe an emphatic realisation /r/ brought about by the phonetic surroundings. The /r/ is velarised (mu والف) when it is followed by the vowel /a/ or the vowel /â/, or by one of the seven “high” (mu’tâsima) consonants: /q/, /l/, /l, /f/, /k/ and /gh/, itself followed by /l/ or /ul/; contrariwise, the /r/ is not velarised if it is followed by the vowel /i/ or the semi-vowel /y/. This emphatic realisation is a combinatorial variant of the same phoneme, and has only a phonetic, extra-phonological value. One of the properties of the emphatic /r/ is to prevent, through its proximity, the inclination (imda) of the vowel /a/ towards /i/. The opposition of non-emphatic /r/ and emphatic /r/ exists also in Arabic dialects. In most eastern dialects, the opposition remains purely phonetic, with no distinctive character,
and the causes producing emphasisation are the same as those in literary Arabic; but in certain eastern dialects and in the western ones, the opposition of the two forms of /t/ has a distinctive value, and one can speak of two phonemes, non-emphatic /t/ and emphatic /ṭ/.

Asstimilation (iddīmāt). Because of its specific character, the trilling or repetition (takrīr) which accompanies its emission, Sibawayh considers that /ṭ/ cannot be assimilated (mudhāmāt) to another consonant, since it would lose its character; however, the assimilations of /ṭ-ṭ/ into /t-ṭ/ are found amongst certain "readers" (kurvā) of the Kurān.

In modern Arabic dialects, /ṭ/ undergoes very few conditioned alterations and is subject to only one non-conditioned alteration; in certain sedentary dialects, both eastern and western, the /ṭ/ may be realised as a voiced velar spirant /ṭā/. (G. Trémau)

Rāb (A., pl. rābaʾ) originally means home, domicile, home town or home country; the verb rābaʾ means "to dwell". In the context of Cairene architecture, it designates a type of urban dwelling which is a rental multi-unit building founded for investment. It can also refer to the living quarters belonging to a rab's class and other wealthy investors who made them into precious sites or a row of shops or store-rooms or above any type of commercial structure. The Rab complexes are designated by the term tabaka (pl. tibdīk); larger apartments are referred to as rīwāʾ or kāʾa. The tabaka was a kind of duplex with a vestibule (dihiliz), a recess for water jars, a latrine and a main room consisting of a slightly raised ṭawād and a dārkāa. An inner staircase led up to a mezzanine (mustakara) used for sleeping. Each unit had its own enclosed private roof. A tabaka may also be a triplex with an additional room above the mezzanine.

The rāb was often built on the second floor above a row of shops or store-rooms or above any type of caravanserai like a waṣṣāla, a khān, a funduk or a kaysarīya. In the first case it was built along the street. If it was associated with a commercial structure, it was adapted to its layout, i.e. it was built around a courtyard. As the basic study of L. Ali Ibrahim demonstrates (see Bibl.), the windows of the living units, as a rule, overlooked the street whenever they could be located on the street side, which contradicts the wide-spread conception that residential architecture in Egypt is introverted. Each rāb was served by an independent staircase which was reached through a separate entrance from the street. The staircase led to a gallery leading to the living units. There were also rāb's built independently without commercial structures, with living units also on the ground floor. Since the 9th/10th century the rāb type of housing was adopted to serve as living quarters for the community of the khānqāh and madrasas instead of the traditional cells. Such rāb's were built by Sultan Barsbay and Amir Kurkmās at their respective religious-funerary complexes in the cemetery. A different kind of rāb was the rāb al-zaytī mentioned by Makrīzī (Khīṭat, ii, 78). Located in the green outskirts of Cairo, along the Nāṣirī Canal, its apartments on four sides overlooked gardens and orchards. It was frequented by a licentious clientele (ṣansūlaḥ abī al-khulāṣa ti l-kaṣf).

The rental rāb's were built by members of the ruling class and other wealthy investors who made them into waṣṣāla, i.e. they alienated their revenues either to endow philanthropic and religious foundations or for their private family trusts. The dwellers of the rāb were not poor, but middle-class citizens who were able to pay the rent that made this form of dwelling a lucrative investment. The waṣṣāla archives of Cairo provide a wealth of rāb descriptions from the Mamlūk as well as the Ottoman periods (see H. Sayed). From the Mamluk period on rāb's built by the ruling establishment have survived, those of the sultans Barsbay, Ināl, Kāyibay, al-Qurrā and Amir Kurkmās. From the Ottoman period there are still a good number of rāb's built by amirs and other notables.

(DoRis BEHRENS-ABOUSEIF)
Diagrammatic plan of a rab block (by Hazem Sayed).
RABĀB (A.), the generic name for the viol, or any stringed instrument played with a bow (kaus). The origin of the name has been variously explained: a. from the Hebrew lābab (l and r being interchangeable); b. from the Persian rubāb, which was played with the fingers or plectrum; and c. from the Arabic rabba (to collect, arrange, assemble together).

The first derivation is scarcely feasible. The second has a raison d'etre, although the mere similarity in name must not be accepted without question. In spite of the oft-repeated statement that the Arabs admit that they borrowed the rubāb from the Persians, together with the word kamān for the bow, there is not the slightest evidence for it. No Arabic author (so far as the present writer knows) makes an admission of this kind, nor have the Arabs adopted the word kamān for the bow, their own term kaus having been considered sufficient. It is true that we read in the Masūfī al-ʿulūm (10th century) that “The rubāb is well known to the people of Persia and ʿAṣūrān” (237), but this author was writing in Transoxania, and we know from al-Fārābī that the rubāb was also well known in Arabian lands. One argument against the alleged borrowing from Persia is that the rubāb with the Persians was
The rāb of Sultan al-Ghawrī at his wakāla near al-Azhar.
always a plucked and not a bowed instrument. Still, the Arabs may have borrowed the plucked instrument and adapted it to the bow. On the other hand, the Arabic root rabah as the parent of the word rabāb has much in its favour. As the Arabic musical accousticians point out, plucked instruments such as the ʿād (lute), tunbīr (pandore), etc., gave short (manfāṣīl) sounds, but bowed instruments such as the rabāb gave long or sustained (muṭṭasāl) sounds. It was application of the bow which “collected, arranged, or assembled” the short notes into one sustained note, hence the term rabāb being applied to the viol (see Farmer, Studies, i, 99).

The rabāb is mentioned as early as the Arabic polygraph al-Dāḥīzī (d. 255/870) in his Maqāmīʿat al-rasāʾil. Yet we cannot be sure whether this was the bowed rabāb or the plucked rabāb. At any rate, it already had a legendary history when he wrote. According to the Kāfṣī fi-l-ḥumūm (15th-16th century), it is first found in the hands of a woman of the Banū Tayyī (fol. 263). Turkish tradition ascribed its “invention” to a certain ʿAbd Allāh Fārābī (Ewlīyā Ǧelbī, Ǧaḥṣāb-nāme, i/2, 226, 234). An Andalusian legend places its invention within the Iberian peninsula (Delphín and Guin, Notes sur la poésie et la musique arabes, 59). One thing is certain: even if we have iconographic evidence of the viol in the 8th or 9th century (see below), the earliest literary evidence of the use of the bow comes from Arabic sources, i.e. from al-Fārābī (d. 950), the Ikhwān al-Safā> (10th century), and Ṣafīr Ibn Fardīn (d. 1048), as I have fully demonstrated elsewhere (Studies, i, 101-5).

Seven different forms of viol are known to Islamic peoples, viz. 1. the Rectangular Viol, 2. the Circular Viol, 3. the Boat-Shaped Viol, 4. the Pear-Shaped Viol, 5. the Hemispherical Viol, 6. the Pandore Viol, and 7. the Open Chest Viol.

1. The Rectangular Viol. This consists of a wooden frame, more or less rectangular, over the face (waṣiṣ) and back (ṣadr) of which is stretched a membrane (dījāla). The neck (ṣuʾak) is cylindrical and is of wood, whilst the foot (risq) is of iron. It has either one or two strings (awzaʿ), generally of horsehair. Al-Khālīl (d. 791) says that “the ancient Arabs sang their poems to its [the rabāb’s] sounds, but bowed instruments such as the [rabāb] which was identical with the lura which was identified with the rabāb of the Arabs [al-Masʿūdī, Marāfī, vii, 91]. We can probably identify the instrument which was similar to the (pear-shaped) rabāb al-mugantī (singer’s viol) had two strings and the instrument which was similar to the (singer’s viol) had one string of horsehair (fol. 78b). Niebuhr (i, 144) says that it was still called the rabāb al-mugantī in the 18th century. We certainly have a rectangular instrument shown in the frescoes of Kusayr ʿAmra (Musil, pi. xxxiv), but it is played with the fingers and not with a bow. Yet even in modern times the rabāb of the desert was to be found played in this way as well as with a bow. Yet it is not until the time of ʿAbd al-Rahmān al-Fāsī (ca. 1650) that we get any musical details of the instrument (IRAS [1931], 366).

2. The Circular Viol. The modern instrument of this form consists of a circular wooden frame or pan, the face, and sometimes the back, being covered with a membrane. There is no foot. There is no special reference to this form in Arabic literature nor is there any definite iconographic evidence of it earlier than the 18th century, when it is described and delineated by Niebuhr (ib.); Tab. xxv, (3), who found it at Baʿara. It has but one string. It is still found among the folk of Palestine (Sachsse, 30, 40, Tab. 3, 17) and the Maghrib (Chottin, 50), where it is still known as the rabāb or ribāb. For other delineations, see Lavigne (2790) and Chottin (pl. vi).

3. The Boat-Shaped Viol. This form is confined to the Maghrib. It consists of a piece of wood hollowed out into the shape of a boat. The chest (ṣadr) is covered with thin metal or wood pierced with ornamental rosettes (musewarat), whilst the lower part is covered with a membrane. The head (taʿ) is at right angles to the body, and it is generally furnished with two strings. It seems to have been used by the Arabs and Moors of Spain since their invasion of the peninsula. It is praised by their 10th and 11th century writers Abū Bakr Yāḥyā Ibn Ḥughayl (see al-Shāhālī, fol. 15), and Ibn Ḥazm (see Muhammad b. Ismaʿīl, 473), and doubtless they refer to either this instrument or the Pear-Shaped Viol (see below, 4) since the Glossarium Latino-Arabicum (11th century) equates rabāb with līra dicta a varietate. If we have no iconographic evidence of this viol from Arabic or Moorish sources, it certainly existed among the Spaniards, since the instruments in the Cantigas de Santa María (13th century) show definite oriental features, see Riano (121) and Ribera (pl. xi). Ibn Khaldūn (d. 1406) is the first to describe this viol, although not very clearly (Prolegomena, in Notices et extraits, xvii, 354). It is not until the time of ʿAbd al-Rahmān al-Fāsī (ca. 1650) that we get any musical details of the instrument (IRAS [1931], 366). European travellers (Addison, Windhus, Höst, Shaw) mention the instrument as popular in the Maghrib, and today it is one of the principal instruments in concert music. Hōst gives us one example of this viol, and Ribera (pl. xi) identifies the instrument from Eastern sources (Tab. xxxi, 2). For a 19th century description, see F. Salvador-Daniel (80), and for a design, see Christianowich (pl. 1). Several delineations of both instruments and players may be seen in al-Haftī (pl. 34, 39-52), Mahillon (i, 416-17), Fétis (Hist., ii, 146), Engel (Cat., 143), Chouquet (205), Sachs (ReaIex., 317), etc. For the instrument of Northern India called the sānāng, see Lavigne (350) and Fétis (ii, 298).

4. The Pear-Shaped Viol. Probably, the earliest Arabic reference to this instrument is that made by Ibn Khurraḍāǧibī (d. ca. 912) who, in an oration before the caliph al-Muʿtamīd (d. 893), says that the Byzantines had a wooden instrument of five strings called the lūra which was identical with the rabāb of the Arabs (al-Masʿūdī, Marāfī, vii, 91). We can probably identify the instrument which was similar to the (singer’s viol) had two strings (see Cat., Casket at Florence which dates from the 9th century (L’Arte, 1896, 24). From the Siculo-Moorish woodwork of the Palatine Chapel at Palermo (12th century) we see to better advantage what the Arabic instrument was like (BZ [1893], ii, 383). It was this form of the rabāb, probably, with which al-Fārābī (d. 950) deals (see Land, Researches, 130, 166). He gives full details of both the accordatura and scales. We know little about this instrument in Arabic-speaking lands.
after the 13th-14th centuries, until it is described by Niebuhr (i, 143; Tab. xxvi, D) in the 18th century, and even then it appears to have been favoured only by the Greek population. It had three strings. It may have been used in the Maghrib (Jackson, 159-60), but neither Villotoe nor Lane know of it in Egypt. In Turkey, it appears to have been adopted from the Greeks, possibly in the 17th century, and with the 'ṣid and laṣaṣ plays a prominent part in concert music today (Lavignac, 3015). Recently, an attempt has been made to introduce this rakāb turki or arnaqa, as it is now called, into Egypt (al-Hafnl, 661, pi. 35). Designs of the instrument may be found in Engel (Cat., 210) and Crosby Brown (iii/1, 22), where they represent specimens in collections at South Kensington (London) and New York.

5. The Hemispherical Viol. This is, perhaps, the best known form of the viol in the Islamic east. The body consists of a hemisphere of wood, coconut, or a gourd, over the aperture of which a membrane is stretched. The neck is of wood, generally cylindrical, and there is a foot of iron, although sometimes there is no foot. It is often known in Arabic as the kamāndja or more rarely as the ḥiṣāj or ḥiṣāk. The former is derived from the Persian kamānda (dim. of kamān, "bow") whilst the latter is derived from the Persian and Turkish ḥiṣāj, ḥiṣāk, ḥiṣāx, ḥiṣāk, ḥiṣāx, etc., which may have had their origin in the Sanskrit ghosaka, an instrument mentioned in the pre-Christian Nāga-ghosika (ch. xxxiii). The present writer believes that the words ḥiṣāj and ḥiṣān mentioned in the Ikhwan al-Safa (Bombay ed., i, 97) and al-Shalābi (fol. 12) respectively, are copyist's errors for ḥiṣāx and ḥiṣāx. The word kamānda is first mentioned in Arabic by Ibn al-Fakhl (ca. 903) who says that it was used by both the Copts and the people of Sind. Of course, this need not mean that the instrument mentioned was a hemispherical viol, because, being a Persian by origin, the author may have used the word kamānda in its Persian generic sense meaning a viol. That Egypt had an early liking for the kamānda is borne out from various sources. Although in Egypt the hemispherical viol is nowadays called the rakāb misri (Egyptian viol), in earlier days it was called the Hungarian viol (al-Haf-nil, 661, pi. 35). Designs of the instrument may be found in Engel (Cat., 210) and Crosby Brown (iii/1, 22), where they represent specimens in collections at South Kensington (London) and New York.

6. The Pandore Viol. This form is practically a dores used with the bow. See Advielle (14), Lavignac (351), and Mironov (25) and Fitrat (43).

Manuscripts:

RABĀB (a., pl. arābāh), district or quarter of a town situated outside the central part or madina [q. v.]. This term, which is very frequently found in mediaeval Islamic historical texts of both the Occident and Orient, lies at the origin of the Spanish word arabal, which has the same meaning. In the strongholds (hisn or sakhr) of Muslim Spain, the name rabāb was given to the civil quarter situated below the strictly best-known examples from India are the erṣrār and jāmā. The former has a membrane on its face and has five strings played with the bow together with a number of sympathetic strings. The latter is practically identical with the former, but is adorned with the figure of a peacock (hence its name) at the bottom of the body of the instrument. See Lavignac (351) and Mahillon (i, 131) for designs and details. With the Persians and Turkomans we see various kinds of pan-
military quarter; it was also applied to the quarters of the lepers and of prostitutes, whilst amongst the Spanish Christians, it designated a particular race.

These quarters of a town generally bore a special name. Thus we know the names of 21 of the 4th/10th century suburban quarters of the caliphal capital Cordova [see KurTUBA]. Rabād Shakunda or simply al-Rabād was the southern quarter of Cordova, where the celebrated revolt called "that of the suburb" broke out. Situated on the left bank of the Guadalquivir, it was inhabited by the Cordovan plebe but also by artisans and merchants, as well as by Mātūrī fukahā who had made it a centre of opposition to the Umayyad authorities. A conspiracy hatched by the notables of the quarter in Djúmādā́ II 1189/May 805 had failed and 72 of those involved had been executed; in the following year, an outbreak of discontent had likewise been followed by several condemnations to death. For about a dozen years, the trouble-makers amongst the fukahā seem to have maintained an attitude of mind which provoked a popular rising on 18 Ramadā́n 202/25 March 818 (and not in 198/204, the date generally accepted before Lévi-Provençal's revision of this in Hist. Esp. Mus., i, 165 n. 1). The immediate cause of the uprising was the amīr al-Hakam I's decision to impose new, extraordinary taxes and to entrust the task of raising them to the chief of his police force, a Christian called RablS but the actual pretext was the murder of an artisan by one of the police. Since al-Hakam was, on his return from a hunting session in the Campiña [see KABĀnIYyA], jeered at by the population of the quarter, he had some ten of those involved executed, which enraged the mob. It surged en masse towards the bridge over the Guadalquivir, where the bridge guards were on the point of being overwhelmed when two officers, the sāḥib al-sawdā́f Ubayd Allāh b. 'Abd Allāh al-Balawi and Ishaq b. al-Mundhir, crossed the river at a ford with a rapidly-assembled force of cavalrymen and, taking the mob in its rear, speedily suppressed the insurrection. The amīr then allowed the soldiers to give free rein to pillaging and massacring with an unheard-of ferocity. At the end of three days, the killing was halted, and al-Hakam alleges he received to death 300 of the rioters. The master of the quarters of the quarter were compelled to flee Cordova, the Rabād was razed to the ground and, right until the end of the 4th/10th century, the prohibition of erecting any sort of building in or near it was rigorously enforced, this ban being, according to some sources, existing until al-Hakam's death (see below). The Rabād, therefore, continued to be used as a prison, albeit a place of no great comfort, and an early second quarter has been described by Ibn al-Raggīd as "a small enclosure, enclosed with high and solid walls", and as a place of "very foul air and stench" (Radd al-Abi Muhammad al-Asili, 53, 78, 80, 89-90, 107-9).

The modern archaeological site covers an area of approx. 1,740 hectares, and several seasons of excavations have revealed various types of buildings, including palaces, houses, two mosques, large reservoirs and underground water-storage tanks. There is evidence of small-scale artisanal activity such as tanning, dyeing, smelting and metal-working. Many Umayyad and 'Abbasid period dirhams and dinars have been found, together with a variety of ceramics, including polychrome and lustre ware, steatite and glass objects.

Bibliography: In addition to the references given in the article, see Yākūt, Buldān, ed. Beirut, iii, 24-5; Hamad al-Djasir, al-Rabādha fi kutub al-mutakaddimin, in al-ʻArab, i, 5-8 (1398/1967); and above all, S. A. A. al-Raggīd, al-Rabādha, a portrait of early Islamic civilization in Saudi Arabia, Riyyād 1986, giving the earlier sources and the results of recent excavations.

AL-RABAHI, Yūsuf b. Sulaymān b. Marwān al-Anṣābī, Abū ʻUmār, b. 367/978, d. at Murcia 448/1056, grammarian of Muslim Spain. Best known as such, he is equally credited with competence in fiqh, poetry, metrics and genealogies. It appears that he played a certain role in the compilation of the various grammatical commentaries on the classics of Arabic. In his Radd ʻalā ʻl-Kabīr and a Radd ʻalā Abī Muhammad al-Aṣfīl are attributed to him, but do not seem to have survived.

AL-RABATI, Abu Ḥasan ʻAllī b. ʻIsa, grammarian of Baghdaḍ of the 4th/10th century and contemporary of Ibn Dīnnī. He was born at Baghdaḍ in 328/940, and studied grammar there under the direction of al-Sirāfī [q.v.] before moving to Shirāz in order to follow the teaching of al-Fārisī [q.v.] over a period of almost 20 years. He then returned to Baghdaḍ where he died, at an advanced age, in 420/1029. His eccentricities, seen in a fear of dogs, prevented him from having any pupils. Amongst his works, none of which have survived, are various grammatical commentaries (darbā), such as one on the K. al-Ịdāḥ of al-Fārisī and one on the K. al-Mukhtar of al-Djāmīr, and two treatises on grammar, the K. al-Mukaddima and the K. al-Badī‘.

RABAT [see al-RibAT].
RABB (A.), lord, God, master of a slave. Pre-Islamic Arabia probably applied this term to its gods or to some of them. In this sense the word corresponds to the Turkic term Bašal, Adon, etc., in the Northwestern Semitic languages, where it means "much great" (see A. Jeffery, The foreign vocabulary of the Qur'an, Baroda 1938, 136-7). In one of the oldest sûras (CVI, 3) Allâh is called the "lord of the temple". Similarly, al-Lât bore the epithet al-Rabba, especially at Ta'if where she was worshipped in the image of a stone or of a rock. In the Kur'ān, rabb (especially with the possessive suffix) is one of the usual names of God (see J. Chelhod, in Arabica, v (1958), 159-67). For further details, see T. Fahd, La religion des Arabes preislamiques, Louvain 1953, 30). For the usage of rabbi, which he must replace by sayyid (Muslim, al-Âlîf min al-adab, trads. 14, 15, etc.). The abstract rubâbîyya is not found in either Kur'ān or Hadîth, but is in common use in mystic theology.

In pre-Islamic times, rabb was one of the titles given to certain of the kâhûns [q.v.]. Lammens gives numerous references to this theme (see his Les cultes des hérétiques, in BIFAO, xvii (1919), 39-101). The name r b y, associated with h t r (the Moon), designated in the kingdom of Katabân a class of priest-officials who had the duty of administering the divinity's domains (G. Ryckmans, Les religions arabes preslamiques, Louvain 1953, 30). For the usage of rabb in the Kur'ān, see J. Chelhod, in Arabica, v (1958), 159-67. For further details, see T. Fahd, La divination arabe, Paris 1987, 107-8.

Bibliography: In addition to references in the text, see the Arabic lexica and the Kur'ān commentaries, s.v.

(RABGHUZI, Nâṣîr al-Dîn b. Bûrûnân al-Dîn, early writer in Central Asian Turkish, was born somewhere in the second half of the 13th century, possibly in the still unidentified encampment of Ribât Ògûz in Transoxiana (Western Turkestan), then under the hegemony of the Caghatay Khânâte [q.v.]. Being himself a Turk and a judge by profession, he also had some rather good relations with the Mongol ruling élite. The date post quem for his death is 710/1310. These scarce facts all stem from his own work and no other source so far has come to light revealing anything more about his identity.

Rabghûzî gained his fame as author of the first Mideast Turkic version of the qisas-i anbiyâ [q.v.] genre, commonly referred to as the Kisas-i Rabghûzî, and written in 710/1310 at the instigation of Nâṣîr al-Dîn Tûk Bûgha, a young (not yet identified) prince of Mongol lineage, but of Muslim faith. The text is enriched with some seventy poems in Arabic and Türkî (cf. H. Boeschoten and M. Vandamme, 1990); also, it contains some 1200 Arabic quotations from the Kur'ân and the hadîth.

First extracted material from a large range of sources, Rabghûzî then recomposed this chosen material in a number of cyclic stories. However, since the identification of these sources is still problematical, this will not be elaborated here; see, however, Dorleijn (1986) and Boeschoten (1992, 55-6).

Albeit much is still indistinct, Rabghûzî's kind of Turkic, which he himself calls "Türkî", is commonly referred to as Khühûramz Türkîch, the literary Türkîch language of Central Asia of the 13th and 14th centuries. It is also partly characterized as the transition stage from the Kâhûnic literary language (to early) Caghatay. As a whole, Rabghûzî's Khühûramz Türkîch offers the picture of a hybrid language which has been infiltrated by forms from various dialects, notably those spoken by Oghûz and Kïpçïk tribes (Boeschoten and Van Damme, 1987, and Boeschoten, 1991, 23 ff.). As to language and contents, the Kisas-i Rabghûzî stands very close to Mahâmûd b. 'Allî's Nahjât-i Farrâdî, written before 1358 (facsimile publ. by J. Eckmann, Ankara, 1956, and S. Tezcan and H. Zülfikar, TDK, 518).

Although the archetype has been lost, the Kisas-i Rabghûzî has become the focus of a Central Asian tradition which lived on well into this century. This may be summarised briefly as:

(a) The old mss. (13th-16th centuries), of which five are still extant (Boeschoten, 1991, 3-4). Up to now, only one facsimile has been produced (F. Groeneveld, 1980). For a listing of the most important mss. and older representations, see Hofman (1980), iii/1, 85-90; J. Eckmann (1987), 17-18 and J. Eckmann in PTF, i, 104; ii, 218-19.

(b) A period of loss of interest, the cause of which is still unknown, somewhere in the 17th-18th centuries.

(c) A host of new mss. (18th-20th centuries), which have the particularity of showing rather conservative versions as to the contents, but which were modernised versions seen from the language aspect.

For a listing of the most important mss. and older representations, see Hofman (1969, iii/1, 85-90; J. Eckmann (1980), 17-18 and J. Eckmann in PTF, i, 104; ii, 218-19.

RABÎ (A.), the name of the third and fourth months of the Muslim calendar. The Syriac equivalent rûša is used in the Peshitta as a translation of the Hebrew malḵîth (late rain). This and the fact that the two months following Rabî' II are called Dîmâmad (month of frost) suggested to Wellhausen that these four months originally fell in winter and that the old Arab year began with the winter half-year (see AL-MUNJARRAM). Rabî' means originally the season in which, as a result of the rains, the earth is covered with green; this later led to the name Rabî' being given to spring. Al-Birûnî expressly describes autumn (khârij) as the season indicated by Rabî'. As a result of the Kur'ânic prohibition of intercalation (see NASRî), since the beginning of the Muslim era the two months no longer fall at a regular season.

AL-RABI' B. YÜNUS B. 'ABD ALLAH B. ABI FARWA (so-called from his entering Medina with a fleece on his back), emancipated slave of al-Ḥârij al-Haffâr, himself the emancipated slave of 'Uthmân b. Affân [q.v.]. He was really a man of obscure origin, born in slavery at Medina about 1127/30. He was
bought by Ziyād b. ʿAbd Allāh al-Ḥārīthi, who presented him to his master Abu ʿl-ʿAbdāb b. ʿAlī al-Ṣaffāhī, the first ʿAbdābīd caliph. All his life, he served, with varying fortune, three more ʿAbdābīd caliphs: al-ṣaḥīf al-Mānṣūr, al-Mahdī, and al-Hādī. He reached the zenith of his power under al-ṣaḥīf al-Mānṣūr (136-8/754-5 [q. v.]), who, finding him a capable and useful courtier, appointed him ḥādījīb and afterwards made him ʿωσίζ in succession to Abu ʿl-ʿAbīs b. ʿAlī al-Ṣaffārī [q. v.]. His son al-Ḥārīš b. al-Ṣāfī [q. v.], who was destined to play a prominent part in the 936 onward, al-Rābīʿ participated in an intrigue which led to the downfall of his rival by exposing his son as a heretic (zindik [q. v.]) in 163/779-80 and bringing about his execution (see Sourdrel, Vīzarī, 103-11 and index). Even then, al-Rābīʿ only retained his old office as ḥādījīb and never became al-ṣaḥīf al-Mānṣūr’s ʿωσίζ. It was ʿAbd Allāh Abū Yaʿkūb b. Dāwūd who succeeded the disgraced minister, but, at the end of 166/middle of 780, the above-mentioned caliph made him his delegate in al-Baṣra representing Baghdad. He took part in the intrigues which arose around the succession to al-Mahdī, but on his accession, al-Ḥādī [q. v.] pardoned him and appointed him to the vizierate, the ḥādījīb and the chancery. However, the vizierate was taken back from his control shortly afterwards, and the only office which he retained was the ṯawāʾīf. The exact date of his death is uncertain. Whilst al-Dāhghājiyārī and al-Ṭabarī placed him in 169/785-6, al-Khāṭib al-Baghdādī and Ibn Khallīkān assert that he died at the beginning of 170/786.

Details about his administration are scanty, but it is certain that he was an able, industrious, temperate and tactful man of affairs. Even al-Mahdī, who was never lavish in showering favours on al-Rābīʿ, once employed him, but history remembers him on account of Latin and of Arabic, was able to render considerable services to the caliphal chancellery which employed him, but history remembers him on account of a mission which he undertook in Frankfurt at the court of Otto I the Great, king of Germany (from 936 onward) and (as lord of the realm of Emporium (962-73), what he had ʿAbd al-Rāhmān III responsible for depredations and extortions committed by the Moors in Provence (see Praxineum and add to the Bibl., Ph. Senac, Musulmans et Sarrazins dans le sud de la Gaule (VIII-XI siècles), Paris 1980, and idem, Providence et piraterie sarra- sinne, Paris 1982). In 953 Otto I, who had considered insolent an initial message sent from Cordova in 950, dispatched a monk named John of Gorze to deliver a letter of protest to the caliph. (The biography of this monk was related by an abbot of St. Arnulph, also known as John, in his Vita Johannis Gomerisensi (Monumenta Germaniae Historica, Scriptores, Hanover 1841, iv, 338-77) the passage (369 ff.) concerning these exchanges was utilised by R. Poupardin in Le royaume de Bourgogne, Paris 1907, 94-5; cf. E. Lévi-Provençal, HEM, ii, 160-1.) It is stated here that Ot- to’s messenger was murdered in Cordova and could thus have been aware of the departure, in the spring of 955, of Recemundo, who returned in June 956, having completed his mission but apparently without much success. It may also be noted that the Antapodosis of Liutprand (Mon. Germaniae Hist., 265 ff.) is dedicated to Recemundus. He is mentioned again, but under the name of Rābīʿ b. Zayd, in connection with another mission, this time to Constantinople and Syria, with the object of acquiring works of art for Madinat al-Zahraʾ [q. v.], under construction since 325/936. He returned with “a basin of sculpted and gilded marble and a fountain of green onyx decorated with bas-reliefs representing human figures” (Lévi-Provençal, HEM, ii, 148, quoting al-Mākṣāri, Analectes, i, 372-3; see also H. Terrasse, L’art hispano- mauresque, 102). As a reward for his services, ʿAbd al- Ṭabarīs b. Zayd was appointed to an important government post, and thus have been aware of the departure, in the spring of 955, of Recemundo, who returned in June 956, having completed his mission but apparently without much success. It may also be noted that the Antapodosis of Liutprand (Mon. Germaniae Hist., 265 ff.) is dedicated to Recemundus. He is mentioned again, but under the name of Rābīʿ b. Zayd, in connection with another mission, this time to Constantinople and Syria, with the object of acquiring works of art for Madinat al-Zahraʾ [q. v.], under construction since 325/936. He returned with “a basin of sculpted and gilded marble and a fountain of green onyx decorated with bas-reliefs representing human figures” (Lévi-Provençal, HEM, ii, 148, quoting al-Mākṣāri, Analectes, i, 372-3; see also H. Terrasse, L’art hispano- mauresque, 102). As a reward for his services, ʿAbd al-Rāhām B. Zayd was appointed to an important government post, and thus have been aware of the departure, in the spring of 955, of Recemundo, who returned in June 956, having completed his mission but apparently without much success. It may also be noted that the Antapodosis of Liutprand (Mon. Germaniae Hist., 265 ff.) is dedicated to Recemundus. He is mentioned again, but under the name of Rābīʿ b. Zayd, in connection with another mission, this time to Constantinople and Syria, with the object of acquiring works of art for Madinat al-Zahraʾ [q. v.], under construction since 325/936. He returned with “a basin of sculpted and gilded marble and a fountain of green onyx decorated with bas-reliefs representing human figures” (Lévi-Provençal, HEM, ii, 148, quoting al-Mākṣāri, Analectes, i, 372-3; see also H. Terrasse, L’art hispano- mauresque, 102). As a reward for his services, ʿAbd al-Rāhām B. Zayd was appointed to an important government post, and thus have been aware of the departure, in the spring of 955, of Recemundo, who returned in June 956, having completed his mission but apparently without much success. It may also be noted that the Antapodosis of Liutprand (Mon. Germaniae Hist., 265 ff.) is dedicated to Recemundus. He is mentioned again, but under the name of Rābīʿ b. Zayd, in connection with another mission, this time to Constantinople and Syria, with the object of acquiring works of art for Madinat al-Zahraʾ [q. v.], under construction since 325/936. He returned with “a basin of sculpted and gilded marble and a fountain of green onyx decorated with bas-reliefs representing human figures” (Lévi-Provençal, HEM, ii, 148, quoting al-Mākṣāri, Analectes, i, 372-3; see also H. Terrasse, L’art hispano- mauresque, 102). As a reward for his services, ʿAbd al-Rāhām B. Zayd was appointed to an important government post, and thus have been aware of the departure, in the spring of 955, of Recemundo, who returned in June 956, having completed his mission but apparently without much success. Terrasse, L’art hisp...
into Spanish the liturgical part of the text, precisely that which may with some confidence be attributed to Recermondo, and published it under the title of San
torae sanctissimae castellae Salisburgensis canonicorum obis
obis de Liberis (in Ciudad de Dios, v (1871), 105-16, 192-212). Two years later, at Leiden, Dozy decided to publish the original, this time in Arabic characters, and the Latin version, entitled the whole Le calendrier de Cordoue de 961. Finally, the author of the present article has revived the Arabic text and the Latin version, combining the two and offering in addition an annotated French translation. The whole, entitled Le Calendar de Cordoue de l'année 961, was pub

lished at Leiden in 1961, thus exactly a thousand years after the date assumed by Dozy for the composition of the work. The Arabic text (improved by reference to the Kithab al-Anwad of Ibn Kutayba [q. v.], which had recently been edited), lacks a title (but it is easy to observe that the Latin expression Liber Anoe appears exactly to correspond to Kithab al-Anwad) and gives as the name of the author 'Arib b. Sa'd al-Khitib (d. ca. 370/980 [q. v.]), whereas the Latin version is headed Harib filius Zeid episcope quem compositus Mustansir imperatoris, with an unexpected genitive and a relative pronoun which refers to no expressed term. The phrase needs therefore to be completed, to read, for example, Harib filius (Sad liber cum libro or (according to Saavedra) addiamentis: Rabih filius Zeid episcopus. As for the full name of Rabih b. Zayd, it is supplied by Ibn Sa'd (epig. al-Makkari, Analeceti, ii, 125), who specifies his role as uskuf (bishop) and attributes to him, and to him alone, a Kithab Tafsil al-zaman wa-

maqalih, the Arabic text reads tamma kithab 'Arib fi tafsil, etc., which does nothing to simplify the issue.

In view of the fact that the almanac comprises a book of traditional annwad [q. v.] and a liturgical calendar, it seems logical to assert that the latter is the work of Rabih b. Zayd and that the former is to be attri

buted to 'Arib b. Sa'd. However the solution is not so simple, since the statement of Ibn Sa'd and the col-

ophone of the ms. are utterly contradictory. It has to be assumed therefore that an understandable confusion has arisen between the names of the two authors (which are, it may be observed, anagrams one of the other) and that the blending is so perfect that, towards the end of the introduction, a paragraph relating to Christian festivals gives the impression that the work is attributable to a single author. As for information concerning agricultural activities, hygiene, daily life, etc., so precious in the view of historians, it is not unreasonable to give the credit to 'Arib rather than to Rabih, since the former was apparently more apt to respect the tradition of kithab al-anwad, which itself

contains facts of this type as well as material concern-

cing astronomy and meteorology. In view of the fact that a Kithab Tafsil al-zaman, etc., evidently as a result of confusion, is attributed to each of the two authors, the problem remains unsolved.

RABİ'Â

was the ancestor of two of the most powerful Arab tribes: Bakr [q. v.] and Taghlib [q. v.]. From Bakr are descended the tribes of Hanifa [q. v.], Shubayh, Dhuul, Kays b. Thalaba and others (see Ibn Durayd, Râbi', 158-219). From the introduction to Baktri's Muğdam we get the first of the following ideas of the dwelling-places of the two tribes. At the partition of Arabia among the descendants of Ma'add, the Mudar received the frontiers of the sacred territory as far as al-Sarawat and the lands adjoining them. The Mudar, however, remained in the Tihama, where they occupied the lands which later bore their names: Diyar Rab'a and Diyar Bakr [q.v.]. (Wustenfeld, Wohnsitze, 107, 136-7, 161 ff., 168; Blau, in ZDMG, xiii [1869], 579-80).

After the withdrawal of the 'Abd al-Kays to Bahrain, a number of Rabi'a tribes occupied the highlands of Najd and Hijaz and the frontiers of Tihama where al-Dhâna'ib, Waridat, al-Ahas, Shubayth, Bâtân al-Djarb und al-Taghlamân were their settlements. As a result of a war, the various clans separated and, pushing forward, for the most part reached Mesopotamia, where they occupied the lands which later bore their names: Diyâr Rabi'a and Diyâr Bakr [q. v.]. (Wustenfeld, Wohnsitze, 107, 136-7, 161 ff., 168; Blau, in ZDMG, xiii [1869], 579-80).

After the withdrawal of the Rabi'a from the Tihama, the Mudar remained in their settlements until the Kays, defeated by the Khindif, advanced into the lands of Najd. Dissensions among the Khindif caused the Tâbi'ka to migrate to Najd, Hijaz and adjoining territories. Clans of the Tâbi'ka went as far as Yamâma, Hadjâr, Yâbrîn and Ummân; some groups settled between Bahrayn and Basra. Several Muderika tribes, however, remained in the Tihama, like the descendants of Nadr b. Kinâna in the vicinity of Mecca (Wustenfeld, Wohnsitze, 169 ff.). The Mudar who migrated to Mesopotamia gave their name to Diyâr Mudar, which Blau, op. cit., 577, recognises in the Arab tribe of the Mousâ'âets mentioned there in the 4th century A.D.

History. Down to the overthrow of the Himyar kingdom by the Abyssinians, the Rabi'a and Mudar were under the suzerainty of Yaman, which they were able several times to cast off when they all obeyed one ruler. Of battles in these wars the most important are those of Bayda', al-Sullân and Khâzâzâ (in which the Ma'addi tribes were victorious (Reiske, Primae lineae hist. regn. arab., ed. Wustenfeld, 180 ff.; al-Yâ'kûbî, ed. Housma, i, 257; Yâkût, ii, 432 ff., iii, 114-15). They belonged for a time to the kingdom of the Kinda [q. v.], the rulers of which bore the title king of the Ma'addi (or Mudar) and Rabi'a (A. Sprenger, Geogr., 299). Like the Bakr and Taghlib, the rest of the Rabi'a and Mudar recognised the Kindiâl-Hârîb b. 'Amr al-Maşkûr, who led them successfully against the Qhassânîd and Lakhîmid kings but lost his conquests again (Hamza al-Iṣlahâni, ed. Gottwaldt, i, 140). After when his death the kingdom of Dhû Nuwâs collapsed under the Abyssinians and the Kindiâ no longer recognised the suzerainty of Yemen, the Basrus war [q. v.] broke out between the Bakr and the Taghlib. The first day of al-Kulâb or "day of Kulâb of the Rabi'a", so-called because both tribes were descended from Rabi'a b. Nizâr, ended in favour of the Taghlib, and the Bakr turned to the king of Hira al-Mundhir III, who now extended his rule over the Rabi'a and Mudar and other Central Arabian tribes (al-Yâ'kûbî, op. cit.; Yâkût, iv, 294-5). To this period belongs the intrusion into Mesopotamia of the Taghlib, who were probably the first of the Rabi'a to settle there; they were followed by the Banû Namir b. Kâsî, and other Rabi'a tribes. The hostilities between the Taghlib and Bakr did not cease, and in the battle of Dhû Kâr [q. v.] they were on opposite sides. The victory of the Bakr, celebrated as a great success of the Rabi'a over the Persians (cf. Noldeke, Sasaniiden, 310 ff.; an earlier encounter, Yâkût, ii, 735 ff.), liberated the Central Arabian tribes from foreign rule and paved the way for Islam.

Legend records very old connections of the Mudar with the Meccan sanctuary; the Djûrhum [q. v.], the early Kays b. Thalabâ and others (see Ibn Durayd, Râbi', 158-219). The "first day of al-Kulâb" or "day of Kulâb of the Rabi'a" (Hamza al-Iṣlahâni, ed. Gottwaldt, i, 333, 335; al-Yâ'kûbî, i, 274). The influential office of time-reckoner also fell to a Mudar under the Kinda (Sprenger, Geogr., 225). While Christianity was widespread among the Rabi'a in Muhammad's time, the Mudar remained more faithful to the old pagan ways and were less susceptible to Aramaic influence than the tribes on the frontier ("this perhaps partly explains their estrangement from the Rabi'a"). (Wellhausen, Reste, 231). Rabi'a was the sacred month of the Mudar (hence Radjâb Mudar; cf. Wellhausen, op. cit., 97; a strange explanation of this from Ibn al-Mudjâwîrî in A. Sprenger, Mohammed, iii, 301), Radmân of the Rabi'a (cf. al-Dimîshki, Nukhbat al-dahr, tr. Mehren, 403). From their practices during ihrâm, all the Rabi'a and many groups of the Mudar, including the Ribâb league, belonged to the Hilâl (al-Yâ'kûbî, i, 296). In al-Dimâshkî, 385, we find the peculiar view that the Copts are descended from Rabi'a "or" Taghlib who had migrated into Egypt in search of food.

The Muzayna [q. v.] boasted of being the first Mudar tribe to pay homage to the Prophet (as early as 5 A.H. it is said; Sprenger, op. cit., iii, 201). In 6/630 Khâlid b. al-Wâlid destroyed the idol al-'Uzza in Nakha', which was revered by the Kuraysh, Kinâna and Kays b. Thalabâ (cf. al-Tabari, i, 1648). In the "year of the Deputations" (9/631), several large clans of the Mudar and Rabi'a like the Tamîm, Thâkîf, 'Abd al-Kays and Bakr b. Wâ'il adopted Islam, but this does not imply the submission of the whole of Central Arabia. The lament of the deputation of the 'Abd al-Kays to Muhammad is significant: "between thee and us dwell Mudar tribes and we can only come to thee in the sacred months" (Sprenger, op. cit., iii, 374; cf. 301, n. 1). In the year 11 a saying of the followers of the false prophet Musaylima [q. v.], who belonged to the Rabi'a, is recorded: "a deceiver of the Rabi'a is dearer to us than a true prophet of the Mudar" (perhaps the variant "than a deceiver of the Mudar") is better: al-Tabari, i, 1936-7; perhaps the earliest clearly expressed contrast between the Rabi'a and Mudar?). When in the same year the "Rabi'a" in Bahrain was regarded as a kingdom by the Muslims, they only refer to the tribes of Kays b. Thalâba and 'Abd al-Kays (al-Tabari, i, 1960; al-Baladhûrî, Futûh, 83-4). The tribes of Rabi'a and Mudar are from now onwards mentioned as important contingents in the Muslim armies, but sometimes the large numbers given for them are doubtful (cf. Caetani, Annali, 12 A.H., § 188, n. 5). When al-Muqâjanna invaded al-Sawâd in 13/635, he surprised the Rabi'a and Kâfi'a
assembled at the Sūk al-Khanāfīs, who still recognised the suzerainty of the Sasanids (al-Tabān, i, 2202-3); five years later a considerable force was sent against al-Rakkā, Nasībīn and the nomadic Rabīʿa and Tānūkḫ (Ibn Khuldīn, ʿIbar, ii/2, 107-8).

It is unnecessary to follow the history of the Rabīʿa and Muḍār farther, as it is clear from the above that the two names stand only for a few clans and not for the whole confederation of tribes, as the genealogists say (Rabīʿa usually means the Bakr and Taghīb or only one of them). Sometimes we even find the whole Rabīʿa group included in the Muḍār (Ibn Khuldīn, ii, 39-40) which further increases the confusion. The beginnings of the two tribes are further put at so early a date that it is difficult to decide whether they really existed as such, or like Maʿadd and Nīzār are only artificial conceptions.

Goldziher (Muk. Stud., i, 94-5) surmised that the antagonism between North and South Arabia had its roots in the rivalry between Kuraysh and Ansār, and he regarded the early wars between Maʿadd and Yemen as a later invention. “Maʿadd and Muḍār,” he lays down, “is primarily contrasted with the name of Yemen as a later invention. “Maʿadd and Mudar,”

The effects of this dualism are further put at so early a date that it is difficult to decide whether they really existed as such, or like Maʿadd and Nīzār are only artificial conceptions. With this qualification borne in mind, one may nevertheless be permitted to present a portrait of the saint as it was conceived by her co-religionists over the course of the centuries. She is said to have been born in 95/714 or 99/717-18 and to have breathed her last at Baṣra in 185/801, where her tomb was shown outside the city (see al-Harawi, Ẓiyārāt, ed. and tr. J. Sourdel-Thomine, 81/88). In the evolution of Sūfī mysticism, she became one of the three most famous female mystics of Baṣra, the two others being Muʿāthqa al-ʿAdawiyya, wife of the “ascetic” Amīr b. ʿAbd al-Ḥās al-ʿAnbarī [q. v.], and a certain Umm al-Dardāʾ [see Pellat, Le moeurs baṣriennes, ii, 331].

Born into a poor home, she was stolen as a child and sold into slavery (she is even sometimes made into a kāyna [q. v.]), but her sanctity secured her freedom, and she retired to a life of seclusion and celibacy, at first in the desert and then in Baṣra, where she gathered round her many disciples and associates, who came to seek her counsel or prayers or to listen to her teachings. These included ʿAbd al-Wahīd b. Zayd (d. 177/793; see Pellat, Mīlit, 102-3 and index), Mālik b. Dinār [q. v.], the ascetic Rabīḥ al-Kaysī, the traditionist Sufyān al-Thawrī [q. v.] and the Sūfī Shāfīk al-Balḥī. Her life was one of extreme asceticism and otherworldliness. Asked why she did not ask help from her friends, she said, “I should be ashamed to ask for this world’s goods from Him to Whom they belong, and how should I ask them from those to whom I am of no use?” (it seems that al-Dīzhīz, more conscious of the nearness of this reply than of its deeper sense, cites it at least twice (in Hayawān, v, 589, and Bayān, iii, 127) and does not mention any other details concerning Rabīʿa, which seems to show that, in the 3rd/9th century, the legend around her had not yet totally crystallised. On the other hand, this tradition, perhaps authentic, is contradicted by a piece of evidence according to which she possessed a khdāima khdāima and by the mention, in al-Husaynī, of another saint called Maryam al-ʿAswārī, her servant and disciple, to whom she had communicated her doctrine of pure love, ʿilm al-mahabba.

To another friend she said, “Will God forget the poor because of their poverty or remember the rich because of their riches? Since He knows my state, what have I to remind Him of? What He wills, we should also will.” Miracles were attributed to her as to other Muslim saints. Food was supplied by miraculous means for her guests, and to save her from starvation. A camel, which died when she was on pilgrimage, was restored to life for her use; the lack of a lamp was made good by the light which shone round the saint. It was related that when she was dying, she bade her friends depart and leave the way free for the messengers of God Most High. As they went
out, they heard her making her confession of faith, and a voice which responded, "O soul at rest, return to thy Lord, satisfied with Him, giving satisfaction to Him. So enter among My servants into My Paradise" (Surah LXXXIX, 27-30). After her death, Rabia was seen in a dream and asked how she had escaped from Munkar and Nakir [q. v.], the angels of the tomb, when they asked her, "Who is your Lord?", and she replied, "I said, return and tell your Lord, 'Notwithstanding the thousands and thousands of Thy creatures, Thou hast not forgotten a weak old woman. I, who had only Thee in all the world, have never forgotten Thee, that Thou shouldst ask, Who is thy Lord?""

Among the prayers recorded of Rabia is one she was accustomed to pray at night upon her roof: "O Lord, the stars are shining and the eyes of men are closed and kings have shut their doors and every lover is alone with his beloved, and here am I alone with Thee." Again she prayed, "O my Lord, if I worship Thee from fear of Hell, burn me therein, and if I worship Thee in hope of Paradise, exclude me thence, but if I worship Thee for Thine own sake, then withhold not from me Thine Eternal Beauty." Of Repentance, the beginning of the Sufi Path, she said, "How can anyone repent unless His Lord gives him repentance and accepts him? If He turns towards you, you will turn towards Him." She held that Gratitude was the vision of the Giver, not the gift, and one spring day, when urged to come out to behold the works of God, she rejoined, "Come rather inside to behold their Maker. Contemplation of the Maker has turned me aside from contemplating what He has made." Asked what she thought of Paradise, Rabia replied, "First of the neighbour, then the house" (al-ajdr thumma 'l-ddr) and al-Ghazali, commenting on this, says she implied that no one who does not know God in this world will see Him in the next, and he who does not feel the joy of gnostics here will not find the joy of the Vision there, nor can any appeal to God in that world if he has not sought His friendship in this. None may reap who has not sown (Ihya', iv, 269). The otherworldliness of her teaching is shown in her declaration that she had come from that world and to that world she was going, and she ate the bread of this world in sorrow, while doing the work of that world. One who heard her only superficially, "One so persuasive in speech is worthy to keep a rest-house" and Rabia responded, "I myself am keeping a rest-house; whatever is within, I do not allow it to go out and whatever is without, I do not allow to come in. I do not concern myself with those who pass in and out, for I am contemplating my own heart, not mere clay." Asked how she had attained to the rank of the saints, Rabia's replied, "By abandoning what did not concern me and seeking fellowship with Him Who is eternal." She was famed for her teaching on mystic love (mahabba) and the fellowship with God (un) which is the pre-occupation of His lover. Every true lover, she said, seeks intimacy with the beloved, and she recited the lines:

I have made Thee the Companion of my heart,
But my body is present for those who seek its company,
And my body is friendly towards its guests.

But the Beloved of my heart is the guest of my soul.
(Ihya', iv, 358, marg. line) Questioned about her love for the Prophet she said, "I love him, but love of the Creator has turned me aside from love of His creatures"; and again, "My love for God has so possessed me that no place remains for loving any save Him." Of her own service to God and its motive-force, she said, "I have not served God from fear of Hell, for I should be a bad servant if I served for the sake of what was given me, but I have served Him only for the love of Him and desire of Him." The verses often ascribed to her (but now shown by G.J.H. van Gelder to be originally a secular love poem, see his Rabia's poem on the two kinds of love: a mystification?, in Verse and the fair sex, a collection of papers presented at the 15th Congress of the UEA... 1990, ed. F. de Jong, Utrecht 1993, 86-7) are the two types of love, that which seeks its own ends and that which seeks only God and His glory, are famous and much quoted, translated and commented upon:

I love Thee with two loves: a selfish (or concerned, impassioned, instinctive) love and a love of which Thou [alone] art worthy. The selfish love makes me turn away from all that is not Thou, making me think only of Thee But as for that love of which Thou [alone] art worthy,
Thou raisest the veils so that I may see Thee.
In neither the one case nor the other have I any merit, but the praise for the first and the second is wholly Thine.

Al-Ghazali again comments, "She meant, by the selfish love, the love of God for His favour and grace bestowed and for temporary happiness, and by the love worthy of Him, the love of His Beauty which was revealed to her, and this is the higher of the two loves and the finer of them" (Ihya', iv, 267). Like all mystics, Rabia looked for union with the Divine (wa'gîf). In certain of her verses she says, "My hope is for union with Thee, for that is the goal of my desire", and again she said, "I have ceased to exist and have passed out of self. I have become one with God and am altogether His."

Rabia, therefore, according to the traditions about her, differs from those of the early Sufis who were simply ascetics and quietists, in that she was a true mystic, inspired by an ardent love, and conscious of having entered into the unitive life with God. She was one of the first of the Sufis to teach the doctrine of Pure Love, the disinterested love of God for His own sake alone, and one of the first to combine with her teaching on love the doctrine of kaqfs, the unveiling, to the lover, of the Beatific Vision.

The semi-legendary personality of Rabia has inspired romantic biographies and even two Egyptian films, but one should remember a curious phenomenon, which has its origin in an account which shows the saint holding in one hand fire and in the other water, and replying to some youths who had asked her where she was going: "...towards the heavens, in order to throw some fire into Paradise and some water on Hellfire, so that both of them may disappear and that human beings may contemplate God without hope or fear, for if neither hope for Paradise nor fear of Hellfire existed, would they worship al-Hak and submit to it?" This text, which appears in Persian in the Manātīh al-ārshân (ms. India Office Library, no. 1670, fol. 114a) of Allâki (8th/14th century [q.v.]), is found again almost word-for-word in the Mémoires du sieur de Fontinville, ed. Paris 1854, 195, with this difference that a Preaching Friar called Yves the Breton, sent to the "soudan" of Damascus by the King of France Louis IX (the future King of France Louis IX) (8th/14th century [q.v.]), saw Allâki and one of thefirst also to combine with her teaching on love the doctrine of kaqfs, the unveiling, to the lover, of the Beatific Vision.
equally in the 2nd/8th century, another holy woman called Rabi’a bint Isma’il al-Adawiyya. It is equally in the 2nd/8th century, another holy woman named Rabi’h b. Fadl Allah, or Bibi Rabi’a Basri in Mogul painting, in IC, xxiiii (1939), 466-9.

(MARGARET SMITH—CH. PELLAT)

RABI’ AL-DAWLA Abū Mansūr b. Abī Shuqādāl-Muhammad b. Al-Husayn, viźīr of the Abbasids and Saljuqs. When the vizier Abū Shuqādāl-Muhammad al-Rūghārawi [q.v.] made the pilgrimage to Mecca in 481/1090, he appointed his son Rabīḫ al- Dawla and the vizier of the nakhāl. Tirāb al-Muhammad al-Zaynābī his deputies, and in 507/1113-14, on the death of Abu 1-Kāsim ʿAli b. Fakhr al-Dawla Muhammad b. Dāhirī [see Dāhirī, Bani], Rabīḫ al-Dawla was appointed vizier of the caliph al-Mustazhir. In Dhū 1-Hijjah 511/April 1118 the fourteen-year-old Muhammad b. Muhammad [q.v.] succeeded his father as Sādūqī sultan and, when he was looking around for an able vizier, he was recommended to choose someone who had had the necessary training in the service of the caliph (min ṭabarīṣ, dar al-ḥijāf), allegedly because there was no suitable man in the train of the young sultan. The choice therefore fell upon Rabīḫ al-Dawla who was at once summoned from Baghdad to Isfahan but, as the nominee of the amirs and great men of state, proved himself a somewhat ineffective vizier until his death after a brief tenure of office in Rabī’ I 513/June-July 1119; according to another statement he died as early as 512/1118-19.

RABĪGH (Bandar Rābī, Rābūg), a port in the Ḥijāz province of Saudi Arabia, in lat. 22° 48’ N., and long. 39° 1° E., half-way between Dūd-dīlā [q.v.] and Yānnūs. In Sādūqī Masri [q.v.], now called al-Khurayba, the reputed burial place of the Prophet’s mother Amina [q.v.]. In the past, the port had no proper harbour. Ships anchored at Shārm Rābīgh, an inlet about 3 km long, which offered excellent anchorage (Hogarth, Ḥejarat, 29). From there cargoes were transferred on local sailing craft to Rābīgh proper, a group of four hamlets and extensive date-groves, about 6 km from Shārm Rābīgh. It used to be the place [see mākā] where pilgrims to Mecca, coming overland from Syria, Egypt and the Maghrib, put on the ihram [q.v.] (see Ibn Ṣaṭṭīta, Ṣāḥa, i, 297, 86). Such, Rābīgh had succeeded the village of al-Dūfā’ which lies in a valley reaching the sea just south of the port. Pilgrims coming down the Red Sea entered into ihram as their ships passed Rābīgh. It was the centre of the Banū Zubayd, a sub-section of the Banū Masrūḥ who, together with the Banū Sālim, were the main sections of the Banū Harb [q.v.], the dominant tribe in the area between Mecca and Medina (Hogarth, Ḥejarat, 38). Before an asphalt highway joined Mecca and Medina via Dūd-dīlā, Rābīgh and Bādir, secondary routes (see Hogarth, Ḥejarat, 114-21) ran from Rābīgh northward through the mountains to Medina, providing a more direct but more difficult approach than the al-Tūrīk (or al-Darīb “narrow mountain pass”) al-Sulāntī, which follows the coast. In 1924 Abū ʿAzīz Āl Saʿūd, the future king of Saudi Arabia, sent the Ikhūn [q.v.] to capture Rābīgh, cutting the communications between Dūd-dīlā and Medina. In 1925 he declared Rābīgh an official pilgrim port.

RABI’ B. FADL ALLĀH, an adventurer attached to the ivory and slave trader of the eastern Sudan, Zubayr Pasha [q.v.]. After the fall of Zubayr in 1291/1874 and the subsequent death of his son Sulaymān, Rabi’h assumed leadership of Sulaymān’s followers. By 1305/1887 he had become associated with the Mahdiyya [q.v.] movement in the eastern Sudan. Between 1309-10/1892 and 1310-11/1893 he attacked and defeated the sultanes of Baghirmi and Wadai.

There then followed a period during which Rabi’h entered into an association with Hayatu dān Sa’du’u, a disaffected grandson of Muhammadu Bello [q.v.], first caliph of Sokoto, to conquer Borno [see Borno] and then Sokoto [q.v.]. The conquest of Borno was accomplished at the battle of Nga in 1311/1893, but at that point Hayatu and Rabi’h quarrelled and the projected attack on Sokoto failed to develop.

Rabi’h now moved south and occupied Dikwa,
which became his headquarters. After several clashes with the French, he was defeated and killed at the battle of Kusseri in 1900.

RABI'IYYAT. In Ottoman literature.

There is no special literary genre called rabi'iyät (bahiyyät) in Ottoman literature (from now on referred to as diwan literature). Spring, however, has an important place within diwan literature, as is the case for every other national literature. Spring, with its different functions fitting the structure of almost every kind of literary style and genre, was given its own special place in diverse literary genres coeval with the beginnings of written Ottoman literature in the second half of the 13th century. Since this literature favoured the meltemi'yi genre, in which all sorts of religious stories, religio-mythological works, histories, semi-religious books of advice pertaining to literary edification and romances were written, spring acquired a place in romances written in the style of the 13th and 14th centuries, especially those dealing with love adventures. It did so whilst serving two functions: as a sort of setting-décor, but also, beyond that obvious function, as a means to convey certain symbolic-mythological meanings.

Spring in Ottoman literature was naturally connected with the descriptions of orchards and gardens in springtime, thus bringing together the categories of time and space and carrying out the task of creating in the reader/listener the impression of verisimilitude. In this literature most lovers meet or are introduced to one another in the setting of a green, blossoming orchard full of flowers and plants coming back to life. Spring is connected here with the image of an orchard and with the idea of eternal life as the plants that have wilted and died in winter come back to life, and through these two motifs it is further related to the notion of Paradise (to which it includes in an idealised version of all the elements of nature in springtime, such as meadows, gardens, flowers, trees, birds, running waters, light, cool breezes and the like) and its eternal happiness. Thus, in the descriptions of spring it is the notion of Paradise and its central role in the religion and beliefs of Islam that is at the back of the poet's intention and imagery. For instance, Mehmed, in his meltemi'yi Uğur-ndme (15th century) has the two lovers meet in an orchard at springtime, and the description of spring is presented in the above-mentioned terms (cf. 102, ll. 1716-1728; 116, ll. 2300-16). Likewise, the first love scenes take place in the same setting, as do the wedding ceremonies (cf. 81-2, ll. 872-91; 248-9 ll. 8081-8100; 225 l. 8409). Descriptions of spring in the same terms are also found in the 14th century meltemi'yi Ağrek-ndme of Ahmed-i Dîmûn, and in the Khrüştînd-ndme of Sheykh-oglu Mustafa (ed. Hüseyin Ayan, Erzurum 1979, 176-7, ll. 1263-1319; 192, ll. 1706-29. For the meeting of the lovers in an orchard, cf. 239-40, ll. 2959-87).

In the meltemi'yi, spring is presented in close association with the sun. For instance, in the Khrüştînd-ndme of Sheykh-oglu Mustafa, the garden specially ordered by Sultan Siyâwuş for his son Khrüştînd is described as a garden in eternal springtime. All the flowers, trees and vegetation in this garden preserve their blossoming in an eternal spring. This garden is in fact an image of paradise. It has been arranged as an eternally unwilting garden, and moreover, it is the garden of a god (cf. 176-7). The owner of this garden is Khurshid, and if we consider the etymology of the word Khrüştînd we realise that the owner of the garden is the sun. Furthermore, Khrüştînd in this work is dressed in green from head to toe, with a green crown and a green veil; in other words, he has been described as a Kholîd (q.v. figure (cf. 240, ll. 12979, 1981). At the same time, the garden is a symbol of Khrüştînd-ndme, and in Khrüştînd-ndme is a gülîttân (cf. 1. 1653). In this manner, both the image and the concept of the orchard's association with the sun, spring and the rebirth of life at springtime, as well as the thought that the orchard belongs to the beloved or the sun or the ruler, are reminiscent of the Hanging Gardens of Babylon, of the blessed divine gardens (whose gardener is a Sumerian or Akkadian king), of the even more ancient Sumerian temples, of the Sumerian concept of An and Adad, of Atargatis in Dilmun, and, finally, of the Paradise of the Torah and the gardens of Solomon in eternal springtime as described in the Song of Solomon in the Old Testament. Likewise, the traditional and typified theme in the meltemi'yi's of the meeting of the two lovers in gardens of eternal springtime, and their holding festivities and wedding ceremonies there, may be traced back to the older tradition of the New Year festivals, mostly a tradition orally transmitted for thousands of years and only a small part of which is reflected in written traditions. For instance, the scene of the washing and decoration of Ferahshad before the meeting of the lovers in the eternal spring garden in the Khrüştînd-ndme is clearly a distant echo of the ritual washing and decoration of the gods and goddesses before their wedding in the New Year festival (cf. 248-9; cf. also G. Alpay-Tekin (ed.), Ahmed-i Dîmûn, Ceng-ndme, in Sources of Oriental Languages and Literature, 16, Harvard University 1992; the ninth and tenth part of the text are a spring and garden description and the celebration of New Year in the spring at the ruler's garden).

These mythological elements preserved their identity during the 14th and 15th centuries but not thereafter, when they were reduced to mere decorative elements after losing their lively character and deeper meaning with the onset of a changing world view that paralleled the changing living conditions, social classes and economic conditions of the Ottoman empire. In the hands of the poets of diwan literature, spring and everything associated with it became means for creating all sorts of literary figures and word plays on the level of style and rhetoric. Nonetheless, the words expressing these mythological viewpoints relating to spring, used in a stereotyped manner both in the meltemi'yi and in other literary genres to be examined, were used only for the purpose of background description and word plays in the following centuries, while viewpoints whose meaning had been more or less changed were combined with concepts and used, always, in the same stereotyped associations. In the following are outlined the main characteristics of these associations with reference to these particularities:

1. As mentioned above, spring was presented in terms of the association garden-spring-eternal-life-Paradise.

2. Spring was always expressed together with the emotion of eternal happiness, either in connection with Paradise or with youth. In the following centuries, however, the quality of the eternal withered
away and happiness was associated with the transitory quality of spring and depicted as a happiness with an end drawing near. Uzun Firdewsl started depicting spring with the transitoriness of happiness and youth in his *Kuhb-nâmê* (ed. 21.)

3. Spring is the symbol of youth and therefore represents the beloved and beautiful lady. For instance, in the *Yasuf u Zalikah* of the 16th century poet Kemal Paşa-zâde, spring represents youth, and autumn and winter old age (ed. Mustafa Demirel, Ankara 1983, 183-4, ll. 1850-6; for a classic depiction of spring, see 70-1, ll. 553-70). Spring, garden, beautiful lady, and the sun are all presented in terms of the traditional association of youth with the sun, and thus the garden is presented in terms of the traditional associations (ed. Necmettin Halîl Onan, Istanbul 1956, 133-42, ll. 1321-1418).

4. The relationship between spring and sun is presented mostly in the following fashion. Because at the spring equinox night and day are equal, the sun is considered a symbol of justice and spring is the season when this justice is applied. Moreover, it is because of the sun's beneficial effects that vegetation comes back to life in the spring. Thus generosity is a quality that comes about by the joining of spring and the sun. As a result, in *divan* literature, the sun, because of its associations with justice and generosity, has always been conceived in terms of spring and the ruler, on account of his close relation to the sun, has been presented as an indivisible part of spring.

5. Spring has always been considered together with the rains of April and the concepts of blessing and mercy. Moreover, through the coming into being of the pearl out of the raindrop of April that falls into an oyster, the image of the pearl, its preciousness, perfection and beauty are added to these concepts.

6. Spring in *divan* literature is frequently presented together with drinking and music at evening gatherings held in gardens in connection with the spring festivals.

Different social and military conditions entered the above general picture after the second half of the 15th century and especially during the 16th century. For instance, the elements used in describing spring started to stand for the different ranks of the Ottoman hierarchy, such as a Grand Vizier or a pasha or a vizier, or even just a person near and dear to him.

Spring is sometimes the topic of the *neshî* (tezêhîb) section of the literary genre of the *kâsîde*. In fact *kâsîdes* frequently start with a description of the rose, which symbolizes the beloved and beautiful lady. For instance, we find the standard images of classical poetry where the cheek of the beloved was compared to a rose, the locks of hair to hyacinth, the elegant stature to a cypress, etc.

Spring was also the symbol of joy and increase of nature, which may have to do with one of the four seasons, and the poem is termed, accordingly, a *bahâriyye*, or a *gâhidîyye* or a *lemnûzîyye*. Just like the descriptions of autumn and winter, those of spring are means for the poet to effect the transition to the short grizgâh part, serving as an introduction to the praise (*medîîîye*) section of a *kâsîde* which he has composed in order to praise his patron-ruler or another high member of the Ottoman hierarchy, such as a Grand Vizier or a paşa or a vizier, or even just a person near and dear to him.

The *kâsîdes*, for all that they conform to the descriptions of spring presented above and are faithful to the whole network of stereotypical relations between themes and concepts, are the poems that best reflect the changing conceptions of spring paralleling those. There are plenty of poets in *divan* literature who are famous for their *kâsîdes*, including Ahmed Paşa and Necâîî for the 16th century, Fudüî, Bâkî, Newî, Yahyah Bey for the 16th, Khayyâf and especially Nefî for the 17th, and Nедîm for the 18th. Almost all of these poets treated spring as the subject of the *neshî* section of their *kâsîdes*. There is little doubt that, among these *bahâriyyes*, the most famous is the one dedicated by Nefî (d. 1634) to Sultan Murâd IV, whose *masâlâ* begins:

*Alcsun bizim de göllümüz sâki medi sün qâmî-dî Djem (Divân, Istanbul 1249, 47).*

Another very famous *kâsîde* beginning with a spring depiction was written in the 18th century by Nedîm (d. 1730). This poem that puts to words the excitement and joy of spring is one of the most beautiful and allegorical allusions peculiar to the century were sprinkled, without much sense of unity and order, in all genres of *divan* literature (medîîîye, *gâzelt, kaside, kifâ* or a *turchiyye*). For instance, we find the standard images of classical poetry where the cheek of the beloved was compared to a rose, the locks of hair to hyacinth, the elegant stature to a cypress, etc.
The influence of the depictions of spring in diwa‘n literature is so strong that even when writing ghībāyā, ghībāyā, or temmūzīyya, poets compare that season to spring. It is also worth mentioning that sometimes a word having to do with the spring répertoire is the rhyming word of the kasīde, even if there is no proper nesīb section dealing with spring, and the kasīde is then named according to that rhyme word, e.g. the gāl kasīde of the nesīb sections and sometimes therefore named bahārijūyeh) that may deal with spring is the Sākī-nāme. This genre, which is in fact written in methnīwī style, was developed especially after the 16th century. Spring in this genre is more closely associated with music and drinking gatherings.

It should be noted that there is a fourth genre dealing with spring, the mūnāząre [see MUNAZARA], even though there appears to be only one extant example. Lāmī‘ī’s prose work Mūnāząre-yi Sultan-i Bahār bā Shērūrī-yi Ṣīʿāt. As may be understood from its title, this work deals with a competition between the two seasons.

Apart from all these, the only work of diwa‘n literature entirely devoted to the springtime New Year festivals is the Ăng-nāme of Ahmad-i Dāštī, who lived in the first half of the 15th century. Except for the last, synonymous work of 70-80 lines by the Persian poet Sa‘dī, this work appears to be the only one connecting not just Ottoman but Islamic literature with the New Year festivals of ancient times. In methnīwī style, it was written to express the desire of man, alone and a stranger in this world, to return to man’s real homeland and to find eternal life. The lyre (ĕng), which represents exactly such a man, is played at a musical gathering on a spring day, entertaining everyone. In the first part of the work there is a description of a spring festival in which the son of Bāyezīd I, Prince Sūleymān, is participating. In the second part, the lyre played at this festival tells the poet the adventures of its coming to this strange world through the stories of the cypress, the gazelle, the horse and the silk worm, the origins of the four constituent parts of the lyre. The heroes of the four stories are victims to the chain of eternal change, birth and death, of the material world and at the same time are eaten with the desire to return to their homelands, the source of eternal life. In the Ăng-nāme, the lyre celebrating spring and the man wishing for eternal life (symbolised by spring) are joined into one figure. Bibliography: Given in the article.

RABĪ’IYĀT: In Arabic [see ZAHRIYĀT].

RABĪTA (A.), term employed in al-Andalus to denote a fortified enclosure, a bastion constructed on the coast to deter enemy attacks from the sea. This term sometimes served as a substitute for rūbā [q.v.], a term which no longer extended to the concentration point occupied by combatants in a holy war, but was almost reduced to the sense of ḡīdā [q.v.] or even replaced with gārā [sudden attack, raid].

In a rūbā, “volunteers, who were periodically relieved, maintained a vigilant watch, while practising spiritual exercises and striving to lead an ascetic life. “The best known of these fortified monasteries, on the Mediterranean, was that of the Cape of Gata, at the eastern point of the bay of Almería... Another known rūbā, on the other side of the Straits of Gibraltar, was that of al-Tawba or “Penitence”; it stood, opposite Huelva, not far from the estuary of the Río Tinto, on the same site where today stands the famous monastery of the Rabita, whose presence, since the end of the Middle Ages, has continued to uphold the Muslim monastic tradition” (E. Lövi-Provençal, Hist. Esp. mus., iii, 111-12).

Current Spanish toponymy preserves, in the forms Rápita, Rávita, Rábida, the memory of the existence, in other parts of al-Andalus, of hermitages which were places of retreat for persons considered to be saints, accompanied by their disciples. This term thus became synonymous with zāwiyah, a term which has been adopted by the Spanish language, which uses rūbā to denote a monastery or a hermitage.

Long before the arrival in the Maghrib of the wave of mysticism and the development in these regions of the “maraboutism” characteristic of religious activity, rūbā was also used there in concurrence with zāwiyah (see al-Badisi, Muṣḥab, tr. G.S. Colin, in AM, xxvi [1926], 240).

AL-RABIṬA AL-ISLAMIYYA (A.), literally “the Islamic league.”

Pan-movements in the Muslim world have been usually rendered by Arabic terms like waṣḥād, ṭīḥād, rūbā or ḡīdām. Rūbā ("bond") in eastern Muslim mystic tradition originally meant the relationship of a murid to his master (R. Gramlich (tr.), Awadrif al-ṭawābi̇n, Die Gaben der Erkenntnisse des Ḥāmid al-Dīn Khodja, 1984, 117-118). The best known of these fortified monasteries, on the coast to deter enemy attacks from the sea, was that of al-Tawba or “Penitence”; it is known as a term which no longer extended to the ballad [q.v., ghīdā]. The best known of these fortified monasteries, on the coast to deter enemy attacks from the sea, was that of al-Tawba or “Penitence”; it is known as a term which no longer extended to the ballad [q.v., ghīdā].

THE BEST KNOWN OF THESE FORTIFIED MONASTRIES, ON THE MEDITERRANEAN, WAS THAT OF THE CAPE OF GATA, AT THE EASTERN POINT OF THE BAY OF ALMERIÀ... ANOTHER KNOWN RUBABA, ON THE OTHER SIDE OF THE STRAITS OF GIBRALTAR, WAS THAT OF AL-TAWBA OR "PENITENCE"; IT
These dates suggest that after 1880, Islamic politics were primarily conceived as a movement to reunify the Muslim countries and, as al-Afghani put it in 1884, "to preserve [four] nation's honour, to grieve for what hurts it, and to co-operate to defend a total union against whomsoever attacks it." (al-Afghani, 'Abdul-, al-'Urwah al-tawakkul, 71, tr. Landau, in op. cit., 319). Consequently, Islamic politics constituted the mass of the whole Islamic umma as superseding any national boundaries of Muslim politics (see al-'Urwah al-tawakkul, 48).

Islamic rhetorics were of great importance during the reign of the two Ottoman sultans 'Abd al-'Aziz and 'Abd al-Hamid II (q.v.). They used the concept of Islamic unity to develop a new form of foreign policy which aimed at mobilising the peoples of the Muslim world in favour of the Ottoman Empire. Though 'Abd al-Hamid II, who now stressed his identity as caliph, tried to establish a network of Islamic propagandists, the success of his appeal to Islamic unity and of Pan-Islam as an "imperial ideology" (Landau, op. cit., 9-72) was very small. Obviously, national policy was much more able to mobilise Muslim intellectuals, since the nation state offered real positions of power, whereas Pan-Islamism referred to an Islamic umma which had only a nebulous existence. Only in India were the activities of the Ottoman emissaries rather more successful.

Since ca. 1900, rabi'a has also become a technical term for independent, trans-national Islamic organisations (e.g. the All-India Muslim League, established in the context of local politics by partisans of Sayyid Ahmad Khan's (1817-98) reform movement in 1906 (W.C. Smith, Modern Islam in India, London 1946, 246-92, Lahore 1969, 297-358; Landau, op. cit., 185), in Arabic called al-rabi'a al-mustima (Mas'ud al-Nawdi, Ta'rikh al-Da'wa al-isldmiyya fi 'l-Hind, Beirut 1930/1950, 249). In 1909-10, the famous Egyptian nationalist Ibrahim Nafi al-Wardanl (1886-90), and Shafik Mansur (1886-1895) called their small, militant organisation either djam'iyat al-rabita al-isldmiyya, djam'iyat al-tit'had al-isldmi or simply djam'iyat al-rabita al-nakawusiyya.

During the First World War, the Central Powers, especially Germany, induced the Ottoman empire to join the war against the Allies. Again, however, this propaganda failed, since national identities of local elites predominated over trans-national forms of self-identification (see further on this, PAN-ISLAMISM).

Islamic policy formulated as Pan-Islamism was often, but not invariably, connected to the Salafiyya (q.v.) movement. It continued to be an important field of propaganda, especially in Muslim minority communities and among dissident Muslim political groups. 'Abd al-Rahman al-Kawkabii (1848-1902 (q.v.)) elaborated the idea of Pan-Islamism in constructing a fictive Muslim congress that should have taken place in Mecca in 1898-9. He stressed the importance of the civil identity of Pan-Islamism as being for him the only policy that could guarantee Muslim social, cultural and political welfare (Umm al-kurraj, Birjat 1901, tr. Albright, ibid., 30-5). The congress idea aroused a brief enthusiastic response in 1907-8 and again after the abolition of the caliphate in Turkey on 4 March 1924. From 1926 to 1931, three international Islamic congresses were held (Mecca 1926, Cairo 1926 and Jerusalem 1931), each of which aimed at helping establish an Islamic public opinion on special issues (the question of the Holy Places, the question of the caliphate, and the question of the Sanctuaries in Jerusalem).

The more such independent Islamic groups as the Egyptian Muslim Brotherhood (djam'iyat al-'ishqad al-muslimin (see AL-ISHQAD AL-MUSLIMIN)) or the Muslim Youth Organisation (djam'iyat al-shubban al-muslimin) were able to spread their propaganda and to articulate an Islamic policy which was directed more to a local public than to an imagined Islamic umma (the influence of Rashid Ridj (q.v.)) is notable, the more the traditional concept of Pan-Islam lost its influence. Following Rashid Ridj, most Islamic activists now favoured a unity of Islamic avant-garde organisations (djam'iyat al-ikhwan al-muslimin), which would represent the "polity of Islam" (dawlat al-Islam) in contrast to the undifferentiated unity of the Islamic umma (djam'a al-isldmiyya) (cf. Rashid Ridj, Ta'rikh al-Imam al-Ushtad Muhammad 'Abduh, i, Cairo 1350/1931, 318-320, 328). It is in this sense that the term rabi'a ("league") has been widely used since the 1930s. In Syria, Morocco, 'Irak, Algeria and Sudan, for instance, Muslim scholars have founded so-called "leagues" (rabi'a al-'ulam), which show that the term rabi'a has now become a word signifying an independent Muslim elite organisation, mostly of Salafi orientation.

After the Second World War, Pan-Islamism as a label for independent, trans-national Islamic policy faded out. Instead, national politics of the newly-established or re-established states began to incorporate Pan-Islamic ideals into their own propaganda (Egypt, Jordan, Pakistan, Saudi Arabia). The Suez Crisis offered real positions of power, whereas Pan-Islamism was only a nebulous existence. Only in India were the activities of the Ottoman emissaries rather more successful.

Obviously, national policy was much more able to mobilise Muslim intellectuals, since the nation state offered real positions of power, whereas Pan-Islamism referred to an Islamic umma which had only a nebulous existence. Only in India were the activities of the Ottoman emissaries rather more successful.
in foster-relationship, adds to the impediment to marriage by reason of fostership a further impediment on grounds of a relationship in law. Resistance to the idea that the relation established between nurse and infant extended to the nurse's husband and, through him, to his brothers, was expressed in variants of the above traditions, one of which exposes the principle underlying the proposed extension. This is the concept of "the sire's milk". It was thought that there inhered in breast-milk some quality similar to that residing in blood. The semen of the husband caused the flow of milk. That was what underlay the ban created by the act of nursing and it was, therefore, of necessity, implicated in its legal consequences. Incorporation of relationship in law within the structure of foster-relationships was upheld but, at least in this aspect, was abandoned by al-Shāfī'i under the influence of contrary traditions.

Foster-relationship is to a degree specific. The fuḥakā' are agreed that, whereas it exists between a man and all his descendants and his nurse and all her foster- and blood relatives, and for the majority, all her husband's ones as well, no foster-relationship is assumed between a man and the ascendants or lateral relatives of his foster-brothers and sisters, or between the nurse and the ascendants or lateral relatives of her foster-child. Since the Kur'ān envisages the employment for hire of wet-nurses, the duration of the breast-feeding had to be ascertained, under the rules governing hire. As to the age of the infant, that and the question of the period of his feeding had been addressed in II, 233, which suggested that the complete course would be of two years. For the majority, therefore, only suckling that occurs in infancy and is indispensable for the physical development of the child creates the legally significant bond. The point was illustrated using hypothetical illustrations. A husband, coming to the aid of his wife whose milk is slow to flow, is not barred from future marital relations with her if he should inadvertently swallow any of her milk. Nor can a jealous wife prevent legitimate sexual relations between her husband and any younger co-wife whom he chooses to marry by the expedient of nursing her. The response to such situations was conveyed in traditions traced to prominent Companions, or to the Prophet himself: in-namū 'l-rafā' al-magdi'a al-rafā' al-kabir. Various wives of the Prophet are reported to have arranged that certain infants be suckled by their sisters or by the daughters of their brothers, to ensure that, in their later years, such males would be able to visit them. The traditions in question make the point that a minimum number, usually five or ten, of suckling sessions had to be completed if the plan were to succeed. Where the number of sessions fell below the stated minimum, the underlying intent was frustrated. That, it is explained, is why Sālim b. 'Abd Allāh could never call upon ʿAṣīha. The discussion on numbers merged with the separate tradition on the plight of a particular family unit. When the wife of a foster-mother and foster-sister, and foster-daughter. Nor is it under the influence of contrary traditions.

The response to such situations was conveyed in traditions traced to prominent Companions, or to the Prophet himself: in-namū 'l-rafā' al-magdi'a al-rafā' al-kabir. Various wives of the Prophet are reported to have arranged that certain infants be suckled by their sisters or by the daughters of their brothers, to ensure that, in their later years, such males would be able to visit them. The traditions in question make the point that a minimum number, usually five or ten, of suckling sessions had to be completed if the plan were to succeed. Where the number of sessions fell below the stated minimum, the underlying intent was frustrated. That, it is explained, is why Sālim b. 'Abd Allāh could never call upon ʿAṣīha. The discussion on numbers merged with the separate tradition on the plight of a particular family unit. When the wife of a
prominent Companion told the Prophet that, following the revelation of sura XXXIII's negation of the reality of legal adoption, her husband resented the continued presence in their home of their adopted son, now grown to full manhood, the Prophet counselled her to suckle the man on five separate occasions. A variant says ten separate occasions. Alone among the Prophet's widows, Ḥādīth is said, on the basis of this episode, to have adopted the principle that the suckling of an adult is legally efficacious. Rebuffed by the Prophet's other widows, Ḥādīth is reported to have replied that she merely followed a precedent that was acknowledged by her husband. The Sunna, XXXIII, 23. This argument from the Sunna proving inadequate in the face of an equal weight of contrary traditions traced to the remaining widows, showing that they regarded that as having been a specific concession granted by the Prophet and never intended for general application, resort had to be made to higher authority. Ḥādīth is said to have claimed that a Kurānic verse had been revealed to the Prophet setting the minimum number of suckling sessions required to establish the marriage ban at ten. The verse had subsequently been withdrawn and replaced by a second verse setting the limit at five. Ḥādīth is further held to have stated that this second verse was still being recited as part of the Kurānic recitation. Malik reproduced this report in his Mustawā, merely to dismiss it, but it became a crucial element in al-Shāfi‘ī's bitter polemic against the Mālikīs of his day. Hanafīs and Mālikīs are agreed that one single session suffices to establish the ban; three opinions are transmitted from Ahmad which show him somewhat equivocal on the matter. Al-Layth b. Sa‘d and the Zāhirīs Dāwūd and Ibn Hazm argued for this limit of five sessions, and defended the legal efficacy of suckling an adult, although al-Shāfi‘ī had already abandoned this element of the tradition as curtly as Malik or, failing that, one man and two women (II, 282).

The discussion incidentally furnished the theorists on nasiḥ [q.e.] with what were claimed to be two attested instances of the phenomenon. The ten sucklings verse exemplified nasiḥ al-ti‘ala wa ‘l-ḥākm, suppression of both wording and ruling of a Kurānic verse, while the five sucklings-verse represented suppression of the wording, but not the ruling of a revealed verse, nasiḥ al-ti‘ala dāna ‘l-ḥākm. That the Mālikīs treated both verses as suppressed in respect of wording and ruling shows that they traced their view directly to IV, 23. The verse used the preterite of the verb which can be realised in a single act, an interpretation illustrated in a tradition attributed to ‘Abd Allāh b. Umar: ‘God's word is superior to Ḥādīth's word. God merely says 'Your foster-sisters are prohibited'; He does not say 'One suckling' nor 'two sucklings'.’

To prove foster-kinship, many authorities were content with the testimony of the foster-mother. But, as the foster-mother may be either free or a slave, Muslim or dāmmī, Mālik is said to have expected the evidence of at least two women, although his followers are divided on this. The Ḥanafīs demanded two men, or, failing that, one man and two women (II, 282). Bibliography: J. Schacht, Concise History of Islamic Law, Oxford 1950; M. J. 2. In Arabian society.
Before Islam, the Meccans habitually gave their infants to wet-nurses, choosing these for preference amongst the Bedouins; hence Muhammad was entrusted to Halima, of the tribe of Sa‘d b. Bakr (al-Balādhūrī, Anṣāb al-sa‘rāfī, ed. Hamidallah, Cairo 1959, i, 93). It was normal for such services to be recontracted, and Kurānic verses, e.g., Kurgan, II, 233, stipulates that the wet-nurse should be rewarded according to the custom. Curiously, it is also envisaged that a husband should make a payment to the mother whom he has repudiated as a wife so that she can suckle her child born of him. If there is any dispute over the amount of this recompense, the mother can refuse to provide milk without the father being able to exert any pressure or compulsion on her. In such a case, the parents can only entrust their child to a wet-nurse (LXV, 6).

Suckling creates fraternal bonds which have a widespread social and moral effect. As a vital element which embodies a sacred principle, milk produces an effect comparable to that of blood, of which it is sometimes a synonym. This is why children suckled from the same breasts were considered as brothers, so that Shīmā, daughter of the wet-nurse Halima, was the foster-sister of Muhammad. When she was captured on the Day of Hunayn [q.e.], she identified herself to the Prophet, who accabled her a welcome worthy of a sister (al-Balādhūrī, Anṣāb, i, 93).

The mystical bond of relationship created by suckling gave rise to a number of marriage prohibitions (see 1. above). The prohibition of marrying a foster-sister was pre-Islamic. In order to prevent ‘Aṭār from consummating his marriage, a rival tried to make him believe that he was the milk-sister of his wife ‘Abla, on the grounds that the latter had allegedly sucked the breasts of Zābība, ‘Aṭār’s mother. In addition to the Kurānic prohibition (see 1. above), a hadith adds ‘suckling prohibits what birth prohibits’ (al-radda ta‘āruma ma ta‘āruma al-wusūda) (Muslim, Sahih, k. al-radda, Cairo 1334, iv, 192), and another tradition states ‘what is prohibited through fostering is the same as what is prohibited by blood relationship’ (yaḥrumu min al-ra‘da ma yaḥrumu min al-nasab) (al-Bukhārī, Sahih, k. al-nikāḥ, Cairo 1376, vii, 9).

When a husband learnt that he had been suckled at the same breast as had his spouse, he consulted the Prophet, who ordered him to divorce her (ibid., vii, 10). Since the wet-nurse’s husband was considered as a father, the latter’s brother became the uncle of the man who had been suckled, i.e. a foster-uncle (see 1. above).

One question to be considered concerns the provi- ence or source of the milk. Only a woman’s milk creates bonds of kinship; if a man suckles a child with milk secreted by his breasts, no prohibitions result (al-Sha‘rānī, Mīzān, Cairo 1322, ii, 143). Bibliography: Given in the article.
used, with the same meaning, was the expression Kitdb cala..., cf. Fihrist, index, 132. There are imported from these countries. Thus they return to al-Kulzum, then transport their [consignment] to al-Farama and [25x625]c

... a refutation of the...
embark on the Mediterranean. Sometimes, they
made a detour through Constantinople with their
merchandise, which they sold to the Byzantines.
Sometimes furthermore, they went to sell them [in the
land of the] king of Firandja."

[Second itinerary] "When they chose to do so, on
leaving Firandja, they transported their merchandise
by sea, on the Mediterranean, disembarking at An-
dhaniyya; not only, in fact, do "they call themselves
Christians", but moreover their journeys, confined to
the Orient, have Baghdad as their western limit. The
paragraph devoted to them is possibly an interpola-
tion owed to a copyist, but it is equally possible that
the author himself has inserted a few lines regarding
these merchants; this would then be one of those inter-
calations through association of ideas which are such
a feature of mediaeval Arab writings, especially in the
process of revisions, and it is known that Ibn Khur-
radadhbih adapted his own text. On the subject of the
Russians, al-Mas'udî, who does not know of the Râ-
dhâniyya, speaks (Murâdî, ii, 18 = § 458) of the Lûd'hûnāa (? "who come in pursuit of trade to Spain,
to Rome, to Constantinople and Khazaria". J. Mar-
quart (Streatf. 33, D. M. Dunlop (Khazars, 209) and A. Seippel (p. xxviii) have proposed various readings
and handled, but it would be tempting to see this
name as an adaptation of Râdhâniyya; the author
of the present article was rash enough to suggest such
a connection (Arabic index of the Murâdî, s.v.
Lûd'hûnâ) Jacobs (252-3) also speculates cautiously
on the possibility of the al-Lûd'hûnâa = al-
Râdhâniyya equation and shows equal circumspec-
tion in considering a passage of the Kitâb al-Tambîh of the same author (I40; ed. Cairo, 121-2) where it is said
that the same group of Jewish merchants from the
pounds ships of the Kûd'hûnâa (? Râdhâniyya ?) and
of other Russians.
It is particularly important not to overlook, as R.
Blachère has, the continuation of the account of Ibn
Khurrâradadhbih, who returns to the Râdhâniyya
without introducing them other than by a personal
pronom (âm), which could equally well refer to the
Russian merchants. So, having described in the first
part of the text two itineraries of the Jewish merchants
who, on the outward journey at least, traverse the
Mediterrenean from end to end, the author moves on
to a Third itinerary, to
"Their landover route: those among them who set
out from al-Andalus or from Firandja, cross over (the
strait) to Lower Sûs [al-Sûs al-Aqṣâ] and arrive at
Tanger, whence they make their way to Ifrikîya
[al-Andalus] and the western Egyptian coasts (in the
present-day Tunisia, but more specifically Kayrawân), to Mîr [q.v.], (Egypt, but more specifically al-Fustâqî); they
subsequently pass through al-Kamla [q.v.] (in
Palestine), Damascus (Dimâshq [q.v.]), Kûfâ [q.v.],
Baghdâd, Bâṣra [q.v.], (these last three in Tirâq), al-
âhwâz [q.v.] (in al-Khuzâsîn), Fârs and Kirkman [q.v.1,
arriving in Sind, India and China.

[Fourth itinerary] "Sometimes they take a route to
the rear of Rome (Rûmiyya), through the land of the Slavs
(al-Sâkâlîga [q.v.]), reaching Khâmîlîdî (or Khamîlîk; see Hudâd al-Islâm, cmm. Minorsky, 154 and index),
capital of the Khazars [q.v.], then [they sail] on the sea of
Djurdanî (the Caspian), arriving at Bâlk [q.v.] (in northern Afghanistan) and in Transoxiana (Mâ warâ al-Nahr [q.v.] before attaining the camp
(wurt; see below) of the Toghuzghuz [q.v.] and mov-
ing into China."

The first orientalist to have drawn attention to this
passage was A. Sprenger who, in 1844, undertook an
English translation of it. Shortly after this, J.-T. Renuad de
Blachere has, the continuation of the account of Ibn
Khurrâradadhbih, who is not to be confused with the Ra-
danites, this senior South African rabbi
Rabinowitz who, following his survey of The routes of
the Radanites (1944), devoted a monograph to these
merchants, entitled Jewish merchant adventurers. A study
of the Radanites. This senior South African rabbi
reckoned it necessary to consider in the first place the general situation of the world in the 9th century in order to identify and locate the "Radhanites". In reference to whom he asserted (11), quoting Jacobi, who was the first historian (in 1964) to subject the text of Ibn Khurradadhbih to critical examination of certain striking details or, on the contrary, if the whole is not to be rejected, should its authenticity at least be seriously questioned, bearing in mind that it is possibly a case of interpolation, the product of the intervention of some copyist? No historian has gone so far as this, not even Cl. Cahen, nor B. Blumenkranz who, writing in 1960, has shown considerable scepticism and has criticised the modern scholars who "by means of ingenious but barely reliable exegesis" locate the Radhaniyya, for this ancient city, which had lost much of its importance since the Arab conquest, was not a known market. Furthermore, the name of al-Djabiyah is suspect (and it hard to understand how Blachère, op. cit., 28, n. 12, discovered that it refers to "a small locality on the Euphrates", whereas the name in question [q.v.] is only that of a small town situated to the south of Damascus, and it seems unlikely that itinerant merchants would have made such a detour. In fact, this toponym features in only one of the four itineraries described briefly, by the geographer. He finds it astonishing that, in the second, An-tiuch should be the port of disembarkation of the Radhanites, since the trade routes between Christian Europe and the Islamic world were closed, except for the Jews. S.D. Goitein (1955), who was well aware of the work of Rabinowitz, considered the history of the Radhanites in the light of documents from the Geniza and saw in their activity the first example of Jewish commerce in the early years of Islam. Writing in 1967, this same scholar attributed in part the major role played by Jews in the silk industry to the Radhaniyya (sic), who could have had the opportunity, during their visits to China, to become acquainted with the professional intricacies of silk production. Goitein was unaware of a seminal article Y a-t-il eu des Radhanites? by Cl. Cahen, who was the first historian to subject the text of Ibn Khurradadhbih to critical examination of certain striking details or, on the contrary, if the whole is not to be rejected, should its authenticity at least be seriously questioned, bearing in mind that it is possibly a case of interpolation, the product of the intervention of some copyist? No historian has gone so far as this, not even Cl. Cahen, nor B. Blumenkranz who, writing in 1960, has shown considerable scepticism and has criticised the modern scholars who "by means of ingenious but barely reliable exegesis" locate the Radhaniyya, for this ancient city, which had lost much of its importance since the Arab conquest, was not a known market. Furthermore, the name of al-Djabiyah is suspect (and it hard to understand how Blachère, op. cit., 28, n. 12, discovered that it refers to "a small locality on the Euphrates", whereas the name in question [q.v.] is only that of a small town situated to the south of Damascus, and it seems unlikely that itinerant merchants would have made such a detour. In fact, this toponym features in only one of the two mss. of Ibn Khurradadhbih and was omitted by Ibn al-Fakih (see below). On the other hand, if it is accepted that the name of al-Djabiyah is not an addition owed to a copyist but simply replaces that of the locali-
of merchandise mentioned and supplies, for each of them, references which in general do not contradict Ibn Khurraḍādjiḥbīh's version. The religion of the group poses no problem, the role of the Jews in worldwide commerce being well known; its organisation, however, is a mystery. (4) Etymology and origin: it is specifically in regard to the meaning and etymology of the term that Jacobi presents an interesting hypothesis worthy of serious consideration. Recalling that the author of the K. al-Masālik was a member of the managerial staff of the postal organisation (band) and thereby of an informational service, he proposes to see in the word ṭārādānīya not a name as such, but a technical term denoting a group of intelligence agents who, being Jews, were able to move from one community to another without attracting too much attention, using their commercial activity as a cover. This interpretation deserves to be taken seriously, but judgment must be suspended so long as there is no new source available to throw a decisive light on this problem.

The dialogue has not stopped here, and Cl. Cahen returned to the attack with an article intitled Quelques questions sur les Radanites. He thanks Jacobi for having corrected a few minor errors and judges "plausible, though unproven" his "interpretation of the word Raḍḥānīya", but returns to the major questions posed by the problem of the "Radanites". He adds that the text of Ibn Khurraḍādjiḥbīh gives the impression of "an organisation of people travelling from one end to the other along specific itineraries", which appears to conflict with the information supplied a little later by "the documents of the Geniza, according to which there never was a single commercial route directly followed from the West to the Indian Ocean." Above all, how is it to be explained that Ibn Khurraḍādjiḥbīh should be the only one to speak of the ṭārādānīya, that there was no western testimony regarding their journeys and that Europe knew nothing of the Far East?

The latest, chronologically, to take an interest in the ṭārādānīya has been M. Gil (1974), who presents a historical survey of works devoted to this subject and of answers to some of the questions posed by Cahen. Refusing to follow Kmietowicz (see below) and Jacobs, he seeks to link their evidence with the possible usage of Arabic sources (a comparison with Ibn al-Fakhlī), the point of departure and the itineraries (on which he comments at length), the meaning of Firandja (which he prefers to interpret as meaning Italy), the types of merchandise transported (which are subjected to thorough analysis) and finally the land of the ṭārādānīya: Gil revives the notion that they take their name from ṭārādān, a toponym which is the object of a very detailed study. The conclusion (323) is that "they were not an organisation, nor association, nor group; they only had in common their country of origin."

An issue which has so far been left to one side is the widely debated question of the etymology of the name of the ṭārādānīya. Reinaud was the first to associate it with a "Persian" word, rād-dān, translating it as "knowers of the way", and it is in fact a Persian origin which has been proposed by the scholars who have seriously dealt with the etymology of this term who, like Barbier de Meynard or Gil, see ṭārādān as an ethnic term. In his Glossarium to the BGA, De Goede followed Reinaud, justifying his acceptance of rād-dān with the reading ṭārādānīya of Ibn al-Fakhlī al-Hamadānī [q.v.] who, in his Mukhtasar Kītāb al-Buldān (270, tr. H. Massé, Abrégé du Livre des Pays, Damascus 1973, 324), summarised the passage of Ibn Khurraḍādjiḥbīh. However, in the course of editing this translation, the author of the present article has established that the Maqā’id ms. of the Mukhtasar also featured ṭārādāniya, thus a reading identical to that which De Goede retained in his edition of the K. al-Masālik. In 1907, D. Simonsen returned to the etymological problem and, rejecting the solution of Barbier de Meynard, since the ṭārādāniya came from Europe, he revived Spenger's hypothesis and suggested that they should be seen as "sea voyagers from the Rhône" (nautae) Rhodanesi. Furthermore in 1931, in a book in Hebrew on the subject of Israel in the diaspora, B. Dinur accepted this etymology, and he was not the only one to do so (see also 1966), but it had been rejected as early as 1908 by De Goede (in his Opuscule), for a phonetic reason, a transformation from o to ō being impossible. Jacobs and Katz, who saw the ṭārādāniya as coming from Rāy [q.v.] in Dībāl, where Ibn Khurraḍādjiḥbīh was employed as head of the barādīrī, sought to link their name to this town, although the corresponding ethnic term is Rāzī. In 1957, S.W. Baron considered De Goede's explanation (= itinerant merchants) more plausible than that of Simonsen. Cl. Cahen (1951, 1964, 499, n. 4) seemed willing to accept ṭārādān, rejecting ṭārādārī ("custodian of the road"), which could equally well be proposed; he made the point, however, that the orthography of the name of the group is far from being established. He no longer accepted a possible harmonisation with the reading of al-Mukaddāsī (Ahsan al-takṣīm, 30), which mentions a plural ṭārādānīna and explains it as meaning "sellers of linen and cotton goods". Dozy, who took this reference into account (Suppl., s.v. ṭ-h-r-d-n), added that he had encountered in the ms. of the Šīrāzī ath-thawālīf of al-Mālikī (mid-6th/11th century), the same plural designating (fol. 29b) a quarter of Kayrawān and (fol. 91b) traders who used their children to sell their merchandise (cf. R. Brunschvig, Haïfaïdes, i, 354, ii, 204); there was also at Kayrawān a Bāb al-Ṭārādānīna (al-Mukaddāsī, op. cit., 225; partial ed.-tr. Pellat, Description de l'Occident musulman au XIVVe siècle, Algiers 1950, 14/15). In 1970, Kmietowicz took a direction radically different from that of all his predecessors, deriving ṭārādāniya from vereardarii "couriers" and positing a phonetic evolution vereardarii-rewardarii-Ṭārādānīa, a hypothesis, however, which becomes impossible. Jacobs has given to Arabic barādīr "post and information" and to Berber abriḍ "road". It emerges that it is precisely espionage which Jacobi had in mind (261-2), accepting the etymology proposed by Reinaud. Finally, the last chronologically, M. Gil (306), is noteworthy for his assertion that the name of these merchants is based in all probability on the Syriac ṭārādān. This rapid survey has shown that, in spite of the erudition or the imagination of scholars, the problem posed by the origin of the term ṭārādāniya remains unsolved. Other unanswered questions include, whether this name was known throughout the itineraries described, or whether it was current only in the East of the Islamic world or even known only in the services of the barādīr; was it a kind of password used by spies, assuming that Jacobi's suggestion is to be taken seriously?

What is to be concluded now from examination of the principal works devoted to the ṭārādāniya? If it is accepted that they did really exist—and nobody seriously doubts this—it is beyond doubt that they were merchants who followed numerous itineraries between western Europe and China. On the outward and return journeys they conveyed a number of types of costly merchandise which are carefully listed by Ibn
Khurradadhbih. The latter also informs us that they spoke numerous languages, and it may be supposed that each individual was familiar with two or three among the languages mentioned and that they would have employed a common traders’ argot, probably containing many Hebrew elements. This is all that has been summarised above as having posed questions which they have attempted to answer with varying degrees of success. They have seized the opportunity to demonstrate their knowledge of international commerce in the Middle Ages and of the economic role of the Jews, but as regards the Rādhanīyya specifically, all their speculations have not brought any discernible progress. For so long as new sources remain undiscovered it is appropriate to avoid both hypercriticism and impudence and to admit that Ibn Khurradadhbih, occasional geographer, musicologist and above all Jew, in his barit wa ‘l-khabar, constituted himself the echo of information which circulated—perhaps confidently—in the governmental circles of his time.

RADHANPUR, a former princely state, headed by a Nawâb [q.v.], of British India, at that time in the Pâlânpur 68) Agency of Bombay Province, now in the Gujarat State of the Indian Union. It is also the name of its capital (lat. 23° 49' N., long. 7° 39' E.), an area of 1,150 square miles and supported a population of 70,530, of whom only 8,435 were Muslims.

The rulers of Radhanpur traced their descent from a Muslim adventurer who came to India from Isfâhân about the middle of the 12th/18th century. His descendants, the Murûds, and their successors were reelected in the Mughul province of Gudjarât [q.v.] early in the 12th/18th century Qâwâm Mârd Khân Bâbî, the head of the family at that time, received a grant of Radhanpur and other districts (Mirâ‘î-i Ahmadi, ms. in Ethê, no. 3599, fol. 742). With the decline of the Mughul empire these districts passed into the hands of the Mârâthâs [q.v.], but the Bâbî family were confirmed in the possession of Radhanpur by Damâdî Râo Gaekwâr.

British relations with Radhanpur date back to the year 1813 (Aitchison, vi, c). Some years later, the British were called upon to rid Radhanpur of plundering tribes from Sind who were committing serious depredations in the Nawâb’s territories. In return for this the Nawâb agreed to become a tributary of the British Government, but a few years later his tribute was remitted because it was felt that the state was unable to bear the expense. After the Sepoy Mutiny of 1857-8, in 1862, the ruler of Radhanpur received an adoption sanad from the governor-general (op. cit., cii). It was not until 1900 that the Qâwar-sai currency previously in use was discontinued and replaced by British currency.

In the last years of British rule, Radhanpur covered an area of 1,150 square miles and supported a population of 70,550, of whom only 8,435 were Muslims.
The town of Radhanpur, the capital of the state, had a total population of 11,225, of whom 3,694 were Muslims (1931 Census Report).

(RADĪ AL-DĪN HASAN AL-ŠAĞHĀNI [see AL-ŠAĞHĀNI].

RADĪF (A.), lit. "one who rides behind", "pillion rider", is used metaphorically in several technical senses (for a poetical figurative use in Turkish, cf. ordu-yi sa菲尔-řafī "the victorious army jone which has victory on its croup") in Tānkh-i Dżewdet, Istanbul 1270/1853-4, i, 22:

1. In astronomy it has two meanings, which seem, however, not very amply attested: (a) al-Radīf, and also, better attested, al-Rifḍ, is the ancient Arabic name for Dženab al-Dżamhīra, i.e. the star Deneb (a Cygni), called thus because it "rides pillion" to the "Horsemens" (al-Fawārī)—i.e., Cygni. (b) Rifḍ refers to a star or constellation which rises (yapūn, cf. also anawāk) at sunrise, while its opposite (rađif) is setting. For both meanings see L'A et Lane, s. v., for al-Rifḍ also al-Khārazmī, Mafātīḥ, 21, 6, and P. Kunitzsch, Arabische Sternennamen in Europa, Wiesbaden 1959, 82, 143.

2. In Persian and Persianate prosody the term denotes a word or a whole phrase that follows the rhyme letter (raǰūy) and recurs in every line of the poem. In Western languages various renditions of the term have been used, such as "over-rhyme" (Schimmel, 21), "echo rhyme" (Bombaci, in PTF, ii, pp. xxii, xxv), "refrain" (Thiesen, 76, n. 5), and "hypermeter" (J. Deny, in EL, s.v. reǰīf). However, "refrain" normally refers to entire lines or even stanzas repeated throughout a poem, while the radif is always shorter than a hemistich, and "hypermeter" denotes a stressed syllable in the outermost line, whereas the radif is decidedly not. The radif is a metrically and semantically necessary element of the line, as Shams-i Kays (Maṣḡūm, 258) and other authorities stress. The following line by Hafiz (q.v.; Dżowdān, edd. Kazwīnī and Qnhānī, no. 233) may serve as an example:

Dast az falāb nāmadar tā kām-i man bar ʿayād yā ʿan rasād bī-dżānān yā ʿan xītan bar ʿayād.

"I do not cease striving, until my desire comes about:..."
either the body reaches the friend or the soul comes up from the body.

The rhyme (kāfyā) in this ghazal is -ān (the raūʿyy being -n) and the radif is bar āyuūd. Clinton (Manāçthīrī, 51) calls the overall rhyme scheme in such cases very aptly “multiple rhyme”, but go on, as does others well, to call this ensemble a radif, which is not correct usage: kāfyā and radif are considered two separate elements.

The length of the radif may vary between one word and several words almost filling the hemistich. Extremes are to be found: (radif underlined):

\[\text{zhīzī fūzūda ḍānma-t-e ta sūb u sūrā rāa ḏẖka-sta sunbūl-i radif-ta mu‰k-hi-sārā rāa} \]

(Rūdāki [q.v.], apud Elwel-Sulton, 225)

and sarū-gāl-bāz nabād-ū w-ar buwaq nabād-ū lāniñ sarū-gāl rukh-ta sarū w-ar buwaq nabād-ū lāniñ didam-āq ša bar-sē gūlbār gūlmā rastī sarū dar gūlbār nabād-ū w-ar buwaq nabād-ū lāniñ (Khwādūyā [q.v.], apud Elwel-Sulton, 225) or, from Caghhatay Turkish:

\[\text{Meni shayda cla durghan bu königl dīr, bu königl. Kōhr u rusūa cla durghan bu königl dīr, bu königl. Ok tegn kāmatilmīzı kara khashgilardı wúcın Multıcıa ya cla durghan bu königl dīr, bu königl...} \]

(Lutfi [q.v., apud.]). Eckmann, in PTF, ii, 310)

Mere suffixes following the raūʿyy are not considered a radif (e.g. Džamī, Kāfyā, 1), and statements to the contrary in the secondary literature should be amended. It is true that Našīr al-Dīn-i Tūstī (Mi-yār al-āq ār, 200-1) prefers to consider everything that follows the raūʿyy-um wašt (see below) a radif but, as al-Tāhanāwī (Khwādūyā, h, 236-4) notes, this is against the communis opinio (wa in khlīf-mi mastaʿaraft asīt). The strength of this general opinion is shown by the fact that the early modern Turkish critic Muʿallīm Nāgī (Istilabat, 51) who would likewise subsume the suffixes under the general heading radif, defends his position with a personal statement to this effect (Aciz kanaatimızce, reviden sonra her ne gelirse redif sayilmak daha dogrudad). The suffixes, or rather the letters that make up the suffixes, have special names in “orthodox” -im-i kāfyā, the first letter after the raūʿyy being called wašt, the second ḍōnīg, the third māzid, and the fourth šīr and šūrūth—which is said to be the maximum—nāra.

The radif is supposed to have the same meaning throughout the poem. If it does not, a special artifice results (radif mutadhānis, see al-Tāhanāwī, Khwādūyā, i, 576) with complete paronomasia between radifs, as in the Arabic rhyme 

\[\text{Aa, mālāk ast u bar dāl-e sulān nār ha rūz bār-ni-yū u kuden sulān sūr ār} \]

(Mašīd-i Šād-i Salmān, apud Elwel-Sulton, 226)

Even more sophisticated is a combination of hādīg and double rhyme (dāwā t-kašyāyatān), as in the following lines from Maṣūzī [q.v.] (bid.), where the first rhyme is -ān, followed by the hādīg darti, in turn followed by words containing the second rhyme -akht:

\[\text{Aa šahr-i samin bar āsmān darti akht sest ast ratī tā tu kamān darti akht etc.} \]

A poem with radif is called muraddaf. This should not be confused with the term muraddaf, which means ‘provided with a radif’. The radif is a letter of prolongation (alif, awwā, yā) immediately preceding the raūʿyy, as in the Arabic rhymes nārā, nār, nār (spelled rāṭrā, nīnā, nuwru [H = alif]); in Persian rhyme theory there is the additional redif-i zāʿūd which denotes a consonant intervening between the radif and the raūʿyy, as in dāwāt (spelled dawāt), where w is the redif, s the radif, and i the raūʿyy. Since both muraddaf and muraddaf are terms used in rhyme theory, confusion is not easily avoided.

As for history and the poetics of the phenomenon, much remains to be studied. The first thing to be said is that the radif is unknown to the Arabs, as a critic like Rāghī al-Dīn-i Watāwī (Haddāk, 79-80) was well aware, except, he says, for innovations of the Moderns. As an example he gives a kāfyā by al-Zamakhshārī [q.v.] in praise of “Allā ad-Dawlāh Khdhārazmshāh in which the lakab of the mamduh is used as radif. First line:

\[\text{al-fadlu ḫayṣalalāh ‘Allāa l-Dawlah u} \]

(PTF, ii, 259). It is probably closer to the truth to say that existing rhyme phenomena in pre-Islamic Turkish poetry facilitated the adoption of the Persian radif technique.

Watāwī alleges that “most” Persian poems have a radif (Haddāk, loc. cit.). In the case of Manāçthīrī [q.v.] poems with and without radif are about evenly divided (Clinton, Manāçthīrī, 51). But simple percentages do not tell much without due consideration of the various kinds of radifs that are attested. The most common, and probably most ancient, type is the verbal radif consisting of a simple and mostly rather nondescript verb (cf. the line from Hafīz quoted above). This may be expanded into longer phrases and even complete sentences, such as “bar na-tābāt bēs as in “more than this is not feasible” serving as a radif in a kasfā of seventy-nine lines by Khākānī (q.v.; Reinert, 40; cf. Dīwān, 337-40). As for nominal radifs, Khākānī does not follow the fad of his time which was to choose just any noun in order to display one’s artistic virtuosity; the nouns he selects always have a bearing on the theme of the poem, such as using ḫāt “dust”, as a radif in a dirge of forty-two lines (ibid.; cf. Dīwān, 237-9), or the noun construct sag-i kāy-āt, “the dog of your street”, in a ghazal of fifteen lines in which the poet describes himself as the most despicable dog in the beloved’s lane (Schimmel, 403, n. 26, cf. Dīwān, 575). These nominal radifs can acquire an iconic character, as in a tāfṣīr-band by Dzhannati Biyā, quoted by ‘Awī (Ludāb, ed. Browne, ii, 394), where they denote various precious stones (gawhar, lašs, zumurrud), thus forming a necklace of sorts for the poem itself (Schimmel, 156). This possibility is also alluded to in a poem by the Mughal poet Ashraf who says about a celadon bowl with craquelé glaze:

You cannot describe it in a quartain or a ghazal - I think of a kasfā with the radif “Hair”

(Schimmel, 149). Similarly, almost every poet in Persia, Turkey, and
Muslim India attempted at least one poem with the radif gut, "rose" (Schimmel, 389, n. 65), and in Ottoman poetry such poems with gut (and also nergis) as radif solmasy were subgenres of the kasida (see Barfyay, toward the end).

3. Modern studies of poetry. A. Schimmel, A two-colored brocade. The imagery of Persian poetry, Chapel Hill and London 1992; B. Reinert, Hâgânî as Dichter. Poesische Logik und Phantasie, Berlin and New York 1972; J.W. Clinton, The Disson of Manâchîbî Dâmghânî. A critical study, Minneapolis 1972; H. Heimann, 3. In Turkish military usage. Mahmûd I [q.v.] gave the name of radif (‘âsîkî radifî-yi mensûre) to the reserve army created in 1834 (Jouanin and van Redif i nasîrî-mülûkî). The officers received a quarter of the usual pay, but were only expected to serve and wear uniform two days a week (Mußtaफî Nûrsî Pasha, Net‘î-yî ul-wu’ukî-yi, iv, 190).

In 1252/1836-7, the radif was organised in wide groups with a high command: muşîrîk (muşîrîk) or ‘mashal-ship’ [see müsîrîk] of radif, conferred upon the wâlîs. The first were those of the eyâlet of Kârâmân (Konîya), Khudaâwendi, (Bursa: guard or hâkîs), Ankarâ, Aydın, Erzurum and Edirne. At the same time, plans were made to raise the money required for this purpose. The radif-marshals were given the karunânî (karmânî) or cloaks of their new rank. Just as the troops of the line (mensûre) were distinguished from those of the guard (hâsîr), so there were radif-mensûre and radif-hâsîr. The appointment of commanders of divisions was to follow (for details, see the Tabriz-î ‘âlî or report of the grand vizier Mehmêd Emin Ra‘îf Pasha, in Lufî, v, 165-70). If we may believe the khâtî-h mâhâyyn [q.v.] promulgated on this occasion by Mahmûd II, these first steps gave every satisfaction (ibid., 74).

When the Military School (mekteb-i hârbiyey) instituted in 1251/1835-6 began to supply officers, the radif under arms was converted into active forces and the officers were sent back to their oğlûs (Net‘î-yî ul-wu’ukî-yi, iv, 106-9). The service of radif (kâmî-yi radifî) was now definitely to assume the character of a kind of period of service in the reserve or intermittent service, the duration of which (müddet-i radifî) was to be fixed under conditions which we shall explain below.

In the khâtî-h mâhâyyn of Gülkhânî (30 November 1839), there is an allusion to an approaching improvement in the system of regional recruiting. In 1838, five years later, the period of service in the regular army, previously practically unlimited (one saw young married soldiers leaving their families for life), but this measure did not immediately make its effect felt (cf. von Moltke, Lettres sur l’Orient, n.d., 211, letter no. xlviii).

On 6 September 1845, the military law of the serâs-asker Rüdâ Pâşa (Engelhardt, i, 71) was promulgated, a law of fundamental importance, half-French and half-German in character, the principles of which survived even into the early Republican period; it confirmed the period of regular service at five years (later reduced to four), to be followed by a period of seven years during which a radif could be recalled to the colours for a month each year (later every two years). Each ordu (army corps) was to have its radif contingent (şafî-i radifî) placed in time of peace under the orders of a brigadier-general (liwed, brigade) who lived at the headquarters of the ordu. In 1855 (Ubicini, i, 456) the radif was organised into 4 (out of 6) ordu, namely, those of hâsîr (Üskâdîr [Asia] and İzmîr), Derîséâdet (Istanbul and Ankarâ), Rumelî (Manastîr) and Anatolîa (Harput). The ordu of ‘Arabîstân and ‘Irak were still to be composed of. Ubicini adds this observation: ‘By means of this organisation the government has secured...a force at its disposal equal to the regular army and capable of
being moved in a few weeks either to the line of the Balkans or to any other point in the empire. " According to Bianchi (Guide de la conversation, 1852, 230), the organisation of reserves was provided for 6 years in the redif in two bands (şifî-l-墨西de and şifî-l-tâli) of 3 years each (according to Engelhardt, of 4 and 2 years respectively). In practice, in 1877 there were 3 bands, the third (şifî-l-墨西de) being represented by the territorial army (mustâfizî) then mobilised (Zboinska, 98). A conscript who obtained a lucky number in the draw was drafted directly into the redif army (art. 17). The law of 27 Safar 1304/13 Téhîrîn-thâni 1302 (25 November 1886; résumé by Lamouche, 77, and Young, ii, 394) provided by a commission of reorganisation which included Muzaffîr Wâli Ridâ Patâ-ghâ and von der Goltz Patâ-ghâ, fixed the period of redif service at 9 years, but was soon afterwards followed by a special law (redif kanunu) of 10 Muharram 1305/28 September 1887. According to this, which was, however, not put into force till 1892, the period of redif service was 8 years. The ranks in the redif were the same as in the regular army from general of division down to sergeant-major. These officers formed at the same time the personnel of the recruiting offices for the whole army.

According to the law regulating the uniforms of the army on (elbise-yi ʼaskeriyye nizâm-ndmesi) of 29 Dümâmâd 1307/28 Hazîrân 1325 (18 June 1909), the redif soldiers wore as distinctive badge a dark green (reftî) piping (zîh, Pers. zîh, Ar. zît) at the bottom of the collar (yaka) of the tunic (ţıqet or şıqet, modern spelling șıket, șeket). The officers wore a piece of cloth of the same colour 7 cm in length fastened on the collar of the undress tunic (şıket) or the full dress tunic (şere, older setre; cf. Pers. şadre) (Düstür, Terîbî-șıqeti, i, 276; A. Bilotti and Ahmad Sedad, Législation ottomane, Paris 1912, 171 ff.).

The redif system was abandoned by the Young Turks. The law of 18 Ramâdan 1330/18 Âğhusûst 1328 (31 August 1912), without proclaiming the dissolution of the corps, ordered the formation of units of mustâfizî with elements furnished by the battle depots in the second inspection (mi.syîlîshîkh) or redif (Düstûr, Terîbî-şıqetî, iv, 615). The Young Turks were reproached for this measure, and some even saw in it the cause of the Turkish defeat in the Second Balkan War. 

(M. ʻAthermal)
times incorporates docetic elements: the corpse taken to be that of the Imam is said actually to have died in the madhhab al-radda al-madhbita, but was taken to be his body, and given the name of the Imam, in order to deter the attention of the enemies. In the madhhab al-radda al-madhbita, the idea of the Imam was rejected by mainstream Zaydism; more so, the majority of the Rafida and al-Khayyat component of the Imam doctrine is described by al-Ashtar as referring to the return of power (dawla [q.v.]) to the Shi'i during the time of the Mahdi; this view was rejected by the leading Imam scholars of the Buwayhid period. Their main concern was to prove that there was no contradiction between the doctrine of radda and Mu'tazili views about reason and divine justice. A case in point is al-Shaykh al-Mufid (d. 413/1022 [q.v.]), who was told by a Mu'tazili critic that if radda were to take place, this would give the enemies of Shi'ism a chance to repent and thus escape punishment. Al-Mufid's answer is that the Imams have made clear that these enemies will never repent; and even if they were to do so, God would not accept their repentance, just as He did not accept the repentance of Pharaoh. The Mu'tazili argues that if this were so, the radda would constitute an enticement to disobedience (al-igra bi 'l-izydan) during the period of renewed life that followed it, since God's enemies would know that even if they were to change their ways, their repentance would not be accepted. Al-Mufid responds that their past experience of punishment after death will deter them from adding to it by further evil deeds when brought back to life (al-Murtada, 'Ali b. al-Husayn, al-Fusul al-mukhtara, Beirut 1405/1985, 115-9, cited in McDermott, The theology of al-Shaikh al-Mufid, 268-9). The subject of al-igra bi 'l-izydan is also tackled by the Mu'tazili Abu 'l-Kásim al-Balagh, al-Kabi (d. 319/931). He asserts that if people were to know that they would have a chance to repent following the radda, this would incite them to act of disobedience in this life. Abu Dja'dar al-Tusi (d. 460/1067) replies that since only some will be brought back to life, and it is not known who they are, no one can safely act on the assumption that he will be among them (Tibiyn, 1, 255).

This doctrine of radda continued to be a favourite subject of attack by opponents of Shi'ism, who claimed that it was a borrowing from Judaism that had no basis in Islam. Such criticism led some Imami apologists to minimise its importance. For example, the contemporary Lebanese scholar Muhammad Djawad Maghniyya maintains that not all Imami doctors adhere to this doctrine; he asserts that it is only transmitted in reports (ahdith, akhbar) of a type which may be accepted or rejected, and that it is not among the principles of the religion (usul al-din) (al-Shi'a fi 'l-mizân, Beirut n.d., 54-5).

RADJA — RADJAB

RADJIA GANESH (the latter part of the name being the Hindu name Ganêsa, appearing in Arabic script as G.n.s or G.n.sl), a local Hindu landowner of northern Bengal, who successfully usurped authority in Bengal during the latter years of the first period of power of the Ilyäš Shâhi line, probably in the first decade or so of the 9th/15th century. He became a Muslim and assumed the name of Djalal al-Dîn Muhammad Shâh. The latter ruled until 835/1437, when he was succeeded by his son Shams al-Dîn Muhammad Shâh, who held power in Bengal till the restoration of the Ilyäš Shâhls in 841/1437. This family of Islamised Hindus had clearly enjoyed considerable support from both the class of Muslim landholders and notables and the Hindus, and it had ruled over a powerful sultanate which extended as far as the Kusi River in the north-west of Bengal to Chittagong [q.v.] in the south-east.

RADJAB, the seventh month of the Islamic calendar, was observed as a holy month in the period of the Dhâhilîyya in spring. It was the month of the sacrifices of the 'âdâr offered to the pagan deities as a token of gratitude for the augmentation of their flocks and herds. It was also the time of invocations of their deities to increase the number of their flocks. It was as well the month of the sacrifices of the furs, the firstlings of the flocks and herds. The owner of the flock had to sacrifice one ewe out of fifty (or hundred) of his herd. The holy month of Radjab was also the month of peace in the Arab peninsula; the tribes refrained from raids and warfare. The month was called al-âsâmm "the deaf" because no sound of weapons was heard during that month and al-âjâm "the pouring" because the unbelievers of Mecca used to say that the mercy is pouring forth in this month. Another by-name of Radjab was al-rajdîm "the stoning" because the Satans were stoned in that month and were expelled from the dwellings of the tribes. Other by-names attached to Radjab were: al-mâkîn "the constant," because its sanctity was a firm one, since Radjab is one of the four furûm months; al-harîm "the aged" because the sanctity of the month was an ancient one,
dating from the time of Mu'ad b. Nizar; as the tribes of Mu'ad venerated this month, it was also named Radjab. Because of the comprehensive peace among the tribes and their abstaining from hostilities, the month was called munsil al-all and munsil al-asinna, pointing to the fact that the spearheads were removed, weapons laid down and no fighting among tribes was launched. The name al-mu'allah "the elevated" was attached to Radjab because it was a month highly respected among the Arab tribes. The name al-mukashkish "the exonerating," denoting that Radjab distinguished between the people who stuck to the tenets enjoining abstention from fighting during the month and those who violated the sanctity of the month by fighting. Finally, the month was called al-'atia because the sacrifices of the 'atia were carried out during this month.

According to tradition, the month of Radjab was a time of devotional practices, exertions and fasting. Invocation sentences against the iniquitous and the wrong-doers were more energetically used during the month. A peculiarly named格个 month was al-mukashkish during the month. A peculiar name granted to Radjab was al-mukashkish "the exonerating," denoting that Radjab distinguished between the people who stuck to the tenets enjoining abstention from fighting during the month and those who violated the sanctity of the month by fighting. Finally, the month was called al-'atia because the sacrifices of the 'atia were carried out during this month.

According to tradition, the month of Radjab was a time of devotional practices, exertions and fasting. Invocation sentences against the iniquitous and the wrong-doers were more energetically used during the month. A peculiar name granted to Radjab was al-mukashkish "the exonerating," denoting that Radjab distinguished between the people who stuck to the tenets enjoining abstention from fighting during the month and those who violated the sanctity of the month by fighting. Finally, the month was called al-'atia because the sacrifices of the 'atia were carried out during this month.

An utterance attributed to the Prophet and recorded in the early collection of 'Abd al-Razzâk (d. 211/826) says that the Prophet approved of the sacrifice of the 'atia which the people used to practice in Radjab. The Prophet said, "Do it, and name it al-'atia".

The utterance of the Prophet enjoining sacrifice of the 'atia and naming it the rajib is opposed by an utterance attributed to the Prophet enjoining annulment of the sacrifice of the firstlings and the sacrifice of the Radjab 'atia . It is recorded in the same collection and is formulated plainly: la fari'a waw-la 'atia "there is no [sacrifice] of the firstlings nor of the 'atia."

This prohibitive tradition was, however, changed by the utterance of the Prophet in which he said, "And if you want". Thus the sacrifice was left to the discretion of the believer.

A peculiar name of the Prophet turns the sacrifice of the fari'a into a voluntary practice, with a special reservation of the Prophet changing the aim of the practice. The Prophet permitted the practice but remarked that it would be preferable to feed the camel until it grows up and to ride it on expeditions and raids for the cause of God; similarly, it is preferable to feed the ewe until it grows up, to sacrifice it and to divide the meat among the poor.

Similarly, the utterance of the Prophet in which he is said to have approved of the 'atia, saying al-fari'a hakik, was considerably changed by the added reservation that it would be better to feed the destined sacrificial animal until it grows up and can be used to ride on it in a raid for the cause of God (in the case of a camel) or to slaughter it (in the case of a ewe) and give the meat as charity to a needy widow.

Scholars of Islam stress that the slaughter of animals in Radjab was continued in the first period of Islam and was only later abrogated. Al-Khaṭṭābi (d. 388/998) considered the 'atia compatible with the principles of Islam: it was in the period of Islam sacrificed to God in contradiction to the Dā'alihi 'atia, which was sacrificed to the idols. There is indeed a report saying that Ibn Sirīn (d. 110/729) used to slaughter the 'atia in Radjab.

Strictly orthodox scholars stressed that there is no valid tradition concerning the virtues of Radjab. There were, however, those who endeavored to make the month and its significance a part of the pious and devoted, who favored the widely-circulated popular traditions attributed to the Prophet, emphasizing the virtues of Radjab and encouraging the carrying-out of the various practices considered laudable and right. The Prophet is said to have named Radjab "the month of God", shahr Allâh, because it was the month of the people of the haram (i.e. the people of Mecca) who were freed al-Allah. The problem of the sacrifices during the month of Radjab was only one aspect of the disputes among the Muslim scholars as to the ritual practices performed in the Muslim community in that month.

A significant tradition ascribed to the Prophet singled out the peculiar sanctity of three months of the year: 'Radjab is the month of God, Shab'ān is my month and Ramaḍān is the month of my people.' As the months of Ramaḍān and Shab'ān were prominent in the observances of the Muslim community, it was put forward that these other months there was an obvious tendency to competition between these holy months regarding the rewards of the ritual practices performed during these months, the exceptional position of certain nights of the months and the prayers during these months. The competition between Radjab and Shab'ān is clearly presented in a tradition reported on the authority of Zayd b. Aslam. The Prophet was informed about people fasting during Radjab. He remarked, "How far are they from the virtues of the people fasting during Shab'ān?" Zayd observed, "Most of the fasting of the Prophet, except in Ramaḍān, was in Shab'ān." The partisans of Radjab quoted a report of Ibn al-'Abbâs saying that the Prophet used to fast so many days in Radjab that his Companions did not think that he would break his fast; and he used to break his fast so that they doubted whether he would resume it.

As against the people venerating Shab'ān, the partisans of Radjab had recourse to utterances attributed to the Prophet in which the fasting of Radjab was recommended and very high rewards were promised to people who were fasting in it. The Prophet is said to have stated that the month of Radjab is of a high position and that the good deeds of the believer gain multiple rewards. He who fasts one day in Radjab is in the position of a believer who would fast a year. He
who fasts nine days, for him the gates of Hell are closed; he who fasts eight days, for him the eight doors of Paradise are opened; he who fasts ten days, God will fulfill for him every wish; he who fasts fifteen days, a tradition recording the rewards for fasting of every day of Radjab; he considered, however, the hadith a forged one. The fasting of the whole month of Radjab was nevertheless frowned upon and sometimes forbidden in order not to create a similarity with Ramadan. The practices of fasting during Radjab were censured by Abu Bakr, 'Umar and people of the sahaba, says Ibn Taymiyya.

Some myths of Radjab are considered to be replete with God's graces. In the first night of Radjab, God will grant every supplication of the believer. It is one of the five chosen nights in the year. Another prayer strongly censured by Ibn Taymiyya was the prayer practised in the midst of Radjab called salat Umm Daud.

A night highly praised by those who observed Radjab was the night of the salat al-raghdib "the night of the prayer for extensive and desirable gifts"; it starts on the eve of the first Friday of Radjab; the prayers and supplications contained hundreds of invocations, prostrations, rak'as and recitations of some verses of the Qur'an. The believer is requested to fast on Thursday preceding this night. A night of Radjab distinguished by the rich rewards is the night of the twenty-seventh of Radjab. The believer spending this night in vigils: praying; thanking God; repeating a hundred times the various phrases of gratitude, the oneness of God, invocations and supplications; performing prostrations and rak'as; and reading a sura of the Qur'an and fasting the next day, will be highly rewarded by God; he will attain God's grace as if he fasted a hundred years and practiced vigils for a hundred years. On that night, Muhammad was sent as a prophet.

The significant events connected with the life of the Prophet which allegedly happened in Radjab turn the month into one of the most distinctive periods of the year. According to a tradition, the mother of the Prophet conceived him on the first evening of Radjab; another tradition claims that he was born in Radjab. Some traditions assert that the event of the laylat al-mir'ad occurred in Radjab. Other traditions claim that the date of the isra' was the twenty-seventh day of Radjab.

The struggle of the orthodox scholars against those practices of Radjab widely approved by pious ascetics and Sufis was not entirely successful. These practices have survived and form until the present time an essential part of Muslim popular belief and ritual.

it wants to rise’). It is not clear how this word became a technical term in prosody. The other etymological meaning of radjaz ‘thunder, rumble, making a noise’, may perhaps be taken into consideration. In that case, there might be an allusion to the iambic, monotonous and pounding rhythm of these poems (cf. ka-ma sam’u radjaz l-sawā’ikī, Abū Nuwās, ed. E. Wagner, ii, 299; for the etymology, see also T. Fahd, La divination arabe, Leiden 1966, 153-8). A poem composed in this metre is called urājizā.

1. Prosody.

In the system of Arabic metres, the radjaz occupies a special place. Whereas in other metres the lines of verse consist of two symmetrical half-lines, separated by a caesura, the line of verse of the radjaz is in one part only and has no caesura. In general, the radjaz lines are only half as long as the lines of other metres. The basic element is the dipody which consists of four syllables. The first and second syllables can be long or short, but the third one must be short and the fourth one long ـ،ـ،ـ،ـ. Three such dipodies form a trimeter, which is by far the most widely used form of the radjaz poem. In its acatalectic form it has the following scheme: ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ，ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ，ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ，ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ，ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ，ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ，ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ，ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ，ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ，ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،~،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،~،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ，ـ،ـ،ـ،ـ，ـ،ـ،ـ،ـ،ـ،ـ،ـ，ـ،~،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ，ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،~،ـ،ـ،ـ،ـ،~،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ，ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ，ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ，ـ،ـ،~،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،~،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،~،ـ،ـ،ـ،ـ،ـ،ـ،ـ，ـ،~،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ，~،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،~،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،~،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ،ـ، adultes. The factual power of words cursing (hidjd*) was not, to serve to present scientific doctrines, lexical problems, various descriptions and travel accounts.

2. Historical development.

In pre-Islamic times, the radjaz was only used for short poems. They originated from a concrete situation, were mostly improvised (see sīrat) and as a rule comprised only three to five verses. It is true that these compositions in radjaz were correct prosodic units, but they were no poems in the sense of works of art. Initially, the radjaz was not a ‘literary’ metre. During the Dāhiliyā [q. v.], no one composed a ḍāṣid in the radjaz.

A typical situation was the man-to-man fight, in which two adversaries came forward from their battle array. Both heroes called their names and boasted about their strength. Abū Ūmayr al-Fazārī, for instance, said anb Abū Ḫayyata uwa-smī Wās’dān lā daratun ḥay’ān fān ārābī ḍāṣid (cf. al-Āmidī, Mu’tāfīs, ed. Abū Abd al-Sattār Ahmad Farrājī, Cairo 1961, 146). The purpose of such utterances was to intimidate the adversary and to make him insecure. Self-praise (fakhr) was here linked to cursing (ḥudūd) the enemy. The factual power of words should hit the adversary and weaken him. Here it becomes clear that magic was one of the ancient elements of the radjaz.

Hudud also indicates another group of radjaz poems, namely, trivial mocking verses of an erotic and obscene content. Occasionally, a dialogue is then staged between man and wife during intercourse, the dialogue being divided by conventional expressions such as kultu...kdlat. A typical example is the poem by Abū Aḥlab al-‘Abi’dī, in which he ridicules the pseudo-prophets Musaylima [q. v.] and Saḍābi (cf. ‘Imām, Tabākī, ed. Mahmūd Muhammad Shāhīk, Cairo 1974, 740-2).

Radjaz is also the metre for tunes, sung at rhythmical activities such as urging camels or drawing water (see qinsa). Rhythmical games are also accompanied by radjaz verses: mothers used to sing such
verses when making their children dance in a circle (cf. W. Walther, Altarabische Kinderzantsenreime, in Studia Orientalia in memoriam Caroli Brockelmann, Halle 1968, 217-33). He was ascribed fragments of the radjaz. Hind bint al-Khus [q.v.] was able to cast, with such verses, a spell on birds that were flying by (Aghani ix, 175; xii, 36).

In the old days, the radjaz therefore was only an artless folk poetry. Great poets such as al-Nabigha al-Dhibyani, Zuhayr, Tarafa, ‘Antara, Imru’ al-Kays, etc., hardly used this metre and their verses in it are not extant. It cannot be weighed for as being authentic. In the early Islamic period a change gradually becomes apparent. According to the Arab literary historians, al-Aghlab b. Djumah al-Idjlī, who allegedly fell in the battle of Nihāwānd in 21/641, is said to have been the first to compose longer poems in radjaz (Saqiin ii, 163-4; collection of fragments by Nūrī Hammūdi al-Kaynī, in Majallat al-Maḍīna al-‘Imlī al-Darīkī, xxvi/3 [1980], 104-44). But Labid b. Rab’a al-‘Amīrī and al-Shamādkh b. Dirār al-Ghatfānī, together with his companions Di‘abbār b. Dīqāz, Dqundab and al-Dhulayyih, also composed several urdijuzas which comprise as many as 40 verses. They contain parts of the real kastīda, like the nasīb [q.v.], the ride through the desert or the description of the bull antelope. The Hudhaliyyin, ed. J. Wellhausen, no. 278; German tr. composed an kasīda, after the old fashion. They are also the 10 which have woven into their diatribes, and irony does not signify a greater, but rather a slight. But as far as the contents are concerned, their poems are full kasīdas, which start with the complaint addressed to the remains of the abandoned camp (aṭlāf), pass into the desert ride (raḥīl [q.v.]) and in a request to the patron. They contain the usual images which are developed into independent episodes, and all the other elements of the traditional kastīda. Both poets are inclined to exaggeration and grotesque. Their banter is coarse, their ridicule and coarseness, and their arsenal of words of abuse is inexhaustible. But it looks as if even the greatest self-glorification and the devastating scoffing of the adversary are not meant that seriously. Again and again, ironic and humoristic turns of phrase are passed into their diatribes, and irony does not exempt their own persons. Sarcastic, grotesque, comical and humoristic elements may be said to appear al-‘Addijaddī’s and Ru‘ba’s urdijuzas into a persiflage of the regular two-hemistich kastīda.

Next to these two poets mention should be made of the great poets of the Umayyad period, to whom allegedly fell in the battle of Nihāwānd in 21/641, is said to have been the first to compose longer poems in radjaz. Hind bint al-Khus [q.v.], who allegedly fell in the battle of Nihāwānd in 21/641, is said to have been the first to compose longer poems in radjaz (Saqiin ii, 163-4; collection of fragments by Nūrī Hammūdi al-Kaynī, in Majallat al-Maḍīna al-‘Imlī al-Darīkī, xxvi/3 [1980], 104-44). But Labid b. Rab’a al-‘Amīrī and al-Shamādkh b. Dirār al-Ghatfānī, together with his companions Di‘abbār b. Dīqāz, Dqundab and al-Dhulayyih, also composed several urdijuzas which comprise as many as 40 verses. They contain parts of the real kastīda, like the nasīb [q.v.], the ride through the desert or the description of the bull antelope. The Hudhaliyyin, ed. J. Wellhausen, no. 278; German tr. composed an kasīda, after the old fashion. They are also the 10 which have woven into their diatribes, and irony does not signify a greater, but rather a slight. But as far as the contents are concerned, their poems are full kasīdas, which start with the complaint addressed to the remains of the abandoned camp (aṭlāf), pass into the desert ride (raḥīl [q.v.]) and in a request to the patron. They contain the usual images which are developed into independent episodes, and all the other elements of the traditional kastīda. Both poets are inclined to exaggeration and grotesque. Their banter is coarse, their ridicule and coarseness, and their arsenal of words of abuse is inexhaustible. But it looks as if even the greatest self-glorification and the devastating scoffing of the adversary are not meant that seriously. Again and again, ironic and humoristic turns of phrase are passed into their diatribes, and irony does not exempt their own persons. Sarcastic, grotesque, comical and humoristic elements may be said to appear al-‘Addijaddī’s and Ru‘ba’s urdijuzas into a persiflage of the regular two-hemistich kastīda.

To the great poets of the Umayyad period, they were not as unfavourably disposed towards the radjaz metre as had been their colleagues of the Djdhiliyya.
RADJAZ

Cairo 1898, 206-34; ed. E. Wagner, ii, 176-327; cf. also Wagner, Abu Nuwas, Wiesbaden 1965, 265-89).

Even if, according to the transmitters, many of them are not authentic, yet the full range and richness of this literary genre are shown in Abu Nuwas. More than others he strongly influenced later poets when they were writing about hunting. Among other poems, 3Abd al-Šamād b. al-Mu'ādh al-Šahhāl (d. ca. 240/854; 3Sæzgin, i, 508) composed one hunting with the cheetah (jaḥda), 49 verses of which are transmitted by Kūshādīm (Mašīyād, Baghdad 1554, 150 ff.). Among the hunting poems of al-Allāh b. al-Mu'tazz (d. 296/908) are 48 urdžas, and only 5 in other metres (3Dīwān, ed. B. Lewin, iv, 2–44; ed. Yûnus A. al-Šamārāṭ, ii, Baghdad 1978, 405 ff.). His contemporary 2Abd al-Allāh b. Muhammad al-Nāghī al-Šakār (d. 293/906; 3Sæzgin, ii, 564 ff.) also composed numerous urdžas on falcons, dogs and on fox-hunting (cf. the inventory of his poems in J. van Ess, Frühe mu'tasīlische Héroïdographie, Beirut 1971, 155-61; see also 2Allāh b. Muhammad al-Shīrāzī, K. al-Anṣārī wa-maḥāsin al-šu'ārā, Baghdad 1976, 284–5, 300, 305, 311, 322). Kūshādīm, too (see above), composed a number of hunting urdžas (3Dīwān, ed. Khayriyya Muhammad Maḥfūz, Baghdad 1970, nos. 2, 12, 88, 172, 259, 260, 267, 321, 354, 371, etc.). He was very familiar with this metre. In his K. al-Mašīyād wa-l-māwīrīr he also quotes numerous hunting poems by other poets. Finally, mention should be made of Ṣafī al-Dīn al-Ḥillī (d. 749/1349; Brockelmann, ii, 159, S ii, 199), who composed 7 urdžas on hunting with falcons, cheetahs and dogs (3Dīwān, Beirut 1962, 245 ff.). One of his muwaṣḥahāt [q.v.] (3Dīwān, 245 ff.) is also composed in rādžas. He describes it in bird-hunting with the crossbow (kaṣīd al-banduk), a theme already treated by Abu Nuwas.

3 Special characteristics

As said above, the length of line of the rādžas is in general only half of that of the other metres. The kašīd verse contains an average of 8, 9 words, while the rādžas trimeter consists of only 4, 3 words. This means that every fourth or fifth word must be a rhyme word (in the dimeter the relations are even less favourable), while the poet is quite limited in the choice of his words. Nowhere does the rādžas Trimeter impose itself so strongly as in the rādžas Trimeter (and to a lesser degree the -itu verse, almost every fourth word must be a dual. In Ru'ba's poem no. 32 the rhyme is -iti. Consequently, almost all the rhyme words of the 94 verses must be nouns in the genitive. In the -ita rhyme (Ru'ba, no. 10) the forms of the first person perfect of the -ita tertiae infirmae dominate, and in al-Āḍīḍādī's poem no. 40, which has the -iya rhyme and which comprises 200 verses, innumerable nomina relating (nēhīy) occur. The part of speech, the case and the grammatical person thus are largely determined by the requirements of the rhyme, and so the syntax of the verses is fixed to a high degree. It is also evident that a full sentence can only rarely be accommodated in the short lines of verse. Nowhere does enjambment occur so often as in the rādžas (cf. G.J.H. van Gelder, Breaking rules for fun ..., On enjambment in classical Arabic poetry, in The challenge of the Middle East: Middell Eastern Studies at the University of Amsterdam 1982, 25–31, 184-6; idem, Beyond the line, Leiden 1982, 123-4). The choice of words, too, depends on the requirements of the rhyme. Since the lexicon of literary speech is not sufficient for the rhymes of a long urdža, the poet searches for rare words, i.e. expressions which have become obsolete or which originate from certain dialects, or he reaches even for foreign words. In order to meet the requirements of the rhyme, the poet furthermore often has to change, to mutilate or to expand the words; he has to replace one word by another, to form irregular plurals, and so on. Metre and rhyme had to be taken into account correctly in any case, while sounds, forms and syntax could eventually be changed. All this gives the rādžas poems their unmistakable, distinctive hall-mark. They belong to the most difficult texts of Arabic literature.

4 As a term of non-metrical poetry

In some early Arabic traditions the term rādžas is used not in its metrical sense, but to denote poetry defined by "halved" (maṣḥūr), i.e. three-foot, lines without caesura. Since poetry in the rādžas metre is at least for the most part, also characterised by tripodies (see above under 1.), the two applications of the term are certainly related. The priority may lie with the maṣḥūr meaning, which would then have been narrowed down to the one metre in which maṣḥūr verses occur, the rādžas.

The first early attestation of this use is in al-Akhṭār al-Āwsaṭ (d. 215/830 or 221/836 [q.v.]; Kāwāfī, 67-8, where poetry is divided into kašīd, raḵal, and rādžas, which are defined as having lines that are 74, maṣḥūr, and maṣḥūr, i.e. "complete", "shortened by one foot per hemistich", and "halved". In terms of metres, the kašīd comprises 200, bāṣīt, kāmīl, maṣḥūr, urdža, and rādžas (sic, here meant as the rādžas hexameter with caesura), the rādžas includes everything with three feet and no caesura (thus presumably the rādžas and the munsārīth trimeter), and the raḵal [q.v.] covers everything else (thus the metres raḵal, hāṣaḏ, the metres of the Fourth [unless they are trimeters] and the Fifth Circles, and all kašīd metres, if they are maṣḥūr).”

A slightly different system is found in al-Dawāhīr (d. 393/1003 or later [q.v.]; Kāwāfī, fols. 34b-35b. Here we have the following fourfold division:

3. radjaz manthür manthūr al-radjaz, manthūr al-munsarih
4. manhuk manhuk al-radjaz, manhuk al-munsarih

The difference is the addition, in al-Djawhari, of the manhuk metres, i.e. the "emaciated" dimeters, which however do not have their own name. The rest seems to be identical, although for lack of a complete enumeration of the metres covered by each term in both authors we cannot be certain. A system similar to al-Djawhari's is quoted by al-TahanawT, Kashshaf.

In addition to the meaning of "ritual stoning as a punishment for fornication", radjim means the casting of stones at Minā, which is one of the pre-Islamic rites preserved by Muhammad and inserted among the ceremonies of the pilgrimage. See here [aqama, jam'ah and jumah] with their bibliographies.

The Kurān does not mention this rite, but it knows radjama in its Biblical sense of "stoning of prophets by unbelievers", and also radjim (= mardjum) as an epithet of Satan, "driven away and struck with projectiles of fire by the angels", and lastly (XVIII, 21) in an abstract sense which indicates a long semantic evolution.

The rite of casting stones at Minā was regulated by hadiths in the classical collections. There is a model hadīth, that of the Prophet which we find in the manuals of manāsik al-hadj, e.g. in the Risāla of Ibn Taymiyya (cf. Rifāt, i, 89 ff.). Some hadīths of archaic form (e.g. al-Bukhārī, Nikāh, bāb 2; Salam, bāb 1 and 2; 'Umda, viii, 489) show that Muhammad had to lay down rules for the essential question of the wukāf, the culmination of the hadīd. The Hums, i.e. the Kuraysh and their allies, observed it at Djam' (Muzdalīfa [q. v.]), in the haram, the others, the 'Arab, at 'Arafa, outside of the haram of Mecca. Having to choose between his companions of two different origins, the Muhādżirūn and the Anṣār [q. v.], Muḥammad decided with the latter for 'Arafa; but he retained a secondary wukāf at Muzdalīfa, and the two isdās, the new combination of rites culminating in the throwing of stones at al-`Ākaba.

Situated at the bottom of the valley of Minā, on the slope of the defile towards Mecca, al-`Ākaba is "not in Minā but it is its boundary on the side of Mecca" ("'Umda, iv, 770"). On the morning of 10 Dhu 'l-Hijjah, the pilgrim goes down into the valley, passes without saluting them in front of the great djāmara, 500 yards farther on the middle one, and 400 yards beyond he comes to djamrat al-'Ākaba (Rifāt, i, 328). There he throws 7 stones, and this is one of the four ceremonies which on the tenth day are intended to remove his state of sanctity. He must also have his hair shaved (halk), sacrifice a victim (nahr) and return in procession to Mecca (ifsāda). This last rite prepares the sexual deconsecration; the three others together abolish the prohibitions of the hadīd, but the legists are not agreed on the order in which they have to be accomplished. The hadīdīs say that the Prophet replied to the question whether the pilgrims who had not followed the order in which he had himself followed them, là haradja "no harm (in that)" (al-Bukhārī, Hadīdī, bāb 125, 130 etc.). It is explained that the Prophet on this day of rejoicing did not wish to hurt the feelings of the ignorant Bedouins. We may imagine that these 'Arab did not follow the customs of the Kuraysh and that Muhammad had neither the time nor the inclination to impose his own choice between the varying customs.

Muhammad began with the lapidation at al-`Ākaba. After the halk, the sacrifice and the ifsāda, he returned to spend the night in Minā. Then on the 11th, 12th and 13th days, he cast 7 stones at the three djamarāt, ending with that of al-`Ākaba. The pilgrims imitating him ought therefore to throw 7 + (7 x 3 x 3) = 70 stones. But in general, they take advantage of the liberty (rukhsa) given them by the hadīdīs to leave Minā finally on the 12th day and therefore only to throw 7 + (7 x 2 x 3) = 49 stones. It is probable that there was no ancient usage; the presence of the bodies of the sacrificial victims made Minā a horrible place. It is difficult to see how Wavell (Pilgrim, 202) threw 63 stones, i.e. 7 x 3 x 3; this is, however, the number of victims which, according to tradition, Muḥammad sacrificed with his own hand, one for each year of his life.

The stoning of al-`Ākaba is done on the 10th day by...
the pilgrims in *dhamm; those of the three days following by the deconsecrated pilgrims. The whole business is not a fundamental element of the pilgrimage (*rukh*).

Little stones are thrown, larger than a lentil, but less than a nut, what the old Arabs called *basra l-bakhshif* which were thrown either with the fingers or with a little lever of wood forming a kind of sling (*mishkhaba: al-Tirmidhi*, iv, 123). A *badshif* forbids this dangerous game, which might knock out an eye but is not strong enough to kill an enemy as the *djafl* has. It has been declared that this has something magical or pagan in its character. The stones have to be collected of the proper size and not broken from a rock. Gold, silver, precious stones, etc., are condemned; but some texts allow, in addition to date-stones, a piece of camel-dung or a dead sparrow, which we find are also the means used by the women of the *Dahiliyya* at the end of their period of isolation to remove the impurity of their widowhood and prepare a new personality. It is recommended that the seven stones for the lapidation of *al-Akaba* should be gathered at the *mashar al-baram* at Muzdalifah, outside of Minah. As a rule, the 63 others are gathered in the valley of Minah, but outside of the mosque and far from the *djamara* to avoid their having already been used (*Ibn Taymiyya*, 385). Besides, it is thought that stones accepted by Allah are carried away by angels. Stones collected but not used should be gathered together as a sacred character which makes them dangerous.

The model pilgrim of the Prophet fixed the time of the *djamra* for the day of the 10th *Dhu'l-Hijjah*. It shows him beginning the *istada* of Muzdalifah after the prayer at dawn (*fajr*) and casting the stones after sunrise. But by survival of an ancient custom more than for reasons of convenience, other times are allowed by law. *Al-Sakhih*, against the three other imams, permits the *Akaba* ceremony before sunrise (*Ri'fat*, i, 113); in general, the time is extended to the whole morning (*dahib*), till afternoon (*zaudel*), till sunset, till night, till the morning of the day following; these interruptions of the normal routine are atoned for by a sacrifice or alms, varying with the different schools. The *djamara* of the three days of the *taghr* take place in the *zaudel*; here again there are various opinions (*al-Sakhih*, *badshif*). From the third day the time of the lapidations, the law has always endeavoured to avoid any Muslim rite, e.g. prayer, coinciding with one of the three positions of the sun by day, rising, noon, setting. A. J. Wensinck asserted (in *HADJDJ*, vol. III, 326) the probability of the solar character of the pagan *hadshif*.

Muhammad made his lapidation at al-*Akaba* from the bottom of the valley, mounted on his camel, turned towards the *gumma*, with the *Ka'bah* on his left and Minah on his right, standing at a distance of five cubits (eight feet). But there are other possible positions. *Ri'fat* (i, 328) gives the *gumra* the following dimensions: 10 feet high and 6 feet broad on a rock 5 feet high (see the photographs, *ibid*.). It is said to have been removed at the beginning of Islam and replaced in 240/854-5 (al-Azraki, 212). Muhammad made the lapidations of the other two *djamara* on foot, turning towards the *kibla*. In brief, the stones are cast in the attitude one happens to be in. The position facing the Great Devil is explained by the nature of the ground, but it would also be in keeping with the idea of a curse cast in the face of a fallen deity. The position which makes the pilgrim turn towards the *Ka'bah* is due to the Muslim legend of the tempter Satan and to the rule of the *tabir*, which will be explained below.

According to the *sunna*, the stones are placed on the thumb and bent forefinger and thrown, one by one, as in the game of marbles. However, the possibility of the stones having been thrown together in a handful has been foreseen, and it was decided that this should only count as one stone and that the omission could be made good. The stone should not be thrown violently nor should one call "look out! look out!" (*al-Tirmidhi*, iv, 136), a pagan custom which the modern Bedouins still retained until quite recently (*Ri'fat*, i, 89). It seems that Muhammad put some strength into it, for he cursed his hand to the level of his right eybrow" (*al-Tirmidhi*, iv, 139) and showed his arm pit (*al-Bukhari*, *Hadjdj*, bbd 141).

In Islam, the casting of each stone is accompanied by pious formule. It is generally agreed that the *talbiya* is no longer pronounced at *Arafa* or at least before the lapidation of al-*Akaba* (*al-Bukhari*, *Hadjdj*, bbd 101); some writers however approve of it after al-*Akaba*. The *talbi* and *tafil* are permitted, but it is the *tabir* which is recommended (*Ibn Taymiyya*, 382), *al-Bukhari*, *Hadjdj*, bbd 138, 143). The spiritual evolution of the rites even seems in this the essential feature of the rite, the throwing of the stone and the figure formed in throwing it by the thumb and forefinger forming an *'ukd* which represents 70, being no more than symbolical and mnemonic gestures. "The throwing of the stones was only instituted to cause the name of God to be repeated" (*al-Tirmidhi*, iv, 139). To al-*Ghazali* (*Ihy*, i, 192), it is an act of submission to God and of resistance to Satan, who seeks to turn man away from the fatigues of the *hadshif*, but the rite is without rational explanation *min ghayr basra* *l-* *'alak* wa *l-nafs* *fihi* (cf. Goldzwehr, *Richtungen*, 252). The devout man adds a prayer (*du'a*) which is as a rule quasi-ritual. The usual one is *Allahumma 'ala hu hakum* *wa-* *l-man* *wa-* *dhu* *l-khadhf* *wa-* *saw* *wa-* *min* *aghfa* *r*- *wa* *min* *ghayr li* *m* *a* *wa* *m* *la* *wa* *m* *am* *la* *wa* *m* *la* *wa* *m* *la* *wa* *m* *la* *wa* *m* *la*. "Look! Look! O Lord, make this pilgrimage a pious one, pardon our sins and recompense our efforts!" There is, as a matter of fact, after the stoning, a halt, a *wukuf*, before the two higher *djamara*, that at the second being especially long: the duration is calculated by the recitation of the *sura* of the Cow (II), or of Joseph (XII), or of the Family of Immrân (III) by altering the indication in the *hadshif* (*al-Bukhari*, *Hadjdj*, bbd 135-7). This would take the place of an ancient ceremony of imprecation.

Breaches of the rules for the performance of these diverse ceremonies, especially as regards the number of stones thrown and the time when they are thrown (*'Unda*, iv, 767 ff.; *Ri'fat*, i, 113), are punished by atonements, the exact nature of which the legists delight to vary, from the sacrifice of an animal to the giving of a *madd* of food in alms.

The Muslim teachers have sought to explain the lapidations of Minah. Some exegetes (e.g. *al-Tabari*, *Tafsir*, xxv, 167) have seen quite clearly that they represent ancient rites and have compared the *ramy* of the tomb of Abû Ridjâl. Others are known, for example at the well of *Dhu'l-Hulayfa* (*Lammens, Bétyles*, 94). The works quoted [see HADJDJ] show the spread of this rite and the cases in which we are certain that it is a question of the driving away or the expulsion of evil. Stones used to be thrown behind an individual whom one wished never to return (*al-Hamadhani*, *Makhâmât*, ed. Beirut, 23). At Alexandria, tired people used to go and lie down on a fallen pillar, throw 7 stones behind them on a pile "like that of Minah", then go away quite recaptured (*al-Kalkhashandi*, *Subh al-ajha*, iii, 322). But comparisons would take us out of the region of Arabia (*Lods, Prophétès d'Israel*, 354).

Popular legend has connected the lapidation, like many other rites, with Abraham. It was Abraham or Hagar or Ishmael, or even Muhammad, that Satan
wished to deter from accomplishing the rites of the hadj and who chased him, whoever this was, away with stones. If we conclude that he is rağgilım, we are some way to the explanation of sûra LXVII 5 (see above).

One would like to be able to locate the lapidations among the rites of the pre-Islamic pilgrimage. One would first have to have a clear idea of the meaning and details of the ceremonies and of the part played by lapidations and sacred piles of stones in Semitic and Mediterranean antiquity. Stoning seems to have been a rite of expulsion of evil which coincided with the deconsecration of the pilgrim and seems to protect his return to everyday life. It is possible that lapidations at one time followed the sacrifices which perhaps took place at 'Arafá and Muzdalifá.

To sum up, the lapidation at Miná has been by turns interpreted as a vestige of the cult of the dead (refs. in Lammens, Le culte des bêtes, 39 and esp. 96 ff.), a rite honouring protective deities, after the manner of the 'Equation (refs. in Fahd, La divination arabe, 189 n. 1); a symbol of the expulsion of malevolent spirits (aurunsurianii), in the sense given by Tradition to the rite at Miná (refs. in ibid., 189); a gesture of cursing against certain tombs of persons of sinister memory (ibid., n. 3); and, finally, as an act of scelopism born out of the hatred of the nomads for the sedentarys (see V. Chauvin, Le jet de pierres au pèlerinage à l’Amour, in Revue des études Semitiques, 74, 5th sér., iv [Antwerp 1902], 272-300, a thesis refuted by Van Vloten and Th. Houtsma; refs. in Fahd, 189 n. 4).

In regard to the basic sense of djamra [q.v.], pl. djammar, which designates, among other things, the tribe (kabila), this rite seems merely to have been in origin a simple gesture of coming together, done by means of a ballot. In practice this term denotes essentially the internal uniting of all the fractions of a tribe or a tribal group (see TÁ, iii, 129: al-djamra al-kabila in-šammat fi-jarát yahdun wakhidahm là tandaññun ilá abadu wa-lá tathabilī ghyara-hā). Thus "the secondary sense, expressed in djamra, pl. djammar, ‘pile of pebbles’, allows the gesture of union, which renewes the tribe periodically or occasionally, to be represented as being like the throwing of a pebble on a precise spot, near to a sacred site or in the midst of an encampment, done by all the members of the tribe or by the heads of the clans composing it, and thus symbolising the indissoluble unity of the tribe and its adhesion to a decision which has been taken. The standing at Miná which ends the sacred sequence of the Pilgrimage, before entry into the sacred city, lends itself well to the idea of a renewal of a pact of union between clans and tribes. In short, the basic aim of the Meccan Pilgrimage was to serve as a rallying point for all the Arab tribes, involving the exclusion of all outsiders, in order to put an end to the internal quarrels between tribes and in order to undertake common action aimed at permanently opposing all outside intervention in this inviolable centre of the Arabian peninsula" (Fahd, op. cit., 190).

(M. GAUDEFROY-DEMOMBYNES [T. FAHD])

RAJDHMAL, a former city of Muslim Bengal during Mughal times, now a small town 6 km/4 miles to the east of the ruinous Mughal site, in the Santal Farganas District of Bihar Province in the Indian Union (lat. 25° 3' N, long. 87° 50' E.). To its west run the basaltic Rādjmahal Hills of central Bihār. Rādjmahal city grew up in the strategically important gap between the Hills and the right bank of the Ganges, a corridor defended in Mughal times by the fortress of Teliágarh.

When the Rādjput governor of the Mughals, Mān Singh [q.v.], had in 1500/1592 conquered Oriissa [see ORISA], he made the existing settlement Agmahal into Rādjmahal and into the capital of Bengal, and it remained the capital until this was moved to Daccá/Dhaka in 1609/1659. European travellers testify to the importance of Rādjmahal, which, with Dhaka, was one of Bengal's two minting centres. It still had probably some 25,000 to 30,000 inhabitants in the early 19th century, but its prosperity was adversely affected by changes in the channels of the Ganges. It is now notable for a remarkably large number of significant monuments of Mughal architecture, many now ruined, including the Akbari mosque, the Chota ("small") mosque, the Djamra mosque, the enormous Dāmī mosque, etc. Bibliography: Imperial gazetteer of India, xxii, 76-8; Catherine B. Asher, in G. Michel (ed.), The Islamic heritage of Bengal, UNESCO Paris 1984, 116-27, with further references. (C. E. BOSWORTH)
evidence produced by these writers for the foreign extraction of certain Radjput clans.

They base this theory of foreign descent principally upon the Agni Kula legend, for Waidya and other writers have proved this to be a myth first heard of in the Pṛthvīrāja-rāisi of the poet Čand, who could not have composed this work before the 12th century A.D. Recent research has brought to light the fact that the inscriptions of the Prathihāras and Čāhāns before the 12th century represent them as Soḷah Ρadžput, while the Śaṅkayas are represented as of the Lōḍī dynasty. The Agni Kula legend does not therefore deserve the prominence given to it by Smith and other writers. Even the contention that the Prathihāras were a branch of the Gurdjara tribe has met with much hostile criticism.

According to the orthodox Hindu view, the Ρadžput are the direct descendants of the Kṣatriyas of the Vedic polity, but this claim is based on fictitious genealogies. The Kṣatriyas of ancient India disappeared from history, and this can probably be explained by invasions from Central Asia which shattered the ancient Hindu polity. It is accepted that these invading hordes, such as the Yūche-Či and Hūnas, became rapidly Hinduised, and that their leaders assumed Kṣatriya rank and were recognised as such. Out of this chaos arose a new Hindu polity with new rulers, and the families of invaders which became supreme were recognised as Kṣatriyas or Radjput. In later times, many chief of the so-called aboriginal tribes also assumed the title of Ρadžput.

It is therefore safe to assert that the Ρadžput are a very heterogeneous body and probably contain some survivors of the older Kṣatriyas. A mass of legend arose assigning to the various clans a descent from the sun and the moon, or from the heroes of the epic poems. These are the legendary pedigrees recorded in the Śaiva and Śivān poems. The Kshatriyas of ancient India disappeared from history, and this can probably be explained by the acceptance of the Hūnas in the recognised list of Ρadžput tribes.

Whatever may be the origin of the Ρadžput, we know that disorder and political disintegration followed the death of Harāga, and that until the Muslim invasions of northern India the chief characteristic of this period was the growth and development of the Ρadžput clans. Except for about two hundred years, when the Gurdjara-Prathihāras were the paramount power in Hindustān, there was constant internecine warfare between the various Ρadžput kingdoms. This weakness considerably facilitated the Muslim conquest. It was not, however, until the days of Muḥammad of Gīsr that the Ρadžput dynasties in the plains were finally overthrown [see MUḤAMMAD B. SĀM, MUṢIZZ AL-DĪN]. Driven from Dīlī and Kanawḏā, they retreated to the Čhāhāns and other Tāns [see also JBBRAS, iii (1910); D.R. Bhandarkar, Treaties, and on Kshatras and the Sehat of the Gudjars, in Suppl.] where they eventually built up a strong position and were able to resist the Muslim invader, for it cannot be said that the Sultans of Dīlī ever really subdued the Ρadžputa of Rājputāna. Nevertheless, throughout this period there was constant warfare, fortresses and strongholds frequently changing hands. The Ρadžput nearest to Dīlī were naturally the weakest because the eastern frontier of Rājputāna was exposed to attack. The Sultans of Dīlī appear to have realised the value of communications with the western coast, and we find that the route between Dīlī and Gudjārāt via Ağmār was usually open to imperial armies. The chief menace to the Rājputs was not from Dīlī but from the independent Muslim kingdoms of Gudjārāt [q.v.] and Mālwā [q.v.].

The outstanding feature of the period from the end of the so-called Sayyid rule to the final invasion of Bābūr [q.v.] was the growth of Ρadžput power in northern India under Rānā Sāṅga [q.v.] of Mēwār [q.v.]. Taking advantage of the weakness of the Lōḍīs [q.v] under Ibrahim, he managed to subdue Gudjārāt and Mālwā, he had extended his sway over the greater part of modern Rājputāna. The battle of Khaṇūrā [q.v.] in 1527, when Bābūr shattered his power, marks a turning-point in the history of Muslim rule in India, for the Rājput never again attempted to regain their lost dominions on the plains and contented themselves with remaining on the defensive. After Khaṇūrā [q.v.], the place of the Sodās in Rājput politics was taken by the Rāṭhors, the growth of whose power under Mādēr of Māwār was facilitated by the struggle between Humāyūn [q.v.] and Shēr Shāh. Akbar's Rājput policy was based on conquest and conciliation. The fall of ČiTāw and Ranthambhār made him master of the greater part of Rājputāna, with the exception of Mēwār [q.v.], which was not completely subdued until the reign of Djahāṅgīr [q.v.]. The reversal of Akbar's conquests produced the great Hindu reaction of Awarangzb's reign, when, faced at the same time with the Rājputs of the north and the Marāṭhās [q.v.] of the Deccan, Awarangzb [q.v.] was unable to concentrate on either campaign. But internal dissensions once more prevented the Rājputs from taking advantage of the decline of Muḥāl power, and, in the second half of the 18th century, they proved no match for the Marāṭhās, who easily overran their country. It was not until the beginning of the 19th century, when the British were at war with the Marāṭhās, that they entered into political relations with the Rājput states. Before the end of the year 1818, the group of states which in British Indian times comprised Rājputāna had been taken under British protection.

In British India, in 1901, the population of 11,225,712. The native states of Rājputāna were ruled by Rājputs, with the exception of Tonk, which was Muslim, and Bharatpur and Dholpur, which was Dījāt. The chief Rājput clans in Rājputāna are the Rāṭhōr, Kāchhāwā, Cāhān, Dījādona, Ṣesodīa, Ponwar, Parihār, Tonwar and Dījāhā. Rājāsthānī is the mother tongue of 77% of the inhabitants of this area. It is interesting to note that Macaulay, in his History of the British in India, states that many of the Soḷah Rājputs have embraced Islam, as for example the Manhās, Kātīls and Salāhīr of the Pāndjāb.

Rādākān, the site of a mediaeval Islamic monument in northern Persia. The tomb tower (Iranian National Monument 145) sits on the edge of an isolated, 1,300 metre long valley in the Alburz Mountains north of the Nīku River, 70 km/43 miles east of Nikā in the province of Māzandarān. It is best known as Rādākān West to distinguish it from another isolated, 1,300 metre long valley in the Alburz Mountains north of the Denān continued to rule in isolated localities. The tomb tower, the Mīl-i Rādākān, continued to be used for burials from Rābi‘ II 407/September-October 1016 and 411/October-November 1017, c. 1020-1. He was a member of the first branch of the Bawand dynasty, which ruled in isolated localities in-between Rābi‘ II 407/September-October 1016 and 411/October-November 1017.

(W.P. Heinrichs)

Rādwa, the name of the crags west of Medina, occasionally mentioned in connection with the mountain Ṭḥabīr (Ṣirat al-Ḥabash, 86). Lying behind Yanbu‘, between the regions of Ma’dinay [see MA’DIAN QU‘AYR] and Mecca, they were known to Ptolemy (Sprenger, Die alte Geographie, nos. 28, 30) and are mentioned in a later and more literary context which became common in the area at the time (the most striking example is the stellate tower which was ordered in 397/1006-7 at nearby Gunbadh-i Kabūs) and is remarkable for its superb inscriptions in plaited Kufic script.

(Sheila S. Blair)

Al-Rādūyānī, Muhammad b. ‘Umar, author of the first Persian treatise on rhetoric, the Kitāb Tārīkum al-balāgah. The little that can be inferred about the author’s life is known from the Tārīkum itself; no other source mentions him. According to the researches of A. Ates, he seems to have lived in Transoxania, and his book was written between 481/1098, the beginning of the Karakhanid Ahmad Khān’s incarceration at the hand of Malik Shāh, as mentioned in one of the poems quoted, and 507/1114, the date of the unique ms. of the Tārīkum, the majāfīs’ Istanbul, Fatih 5415, fols. 235a-290a.

As al-Rādūyānī explicitly states (Tārīkum, 3), his book was modelled on the Arabic Maḥāsīn al-kalām of Abu l-Ḥasan Naṣr b. al-Hāschar al-Marghindānī, recently published by G.J. van Gelder as K. al-Maḥāsīn fi ’l-naẓm wa ’l-nathr (see Bibl.). However, in spite of his assertion, there are substantial differences between the two works in size and structure, e.g. the Maḥāsīn has about 33 rhetorical figures as opposed to 73 in the Tārīkum, the figures being slightly misleading because of different taxonomies; also, the Maḥāsīn uses examples from Kurān and Hadīth, which are totally lacking in the Tārīkum (see further, Ates, ibid., 90-42).

The Tārīkum in turn was known to Rāshid al-Dīn-i Wātqāy (d. 573/1177 [q.v.]), who found it lacking and wrote his own Hādāk al-balagha fi dakāk al-dh-r to supersed it (Haddāk, 1). He does not mention the author’s name. Later sources do not seem to have had direct access to the Tārīkum and uniformly attribute it to the poet Farrukhlā (d. 429/1037-8 [q.v.]). Whereas Wātqāy adds both Persian and Arabic examples, all poetic examples in the Tārīkum are in Persian. Due to its early date it is an important source for the beginnings of Persian poetry (see Ates, Etude, and Lazard).

(W.P. Heinrichs)

(C. Collin Davies)
consonant of words (nouns and verbs) which are inflected (mu'ârad). The term indicates not a function but the position of the tone (e.g., marfu'â towards) the top of the palate in order to pronounce the vowel /u/. European grammarians see in this vowel the mark of the nominative case of nouns and the mark of the indicative mood in verbs.

Nouns “raised” (marfu'ât) by the vowel /u/ are of five kinds:

1. The inchoative (muhtâda'), which is to be connected (muhtâda' with an item of information, and which is stripped (mu'ârad, mu'âra') of any regent (âmul) which is expressed (laqef); it is “raised” by the fact of beginning of a piece of speech utterance (ibti'dâ), which is understood (ma'nauti') regent.

2. The noun which is a predicate (jâhid), to which the inchoative is connected (musnad 'lâyhi). For certain of the Bayran grammarians (including Sibawayh and Ibn al-Sarrâjî), it is “raised” at the same time by both the act of beginning and by the noun which forms this; for other Bayran grammarians, it is “raised” by the act of beginning by means of (by-âwâsia) the noun which forms this; for the Kûfâns, it is “raised” solely by the act of beginning.

3. The noun which is an agent (âfsâ') built upon a verb formed (bunîya) for it and to which it is connected; it is “raised” by this verb, which is what one is talking about (mâ yuhadathâ 'anhu).

4. The noun which is a direct object (marfûl bîhi) built upon a verb formed by it and to which it is connected, but whose agent is not named (summiya); it is “raised” by this verb, which is what one is talking about (mâ yuhadathâ 'anhu).

5. The noun which is assimilated (muqababah) to the agent in actual utterance (laqef). This noun comes after incomplete verbs, such as kâna and its sisters, which are not genuine (ba'dîrî verbs, since they express only time. It can also come after two negative particles assimilated to these verbs, such as mâ and lâa in the dialect of the Hidjâz; it is “raised” by this verb or by this particle.

As for the “similar” (mu'dâri [q.v.] verb, it is “raised” by an understood (ma'nauti') regent, which is the fact that it occupies (waâkû) the place (ma'âki') of a noun, whatever its inflexion might be.

B. TROUPEAU

2. As a technical term in the science of Muslim tradition = hadîth [q.v.].

Beside the verbal noun, the passive participle marfû' (plural marfu'ât), “lifted up”, is commonly used. An inâd [q.v.] of a tradition is marfu', when it is, as it were, “lifted up”, sc. to the level of the Prophet Muhammad, supporting a main (= text) containing either his words and/or describing some activity of him as transmitted by one of his Companions. (In contrast, when the transmission of such a tradition is put in the mouth of a Successor, who could not possibly have been present or someone who lived even later, one speaks of a mursal [q.v.] inâd; on the other hand, when the text of a tradition does not contain a mention of the Prophet, but describes the words and/or deeds of a Companion or somebody later, tradition science defines that as a muwââkîf tradition, a qualification also applied to its inâd, since it has literally “stopped” at the Companion.)

During the initial stages of hadîth transmission, a time roughly coinciding with the first three quarters of the 1st/7th century, the necessity of naming one’s sources was yet generally felt. In the course of the last few decades of that century, however, the inâd as authentication device came into use. In order to validate a report of which one claimed that it described an event of the past, one was required to call an older authority to witness. The earliest inâdâs contained only one name, mostly that of an alleged expert in legal or ritual matters, a Companion or somebody of a later generation, resulting in a muwââkîf inâd on the Prophet himself, resulting in a mursal inâd, thus without a Companion. But, as a result of inaccurate handling of inâdâs and/or because of widespread inâd fabrication, they became subject to a more sophisticated evaluation, which resulted in the course of time in fully-fledged inâdân criticism. Merely supplying muwââkîf or mursal inâdâs in an attempt to guarantee the veracity of a report which one wished to circulate was no longer sufficient, and the call for inâdân ending in a Companion, who reported on the authority of the Prophet, became louder. Muslim tradition scholars generally credit the founder of the legal school that bears his name, Muhammad b. Idrîs al-Shâfi‘î (d. 204/820 [q.v.], with the foresight of having been the first to emphasise the authority of muwââkîf inâdâs, more so than the other types of inâdâs strands. This was also underlined in western studies, notably in those of J. Schacht (cf. his The origins of Muslim jurisprudence, Oxford 1950, ch. 3). As from al-Shâfi‘î’s days, the prestige of these latter types began to diminish and traditions supported by them gradually failed to attract the attention of tradition collectors, while supplying muwââkîf inâdân, which in the beginning were vastly outnumbered by the other types as is especially clear in the pre-canonical hadîth collections, became the rule.

The qualification muwââkîf for an inâdân strand does not necessarily imply that it is at the same time beyond criticism. To be considered unassailable, the strand has to show up an uninterrupted string of names of known transmitters, from the Prophet to the collector in whose collection that strand turns up. At the same time, each pair of transmitters in that string of names must be believed to have transmitted from one another. For that reason, a strand deemed muttasil is used. Because not each muttasil strand is muwââkîf, but can “stop” at a Companion (= muttâsil muwââkîf) and because not every muwââkîf is at the same time muttasil (e.g. a munkati' muwââkîf), a strand deemed genuinely reliable has to be both muwââkîf as well as muttâsil; for both terms taken together the technical term musnadh [q.v.] came into use. It is only a tradition with a main supported by a musnad inâd strand which may have a claim to be considered sahhî [q.v.], “sound”.

The Arabic root r-f-c has given rise to yet another derivative being widely used in a technical sense in the context of hadîth. With the prestige of muwââkîf strands gradually increasing, but especially after al-Shâfi‘î’s insistence on them, many transmitters became known as râfî‘ûn, i.e. people who developed the habit of frequently “raising” inâdân strands “to the level” of muwââkîf, either by inserting the name of a Companion in mursal strands which they had, or replacing the ac-

actor in a muwââkîf-supported main by the Prophet.

In later times certain formal rules were less strictly observed. Thus the mention of the Prophet was often dropped in a saying ascribed to him by the mere addition of the adverbially used muwââkîf after the name of the Companion of that saying’s inâd strand. Alternative loose forms for this were the verbal forms yarfa' 'l-hadîth, yanmihi, yablughu bihi or riyâsaa ma-
